[h] This Fact, that no ſuch thing as a true and perfect Emerald is to be found in any of the Countries on the Continent, or in any of the Iſlands of the *Eaſt-Indies*, is maintained by the famous *M. Tavernier*, than whom I think a better Authority cannot be produced. He was indiſputably as well ſkilled in Jewels as any Man of his Time, and had travelled more in the *Indies* than almoſt any other Writer, ſo that to controvert his Authority on this Head, is to refuſe the beſt Evidence that can be produced, in order to conclude, without any Evidence at all, that the Thing is otherwiſe. It may, and indeed it has been ſaid, that to ſupport this Opinion, we ought to ſhew that there has been ſuch a Commerce with *America*; but there is a Difference between proving a thing, and rendering it probable; and yet in the next Chapter ſomething farther ſhall be ſaid in Defence of this Opinion, which will approach very near a Proof.

18. In the Year 1525, *Antonio Britto* and *Garcias Henriquez* being ſent from the *Moluccas*, diſcovered the great Iſland of *Celebes*. This *Antonio Britto* was the very Perſon that had taken one of *Magellan*'s Ships, and put all the People that were in her to Death, which had gained him the Reputation of a bold and able Seaman; nor did he loſe it by this Expedition, ſince he actually diſcovered what he was ſent to look for. Other *Portugueze* Writers ſay, that he did not go himſelf, but fitted out Ships for that Diſcovery, and that they in their Return to the *Moluccas* ſaw certain Iſlands which they could not reach, to which they gave the Name of the Iſlands of *Mey*. But when *Antonio Galvano* was Governor of the *Moluccas*, he ſent over two of the Natives, who were baptized, into that Country, who converted ſeveral of the Princes thereof from Paganiſm to Chriſtianity[i], and eſtabliſhed a good Correſpondence between them and the Inhabitants of the *Portugueze* ſettled in the *Moluccas*.

This Iſland of *Celebes* is divided from *Borneo* by the Streights of *Macaſſar*, and lies at no great Diſtance from the *Moluccas*. *Argenſola* tells us, the Natives are of a white Complexion, and that they were formerly much given to Piracy. That Writer, and ſome others, give us an odd Account of the antient Form of Government in this Country, and which ſeems to confirm what I have before ſuggeſted, that there had been great Revolutions in theſe Parts before they were diſcovered by the *Europeans*. What they ſay on this Subject, reduced into a narrow Compaſs, amounts to this; that there were originally ſeven Kingdoms or Principalities in this Iſland, the Princes of which met together and choſe a Monarch, who had a limited Power over the whole Iſland, and whom, in caſe of Tyranny, they who elected him depoſed. This does not look like Rudeneſs or Barbarity, but ſeems to have been a very rational kind of Policy, inſtituted for the Sake of preſerving the Peace of the ſeveral Nations inhabiting that Country, and preventing thoſe Wars that muſt otherwiſe have kept them in continual Confuſion, and into which they actually relapſed, when by ſome Accident or other this ſalutary Form of Government fell into Diſuſe.

The Diſcovery of ſo conſiderable a Country was looked upon by the *Portugueze* as a Matter of great Conſequence, and Meaſures were taken to ſecure the Affections of thoſe whom it was not found eaſy to conquer; but, on the other hand, capable of being obliged, or rendered uſeful, as their Allies, by good Uſage. The People were much braver, and withal had much better Senſe than moſt of the *Indians*; and, therefore, after a little Converſation with the *Europeans*, they began, in general, to diſcern that there was no Senſe or Meaning in their own Religion; and the few of them who had been made Chriſtians by the Care of Don *Antonio Galvano*, were not ſo thoroughly inſtructed themſelves as to be able to teach them a new Faith. The whole People in general, however, diſclaimed their old Superſtitions, and became Deiſts at once[k]; but, not ſatisfied with this, they determined to ſend, at the ſame Time, to *Malacca* and to *Achin*, to deſire from the one, Chriſtian Prieſts; and from the other, Doctors of the *Mohammedan* Law; reſolving to embrace the Religion of thoſe Teachers who came firſt among them. The *Portugueze* have hitherto been eſteemed zealous enough for their Religion; but it ſeems that Don *Ruis Perera*, who was then Governor of *Malacca*, was a little deficient in his Concern for the Faith, ſince he made a great and very unneceſſary Delay in ſending the Prieſts that were deſired.

On the other hand, the Queen of *Achin* being a furious *Mohammedan*, no ſooner received an Account of this Diſpoſition in the People of the Iſland of *Celebes*, than ſhe immediately diſpatched a Veſſel full of Doctors of the Law, who, in a ſhort Time, eſtabliſhed their Religion effectually among the Inhabitants. Some Time after came the Chriſtian Prieſts, and inveighed bitterly againſt the Law of *Mohammed*, but to no Purpoſe; the People of *Celebes* had made their Choice, and there was no Poſſibility of bringing them to alter it. One of the Kings of this Iſland, indeed, who had before embraced Chriſtianity, perſiſted in the Faith, and moſt of his Subjects were converted to it; but ſtill, the Bulk of the People of *Celebes* continued *Mohammedans*, and are ſo to this Day, and the greateſt Zealots for their Religion of any in the *Indies*. This was one of the greateſt Errors in Policy that ever the *Portugueze* committed; for if all the Inhabitants of that Iſland had been made, as they very eaſily might have been, zealous Chriſtians, the *Dutch* had never became ſo abſolute in the *Indies* as they now are.

But this Difference in Religion did not hinder them from living on very good Terms with the *Portugueze*, who eſtabliſhed a better Trade here than in any other Part of the *Indies*; for, finding few rich Commodities, and no Opportunity of encroaching on the Liberties of the Nation, they were glad to treat them as a free People, and the Situation of the Country being extremely happy for that Purpoſe, made it very ſoon the Centre of Commerce. The great Iſland of *Borneo*, abounding in Gold, Diamonds, Pepper, and other rich Commodities, lay but one Day's Sail from them; *Amboyna* and the Spice-Iſlands, not above three or four; the Kingdoms of *Siam*, *Camboya*, *Cochinchina*, and *Tonquin*, the Empire of *China*, and the *Philippine* Iſlands, none of them above three hundred Leagues. We need not wonder therefore, that the Port of *Jampodan*, the beſt in that Part of the World, ſhould be always full of Ships, and the great Towns on the Coaſt become Places of great Trade, when it was ſo much the Intereſt of the *Portugueze* to promote it. The People themſelves were very capable of managing it, being very induſtrious, and as well ſkilled in Navigation as any of their Neighbours; and though they had not any very rich Commodities, except Gold, and that in no great Quantities, yet they had wherewithal to purchaſe thoſe of the greateſt Value, ſince the Rice of this Country is eſteemed the beſt in the *Indies*, as their Cotton is held the fineſt; with thoſe they traded to the *Moluccas*, and from thence brought ſuch vaſt Quantities of Spices, that they drove a very conſiderable Trade in them with the *Europeans*.

The Reaſon that this Iſland is ſometimes called *Celebes*, and at others *Macaſſar*, is, becauſe the former, which lies in the North-Weſt Part of the Iſland, and the latter which takes up all the South, were the principal Kingdoms of the Iſland, and eſpecially the laſt, the Monarchs of which were very powerful, and frequently made themſelves Maſters of the beſt Part of the whole Iſland. Their Subjects are allowed to be the boldeſt and braveſt of all *Indians*, and are likewiſe remarkable for having a conſummate Knowledge in all Sorts of Poiſons, which are ſome of them of ſo deadly a Nature, that the very Touch, or Smell of them, is inſtantly and infallibly mortal. The Men make uſe of them to tinge the Head of their Arrows, or rather Darts, which they blow through hollow Trunks, and that with ſuch Force and Dexterity, that they will hit a ſmall Mark at the Diſtance of fourſcore Yards. They likewiſe dip the Points of their Daggers in the ſame poiſonous Drugs, and the very Scratch of it, either Dart or Dagger, kills without Remedy [l]. The Women likewiſe make uſe of theſe Poiſons to gratify their Revenge; for as they are generally allowed to be extremely conſtant themſelves, ſo they have very quick Reſentments in Caſes of Infidelity, eſpecially in regard to *Europeans*, who frequently cohabit with them, and ſometimes marry them.

---

[i] As this Fact is unanimouſly related by the beſt Authors on this Subject, it may not be amiſs to ſet it in the cleareſt Light of which it is capable. Two Brothers, Subjects of the King of *Seppet*, going over to the Iſland of *Ternate*, ſaw there the Ceremonies of the Chriſtian Worſhip, according to the Rites of the Church of *Rome*. They were extremely pleaſed with the Shew, and deſired therefore to know more of the Subſtance, which induced them to apply to the Governor, in order to be informed as to the Notions the *Portugueze* had of God, the Reaſons why they were called Chriſtians, and how themſelves might be made ſo. He readily diſcourſed with them on theſe Heads; they were quickly convinced of the Truth of what he ſaid, and ſo were baptized by the Names of *Anthony* and *Michael*; which, it ſeems, the Governor made no Scruple of performing with his own Hands, there being, at that Time, no Prieſt in the *Moluccas*. It is eaſy to conceive, that theſe Men, returning into their own Country, might be able to ſhew the Folly and Abſurdity of their Idolatry, without being capable of demonſtrating the Truth of the Chriſtian Faith.

[k] The ancient Religion of this Country deſerves to be taken Notice of, becauſe we ſhall then evidently ſee that the People had good Reaſon to act as they did. Their Prieſts told them, that the Heavens were eternal, and the Sun and Moon a God and Goddeſs, from whoſe Influence all Things proceed; that they had once a Quarrel, and the Sun ſtriking the Moon, ſhe thereupon miſcarried of this World; with Abundance of Stories of the like Nature. They taught them likewiſe the Tranſmigration of Souls; and that it was unlawful to kill any living Creature to eat, except Swine and Birds, becauſe the former was too naſty, and the latter too little for any human Soul to dwell in. But they adviſed them to ſacrifice their Cattle to the Sun and Moon; and, if they had none of theſe, they ſometimes made free with their Children. No wonder, therefore, that they were glad to get rid of ſuch a Religion and of ſuch Practices.

As they were rather the Allies than the Subjects of the *Portugueze*, ſo they were much more attached to that Nation than any other *Indians*, and gave a very hoſpitable Reception to ſuch of them, as on the Declenſion and Ruin of their Colonies fled thither for Protection, which was one Reaſon that the *Dutch* made ſuch a Point of reducing the King of *Macaſſar*, which they did after a long War in 1667, and preſcribed to him very hard Terms; particularly theſe, that he ſhould deliver up to them the Harbour of *Jompadan*, as too good for any but the *Dutch* to be poſſeſſed of; next he was obliged to turn all the *Portugueze* out of his Dominions, which was the more reaſonable, becauſe it was intended that he ſhould never trade with them or any other *European* for the future; and laſtly, he was to renounce all Commerce with the Spice-Iſlands, without which his Conquerors could not have monopolized them [m].

This fully proves what has been before obſerved, that if the *Portugueze* had taken Care to have converted theſe People to Chriſtianity, and had taught them the Sciences, they would have been of more uſe to the Crown of *Portugal*, than all the *Indian* Nations that were ſubjected to it; for they had very right Notions of the Conſequences of falling under the Dominion of the *Dutch*, and ſtruggled againſt their whole Power in the *Indies*, when at its greateſt Height, for many Years; and ſince their Country has been ſubdued, Multitudes of the *Macaſſars* have quitted it, and tranſported themſelves to other Places, where they are entertained as Soldiers, particularly at *Batavia*, where they are eſteemed by far the beſt *Indian* Troops in the Service of the States, and ſome of them likewiſe are in the Pay of the *Portugueze* Viceroy at *Goa*.

10. The *Sunda* Iſlands were now entirely open, and it is not eaſy to conceive how the *Portugueze* could be ſo long traverſing thoſe Seas, without gaining a proper Knowledge of them; yet it does not appear, that before the Year 1527, they were acquainted with any thing more than the Name of the Iſland of *Borneo*, and with its Situation, by reaſon of their frequently paſſing by its Coaſts. About that Time, Captain *Edward Conil* had Orders to examine it more narrowly, and being once acquainted with the Worth of the Country, they made frequent Viſits thither. This Iſland, which is almoſt of a circular Figure, lies immediately under the Equator; it is about five hundred Leagues in Circumference, and abounds with the richeſt Commodities, the Hills well ſtored with Gold, and the fineſt Diamonds in *India* are found in its Rivers, waſhed down into them probably from the Hills by the Torrents that pour into them.

All the Coaſts they found inhabited by *Malayan Moors*, who certainly had eſtabliſhed themſelves there by Conqueſt; but the original Inhabitants ſtill remain in the Mountains, and are ſtiled *Beajus*, which in the *Malayan* Tongue ſignifies a wild Man, and the *Moors* uſe the very ſame Word for the largeſt Sort of Apes, that are likewiſe common in this Country, as if they meant to ſignify, that the one had as little of Humanity about them as the other, which however is far from being true. The *Moors* are governed by ſeveral Kings, the chief of which are thoſe of *Manjar-Maſſen*, of *Succadan* (in one of whoſe Rivers there are excellent Diamonds found) of *Borneo*, and others. The *Beajuſes* have no Kings, but only Princes and other Chiefs. Thoſe that are Subjects to the King of *Manjar*, or border upon him, pay a Tribute; but ſuch as live farther up in the Country, and in Places inacceſſible to the *Moors*, are abſolutely independent, and live according to their own Cuſtoms. The *Beajuſes* are generally very ſuperſtitious, being much addicted to Augury. They do not adore Idols, but their Sacrifices of Sweet-wood and Perfumes are offered to one only God, who they believe rewards the Juſt in Heaven, and puniſhes the Wicked in Hell. They marry but one Wife, and look upon any Breach of conjugal Faith, either in the Man or in the Woman, as ſo heinous an Offence, that every one contrives the Death of the Perſon tranſgreſſing, either by themſelves or their Friends; and therefore the Women are very modeſt and reſerved, eſpecially the Maidens, who are not ſeen by their Huſbands till the Wedding-day, when the Women receive their Portion.

They are Enemies to Fraud and Theft, and grateful for Benefits received. Among themſelves they live lovingly and friendly, and therefore when every Man has gathered what he ſowed for his own Uſe, the reſt on the Mountains and Vallies is in common, without any Diſtinction of particular Right. They are alſo well inclined in their Pleaſures, and ſeek Honour in Hunting, at which Sport they endeavour to get ſome ſharp Horns to poliſh, and wear them as an Ornament at their Girdle. This Girdle is no other than a long Slip of Linen, which turns between their Thighs to cover their Privities, one End of which hangs down before, and the other behind. The Peaſants make a ſort of Cloth of the Barks of Trees, which being afterwards waſhed and beaten, are as ſoft as Cotton, and thoſe Trees being within the Dominions of the *Malay Moors*, they expoſe themſelves for the Bark to their Tyranny and Inſolence. Some of them go naked, and the reſt wear a ſmall Doublet made of the ſame Bark, which they dye of any Colour. On their Heads, to keep off the Heat of the Sun or Rain, they wear a Cap of the Palm-Tree Leaves, ſhaped above like a Sugar-Loaf, long, and with Flaps hanging down.

The Weapons they uſe are Knives, made like the Cangiers of the *Moors*, and Zampittes, that is, Trunks about ſix Opans long, out of which they ſhoot little wooden Darts, with an iron Head at the one End, and a Cartouch, or hollow Paper at the other, blowing into which they ſhoot it out with a vaſt Force, and ſometimes the Point being poiſoned, the Wound is mortal. They alſo ſhoot Birds with Pellets through them. The *Beajuſes*, as to their Perſons, are of a dark Complexion, well countenanced and ſtrong. Such is the Account given of them by the *Portugueze* Writers, who, for any thing I know, are the only Authors that can be depended upon in this Particular. Their Countrymen carried on their Trade chiefly with the *Moors*, whom they could never ſubdue; nor have their Succeſſors, the *Dutch*, been able to do any thing conſiderable againſt them, as we have already ſhewn at large in another Place.

The noble Iſland of *Java* was ſooner viſited by the *Portugueze*, on account of the Trouble given them by the Pirates, or Privateers, fitted out from *Bantam*, or as they call it *Bintam*, and other Places in the ſame Iſland, which induced *Pedro Maſcarenhas* to attack *Bantam*, which he took and plundered, though *George Albuquerque* had attempted it in vain. *Java Major* lies South-Eaſt from the *Peninſula* of *Malacca*, having *Sumatra*, *Borneo*, and *Celebes*, lying before it. Authors vary as to its Dimenſions; but the moſt moderate allow it nine hundred Miles in Circuit. The Air is generally eſteemed more wholſome than in any of the Iſles before mentioned, the Country exceedingly fruitful, and the Coaſt abounding with good Ports. It is not intended here to enter farther into the Deſcription of Places, than to render what we have to ſay as to the Hiſtory of them clear and intelligible.

---

[l] When our Royal Society was firſt founded, they ſent ſome Queries to Sir *Philberto Varnatti*, who reſided at *Batavia*, the ſixteenth of which ran in theſe Words: "What Poiſon is it the King of *Macaſſar* in *Celebes* is ſaid to have particular to himſelf, which not only kills a Man immediately, that hath received the ſlighteſt Wound by a Dart dipped therein, but alſo within half an Hour's Time makes the Fleſh touched therewith ſo rotten, that it will fall like Snivel from the Bones, and whoſe poiſonous Steam will ſoon fly up to a Wound made with an unpoiſoned Dart, if the Blood be only in the ſlighteſt Manner touched with a Dart infected with the Poiſon?" To which he gave the following Anſwer? "That there is ſuch a Poiſon in this King's Poſſeſſion, is moſt certain, but what it is no Chriſtian ever knew; ſome ſay it is the Gall of a venomous Fiſh, others ſay it is a Tree, which is ſo venomous, that thoſe who are condemned to die fetch the Poiſon, but not one in a Hundred eſcapes Death. The Roots of this Tree are held an Antidote againſt the Poiſon; but our People, when we had War with *Macaſſar*, found no Antidote like to their own or others Excrements. As ſoon as they felt themſelves wounded, they inſtantly took a Doſe of the ſame, which preſently provoked to vomit, and ſo by Repulſion (as I conceive) and Sweat, freed the nobler Parts from farther Infection."

[m] I ſhould not have advanced theſe Facts on the Hearſay or Report of any Writer whatever, but the Treaty dated the 18th of *November* 1667, is before my Eyes, and the ſixth Article of it begins thus, "They, that is the Regents of *Macaſſar*, ſhall turn out the *Portugueze*, and all belonging to them, without Exception; and becauſe we are obliged to believe that the *Engliſh* are great Miſchief-makers, and the Authors of the preſent War, the ſaid Regents ſhall turn them out alſo the firſt Opportunity, and ſhall never permit either of thoſe Nations, or their Creatures, to negotiate or trade in *Macaſſar* hereafter, &c."

The *Javaneſe* pretend, that they are deſcended from the pure and unmixed Race of the old Inhabitants of *China*, who retired thither when their Country was over-run by the *Tartars*; and on this they very much value themſelves; but before the *Portugueze* came there, they had not only mixed with other neighbouring Nations, but were alſo become *Mohammedans*. The whole Iſland at that Time was cantoned out among a Number of little Princes, ſome more, ſome leſs powerful; but moſt of them Maſters of ſome Force by Sea. All this corroborates what has been before ſo often obſerved, that theſe Nations did not grow better by their Commerce with the *Europeans*, but were actually declining from what they had been when firſt viſited by them, and have been ſinking lower and lower ever ſince.

The *Portugueze* Generals ſaw plainly enough, that they had not Force ſufficient to keep this Iſland, and therefore they contented themſelves with making a new King of *Bantam*, when they had taken it, and accepted from him an annual Tribute. *Panarucan*, a ſmall City, the Capital of a little Principality of the ſame Name, and withal a commodious Port, owed much to their Protection, and was raiſed to one of the principal Marts of the whole Country, where they not only dealt in Rice, Pepper, and other Commodities of the Iſland, but alſo in Gold, precious Stones, and Spices brought from other Places, and more eſpecially from the adjacent Iſlands. But ſince the *Dutch* became Maſters of *Batavia*, and the Emperor of *Materan* and the King of *Bantam* have divided the Iſland between them, this Place is become a Fiſhing Village, and all its Trade is entirely loſt.

20. There is ſome Diſpute as to the Time, and even as to the Perſon who firſt viſited the Coaſt of *New Guiney*: Some ſay that this Coaſt was firſt diſcovered by *Alvare de Saavedra* in the Month of *May* 1529, as he was returning to *New Spain* from a Voyage he had made for Diſcoveries. He fell in with this Continent in the Latitude of two Degrees South, and ran Eaſt along by it above five hundred Leagues to the End of the Month of *Auguſt*. The Coaſt was clean, and of good Anchorage: The People black, with curled Hair, naked to the Waiſt, and covered from thence to their Feet. *Saavedra* having ſailed four or five Degrees to the South, returned again unto the Equinoctial, and having paſſed it, diſcovered towards the North an Iſland, on which he beſtowed the Name of *Iſla de los Pintados*, that is, *The Iſland of painted People*; for he found the Inhabitants white, and each of them marked in his Body with an Iron. They could not underſtand the Language they ſpoke, which was very guttural; but by the Signs they made, they apprehended that they came from *China*.

There came off a Boat full of theſe People in a hoſtile manner, threatening the *Spaniards*, and throwing Stones at them; but *Saavedra* would not ſuffer his People to fire upon them by any means. A little beyond this Iſland they diſcovered many others low and flat, covered with Palm-Trees and Graſs, ſo that they made a very pleaſant Appearance, and therefore *Saavedra* called them *Los Jardines*, or the Gardens; they were very full of People, who ſeemed to them by their Countenances, and the Manner of wearing their Hair, to be deſcended from the *Chineſe*; but by their long Continuance there were become barbarous, and even brutiſh, living without Law, that they may live without Labour, and cloathed only with a white kind of Stuff, which they make of Graſs. They eat Cocoas inſtead of Bread, pulling them before they are ripe, and burying them in the Sand, from whence, after ſome Days, they take them out, and lay them in the Sun, where they open of themſelves. They likewiſe eat Fiſh, which they take in a kind of Boats, called *Paraos*, made of Pine-wood, which is driven on that Coaſt at certain Times of the Year, they know not from whence or how. The Tools with which they make theſe Boats are made of Shells. What appeared to *Saavedra* the moſt ſtrange was, that theſe People had never ſeen, nor had any Notion of Fire, till they came upon their Coaſt, and then they ſhewed the utmoſt Terror and Apprehenſion at the Sight. *Saavedra* would have returned from hence to *New Spain*, but met with ſo many Difficulties in his Paſſage, that worn out with Grief and Care, he died, and his People brought his Ship back to the *Moluccas*.

This gave an Opportunity to the Author we have taken this Account from to learn all thoſe Particulars; and this Writer deſerves the more Credit, as he was a Man of Diſtinction, and Governor of the *Spice-Iſlands* for the *Portugueze*. His Name was *Antonio Galvano*, the ſame who took ſo much Pains to introduce Chriſtianity into the Iſland of *Celebes*, and who has written an exact Account of all the Diſcoveries made by the *Spaniards* and *Portugueze* both in the *Eaſt-Indies* and in the *Weſt*. But we muſt not apprehend from his Account, that this Southern Continent was abſolutely unknown till this Diſcovery of it by *Saavedra*, becauſe it is certain from his own Account, that the Inhabitants of the *Moluccas* were very well acquainted with it before the *Portugueze* came amongſt them, and carried on a conſiderable Trade thither; but this Part of the Coaſt on which *Saavedra* ſailed was unknown to the *Europeans* before. While this *Antonio Galvano* commanded at *Ternate*, there was a famous Pirate, who with a Squadron of *Paraos* did a great deal of Miſchief on the Coaſt of the Land of *Papoas*, which is the Country ſince called *New-Guiney*, and at laſt began to threaten the Subjects of the *Portugueze* in the *Moluccas*. To repreſs the Violences committed by this Rover, *Galvano* fitted out ſome Barks that were ſent him by the King of *Tidor*, and having manned them with a few *Portugueze*, and with the Auxiliaries from the neighbouring Iſlands, he ſent them under the Command of *Ferdinand Vinagrez*, a Prieſt, in Queſt of this Pirate, with whom they came up, and after a ſmart Engagement, in which the Pirate and his Brother were both killed, deſtroyed ſome and diſperſed the reſt of his Squadron.

After obtaining this Victory, he was ſent to the Country of *Papoas*, where he was kindly received by ſeveral Princes, and converted ſome of them and their Subjects to the Chriſtain Faith, which was ſo great a Satisfaction to the worthy Governor, that he inſtituted a kind of Seminary, in which he bred up Abundance of young Men brought from all theſe Countries, inſtructing them himſelf in the Chriſtian Religion, and in all ſorts of Literature that were at that Time ſtudied in *Portugal*.

It is obſerved by the *Portugueze* Hiſtorians, that while other Governors increaſed their Fortunes, this Man ſtudied only to increaſe his Reputation, and the Number of his Maſter's Subjects, by his wiſe and gentle Government, which had ſo good an Effect, that Multitudes of Chriſtians, expelled and baniſhed by *Mohammedan* Princes throughout the *Indies*, repaired to him in the *Moluccas*, where he was ſo entirely beloved by all the Princes of thoſe Iſlands, that they joined together in a Repreſentation to the King of *Portugal*, ſetting forth the many Advantages that would accrue to the *Portugueze*, as well as themſelves, if *Antonio Galvano* was continued in this Government for Life; but before this Repreſentation was well framed, the Governor of the *Indies* ſent *George Caſtro* to ſucceed him, which, in the Space of a few Years, produced ſuch a Change in their Affairs on this Side, that *Maffeus*, and other of their Hiſtorians, have declined giving us an Account of them.

It was the removing this worthy Man that hindered all the Southern Continent from being thoroughly known; for by his Candour, Humanity, and wiſe Government, he eſtabliſhed a new Face in that Part of the World, of which the *Portugueze* never had an Idea, either before or ſince; and if he had remained there but a few Years, would have done more towards the Converſion of thoſe Nations by his own Virtue and Piety, than ever could be effected by an Army of Miſſionaries. But what he was not permitted to effect by his Actions, he has ſketched forth in his Writings; ſo that, from them we learn, this great Southern Continent was, in his Time, well inhabited; and though theſe Inhabitants might, in ſome Parts of it, be abſolute Barbarians, yet in others, they were as much civilized as their Neighbours, and had, as we have before ſeen, not only the Uſe of Veſſels, but ſome kind of naval Force.

21. The Diſcovery of the *Philippine Iſlands*, as they are now called, was, undoubtedly, made by *Francis Magellan* in the Year 1521; and the firſt Iſland in which he landed was *Hummunun*, which is now barren and uninhabited. He took poſſeſſion of the Iſland of *Butuan*, by erecting a Croſs, as we have elſewhere ſhewn, on the *Wedneſday* in *Eaſter-Week*, in the ſame Year. But theſe Iſlands were not ſettled on the Behalf of the *Spaniards* till the Year 1565, by *Michael Lopez de Legaſpi*, a Native of *Mexico*, acting under a Commiſſion from King *Philip* II. in honour of whom they were called *Philippines*. But with this Conqueſt and Settlement I have, at preſent, nothing to do, as intending to ſpeak only of the Diſcoveries made in theſe Parts by the *Portugueze*, on whoſe ehalf Don *Antonio de Galvano*, in the Year 1538, ſent *Francis de Caſtro* to the Iſland of *Mindanao*, where he perſuaded ſix of the petty Princes to receive Baptiſm, with all their Families. This Iſland of *Mindanao* is the moſt ſouthern of all the *Philippines*, and the largeſt of them all, except *Manila*; it extends from 6° of N. L. to 10° 30′, and is eſteemed three hundred Leagues in compaſs. There are few Countries in the World better watered; for there are in it twenty navigable Rivers, and near two hundred Rivulets, beſides large Lakes, one of which is called *Mindanao*, and gives its Name to the whole Iſland.

The *Portugueze* found it inhabited by ſeveral different Nations, of which the true original Lords of the Country poſſeſſed then only the Hills and inacceſſible Places; being Negroes, with criſp and curled Hair, like thoſe in *New Guiney*; and by the way thoſe were the original Inhabitants of all the *Philippines*. The *Portugueze* and *Spaniards* call them *Nigrillos*, a Nation who have ſacrificed all the Bleſſings of Life, and all the Advantages of human Nature, to an enthuſiaſtick Love of Liberty. Thoſe who inhabit one Mountain will have no Intercourſe with thoſe who inhabit the next; nay thoſe that inhabit the Middle of a Hill will murder ſuch as live at the Top or the Bottom of it, if they find them in their Diſtrict. They have neither Lords nor Laws, but live like Brutes, for the ſole Satisfaction of being free. This ſilly Humour induced them to abandon the Sea-Coaſts on the firſt Appearance of Strangers, which have been ſince ſettled by ſeveral Nations, ſome *Mohammedans* from *Borneo*, others a whiter People, no body can well ſay from whence, only the moſt civilized Inhabitants own, when the *Portugueze* came amongſt them firſt, that theſe Iſlands had formerly been under the Dominion of the *Chineſe*, and, upon their abandoning them, were left a Prey to any Nation that thought fit to ſettle in them, and were able to defend themſelves from the Blacks in the Mountains.

The Iſland *Xolo* lies South Weſt from *Mindanao*, and is governed by a King of its own; it is far from being large, but its Situation between *Mindanao* and *Borneo* makes it the Mart of all the *Mooriſh* Kingdoms. I do not find that the *Portugueze* ever pretended to ſettle, much leſs to conquer theſe Iſlands; but they viſited them frequently for the ſake of Trade, and in thoſe Days there was a greater Commerce in theſe Parts than can be well imagined; for while the Trade was open to *Japan*, there came annually two or three Ships laden with Silver, Amber, Silks, Cheſts, Cabinets, and other Curioſities, made of ſweet-ſcented Woods, with vaſt Quantities of Silks, Muſlins, Callicoes, Quilts, and Earthen-ware from *China*. For theſe the Merchants of *Golconda* exchanged their Diamonds; thoſe of *Ceylon* their Rubies, Topazes and Saphires; from *Java* and *Sumatra* came Pepper, and Cloves, and Nutmegs from the *Moluccas*.

The native Commodities of theſe Iſlands were as valuable as any of the reſt, ſince no Country in the World, *Peru* not excepted, abounds with more Gold. In the Mountains they dig but Three Feet deep, before they meet with it in red Sand, and where they cannot come at the Mountains for the Blacks, they dig Trenches in the flat Country, and after the rainy Seaſon, they pick the Gold out of the Mud that is left in them. Cinnamon they have as good as any in *Ceylon*, but nobody having any Property in the Trees, they tear and deſtroy the Bark at all Seaſons, which is the Reaſon the World is ſo little acquainted with the Cinnamon of *Mindanao*. In the Sea, between this Iſland and *Xolo*, there is a Pearl-Fiſhery, inferior to none in the *Indies*, either in point of Colour or Shape. Ambergriſe they have in great Plenty and Perfection on their Coaſt, and Lumps are very often found of twenty or thirty Pounds Weight; nay and ſometimes larger.

It was from their Commerce with *Mindanao*, and the Reſpect, or, as they call it, Homage, paid to the King of *Portugal* by ſome of the petty Monarchs of that Country, that the *Portugueze* pretended to maintain their Claim to theſe Iſlands againſt the *Spaniards*, who aſſume to themſelves an excluſive Right over all the *Philippines*; becauſe *Luconia*, or *Manila*, which is the biggeſt of them, is in their Poſſeſſion; yet they have ſo managed their Affairs, that, though they keep theſe Settlements merely for the ſake of Trade, their Government is ſo ordered as to leſſen that Commerce which thoſe Iſlands had before they became Maſters of them; and at the ſame time the royal Revenue is ſo indifferently managed, as not to defray above Two-thirds of the Expences of the Government; though the People are ſo much harraſſed, that they fly to all Parts of *India* to avoid the Hardſhips impoſed on them at home.

Father *Navarette*, who was himſelf a *Spaniard*, and who in his Hiſtory of *China* ſhews a manifeſt Partiality for his Country, confeſſes the Truth of this, and that he never was in any Country of the *Indies* but he found *Manila Indians*, either carried away or run away from thence; and of this, he ſays, the *Spaniſh* Government complained, as being extremely detrimental to that Settlement: But he obſerves very juſtly upon that Occaſion, that Complaints lie only againſt themſelves and their own Conduct: Let them, ſays he, uſe the *Indians* well, and they will not run away; let them protect thoſe People as they ought, and no body will be able to ſteal them. The Negligence of the *Portugueze*, the Tyranny of the *Spaniards*, and the incroaching Diſpoſition of the *Dutch*, hinder theſe Iſlands from being, what they otherwiſe muſt be, the Centre of Commerce between the *Eaſt* and *Weſt Indies*; and if a free Trade were allowed to them, each of theſe Nations would get ten times as much, and that too with ten times the Eaſe with which they get what little they do get by their Commerce here at preſent.

22. There is not any Paſſage relating to the Diſcoveries made by the *Portugueze* in the Eaſt more curious or more extraordinary than what relates to the finding the Iſlands of *Japan*, which were diſcovered about the ſame time by two different Sets of Adventurers, both, in all Appearance, the pure Effects of Chance. And though, in the Account we have received of both theſe Diſcoveries, very little Notice is taken of Dates; yet, from Compariſon of Facts, it is pretty evident, that the Perſons we ſhall firſt ſpeak of arrived in that Country ſome time in the Month of *May*, *A. D.* 1542. Of the firſt of theſe, we have a very large Account written by *Mendez Pinto*, who was himſelf the Diſcoverer; but for many Reaſons we have found it neceſſary to contract that Account into as few Words as poſſible, that we may have Room to give the Reader both the Diſcoveries, and thereby enable him to judge for himſelf, as to the Controverſy that has been raiſed concerning them.

Ferdinand Mendez Pinto tells us himſelf, that being in Company with two of his Countrymen, whoſe Names were *Diego Zeimoto* and *Chriſtopher Borello*, at *Lampacao*, which is the ſame with *Macao*, they there endeavoured to get a Paſſage to ſome other Part in the *Indies*, and found it very difficult to do: At laſt a *Chineſe* Corſair offered his

Service, promiſing to conduct them to the Iſlands of *Lequios*[n]; but when they were at Sea, the Weather proved ſo bad, and the *Chineſe* Captain's Ship ſo leaky, that there was an abſolute Neceſſity of putting into ſome Port to refit; and accordingly the Captain bore away for a certain Port in the Iſland of *Japan*, which our Author tells us was that of *Niaygima* in the Iſland of *Tanuximaa*, where they ſafely arrived. Before they entered the Port, two Barks came from the Shore to know who they were, and what they wanted? The Captain anſwered, that they were come from *China*, that his Ship was full of Goods, and that his Intention was to trade, if they might obtain Permiſſion; to which the principal Perſon in the Barks anſwered, that the Lord of the Iſland was called *Nautaquim*, and that if they paid the Port Duties, they might have Leave to trade[o]. The *Chineſe* Captain inſtantly complied with this Demand; the Patron of the Barks uſed him thereupon with great Civility, and conducted him immediately into the Harbour.

About two Hours after the Lord of the Iſland came thither, accompanied by ſeveral Perſons of Diſtinction, and ſome Merchants. At the Sight of the three *Portugueze* he was very much aſtoniſhed, and demanded immediately who thoſe Strangers were, and of what Nation? The Captain anſwered, that they came from a great City called *Malacca*, and that they were of a certain Kingdom in *Europe* called *Portugal*. At theſe Words *Nautaquim* appeared more ſurprized than before, and at laſt, turning to thoſe who were about him, he ſaid, Let me die, if I don't believe theſe are the *Chinchicogis*, of whom we read in our old Books that they fly upon the Waters, and make themſelves Maſters of every rich Country they hear of: We ſhall think ourſelves very happy, if they are content to be our Allies. He then called a Woman, who could ſpeak the *Chineſe* Language, in which he was but indifferently ſkilled, and deſired her to aſk the Captain with what View he brought theſe Strangers into *Japan*. The Captain anſwered very candidly, that he found them at *Macao* much diſtreſſed for a Paſſage to ſome Port in the *Indies*, and that he, from a Principle of Humanity, took them on board his Veſſel, in hopes that Providence would raiſe him a like Friend, in caſe he ſhould fall into the ſame Diſtreſs. This ſatisfied *Nautaquim* perfectly, ſo that he made no Difficulty of going aboard the *Chineſe* Veſſel, with ſome of the principal Perſons about him, and aſked the *Portugueze* abundance of Queſtions, whom he alſo invited to viſit him on Shore, promiſing to entertain them kindly.

They went accordingly, and carried him a Preſent, which was very graciouſly received, and *Nautaquim* entered into a long Converſation with them about their Country, and particularly inſiſted on theſe three Points, which he ſaid he had been told by the *Chineſe* and *Lequians* in his Country. Firſt, that *Portugal* was bigger than *China*, and richer; the ſecond, that the King of *Portugal* had conquered the beſt Part of the World; and thirdly, that his *Portugueze* Majeſty had better than two thouſand Houſes full of Gold and Silver. *Pinto* ingenuouſly owns, that he did not ſtick exactly to Truth in his Anſwers, but contrived ſuch as were moſt likely to keep up the high Opinion that *Nautaquim* had conceived of their Monarch. All the Time they ſtayed here, they were treated with the utmoſt Civility and Reſpect, being permitted to ſee every thing they deſired, and to go where they would. *Zeimoto* had a very fine Gun, with which the *Japaneſe* were extremely taken, inſomuch that they ſpoke of it to *Nautaquim*, who deſired to ſee it, and how it was uſed; which Requeſt of his being complied with, he thought himſelf ſo much obliged thereby, that he ſet the *Portugueze* upon one of his own Horſes, and obliged him to ride through the Town with a Crier before him, who proclaimed him *Nautaquim's* Couſin, and admoniſhed the People to conſider him as ſuch: At his Return he had an Apartment aſſigned him in the Palace; upon which he made a Preſent to *Nautaquim* of his Fowling-piece, in return for which, he ſent him in ready Money a thouſand Taels, which make in our Money three hundred and thirty-three Pounds[p].

The People imitated the Generoſity of their Prince, and bought all the Captain's Goods at ſuch round Rates, that for a Cargo which coſt him two thouſand five hundred Taels, they gave him to the Value of thirty thouſand. We need not doubt that People ſo well entertained, ſpent their Days there very agreeably, and were not in any great Hurry about their Departure. After a Month's Stay, however, the *Chineſe* Captain having refitted his Ship, prepared to put to Sea; but before he was ready, an Accident happened, which changed the Face of their Affairs entirely. A Boat arrived in the Harbour, having on Board a Gentleman charged with a Letter from the King of *Bungo* to the Lord of the Iſland, ſignifying that he was informed that certain Strangers were come into his Dominions, by which it was apparent, that the World was much larger than they imagined, and that he deſired he would ſend at leaſt one of theſe Strangers to diſcourſe with him, the rather becauſe at that Time he was very much indiſpoſed, and ſuffered by repeated Fits of black Melancholy, which oppreſſed him to the laſt Degree. The Lord of the Iſland ſent immediately for the *Portugueze*, aad having informed them, that the King of *Bungo* was both his Uncle and his Father-in-Law, he moſt earneſtly deſired that they would gratify the Requeſt of that Prince. At the ſame time, however, he declared, that he could not part with his Couſin *Zeimoto*, but that the Embaſſador might take which of the other two he pleaſed; but after a little Recollection, he fixed upon *Pinto* as the moſt proper Perſon to go to his Uncle, becauſe he was of a briſk and lively Temper, and therefore the moſt likely to divert him; and at the ſame time made him a Preſent of two hundred Taels, as a Compenſation for the Trouble of this Journey.

Things being thus regulated, *Pinto* took his Leave of his Friends, and embarked with the Embaſſador for the Kingdom of *Bungo*, which lies but at a very ſmall Diſtance from the Iſland of *Tacuxima*. They arrived, without meeting with any Accident, at the Fortreſs of *Oſqui*, where they remained two Days, and then they ſet out for the Capital, where they arrived the very ſame Day. The King had no ſooner Notice of their coming than he immediately ſent one of his Sons to compliment them, to whom the Embaſſador delivered a Letter from *Nautaquim* for the King's Father, whoſe Name was **Origendo**, who, as ſoon as he received it, deſired the *Portugueze* to come to him, whom he received with all the Reſpect imaginable. The firſt Queſtion he aſked *Pinto* was whether the Gout, with which he was dreadfully afflicted, was a Diſtemper known in any of the Countries through which he had paſſed, and if he had ever heard of any Remedy that would effectually cure it? *Pinto* told him honeſtly, that he was no Phyſician, but that he had brought with him from *China* a kind of Wood, which had a Quality of relieving the moſt violent Pains, let their Cauſe be what it would, but that he had left it in the Iſland where he firſt arrived; upon which the King immediately diſpatched a Meſſenger thither to fetch it. As ſoon as it arrived, *Pinto* cauſed it to be ſteeped in Water, which he gave the King to drink, and in the Space of a few Days he found himſelf ſo well, that he was able to riſe and walk about, which he had not done for two Years.

---

[n] Theſe Iſlands, of which it ſeems the *Portugueze* had already ſome Knowledge, paſs under different Names; and even at this Day we are not able to ſay much with any Certainty about them. Some Writers call them the Iſlands of *Liqueios*, others the Iſlands of *Rinku*. They lie between 26 and 30° of North Latitude, having the Iſland of *Formoſa* on the South-weſt, the Continent of *China* on the Weſt, the Iſlands of *Japan* on the North, and the Ocean on the Eaſt; on which Side they ſeem to have no Land nearer to them than *America*. The *Japaneſe* report that they are the moſt fertile Countries in the World, and that the Inhabitants are the eaſieſt, happieſt, and beſt conditioned of the Human Race. They are ſubject to the Prince of *Saxuma*, who is one of the principal Lords of the Empire of *Japan*. It may not be amiſs to obſerve, that the *Chineſe* were formerly Maſters of theſe Iſlands, and that at preſent there is ſome Commerce between them and the *Philippines*.

[o] This Iſland, which *Pinto* calls *Tanuximaa*, is, undoubtedly, *Tacuxima*, belonging to the Kingdom of *Firando*. It lies in the Latitude of 31° North, at a very ſmall Diſtance off the great Iſland of *Ximo*, which is the ſecond in Size of thoſe three Iſlands which are known in *Europe* under the common Name of *Japan*, which is not, as we generally apprehend it, the Name of a particular Country, but of a large Archipelago of Iſlands, the moſt conſiderable of which is *Niphon*. It is true, that later Authors ſpeak of no ſuch Port as *Pinto* mentions, but that is no juſt Objection to the Truth of his Relation, ſince it is on all Hands allowed, that prodigious Changes have been made in the Names of the principal Ports and Places in theſe Iſlands.

[p] One of the moſt ſingular Things in *Pinto's* Relation is this; that, notwithſtanding the Aſtoniſhment of the People on their firſt beholding the Gun which his Companion brought over, they were, however, ſo ingenious as to comprehend the whole Mechaniſm of it in a very little time; ſo that before he was ſent for to *Bungo*, they had made ſeveral of them, and in the Space of a few Years they became very expert in the Trade; which Fact, though very extraordinary in itſelf, is, notwithſtanding, confirmed by later Writers.

It is eaſy to imagine what high Effects ſo extraordinary a Circumſtance as this muſt neceſſarily produce, and what Careſſes were naturally beſtowed on a Stranger, who had ſo ſuddenly and ſo unexpectedly performed ſo great a Cure. The King ordered all the Care imaginable to be taken of him, and the whole Court was employed in contriving how to entertain and divert him; but in the midſt of all this Joy and Satisfaction, there happened an unlucky Accident, which had like to have been attended with very bad Conſequences. *Pinto* had with him his Gun, which was mightily admired by every Body that ſaw it, and the Operations of which filled them with Aſtoniſhment. The hereditary Prince was ſo taken with it, that he would needs try to ſhoot himſelf, to which *Pinto* would by no means conſent, telling him, it was an Inſtrument to be managed with great Caution, and might do unexpected Miſchief in the Hands of a Perſon who knew not how to manage it. This, inſtead of ſatisfying the Prince, made him only the more eager, inſomuch that he complained to his Father, and deſired he would prevail upon the Stranger to truſt him with his Gun; to which the *Portugueze* yielded, and promiſed to go a ſhooting with him the next Day.

The young Man was ſo impatient that he was up before it was light, and on the fifth of *Auguſt* was at *Pinto*'s Chamber-door before he awoke. He had too much Manners to diſturb him, but unluckily ſpying the Gun, took it out with him into the Court, and reſolved to make a Shot. He put in a double or treble Charge of Powder, to which giving Fire, the Gun burſt, cut his right Thumb ſo that it hung by a Thread, and at the ſame time a Piece of the Barrel ſtruck him ſo violently over the Ear, that he fell flat upon the Ground, and thoſe who were about him thought he was killed. The Noiſe of this Accident was very ſoon ſpread over the whole Town, where it was unanimouſly agreed, that the Stranger's inchanted Inſtrument had killed the Heir of the Crown. The Noiſe made round his Apartment awaked *Pinto* out of his Sleep, who coming down without knowing what was the Mattter, went directly to the Place where the Accident had happened, and ſeeing the Prince lying on the Ground, whom he took to be dead, he threw himſelf on the Body in the utmoſt Agony. A Moment after came the King, the Queen, and the two Princeſſes, all of them in a diſtracted Condition, and as ſoon as they ſaw the Prince ſwimming in his Blood, and *Pinto* lying by him, they immediately concluded that the Stranger had killed the Prince; upon which two Soldiers advanced with their Swords drawn, in order to cut off his Head; but the King called out to them to forbear, ſince he was determined he would firſt extort from him the Reaſon that induced him to commit ſo vile a Fact.

The Reaſon of this Stay of Execution was, becauſe a little before a Conſpiracy had been diſcovered, for which ſeveral Perſons had been executed the Day before; and the King apprehended, without any Reaſon, that this Action might be an Effect of that Conſpiracy. It is not neceſſary for us to dwell upon all the little Circumſtances of this Affair; and therefore it will be ſufficient to obſerve, that when they were on the very Point of torturing *Pinto*, in order to make him confeſs why he committed this deteſtable Murder, and who were his Accomplices, the Prince very luckily came to himſelf, and ſeeing how Things ſtood, declared, with great Concern, that he alone was in the Fault, and that the Stranger knew nothing of the Matter; wherefore he intreated that he might be ſet at Liberty, and have Leave to come to him, which his Father immediately granted. It was then propoſed, that they ſhould ſend for an old Bonze, who lived at ſeventy Leagues Diſtance, to dreſs the Prince's Wounds, and to try if he could ſave his Life. The young Man declared againſt this, and ſaid, he ſhould die before he came, and begged that he might be left in the Hands of the Stranger, who knew beſt how to deal with him. The King thereupon called for him, and aſked, if he would undertake his Son's Cure, which, if he performed, he ſhould think his Kingdom too ſmall a Reward. *Pinto* declared he could promiſe for nothing, but that he was willing to do all that lay in his Power, and that he had great Hopes of ſucceeding.

Upon this the Prince was left in his Hands, but not without a great Struggle on the Part of the Bonzes, who declared, that if the Stranger touched his Wounds, he would die that Night; and that the beſt thing the King could do was to offer up *Pinto* as a Sacrifice to the Gods, and to ſend an Expreſs immediately for the old Bonze before-mentioned. The Prince interpoſed, however, ſo warmly in Favour of the Stranger, and ſome of the oldeſt and wiſeſt Men about the Court thought the young Man's Deſire ſo reaſonable, that the King conſented to it, and the Prince being carried to *Pinto*'s Lodgings, he dreſſed him as he had ſeen the *European* Surgeons do, and in one Month's Time there was no other Sign of the Wounds than the Scars they had left, and a little Deadneſs in his Thumb. The King and the whole Court were quite raviſhed with Joy at his unexpected Recovery, and beſides a thouſand Bleſſings and Thanks, made the *Portugueze* abundance of magnificent Preſents, beſides fifteen hundred Taels in ready Money, which the King beſtowed upon him as ſoon as the Prince was able to go abroad.

While Things were in this Situation, they had Advice that the *Chineſe* Ship was ready to ſail; upon which *Pinto* deſired Leave to be gone, to which the King very unwillingly conſented; but as the Stranger inſiſted upon it, he ordered a Veſſel to be equipped, in order to carry him back to the Iſland of *Tacuxima*, and ſent a Gentleman with him, furniſhing him alſo with all manner of Proviſions and Refreſhments. After his Return to that Iſland, our Traveller remained there a Fortnight, waiting for a fair Wind, and then embarking, arrived ſafely at *Liampo* on the Coaſt of *China*. This is, in few Words, the Account given us by *Pinto* himſelf: Let us now proceed to the other Diſcovery of this Country made by the *Portugueze*, according to our Promiſe.

In the ſame Year 1542, three of the ſame Nation came by pure Accident into this Country, their Names were, *Antonia Mota*, *Franciſco Zeimoto*, and *Antonio Pexota*, who in a Voyage from the Iſland of *Macaſſar* to *China* were thrown upon the Coaſts of theſe Iſlands, and were exceedingly well received. Amongſt other Acquaintance, they entered into a cloſe Converſation with one *Angero*, a Man of a good Family, and conſiderable Fortune; but who was exceedingly troubled in Mind on account of ſome Irregularities committed in his Youth, who heard them with Pleaſure diſcourſe concerning the Truth of the Chriſtian Religion. About two Years after *Alvarez Vaz*, a *Portugueze* Merchant, came into the ſame Country, and became very intimate with the ſame Perſon, whom he perſuaded to go to the *Portugueze* Settlements in *India*, in order to be converted and conſoled by the holy Diſcourſes of the famous *Francis Xavier*; to which at length he yielded, and having received Baptiſm at *Goa* in the Year 1548, he the next Year accompanied Father *Xavier* and two other Jeſuits in their Voyage to *Japan*, where they immediately entered upon their Miſſion; by the Progreſs of which, this Country was made ſo thoroughly known to the *Portugueze*, that if *Mendez Pinto* had not recorded his own Voyage thither, it is very poſſible we had never heard any thing of it at all; but that he afterwards viſited *Japan* in Company with Father *Xavier*, and after the Deceaſe of that induſtrious Jeſuit, whom the Papiſts eſteem the Apoſtle of the *Indies*, he went thither again as Embaſſador from the Viceroy of the *Indies* to the King of *Bungo* in 1556, ſo that there ſeems to be no juſt Grounds for calling any thing that he has written in Queſtion.

The Converſions made in this great Empire contributed not a little to ſupport and extend the *Portugueze* Trade, which was managed with much Facility, and to a vaſt Profit: For the *Portugueze* being eſtabliſhed in *China*, carried from thence vaſt Quantities of Silk into *Japan*, where, as all Ranks of People affect to be cloathed in it, There followed a prodigious Conſumption, which enriched the *Portugueze* Merchants very ſoon to a high Degree, tho' it is ſcarce credible, that as ſome *Dutch* Writers report, they have ſometimes carried home in one ſmall Ship one hundred Tons of Gold. But this prodigious Succeſs proved the Cauſe of their being at laſt deprived of this lucrative Commerce.

It is not to be expected that we ſhould enter here into a long and particular Relation of the ſeveral Facts which drew upon them, from the Government of *Japan*, that Prohibition of which we have ſpoken ſo largely in the Article of *Macao*, and therefore we ſhall only report in general Terms, and in as few Words as poſſible, the principal Cauſes of that Excluſion. The vaſt Wealth they had acquired corrupting the Manners of the *Portugueze*, made them leſs cautious than they ought to have been, in their Behaviour towards the *Japoneſe*, inſomuch that, inſtead of the Moderation, Sobriety, and exact Conduct which they at firſt purſued, they grew proud, inſolent, and diſſolute. This prompted them to change the Places where they were wont to trade, and to prefer ſuch Ports as were in the Dominions of infidel Princes, to thoſe in the Territories of theie *Japoneſe* Lords, that had embraced the Chriſtian Religion, that they might live as they thought fit, and without being under the Controul of the Miſſionaries, who took all the Pains they could to oblige their Countrymen to advance the Credit of the Chriſtian Religion by the Regularity of their Lives. Theſe Errors had two very bad Conſequences; for, firſt, they diſguſted ſuch Princes as had embraced the Faith; and, ſecondly, they hardened the Infidels in their Averſion to it.

But it was not only the Corruption of the *Portugueze* Merchants, Officers, and Seamen, that gave Offence to the People of this Empire, the Intrigues of the Miſſionaries themſelves contributed to it as much, or more, by exciting the Jealouſy of the Emperor; for where-ever they had converted any of the Princes of *Japan*, they were continually at Court, and, inſtead of minding what was the proper Buſineſs of the Church, engaged at every Turn in Affairs of State, making the Direction of Conſcience much leſs their Care than the Direction of Councils, by which they became the Authors of many Troubles, and afforded a Handle to their Enemies of charging them with many more; ſo that the Emperor of *Japan* began at laſt to ſurmiſe, that there was more of Hypocriſy than Sanctity in their Hearts, and that they were endeavouring, under Colour of ſaving Mens Souls, to eſtabliſh a new Government in that Country.

Theſe Jealouſies, which certainly were not altogether without Foundation, were extreamly increaſed by two Circumſtances; the firſt was, the Haughtineſs and Ill-conduct of ſuch as were ſent Embaſſadors thither, eſpecially after the Union of the Crowns of *Spain* and *Portugal*; for thoſe Miniſters were wont to boaſt of the vaſt Power of the Catholick King, and of the mighty Extent of his Dominions, of which they affected to convince the *Japoneſe*, by ſhewing the Maps of the *Eaſt* and *Weſt Indies*; and the Imprudence of one of theſe Embaſſadors is ſaid to have carried him ſo far, as that on being aſked how his Maſter had acquired ſuch vaſt Territories at ſo great a Diſtance from his hereditary Dominions, he anſwered, by ſending Miſſionaries firſt to convert a Part of the Inhabitants to Chriſtianity, and then ſending Troops to aſſiſt the new Converts in ſhaking off the Yoke of infidel Princes.

The other Circumſtance was the coming of the *Dutch* Ships upon the Coaſt of *Japan*; for theſe People applying themſelves entirely to Commerce, and ſubmitting, for the ſake thereof, to whatever Terms were preſcribed by the *Japoneſe*, gained thereby ſuch a Degree of Confidence with their Princes, that it procured implicit Credit to their Repreſentations, as to the ambitious Deſigns of the *Spaniards* and *Portugueze*. Theſe Remarks will give the Reader ſo eaſy a Key to the political Contrivances for firſt reſtraining the *Portugueze* Trade to a particular Port, and then ſhutting them up as it were in a Priſon during their Stay in that Empire, as in the firſt Chapter of this Work has been largely related, that we need not run here into any Repetitions, but content ourſelves with obſerving, that notwithſtanding the many previous Signs which the *Portugueze* had of the approaching Rupture with the *Japoneſe*, yet were they ſo far from taking ſuch Steps, as in common Prudence they ought to have done, for avoiding ſo great a Miſchief, that on the contrary, they behaved daily worſe and worſe, till the Storm came upon them with ſuch a Force as was not to be reſiſted.

The particular Relation of the Subverſion of Chriſtianity in this Empire will be found in the ſucceeding Volume, when we come to treat of the Deſcription of *Japan*; at preſent we have only to obſerve, that the *Portugueze* have been deprived of this rich Commerce ever ſince the Year 1639, and that all the Attempts they have hitherto made to recover it have proved abſolutely ineffectual, nor is it probable that any they may hereafter make will be attended with any better Succeſs.

23. The Country, or Countries, lying beyond *Japan*, to the North-Eaſt, or North-Weſt, have been always regarded, at leaſt ſince Geography has been tolerably underſtood, as the very Confines of the World, and the Extremities of the Earth, which Countries the *Japoneſe* themſelves called *Jeſo*, or *Jeſſo*, the *Chineſe*, *Yeço*; from whence we have the word *Yeſſo*, or *Yedzo*, by which in the *Engliſh* and *Dutch* Maps they are diſtinguiſhed. The firſt Accounts that were received of theſe Countries were from the *Japoneſe* themſelves, but according to their Skill in ſuch Sciences, extreamly dark and incorrect. They were not able to ſay abſolutely, whether their own Country was an Iſland or not; and as for the Land of *Yeſſo*, they profeſſed the utmoſt Extent of their Knowledge to be, that it belonged to the Prince of *Matſuma*, who was dependent on, and a Tributary to, the Emperor of *Japan*. In the Year 1613, Father *Conſtanzo*, who then preached the Chriſtian Religion in *Japan*, hearing that the Prince of *Matſuma* had ſent to *Japan* for a Phyſician, and that a Convert to Chriſtianity, a Man of good Senſe and quick Parts, was pitched upon to go over in that Qnality, he recommended to him the Care of inſtructing thoſe People, if a favourable Opportunity offered, in the Chriſtian Faith; which Commiſſion the Phyſician executed with ſo much Zeal and Fidelity, that he quickly gave Father *Conſtanzo* a good Account of his Miſſion, aſſuring him, that he had not only made many Converts, but that he found the People in general better inclined to the Chriſtian Religion, than could have been expected.

In 1620, Father *Angelis*, who was them at *Tzugara*, the moſt Northern Part of the Iſland of *Niphon*, to which many Chriſtians had been baniſhed, received Orders there, from his Superior, to go himſelf to *Matſuma*, in order to cultivate the Seeds of Converſion, which the *Japoneſe* Phyſician had ſown, and accordingly thither he went the ſame Year by Sea. He arrived very ſafely in the Port of *Tzugo*, and from thence travelled through very bad Roads to *Matſuma*, where he found a vaſt Number of *Japoneſe*, and amongſt them many Chriſtians. They had been ſettled there but a few Years, and had been drawn thither by the Diſcovery of very rich gold Mines in the Neighbourhood of this City, and Mines (if they may be ſo called) of a very ſingular Kind. There is a great River paſſes by the City of *Matſuma*, immenſely rich in Gold; thoſe who deſire to deal in that Commodity, purchaſe from the Prince ſuch a Part of the River, and then cut a ſemicircular Canal, well ſecured by ſtrong Banks, into which, by Sluices, the River is turned, leaving ſo much of its Channel as the Adventurers have agreed for dry; thence they take the Mud, and by frequently rinſing it obtain vaſt Quantities of Gold-duſt, and ſometimes Pieces of Gold of a conſiderable Bigneſs. When they have finiſhed their Work, and find there is no more Gold to be got, they fill up the Canal, and by that Means force the River back into its old Channel, and in the Space of a Year or two it is found as rich in Gold as ever.

Father *Angelis* informs us, that the Natives of that Country, which we call *Yeſſo*, call it in their own Language *Ainomoxori*, but were able to give but a very indifferent Account of its Extent or Situation. Theſe People were larger, ſtronger, and had much better Complexions than the *Japoneſe*, and wore Beards that reached to their Girdles. They were dreſſed in long Robes of Silk, Cotton, or Linnen, according to their Rank, which were ſet off with abundance of little Ornaments. Their Arms were Bows, Arrows, Lances, and ſhort Swords. In Point of Religion their Notions were very obſcure and confuſed, but the great Objects of their Worſhip were the Sun and Moon. They talk'd likewiſe of an inviſible King of the Mountains, Foreſts, Seas and Rivers, but they did not worſhip him. Their Government was very regular and exact, and themſelves the beſt-natured and beſt-behaved People the Miſſionary had ever ſeen. Their Commerce conſiſted chiefly in dried Fiſh, and in a ſort of Seal-ſkins, which they exchanged for Rice, Cotton, Thread, and other Neceſſaries; for as for Gold and Silver, they made little account of them, but left the Trade in them to the *Japoneze*. On his firſt going over, Father *Angelis* was inclined to believe, that this Country was the ſouthern Part of *Tartary*; but after he had made a longer Stay there, he in ſome meaſure altered his Sentiments, as appears by the following Letter he wrote upon this Subject, which is very curious and entertaining, and is, withal, the utmoſt that can be ſaid on this Subject, from the Lights given us by the *Portugueze*.

" I am at preſent perſuaded, that the Opinion entertained as to the Country of *Yeſſo*'s being an Iſland, is not without Probability, and the Reaſons upon which I go, are theſe: In the firſt Place, it is very certain, that this Country is bounded on the Eaſt, and on the South, by the Sea. On the other Hand, the Land of *Teſſoi*, which is the weſtern Extremity of *Yeſſo*, is likewiſe bounded by the Sea, where the Currents are ſo violent, that tho' there is a Country on the other Side the Strait, within Sight, and where they are able to diſtinguiſh the Horſes feeding, yet hitherto none of the Inhabitants of *Yeſſo* have paſſed over thither, becauſe great Quantities of large Canes are driven with prodigious Violence by thoſe Currents, ſo that if they were to hazard themſelves in their ſmall Boats, they muſt run an apparent Hazard of being overſet and loſt. From hence I conclude, that according to all Appearance *Yeſſo* hath a fourth Sea on the North, which conſequently ſeparates it from *Tartary*. From whence ſhould thoſe impetuous Currents come, but from a Sea to the North of *Yeſſo*, running Eaſt and Weſt, or from Weſt to Eaſt, and diſcharging itſelf to the South, through the Straits, on the Weſt of *Yeſſo*, with ſuch Rapidity, as renders them impaſſable to the People of the Country.

" The ſecond Reaſon is, that the Inhabitants of *Yeſſo* are not under the Dominion of any one Prince, nor have they amongſt them any Chief that has a Tract of Country of any great Conſequence, that is ſubject to him; they are likewiſe far from acknowledging the Supremacy of any Khan of the *Tartars*, or ſeem to be acquainted with that Title, or with any thing of the like Import; but every Family, or at leaſt every little Village, has a Chief who governs it abſolutely, and without acknowledging any Superior, which appears to me a ſtrong Proof, that they are ſeparated by a Sea from all other Countries, ſince if it were otherwiſe, they would undoubtedly be governed as thoſe Countries are. I am ſenſible, that it may be objected againſt the firſt Proof Ioffer, that the Currents of which I am ſpeaking, may poſſibly be occaſioned by the Opening of ſome great River, which diſcharges itſelf into the Sea, ſomewhat farther to the North, and thereby occaſions ſuch an Acceſſion of Water, as in paſſing through thoſe Streights, form ſuch terrible Currents. But after all, I cannot help eſteeming it more reaſonable to believe that this Country is bounded on that Side, as well as on the reſt, by an Arm of the Sea. At leaſt this is the moſt common Opinion, and I remember to have ſeen in *Sicily* an old Map of the World, in which the Land of *Yeſſo* is laid down as an Iſland. As to what the Inhabitants of the Country ſay, I have examined thoſe that came from the Eaſt, and others who came from the Weſt, but found them all alike ignorant of Geography."

Thus far this Miſſionary, who is the only *Portugueze* that has wrote ſenſibly upon this Matter. He does not, however, ſeem to have been acquainted with one Thing, which he might have learned in *Japan*, and that is, that thoſe People diſtinguiſh between the Iſland of *Yeſſo* and *Oku Yeſſo*, that is, the higher or upper *Yeſſo*; from whence it is very plain, that there is both an Iſland and a Continent of *Yeſſo*; but we ſhall have Occaſion to reſume this Subject, when we come to ſpeak of the Diſcoveries made by the *Dutch* on this Side, who were both more capable of making ſuch Diſcoveries, and more induſtrious in making them than the *Portugueze*. It may not be amiſs to obſerve here, that the *Japoneſe* informed the Miſſionaries, that there lay North-Eaſt from their Country, and to the Eaſt of that of *Yeſſo*, two Iſlands, of which the ſmalleſt, and that at the greateſt Diſtance, they call *Yenſima*, that is, the ſilver Iſland; and that which is neareſt their Continent, *Kinſima*, or the golden Iſland; but as they have been always very cautious of explaining themſelves as to the Situation of theſe Countries, ſome Doubts have ariſen, whether there were really any ſuch Iſlands or not.

However, in the Year 1620 a Ship was ſent by Order of *Philip* II. of *Spain*, to diſcover them, but without Succeſs; and the *Dutch* have likewiſe made an Expedition, with the ſame View, to as little Purpoſe. This may ſeem to juſtify the Suppoſition of their being fabulous; but then on the other hand, there are two Circumſtances equally ſtrong, that ſeem to prove the contrary: The firſt is, that there is ſuch a Plenty of Gold and Silver in *Japan*, as cannot be accounted for from the Mines known to be wrought in that Country; the other, that though the Emperors of that Country have granted ſeveral Licences to *Europeans*, and particularly to our Countryman Captain *William Saris*, for making Diſcoveries to the Weſt and North, yet they have always been extremely cautious of permitting any Strangers to examine their Coaſts on the Eaſt.

24. The new *Philippine* Iſlands are a late Diſcovery, of which we have an Account in the Philoſophical Tranſactions, in a Letter from a Miſſionary at *Manilla*, who tells us, that being accidentally at the Town of *Guivam*, in the Iſland of *Sama'*, he there found twenty-nine Palaos or Inhabitants of certain new-diſcovered Iſlands, who were driven thither by the Eaſterly Winds, which blew in thoſe Seas from *December* to *May*. They had run before the Wind for ſeventy Days together, according to their own Relation, without being able to make any Land till they came in Sight of the Town of *Guivam*, an Inhabitant of which being on the Shore, perceived them, and judging from the Make and Size of their Veſſels they were Strangers, and out of their Courſe, took a Piece of Cloth and made them a Signal of entering the Road he directed; to avoid the Shoals and Banks of Sand they would otherwiſe have run upon. Theſe poor People were ſo frightened at the Sight of this Stranger, that they began to put to Sea again; yet the Wind forced them back a ſecond time towards the Shore; when they came near, the *Guivanneſe* made the ſame Signal as before; but ſeeing they would not mind it, but would unavoidably be loſt, he threw himſelf into the Sea, and ſwam to one of the little Veſſels, on purpoſe to bring them ſafe into Shore. He was no ſooner got to them, but the Women with their Children on their Backs, and all that were in that Veſſel, threw themſelves overboard, and ſwam to the other. He ſeeing himſelf alone in the Veſſel, reſolved to follow them, and getting aboard the ſecond, ſhewed them how to avoid the Shoals, and brought them ſafe to Land; in the mean time they ſtood immoveable, and reſigned themſelves up intirely to the Conduct of this Stranger, as ſo many Priſoners.

The Inhabitants of *Guivam* running to Shore, received them very kindly, and brought them Wine and other Proviſions; they eat Cocoas very freely, which are the Fruit of the Palm-trees of this Country. Their Pulp is ſomething like that of Cheſnuts, only that it is more oily, and it ſupplies them with a ſort of ſweet Water, very pleaſant to drink; they gave them Rice boiled in Water, which is eat there and all over *Aſia* as Bread is in *Europe*; they looked on it with Surpize, and taking up ſome Grains of it, threw them on the Ground, imagining them to be Worms; upon bringing them large Roots called *Palavan*, they eat greedily of them. In the mean time they brought them two Women that had formerly been driven on Shore on the Coaſt of *Guivam*, and who underſtood a little of the Language of this Country; one of the Women found among theſe Strangers one of her Relations, and, as ſoon as they knew each other, they fell a weeping. The Inhabitants of *Guivam* ſtrove with each other who ſhould entertain theſe Strangers at their Houſes, and furniſh them with Proviſions and Cloaths, and other Neceſſaries. Of thirty-five Perſons that embarked there remained but thirty, five dying through Want of Proviſions and other Hardſhips, in ſo long a Voyage; and ſome time after their Arrival another died.

They related, that their Country conſiſted of thirty-two Iſlands, which cannot be far diſtant from the *Mariann*s, as may be judged by the Smallneſs of their Veſſels, and the Form of their Sails, which are very like thoſe of the *Marianeſe*. It is likely that theſe Iſlands may be in eleven or twelve Degrees of North Latitude, more Southerly than the *Mariann*s, and under the ſame Degree of Longitude as *Guivam*; for, ſailing directly from Eaſt to Weſt, they came aſhore at this Town. It is likewiſe probable, that it was one of theſe Iſlands that was diſcovered ſome Years ago at a Diſtance, when a Ship belonging to the *Philippines* leaving the common Courſe, which is from Eaſt to Weſt, under the third Degree of Longitude, and running farther to the South-Eaſt, firſt perceived it. Some called this Iſland *Carolina* Iſland from *Charles* II. of *Spain*, and others the Iſland of Saint *Barnaby*, becauſe diſcovered on that Apoſtle's Day; and it was again ſeen in 1695, by another Veſſel, that a Storm had driven out of its Courſe in going from hence to *Mariann*s. Theſe Strangers added, that of the thirty-two Iſlands three of them were uninhabited, unleſs with Wild-fowl, but all the reſt were well peopled. Upon aſking them the Number of Inhabitants, they pointed to a Heap of Sand, to ſhew that their Number was very great. The Names of theſe Iſlands are *Pais Lamulututup*, *Saraon*, *Yaropie*, *Valayyay*, &c.

The three Iſlands that have nothing on them but Wild-fowl, are *Piculet*, *Hulatan*, *Pagian*. The moſt conſiderable of all theſe Iſlands is *Lamurec*, where the King of the Country keeps his Court, and to him the Governors of all the other Iſlands are ſubject. Among thoſe Strangers, there was one of the Governors and his Wife who was the King's Daughter; though they went half naked, yet their Carriage, and a peculiar Air of Greatneſs, ſufficiently diſtinguiſhed them from the reſt. The Huſband had his Body painted all over with certain Lines, in ſuch a manner, that they formed ſeveral Figures: The reſt of the People were alſo painted in like manner more or leſs. The Women and Children were not painted at all; there were nineteen Men and ten Women of different Ages; the Make and Colour of their Faces were much like that of the *Philippineſe*. The Men had no other ſort of Cloaths than a Saſh wrapped ſeveral times round their Bodies, and covering their Reins and Thighs; they wore on their Shoulders about an Ell and an Half of coarſe Linen Cloth, like a Cowl, tied before, and hanging looſe behind. Both Men and Women dreſſed much alike, only that the Women had a Piece of Cloth ſomewhat longer, that hung from their Waiſt down to their Knees. Their Language is different from that of the *Philippineſe* and *Marianeſe*; their Manner of pronouncing comes neareſt that of the *Arabs*, and ſome who underſtood the Language obſerved the Women that ſeemed the moſt conſiderable amongſt them, had ſeveral Rings and Necklaces of Tortoiſe-ſhells, called here *Carey*; and others made of a Subſtance much like Ambergris, but not tranſparent. The Manner of their living at Sea, which was for ſeventy Days together, continually driven by the Wind, was thus: They caſt out a ſort of Net made of a great many Twigs of Trees tied together, with a large Mouth for the Fiſh to enter in at, and terminating in a Point, to prevent their getting out. The Fiſh they took after this manner was all the Nouriſhment they had, and Rain Water ſaved in Cocoa-ſhells, which is the Fruit of the Palm-trees, and of the Figure and Size of a Human Skull.

They have no Cows in their Iſlands, and at the Sight of them they ran away, as they did likewiſe at the Barking of a Dog; neither have they Cats, Stags, Horſes, nor, in general, any Quadruped, nor any Fowl, but Sea-fowl, excepting Hens, which they breed up, but never eat their Eggs. Notwithſtanding this their Want of every thing, they are very chearful, and contented with their Condition. Their Songs and Dances are exact and regular; when they ſing, it is all in Concert, every one obſerving the ſame Humour and Geſtures, which makes it very agreeable. They were ſurpriſed at the Government, Politeneſs, and Manners of the *Europeans*. They admired not only the Solemnities and Ceremonies of the Church in celebrating the Divine Service, but alſo the Muſick, Inſtruments, Dances, and Arms of the *Spaniards*, and Gunpowder was what ſurpriſed them moſt. They wondered at the Whiteneſs of the *Europeans*, in reſpect of whom they were perfectly tawney, as well as the Inhabitants of this Country. It did not then appear that they had any Knowledge either of a Deity, or that they worſhipped Idols. Their Life is perfectly ſavage, minding nothing but eating and drinking, in which they obſerve no ſet Time or Place, when hungry or dry, and when they can find any thing to ſatisfy Nature: Yet they eat but a little at a Time, and never enough to ſatisfy for a whole Day. They ſhew much Reſpect and Deference for their King, and the Governors of Towns, and obey them very punctually. Their Civility and Reſpect conſiſts in taking hold of the Hand or Foot of the Perſon they would honour, and gently rubbing his Face.

Amongſt their Utenſils they had ſome Saws, not made of Iron, but of a large Shell, called here Toulobo, which they rub and whet upon a certain kind of Stone. They were ſurpriſed to ſee the Number of Carpenters Tools uſed in building a Merchant-Ship at *Guivam*. They have no Metals in their Country. The Father-Miſſionary made each of them a Preſent of a large Piece of Iron, which they received with as much Joy as if it had been ſo much Gold; and for fear it ſhould be ſtole from them, they laid it under their Heads, when they went to ſleep. They have no other Arms than Lances or Darts, made of human Bones, very well ſharpened, and fixed on. They are naturally very peaceable; but if any Quarrel happens amongſt them, it is decided with ſome fiſty Cuffs on the Head, which yet very rarely happens; for when they would come to a cloſe Fight, they ſeparate them, and they are ſoon reconciled again. They are not dull and heavy, but, on the contrary, have a great deal of Livelineſs and Courage. They are not ſo luſty as the Inhabitants of the *Mariann*s; yet they are well-proportioned, and ſhaped much like thoſe of the *Philippines*: Both the Men and Women let their Hair grow long, and hang looſe on their Shoulders. When they underſtood that they were to be conducted to the Preſence of the Father-Miſſionary, they painted their Bodies all over with a yellow Colour, which is looked upon by them as a great Ornament.

The oldeſt of theſe Strangers was once before caſt on the Coaſt of *Caragan*. They are very expert at diving, and they ſaid, that in fiſhing they took two large Pearls in their Shells, but threw them into the Sea again, not knowing their Value. The New *Philippines* are eighty-ſeven in Number, and form one of the fineſt *Archipelago's* in the Eaſt, being encloſed on the North and South between the Line and the Tropic of *Cancer*; on the Eaſt and Weſt between the *Mariann*s and *Philippines*. The Natives of the Iſlands never offer any Violence to each other: Murder and Homicide are unknown to them; and they have a Proverb amongſt them, *viz.* That one Man never kills another. It is probable theſe Iſlands may abound in Gold, Amber, and Drugs, being ſituated nearly under the ſame Degree of Longitude as the *Moluccas*, whence we have Nutmegs, and other valuable Spices.

Though theſe People ſeem barbarous, yet they have amongſt them a ſort of Politeneſs and regular Government; every Iſland obeys his Chief, who is himſelf ſubject to the King of the Country. This Prince holds his Court in the Iſland of *Falu*, called likewiſe *Lamurec*. Though theſe Iſlands were never heard of in *Europe* till within theſe very few Years, it is a long Time ſince, from the high Mountains of *Samal*, thick Smokes were diſcovered on that Coaſt, which commonly happen in Summer, when theſe Iſlanders ſet Fire to their Woods and Foreſts, to clear up the Ground: Theſe Smokes the Fiſhermen of *Mindanao*, and other Iſlands, had alſo obſerved when far out at Sea.

There have been ſome Objections made to this Account by ſome of our Writers, who have reported it too ſuccinctly, and thereby embarraſſed themſelves by confounding their own Senſe of Things with that of their Authors. It has, for example, been queſtioned, whether there be not Inconſiſtencies in theſe Accounts of the *Indians?* It is ſuggeſted that, as no *European* ever was in that Country, ſo the Belief of ſuch an *Archipelago* of Iſlands cannot be eſtabliſhed on any rational Foundation; and that there is a viſible Abſurdity in the *Indians* being ſeventy Days in paſſing from a Country, the Smoak of which was ſeen from the Mountains of *Mindano*. This Humour of Reaſoning away Facts, is ſo ſtrong at preſent, that though I have already taken up more Room than I intended, yet I cannot forbear adding another Relation, with reſpect to theſe Iſlands, of a much later Date, *viz.* in the Year 1710, becauſe I think it will put this Matter out of Diſpute, and becauſe, hitherto, it has never appeared in our Language.

“ The Veſſel in which we embarked, in order to proſecute the Diſcovery of the Iſlands of *Palaos*, was called the *Holy Trinity*, and her Crew conſiſted of eighty-ſix Perſons: She was commanded by Serjeant-Major Don *Francis Padilla*, who carried with him the Reverend Fathers *Duberon* and *Cortil*, Jeſuits, accompanied by Brother *Stephen Baudin*, who were made Choice of to propagate the Faith among theſe Iſlanders. It was on the Fourteenth of *November*, in the Year 1710, that I ſailed from the *Philippine* Iſlands, in order to find the Iſlands of *Palaos*, ſuppoſing my Departure to be from the Lat. of 13° 9′, and from the Long. of 144° 22′, I navigated fifteen Days, as I have marked in my Chart; and, on the Thirtieth of *November*, we diſcovered Land to the North-Eaſt 3° towards the North, having obſerved 4 or 5° Variation to the Eaſt in this Courſe, the Land lying from us about three Leagues.

“ We made Sail again in order to approach nearer, when it appeared, that there were two Iſlands, which Father *Duberon* thought fit to call the Iſlands of *St. Andrew*, becauſe, on the Day that we diſcovered them, the Church celebrated the Feaſt of that great Apoſtle. When we were very near theſe Iſlands, we perceived a Boat coming to us, in which were ſome of the Inhabitants, who cried out, when they were within Hearing, *Mapia*, *Mapia*, which is as much as ſo ſay, Good People. A *Palaos*, who had been baptized at *Manila*, and whom we carried with us, ſhewed himſelf then, and ſpoke to them: As ſoon as they came on Board, they informed us, that theſe Iſlands were called *Sonſorol*, and that they were Part of the *Archipelago* we ſought for. They expreſſed a great deal of Satisfaction and Joy at the Sight of us, which they teſtified by kiſſing our Hands, and embracing us.

“ Theſe People are extremely well ſhaped, and of a very robuſt Conſtitution; they were naked, except that about their Middle they wore a Piece of Mat. Their Hair was curled; they had very little Beard, and, to defend themſelves from the Rain, they wore upon their Shoulders a kind of Mantle, made of a thick ſort of Mat, and, on their Heads, Hats of the ſame ſort of Stuff, round which they ſtuck Birds Feathers upright. They were extremely ſurprized to ſee our People ſmoke Tobacco: and, of all things, ſeemed moſt to eſteem Iron; and whenever they ſaw it, they gazed on it in ſuch a manner as viſibly betrayed how much they coveted it: And in caſe we did not underſtand their dumb Signs, they made no Difficulty of earneſtly and frequently demanding it. In the Afternoon there came off two other Boats, in each of which there were eight Men; as ſoon as they came near us, they began to ſing, beating Time with their Hands upon their Thighs. When they were on Board, ſome of them began to meaſure the Length of the Ship, taking it for granted, that it was made of a ſingle Tree, while others counted our Number of Men. They brought us ſome Loaves, ſome Fiſh, and ſome Herbs.

“ Theſe Iſlands were all covered with Trees to the Sea-Shore. Their Boats appeared to us very neatly made, in which they made uſe of Smack-Sails, having a Lee-Board on the other Side the Boat, in order to preſerve it from going over. We deſired them to ſhew us which was the Courſe to the largeſt of their Iſlands, or *Panloque*, and they pointed to the N. N. E. They added, that to the S. S. W. and to the S. S. E. there lay two other Iſlands, one of which was called *Merieres*, and the other *Poulo*. When we were very near the Land, I ſent my under Pilot to ſound, that I might bring the Ships to an Anchor. The Shallop being arrived within a quarter of a League of the Iſland, there came off three Boats full of People, and ſome of them going on Board our Shallop, one of the *Indians* took notice there of a Sabre, which, after he had, for ſome time, conſidered attentively, he jumped into the Sea, and took it with him. My under Pilot reported, at his Return, that there was no fit Ground for Anchorage, inaſmuch as there was a great Depth of Water, and a rocky Bottom all along the Shore. I afterwards ſent another Man on the ſame Errand, who quickly returned with the ſame Anſwer.

“ All this Time I had made a ſhift, by keeping under Sail, to ſtem the Current which ran very ſtrongly to the South-Eaſt, but the Wind failing in the Evening, we began to drive at large; the *Indians* then got into their Boats to go aſhore. Our Miſſionaries laboured all they could to keep them on Board, but could not prevail upon them by any Means. They talked with them, however, ſome Time, on the firſt Principles of our Religion, and taught them to pronounce plainly the holy Names *Jeſus* and *Maria*. We aſked them ſeveral Queſtions as to the Bigneſs of the Iſland, and the Number of its Inhabitants. They anſwered, that the Iſland was about two Leagues and a half in Circumference, and that very probably there might be eight hundred People, who lived chiefly on Cocoa, Fiſh and Salads. I obſerved the Height of the Sun at Noon, and found, that we were in the Latitude of five Degrees ſixteen Minutes North, the Variation of the Compaſs at Sunriſe being about 5° to the N. E.

“ The Currents carrying us away to the South-Eaſt with great Violence, we were not able to recover the Land till the fourth, about Six in the Morning. We then found ourſelves at the Mouth of the Channel, betwixt the two Iſlands. I then ſent the Shallop once more to look for an Anchorage; it was to no Purpoſe, for about 4 in the Afternoon they returned with an Account, that the Coaſt was an entire Rock, and that it was to no Purpoſe to let go an Anchor. On the 5th, about 7 in the Morning, the two Fathers came to a Reſolution of going aſhore, and ſetting up a Croſs. Don *Padilla*, and myſelf, repreſented to them the Dangers to which they would be expoſed, and how much they had to fear from theſe Iſlanders, with whoſe Temper we were ſo little acquainted, and how much they might be embarraſſed, in caſe the Currents carried us to ſuch a Diſtance as might put it out of our Power to ſend a Boat to bring them off, or to afford them any Aſſiſtance. Their Zeal was ſo warm, that they made little Account of theſe Difficulties, but perſiſted firmly in their Reſolution, in ſpite of all we could ſay. At laſt, therefore, leaving Brother *Baudin* on Board the Ship, they went into the Shallop, taking with them the Quarter-Maſter of the Veſſel, and the Enſign of the Land Forces we had on Board: They likewiſe carried with them the *Palaos* I have before mentioned, together with his Wife and Children.

“ The two Miſſionaries being gone, we kept near the Iſland all Day, by the Favour of the Wind, notwithſtanding the Force of the Current; but towards the Evening, the Wind ſunk, and we were driven out to Sea. We put out Lights from the Time it was dark, on the Bolt-ſprit, and alſo on the Mizen-maſt, that they might ſee where we were. During the Night, we had ſome Guſts of Wind from the North-Eaſt, the North-Weſt, the Weſt and South-Eaſt, ſo that in the Morning at Break of Day, we found the largeſt of the two Iſlands bore from us, N. N. W. diſtant about 8 Leagues. We endeavoured from that Time to the 9th at Noon, to get as near the Land as we could, but without Effect; nay, the Current drove us ſtill farther and farther, ſo that I found myſelf in the Latitude of 5° 28′ N.

“ We then held a Council of War, in order to conſider what Courſe we ſhould take. Don *Padilla*, the Lay-Jeſuit, my Sub Pilot, and myſelf, were of Opinion, that the wiſeſt thing we could do was to ſteer for the Iſland of *Panloque*, the largeſt of theſe Iſles, and which was diſtant from that we had quitted about fifty Leagues. It was about nine o'Clock in the Morning of the 11th, that we diſcovered that Iſland; at Noon we were in the Latitude of 7° 14′ North, the Land being about a League off. At Four in the Afternoon came off four Boats, which kept at the Diſtance of about half a Cable's Length, and were ſoon after followed by two other Boats; at laſt ſome of the People jumped over-board into the Sea, and ſwam on Board of us, with Intent, as it appeared, to ſteal any thing they could lay their Hands on. One of them laid hold of an Iron Chain, and pulled at it, in hopes of breaking it: another catched hold of a Hammock that was hung out to dry, and a third was endeavouring to get in at a Port-hole. Don *Padilla* conſidering the Behaviour of theſe People, thought proper to put the Soldiers under Arms, there being at leaſt fourſcore Men in theſe ſix Boats, and at the ſame time made a Sign to the Iſlanders to keep at a Diſtance.

“ Upon this they began to row towards the Shore; but at their going off, let fly a Shower of Arrows, four of which fell on Board our Ship. Don *Padilla* then thought fit to order a general Diſcharge of our Fire-Arms; upon which the *Indians* jumped over-board, leaving their Veſſels, and ſwimming towards the Shore at a prodigious Rate; but when they found that we gave over firing, they returned to their Boats, reimbarqued, and made for the Land as faſt as they were able. Theſe *Indians* were all of them naked, and ſome had painted their Bodies of different Colours. Their Skin is generally of an Olive Colour; but ſome were darker ſkinned than others; they had nothing with them that we ſaw, but a few Cocoas. On the 12th we had little or no Wind, ſo that it was as much as we could do to continue in our Station, which we did all that Day without approaching near the Land. About four in the Afternoon there came off two Boats, who made Signs, and ſpoke to us; but as we had no Interpreter, we were not able to learn what they ſaid. About Nine at Night the Wind blew South-South-Eaſt, and the Currents ſetting ſtrongly to the North, carried us away at a great Rate. I then thought the moſt prudent thing I could do was to ſail between two of theſe Iſlands, the Chanel being very open and fair, and about a League over. On the 13th, being to the Weſt of theſe two Iſlands, we held a Council, in order to conſider what Meaſures we were to take, and it was very ſoon reſolved to bear away for *Sonſoral*, in order to learn ſome News of our Miſſionaries, and of our Shallop. On the 18th, I found myſelf abreaſt of that Iſland. We lay there the whole Day without ſo much as ſeeing a Boat, though we were within Cannon-ſhot of the Shore. We coaſted round the Weſt Side of the Iſland till the 20th, when a high Guſt of Wind from the South-Eaſt drove us out to Sea.

“ On the 21ſt we again drew near the Coaſt, and by Two in the Afternoon were within three Quarters of a League of the Shore, without perceiving any Boat. In the Evening we were driven to Sea again by an Eaſt-North-Eaſt Wind, upon which we held another Council, in which, after mature Deliberation on the Circumſtances we were in, without a Shallop, in ſome want of Water, without knowing where to get any, it was reſolved to return to *Manila*, which we did with ſome Difficulty, being forced to make the Tour of *Mindanao*, carrying nothing back but the melancholy News of the Loſs of the two worthy Fathers we carried out.”

It appears clearly from this Relation, that it was penned by the Captain of the Veſſel, though he has not thought fit to inform us of his Name. Better Evidence than this of there being ſuch an Archipelago cannot be deſired, tho' at the ſame time it muſt be confeſſed, that this Account gives us a very different Notion of thoſe People from that ſuggeſted by the former Narratives. In 1711 another Attempt was made of this kind, which ended as unluckily, ſome of the Jeſuits intended for the Miſſion dying at Sea, and others periſhing in theſe Iſlands, as very probably thoſe did that are mentioned in the foregoing Voyages.

25. It has been generally believed, that theſe Iſlands of *Palaos* are near the *Philippines*, and the ſame with thoſe which were diſcovered by a *Spaniſh* Captain in the Year 1686, and who in Honour of *Charles* the Second of *Spain*, called them the *Caroline* Iſlands; but I think theſe lay more to the South. On the 19th, and on the 21ſt of *June* 1720, there arrived in the Iſland of *Guam* the largeſt of the Archipelago called the *Marianne* Iſlands, two Boats full of *Indians*, who ſaid they embarqued from an Iſland called *Sareſiop*, in order to go to another at a ſmall Diſtance from it called *Uly*, and were driven thither by a Storm. A Veſſel was fitted out to carry them home, and from the Accounts given by thoſe who were on Board that Veſſel, it very clearly appeared, that the laſt named Iſland was one of thoſe called the *Caroline* Iſlands, lying in the Latitude of 6° North. It is ſaid, that theſe Iſlands belong to a large Archipelago divided like the *Maldives* into five Provinces, and inhabited by various Nations of very different Colours: Some Negroes, ſuppoſed to be of the ſame Race with the Inhabitants of *New Guinea*, others tawny, like the *Indians* in the *Philippines*, and a third ſort perfectly white, ſuppoſed to be the Deſcendants of certain *Spaniards*, who in the Year 1566 were ſet on Shore by their Commanders for Mutiny, in a Voyage from *New Spain* to the *Philippines*.

While theſe People were on Shore at *Guam*, they ſaw ſome Silver Plate, and after conſidering it attentively, declared that they had a great deal of that Metal in their Iſlands, which gave Occaſion for the fitting out ſome Ships from *Guam*, for the Diſcovery of thoſe Iſlands, in the Year 1722; but what the Fate of that Expedition was, is not come to our Knowledge. It is certain, that a very great Diſcovery might be made on this Side, becauſe, from what is already known, it is very clear, that there is a continued Chain of Iſlands in the Longitude of about 160°; from the Line, or rather from the Continent of *New Guiney*, which lies in the Latitude of 8° S. to the Iſlands, that make a Part of the Archipelago of *Japan*, in the Latitude of 32° N. and as it is certain, that the Inhabitants of the laſt mentioned Archipelago acknowledge they received great Quantities of Silver from an Iſland which lies to the Eaſt of them, it is not at all improbable, that many rich Metals might be found in ſome of the many Iſlands which form the Chain before mentioned.

But this, however, is not the Diſcovery that I mean, and therefore I ſhall explain myſelf a little farther. If a Settlement was made on any of theſe Iſlands, or in any Iſland to the Eaſt of them, it might afford an Opportunity of viſiting the great Continent, if in Truth there be any Continent between *America* and *Aſia*, or, perhaps, it might lead to the Diſcovery of ſome conſiderable Iſlands between *America* and *Aſia*, which, from their Situation, might well be expected to abound in rich Commodities, but particularly in ſilver Mines, ſince it is confeſſed, that the richeſt of thoſe hitherto diſcovered are in the Northern Parts of *Japan* and of *America*. If it ſhould be objected, that the rich ſilver Mines of *Potoſi* lie in *South America*, I anſwer to that, this makes rather for than againſt my Opinion, becauſe they are very near the ſame Degree of South Latitude that the rich Mines of *New Mexico* are to the N. that is, a little within forty Degrees. But this is not all, for if any ſuch Iſlands could be diſcovered, they would afford us an Opportunity of ſearching with great Eaſe for a Paſſage either to the N. E. or N. W. which is a Point of very great Importance, and as ſuch, has been treated very judiciouſly by Mr. *Dobbs*, in ſome of his late Pieces, which, ſooner or later, may very probably produce ſome ſuch Diſcovery.

We have now gone through all that we propoſed with reſpect to this Part of our Subject, and the Lights given us by the Expeditions of the *Portugueze* and *Spaniards* on this Side. It next remains to ſhew how that prodigious Power which thoſe Nations had acquired in the Eaſt, crumbled, and broke to pieces, notwithſtanding the many Advantages they had for preſerving it; and what ſtill remains in theſe *Indies* under the Dominions of the Crown of *Portugal*: Which, when we have performed, the Reader will have a much more compleat Hiſtory of the *Portugueze Indies*, and that too in a much narrower Compaſs than is any where elſe to be met with. In treating of this Subject, I have, to the utmoſt of my Power, laboured to draw together ſuch Circumſtances as were moſt likely to contribute to the Reader's Information, and to connect, with the greateſt Propriety, the ancient and modern Commerce in this Part of the World; and, at the ſame time, I have been very careful to omit nothing that might entertain or divert him. As to the particular Memoirs of the *Portugueze* Governors, their Diſputes with the *Indian* Princes, and with each other, they would have ſwelled this Section to an enormous Length to a very little Purpoſe; and beſides, the Reader will meet with enough on this Head in other Places. I ſhall purſue the ſame Method in the ſubſequent Articles, and ſhall endeavour to point out briefly and truly the Cauſes of that ſtrange Revolution which has happened in the *Portugueze* Trade; the rather, becauſe I am convinced the ſame Cauſes will produce like Effects, in regard to the Trade of all other Nations.

26. The Care taken by the *Portugueſe* to eſtabliſh themſelves firmly in all the principal Ports of the *Indies*, was of great Conſequence to them, conſidering the Circumſtances under which they began their Commerce in theſe Parts; for at that Time the *Indian* Princes were engaged in cruel Wars againſt each other, and the *Mohammedans* taking Advantage of this War, endeavouring to make themſelves Maſters of every Country in which they were permitted to trade; ſo that it muſt be admitted, the *Portugueze* had, at firſt, ſome Reaſon for making Uſe of Arms, and inſiſting on a Fortreſs where-ever they eſtabliſhed a Factory, becauſe the one was neceſſary for the Security of the other; but in this they were blameable, that they affected to govern with an abſolute and uncontroulable Power every Country into which they came, inſtead of cheriſhing and ſupporting the *Indians*, as they might have done, to their own great Profit, as well as that of thoſe unhappy People, who, from their own Diſſentions and ill Management, became the Prey of every new Invader.

If the *Portugueze* had taken this Step, they had undoubtedly ſecured this rich Commerce to themſelves; whereas by their Tyranny they made the Inhabitants weary of them to the laſt Degree, and ready, whenever an Opportunity offered, to change their Maſters. It muſt, however, be allowed, that the Method they purſued ſerved to gratify their Vanity exceedingly, inaſmuch as for above a Century they governed the *Indies* at their Will, and were the ſole Lords of that rich and extenſive Trade, none of the *Indian* Nations being allowed to carry on any Trade at all but by their Permiſſion, and under the Sanction of their Paſſports. They carried this Matter ſtill farther; for with reſpect to the richeſt Commodities, they reſerved the Privilege of dealing in them to their own Subjects entirely, ſuch as in the Cinnamon of *Ceylon*, the wild Cinnamon of *Cochin*, Ginger, Iron, Steel, Lead, Tin, Copper, Planks, Timber for building, all Sorts of Arms, Honey, and Pepper. Theſe Regulations, both with reſpect to Paſſports and reſerved Commodities, together with a Power of viſiting ſuch Ships as put into any of the Ports under their immediate Dominion, continued in Force for a long Series of Time, and was not totally aboliſhed till the Year 1678, which was One hundred and fourſcore Years after their firſt Eſtabliſhment in thoſe Parts.

During the beſt Part of this Time, they diſpoſed, as the ſupreme Lords of *India*, of all the rich Commodities it afforded, ſending home annually fifteen or twenty large Ships laden with the moſt precious Merchandize of the Eaſt, excluſive of the Profits they made of their Commerce in the *Indies* themſelves, and the adjacent Coaſts of *Africa*, viz. to *China*, *Japan*, *Perſia*, *Arabia*, *Melinda*, *Moſambique*, and *Sofala*. *Liſbon* became, by this Means, the greateſt Port for Trade in *Europe*, to which the Ships of all Nations reſorted for the Commodities and Manufactures of theſe diſtant Countries, the beſt Part of which were paid for in Gold and Silver, and, for the reſt, the moſt valuable Products of theſe Nations were exchanged; ſo that the whole of this Commerce was in the Hands of the *Portugueſe*, who ſet whatever Price they thought fit upon what they imported, and ſold at exceſſives Rates to other *Europeans*, what they had purchaſed in the *Indies* for coarſe Stuffs, Needles, Knives, Glaſs-Ware, and other Things of very little Value. In conſequence of which, they became, by far, the richeſt trading Nation, and, at the ſame Time, the moſt potent maritime Power in this Part of the World; and ſo for a long Time they might have continued, if from their own Miſtakes, and the bad Uſe they made of their Power and Riches, they had not excited other Nations to a Reſolution of taking, at all Events, this rich Commerce out of their Hands; a Point that it will become every Nation to conſider, that finds itſelf in the like Circumſtances; for Trade is not to be conſtrained or monopolized: And though the contrary of this may, for ſome Time, appear true, yet ſooner or later every Nation that acts as the *Portugueze* did, will be ſenſible of the ſame Effects which happened to them in the *Indies*.

27. It was towards the latter End of the ſixteenth Century that the *Engliſh* and *Dutch* began, as we have before ſhewn, to interfere with the *Portugueſe* in theſe Parts, but they very ſoon, by the Aſſiſtance of the Natives, took from them the moſt conſiderable Places they poſſeſſed, and ſome of them they abandoned themſelves. It would take up a great deal of Room, and perhaps anſwer the Purpoſe but indifferently, if we ſhould attempt to give a large Hiſtory of the Manner in which theſe Places were reduced, and therefore we ſhall rather take them in the Courſe of their Situation, by which the Reader will clearly perceive how the Empire of this Nation in the Eaſt was broken and diſſolved [q].

We have already ſhewn how the *Portugueze* became Maſters of *Ormuz* on the Coaſt of *Perſia*; which Settlement they greatly improved, though the Iſland itſelf is one of the moſt uncomfortable Places in the World, the Country being without Water, and ſituated in a Climate where the Heats are in a manner intolerable: Yet in ſpite of all theſe Difficulties the *Portugueze* built there a very fine Town, in which the Streets were ſtrait and regular, their Houſes very high, finely adorned without, and within richly furniſhed, their Exchange rich and beautiful, their Churches ſplendid, and their Caſtle regular, well fortified, and excellently provided with Artillery. *Shah Abbas*, when Monarch of *Perſia*, had an earneſt Deſire to rid himſelf of thoſe ill Neighbours; but he wanted a maritime Force ſufficient to accompliſh his Deſign, and therefore he applied himſelf to the *Engliſh*, who had likewiſe ſuffered much by the Pride and Avarice of the *Portugueze*, and by their Aſſiſtance Part of his Forces were tranſported into the Iſland of *Ormuz*, which was attacked both by Land and Sea on the 20th of *January* 1622. The Defendants behaved with great Bravery, and good Conduct, and made a noble Reſiſtance; but the *Engliſh* having deſtroyed their Fleet, which conſiſted of five Galleons and twenty-five Frigates, and having alſo ſprung a Mine which opened a fair Paſſage into the Caſtle, the Garriſon thought fit, about the Middle of *April*, to ſurrender; which ſet all the neighbouring Coaſts at Liberty, and deſtroyed the Power of the *Portugueze* on that Side.

The rich City of *Surat*, formerly a Place of the greateſt Trade in the *Indies*, ſuffered ſeverely from the *Portugueze*, who burnt it down to the Ground on purpoſe to favour the Commerce of their own City of *Diu*, which ſtands at the Entry of the Gulph of *Cambaya*, and which they had rendered one of the ſtrongeſt and fineſt Places in the Eaſt, keeping the Monarch of that Country in the moſt abſolute

---

[q] If we had purſued a ſtrict chronological Method in relating the Loſs of the Settlements made by this Nation in the *Eaſt-Indies*, we muſt have ſtarted from one Part of this Country to another, which would have occaſioned great Confuſion, without yielding any conſiderable Advantage; whereas the Method we have now taken by proceeding from Weſt to Eaſt, will ſhew the Reader, as he goes along, how theſe Settlements were loſt in the very ſame Order in which we have before ſhewn they were acquired.

Subjection. But notwithſtanding their Policy in this reſpect, and that they ſtill remained Maſters of *Diu*[1], yet the *Indian* Princes in the Neighbourhood trade freely with all *Europeans*, and *Surat*, which they took ſo much Pains to deſtroy in 1520, is now in as flouriſhing a Condition as ever, and the *Portugueze* are almoſt the only Nation that are not benefited by its Traffick. On this Coaſt they were poſſeſſed of ſeveral ſtrong Places down to *Goa*; of theſe *Daman* is ſtill in their Hands, and is a Place of pretty good Trade. *Baçaim* is lately fallen into the Hands of the *Indians*. *Bombay* they yielded to the *Engliſh* on the Marriage of Queen *Catherine* with King *Charles* II. and has continued in our Hands ever ſince. From *Goa* to Cape *Comorin* they had alſo very conſiderable Settlements, of moſt of which they have been diſpoſſeſſed by the *Dutch*, who in the Year 1663 becoming Maſters of *Cranganor*, *Cochin*, and *Coulan*, ſoon after deprived them of *Cananor*, which was the firſt Place they had ſettled at; and thus we ſee the State of their Power greatly reduced on the Coaſt of *Malabar*. Doubling this famous Cape, and proceeding along the Coaſt of *Coromandel*, we meet firſt with the Port and Fortreſs of *Nagapatan*, which, when the *Portugueze* came firſt into the *Indies*, was no more than a Village; but they conſidering the Importance of the Place, fortified it with great Care, and rendered it in every reſpect very conſiderable; but after the *Dutch* had deprived them of the Iſland of *Ceylon*, they did not long let them reſt here, but by the Aſſiſtance of an *Indian* Prince, beſieged and became Maſters of that Place in 1658.

From thence all along the Coaſt, quite up to *Bengal*, the *Portugueze* have loſt all Power; and as for Settlements they had none of any great Conſequence to loſe, having in the Time of their greateſt Power contented themſelves with a ſmall Eſtabliſhment at *Meliapour*, or *St. Thomas*, reſtraining all the reſt of the Coaſt by their Squadrons, which were continually cruizing in the Bay of *Bengal*. On the oppoſite Side of the Gulph the *Portugueze* had once very great Power in the Kingdom of *Pegu*, in conſequence of their aſſiſting the Monarch of that Country againſt the King of *Siam*, who had invaded his Territories, and would very probably have made him his Tributary, if a Body of *Portugueze* had not come to his Aſſiſtance, by whom he was enabled not only to defend himſelf effectually againſt his Enemy, but even to purſue him into his own Country.

It is very eaſy to diſcern what mighty Advantages might have accrued to the *Portugueze* from this favourable Turn, if they had known how to improve it; but we learn from a late Author, that what might have turned ſo much to their Benefit, proved, by their own ill Management, the Cauſe of their Ruin, and that in a very ſhort Space of Time. The King of *Pegu*, it ſeems, was ſo ſenſible of the Service they had done him, in driving the King of *Siam* out of his Country, that in pure Gratitude, he made one *Senhor Thomas Pereyra*, who commanded the *Portugueze* in the War, Generaliſſimo of all his Forces, which Preferment made the *Portugueze* ſo inſolent, that in a few Years they became intolerable to all Ranks and Degrees of Perſons in *Pegu*. Both Kings grew tired of War, but both were too proud to make Advances towards Peace, ſo that for many Years they had Skirmiſhes with ſmall Parties, though not ſet Battles; and where-ever the *Portugueze* Arms went, they had Victory to accompany them. The King of *Pegu*, to have his Forces nearer the Borders of *Siam*, ſettled his Court at *Martavan*, and kept the *Portugueze* near him, to be ready upon all Occaſions, either to repel or aſſault the *Siam* Forces, as Opportunity ſerved; and *Thomas Pereyra* was the great Favourite at Court: He had his Elephants of State, and a Guard of his own Countrymen to attend him.

One Day, as he was coming from Court in State, on a large Elephant, towards his own Palace, he happened to hear Muſick in a Burgher's Houſe, whoſe Daughter being a very beautiful Virgin, had been married that Morning to a young Man of that Neighbourhood. The General went to the Houſe, wiſhed them Joy, and deſired to ſee the Bride. The Parents took the General's Viſit for a great Honour done them, and brought their Daughter to his Elephant's Side. He being ſmitten with her Beauty, ordered his Guard to ſeize her, and carry her to his Houſe. His Orders were but too readily obeyed, and the poor Bridegroom, not able to bear his Loſs, cut his own Throat; and the diſconſolate Parents rent their Cloaths, and went crying through the Streets towards the King's Palace, imploring their Countrymen to avenge them on the inſolent *Portugueze*, the common Oppreſſors of their Country. Crowds of People came from all Parts of the City to hear and ſee the Tragedy; their Numbers grew ſo great that the Streets were hardly large enough for them, and their Noiſe ſo loud that it reached the King's Ears, who ſent to know the Cauſe of their Uproar. The Meſſenger returning, acquainted the King with what had been tranſacted, and he, to appeaſe the Tumult, ſent them Word, that he would puniſh the Criminal, and accordingly ſent for his General: But he made an Excuſe, that he was ſo much out of Order that he could not wait on his Majeſty till he was better; which Anſwer ſo provoked the King, that he ordered the whole Nation to take up Arms, and to make a general Maſſacre of the *Portugueze*, whereſoever they ſhould be found, in City or Country. The King's Orders were put in Execution ſo ſpeedily, that in a few Hours all the *Portugueze* were ſlaughtered, and the guilty Criminal was taken alive, and made faſt by the Heels to an Elephant's Feet, which dragged him through the Streets till there was no Skin nor Fleſh left to cover his Bones; which Spectacle appeaſed the enraged Populace. There were only three *Portugueze* ſaved, who were accidentally in the Suburbs, next the River, who hid themſelves till Night favoured their Eſcape in a ſmall Boat, in which they coaſted along the Shore, feeding on what the Woods and Rocks afforded them, and at length arrived at *Malacca*, to give an Account of this melancholy Tranſaction.

The Kingdom, or as ſome called it, the Empire of *Siam*, lies next to *Pegu*, and is a Country of vaſt Extent, the Monarch of which was too powerful for the *Portugueze* to think of making any great Conqueſt in his Dominions, and therefore they choſe to live with him upon good Terms, for the ſake of the vaſt Trade carried on in his Dominions, which are extreamly well ſituated for Commerce, having on one Side the Kingdoms of *Laos*, *Camboya*, and *Cochin China*, and on the other, the Countries bordering on the Gulph of *Bengal*. Beſides, there annually reſorted thither a Fleet of Merchant Ships from *China*, laden with all the rich Goods of that Empire. They continued to hold a fair Correſpondence with this Monarch and his Subjects as long as their Power ſubſiſted in the *Indies*; but by Degrees the *Dutch* have in a great Meaſure excluded them from their Influence here, ſince 1630, when they erected their Factory here, and have ſince wrought themſelves ſo effectually into the Confidence of this Prince, that he has granted them an excluſive Privilege of purchaſing all the Tin in his Dominions, which is a Branch of Commerce of prodigious Importance; yet the *Portugueze* are not wholly ejected, though their Trade is much fallen from what it was[2]. There are ſeveral ſmall Principalities on the Iſthmus, before one comes to the Country of *Malacca*, which were all of them formerly under the Power of the *Portugueze*, as appears by

[1] This City of *Diu* ſtands in the Latitude of 21° 20′, and is by many ſuppoſed to be the *Barigaza* of the Ancients. It ſtands upon an Iſland about a League in Length, and not a third Part of a League in Breadth. The Country about it abounds with all the Neceſſaries of Life, and the City itſelf is as well built, and as well fortified, as any in the *Indies*. It is very famous for the Siege it ſuſtained in 1538, of which we have before given ſome Account. At preſent it is in a worſe Condition than formerly, both with regard to Wealth and Strength; but to balance this in ſome meaſure, it is in leſs Danger of being attacked.

[2] It is very remarkable, that the *Portugueze* are beſt reſpected in thoſe Countries where they had no Fortreſſes; which ſhews, that where the *Mohammedans* had not eſtabliſhed their Power, the *Europeans* were under no Neceſſity of building Forts, but might have carried on their Commerce as well without them. There are a great Number of *Portugueze*, or rather Deſcendants of *Portugueze*, ſettled in this Country, where they live but poorly, and are treated with great Indignity, both by the Natives and by other *Europeans*, which can be attributed to nothing but their having lived ſo long in the *Indies*, as to have loſt all Spirit, and to become as degenerate as the *Siameſe* themſelves, who are as effeminate a People as any in the *Indies*.

their retaining ſtill a Mixture of that Language with their own. The chief of theſe Principalities are thoſe of *Ligor* on one Side, and *Quedah* on the other; but the People are ſo barbarous and perfidious, that the *Europeans* carry on ſcarce any Trade on their Coaſts.

The great Peninſula of *Malacca*, at the Time the *Portugueze* came thither, was ſubject to the King of *Johore*, and by what Means the Viceroys of the Crown of *Portugal* were led to attack, and make themſelves Maſters of that City, we have already ſhewn. After it came into their Hands, it changed its Condition entirely, and from being a Place of ſmall Account, in a ſhort Time became famous all over *India* and *Europe*, lying almoſt in the Centre of Trade, brought thither by Shipping from the rich Kingdoms of *Japan*, *China*, *Formoſa*, *Luconia*, *Tonquin*, *Cochin-China*, *Cambodia*, and *Siam*, beſides what *Johore* produced, and *Sumatra*, *Java*, *Borneo*, *Macaſſar*, *Banda*, *Amboina*, and *Ternate* Iſlands, that abound in valuable Commodities. After *Goa* and *Ormuz* this was by very far the richeſt City in the *Indies*, and a great Market for all the different Commodities that theſe Countries produced. It was the Seat of a Biſhop, and the Cathedral Church of St. *Paul* was extreamly fine. They had beſides five other Pariſh-Churches, and a noble College for the Jeſuits, together with a Seminary, in which all new Converts to the Faith were inſtructed. The Whole was encompaſſed with a ſtrong ſtone Wall, regularly fortified with Baſtions, the Place extreamly well peopled, and the Garriſon numerous, and well ſupplied, becauſe the *Portugueze* conſidered it as the Eaſtern Frontier of their Dominions.

In 1605, the *Dutch*, who were then become very potent in the *Indies*, attacked and deſtroyed the Fleet of the *Portugueze* here, conſiſting of thirty-four Sail, on board of which were three thouſand Men; but they were not able to take the Place. The next Year the King of *Johore* inveſted it with an Army of ſixty thouſand Men, in Revenge of what the *Portugueze* had done againſt him three Years before, when they took and deſtroyed his Capital; but, however, he was obliged to raiſe the Siege with great Loſs. But the *Dutch*, well knowing the Importance of the Place, and the vaſt Advantages accruing to the *Portugueze* from its Situation and Commerce, the former affording them an Opportunity of levying 10 *per Cent.* upon all Veſſels paſſing through the Streights, and the latter producing annually a large Revenue, they attacked it in the Year 1640 ſo vigorouſly, that they became Maſters of it after a Siege of ſix Months. The Walls and Fortifications they preſerved, as alſo the Church of St. *Paul*; but moſt of the other Churches they have deſtroyed, and the great Hoſpital they have turned into a Warehouſe. The Language ſpoken here is eſteemed the moſt copious and polite in the *Indies*, and therefore ſerves as a kind of general Tongue through all the Iſlands and Provinces farther towards the Eaſt. In the Kingdom of *Cambodia*, or *Camboya*, the *Portugueze* have ſtill a conſiderable Trade, and they are likewiſe well received in *Tonquin*. As to their Settlements in the ſeveral Iſlands of the *Eaſt-Indies*, in *China*, and in the Empire of *Japan*, we have ſpoke of them ſufficiently already under the Head of Diſcoveries, and there is therefore no need of our inſiſting farther upon them here, as our View, at preſent, is no more than to ſhew how their principal Settlements were loſt, and to whom, which having done, it may not be amiſs to ſay ſomewhat of the Wars carried on againſt them in theſe Parts by the *Dutch*, and the Pretences they made uſe of for carrying them on.

28. The Troubles in the Low Countries, which produced a War between the Crown of *Spain* and the Republick of the United Provinces, began about 1570, and *England* interpoſing in Favour of the States, their Power increaſed to ſuch a Degree, that they were not only able to defend themſelves againſt *Spain* by Land, but to give that potent Monarchy inexpreſſible Trouble by Sea. But this War ſeems to have no Relation to *Portugal*, and we do not hear of their attacking any but the *Portugueze* Settlements in the *Eaſt-Indies*. In order to reſolve this Difficulty we muſt remember, that the Crown of *Portugal* was united to that of *Spain* in 1579, by which Means *Philip* II. became Maſter of both the *Indies*, and conſequently the States of the United Provinces were as much at War with the *Portugueze*, who were Subjects to the King of *Spain*, as with any of the reſt of his Subjects; and conſequently this gave them a Right to attack the *Portugueze* Settlements both in the *Eaſt* and *Weſt-Indies*; which they proſecuted with ſuch Vigour, that they bid fair for becoming Maſters of all that the *Portugueze* had poſſeſſed in either *Indies*.

We have ſeen what mighty Acquiſitions they made in the Eaſt; but it is neceſſary to our Subject to obſerve likewiſe, that their *Weſt-India* Company became in that Space of Time ſo powerful, as to make almoſt an intire Conqueſt of *Brazil*. It is very evident from hence, that nothing but the Union of the Crowns of *Spain* and *Portugal* could have afforded the *Dutch* either a Pretence for attacking, or an Opportunity of reducing theſe Countries, both of which in a ſingular Degree they from this Accident obtained. For as on the one hand, his Catholic Majeſty had enough to do in defending his hereditary Dominions before this Acceſſion of the Territories of *Portugal*, ſo he was tempted to apply the Revenues of that Crown to the immediate Wants of the *Spaniſh* Government, which we may conclude were very great, ſince on his Death-bed he owned, that the Wars of the Low-Countries had coſt him five hundred and ſixty-four Millions of Ducats, which is upwards of one hundred and twelve Millions of our Money; whence it is eaſy to perceive, that he could not ſpare as much as was requiſite for the Defence of the *Portugueze* Territories. On the other hand, the *Portugueze* themſelves, though they had been always diſtinguiſhed for their Loyalty to their natural Princes, were far enough from ſhewing ſo much Zeal in the Service of the King of *Spain*; and it is very natural, when the Minds of private Men are entirely deſpoiled of publick Spirit, for the Affairs of the State to fall into Confuſion.

But one would have imagined, that after the Separation of *Portugal* from *Spain*, which happened in the Year 1640, Things would have taken another Turn; becauſe, with King *John* IV. the *Dutch* had no Pretence of making War. To give the Reader a clear Idea of this Matter we muſt remember, that the *Dutch* had taken *Brazil* from the King of *Spain*, or rather from the *Portugueze*; while they were his Subjects; but afterwards that Nation conſidering this as an Injury not to be borne, attempted to drive the *Dutch* out, notwithſtanding the Treaty concluded between the States and the King of *Portugal* in 1641, which, to ſay the Truth, had been but indifferently obſerved on both Sides[t]; that is to ſay, the *Dutch* had encroached upon the *Portugueze* in the *Eaſt-Indies*, and they, on the other hand, gave the *Dutch* little or no Reſpite in *Brazil*, out of which, in ten Years Time, they drove them entirely.

About this Time died King *John* IV. and left his Son *Alphonſo* VI. a Minor, which Advantage the *Dutch* took to declare War againſt the Crown of *Portugal*, from a Perſuaſion that this Opportunity of regaining what they had loſt in the Weſt, and proſecuted their Conqueſts in the *Eaſt-Indies*, was not to be loſt, the rather, becauſe *Portugal* was at that Time engaged in a dangerous War with *Spain*, and the *Dutch* had lately concluded a Peace with that Crown. It was in conſequence of this new War that the *Dutch* attacked the *Portugueze* again in the *Eaſt-Indies*, and even endeavoured to deprive them of *Goa*; but in this they did not ſucceed: And, on the other hand, the *Portugueze* found Means to traverſe all the Attempts that the *Dutch* made to eſtabliſh a Trade in *China*, as alſo to raiſe ſuch a Storm as deprived them of the Iſland of *Formoſa*, which they had conquered, and which was of prodigious Conſequence to them.

---

[t] At the Time the *Portugueze* delivered themſelves from the *Spaniſh* Yoke, the *Dutch* were employed, as we have already ſhewn, in reducing the Iſland of *Ceylon*, and made uſe of Abundance of Artifices, in order to proſecute the Advantages they had gained, notwithſtanding the Peace concluded between the States General and the Crown of *Portugal* in *Europe*; neither did they deſiſt from their Hoſtilities, even after the Peace was proclaimed in the *Indies*, but continued to give the *Portugueze* almoſt as much Trouble as while the War continued. This they did, under Pretence of being Allies, or Auxiliaries to ſuch *Indian* Princes as were at War with the *Portugueze*; and where this Pretence was wanting, they took Care by their Emiſſaries to ſtir up new Wars, and under Pretence of reſtoring the *Indians* to their Freedom, contrived Things ſo as to engage them in long and bloody Wars, which had no other End than to oblige them to change their Maſters, with this Difference only, that whereas the *Portugueze* endeavoured to keep large Countries, and to oblige the *Indian* Princes to pay Homage to the King of *Portugal*, the *Dutch* contented themſelves with the Sea-Coaſts, and forbidding thoſe Princes to trade with any other Nation; ſo that their Slavery was equally great, though not always equally apparent, which ever Side prevailed.

But, in the mean time, the great Fleets they ſent to the *Eaſt-Indies* enabled them not only to extend their Conqueſts, but in the Year 1661 to defeat the whole naval Power of the *Portugueze* in two general Engagements. But while the Publick ſuffered exceſſively from the Conſequences of this fatal War, ſome private Merchants in *Liſbon* and in the *Eaſt-Indies* fitted out ſo many Privateers, and of ſuch Strength, that the *Dutch* ſuffered exceſſively in their Trade, and therefore both Nations began to be weary of the War, and inclined to a Negotiation. The Crown of *Great-Britain* interpoſed its Mediation, in conſequence of the Marriage between King *Charles* II. and the Infanta of *Portugal*, by which Peace was brought about in the Year 1661, and thereby the *Portugueze* were left in Poſſeſſion of *Brazil*, and the *Dutch* accepted a Sum of Money as a Satisfaction for their Pretenſions.

In the *Eaſt-Indies* Things were to remain as they then ſtood, and both Parties were to keep what, at the Concluſion of this Peace, ſhould be in their reſpective Poſſeſſions; but the *Dutch* kept this no better than they did the former Treaty; but, on the contrary, in 1663, attacked all the Places which the *Portugueze* held on the Coaſt of *Malabar*, particularly *Cochin*, which they had no ſooner taken, than they deſtroyed all the Wild or Baſtard Cinnamon, which, after the Loſs of *Ceylon*, had proved an advantageous Branch of Commerce to the *Portugueze*. There were high Complaints made of this in *Europe* to the States-General, who were either deceived by the plauſible Accounts given them by their *Eaſt-India* Company, or pretended to be deceived, that they might, with a better Grace, protract the Negotiation relating to this Affair, till their Subjects in the *Eaſt-Indies* had ſo fortified the Places they had taken, as to put it intirely out of the Power of the *Portugueze* to attempt the Recovery of them [v].

Theſe Proceedings gave the finiſhing Blow to the Ruin of the *Portugueze*, who have never ſince been able to undertake any thing of Conſequence; but, on the contrary, have exhauſted much of their remaining Strength in defending themſelves againſt their *Indian* Neighbours, who encouraged by the Progreſs of the *Dutch*, and excited thereto by ſome of their Agents, have been ſince endeavouring to tear from them the ſmall Remains of their Poſſeſſions in *India*, and have often kept *Goa* itſelf blocked up for many Months together; in which, perhaps, they have as much miſtaken their own Intereſt as prejudiced that of this Nation, the Power of which has already ſo much broken, as not to afford any juſt Ground of Jealouſy either to *Indians* or *Europeans*.

29. We have already, in the Courſe of this Hiſtory, pointed out many of the Cauſes of the Declenſion of that mighty Power which, in ſo ſhort a Space of Time, the Crown of *Portugal* acquired in the Eaſt; but as this is perhaps the moſt uſeful Part of the preſent Section, it may not be amiſs to add a few farther Obſervations on this Subject, the rather, becauſe the *Portugueze* Authors, who have treated ſo largely of the Conqueſts made by their Nation, have been, in a great meaſure, ſilent on the Means by which they were loſt. One great Cauſe of their Ruin was the Circumſtances of their Government at home, where, for many Years together, they were engaged in a long, expenſive, and dangerous War againſt the Crown of *Spain*, in Defence of their Independency, which at once employed their whole Force, and exhauſted their whole Revenue. It is true indeed, that this was rather the Misfortune than the Fault of the *Portugueze*, ſince it was what they could not avoid; but it was, nevertheleſs, the great Cauſe of their Loſſes in the *Indies*.

We may add to this their ſending over Men of too great Quality, as Viceroys to *Goa*, with a View rather to better their Fortunes than the publick Service; which is the Reaſon that, of late Years, we hear nothing more of the *Gamas*, the *Albuquerques*, the *Pereyras*, or the *Galvanos*, but are forced to ſearch for the Names of their Viceroys in the private Regiſters of the Palace, inſtead of the publick Records of Hiſtory: Beſides, as theſe Men have been, generally ſpeaking, too poor to mind any thing ſo much as mending their own Eſtates, ſo they have been too well allied to be called to any Account on their Return for their Mal-adminiſtration in the *Indies*. When their Affairs began firſt to decline in this Part of the World, it was a common Thing for the Viceroy to beſtow not only the Government of *Moſambique*, which was eſteemed the next in Conſequence after the Viceroyſhip, but all the leſſer Governments in his Power, on whom he pleaſed. I ſay, it has been common for ſuch Viceroys to make, in the Space of three Years, Five hundred thouſand Crowns; from whence we may form ſome Notion of the Profits of the Viceroy. Now as it is impoſſible ſuch exorbitant Sums ſhould be made any other Way than by oppreſſing the *Indians*, and taking large Sums from the Merchants, we may eaſily perceive, that all theſe private Fortunes were made at the Expence of the public Intereſt.

The bad Examples of the Governors had a very bad Effect on all the ſubordinate Officers; ſo that Pride, Vanity, Luxury, and a pompous Diſplay of Wealth, attained by illicit Means, took place of that generous Virtue, that laudable Ambition, that diſintereſted public Spirit, which enabled their Anceſtors to lay the Foundation of ſo large an Empire, with a very inconſiderable Part of that Power which was in the Poſſeſſion of thoſe who loſt it. The Clergy too followed the Example of the Laity, and inſtead of promoting, as at the Beginning, the Converſion of the Natives to the Chriſtian Faith, from the religious View of ſaving their Souls, they now proſecuted that Work from the meaner Motive of making them ſubſervient to their own Purpoſes, and enabling them to acquire vaſt Riches. This Corruption proceeded ſo far by Degrees, that not only many of the Jeſuits at *Goa* engaged in Trade, contrary to the Rules of their Order, and their Duty as Miſſionaries, but even deſcended ſo low as to diſguiſe themſelves in the Habits of Faquirs, or *Mohammedan* Monks, that they might have an Opportunity of viſiting the Diamond Mines, and purchaſing Stones there of extraordinary Value [w].

But what moſt of all contributed to corrupt the Inhabitants of the *Portugueze* Settlements, was the little Care taken to prevent their leaving all Things to the Care of their Negroes and other Slaves, and their inter-marrying with the People of the Country, Practices which have been and ever will be fatal to all *European* Eſtabliſhments, becauſe it not only ſoftens and effeminates the Minds of ſuch as fall into this Way of living, but alſo changes their Views, makes them loſe all Regard for their Country, and inclines them to take ſuch Meaſures as are moſt likely to preſerve them in the Enjoyment of ſuch ſervile Pleaſures. The *Portugueze* at *Goa* have been for more than a Century paſt ſo much addicted to this groſs and ſenſual kind of Life, that provided they might enjoy their fine Houſes in the City, and their Country Palaces in its Neighbourhood, they gave themſelves no Pain about what happened elſewhere, or how great Progreſs the *Dutch* made in ſubduing their diſtant Settlements. The natural Conſequence of this was, that when ſuch Settlements were loſt, thoſe who were driven from their Habitations, inſtead of repairing to *Goa*, and taking Arms in the King's Service, for the Recovery of any Part of his Dominions, went into the Territories of ſome *Indian* Prince, and there, for a pitiful Subſiſtence, entered into his Pay, or accepted of ſome low Office in his Court; ſo that while the Fleets and Armies of *Portugal* grew thin and contemptible, for want of Soldiers and Seamen, there were many thouſands of that Nation ſcattered all over the *Indies*, diſgracing their Country by the manner in which they got their Bread, when by a proper Behaviour they might have reſtored the Affairs of their Prince, as well as their own Fortunes.

---

[v] The *Dutch*, though their *Eaſt India* Company gained ſufficiently by theſe Practices, ſuffered very ſeverely, as a State, from the Jealouſies they excited in their Neighbours. The *Engliſh* had ſome Experience of a like Diſpoſition towards them; and though the *French* had not, at that Time, any Grounds of Complaint in the *Indies*, yet they were far enough from being pleaſed with the Growth of the *Dutch* naval Power; and therefore readily joined in a War to humble them, as they phraſed it, which was that of 1672; and how far the Cauſes of that War were connected with the Conduct of the *Dutch* in the *Indies*, may appear from a Fact charged upon them by Mr. *Tavernier*, who in his Travels relates, that the *Dutch* Factory at *Gambron* in *Perſia* publickly burnt the Picture of King *Charles* II. in a Fire, partly made of Cinnamon; which was ſuch an Indignity as that Prince never forgot, and which gave a very bad Impreſſion of the *Dutch* to the *Perſians*, who laboured all they could to hinder it.

[w] We owe this Circumſtance to the Hiſtory of *Holland*, by M. *De La Neuville*, who tells us, that the *Dutch* being extremely piqued at the Trouble the Jeſuits gave them in *China*, diſcovered this Practice to the Governor of the Diamond Mines at *Viſapour*, who caught two of the Fathers, diſguiſed like Faquirs, with Stones about them to the Value of twenty-five thouſand Pounds, which he took from them, and after whipping them publickly for profaning the Habit of thoſe holy Men, took ſuch Meaſures as prevented their carrying on that Trade in this Shape ever after.

One may ſafely affirm, that all theſe Miſchiefs were at the Bottom owing to the Want of a right Adminiſtration in *Portugal*, where, if a Council for the *Indies* had been ſettled, compoſed of Men of real Abilities and competent Experience, who had been entruſted with the ſole Power of beſtowing Places in that Country, and had been charged to look carefully into the Conduct of ſuch as were employed by them, might, before things had gone too far, have reſtored Diſcipline in their Colonies, and recalled ſuch as from Diſcontent or Diffidence in their former Governors had taken Refuge in other Places. But their Attention to other things, and more eſpecially to their Settlements in *Braſil*, which have, indeed, accidentally compenſated in ſome meaſure their Loſſes on this Side, hindered them from thinking of their Affairs in the Eaſt, till they became paſt all Hopes, as well as paſt Recovery. In this diſtreſſed and dejected State they lie at preſent, which, however, muſt not excuſe us from giving the Reader a View of them even in this Condition, becauſe the *Portugueze* are ſtill conſidered as having ſome Intereſt in the *Indies*, though it be in a manner nothing in Compariſon of what it was, and is daily growing from bad to worſe, ſo that they really owe what little they ſtill enjoy to the Want of any Inclination, at leaſt in *European* Nations, to take it from them, which they might otherwiſe do almoſt at Pleaſure.

30. The Dominions ſubject to the *Portugueze* Viceroy of the *Indies* are very eaſily deſcribed. The City of *Goa*, of which we have ſpoken before, is ſtill the Capital, the Seat of the Viceroy, the Archbiſhop, and the Inquiſition, which are heavy Burthens on ſo exhauſted an Eſtabliſhment. In the Neighbourhood of this City, they preſerve the Iſlands of *Salſette*, *Bardes*, *Augedive*, and ſome others of no great Conſequence, farther than that they ſupply the City of *Goa* plentifully with Proviſions, which is hard to ſay, whether it be an Advantage to that Place or not; and becauſe this may ſeem a kind of Paradox, I will explain it. As Rice comes in great Quantities, and very cheap, to *Goa*, it encourages the Citizens to keep a vaſt Number of Servants, eſpecially Negroes, who are content with one Diſh of this Food at Noon, and another at Night. If theſe were kept for any kind of Labour or Manufactures, there would be no great Objection to it; but almoſt every Houſekeeper has ſix, moſt of them twelve, ſome thirty or forty, that have no other Buſineſs than carrying their Maſter's Palankin and Umbrella; ſo that in Reality they are not kept ſo much for Service as for State; and thus they rather exhauſt than increaſe the Riches of the Inhabitants.

Diu, which formerly belonged to the Kingdom of *Guzarat*, is the ſtrongeſt Place they have, and is indeed very well ſituated for Commerce. It has a very good Port, and while the *Portugueze* had any Fleets of Conſequence, they were generally laid up here; and at this City the *Moors* and other Traders in theſe Seas were obliged to take out their Paſſports before they proceeded any farther to the Eaſt. At preſent all the Trade, or at leaſt almoſt all the Trade which was carried on here, is removed to *Surat*, and what little ſtill remains at *Diu*, in the Hands of the *Portugueze*, is carried on under *Gentil* Colours; that is to ſay, the *Portugueze* think themſelves ſafer under them than under the Flag of *Portugal*, formerly ſo much reſpected in the *Indies*. The Port of *Daman*, on the Gulph of *Cambaya*, is yet in tolerable good Condition, though nothing in Compariſon of what it was, the old Town being in a manner deſerted, and the new not near ſo well peopled as might be expected from its Extent. There are, however, ſtill ſome Manufactures carried on here, particulary in Silk, with which they furniſh the Market of *Goa*, and thereby enable the Merchants ſettled there to carry on what ſmall Commerce they have left. *Chaoul* ſtands behind the Mountains on the ſame Coaſt, and has a very ſafe and good Port.

Theſe are all the Places that they have on the *Malabar* Coaſt, and in other Parts of the *Indies* they have few Factories, and no Eſtabliſhments at all, except it be in the Iſlands of *Timor* and *Solor*, not far from the *Moluccas*, which they poſſeſs jointly with the *Dutch*, and of which we have already given a large Account in the Hiſtory of Captain *Dampier's* Expedition to the South. Once in two or three Years they ſend a Ship from *Goa* to theſe Iſlands, the chief Commodities of which are Sandal Wood, much eſteemed in *China*, very good Wax, and a ſort of Medicine called *Solor* Stones, which are very little, if at all, inferior to the beſt Bezoar. On the Coaſt of *China* they have the Iſland and Port of *Macao*, from whence they carry on a conſiderable Trade to *China* and the *Philippines*.

All that remains under the *Portugueze* Dominion from the *Cape of Good Hope* in *Africa* to the City of *Macao* in *China* is governed by a Viceroy, with the Title of Captain General, who reſides at *Goa*, as the Metropolis of *India*. There are ſix, and ſometimes eight Deſembargadores or Judges that attend the Government as a Sovereign Court or Council, who wear a Gown down to their Heels over a Caſſock of the ſame Length, the Gown with wide Sleeves down half way their Arms. They wear Golillas, and huge Perukes of the *French* Faſhion. The chief Court theſe Gown-men ſit in is called a Relacaon, which adminiſters Juſtice in civil and criminal Caſes, having Power over all Miniſters, and tries all Appeals brought from all Parts of their Dominions. The Viceroy ſits as Chief of this Court, under a Canopy. The Gown-men ſit on Benches placed on the plain Floor. The Council *De facada* is like the Court of *Exchequer*, where one of the Gown-men ſits as the Viceroy's Deputy. Thus the Pomp and Splendor of this Government is ſtill kept up, though the Extent of it is much leſſened, and the Power and Credit of it in a manner decayed. There are ſtill as many Governments as ever, that is, in Title; for otherwiſe they are of no great Conſequence, and thoſe on whom they are beſtowed, have the Characters of Generals. There is, for inſtance, a General of the Gulph of *Ormuz*, who has four Ships under his Command; a General of the North, who directs the ſmall Towns on the Coaſt of *Malabar*; a General of *Salſette*, who has a Territory of about fifteen Miles, a General of *China*, who is, properly ſpeaking, Governor of *Macao*, and an abſolute Vaſſal to the *Chineſe*. There is another General in the Iſlands of *Timor* and *Solor*, to whom even the *Portugueze* there ſcarce pay any Obedience, and who lives in a miſerable Fort, the Guns of which are in no Condition for Service. There is likewiſe a General of *Goa*, whoſe Buſineſs it is to take Care of the Channels between the Iſlands, and to reſtrain Smugglers [*].

But the beſt of all the Governments that ſtill belong to the *Indies*, is that of *Moſambique*, which is an Iſland ſituated near the Coaſt of *Africa*, in the Lat. of 15° South, within half a League of the Continent. They have a ſtrong Fort there, with four good Baſtions, which commands the Chanel, and in which there are ſeventy Pieces of Braſs-Cannon; and here there is always kept a good Garriſon, and in tolerable Order. The Governor is honoured with the Title of General of the River of *Senna*, where he has his Lieutenant, which Employment was worth to him ſeveral hundred thouſand Crowns a Year. There are but a few Houſes about the Fort, the Inhabitants keeping their Effects on the neighbouring Continent: But notwithſtanding the Narrowneſs of the Place, there are Monaſteries of Jeſuits, Dominicans of St. *John De Dios*, beſides the chief Church and that of the *Miſericordia*. The Merchandize brought to this Place by the Ships of the Company are bought at a ſet Price by the Royal Factory, which afterwards ſend them to *Chelimani*, the Mouth of the River of *Senna* running three hundred Miles along the Coaſt, in Galliots and ſmall Veſſels, becauſe of the Flats from *Chelimani*; the Goods are ſent up the River, againſt the Stream, in Almandies or little Boats, which are ten Days going up, and about five coming down. It is very difficult going up for thoſe who are not well acquainted with the Shallows and Windings of the River. *Cafres*, or *Blacks*, reſort to this Port from Provinces and Kingdoms three or four Months Journey diſtant, to buy or take up Goods upon Truſt for ſo much Gold, which they never fail to bring punctually the next Year, unleſs Death prevents them. This Trade yields above *Cent.* per *Cent.* ſo that the *Portugueze* may be ſaid to have another *India* in *Africa*. *Senna* is a little Town on the Right-hand of the River, inhabited by fifty *Portugueze* Families, who make it populous enough, by the great Number of Blacks they keep. Theſe till the Ground, and dig in the Mines, and by that means maintain their Maſters, inſtead of being kept by them.

---

[*] There is a very wide Difference between theſe titular Preferments and the Governments formerly in the Gift of the Viceroy of *Goa*, which were five; the firſt was that of *Moſambique*, which is ſtill in their Hands, and the only one of the old Government that is ſo; the ſecond was that of *Maſcat*, on the *Arabian* Coaſt, which was of very great Importance, and brought in a large Revenue; the third was that of *Ormus*, on the Coaſt of *Perſia*; the Captain-General of the Iſland of *Ceylon* was the fourth, and the Governor of the important Fortreſs of *Malacca* the fifth. Upon each of theſe General-Governments there depended many others of leſs Conſequence, of which theſe Generals had the abſolute Diſpoſal; but thoſe who held them were continued in them for no longer than three Years. And it was for this Reaſon they were guilty of ſo much Extortion, looking upon their Governments as Leaſes for ſo many Years, in which they were to make their Fortune.

About fifteen Days Journey from hence lies *Sofala*, where the *Portugueze* have likewiſe an Eſtabliſhment, ſubject however to the General of *Moſambique*; and here a prodigious Trade is driven on, of which the *Portugueze* are, or might be, Maſters. It conſiſts chiefly in Gold, of which there are greater Quantities here than in any other Country in the World, ſince the annual Produce of this Market is computed, by the beſt Judges, at Forty-ſix thouſand Ounces. There are vaſt Quantities of *Spaniſh* and *Canary* Wines, Oils, Silks, Linnens, Cottons, Coral, and other *European* Goods ſold here, which are carried by the Inhabitants of the little Kingdom of *Sofala*, through all the great Empire of *Monomotapa*, which the *Portugueze* ſtile the Empire of Gold, from the prodigious Quantities of that precious Metal which are brought to them from thence. There are, likewiſe, ſome other very rich Commodities brought hither by the Negroes, ſuch as the moſt excellent Ebony in the World; great Quantities of Ivory, abundance of fine Mats, which are much eſteemed in the *Indies*, and a great Number of Slaves; ſo that *Goa*, and all the reſt of the *Portugueze* Settlements, are furniſhed from hence. One may juſtly wonder that, conſidering the Value of this Settlement, and its convenient Situation, the *Dutch* had not made themſelves Maſters of it long ago, as well as of all the other Places belonging to the Crown of *Portugal* on this Coaſt.

In the Year 1605, they attempted *Moſambique* with very little Succeſs, which, however, did not diſcourage them; as it muſt be allowed, that where there is a Proſpect of Gain, the *Dutch* are not eaſily diſcouraged: And, therefore, in 1607, they attacked it a ſecond Time with greater Force, but with the ſame Ill-luck as before, except that they made themſelves Maſters of a rich *Portugueze* Fleet, which, in ſome meaſure, paid the Expence of the Expedition. This rich Trade, however, is much fallen off by the *Arabs* making themſelves Maſters of *Monbaza*, and other Places, which gives them an Opportunity of ſupplying the *Africans* with *European* Goods, which they purchaſe in different Part of the *Indies*.

As for the Share which the *Portugueze* ſtill retain, the Gold obtained thereby is ſent to *Goa* and to *Diu*, where it is coined into ſmall Pieces, called *St. Thomas*'s, which are not worth above Half a Crown of our Money; and it is obſerved that this Coin is of a worſe Touch, that is, of a baſer Allay, than any other in the *Indies*, which is another Sign of a declining Trade; for the Sarafins, which were formerly coined at *Ormuz*, when in the *Portugueze* Hands, were eſteemed the beſt Gold in the *Indies*; but they are now become extremely ſcarce; and the *St. Thomas*'s are ſaid to be coined in leſs Quantities every Year.

31. Theſe Poſſeſſions are ſaid to produce ſo little to the King of *Portugal*, that it has has been more than once debated in the Council of that Prince, whether it would not be for the Intereſt of the Crown to abandon them all together, withdrawing their Artillery and Effects; and we are likewiſe told, that it is not any political, but purely a religious Motive, that has hindered this Meaſure from being taken, the Prieſts having ſuggeſted, that in that Caſe a Multitude of Souls would be loſt to the Church. We ſhall the leſs wonder at this, if we conſider, that ſuch as are beſt acquainted with the *Eaſt-India* Trade aſſure us, that a ſingle Merchant and a ſingle Ship of a reaſonable Burthen, may carry on as great a Commerce as what, at preſent, ſubſiſts between *Liſbon* and *Goa*. This Matter however deſerves ſome Explanation. There are yet a great many Ships employed from *Goa*, *Diu*, and *Daman*, to the Coaſts of *Perſia*, *Pegu*, *Manila*, and *China*, but they are moſtly on the Account of *Indian* Merchants, there being ſcarce a *Portugueze* Trader at *Goa* able to furniſh a Cargo of the Value of Ten thouſand Crowns; and it is very much doubted, whether, in the whole of their Trade, they employ above Two hundred thouſand Crowns; ſo that it is not at all ſtrange, that one Year with another, there are not above two Ships ſent directly from *Goa* to *Liſbon*, and thoſe not a fourth Part ſo rich as when they annually ſent twenty.

Yet there has been a late Regulation made at *Goa* for the Preſervation and promoting of Trade, which thoſe who underſtand that Subject beſt agree compleated its Ruin. This is an excluſive Company, which has the ſole Right to the Commerce of *Moſambique* and *Macao*, which Company has taken upon itſelf the Payment of the Royal Officers, who are alſo Two-thirds concerned therein, which has given ſuch a Blow to the natural Commerce of *Goa*, that the beſt Part of the *Indian* Merchants that were left, are now retired from thence. To ſay the Truth, it was the great Share the Viceroys, Governors, and other Officers, always took in Commerce, without contributing any thing thereto, except protecting the Merchants from the Violence committed by themſelves on ſuch as did not admit them to a Share in their Trade, that firſt deſtroyed the extenſive Commerce they enjoyed. And, upon this Subject, the Wits of the *Indies*, have framed a very pretty Allegory: They ſay, that when the *Portugueze* came firſt there, they had a Sword in one Hand, and a Crucifix in the other; but that they might fill their Pockets the faſter, they quickly diſpenſed with the firſt, and ſoon after laid down the laſt, by which they have loſt all. But though their Power and their Commerce are ſo much declined, their Pride is as great as ever, inſomuch that they refuſe the Natives of the Country, who are called *Canarins*, the Privilege of wearing Stockings, though they employ them as Phyſicians, Lawyers, and Merchants; by which many of them are ſo rich that they keep a Dozen or Fourteen Slaves, and are in much better Circumſtances than the *Portugueze* themſelves.

The Revenues of the Church have ſuffered very little by this ſurprizing Change in the State; there is hardly a Monaſtery that does not receive four or five thouſand Crowns out of the Treaſury, at the ſame time the Soldiers ſtarve and mutiny for want of Pay, which is ſo much the harder upon the Government, becauſe the Reverend Fathers know very well how to take care of themſelves, inſomuch that it is affirmed, the Jeſuits in *Goa* have a better Revenue than the Crown of *Portugal*. It is not eaſy to know what becomes of the Money theſe Churchmen raiſe; but it is very evident, that the Wealth they poſſeſs, together with the Eſtabliſhment of the Inquiſition at *Goa*, is ſuch a dead Weight on the Settlement, as muſt ſooner or later deſtroy it. The wiſeſt of the *Portugueze* in *Europe* underſtand this very well, and would be glad to ſee ſome proper Remedy applied, not from any Prejudice againſt the Church or Churchmen, which is far enough from being the Vice of that Nation, but out of pure Regard to the Crown, and to the Nation; and one would think, that the Clergy themſelves, inſtead of graſping at more, ought to be willing to part with ſome Proportion of what is already in their Hands, in order to render the State more able to protect them in the Poſſeſſion of the Remainder. Beſides, there is nothing clearer, than that the erecting of religious Houſes is directly oppoſite to the very Scheme of planting, and muſt always ruin the Settlements where it prevails, and conſequently the religious Houſes themſelves, which is certainly an Argument that ought to prevail even with Popiſh Princes to lay ſome Reſtraint on the Miſſionaries that are ſent abroad, unleſs they prefer the Reputation of Zeal among ſuch as are no competent Judges, not only to Maxims of Policy and good Government, but to the Principles of true Religion. For, if there be any Piety in converting Pagans to the Chriſtian Faith, it follows, that there is ſtill greater Piety in doing this effectually, and in maintaining for ever the Eſtabliſhments neceſſary to ſupport them, which Reaſon and Experience ſhews, the building Monaſteries, and maintaining Numbers of idle People in them, will not do, but on the contrary will bring on in Time the Deſtruction of thoſe Colonies, in which this Humour is ſuffered to prevail.

The very laſt Advices from this Part of the World inform us, that ſeveral *Indian* Princes were driven from before *Goa*, which they had blocked up with a numerous Army, by the powerful Succours ſent by the preſent King of *Portugal*, and by the excellent Conduct of the late Viceroy, who was the Count *de Laurical*, and who, if I miſtake not, was twice in the *Indies*, and behaved there with great Reputation. Such Expeditions, however, are to be conſidered as Expedients only, which may for a time preſerve that Settlement, but can never reſtore it, or bring the Affairs of this Nation in theſe Parts into ſo good Order, as to make them worth the Attention of a Prince, who has the Honour of his Crown, and the Good of his People, at Heart. It may not therefore be amiſs, before we conclude this Section, to conſider what is like to be the future Fate of the *Portugueze* in the *Indies*, in which, if our Conjectures ſhould be juſtified by Events, they cannot but do Honour to this Performance.

32. It is morally certain, that the Eſtabliſhments which the Crown of *Portugal* ſtill has in the *Eaſt-Indies* might, in the Hands of an active and induſtrious Nation, turn to conſiderable Account; for it has been long ago obſerved by M. *Tavernier*, that the Port of *Diu* is as well ſituated for Trade, and as capable of Improvement, as any in that Part of the World, or more ſo; and if put under proper Regulations, that is, if made in ſome meaſure a free Port, it muſt neceſſarily come in for a large Share of that Commerce now carried on at *Surat*, and, in all probability, retrieve much of the *Arabian* and *Perſian* Commerce that has been ſo long loſt to the *Portugueze*. On the other hand, as they have ſtill ſome Factories at *Biſnagar* and other Places on that Coaſt, it would be no difficult Matter to re-eſtabliſh their Commerce in the Heart of *India*, at the ſame time that the Port of *Macao* would furniſh them with the Means of ſupplying the *China* Market as cheap or cheaper than any other *European* Nation, becauſe their Colony at *Moſambique* is ſo ſituated, as to ſerve them for the ſame Purpoſes that the *Cape of Good Hope* does the *Dutch*, or the Iſland of *St. Helena* the *Engliſh*.

But all theſe Advantages ſignify nothing in the Hands of thoſe who are ſo far from poſſeſſing the Virtues requiſite to ſuch Improvements, that, on the contrary, they are not only tainted with, but over-run by ſuch Vices, as muſt unqueſtionably overturn the beſt Eſtabliſhment in the World. It is neceſſary to ſupport a Charge of this Nature by Facts, that it may not appear to be the Effects of Fancy, Prejudice, or Miſinformation. I ſhall mention but one, which, as it is very ſingular in its kind, will at once anſwer my Purpoſe, and ſerve to enlighten the Subject. The *Portugueze* had, in the Cloſe of the laſt Century, an Officer capable of doing much towards the Execution of ſuch a Plan as this, inaſmuch as he was a Man of great Prudence and Virtue; but withal, he had too high a Spirit, which led him to treat the Vices of his Countrymen with ſuch Aſperity as drew upon him a diſaſtrous Death, and thereby defeated all the Hopes that had been raiſed from the great Victories he obtained over the *Arabs* and *Moors*, and that noble Zeal he had upon all Occaſions ſhewn for the Welfare of his Country.

" His ſharp Tongue, ſays my Author, had gained him
" the Ill-will of almoſt all the Gentry of *Goa*, and along
" the Coaſt; but more particularly of the Family of *Melo*,
" which was powerful in Kindred, and great by Birth. His
" Affronts becoming inſupportable, they conſpired, to the
" Number of fifty, to murder him; and having agreed on
" the Time, Place, and Manner of executing their Deſign,
" they made ſeveral Loop-holes in the Houſes of the
" Quarter and Pariſh of *St. Peter*, that they might ſhoot
" him with more Safety. The General, or rather Admi-
" ral, perſuading himſelf that Gentlemen could not har-
" bour Thoughts of taking an ungenerous Revenge, tho'
" warned to be upon his Guard, becauſe there were trea-
" cherous Practices againſt him, would never admit any
" Soldiers to attend him, and particularly two Captains
" that were willing to ſhare in his Dangers. Thus being
" carried in a Palankin alone, only with one Black that
" carried his Umbrella, a Shot was made at him from a
" Houſe, which giving him a ſlight Wound, he leaped
" out of the Palankin, and taking the Snuff he held be-
" tween his Fingers, ſaid, *Who is it you aim at? Triſ-*
" *tan de Melo* at theſe Words coming out of his Houſe,
" anſwered, *at you*, and fired a Blunderbuſs at him. He,
" with an undaunted Courage, defended it with his Cloak;
" and bowing his Body, then drawing his Sword, and
" falling on his Enemy, he ſtruck him five times, but to
" no Purpoſe, becauſe he had on a Coat of Mail; where-
" upon he cleft his Head, and with a back Stroke cut him
" over the Face, which made him fall; then taking him
" by the Hair, he ſet his Feet upon him, and was going
" to run his Sword into his Breaſt, but *Triſtan* begging
" his Life, he generouſly granted it, ſaying, he would not
" embrue his Hands in ſuch baſe Blood. In the mean
" while out came *Triſtan*'s Son, and a Mulatto, (ſo they
" call all thoſe that are got between Blacks and Whites)
" and firing two Blunderbuſſes, lodged ſeveral Bullets in the
" Admiral's Breaſt, breaking in Pieces the Croſs he wore
" as a Badge of Knighthood; but ſtill he ſtood and de-
" fended himſelf, when a Slave came up and run him into
" the Side with a Javelin; nor did he go unpuniſhed, for
" the General, with a Back-ſtroke, ripped open his Belly,
" whereof he died at Night. *Machado* being ready to ex-
" pire, drew near to the Palankin, and ſetting his Peruke
" to rights the beſt he could, laid himſelf in it. The
" Murderers fearing he might yet live, one of them, who
" was a Prieſt, came with a Blunderbuſs in his Hand to
" make an end of him; but ſeeing him ready to breathe
" out his Soul, aſked, whether he would make his Con-
" feſſion? The Admiral called him Jew, and bid him go
" about his Buſineſs: Afterwards a *Dominican* coming to
" him, he gave Signs of Repentance, and graſping his
" Hands, died with theſe Words: The Blood of Chriſt
" ſave me. They found in his Breaſt about thirty Bullets;
" whereupon People admiring his Valour, ſaid, he muſt
" needs have more vital Spirits than other Mortals, ſince
" there muſt go ſo much to the killing him [y]."

This Murder, foul and deteſtable as it was, could never be puniſhed, ſo powerful was the Family concerned in it, and ſo weak the Authority of the Viceroy, in Matters relating to Juſtice. It is true, this ſtrange Fact happened fifty Years ago, but Things are far from being mended ſince. Aſſaſſinations are ſtill common in this Country, and ſuch as would not expoſe their own Lives for the Preſervation of the Colony, are ready, on the ſlighteſt Provocation, to command their Slaves to take away the Life of another Man, let his Worth or Dignity be what it will, even at the Altar, and this without the leaſt Apprehenſion of Juſtice. We need no clearer Proof than this, that the Minds of theſe People are totally enervated and corrupted, and that as Cowards, they are cruel and revengeful, which wicked Diſpoſitions ariſe from a lazy and luxurious Life. We may therefore ſafely predict, that the Continuance even of that ſlender Power which the *Portugueze* have ſtill left, cannot continue long, and that for theſe two plain Reaſons: Firſt, becauſe it has been long, and is ſtill in a declining Condition, ſo that its Force being extreamly decayed, and at the ſame time continually employed in reſiſting the Efforts of its Enemies, it is impoſſible, in the Nature of Things, that it ſhould ſubſiſt for any Time: Secondly, the Manners of the People are entirely ruined, ſo that there is not the leaſt Probability that any ſuch Reformation will ever be effected, as might enable them to make ſuch Uſe of the convenient Ports of which they are ſtill poſſeſſed, as is neceſſary to revive and reſtore their Commerce in the *Indies*. I venture therefore to pronounce, that in the Compaſs of twenty or thirty Years, their Eſtabliſhments in theſe Parts will be quite loſt, and that in all likelihood, *Goa*, *Diu*, and *Daman*, will be loſt firſt, which will neceſſarily draw after them the Deſertion of *Macao*, which cannot long ſubſiſt by its own Force, and lies at much too great a Diſtance to receive any effectual Succour or Support from *Portugal* directly [z].

---

[y] This gallant Man, Don *Antonio Machado de Brito*, was General of the North, and afterwards Admiral of the Gulph of *Ormus*, in which Character he gained immortal Reputation. In the Month of *April* 1694, he with three Ships only fought fourteen *Arabian* Veſſels of the ſame Size, in the Bay of *Surat*, for a whole Day; and when he might have retired ſafely into the Port of *Diu*, he anchored cloſe by them all Night, in order to have renewed the Fight next Morning, but the *Arabs* having had Fighting enough the Day before, ſtole away in the dark, and recovered their own Coaſt. Several Boats full of *Engliſh*, *French*, and *Dutch* Merchants, went from *Surat* to ſee this Battle, and afterwards complimented the *Portugueze* Admiral on his Victory, little ſuſpecting, that before the End of that Year, a Man, who had done ſuch eminent Service to the Publick, would fall, as he did, a Victim to private Revenge.

It is indeed poſſible, that Accidents out of the Reach of human Foreſight, may prevent, at leaſt for a Time, the Completion of what I have predicted; but without the Intervention of ſome ſuch Accidents, it will certainly come to paſs, and when it does, perhaps it may not be much to the Diſadvantage of *Portugal*; for when Colonies contribute little to the Benefit of a State, and are of no Uſe in promoting its naval Power, the Loſs of them cannot be conſidered as very detrimental, except to ſuch as are ſettled in them, which is a Conſideration well worthy the Attention of every Colony, ſince it ſhews that the Relation between it, and its Mother-Country, is the ſole Source of the Welfare of both, and cannot therefore be taken away without hazarding the Deſtruction of the Colony.

33. The Hiſtory of the Riſe, Progreſs, and Declenſion of the *Portugueze* Commerce in the *Indies* was never written before, and therefore I hope will appear the more agreeable and entertaining now. We have here, in a very narrow Compaſs, preſented the whole of it to the View of the *Engliſh* Reader, with all the Accuracy and Impartiality that lay within the Reach of our Power; and as we have, throughout the whole Section, intermixed our Remarks with the Matters of Fact, we ſhall be very ſhort in our Obſervations here. It may not, however, be amiſs to ſuggeſt, by way of Concluſion, that though this, with reſpect to the Circumſtances attending Facts, is a particular Hiſtory, yet the intelligent and judicious Reader will very eaſily perceive, that, at the Bottom, it contains a general View of the Riſe, Progreſs, and Decay of all Commerce and naval Power, which are at firſt (at leaſt, generally ſpeaking) the Effects of private Virtues, or, in other Words, are produced by the extraordinary Abilities and unwearied Labours of particular Men in Seaſons proper for ſuch Undertakings, and with due Aſſiſtance from that State in which ſuch Genii appear.

The advantageous Conſequences that ariſe from ſuch Expeditions, beget in the Body of a People a Spirit of Induſtry and Commerce, which, by giving a new Turn to their Genius, and raiſing at the ſame a virtuous Emulation, in a ſhort Space, ſhorter indeed than can be well imagined, create a naval Force, and thereby eſtabliſh a new maritime Power. But, on the one hand, the Wealth derived from Commerce, and that wonderful Flow of Succeſs which uſually attends a Nation powerful at Sea, very often produces Luxury and Indolence, which naturally lead to the Ruin both of Trade and naval Power. I do not mean, by Luxury, the Poſſeſſion of all the Pleaſures and good Things of this Life, but the affecting nothing elſe. If it were otherwiſe, we ought not to deſire Commerce at all, becauſe it is the certain Source of Riches and Affluence; but there is a great Difference between poſſeſſing and uſing good Things moderately, and being ſo bewitched with them as to dedicate our whole Time to their Enjoyment; becauſe, if there were no other Argument to prove this wrong, the Thing proves itſelf, ſince it is impoſſible to preſerve Pleaſure, ſuppoſing Happineſs to conſiſt therein, if we do not ſpend a great Part of our Time in thinking of ſomewhat elſe.

It was for want of attending to this plain Truth, that the *Portugueze* deſpiſed and contemned the *Dutch* on their firſt Appearance in the *Indies*; they conſidered their own Force as ſo much ſuperior to that of their Enemies, that they never reflected on the Means by which that Force was raiſed; I mean the Valour, Induſtry, Patience, Prudence, and publick Spirit of the firſt Adventurers; all which Qualities being now on the Side of their Competitors, and wanting in themſelves, ought to have awakened them to a Senſe of their Condition, and to a Return to thoſe Virtues which originally procured, and were alone able to preſerve, their extenſive Poſſeſſions. But continuing as they did to provoke on one hand the Natives, and to neglect on the other the neceſſary Precautions againſt the *Dutch*, they did the Buſineſs of their Enemies, and drew upon themſelves that Deſtruction which could never otherwiſe have been brought upon them.

I have before obſerved, that like Cauſes will, in all Caſes, be attended with the like Effects, and therefore there will be no Occaſion to repeat theſe Remarks in the Progreſs of this Work; though it would have been a great Overſight to have omitted them here, inaſmuch as they contribute chiefly to render our Labour uſeful and important, which otherwiſe would be no more than an agreeable Amuſement. To relieve the Reader, however, from ſo ſerious a Courſe of Study, we have, in the next Section, given him the Travels at large of a very curious Diſcoverer, and the only one who has given us a tolerable Account of that *Archipelago*, which is the Subject of his Performance.

---

[z] It is very remarkable, that *Vaſquez de Gama*, whoſe Statue is over one of the Gates of *Goa*, was not only the Diſcoverer of the Paſſage to the *Indies* by the *Cape of Good Hope*, but lived to ſee the Eſtabliſhments made by his Countrymen in thoſe Parts carried to their greateſt Height; for at the Time of his Demiſe the *Portugueze* Empire in the Eaſt was in its moſt flouriſhing Condition. It is likewiſe remarkable, that the Son of the great Don *Alphonſo d'Albuquerque*, who was the Conqueror of *Goa*, lived to ſee the Declenſion of their Affairs in the *Indies*, and the prodigious Progreſs of the *Dutch* at their Expence. The whole Circle therefore of the Diſcoveries, Acquiſitions, and Loſſes of this Nation, take in no greater Compaſs than two hundred and fifty Years, which is very little in Compariſon to the Time this Trade was held by the *Tyrians*, or the *Romans*.

SECTION XXIV.

The Voyage of Francis Pirard de Laval *to the* Eaſt-Indies; *his Shipwreck amongſt the* Maldives, *and his copious Account of that* Archipelago.

Tranſlated from the Author's Original Voyage, publiſhed by himſelf in *French.*

1. *An Account of the Deſign of this Voyage, and the Author's Embarkation for the* Eaſt-Indies, May 18, 1601. 2. *The remarkable Accidents which happened in their Paſſage till their Arrival at the Iſland of* Anabon. 3. *They double the* Cape of Good Hope, *and arrive happily on the Coaſt of the Iſland of* Madagaſcar. 4. *They meet with a dreadful Storm there, and loſe a great many Men by the Scurvy and Surfeits.* 5. *Proceed from thence to the* Comorro Iſlands *on the Coaſt of* Africa, *near* Moſambique, *where they refreſh and refit.* 6. *The Ship on board of which our Author was, wrecked amongſt the* Maldive-Iſlands, *and himſelf made Priſoner.* 7. *A general Deſcription of theſe Iſlands, their Product, and the People who inhabit them.* 8. *The Diviſion of theſe Iſlands into ſeveral Provinces, with an Account of the Sea that ſurrounds them.* 9. *Of the Original Inhabitants of this Country, their Complexions, Stature, Temper, and Manners.* 10. *The vaſt Fertility of the* Maldives, *and the Nature of the ſeveral kinds of Corn and Fruits produced there.* 11. *Of the Birds, Fowl, Fiſh, and other ſorts of Proviſions, and of their prodigious Plenty and exceſſive Cheapneſs.* 12. *A very ſingular Method in uſe among the Inhabitants for weighing whatever is loſt in the Sea.* 13. *Their Language, Religion, Temples, Prieſts, and Form of publick Worſhip, with occaſional Remarks on them.* 14. *Other Ceremonies of their Religion, together with their Feaſts and Faſts, and Diverſions at ſuch Seaſons.* 15. *A large Account of their Marriages, the Manner of their ſettling Jointures, and their frequent and voluntary Divorces.* 16. *Their funeral Ceremonies, Profits accruing thereby to the Prieſts, and other curious Particulars relating to that Subject.* 17. *A Deſcription of the Dreſs of Men and Women in thoſe Iſlands, and of the Laws in relation thereto, and other Circumſtances.* 18. *Their Cuſtoms in eating and drinking, Laws for prohibiting of Luxury, and generous Concern for the Poor.* 19. *Superſtitious Cuſtoms among them in relation to the Killing of Beaſts, Uſe of Baths, Sailing, and other Caſes.* 20. *An Account of the Diſeaſes which prevail among the Inhabitants; their Skill in Phyſick, and other Sciences.* 21. *The Virtues and Vices of the* Maldivans, *with ſome curious Particulars relating to their Women.* 22. *A large Account of the Nature of their Civil Government, Power of the King, his Privy Council, Judges,* &c. 23. *Criminal Puniſhments in Uſe amongſt them; together with the Eſtate of their Military Eſtabliſhments.* 24. *A Deſcription of the King's Palace, Habit, Manner of Living, and other Circumſtances relating to his Court.* 25. *His State when he appears in Publick, the Queen's Court, and the great Reſpect paid them by their Subjects.* 26. *The Particulars of the Royal Revenue, the Nature of the Coinage here, and of the Value of their Commerce.* 27. *The Manner of the Author's Eſcape out of this Country, after he had remained a Priſoner there for ſeveral Years.* 28. *The Author's Journey to* Bengal, *and Return out of the* Indies. 29. *Remarks and Obſervations on the foregoing Particulars.*

1. THERE are ſome Voyages and Diſcoveries which never loſe their Value, becauſe never ſuperſeded by any thing more excellent in their kind; and this we may truly affirm to be the Caſe of that Voyage which we now preſent to the View of the Reader. It contains a very curious, accurate, and circumſtantial Account of Countries and People, who, tho' they lie at the very Entrance of the *Indies*, were never deſcribed before, nor has any ſubſequent Account of them appeared capable of entering into any Degree of Compariſon with this which we have before us. Our Author appears to have been a Man of good Senſe, and great Obſervation. He was led to travel from a Humour common enough in Youth; I mean the Deſire of ſeeing new and ſtrange Things; but, at the ſame time, this Humour of his was regulated by a Diſpoſition not very common in young People, which was that of looking to the Bottom of whatever appeared worthy of Notice, and of labouring to acquire whatever Talents were neceſſary to make ſo thorough an Inquiſition. It was from theſe Principles that he derived that Conſtancy and Reſolution which are ſo conſpicuous in the following Relation.

He was, doubtleſs, in hopes, when he undertook this Expedition, that all Things would have fallen out favourably, and that he ſhould have been entertained with the Sight of all the Curioſities in the *Indies*, with little Hazard, and ſome Gain to himſelf: But when it fell out otherwiſe, and he found all theſe Reſolutions overturned by the unlucky Accident of a Shipwreck, he did not loſe either his Reaſon or his Spirits; but, on the contrary, determined to make uſe of this Accident to further his Deſign of obtaining a diſtinct Knowledge of the Places and People whom it was his Fortune to viſit. It was in conſequence of theſe Notions, that he examined carefully, and recorded faithfully whatever came within the Compaſs of his Notice: And that he might enlarge the Circle of his Underſtanding, he applied himſelf with Diligence, firſt to learn the Tongue of the Country, and next to enter into a free Converſation with regard to their own Affairs of every kind with the People themſelves; ſo that his Judgment always went along with his Curioſity; and we may reſt ſatisfied that he has not reported Things barely as they appeared, but as they were.

After this Account of our Author, it is requiſite we ſhould ſay ſomewhat of the Time and Manner in which this Voyage was undertaken, and afterwards we ſhall leave him to ſpeak for himſelf. The Fame of the *Eaſt-India* Commerce in the Beginning of the ſeventeenth Century, provoked ſome *French* Merchants of *St. Malo*, *Laval*, and *Vitre*, to think of ſending two Ships into that Part of the World, which Project they executed in the Spring of the Year 1601. The biggeſt of theſe Veſſels was of the Burthen of three hundred Tons, called the *Croiſſant*; the leſſer of two hundred Tons, called the *Corbin*: The former of theſe was under the Command of the Sieur *de Bardeliere*, the other under that of *Francis Grout*, Conſtable of *St. Malo.* They ſailed from the laſt-mentioned Port on the Eighteenth of *May*, 1601, and had not proceeded above ten Leagues out to Sea before their Mizen-Maſt ſplit and broke in the Middle, which, ſays our Author, was the Beginning of our Misfortunes: And their Hiſtory he continues thus.

2. On the 21ſt we fell in with nine great *Dutch* Hoys, each of which ſaluted us with a Gun, but one of them being

ing loaded with Ball, beat the Sail of the *Corbin* to Pieces; upon which the Vice-Admiral fired two Guns on the Rigging of the Ship that had injured him; and the Admiral tacking to the Windward o. the *Dutch* Admiral, ſpread all his Sails, and fired a Gun upon them; the *Dutch* Admiral preſently ſtruck, and, having informed himſelf that the Miſchance was occaſioned by the Overſight of a Gunner that was in Drink, delivered up the Gunner to the *French* Admiral, in order to condign Puniſhment, and begged he would pardon the Miſtake. Our Admiral finding how the Matter ſtood, ſaid, he deſired no further. Satiſfaction; and having returned the Gunner, entreated the *Dutch* to vouchſafe him a Pardon. How the *Dutch* treated him afterwards I know not; though I do not much doubt but they hanged him up immediately at the Yard-arm; for the *Dutch* obſerve an exact Diſcipline among their Ships, and ſuffer no Miſtakes to paſs with Impunity; and from thence it comes to paſs, that their Navigation is more ſucceſsful than the *French*.

June the 3d we deſcried the *Canary Iſlands* in 28, 29, and 30° N. Lat. The 12th and 13th we came within Sight of the Iſlands of *Cape Verd*, which run from 20 to 14° N. Lat. On the 29th we were in 5° Lat. and diſcovered the South-Star, called the *Croſs*; at the ſame time we ſaw a prodigious Quantity of Flying-Fiſh, with Wings like thoſe of Bats, which are very plentiful near the Equinoctial Line, whether on the North or South-ſide. On the 14th of *July* we diſcovered the unhealthy Coaſt of *Guiney*, being carried out of our Courſe in a Calm by the Strength of the Currents. *Auguſt* the 24th we croſſed the Equator, on both Sides of which, for the Extent of 7 or 8 Degrees, we had very unconſtant Weather; the greateſt Calms were commonly turned into Thunderings and Lightnings (eſpecially when the Sun is near the Equinoxes) and with boiſterous Winds, which ſurpriſed us ſo ſuddenly, that we could ſcarce get our Sails down in time. The Heat was ſo great that it melted our Candles and Butter, corrupted our Water, and ſpoiled our Meat and Fiſh, though never ſo well ſalted.

We frequently ſaw great Whirl-winds riſing at a Diſtance, called by the Seamen *Dragons*, which ſhatter and overturn any Ship that falls in their Way. When theſe appear the Sailors have a ſuperſtitious Cuſtom of repairing to the Prow, or the Side that lies next the Storm, and beating naked Swords againſt one another croſſwiſe, from a vain Apprehenſion of preventing their Approach by that Means. In this Climate the Rains are very dangerous, for if one is wet and does not immediately ſhift himſelf, his Body is ſoon covered over with Blotches, and his Cloaths with Worms. In the Time of a Calm Ships roll prodigiouſly in thoſe Seas, but when they run with a freſh Gale they are more ſteady.

3. *Auguſt* the 29th our Pilot, who was an *Engliſhman*, diſcovered Land ten Leagues off; for though we endeavoured to ſtand one hundred Leagues off to Sea, the Currents drove us towards the Shore. This we found to be the Iſle of *Anabon*, poſſeſſed by the *Portugueze*, where we took in freſh Water and Fruit, and the Inhabitants, after a Shew of Civility at firſt, treacherouſly ſlew one of our Men, and took five Priſoners. This Iſland is governed by a *Portugueze* Lord, who had the Gift of it from the King of *Spain*, the other *Portugueze* who inhabit it being only his Factors and Commiſſaries. The Natives who are all his Slaves, are Negroes, and go naked, covering their Privities with Cotton. Their Women carry their Children upon their Backs, and ſuckle them over their Shoulders, their Breaſts being very long. The Iſland is ſituated in 1° 20′ S. Lat, and is five or ſix Leagues in Circumference. It is high, mountainous, and always green. The Road is on the North-Weſt Side, and is very dangerous, by reaſon of Flats and Rocks. We lay there ſix or ſeven Weeks, and, during that Time, it rained every Day, more or leſs. The Country produces great Plenty of Fruit and Cotton, in which all the Revenues to the Lord are paid. Their Fiſh is extraordinary good and very plentiful. At the Diſtance of a League and a half from *Anabon*, there is a little ſcorched Iſland, which affords no Greens, but is ſo covered with Fowl called *Penguins*, that one cannot walk any where without treading upon their Eggs. This Fowl is no bigger than a Pidgeon, and the Fleſh is black, but eats admirably well.

On the 16th of *October* we put to Sea again, and *November* the 17th we made the Iſland of *St. Helens*, which lies in 16° S. Lat. at the Diſtance of ſix hundred Leagues from the *Cape of Good Hope*. Upon the Altar of a Chapel in this Iſland we found ſeveral Letters, adviſing that the *Dutch* had paſſed that Way. Here we thought to have fitted our Mizen-Maſt, but found no Wood fit for the Purpoſe. The Air, Fruit, Fleſh, and Water of that Place are ſo healthy, that our Men, who were much oppreſſed with the Scurvy, recovered in the Space of Nine Days. On the 26th we ſet ſail, and ſtood for the *Cape of Good Hope*, and three Days after doubled *Abrollos*, which are a Bank of Shelves upon the Coaſt of *Brazil*, in 18° S. Lat. and ſeventy Leagues long. The doubling of theſe Sands is both difficult and dangerous, and in ſailing to the *Eaſt-Indies*, an expert Pilot ought to be very cautious in keeping to a juſt Diſtance from the *Guiney* Coaſt, which is very unhealthy, and incommoded with Calms and Currents, and, at the ſame time, ſtandling off from the *Abrollos*, for the doing of which there is Sea Room enough, ſince we reckon a thouſand Leagues from the Coaſt of *Africa* to that of *Brazil*. Having doubled this Cape, we continued our Courſe for the *Cape of Good Hope*, and in a few Days we knew that we approached it by the Appearance of the Reeds called Trombas, and white ſpeckled Fowls. Having weathered the *Cape of Good Hope*, we came in Sight of that of *Aguillas* or *Needles*, which ſhoots fifteen Leagues farther into the Sea, and lies in 35° S. L. This Cape derives its Name from the Obſervation, that when a Ship comes before it, the Needle of the Compaſs points directly northward, without declining to the Eaſt or Weſt.

We met *January* the 6th, 1602, with a violent Storm, in which one of our Seamen fell overboard, and his Companion would have jumped after him if we had not prevented him; though, after all, I took his Offer to be the Effect of Wine rather than true Affection; for there is but little Friendſhip among ſea-faring Men. Purſuing our Courſe, we ſteered by the Country of *Natal*, upon the Coaſt of *Ethiopia*, without any Storm, which was uncommon in thoſe Seas; for between the 33d and 28°, they are never, almoſt, without violent Storms. After that we miſtook our Courſe, thro' the Ignorance of the Pilot; and, on the 4th of *February*, finding ourſelves on the Land-ſide of *St. Laurence*, tacked about, in order to make the other Side.

4. *February* the 7th, having paſſed that Iſland, according to our Wiſhes, we were ſurprized all on a ſudden by a violent Storm from the South-Weſt, being leſs acquainted with thoſe Seas than the *Portugueze*, who make timely Proviſions for ſuch Accidents. In the Storm it was ſo dark at Noon-Day, that we could not ſee the Heavens, or one another; our two Ships were ſeparated, and our Sails were tore to Rags, ſuch was the Force of the Rain and Wind, that they wounded our Faces like ſo many Laſhes of Whipcord. The Waves ſwelled ſo high, and waſhed in upon the Ship, that we could not ſtand upon the Deck. In this Place we continued four Days and four Nights, and ſome of the Men that were on board applied themſelves to devout Exerciſes, while the Sailors redoubled their Oaths and Blaſphemies. Our ancienteſt Pilots and Seamen proteſted they never encountered ſuch a Tempeſt; but the Buſineſs was, they never had been in thoſe Seas, which ſwell higher than elſewhere.

On the 11th the Storm being over, we ſtood in for *St. Laurence*, being much diſabled. All our Men were in a manner half dead, and we had not a Man on Board, but a *Dutch* Gunner, that had ever been in the *Indies* before. When we came within forty or fifty Leagues of the Iſland, the Sea appeared yellowiſh and frothy, and was covered with Reeds and floating Herbs, which continued to appear on its Surface till the 19th, that we arrived and caſt Anchor in *St. Auguſtin*'s Bay, in 23° 30′ South Latitude. This Bay is large, and very convenient, having an excellent Ground of Clay and Sand. The ſame Day the *Croiſſant* rejoined us, after twelve Days Separation, and was more diſabled than we.

The Seamen being ſcorbutick, we marked out a Place on the Shore for the Sick, and at the ſame time a *Dutch* Ship wae forced into the ſame Harbour by Streſs of Weather, which had not one ſick Hand on Board. The Natives gave us Cattle, Fowls, Honey, and Fruit, in Exchange for Knives, Sciſſars, and Trinkets of little Value; but the Place was ſo unhealthy, that many of our Men died, partly by the Scurvy, and partly by a Phrenetick Fever. We lay directly under the Tropick of *Capricorn*, and the Sun-beams darted upon us almoſt in a perpendicular Line; ſome had their Legs ſcorched, and ulcerated through their Stockings; nay, the extream Heat would have incommoded us more, if it had not been for the Conveniency of a fine River to bathe in, and the Shades of a large Wood. We were poſted at the Foot of a great Mountain, which was covered with Infinity of large Lizards that offered no Hurt to any body. The Wood was repleniſhed with an innumerable Quantity of little Monkies and Apes, which entertained us with a continual Shew of dancing about, and ſkipping from Tree to Tree. Parrots are there very numerous, and make an agreeable Harmony, with their various and warbling Notes. Not to mention the Indiſcretion of our Men in over-feeding in ſo hot a Climate, and the pernicious Conſequences that attended it, I ſhall only take Notice farther of the unſpeakable Uneaſineſs from the Flies by Day, and the Gnats that peſtered us by Night, in piercing the Fleſh till the Blood came, and an Inflammation iſſued. This Inconvenience was ſo cutting, that ſome crept into Sacks and Bags, leaving only a ſmall Hole to breathe through, and all of us were forced to make Fires, and lie down in the midſt of the Smoak.

The Iſland of *St. Laurence* is ſeven hundred Leagues in Circumference. It lies between 26 and 14° South Latitude. It abounds in Cattle, eſpecially Sheep, which bring forth three or four Lambs at a time; the Cattle are not impropriated, but common to all that catch them; for the Inhabitants, and indeed moſt of the other *Indians*, chuſe rather to feed on Fiſh, Fowl, and Milk. 'Tis common there to ſee two or three hundred Bulls and Cows in one Herd, and when they come to croſs a broad deep River, the Cows raiſe their Heads upon the Bulls Rumps, and ſo get over. We anchored at the Mouth of a River that afforded great Plenty of Fiſh and Crocodiles, and when we killed a Crocodile and took out its Entrails, we obſerved, that like Muſk they made a very agreeable Perfume in the Air. The Natives are of a tawny olive Colour, inclining to red; they are tall, ſtrait, well made, and not only of a ready Apprehenſion, but wiſe; their Hair is long, and wreathed into Treſſes. They are naked all over, excepting that their Privities are covered with Cotton Cloth. The Women wear one Piece of Cloth, that covers them from under their Breaſt to their Girdle, and another that reaches from thence to the Knees, their Heads being bare, and ſhaved. Their Arms are Darts and Javelins, called *Azagayes*, for the Noiſe of a Gun frights them exceedingly. 'Tis ſaid that this Iſland was formerly peopled by the *Chineſe*, upon the Occaſion of a Ship's being caſt away upon that Coaſt; and indeed they reſemble the *Chineſe* very much, bating that their Complexion is not near ſo white, which perhaps may proceed from their going naked, and living in the *Torrid Zone*. At preſent the Iſland is very populous, and governed by ſeveral Kings that wage War with one another: Some of the Inhabitants are *Mohammedans*, and circumciſed, and the reſt are *Pagans*. The inland Parts of the Iſland are in great Want of Water.

5. On the 15th of *May*, having refitted our Ships as well as we could, and provided ourſelves with Water, Wood, and Fleſh, which after all would not take Salt ſo well as what we have in *Europe*, we ſet ſail, and ſteered for the *Comorro* Iſlands, from the Conſideration that our Complement of Men was very ſhort and ſickly. The 23d made theſe Iſlands, which lie in 12° 30′ South Latitude between *St. Laurence* and the Continent of *Africa*, at the Diſtance of ſeventy Leagues from *Mozambique*. There are five of them, each of which has a peculiar King, and one of them called *Malaill*, being ſurrounded by the other four. We choſe to anchor in its Road; we ſaw ſeveral Villages aſhore, the Inhabitants of which uſed us kindly, and gave us Fruits in Exchange for Trinkets made of Iron. The Inhabitants of theſe Iſlands are *Mohammedans*, being a Medley of ſeveral Nations, viz. *Ethiopians*, *Caffres*, *Arabians*, and *Perſians*. They are true Friends to the *Portugueze*, and a cunning, ſharp ſort of People, that are not fit to be confided in.

When our Men offered to land at a little Village to take in Water, the Inhabitants roſe up in Arms, and oppoſed their Landing, till they ſent them five or ſix Crowns; after which they allowed them to take as much Water as they pleaſed. All theſe Iſlands are extreamly fertile in Oranges, Citrons, Cocoes, Honey, Betel, and Rice, which we bought up at the eaſy Purchace of a few Iron Trinkets and *Flanders* Ware: Fleſh, indeed, is as dear there as here, though they have plenty of Oxen, Cows, and Sheep. They have Barks made altogether out of the Body of one Tree, in which they ſend their Fruit to *Mozambique* to be exchanged for Cotton, Cloth, Gold, Ivory, *&c.* One Day we ſaw a monſtrous Fiſh riſe above the Water, which had the Form and Figure of a Man, with a ſort of Beard towards the Chin that ſeemed to be its Fins, and a long ſcaly Head, terminating in a Point: when we offered to come near him he plunged his Head under Water, and ſo diſcovered Part of his Back, which was ſcaly. We ſtaid a Fortnight in this Road, and the Goodneſs of the Fruit and the Air cured our Men of the Scurvy to a Miracle; and indeed I have always obſerved that Citrons and Oranges, and their Juices, are of ſovereign Uſe in ſcorbutick Caſes.

6. *June* the 17th we ſet ſail, and the 24th repaſſed the Equinoctial Line, ſtanding to the Northward in the Lat. of 5°. We perceived ſome great Shelves ſurrounding little Iſlands, which were the *Maldives*, though moſt of our Maſters and Pilots miſtook them for the Iſlands called *De diego des Roes*, which we had left eighty Leagues a-ſtern to the North-Weſt. Our Admiral deſigned to paſs to the North of the *Maldives*, between them and the Coaſt of *India*; but, on the contrary, we run directly upon them, whereas we ought to have ſtood an hundred Leagues off them, if we had a Mind to be ſafe. In fine, ſuch was our Misfortune, that the *Corbin*, which ſailed a-head, ſtruck thrice upon a Rock, at the Diſtance of five or ſix Leagues from the Coaſt of the *Maldives*. In this Diſaſter we ſaw a Bark belonging to the Iſlands, which would not come near us on account of a ſtrict Prohibition in that Country to approach any Ship in Diſtreſs without the King's Leave. In the mean time the Sailors eat and drank heartily, and treated their Commanders with Inſolence, inſulting all thoſe who ſhewed any Regard for Religion, and loudly proclaiming that, ſince Death was ſo certain, they were reſolved to render its Approaches eaſy and ſoft. This filled me with Horror, and convinced me that moſt Sailors leave their Souls and Conſciences aſhore. In fine, after continuing two Days in this deplorable and deſperate Condition, we made a ſhift to refit our Galleon, and haul it over the Flats, and, with infinite Labour and Difficulty, arrived on board of it at one of the Iſlands called *Pouladon*, which is not a League in Circumference. We had carried ſome Arms along with us, but the Inhabitants diſputed our Landing till we had given up our Arms, and ſurrendered ourſelves at Diſcretion. There were not above twenty or twenty-five Inhabitants in the Iſland, but they concerted their Meaſures ſo wiſely, that they ſent off our Boat and all their own to the other Iſlands: to prevent any Inſurrection from us, they carried us to a Lodge in the Middle of the Iſland, where they entertained us with ſome Fruit, Cocoas, and Lemons, and rifled us of all we had, alledging that it belonged to their King, as being a Wreck. We had a Piece of Scarlet Cloth with us, which we pretended was deſigned for a Preſent to the King of the Iſlands, affirming at the ſame time, that the whole Cargo of our Ship was for a Compliment to him.

Upon this nobody dared ſo much as touch the Scarlet; but, after all, we cut off a Piece of two or three Ells of it, and preſented it to the Governor of this little Iſland, in order to oblige him, and he, who was a very old Man, took it very kindly, conjuring us not to ſpeak of it. Soon after the Governor ſent the Maſter and two Sailors to the King, who reſided in the Capital Iſland called *Male*, and the Maſter preſented him with the Piece of Scarlet.

immediately the King ſent for his Brother-in-law to ſave what was on Board our Ship, though the Flats were ſuch that no Boat could come near it; yet they found a Way of getting at it by Means of a Rope faſtened at one End to the Ship, and at the other to the Rock; for tho' the Waves waſhed over them, they had faſt hold by the Rope, and ſo got to the Ship; nay, they are ſo ingenious, that they took out the very Cannon and the heavieſt Goods, and laughed at any Advice we could give them. When we left the Ship, we brought with us about a thouſand Crowns in ſeveral Girdles, and buried it aſhore for a common Reſerve, to ſupply our Neceſſities; but ſome of our Men being in want of Subſiſtence, digged up the Place, and offered the Natives Pieces of Money for Food, after which the Natives would never allow us Suſtenance without Pieces of Money; and in regard that the leaſt Piece in the Bank was worth Twenty-pence, their Proviſions were much over-valued: Every Seaman hid from his Neighbour what he had got, and would not aſſiſt him even at the Point of ſtarving; nay, when any lay very ſick, the reſt came and rifled him before he died.

As for my own Part, I and two more were tranſported to the Iſland of *Pandow*, the Natives of which being acquainted with what paſſed in the other Iſlands, and thinking we had Money about us, refuſed us Suſtenance, till we gave them Pieces of Silver; but, in reality, we had none of the Money, and were reduced to great Extremities. In the mean time, I made it my Buſineſs to learn their Language, and by being able to diſcourſe with them, inſinuated myſelf into the Favour of the Governor of the Iſland, who ſent me to *Male*, with Recommendations to the King, and both the King and his Queens were ſo well pleaſed with my ſaluting them in their own Language, and according to the Cuſtom of the Country, and with the Account I gave them of the Things that were taken out of our Ship, the Manners of the *French* Ladies, *&c.* that they took particular Care of me in a Fit of Sickneſs that laſted for many Days: In a Word, I roſe, by the King's Favour and Bounty, to a Competency; and having, by Virtue of a long Stay in the Country, an Opportunity to inſpect their Conſtitution, Cuſtoms, Laws, *&c.* am now going to gratify the Publick with what I have learned upon that Subject.

7. The *Maldives* lie between one Degree N. Lat. and 4° S. Lat. being two hundred Leagues in Length, and thirty-five in Breadth. They are diſtant from *Spain*, according to the Courſe of ſailing 4500 Leagues. They are divided into thirteen Provinces, called *Attollons*, each of which comprehends a great many ſmall Iſlands, and is of a circular Form, containing about thirty-two Leagues in Circumference. The Iſlands are ſurrounded with a great Ridge of Rocks, which breaks the Shocks of the Sea, and raiſes prodigious Surges. 'Tis ſaid the Number of Iſlands amount to 12000, a great Part of which are nothing but uninhabited Hillocks of Sand; but the Inhabitants informed me, that the daily Incurſions of the Sea-Sand impaired the Number both of the Iſlands and the Inhabitants, and that the Iſles of one *Attollon* were formerly one continued Track of Land. It is plain, that the Seas which divide the Iſles of one *Attollon*, are ſo ſhallow, that at Low-water one might eaſily wade over, were it not that the Bottom is rocky and ſharp, and apt to wound the Feet, and that thoſe Seas are peſtered with Fiſh called *Paimones*, which break Mens Legs and Arms, and devour them. Another great Inconvenience that attends the going into the Water, proceeds from a rough, ſharp, porous, hard and ponderous ſort of Subſtance, not unlike white Coral, which they call *Aquicy*, and make uſe of in boiling it with Cocoa Water, for it is that which forms their Sugar or Honey. A great Part of theſe Iſlands is uninhabited, and produce nothing but Trees and Graſs, others are only a moveable Sand, without any Green, and others again are overflowed at high Water.

The reſt are covered all over with great Crabs called *Cacouue*, and Cray-fiſh, or elſe with the Fowls called Penguins, inſomuch that one cannot place a Foot in any Part without treading upon their Eggs and young ones, or upon the old Birds themſelves, which do not fly far upon the Approach of a Man. This Fowl is as big as a Pidgeon, with black and white Feathers, and is excellent Meat, though the Natives do not eat it. The uninhabited ſandy Iſlands appear at a Diſtance as if they were covered with Snow; for the Sand, which is as fine as that of an Hour-Glaſs, is extream white, and withal ſo very hot as to hatch the Penguins Eggs. Theſe ſandy Iſlands afford little or no freſh Water, but the covered Iſlands, whether inhabited or not, enjoy that Benefit, abating for a very few, the Inhabitants of which are forced to have Recourſe to the neighbouring Iſlands for Water, and make uſe of certain Inventions for the receiving of Rain-Water.

The Water of ſome Iſlands is better than that of others; their Well-Water is neither very ſweet nor very wholeſome, but is is very plentiful, and very freſh, even within four Paces of the Sea-Side; for they dig not above three or four Feet, and where the Sea makes frequent Inundations. This Water is very hot in the Night-Time, and extreme cold in the Day, eſpecially about Noon. To return to the thirteen *Attollons*, the firſt, beginning from the North, is called *Tilla Don Matis*, i. e. *the high Point*; in this lies the Head or Cape of the ſame Name, called by the *Portugueze*, *Cabexa des las il has*, ſituated in 8° N..L. The ſecond is called *Milla done Madone*, the third *Padypolo*, the fourth *Malaſmadon*, the fifth *Aratellon*, the ſixth *Male Attollon*, in which lies *Male*, the head Iſland of the *Maldives*; the ſeventh *Pouliſdows*, the eighth *Molucque*, the ninth *Nilandous*, the tenth *Collomandous*, the eleventh *Aloumàtis*, the twelfth *Souadon*, the thirteenth *Addon* and *Polo Molucque*; theſe two being reckoned but one, by reaſon of their Smallneſs. Each *Attollon* is ſeparated from the adjacent Provinces by an Arm of the Sea, which is in ſome Places narrow, and in others broad. There are only four of theſe limiting Channels, that, being much broader than the reſt, are navigable by great Ships, but not without Danger, eſpecially in the Night, by reaſon of their Flats and Rocks, which are marked very exactly in ſome Sea Charts which I ſaw in that Country. The Natives have a wonderful Dexterity in avoiding theſe dangerous Places: I have ſeen them ſail ſo nicely, as to rub upon Rocks on both Sides, without any Damage.

Both the Rich and the Poor are inured to the Sea from their Infancy, and fear not to encounter the moſt turbulent and foaming Seas, in little Boats and Barks, the Number of which is unaccountable; for the pooreſt Man that is has one, and the Rich have ſeveral. They never ſail by Night, or out of Sight of Land, unleſs it be when they undertake ſome great Voyage; and accordingly, the Proviſions they have on Board are calculated only for one Day. The greateſt Part of the Iſlands comprehended in one *Attollon*, are ſurrounded with a common Flat or Bar, that is only paſſable at one or two narrow Places, which are not eaſily obſerved, and for that Reaſon it is neceſſary for them to be very expert in the Management of their Boats, or Barks, ſince the leaſt Slip is certainly followed with Shipwreck, and the Loſs of their Goods; as for their own Perſons, indeed, they have no great Reaſon to fear, for all of them ſwim admirably well. Notwithſtanding that wonderful Dexterity in Sailing, they frequently loſe their Barks, which is occaſioned by the Currents called *Oyvacous*, which run Eaſt and Weſt, ſix Months upon the Eaſt Coaſt, and ſix Months upon the Weſt; but with ſuch Uncertainty, that the Change happens ſooner or later, at one Time than another: Though their Winds are frequently fixed, as well in the Currents in the Eaſt and Weſt Quarter, yet they ſometimes ſhift to the North and Eaſt.

8. It is to be obſerved, that the *Attollons* lie all in a Line, the End of the one facing the End of the next adjacent, and that they have two Entrances or acceſſible Places on each Side, which is a wonderful Conveniency; for if there was only one Landing-place at each End, the Impetuoſity of the Eaſt and Weſt Currents would break their Communication with one another, or, at leaſt, it would be impoſſible to practiſe it at all Seaſons. The Neceſſity of four Landing-places in each *Attollon* will be evident, if we conſider the following Inſtances; ſuppoſe a Landing-place on the Eaſt Coaſt, almoſt directly oppoſite to the Entry of the other *Attollon*, and another on the Weſt, oppoſite to that of the adjacent *Attollon*, if the Current runs from Eaſt

to Weſt, we cannot croſs directly from Entrance to Entrance, but ſet out from the Eaſt Coaſt, which is then the Head of the Current, and taking it ſideway, ſteer for the Weſt Entry of the other *Attollon*. In order to return, we ſet out from the Eaſt Entrance, and over-thwarting the Current, make to the Weſt Entry of the other *Attollon*. When the Current changes its Courſe, we obſerved the ſame Contrivance in ſetting out from the Head of the Current, and entering the other *Attollon* at the Place which lies under the Current of theſe Entrances. Some are broad, and ſome narrow, but the wideſt is not above two hundred Paces over, and ſome of them are leſs than thirty; each Entrance hath an Iſland on each Side, and if Cannon were planted on theſe Iſlands, it would be eaſy to hinder any Ships to enter.

Of the Channels that part the *Attollons*, there are only four broad ones, which are navigable by great Ships, and frequently viſited by Strangers, when the Currents carry them in againſt their Will. To begin from the North Side, the firſt of the four waſhes the *Attollon* called *Malos Madou*, and it was in this that we were caſt away. The ſecond, called *Caridou*, has *Male*, the greateſt of all theſe Iſlands in the midſt of it. The third, called *Addou*, lies to the South of *Male*. The Fourth, called *Souadon*, lies directly under the equinoctial Line, and in regard that it is the broadeſt of them all, being twenty Leagues over, the Natives do not ſail upon it without a Compaſs, though they never uſe any in the Channels. Beſides theſe, there is a narrow Channel, which ſeparates *Male* and *Pouliſtou*, in which the Sea appears as black as Ink, but the Water taken into a Veſſel, looks like other Water. That Sea boils like Water over a Fire. It ſwells into great black Surges, but is not moved from one Side to the other, which renders it very terrible. The *Maldives* lie ſo near the Equinoctial, on both Sides, that their Climate is extreamly hot. Their Day and Night are always equal, and their Nights are very cool and dewy, which renders the Heat of the Sun more tolerable, and nouriſhes exceedingly their Herbs and Trees. Their Winter commences in *April*, and continues till *October*, at which time the Summer begins, and laſts likewiſe ſix Months. In Winter they have perpetual Rains, but no Froſt, and the weſterly Winds are very boiſterous. In Summer their Winds are eaſterly, with an exceſſive Heat and no Rain.

9. It is ſaid, that the *Maldives* were in former Times peopled by the *Cingala*, or Inhabitants of *Ceylon*; but it is obſervable, that the *Cingalans* are black and ugly, whereas the Inhabitants of the *Maldives* are handſome, well made, and of an Olive Complexion; though, after all, 'tis poſſible, that the Climate and Length of Time may have altered the Complexion and Shape to their Advantage; beſides, that a great many Foreigners being caſt away on their Coaſt, are blended with them by Intermarriages, and by this Means it comes, that thoſe who live about *Male*, between it and the North Cape, where moſt Shipwrecks happen, are more poliſhed and civilized than thoſe on the South Coaſt, who are not only blacker, but much coarſer in their Language, Cuſtoms, and Shape of the Body; nay, many of their Women, eſpecially ſuch as are poor, go naked, with only a ſmall Cover for their Privities. This North Side of the Iſland is not only richer, and more civilized, as being the common Paſſage for all Ships, but the Seat of all the Nobility and Men of Fortune, and when the King puniſhes a Criminal with Baniſhment, he only ſends him to the South Parts. The Soldiers are all raiſed in the North Parts; but after all this Difference, I muſt ſay, that the Inhabitants of the South Parts are naturally as lively and quick-witted as thoſe of the North. In general, the *Maldivans* are very ingenious, they apply themſelves with great Induſtry and Succeſs to all ſorts of Manufactures, and alſo to Letters and Sciences, after this Manner, eſpecially to Aſtrology, which they hold in great Eſteem. They are a very wiſe, cautious People, and very ſharp in their Merchandize and Way of Living; they are brave, and well ſkilled in Arms, and their Policy is very regular.

Their Women are very handſome, abating for their Olive Colour, and ſome of them as white as the *Europeans*. Their Hair is black, which is reckoned a great Ornament, and in order to turn it extremely black, ſeveral Women keep their Daughters Heads ſhaved till they are eight or nine Years old, leaving only a little Hair on the Forehead, to diſtinguiſh them from Boys, who have none at all: I have ſeen ſome Children have half flaxen Hair, which has turned very black by being ſhaved every eight Days. Both Sexes affect black Hair, but the Women take a Pride in having theirs thick and long, which they waſh and dreſs very frequently. They waſh their Head and Hair with Water and Lye made for that Purpoſe; after which their Hair hangs diſhevel'd in the Wind, till it dries, and then they rub and perfume it with an odoriferous Oil, which renders their Head always moiſt and oily. Both Sexes anoint their Bodies after waſhing; but tho' they waſh their Bodies more than once in a Day, their Hair is not waſhed above twice or thrice a Week. They may waſh their Hair when they pleaſe, but they are obliged to do it on *Fridays*, which is their Sabbath for the Women, and Feſtival for the Men. After the Women have waſhed, rubbed and perfumed, they ſtretch all the Hair from before backwards, without leaving ſo much as one ſtraggling Hair, and tie it behind, in a great Tuft, or Knot, which they enlarge by a Perriwig of Man's Hair, made in the Form of a Horſe's Tail; nay, ſome of them have two ſuch Perriwigs; beſides which, they add odoriferous Flowers.

As for the Men, none but Gentlemen, and the King's Officers and Soldiers, are allowed to wear long Hair, and theſe, indeed, waſh, perfume, and dreſs their Hair after the ſame Manner with the Women, excepting that they make the Tuft not behind, but on the Crown of the Head, or on one Side, and they wear no Perriwigs. Their Hair grows much faſter than ours, by reaſon partly of the Waſhing and Perfuming, and partly of the exceſſive Heat which occaſions thick and ſtrong Hair, and for the ſame Reaſon their Hair is black. They have no Combs, but they have Sciſſars of caſt Copper, and copper Looking-Glaſſes, which they make uſe of in ſhaving themſelves, with Steel Razors made after another Faſhion than ours. There are no Barbers in the Country, every one therefore ſhaves himſelf, excepting the King, and ſome Lords, who are ſerved by Perſons who are proud of that Honour, without any Proſpect of Gain; ſo that in all thoſe Iſlands both Men and Women are provided with Utenſils for ſhaving, and are very nice in taking off their Hair, when it begins to be uneaſy to them.

The Girls have their Heads ſhaved once a Week, from their Infancy, to the eighth Year of their Age, at which Time their Hair is ſuffered to grow to its full Length and Dreſs, for then is the Seaſon here of looking out for Huſbands. Before that Age they have no Cloathes, but only a Cloth that hangs down from the Middle to the Knees; and the Occaſion of their being cloathed afterwards proceeds from the Riſing of their Breaſts, before which, they are looked upon as Children, and it is not allowable to diſcourſe to them of Love Matters. The Cloth hangs down from their Middle to the Knees as ſoon as they begin to go, but the Boys have none till they are ſeven Years old and circumciſed. Their Beards are of two ſorts; eccleſiaſtical Perſons, and thoſe who have performed Pilgrimage to *Mecca*, wear long Beards, ſhaving under the Throat, and upon the upper and lower Lips, all round their Mouth. The other ſort of People have little Beards, without Muſtaches, being ſhaved round the Mouth, and under the Chin. They are very careful in ſaving the Parings of their Nails, and the Shavings of their Hair, which they wrap up in Cotton, and bury in their Church-Yards, with a little Water, from a Notion that they being Parts of the Body, require Interment as well as the Whole, and for that Reaſon many of them choſe to be ſhaved in the Porch of the Temples, for they would not for any thing in the World either trample upon theſe Excrements, or ſee them thrown in the Fire.

10. In order to give a particular Deſcription of the *Maldives*, we ſhall begin with their Fertility. It produces great Plenty of *Millet*, called there *Pura*, and another little Grain called *Brinby*, which reſembles *Millet*, but is black like Rape-ſeed. Theſe two ſorts of Grain they ſow, and reap twice a Year; they make a ſort of Meal of them, of

which they make Pottage, with Milk, Cocoa, Honey, as well as Cakes and Fritters. The Country produces likewiſe ſeveral ſorts of Roots, which the Inhabitants feed upon, particularly one called *Nellpou*, which grows wild, being round, and as big as one's two Fiſts. They bruiſe it upon a rough Stone, and then expoſe it to the Sun, upon which it turns to a white ſort of Meal that eats admirably well in Pottage or Cakes, only it muſt be very freſh, or it is apt to lie heavy upon the Stomach. Another Root that grows there plentifully, and eats well, is called *Allas*, which muſt be ſown and cultivated, and is commonly as big as a Man's Thigh. Some of theſe ſorts of Roots are red, and others white; the Inhabitants boil them ſeveral Ways, and make them the moſt of their Food, keeping them for a whole Year, for they come to Maturity only once a Year, *viz.* in *September*. They have no Rice but what is exported from the Continent; however they have it pretty cheap, and uſe much thereof, either boiling it with Water or mixed with Spices, boiled with Milk and Sugar of Cocoas, with Pullets, Fiſh, or turned into Meal after drying and bruiſing, and then made into Cakes and Fritters, with Eggs, Honey, Milk, and the Butter of Cocoas.

This Country is likewiſe furniſhed with Herbs and Trees, ſome of which bear Fruit, and others not; though the Natives eat their Leaves, they being ſweet and well taſted. As for Fruit, they have infinite Plenty of Citrons, Pomegranate, and Oranges of *Bananas*, called by the *Portugueze Indian* Figs, and by the *Maldives Quella*, which is a large, delicious, and nouriſhing Fruit, inſomuch that it ſerves their Children inſtead of Broth. The moſt profitable Fruit is the Cocoa, or *Indian* Fruit, called by them *Coal*, which is more plentiful in the *Maldives* than any other Part of the World; ſo that the Inhabitants know how to manage it better than others. This Tree alone might ſupply all the Neceſſaries of Life, for it affords Wine, Honey, Sugar, Milk, and Butter; beſides that its Kernel may be eat as Bread, of which they have none in that Country. Further, moſt of their Utenſils are made of the Wood, Bark, Leaves, and Nut-ſhells of this Tree. In fine, the whole Country is ſhaded, and refreſhed with Trees, many of which ſerve for no other Uſe but burning; ſo that there is no Occaſion to buy Fire-wood. Beſides that, there are whole Iſlands covered with Trees, from whence they fetch what Fire-wood they pleaſe.

11. It is very remarkable, that though all the thirteen *Attollons* are in the ſame Climate, and all very fertile, yet they produce ſuch different Commodities that one cannot live without another; for what is plentiful in one, is ſcarce in another, or, at leaſt, is not ſo good. This occaſions a Neceſſity of mutual Commerce; and the Inhabitants have likewiſe ſo divided themſelves, that one Province cannot live without another; for the Weavers repair all to one Iſland, the Goldſmiths to another, and ſo on. Now, to render the Communication eaſy, theſe Artificers have little Boats with Checks, where they work, ſleep, and eat, while they are ſailing from one Iſland to another to vend their Manufactures; and ſometimes they are a Year out before they return to their fixed Habitation. As for Animals, they have prodigious Numbers of wild Pullets, which are ſold for a Penny a Piece, and the ſame Price will fetch three Dozen of Eggs; next to Fiſh, this is the moſt of their Food. They have a great Plenty of Wild-Pidgeons, Ducks, Rayls, Birds reſembling Sparrow-Hawks, black and grey Muſkets, living not upon Prey, but upon Fruit, *&c.* As for domeſtick Fowl they have none. The Crows are here very troubleſome, for they are ſo numerous and ſo bold, as to take Things out of their very Houſes before the Peoples Faces. Their Bats are as big as Ravens, and their Gnats, or Muſketoes, bite more ſeverely than in any other Part of the *Indies*.

But they are moſt incommoded by Rats, Dormice, Piſmires, and other ſorts of Vermin, which over-run all their Houſes, and ſpoil their Grain, Proviſions, Fruit, and periſhable Commodities. To obviate this Inconvenience, they build Granaries and Warehouſes on Piles, or Stakes in the Sea, at the Diſtance of two or three hundred Paces from the Land; and moſt of the King's Magazines are built after the ſame Manner. They have no poiſonous Animals, except Snakes, of which a very dangerous kind frequent the Sea. Cats, Pole-cats, and Ferrits, are likewiſe found there; but there are no great Beaſts, either wild or tame, ſave a few Sheep, and ſome three or four hundred Cows and Bulls in the Iſland of *Male*, which belong to the King, and of which they never eat but on Feſtival-Days, and ſolemn Occaſions, for theſe Kine are imported from the Continent. They have no Dogs, nay, they abhor them ſo much, that when the King of *Portugal* ſent two as a Preſent to the King, he ordered them to be drowned immediately. The Sea affords Plenty of all ſorts of Fiſh, eſpecially between the *Attollons*, where the Sea is ſhallow and calm; the Fiſhery is the moſt conſtant Exerciſe of the Natives, who feed moſtly upon Fiſh, when freſh, with Rice, or other Meat fried with the Oil of Cocoas, or boiled in Salt-water, and dried for keeping. They ſend every Day Ships loaded with Fiſh for *Sumatra*, *Achen*, and other Places. Many of the Fiſhermen have loſt Arms and Legs that have been bit off by a ſort of great Fiſh frequent in thoſe Seas. This great Plenty of all Neceſſaries cauſes an eaſy Purchaſe; four hundred Cocoas coſt but a *Larin*, which is Eight-pence; the ſame Price will purchaſe five hundred Bananas, a dozen of Fowls, or three hundred Weight of Roots, or a hundred large Fiſh, *&c.*

In fine, there is no Part of the *Indies* where a Stranger can get an Eſtate ſo ſoon as here, for it lies conveniently for Trade, and requires but an inconſiderable Charge for Maintenance. The Natives, it is true, do not grow rich, and that I take to proceed from their cheap and eaſy Living, which encourages them to Negligence and Idleneſs. *Male*, the principal Iſland, gives Name to all the reſt, *Dives* ſignifying a Cluſter of little Iſlands. This Iſland ſtands almoſt in the Middle, and is one League and a half in Circumference; it is the moſt fertile of them all, the Staple-port and Magazine of all the reſt, and the Reſidence of the King and the Court. By this Means it is better peopled, but, at the ſame time, it is not ſo healthy, for which the Natives give this Reaſon, *viz.* The King and the Court having reſided there Time out of Mind, and the Corpſes of all that died being interred a-part, the whole Surface of the Iſland becomes a continued Series of Graves, from whence the perpendicular Rays of the Sun extract pernicious Vapours; and accordingly the Water is here ſo bad, that the King and Perſons of great Quality ſend for Water to other Iſlands.

12. In all the Iſlands, even in *Male* itſelf, there is no ſuch Thing as incloſed Towns, but the Houſes lie ſcattered here and there, though not without ſome Order and Diſtinction of Streets. The common People's Houſes are built of Cocoa Wood, and covered with Cocoa Leaves ſewed double one within another. Perſons of Quality and Fortune have Houſes built of Stone taken out of and from under the Flats and Rocks. This ſort of Stone is very ſmooth and white, and ſomewhat hard to cut, but when it is wet with Rain, or freſh Water, it loſes its Hardneſs, and, at laſt, becomes all over black. The Manner of taking them out of the Sea is very remarkable. There grows in that Country a ſort of Tree called *Candou*, which is as big as our Walnut-Tree, and reſembles the Aſpin in its ſhaking Leaves and Whiteneſs, but is extremely ſoft, and bears no Fruit, and is not proper for burning; when it is dry, they ſaw it into Planks like our Fir-Deals. This Wood is lighter than Cork. This premiſed, we come to ſhew how they draw out the Stone: Being the experteſt Swimmers that can be, they dive under Water, and having pitched upon a Stone fit for their Purpoſe, faſten a great Cable to it, then they take a Piece of the Candou-wood, and having bored it, run it along the Cable quite up to the Stone; after this, they run on ſuch a Number of Pieces as they have Occaſion for, till the light and floating Wood drag up along with it a Stone of 100,000 Pound Weight. It was by this Contrivance the Natives took up the Cannon and Anchors of our Ship that was caſt away; and I was Eye witneſs to their clearing, by the ſame means, in the Space of fifteen Days, the Harbour of *Male*, which was choaked with great Rocks, inſomuch that no Ship could come in. When the Candou-wood is once ſoaked in Water, it muſt be dried in the Sun before it is uſed, otherwiſe it will not float.

Upon other Occaſions they take five or ſix large Pieces of Wood, and having ranged them all in a Line, raiſe Planks on them of the ſame Wood, to ſit upon, and ſo paſs from one Iſland to another: and it is by this Contrivance they generally manage their Fiſhery. In the Canals that run between the *Attollons* one Man can work theſe Inſtruments of Navigation, though they are not proper for the Sea; for they know how to trim their Deal-ſeats ſo well, that there is no Fear of overſetting; and if that happens, their Plank will always ſwim: all the Danger lies in disjoining the Pieces; and this ſort of Float is called *Candou-patis*, from the Wood of which it conſiſts. The Candou-tree has yet another ſtrange Property, namely, that when one Piece of it is ſtruck againſt another they will extract Fire; and this ſerves them in the Place of Tinder-boxes.

13. Our Method directs us, in the next Place, to ſpeak of their Language, which lies in two Channels; the firſt is the *Maldivan*, properly ſo called, which is very copious: the ſecond is the *Arabick*, of the ſame Uſe as *Latin* in a Popiſh Country, being the Language of their devout Addreſſes. I paſs over the *Cambaya*, *Guzaretta*, and *Portugueze* Tongues, which are derived from their Commerce, and ſhall only take Notice that in the Southern Parts they ſpeak a coarſe unpolite Language, which, after all, is the common Tongue of theſe Iſlands. Their Religion and Ceremonies come next to be conſidered. All the Inhabitants are *Mohammedans*, and the greateſt Part of the Foreigners, *viz.* *Arabians*, *Malabars*, and *Sumatrans*, are the ſame. Their Temples, or Moſches, are built of good Stone, well cemented, and have a thick Wall. They ſtand in the Middle of a ſquare walled Incloſure, where they bury their Dead, except thoſe who deſire a ſeparate Sepulchre. Their Temples are ſquare, and face the Weſt, as pointing to *Mohammed*'s Tomb. They have three Doors, each of which is faced by a broad Wall with Steps, the Bottom and Sides of which are lined with poliſhed and flat Stones, the Floor of the Temple being covered with Mats and Tapeſtry; whereas the Church-Yard is nothing but Sand. Their Temples are kept ſo clean, that if they want to ſpit or blow their Noſe, they muſt either do it in their Handkerchief or get out of Doors.

The Roof or Ceiling of the Temples is of Wood, admirably well poliſhed, and the Walls are wainſcotted, both of them being firmly joined without Nails, Pegs, or any other viſible Artifice. Upon the Walls of the Temples we met with large Tables of Stone, or of Wood, with *Arabick* Inſcriptions. They have a particular Place for the King and his Court, and Galleries for the Guards, and ſeparate Apartments for certain Dignities, Qualities, and Ages, inſomuch that any Perſon who takes up an improper Place, is fined accordingly. They conſtantly burn Lamps, for which End certain low Trees are conſecrated. Some of the Iſlands have nine or ten Temples; but that in which they ſolemnize a general Feſtival is built and ſupported at the common Charge, under the Name of *Ou coura Meſquite:* Each Moſche has its Prieſt called Moudin, and each Iſland that has forty Perſons above the 15th Year of their King's Age is dignified with a Catibe or Curate, who aſſiſts as Principal at all publick Exerciſes, and governs the inferior Prieſts. He pronounces the publick Prayers, and by Sermons and Exhortations explains and recommends the Law of *Mohammed*; under him the *Moudins* teach Children to read and write their Mother Tongue, and that of *Arabia*, for which Service their Parents give them a Reward. Every Day in the Week all above fifteen Years of Age repair, before Break of Day, to the Temple, and declare their Creed, *viz.* That the World is flat, and not round, that it is ſurrounded with a Wall of Braſs, which prevents it being drowned in the Waters that encompaſs it: That the Devil, the general Enemy of Mankind, endeavours every Night to break through and undermine this Wall, and that he is not much ſhort of compaſſing his End when the Day-light arrives. Upon this Belief they all join in Prayer, at the Break of Day, to prevent the Deſtruction of the World, which, as they believe, would otherwiſe enſue.

They repair to the Temple four Times a Day beſides, *viz.* at Noon, at Three o'Clock in the Afternoon, at Sun-ſet, and at ten o'Clock at Night, remaining each Time half an Hour. Thoſe that have no mind to go to Church may ſay their Prayers at home, or none at all if they pleaſe; but if it be known that any Perſon neglects their Duty of Prayer altogether, nobody will eat or converſe with him; from whence it comes to paſs, that almoſt all of them, whether Tradeſmen or others, ſpend a great Part of their Time in publick Service. They make uſe of Beads as well as the Papiſts; but they have no Croſſes. Before they enter the Temple they waſh their Feet, Hands, Ears, Mouth and Eyes, obſerving at the ſame time certain Ceremonies, and pronouncing Prayers ſuitable to the Sin they repent of. They are ſo ſcrupulous, that no Temptation in the World can oblige them to forbear this ſolemn Way of waſhing, upon the Apprehenſion that it certainly purges them of all Sin and Pollution. The greateſt Indecency of their Worſhip is, that they waſh and bathe publickly and promiſcuouſly, and offer their penitential Prayers with a loud Voice, and ſo diſcover to all the World all the ſecret Tranſactions of their Lives. At this Rate all the ſecret Adventures of Man and Wife are laid open to the World by the publick Prayers of both Parties; for the Women pray aloud as well as the Men, only they do it in their Houſes, in regard that they never go to Church.

14. The Male Children are circumciſed when they are ſeven Years of Age, and upon that Occaſion the Parents and Relations divert themſelves with Muſick and publick Feaſting fourteen Days. They have particular Operators for Circumciſions, who apply themſelves to nothing elſe, and the Ceremony is after this Manner: For ſix or ſeven Hours before the Circumciſion the Child is bathed in the Sea, in order to make the Yard ſhrink, and to render the Skin ſoft and tender. When the Hour comes the Child is brought to a Lodge built on purpoſe, and held by two or three Moudins or Prieſts, who in the mean time chant Verſes and Prayers ſuitable to the Occaſion. Then the Operator having drawn over the Prepuce, and tied it with a String, cuts it with a Razor; after which he heals it in fifteen Days; before Circumciſion they alledge that the Child is innocent, and cannot ſin, and for the ſame Reaſon they do not cover the Privities of the uncircumciſed Children. As for the Girls, their Circumciſion conſiſts in drawing two or three Drops of Blood, when they are two Years of Age; but it is attended with no Solemnity. When the Children are grown up, they pay a profound Deference to the Operator that circumciſed them, and call him Maſter.

They celebrate ſeveral Feſtivals in the Courſe of the Year, particularly every *Friday* with them is a Day of Feaſting, at which all the Males above fifteen Years of Age are preſent, but no Females. On the preceding Eve they pray in their Houſes, ſome for their Health, others for the dead, and for that End ſend for the Prieſts to their Houſes, where an Entertainment is provided; and as the Prieſts have no Stomach for eating, they chuſe rather to be abſent, for if they come they muſt eat, though againſt their Appetite. On *Friday* Morning the publick Crier goes round the Iſland, with a ſort of Bell in his Hand, and a Hammer of Wood to beat it withal: He is aſſiſted by three Trumpeters, who ſound often to give the People Notice of their Duty. Upon this Warning the People throw aſide all Work for that Day, and after waſhing and bathing, and putting on their beſt Cloaths, repair to the Temple. In the mean time the King's Muſicians play before his Palace on divers Inſtruments, and ſoon after the King's four Prieſts, who are Men of Quality and Learning, and never aſſiſt but at publick Solemnities, aſcend an high Stone Edifice adjoining to the Temple, where they clap their Hands upon their Ears, and with a loud and fearful Voice cry thrice, *Alla, Alla, Aquebar!* i. e. Great God, and then they add ſomething of *Mohammed.* This done, they repair to the King's Palace, and pronounce the ſame Words after the ſame manner. Upon which, if the King has a Mind to be ſeen, as he commonly is, he ſends a Carpet of Silk to be ſpread on the Place where he means to ſit. Then the Moudins do the like at the Catibe's Houſe, and he comes and waits upon the King, who walks in great Magnificence to the Temple, his Head being covered with a white Veil above a great Turban, ſo that he cannot ſee, but is led by one of the Moudins. The King comes laſt to the Church, and immediately ſays his

Prayers; after which the Catibe being mounted on a raiſed Place at one end of the Temple, takes a naked Sword in his Hand with the Point downward, and flouriſhing it about, recites his Prayers. In the mean time the People pray without ceaſing, putting themſelves in various Poſtures, and obſerving ſeveral apiſh Geſtures.

The Catibe has a new Prayer for every *Friday* in the Year, and when that Year is expired, makes uſe of the ſame Prayers for the next. He repeats all without Book, and if he happens to be out in one Word, Syllable, or Letter, the Moudins reprimand him publicly, and the Feaſt is thought to be ineffectual. This Service laſts about two Hours, and after it is over, the People ſaluting one another, and the King returning in great State to his Palace, entertains them at his own Expence. They obſerve the like Solemnity on the Day of every new Moon, and rejoice when they ſee it. Upon this Occaſion they clean their Houſes, Courts and Streets, garniſhing the Entries of the Churches, and the Gates of their Houſes with Cocoa Shells cut in the middle, and filled with white Sand, and burning Coals, upon which they burn almoſt all Night ſweet-ſcented Gums and Woods, at the ſame time the Inſides of their Houſes, their Beds, *&c.* are perfumed after the ſame manner.

Though the *Maldivans* celebrate every new Moon, yet they obſerve four beyond the reſt. Particularly in *December*, or thereabouts, they have a Faſt called *Ramedan*, which commences at the new Moon, and laſts till the next new Moon. They take their Meaſures not from the real Change, but from the Appearance of the new Moon; by which Means it ſo falls out, that ſome Iſlands begin the Faſt ſooner than others. The firſt Night of the *Ramedan* Feaſt the Men and Women viſit one another apart, and divert themſelves with Feaſting, Dancing, *&c.* till it is near Day, having prepared themſelves for eating by faſting the preceding Day, in which Cuſtom they are ſo ſuperſtitious, that for that Day they will not only avoid the taſting of any, but even the waſhing their Mouth, or putting their Fingers therein, or ſwallowing their Spittle.

The Prohibition of ſwallowing their Spittle puts them to a great Inconvenience when they are in the Church, becauſe it is not allowed to ſpit there, and ſo upon every Turn they are forced to run out of Doors. Nay, ſuch is their Superſtition upon the Feaſt-day, that the Men, who are allowed to bathe, are prohibited to plunge their Heads in the Water, leſt ſome Drop of it ſhould enter their Mouth or Ears; and the Women are forbid to bathe at all. Half an Hour before Sun-ſet, all above fifteen Years of Age repair to the Temple, and in the Space of that half Hour cleanſe their Mouths, and pick their Teeth very nicely, being furniſhed by the Moudins with Pick-tooths, and other cleanſing Inſtruments made of Cocoa-wood. This done, the Moudin makes his Cry three times, and enters the Temple at the Head of the People, who then ſay their Prayers, the Women at the ſame time being employed in ſaying theirs at home. When that Service is over they feaſt and make merry with one another. During the *Ramedan* the King entertains all the People at ſeveral times, inviting only Perſons of the ſame Quality at a time; for they are ſuch religious Obſervers of their Quality, that they will not eat with any Perſon of a different Rank. The Nobles, *&c.* entertain their Friends in like manner; and thus do the Men and Boys feaſt; but the Women, who are not allowed to go to theſe Feaſts, ſend only Preſents at Night one to another.

The Women bathe themſelves in the Evening, at which Time the Men are enjoined to avoid Bathing; during the whole Courſe of the *Ramedan* they faſt after the abovementioned manner in the Day-time, and avoid Sin and Pollution as much as they can. If any one breaks any one of the Faſt-days, he is obliged to faſt as many more after the End of the *Ramedan*. In this Month no body will work be they ever ſo poor. The Pandiare preaches every Day at Three in the Afternoon in the King's Palace, or in the Church, or in his own Houſe. After the Sermon is over they divert themſelves with the Exerciſe of Arms, and ſeveral ſorts of Plays, particularly at Foot-ball. At the ſame time the Women and Girls viſit one another, and have particular ſorts of Plays and Diverſions ſuitable to their Sex. Intrigues run higher in this Month than in any other, and the Courtſhip conſiſts in ſending to one another Songs and Verſes, inſcribed with Bodkins on Cocoa Leaves, which are as white as Paper.

The Youths likewiſe preſent their Miſtreſſes with Garlands of ſweet-ſmelling Flowers, and receive in return Preſents of Betel nicely dreſſed. In fine, they take all poſſible Meaſures to heighten their Mirth and Diverſions. Three Days before it ends the Belman and the Trumpeters go round the Iſland, requiring all the Inhabitants, whether Men or Boys, Women or Girls, to ſend their Names in Writing to the Naybo of their reſpective *Attollon*, and to pay an Offering of half a Larin a Head, which the People pay very willingly as a Tribute to God and *Mohammed*: For they imagine that without the paying of that Tribute their Faſting would not avail them. In this Tax the Parents pay for the unmarried Children, and for their Servants and Slaves; and if any poor Perſon has not the Money to lay down, the King, or any rich Perſon, pays for them very willingly. The Money ariſing from this Tax is lodged in the Hands of four Receivers, one on the Behalf of the King, a ſecond for the Clergy, a third for the new Converts, and a fourth for the Poor. One third of it goes to Eccleſiaſtical Perſons, another to the Proſelytes, and the remaining third to the Poor. About *Auguſt* and *September* they have a Solemnity of Two Days, in which they ſend about to one another boiled Wine, with Honey and Cocoa Milk. This Feſtival is ſaid to take its Riſe from a Miracle that *Mohammed* wrought on that Day.

15. There remains yet another very ſolemn Night-Feſtival called *Maulude*, which happens about the Month of *October*, being the Night on which *Mohammed* died. Upon this Occaſion they have a large Houſe, or Hall of Wood, in ſeveral Parts of the Iſland, which is hung within with the fineſt and richeſt Tapeſtry, the Floor of which is covered with white Sand, and Matts above it, and the Ceiling adorned with white Cotton Cloth, ſupported with black Strings, that run along it like Stripes. In this great Hall hang up ſo many Lamps, that it is as light as Day, and the Smell and Smoke of the Perfumes that they burn, fills the Air. In the midſt of the Hall there is a Table covered with ſeveral ſorts of Meat and mixed Liquors. The Women do not aſſiſt at this Solemnity, but the Men repair thither about eight o'Clock at Night, and ſit down in Order, according to their reſpective Stations, there being Officers appointed to rank them. All the Night long the Prieſts and other Eccleſiaſtical Perſons ſing what they call the Pſalms of *David*. When Midnight approaches, the whole Aſſembly fall down flat upon the Ground, as in an Extaſy, and continue in that Poſture for ſome time; after which the Pandiare and the Catibes ſtart up of a ſudden, and all the reſt following their Examples, ſkip about, and leap upon each other as if they were mad.

The People are ſerved with Betel well dreſſed, and Drink, by fifty Perſons choſen into that Office, which is reckoned very honourable; when the Night is almoſt over the Prieſts give over ſinging, and ſay Prayers; after which they all go to the Middle of the Hall, where the Table ſtands, and every one takes a Plate of Meat, and ſome aromatick Liquors, which they carry home with them, and eſteem very much. Afrer their religious Rites, it will be proper to ſubjoin the Ceremonies of Marriage and Funerals. Upon a Deſign of Marriage they addreſs themſelves to the Pandiare or Naybes, who, after being ſufficiently informed that things really are as they are repreſented, takes the Man by the Hand, and aſks him if he is willing to take ſuch a Woman on the Conditions propoſed, and the Woman always being abſent, he likewiſe queſtions her Parents as to their Conſent. If they all agree, he marries them, and calls the By-ſtanders to witneſs their Conſent. Then the whole Company waits upon the Woman home, and ſeveral other Perſons viſit her. All the Viſitors being entertained with Feaſting, Muſick, Dancing, *&c.* the new-married Man makes Preſents to the King, and the great Lords, and the Bride pays the like Compliments to the Queen, and the other Ladies; both make Preſents likewiſe to their Relations; but when the King is married, he does not give but receives Preſents from all his Subjects, *viz.* Cloths, Garments, Turbans, Victuals, Fruit, Flowers, *&c.* and all theſe Preſents, which ariſe to a great Value, belong to the new-marrried Queen, A Man may have three Wives if he can maintain them, but not more; and if all three live in one Iſland, he is obliged by Law to beſtow as many Nights upon one as upon the other. Tho' after all this Law is not obſerved, and indeed it is a hard Law in that Country, where the Women are ſo laſcivious.

The Bridegroom receives no Dowry with his Wiſe, and is obliged, not only to be at the Charge of the nuptial Solemnity, and to maintain her, but to ſettle upon her a Jointure equal to what her Mother and other Anceſtors had. They are ſo nice on this laſt Condition, that if the Prieſt apprehends the Huſband cannot afford ſuch a Jointure, he refuſes to marry them, notwithſtanding both Parties require it; but after all, the Bride may renounce either whole, or Part of the Jointure, after Marriage, and indeed that is frequently practiſed. Brothers and Siſters, firſt Couſins, and thoſe who by way of Friendſhip and Intimacy have uſed to call one another by the Names of Son or Daughter, Father or Mother, Brother or Siſter, theſe, I ſay, are prohibited to marry. The Males may marry when they will, but a female Orphan cannot marry till ſhe is fifteen Years of Age; indeed, if her Father be alive (for the Mother has no Power) he marries her at ten or eleven Years of Age, and that to the firſt Suitor, whether old or young, provided his Quality is in ſome Meaſure ſuitable to hers; for they reckon it a great Sin to keep the Daughters unmarried. A Man may turn away his Wife, but unleſs ſhe conſents to the Separation, ſhe may demand her Jointure: Tho' after all, that Demand is ſeldom made, as being reckoned a mean Action, and a Sign that the Woman fears that her Merit will never procure her another Huſband.

On the other Hand, the Woman cannot part from the Huſband without his Conſent. This ſort of Divorce, which is very frequent, muſt be atteſted by Witneſſes, or they cannot have the Benefit of a ſecond Marriage. The divorced Parties frequently repent of their Separation, and marry again a ſecond, third, or fourth Time; but after three Divorces, ſuch Re-marriages are not allowed; tho' ſuch is the Levity of the People, that they frequently deſire them, and in order to elude the Law, they have a common Trick of getting ſome profligate Fellow to marry the divorced Woman, and lie with her one Night without touching her; after which he quits her before Witneſs, and ſo ſhe is married again to her former Huſband. Such is the Frequency of thoſe Divorces, that a Man ſhall have an hundred Wives, and the Woman look upon the Multitude of ſeparated Huſbands as a Point which entitles them to future Marriages. When a Woman is ſeparated from her Huſband by Death, ſhe muſt mourn four Months and ten Days before ſhe can marry again; and if the Separation is accompliſhed by Divorce, ſhe muſt remain three Months ſingle before ſhe offers to marry. This Caution is uſed for fear ſhe ſhould prove with Child by her former Huſband.

16. Their funeral Ceremonies are ſuperſtitious to a great Degree; in the firſt Place, the Corpſe is waſhed by Perſons of the ſame Sex, who buy that Office of the King, and are paid for their Service; then they are wrapped up in Cotton, and covered with fine white Cotton Cloth, which goes afterwards to the Prieſt, the Right-hand of the deceaſed Perſon being laid upon his Ear, and the Left upon his Thigh. This done, the Corpſe is laid upon the Right-ſide in a Coffin of *Candou* Wood, and carried to the Burying-place, by ſix Relations and Friends, attended by the Women-waſhers, who cry and howl moſt hideouſly. Every Man in his Life-time provides for himſelf a Burying place, and all the other Neceſſaries; nay, they are ſo ſuperſtitious, that they will rather ſtarve than touch the Money they have laid up for that Purpoſe. Beſides the ſix principal Mourners, the other Relations and Neighbours are preſent without Invitation, and upon the March from the Houſe of the deceaſed Perſon to the Grave, they ſcatter Shells for the Benefit of the Poor, to whom they likewiſe diſtribute Sacks of Rice and Millet, at the ſame Time they give to the Prieſt Pieces of Gold and Silver, the Number of which is proportionable to the Eſtate of the deceaſed Perſon, and theſe Pieces are diſtributed by the Prieſt to thoſe who have aſſiſted in praying for the deceaſed Perſon. The Prieſts ſing continually during the whole Courſe of the Ceremony, and in the Proceſſion a Perſon of Quality ſprinkles the Aſſiſtants with Water made of ſweet Flowers.

The Grave is covered with a large Piece of Silk, or Cotton, which, on the Interment, goes to the Prieſts of the Temple. When the Corpſe is laid in the Grave, they turn the Face of the deceaſed Perſon to the Quarter that faces *Mohammed*'s Tomb, and then fill up the Grave with fine white Sand, ſprinkling it with Water. When the Ceremony is over, the Relations entertain all the Company with Victuals, and the three following *Fridays* they pray over the Grave, where the Prieſts ſing, eat and pray every Day, till the third *Friday* paſſes, after which, a general Feaſt is prepared for the Relations, Friends, and Prieſts, who pretend, that the Soul of the deceaſed Perſon is then conveyed to Paradiſe. This Feaſt is prepared every Year, and on *All-Souls* Day they throw freſh white Sand on the Grave, and perfume it with burnt Incenſe: The Grave is ſurrounded with wooden Pales, for they reckon it a great Sin to walk over it. They never bury two Corpſes in the ſame Place; for they have ſuch a Reverence for the Bones of the Dead, that even the Prieſts dare not touch them. If a great Lord dies, the Prieſts ſing for him a whole Year, and are entertained every Day with Diſhes of Meat and Betel; but if a King or Queen dies, the Ceremony is continued to the Death of the next Succeſſor.

In this Country, the Mourners make no Alteration in their Habit, only they go bare-headed to the Grave, and continue ſo for a few Days after the Interment. Thoſe who die fighting with Perſons of a contrary Religion are buried upon the Spot where they fall, without any Ceremony; and in regard that they are accounted holy and happy, neither the Prieſts, nor their Friends, pray for them. They never tranſport Corpſes from one Iſland to another, and even the King himſelf is buried where he happens to die. If any Perſon dies at Sea, they waſh the Corpſe, and put it into a Coffin, which they place upon a Float of *Condou* Wood; within the Coffin they put Silver, in Proportion to his Circumſtances, and a written Paper, deſcribing his Religion, and withal, praying thoſe who meet with the Corpſe to take the Money, and bury it handſomely.

17. We come near to their Apparel: The Men tie about their Privities a great Swathe of Cloth, which comes round about, to prevent any Diſcovery in working, or walking about; next that they have a Piece of blue, or red Cotton Cloth that reaches to their Knees, and then a larger Piece of Cotton, or Silk, reaching to their Ancles, and girded with a ſquare Handkerchief, embroidered with Gold and Silver, which is ſpread upon their Backs, and tied before. Above theſe they have a little Piece of party-coloured Silk, which reaches only to the middle of their Thighs. At laſt they gird themſelves with a great fringed ſilk Girdle, the Ends of which hang down before; within this Girdle, on the Left-ſide, they keep their Money and Betel, and on the Right-ſide a Knife. Theſe Knives are made of excellent Steel, the Sheaths being of Wood, and the Shafts of Fiſh-bone, for the Bone of a Land-creature they will not wear. The richer Sort have both their Hafts and Sheaths of wrought Silver. Every one wears a Knife, and eſteems it much, as being his only Arms, for none but the King's Officers and Soldiers are allowed to wear any other. Theſe, indeed, have a wrought Dagger at their Side, and when they walk along the Streets, a drawn Sword in one Hand, with a Buckler, or Javelin, in the other. The *Maldivans* place their chief Ornaments in their ſilver Chains, which hang about their Girdle, and of which every Boy or Girl has more or leſs, in Proportion to their Means; but 'tis only Perſons of Quality and Fortune that ſhew them openly. In theſe they place their chief Treaſure, and commonly they appropriate them for the Charge of their Funeral.

The common People are naked from the Girdle upwards, except on the Feſtival-Days, on which they wear Cotton and ſilk Jerkins and Waiſtcoats with gilt copper Buttons; the Sleeves of theſe Coats reach only to their Elbow; for they alledge, that if their Wriſts were tied up like ours, they could not have the free Uſe of their Arms. Perſons of Quality commonly wear ſuch Coats; but ſome have a Cuſtom of covering their Skin from the Girdle upwards, with an odoriferous Paſte, made of the Powder of Camphire and Sanders, beaten upon a ſmooth Stone, and incorporated with the diſtilled Water of ſweet-ſcented Flowers. They make their Wives or Friends anoint their Backs, *&c.* with this Paint, and draw various Figures upon them; however, they muſt not appear with that Piece of Foppery before the King, or be ſeen in his Palace. The Men of this Country wear upon their Heads red or party-coloured Turbans, ſome of which are of Cotton, for the meaner ſort of People, and others of Silk, for the Perſons of Quality. The King's Officers and Soldiers have frequently embroidered Handkerchiefs on their Heads, which other Subjects are not allowed to wear. Their Feet are always naked, excepting that within Doors they uſe wooden Sandals, which they pull off when viſited by a Perſon of ſuperior Rank; oftentimes their Legs are likewiſe naked.

The Women wear a Coat of Cotton, or Silk, which reaches from their Middle to their Ancles; above that they have a long Robe of Taffety, or fine Cotton, reaching to their Feet, withont any Slit beſides the Neck, where it is faſtened with two little gilded Buttons. This Robe they pull quite up to ſuckle their Children. Their Arms are loaded from their Wriſt to the Elbow with Bracelets of Silver, inſomuch that ſometimes they have three or four Pounds of fine Silver upon them, though indeed the poor ſort alloy the Silver with Braſs. The Women of Quality have many Chains of Gold, or Strings with little Pieces of Gold about their Necks, and rich Pendants in their Ears. They have their Ears pierced when they are young, not only in the Cap, upon which there hangs an Ear-ring, but in twenty-four Places up the Griſtle, in which they put as many gilded Nails, with precious Stones or Pearls on the Heads of them. When the Women walk in the Streets they cover their Heads with a Veil, and are very cautious in ſhewing their Faces before Men, though in the Preſence of Women of ſuperior Rank they take off their Veil. They are not allowed to wear Rings, Jewels, Bracelets, or Ear-rings, or Chains of Gold, till they aſk and obtain Leave of the Queen, as the Men do of the King, for the ſame Privilege, which commonly coſts them Money.

The different Quality of the Women is diſtinguiſhed by the Nature of their Ornaments, for none but Queens and Princeſſes are allowed to wear Gold-Bracelets, or Gold-Rings on their Arms or Legs; beſides, the Queens put Rings on their Fore fingers, the Princeſſes and Perſons of the firſt Quality upon their Middle-fingers; ſo that all other Women have their Rings upon the Ring finger and Little-fingers, and the Men have theirs upon their Thumb only. If a Man's Wife begins to wear richer Ornaments than ſhe uſed to do in former Times, the Man's Taxes are raiſed, unleſs he be one of the King's Officers, or an Inhabitant of *Male*, for theſe are exempted from all Taxes on Apparel; Foreigners and their Wives are alſo free, for they may wear what they pleaſe, as well as the Clergy. The Women place a great Part of Beauty in painting red the Nails of their Fingers and Toes, which they effect with the Juice of a certain Tree. In a Word, they are very handſome, and are very careful in ſetting themſelves off with a genteel Habit, and with frequent waſhing and perfuming: Generally ſpeaking, their Complexion is an Olive Colour, though ſome of them are brown, and others very fair.

18. The People of this Country have many peculiar Cuſtoms with reference to eating; they reckon it is very diſhonourable for a Perſon of ſuperior Rank to eat with his Inferior; and indeed they ſeldom regale one another, unleſs it be at ſolemn Feſtivals. If they mean to compliment a Friend, they ſend a covered Table with ſeveral Diſhes of Meat to their Friend's Houſe, who is thereby much honoured; but in their own Houſes they are cautious of eating in the Preſence of others. Before and after eating, they ſay Prayers; and their Table is the Floor, covered with a fine Mat, upon which they ſit croſs-legged; they feed ſo nicely, that they will not drop one Crum, nay, not ſo much as a Drop of Water, though they waſh their Mouths before and after. Inſtead of Table-cloths and Napkins they uſe Banane-Leaves. Their Diſhes are made of Earth, or *China* Porcelane, which is very common in that Country, gold or ſilver Veſſels being prohibited by Law. They are all round like Boxes, with an earthen Cover, over which they put a Piece of Silk, for the Piſmires are there ſo numerous and troubleſome, that it would be impoſſible to keep Meat without a Cover upon it; and the People are ſo nice, that they will not taſte any Meat that has been touched by a Fly, Piſmire, or any Inſect or unclean Thing, but give it to the Fowls. As for the Poor, whom they look upon as the Servants of God, they ſcorn to offer them what they will not eat themſelves, and entertain them with the beſt Victuals they have. If they ſpy the leaſt Crack in a Diſh, they eat no more out of it, holding it polluted.

All Spoon-meat they eat with their Fingers, but withal ſo nicely, that they let nothing fall, that being accounted a very natural Piece of Decency. If they have Occaſion to cough or ſpit at Time of eating, they riſe from the Table, and walk out; they never feed themſelves with their Left-hand, becauſe they make uſe of it in Waſhing their Privities. They chooſe to begin their Meals with eating a Cocoa-nut half-ripe, and drinking the Water of it, which they ſay looſens the Body. While they eat they are all ſilent. and make quick Diſpatch, for with them it is an unmannerly Thing to be long eating. They take it for a Piece of Rudeneſs and Incivility to drink before they have done eating, and even then they drink but once, either Water or Cocoa-wine freſh drawn. They drink out of Copper-cups well wrought, with Covers to them: After eating and waſhing, they ſerve up a Plate of Betel inſtead of Sweet-meats, for the Fruit is ſerved with the Meat. They have no ſet Meal-times, but eat when their Appetite provokes them; and Victuals is dreſſed only by the Women, for the Men deſpiſe the Character of a Cook in ſuch a Manner, that they will not converſe with a Man-cook, or admit him to a Share of their Exerciſes, he being doomed by his Trade to the Company of Women.

19. When they kill a Beaſt for Food, they turn their Faces towards *Mohammed*'s Sepulchre, and ſo cut its Throat in a particular Place; after which they ſuperſtitiouſly avoid the touching of it till it is quite dead. Their Butchers muſt be ancient, and the Fathers of Children. When they awake out of their Sleep they preſently waſh their Eyes and Faces, and rub them with Oil, and blacken their Eye-Lids and Eye-Brows; for before the Performance of that Duty, they muſt not ſpeak, or bid any one Good-morrow. They are very careful in waſhing and cleanſing their Teeth, to the end that the Betel and Areca may the more readily impreſs their red Colour upon them, which they are very fond of. They are always chewing Betel, which they continually carry about with them in the Plaits of their Girdle, and mutually preſent to each other upon occaſional Salutations. They bathe before they enter the Temple, and waſh with their Left-hand after natural Evacuations. When they bathe at home, they plunge their Head three Times under the Water; and in regard that they always bathe and pray in publick, and that the reſpective Crimes have peculiar Ceremonies calculated for them, every Man's Crimes or Miſdemeanors are thus expoſed to the public View; When they ſet out upon a Voyage, they avoid touching or meeting any body; for if any unlucky Accident befalls them, they impute it to the Perſon that touched them. When they go a fiſhing they muſt not ſalute any, or bid them Good-morrow. From Sun-ſet on *Thurſday*, till three or four o'Clock next Morning, they ſuffer nothing to be carried out of their Houſe, but receive all that is brought in.

If they fall out one with another, they never rail, for if they did all the World would fall upon them. When croſſed at Sea, they addreſs themſelves to the King of the Winds (for they do not call him a God); and in every Iſland there is a deſolate Bye-place, called *Siave*, where thoſe who have eſcaped Danger make Offerings of little Boats and Ships, made on purpoſe, and loaded with Guns, Perfumes, Flowers, and odoriferous Woods. They burn the Perfumes, and having ſet fire to the Boats and Ships, turn them adrift, ſo that they float upon down till they are quite burnt; and this they take for a Sacrifice that is acceptable to the King of the Winds. But when they cannot eaſily ſet their Boats and Gallies afloat, they kill Hens and Cocks, and throw them into the Sea right afore the Ship they mean to ſail in. They likewiſe pay a ſuperſtitious Deference to rhe imaginary King of the Sea, and dare not ſpit to the windward of the Ship, nor look behind them.

All their Boats and Ships are devoted to the Prince of the Winds and Seas, and they keep them as neat and clean as Temples. They place a wonderful Virtue in certain Characters called *Cavide*, which they wear under their Garments in little Boxes, and ſometimes under their Arms, Necks, Girdles, or Feet, according to the Seat of the Diſtemper; for, their imaginary Virtue is ſaid to conſiſt in curing or caſing Diſeaſes, procuring Love, Hatred, Safety, or Danger, *&c.* Theſe they buy of the Magicians. who are their only Phyſicians. They impute Death, Sickneſs, and all Affliction to the Devil, and, in order to pacify him, make him Offerings of Flowers and Banquets in a certain Place, where they let them conſume, unleſs ſome poor Body has the Senſe to take them. With the ſame View they offer him Cocks and Hens, which they kill with their Faces directed towards *Mohammed*'s Tomb.

20. To give a ſhort Account of their moſt common Diſtempers; the firſt is a Fever, which is dangerous to Strangers. An epidemical and contagious Diſeaſe called *Curiadin*, and not unlike the Small-pox, viſits them once in ten Years, and ſweeps off a great many. They are liable to Diſorders of the Eyes; many of them are quite blind, and moſt of them have little Eyes. When they have Occaſion to be long in the Sun, in the Height of the Day, they ſometimes loſe their Sight when the Sun goes down, and for a Cure of that Infirmity, they take the Liver of a Cock boiled, and after the writing of certain Words and Charms upon it, ſwallow it juſt before Sun-ſet; by this Remedy both I and my Companions received a conſiderable Benefit, through we omitted the magical Part. They are very ſubject to the Itch, which they heal with the Oil of Cocoas, and ſome of them are covered all over with incurable Tetters, which is owing to their feeding moſtly upon Salt-fiſh, and their pouring ſalt Water upon their ſalt Meat.

In the Winter, as they go barefoot, notwithſtanding that it rains continually, a ſort of Worm breeding in the Mud ſeizes upon the Soles of their Feet, and the Intervals of their Toes, where they raiſe Wheals that degenerate into Ulcers, ſo that they cannot walk; their whole Body is likewiſe infeſted with theſe Worms. Commonly their Spleens are large, and liable to Obſtructions, and their Bellies are apt to ſwell, and be hard, which they believe proceeds from their unhealthy Water. In all external Inflammatiods, or Aches, they apply Fire, which raiſes a Scar, and upon that they lay Cotton ſteeped in Cocoa Oil, which proves very ſucceſsful; their Ulcers, which happen chiefly in their Legs, are perfectly cured by the Application of Plates of Copper. As for their Wounds, they cure them very dexterouſly, by the Application of Ointments, without any Bandages or Tents; they are ſometimes troubled with Catarrhs, Defluxions, and Pains in the Bones. Venereal Diſeaſes are frequent among them; however, they cure them with China-wood without Sweating, and thoſe Diſtempers are communicated to them from the *Europeans*. They are altogether unacquainted with the Tooth-ach, which they owe to continual chewing of Betel, for that fortifies the Gums. As ſoon as the Children come into the World, they waſh them for a conſiderable Space of Time, ſix times a Day in cold Water, and then anoint them with Oil. When they void their Excrements, they waſh their Privities with Water. All Mothers, even the Queens themſelves, ſuckle their own Children, and beſides the Breaſt-Milk, feed them with a ſort of Pap made of Millet bruiſed, and ſteeped in Water, and afterwards boiled in Milk and Sugar of Cocoas. Though they never ſwaddle their Children, yet I never ſaw any of them deformed; they rock them in Hammocks of Cord, or in little Chairs hung up in the Air, which they ſwing to and again. At the Age of nine Months the Children begin to go, and when they are nine Years old, they commence the Studies and Exerciſes of the Country.

Their Studies conſiſt in learning to read and write, to underſtand the *Alcoran*, and to know their Duty. They have three ſorts of Letters, *viz.* the *Arabick*, the *Maldivan*, and a third ſort, which is commonly made uſe of in moſt Parts of the *Eaſt-Indies*. Their Leſſons are wrote down on white Tables of Wood, which they clean and whiten again after they have got their Leſſons by Heart; for durable Writings are on Paper made of the Leaf of a Tree called *Macare Queau*, that Leaf being a Fathom and a half long, and a Foot broad. To teach the Children to write, they make uſe of no Paper, but make Draughts of Letters with a Bodkin upon ſmooth, plain Boards of Wood, covered with fine white Sand. The Children have ſuch a profound Veneration for their Maſters, that they cannot marry them any more than their own Parents. Some of them, eſpecially the *Moudins*, *Naybeys*, and *Catines*, carry their Studies a great Length, and acquire great Skill in the *Alcoran*, and other Treatiſes of the Law. The Mathematicks are much eſteemed in this Country, and eſpecially that Part called Aſtrology; for they always conſult Aſtrologers, not only upon Nativities and Births, but upon all Undertakings whatſoever, as Travelling, Building, *&c.*

As for their Exerciſes, they have Schools for learning the right Uſe of a Sword and Buckler, of a Bow, of a Gun, and of a Pike; and the Maſters who teach them are much reſpected. They have no ſort of Diverſions but that of the Foot-ball, which they toſs very dexterouſly. Many of them apply themſelves to Manufactures for Houſhold-Goods and other Commodities, which they make very ingeniouſly; but the moſt univerſal and the moſt conſiderable Exerciſe they have, is that of Fiſhing, which is ſo common an Exerciſe all over the *Maldives*, that there is no ſuch thing as a particular Trade of that Nature; for Gentlemen, and even their Kings, purſue Fiſhing as we do Hunting in this Part of the World. Every Man there enjoys the natural Liberty of fiſhing where and for what he pleaſes. The Fiſh which are taken in the deep Sea about ſix or Seven Leagues off the Bars of the *Attollons* are large, and of ſeven or eight ſorts, ſuch as *Bonitos*, *Albacores*, *Guiltheads*, &c. which are all much of the ſame Taſte, and have no more Scales than a Mackrel. The Inſtruments with which they catch them are a Line of a Fathom and an half of great Cotton Thread tied to a Cane, together with its Hook, that in Form reſembles the Letter h. The Bait is not faſtened upon the Hook. but thrown about into the Sea; for they drag after their Boat a Quantity of ſmall Fiſh like our Roaches, which are very numerous among the Banks and Sands, and which are preſerved alive in Purſe-nets of Cocoa-thread; and when they come to the deep Sea they caſt theſe little Fiſhes about, and throw in their Line; upon which the great Fiſhes perceiving an unwonted Quantity of little Fiſh crowd upon them in Shoals, greedily ſwallow the whitened Hook, taking it for one of the little Fiſh. The Fiſh that ſwallows the Hook falls off as ſoon as the Line is brought into the Boat, and ſo the Line is thrown in again. At this rate they will fill their Boat with Fiſh in three or four Hours Time, and, which is very ſtrange, the Boat is all along under Sail. The Fiſh thus takes are all black, from whence they are called *Cobolly Maſſe*, i. e. the *Black-fiſh*. They have another Way of fiſhing in the Night-time upon the Banks that ſurround the *Attollons*. At every full and every new Moon they convey themſelves to the Banks upon Hurdles, and the Fiſhing laſts three Days every time. 'Tis performed by Lines of hard, coarſe Cotton Thread, ſome of which are fifty or ſixty Fathom long, and are blackened over with the Bark of a Tree that ſerves inſtead of Pitch, in order to preſerve it from Corruption. At the End of this Line they have a Hook with a Bait faſtened upon it, after the ſame manner as is uſual among us. By this means they catch a prodigious Quantity of large red Fiſh, ſuch as I never ſaw elſewhere, which eats moſt deliciouſly, and is by them called *The King of the Sea*. In fine, they have ſuch Plenty of ſeveral ſorts of Fiſh, and different Ways of taking them unknown to us, that 'tis impoſſible to diſtinguiſh them; for beſides the Lines above-mentioned, they have all ſorts of Nets of Cotton, Twine Wheels, and other Inſtruments for Fiſhing.

ing. Upon the Flats near the Shore they catch ſmall Fiſh like Pilchards with Caſting-nets.

At the two Equinoxes they have a general Fiſhing, which is very remarkable. At theſe two Periods of the Year, as the Tides flow beyond their wonted Bounds, ſo they ebb more than uſual, and diſcover ſeveral Rocks and Flats, which at other times continue under Water. Upon this Occaſion the *Maldivans* pitch upon ſeveral dry Corners, which they encompaſs with Stones raiſed like a Wall to a great Height, being forty Paces in Circumference, with a Door or Entrance left that is three Paces wide. This done, thirty or forty of them ſtretch out, all round the Flats, a large wide Circle of the great Cocoa-cords, at each Fathom of which they tie a Piece of Cocoa-ſhell dried, and that ſupplies the Place of Cork, making the Line float. Now the Fiſh incloſed within the Circle are ſo ſcared with the Shadow of the Floating-line, as if it had a Net underneath it, that inſtead of making their Eſcape by ſwimming, they fly from it, and, by the gradual Contraction of the Line, are brought into the Incloſure, the Entry of which is thereupon ſtopped with all Expedition with Faggots of the Boughs and Leaves of Cocoa compacted together of the Bigneſs of a Man; after all, the Sea runs out, and leaves the Fiſh on the dry Land. This Fiſhery, which continues fifteen Days together, produces commonly ten or twelve thouſand Fiſh. To conclude, I know of no Place in all the *Eaſt-Indies* that can vie with the *Maldives* for a rich and plentiful Fiſhery.

21. After having thus diſpatched the Learning and Exerciſes of the *Maldivans*, it will now be proper to take a View of their Temper and Inclinations. They are a lively, briſk, and at the ſame time a ſober and wiſe People, and very diſcreet in moſt of their Actions. They love Arms and Exerciſe, and are not deſtitute of Courage. They diſplay a great deal of Induſtry in Arts and Manufactures, and are polite enough in their Manners. They are religious to a very high degree, and ſuperſtitious beyond meaſure, tho' at the ſame time they are extreamly given to Wantonneſs and Debauchery. Adultery, Inceſt, and Sodomy, are their common Actions. Notwithſtanding the Severity of their Laws, Fornication is accounted no Crime, and a young Woman ſuffers no Affront for obliging a Friend before Marriage. The Impudence of the Women is unparalleled, and the Men are as vicious as they, though indeed they cannot outdo them if they would. The Men bend all their Thoughts upon their ſupporting of Nature, and would give their whole Eſtates for a Receipt to corroborate drooping Luſt. Their amorous Feats engroſs all their Diſcourſes, and their Wives or Whores are their inſeparable Companions.

Though they are impudent to the laſt Degree, yet the Regard they have for their Parents and Relations ſtifles it in their Preſence; and if a Man talks a little jocularly to a Woman before any of her Relations, they will reſent it ſo far as to proſecute him at Law, and oblige him to own in Court that he takes them for Perſons of Honour, unleſs he declares he did not know of their Affinity to the Lady. A Man muſt not enter where a Woman bathes, or is preſent without her Garment; tho' ſhe never takes off the Cloth that ſupplies the Place of a Petticoat. When a Man is in Company with a Woman, if another Man meets them, he muſt not aſk if ſhe be his Daughter or Wife, but if ſhe be his Kinſwoman, and what Degree of Affinity or Conſanguinity ſhe ſtands in to him: For if the Woman be really the Man's Daughter, and the other aſk if ſhe is his Wife, he will take the Queſtion for an Inſinuation of Inceſt.

As I intimated above, the Women ſeldom ſtir abroad in the Days, ſo that they make all their Viſits at Night, being accompanied with a Man who walks before, and when he ſees any one approaching, calls out thrice *Gas*, i. e. take care. Upon this Signal, the Man betakes himſelf to the other Side of the Street, without ſeeming to ſee or know the Woman: Nay, if one Woman meets another, ſhe takes to the other Side of the Way, and does not ſalute her unleſs ſhe be very intimately acquainted with her; the outer Gate of the Houſes being always open till eleven o'Clock at Night, at which Time every body is at home. The Viſitors have no Occaſion to knock, and indeed the Gates have no Knockers. After entering the Outer-gate, and approaching to the Door of the Houſes, which is always open, and ſpread with Tapeſtry of Cotton Cloth, or ſome other Stuff, they cough once, upon which the People of the Houſe come out. In the Iſland of *Male* the King's Officers and Soldiers cough frequently, to give Notice to one another in the dark Streets, for fear of receiving mutual Wounds from their Arms, which are always naked in their Hands.

22. We ſhall in the next place take a View of their Government, which is an abſolute Monarchy, for the King is feared and revered by all, and every thing depends upon his Pleaſure under him. Each *Attollon* has a Naybe or Governor, who is a Prieſt, and Doctor of the Law. The Naybes govern the inferior Prieſts, and are intruſted with the Adminiſtration of Juſtice, and the Management of religious Concerns. The *Cantons* or *Attollons* being ſubdivided into many Iſlands, each of theſe Iſlands, that contain above forty-one Men, is allotted a Doctor called Cantibe, who preſides there in religious Matters, and rules over the particular Prieſts of the Moſques. All the Prieſts are employed in inſtructing the People in the Law, and live upon a certain Portion of Fruits collected from every Inhabitant, and a Salary allowed them by the King, in proportion to their Dignity.

The Naybes indeed are likewiſe employed in the Adminiſtration of Juſtice; nay, they are the only Judges both in civil and criminal Caſes; and it is for the ſake of Juſtice, as well as the promoting of Religion, that they make four Circuits in the Year through all Parts within their Juriſdiction. When they go theſe Circuits, they gather their Dues, and receive Preſents from an Infinity of Perſons, ſo that Circuits furniſh by this means the beſt Part of their Incomes. The Naybes, or thirteen Judges, are under the Direction of a ſuperior called the Pandiare, and in *Arabick* the Cady, who reſides in the Iſle of *Male*, and is not only the ſupreme Judge in all Cauſes, but likewiſe the Head of the national Church. He receives Appeals from the Naybes, but does not paſs Sentence without taking the Advice of four or five Moncoris, *i. e.* Doctors learned in the Law, and divers other Sciences, who are univerſally honoured and reſpected, there being only fifteen in all the *Maldives*. The Judgment pronounced by the Pandiare may be reverſed by appealing to the King himſelf, who upon ſuch Occaſions orders Juſtice to be done by the principal Officers, of whom there are ſix Counſellors of State.

The Pandiares make a Circuit once a Year through the Iſle of *Male*, as every Naybe does in his reſpective *Attollon*, and condemns all to be whipped that cannot ſay their Creed and Prayers in the *Arabic* Tongue, and conſtrue them into the *Maldivan*. When he goes along the Street, the Women muſt not ſhew themſelves; for if he ſpies any unveiled, he orders their Hair to be ſhaven. Each *Attollon* has, beſides the Naybes, a Collector of the King's Revenues. Juſtice is diſpenſed in the Houſe of the Naybe, or elſe at the Pandiare's Houſe in *Male*, and ſometimes, in Caſes of Moment, in the King's Palace. The Defendant is ſummoned by Serjeants called *Devaints* to come before the Naybe, by Virtue of a ſpecial Letter or Writ from the Naybe; but if he lives out of the Naybe's Juriſdiction, he is ſummoned by Letters from the Pandiare, which enjoin him to come from any Part of the Realm to the Iſland of *Male*.

The Pandiare's Writ is ſerved publickly upon the Defendant by the Calibe, or Superior of the Iſland; and if he does not appear at the Place appointed, he is not only excommunicated, and excluded from eating and drinking with his Neighbours, or coming to Church, but ſeized by a Party of Soldiers. If either Plaintiff or Defendant ſuſpects the Partiality of the Naybe, they have Recourſe to the King, who orders the Cauſe to be tried before impartial Judges. The contending Parties plead their own Cauſes; in the Buſineſs of Right or Title they are judged by the Law; and in Allegations of Matter of Fact, the Plaintiff muſt have them atteſted by three Witneſſes, or elſe the Defendant's own Oath will bring him off. In adminiſtring an Oath, the Judge holds up the Book of the Law, and the Evidence is obliged to touch it with his Hand, and that not ſuperficially, but ſo that every one may obſerve a real Contract. Whatever is adjudged to the Plaintiff, a twelfth Part of it goes to the Serjeant, but nothing to the Judges.

If Women are called as Witneſſes, three of them are equivalent to one Man. Slaves can neither witneſs, nor plead, and the meaneſt of them, called *Allo*, have but one Wife, whereas the reſt are allowed three. By Slaves they underſtand ſuch only as voluntarily ſell themſelves, or are imported as Slaves from foreign Places; for a Shipwrecked Stranger, that was not a Slave before that Misfortune, continues in the Enjoyment of his Liberty. The Puniſhment of beating a Slave, is half of what they inflict for beating a Freeman.

23. An inſolvent Debtor is obliged to become a Servant to his Creditor, but not a Slave, and he and his Children after him continue in the Service till the Debt is worked out. If he thinks himſelf ill uſed, he may turn himſelf over to another Maſter, provided he lays down the Money due to the former. If a Man be murdered, his Wife cannot proſecute the Malefactor, but the Judge obliges him to maintain her Children, and bring them up to a Trade, till they are of Age, at which Time they are qualified either to forgive, or proſecute the Murderer; for the State takes no Cognizance of perſonal Injuries, unleſs the Party aggrieved complains of them. The ordinary Puniſhment for Criminals is Whipping, which, indeed, is very ſevere, and frequently mortal; but in ſome Caſes they are baniſhed to the ſouthern deſart Iſlands, and in others, they are doomed to the Loſs of a principal Member. The Whips are made of Thongs of thick Leather, which are a Fathom long, two Fingers thick, and four Fingers broad, five or ſix of them being faſtened together in a wooden Handle. Whipping is the Puniſhment for Sodomy, Inceſt, Adultery, Perjury, and Rapes; but over and above that Puniſhment, an Adultereſs has her Hair cut off; a perjured Criminal pays a pecuniary Mulct for the Benefit of the Poor, and a Raviſher is obliged to give a Dowry to the injured Woman.

The ſtealing of any thing of Value is puniſhed with the Loſs of a Hand, and the diſobeying of the Law, with publick Penance; for they are of Opinion, they can never come into Paradiſe without ſatisfying the Demands of the Law. The Sentences pronounced by the Judge are executed by the Serjeants, for they have no Hangman or publick Executioner; though Death is by Law the Puniſhment of Homicide, they never condemn a Priſoner to die, unleſs the King expreſly requires it, which ſeldom happens; and when it does, the King ſends his own Soldiers to execute the Sentence, for he reſerves the Power of Life and Death to himſelf; whereas the inflicting other Puniſhments lies in the Hands of the Judges. Their Tenderneſs in not ſentencing Criminals to die, is grounded upon Pretence of not diſpeopling the Country, there being ſo great a Number of Criminals who juſtly deſerve Death. When the King is perſonally offended, he makes the Criminal lie upon the Ground, flat upon his Belly, his Arms and Legs being held by four Men, while his Back is ſoundly beat with a *Bengala* Cane, called *Ratan*, which takes off the Skin, and leaves a perpetual Mark.

Indictments, Depoſitions, or Sentences, are never put in Writing, being all very ſhort; nay, in civil Matters, the Allegations are never written, unleſs it be in a Suit for Land of Inheritance, or Cocoa Trees, which are reckoned immoveable; then, indeed, the Judges give Letters ſealed with Ink (Wax they do not uſe) for an Evidence of the Perſon's Right, to be tranſmitted to Poſterity. The Inhabitants of this Country are divided into four Claſſes, namely, the Royal Family, Perſons inveſted with Dignities and Offices, the Nobility and Gentry, and the common People. The third Rank is diſtinguiſhed from the fourth by their Birth, and the Diſtinction is ſo nicely kept up, that the latter dare not ſit in the Preſence of the former. If a Noble Woman marries a Plebeian, ſhe retains her Rank, and upon her Account the Children are reckoned Noble; but a Woman of the loweſt Form cannot enoble herſelf by marrying a Nobleman.

Beſides the Nobles by Birth, there are ſome enobled by the King, who, upon ſuch Occaſions, gives them Letters, entitling them to that Privilege, and ſends an Officer round the Iſland to make Publication of the Promotion. The firſt Rank comprehends the King, who is called *Roſquan*, the Queen is called *Renequellague*, the Princes and Princeſſes of the Blood are called *Callans* and *Camanaz*, and all who are deſcended of the King's Predeceſſors. The next Station is allotted to the great Officers of the Kingdom, particularly to the *Quillague*, or the King's Lieutenant-General, who commands in the King's Abſence; the *Eudequerry*, who always attends the King's Perſon, as chief Counſellor; the *Velanas*, who takes Care of all Strangers, and takes the Rudder off all Ships that arrive, for fear they ſhould ſet ſail without taking Leave; the General of their Forces, called *Dorimenaz*; the *Manpas*, or Chancellor, who affixes to all Letters the King's Seal, *i. e.* the Impreſſion of his Name in *Arabick*, engraven on Silver; the Secretary, called *Carrans*, &c. Theſe Officers have, beſides the Rents of certain Iſlands allotted them, the King's Rice for their Proviſion (which is a great Honour, allowed likewiſe to the Soldiers) and the Toll of the Ships that trade to the *Maldives*. The Officers and Soldiers are ſo much eſteemed, that a Nobleman is not reſpected, unleſs he be an Officer; and a Gentleman will hardly paſs for ſuch, unleſs he be liſted into the King's Service.

The King's Guards conſiſt of ſix Companies, of one hundred Men each, commanded by the ſix Counſellors, called *Moſcoulis*: Beſides theſe, there are ten Battalions, commanded by ten of the Grandees of the Country, which ſerve the King not in Fighting, but in the Launching of Ships, building of Palaces, and ſuch other Work, being called together by the Sound of a Bell. In five of thoſe Companies none but Gentlemen are received, but the other five take in common People. Slaves are always excluded, as well as thoſe who work in a mechanical Way, as the dreſſing of Cocoa Trees, &c. and particularly ſuch as ſerve others, or cannot read or write. Whoever is liſted as a Soldier, pays twenty *Larins* to the King, and forty to be diſtributed among the Company in which he is to ſerve. To conclude; all Offices are bought of the King, and much coveted, on account of the Honour and Power that attends them; but the Perſons inveſted with theſe Offices can neither ſell nor reſign them.

24. The Iſlanders have but one Name, ſuch as *Mohammed*, *Haly*, *Haſſam*, *Aſſan*, *Ibrabim*, and are diſtinguiſhed by their Stations as Noble, Plebeian, &c. added to their Name, and ſometimes by the Addition of the Iſland in which they live. The Royal Palace is of Stone, one Story high, and has a great many fine Apartments, without the Ornaments of regular Architecture. It is ſurrounded with Gardens, in which there are great Fountains and Ciſterns of Water walled in, and paved with large ſmooth Stones, and guarded continually, to hinder People from waſhing in them, as being ſolely reſerved for the King and Queen's Uſe. The Palace is divided into ſeveral Courts, each of which has a Wall in the middle, paved with fair white Stones; and in one of theſe Courts the King has two Magazines, one for Ordnance, and the other for Ammunition. At the Palace-Gate there is a Guard, with many Pieces of Ordnance, and other Arms. The Portal is made like a ſquare Tower, and on Feſtival-Days the Muſicians ſing and play upon the Top of it. Paſſing on from the Gate, you firſt come to a Hall, where the Soldiers wait, then to another great Hall, where the Noblemen and Gentlemen attend; for none but the Officers of the Houſhold, with the King and Queen's Slaves, or Servants, are allowed to go farther. The Floor of theſe Halls is raiſed three Feet high from the Ground, to avoid the Ants, being neatly boarded with Wood, and covered with a ſort of party-coloured Mats, which they make in theſe Iſlands, and which have ſeveral Characters, and other Figures wrought upon them.

The Walls are hung with ſilk Tapeſtry as well as the Cieling, which has pretty Fringes hanging about it. The Noblemen ſit down croſs-legged on the Mats which cover the Floor of the Hall, obſerving punctually the Order of their Dignities. The Gentry of the Iſland of *Male*, and the ordinary Courtiers who are oblige to ſalute the King every Day after Noon, ſit in an outer Hall till his Majeſty comes forth. The Gentry of the other Iſlands come likewiſe to wait on the King in the ſame Manner, and always bring Preſents along with them, for no one ſalutes the

King without one. The Chambers and inner Apartments are hung with ſilk Tapeſtry, and enriched with gold Flowers and Branches of ſeveral Colours. The Beds of the Palaces, and thoſe of the great Men, are hung with Cords upon a Beam, ſupported by two Pillars, and ſo the Perſon is rocked to Sleep. It is uſual among the better Sort of People, to make the Servants rub and chafe their Bodies when they lie down, and to give them little Slaps, or gentle Blows, with both their Hands, from an Apprehenſion that it promotes Sleep, and expels the Spleen.

The King is generally cloathed in a fine white Robe, or Coat of Cotton, reaching to the Girdle, or a little lower, with white and blue Edgings, and made faſt before with maſſy gold Buttons. Then he has a Piece of red embroidered Tapeſtry reaching from the Girdle to the Heels, and faſtened with a long large Girdle of Silk, fringed with Gold, and a great Chain of Gold before, upon which there hangs a large Jewel, as big as one's Fiſt, compoſed of the fineſt precious Stones; he wears likewiſe a Knife, made after the Faſhion of the Country, and it is richer than ordinary. Upon his Head he has a Cloth of Scarlet, that Cloth being ſo much eſteemed in that Country, that none but the King preſumes to wear it. This Cap is laced with Gold, and has on the Top of it a great gold Button, with a precious Stone. The Grandees and Soldiers wear their Hair long, but the King has his Head ſhaved every Week. His Legs are naked, after the Faſhion of the Country, and his Feet are covered with Slippers of gilt Copper, imported from *Arabia*, and made like Sandals, which none beſides are allowed to wear, but the Queen and the Princes of the Royal Blood.

25. When the King goes abroad, the chief Mark of his Dignity is a white Umbrella, which none are allowed to uſe but Strangers, who may have what they will. Upon the ſame Occaſion he has three Pages near his Perſon, one carrying a Fan, another his Sword and Buckler, and a third a Box full of Betel and Arequa, which he chews every Hour. He is likewiſe attended by a Doctor of Law, who reads in his Preſence, and puts him in Mind of Religion This King does not purſue the Diverſions of going Abroad, and Fiſhing, as his Predeceſſors were wont to do, but ſhuts himſelf up in his Palace, and ſpends his Time in careſſing his Queen, giving Audience to his Courtiers, and ſeeing a great many Meçhanicks and Artificers work; for he keeps in his Palace Painters, Goldſmiths, Embroiderers, Cutlers, Joiners, Turners, Armourers, *&c.* and finds them Work; nay, he works frequently with his own Hands, and looks on it as a Sin to be idle. He is a Man of a lively quick Apprehenſion, and very curious to learn mechanick Trades. He encourages all Strangers that practiſe Arts unknown to his People, and makes Enquiry after thoſe that excel in their Way.

On a *Friday* he goes in great Pomp to the Temple, being attended by his Guards, conſiſting of an hundred Men, and his ordinary Officers, with a complete Band of Muſick of Drums, Flutes, and Trumpets. After Service is over, he returns with the ſame Retinue, the Soldiers leaping all the Way at the Sound of Muſick, and ſtriking their Swords on one another's Bucklers, and that in ſuch a ſucceſſive Manner as to avoid Confuſion. He is likewiſe attended, in his Return from Church, by all the People of the Iſland, and regales with a Dinner the Pandiare, Naybes, Catibes, Moudins, Gentlemen, and Soldiers. After Dinner he hears Cauſes, and adminiſters Juſtice. Theſe Iſlands afford neither Horſe nor Beaſt, and therefore the King walks abroad on Foot, unleſs he be carried in a Chair upon Slaves Shoulders, which happens but ſeldom, for he is a brawny ſtrong Man, and chooſes rather to go on Foot. In ſpeaking to the King, or Queen, or Princes of the Royal Blood, and in ſpeaking of them, they have peculiar Expreſſions, that they dare not apply to others; as when they ſay of another Man, he is aſleep, in talking of the King, they ſay, he takes his Reſt.

The Queens wear the ſame ſorts of Habits with the other *Maldivan* Women, only their Cloaths are richer. The Noblemen's Ladies and Daughters are obliged to wait upon them every Evening: And when the Queens go abroad (which happens but very ſeldom) all the Women in the Iſland run to meet them in their reſpective Diſtricts with Preſents of Flowers and Fruits, the She-Slaves giving Notice, at a great Diſtance before them, for all Men to get out of the Way upon that Occaſion. Four great Ladies carry over the Queen's Head a Veil of white Silk, reaching to the Ground, ſo that ſhe is not ſeen. The Queens bathe frequently in the Sea, as well as other Women, ſuch being the Cuſtom of the Country, which they reckon very conducive to Health. For this End they have an Incloſure in the Sea, covered with Cotton-Cloth, and upon the Shore a little Houſe, with a Freſh-water Bath, which they uſe as they come out of the Sea. Daylight is never ſeen in the Queen's Chambers, or thoſe of the Ladies of Quality, for their only Light is Lamps burning continually; and the Place of the Room where they uſually retire is blocked up with four or five Rows of Tapeſtry, the innermoſt of which neither Man or Woman dares to pull up without coughing or hemming firſt, and telling who they are. When they undreſs, they pull off only their Robe, for neither Men nor Women in the *Maldives* dare to throw off the Cloth that is tied round their Middle.

26. As for the King's Revenue, he has many Iſlands, which are Crown-Lands, beſides a fifth Part of all the Grain and Fruits of the Country, and a Tax on dried Fiſh, Shells called Bely, and Cords of Cocoas, which he lays upon them according to their Circumſtances, for he has no Taxes paid him in Money, abating what is paid as a Purchaſe for Titles and Offices, or for Licences to wear fine Apparel. He obliges his People to make him every Year as much Cotton Cloth as cloaths his Soldiers, for he gives them Cloaths as well as Pay. This Revenue is further enlarged by his Claim to the Goods imported by Shipping, for a Ship no ſooner arrives, than the Owners repair to him, and give him an Account of their Cargo, out of which he takes what he pleaſes, at low Rates, and obliges his Subjects to take them of him again at what Price he pleaſes, by way of Exchange, for ſuch Things as he wants, and often fits out Ships laden with the Commodities of his own Country.

All Wrecks found on the Sea-Shore are immediately brought to the King, for no Subject dares keep them; the ſame is done with Ambergris, called by the *Maldives* Gomen, which is more plentiful here than in any Part of the *Indies*, and which is ſo narrowly looked after, that whoever appropriates it to his own Uſe loſes a Hand. In a word, whatever the Sea caſts upon the Shore is the King's, particularly a ſort of Sea-nuts, called Tanacarre, as big as a Man's Head, which they fancy to grow on Trees under Water. The *Portugueze* call them Cocoas of the *Maldives*; they are uſed in Phyſick, and very dear. Their Money is Silver only, and but of one ſort, called Larins; however, all Gold and Silver is current here by Weight, as it is all over the *Indies*. Before they take it, it is tried in the Fire, and every Man keeps Weights for that Purpoſe. There is a ſort of Metal called Cabin, reſembling Tin, much eſteemed in the *Indies*, but not current there. Iron Money paſſes no where in the *Indies*, but in the Dominions of the Prince that coined it, having but one ſort of Coin; they are forced to cut it, by which they loſe a twelfth Part. Inſtead of ſmall Coins they uſe ſometimes Shells, 12000 of which make a Larin, and a Larin is worth about eight Sols, being long, like one's Finger, and folded; the King's Name is ſet upon thoſe Folds in *Arabick* Letters. Their Gold and Silver is all imported from abroad, but in their own Markets they often barter one Thing for another. The *Maldives* are well frequented with Merchants, and the Commodities they ſend abroad are chiefly the Cocoas, with which they load above one hundred Ships yearly. Of this the Cordage is made that ſerves all the Ships of *Arabia*, *Malabar*, and all the *Indies*. They make alſo Oil and Honey of that Tree, and by weaving the Leaves of the Tree make Sails. They vend alſo little Shells, that contain a Creature in them of the Bigneſs of the End of one's little Finger, white, very ſmooth, and glittering. They fiſh for them but twice a Month, three Days before and three Days after the new Moon, and ſo before and after the full Moon. The Women gather them in the Sands and Flats of the Sea, ſtanding

ing up to their Middle in Water. Theſe go only to *Bengal*, the Inhabitants of which eſteem them ſo much, that I have ſeen thirty or forty Ships laden, without any other Commodity, bound thither. Though in *Bengal* they have enough of other Metals, yet theſe Shells paſs there as Money, and the King and Noblemen hoard up prodigious Quantities of them, accounting them their Treaſure. They give twenty Meaſures of Rice for a Fardel of Shells, each Fardel containing 12000. They have, beſides theſe, a ſort of Tortoiſe-ſhell, called Cambe, which is black and ſmooth, and has many natural Figures; it is found no where but there, and in the *Philippines*, and goes off beſt in *Cambaya*. Here they make fine Reed-mats, and Cloths of Cotton and Silk; in Exchange the Merchants export ſome Cotton and Silk Cloths, a ſort of Oil, Arac, Iron, Steel, Pieces of Porcelane, and, in ſhort, all the Neceſſaries of Life; yet every thing is cheap, becauſe of the Number and Frequency of Ships. They import all their Gold and Silver, which they never ſend out again, but lay it up among their Wives Jewels as their chief Treaſure.

27. After following our Author through his large Deſcription of the *Maldives*, we are next to recur to his perſonal Adventures, in order to acquaint the Reader how he recovered his Freedom, and eſcaped from thence to the Continent of *India*, from whence he returned to his native Country. The Fact, as he relates it, runs thus: He ſays, That in the Beginning of the Month of *February*, 1607, he dreamed that he was ſet at Liberty, and found a Paſſage home to *Europe*, which made a very great Impreſſion on his Mind, inſomuch that it induced him to make a Vow of going in Pilgrimage to the Shrine of *St. James* of *Galicia*, in order to return God Thanks, if this Dream ſhould prove true; at the ſame time he was exceedingly perplexed in his Mind, and endeavoured to diſcover how this could be brought about. All his Conjectures proved vain and fruitleſs; but two Nights after the Thing diſcovered itſelf, by the unexpected News that the King of *Bengal* was preparing to invade the *Maldives* with a Fleet of ſixteen Sail of large Gallies. On the firſt receiving of this Intelligence, the King of *Male* iſſued his Orders for fitting out, with all imaginable Expedition, the large Ships, and all the Gallies, Barks, and Veſſels in his Dominions; but before this could be accompliſhed, the Enemy's Fleet appeared in Sight; upon which the King ſuddenly altered his Reſolution, and determined to fly to the Southern Iſlands, in Hopes of taking Shelter there, till ſuch Time as he could aſſemble a Force ſufficient to expel the Invaders. His beſt Goods were immediately embarked, as alſo his three Queens, each of whom was carried by a Gentleman in his Arms, as if they had been Children, covered with Veils of Taffety of different Colours; as ſoon as they were on board the King followed them, leaving his Capital altogether defenceleſs, and the Streets full of Women, crying and lamenting the Danger to which they were expoſed. The Enemy no ſooner arrived than they divided their Forces, ſending eight of their Gallies in Purſuit of the King, with whom the Wind failing, they very ſpeedily came up, engaged his ſmall Fleet, and having killed the unfortunate Monarch of the *Maldives*, who fought very bravely in his own Defence, made themſelves Maſters of his Ships, Wives, and Treaſures. As ſoon as theſe People landed in *Male*, our Author ſurrendered, and put himſelf into their Hands, declaring to them in what Manner he came thither, and how he had remained Priſoner there for ſeveral Years. They treated him very kindly, as ſoon as they were ſatisfied that he was not a *Portugueze*; for had he been of that Nation, they would, without any Ceremony, have put him to Death. The Conquerors remained about ten Days on the Iſland, in which Space they carried on board their Veſſels all the Plunder of the King's Palace, with every Thing of Value they could find, particularly one-hundred-and-twenty Pieces of Cannon, and then prepared for their Departure, leaving every body at Liberty, excepting only the King's Brother-in-Law, whom they carried with them, and our Author, who went of his own Accord, and who with ſome Difficulty got to *Bengal*, where he had Leiſure to contrive, the beſt he could, the Means of finding a Paſſage back to *Europe*. While he remained in *Bengal*, the *Mogul* declared War againſt that Prince, who immediately aſſembled a prodigious Army, in order to withſtand him, amounting, as our Author was informed, to ſeveral hundred thouſand Men, and ſome thouſands of armed Elephants; which military Preparations did not incline him to remain any longer than till he found an Opportunity of withdrawing himſelf, and this in a ſhort Time he obtained.

28. He retired from *Bengal* to the *Malabar* Coaſt, inhabited at that Time for the moſt Part by Pirates, from whence he proceeded to *Calicut*, where he remained eight Months, waiting for a *Dutch* Ship; but at laſt was perſuaded by the Jeſuits to go to *Cochin*, where, on his firſt Arrival, he was impriſoned as a Spy, and ſuffered great Hardſhips. At *Goa* alſo he was a Priſoner with thoſe who remained of ſeventeen *Engliſh* taken at the Bar of *Surat*. The Jeſuits had brought one Maſter *Richards*, and four other *Engliſhmen*, from the *Mogul*'s Court; ſome *Hollanders* alſo were there, and they were all Priſoners together; but the Jeſuits undertook for them, and procured their Liberty, *viz. Thomas Stevens* an *Engliſhman*, and Rector of *Margon* College in *Salſete*, *Nicholas Trigaut* a *Walloon*, *Stephen Croſs* a *Frenchman* of *Roan*, with *Gaſpar Almano* a *Spaniard*. This *Thomas Stevens* procured the Liberty of the *Engliſhmen* alſo, four of which became Catholicks, and two of them died there. Don *Louis Lorenço d'Eſtabla* arrived at *Goa* with the Title of Viceroy to the People's great Grief, with the more deſired Don *Andreo Furtado*: Ten Months after his coming four great Carracks arrived, each about two thouſand Tons; five had departed from *Liſbon*, but they knew not what was become of the fifth, which was ſeparated by a Tempeſt at the *Cape*; in each were embarked a thouſand Perſons, Soldiers, Mariners, Jeſuits, and other Churchmen, with Merchants and Gentlemen; but when they arrived at *Goa*, there were not above three hundred in each, by reaſon of the Sickneſs and Miſeries they endured in eight Months at Sea without Sight of Land. Theſe brought an Edict from the King, forbidding the *Engliſh*, *French*, or *Dutch* Commerce in his Dominions; and if there were any ſuch there, to ſend them away, upon Peril of their Lives. On the 26th of *December* 1609, he embarked for *Liſbon*, and on the 15th of *March* 1610, they arrived at the Iſle of *Diego Rodriguz* in 20°, about forty Leagues Eaſt from *Saint Laurence*. After a cruel Storm there five Days together, they reached the Cape, *St. Helena*, *Braſil*, the *Acore*, the *Berlings*, and having paid his Vow to *St. James* in *Galicia*, he arrived at *Rochelle* the 16th of *February* 1611. Thus we have brought this Voyage to a Concluſion without taking in the Author's Travels through the Reſt of *India*, which would have ſwelled the Section to a great Extent, and would have contributed little to the Reader's Satisfaction, as containing nothing which may not be met with elſewhere, in as good, or in a better Dreſs, as the Reader will perceive in the next Section, wherein we ſhall give one of the exacteſt and beſt written Voyages to the *Eaſt-Indies* that is any where extant. But with regard to the *Maldives*, *Pirard*'s Account is beyond a Queſtion preferable to any, for the Reaſons we have aſſigned at the Beginning of the Voyage. It may not, however, be amiſs, conſidering our Author went thither one-hundred-and-fifty Years ago, to conclude the preſent Section with ſome Remarks on the State thoſe Iſlands are now in, that we may give the Reader, as near as poſſible, a compleat View of the Subject at once, without fatiguing him with needleſs and impertinent Repetitions; for want of which Caution, moſt of our old Collections of Voyages ſwell to ſuch bulky Volumes, and at the ſame time are, in many material Points, extremely defective.

29. One would imagine, from the Account given us by this Writer, that in the Courſe of ſo many Years as have elapſed ſince his being ſhipwrecked on thoſe Iſlands, many of them muſt have been ſwallowed up entirely, and many more rendered uninhabitable and deſart, which, however, does not appear to be the Caſe. On the contrary, the Iſland of *Male*, according to the lateſt Accounts we have, is in a better Condition than ever, and the *Dutch* carry on there a very conſiderable Commerce, the Natives themſelves alſo trading in their own Veſſels to *Cylon*, where they are well uſed by the *Dutch*, and make a very great Profit of thoſe little Shells which are called *Cauris*, *Coris*, and by our Seamen *Cowries*. Of theſe there are prodigious Quanti-

ties, not only on the Shore of the *Maldives*, waſhed thither by the Waves of the Sea, but alſo dug up in the very Heart of ſome of the Iſlands, as being very probably left there at the Time theſe Lands were deſerted by the Ocean. As the Meaſure of Things, which we call Money, is altogether arbitrary, and depends ſolely on an Agreement amongſt Men, that this or that ſhall ſtand for and be regarded as a common Meaſure, ſo in many Countries, both of *Aſia* and *Africa*, theſe Shells, by a certain tacit Agreement, are fixed as ſuch a common Meaſure, and are conſequently eſteemed, and have the Currency of Money. It is that gives them a Value even with ſuch as deſpiſe thoſe who trade with and receive them as Money, without reflecting, that Shells are to the full as capable of being conſtituted Money as either Gold or Silver, and without remembering that they are compelled to practiſe what they themſelves ſo much condemn, and to take theſe paltry Shells for Money. At *Bengal* two thouſand four hundred Cowries were, in the Year 1740, valued at a Rupee, or about half a Crown of our Money.

But the great Uſe of them is on the Coaſts of *Africa*, and particularly on thoſe of *Guinea*, where the Negroes eſteem them to the full as much as Gold and Silver, and where they paſs under the Denomination of *Bougies*. We may gueſs at the vaſt Conſumption of this Commodity or Money, by the *French* Merchants in the Kingdom of *Fidah*; who give for a Piece of the common Cloth made by the Natives, commonly eighty Pound Weight of Cowries, and ſo in proportion for the richer Commodities of that Country, ſuch as Wax, Ivory, Gold, *&c.* The *Dutch* uſually furniſh other *European* Nations with this kind of Negro Coin, if I may be allowed that Expreſſion, and the Reader will eaſily conceive from thence how beneficial that Trade is which they drive with the *Maldives*. It might be wondered how this Demand for theſe Shells is kept up upon the Coaſt of *Guinea*; but in order to account for this, we are to underſtand that, like Gold and Silver, theſe are not only the Meaſures of Commerce among the Negroes, but likewiſe the higheſt Mark of their Finery, ſince they wear them as Necklaces, Collars, and Bracelets, ſtrung upon Hair or Silk, either in ſingle or double Rows, which indeed make an odd, but at the ſame time no diſagreeable Figure on the Necks and Arms of the Natives, the ſnowy Whiteneſs of the Shell appearing to great Advantage, when compared with their jet-black Skins.

Heretofore about twelve thouſand Pound Weight of Cowries was ſufficient to purchaſe a Cargo of five or ſix hundred Negroes; but at preſent the Market is raiſed, and the Proportion between Man's Fleſh and Baubles ſo altered, that a Ship Load of Slaves cannot be bought for leſs than twelve or fourteen Ton of Cowries. As there would be a great deal of Trouble in adjuſting Payments made in this kind of Money, the Negroes, though ſo ſtupid as to ſell themſelves for Shells, have invented a kind of Copper Baſon of ſuch Size and Shape, as to hold about one hundred and eight Pounds of theſe Shells, which is a great Eaſe to the Merchants. We muſt not, however, imagine, that theſe Shells are not to be found any where elſe but in theſe Iſlands, ſince it is certain that they are likewiſe met with on the Coaſt of the *Philippines*; but theſe are of an inferior Nature, and much below the Cowries of the *Maldives* in Whiteneſs and Luſtre. The principal Mart in *Europe* for theſe Shells is *Amſterdam*, where they have of them large Magazines, and where they are purchaſed both by *French* and *Engliſh* Merchants, for the Conveniency of exporting them to *Africa*.

But to return to the Trade of the *Maldives*, which is far from being ſo inconſiderable as ſome of our modern Writers would have us believe, and that for no better Reaſon than this, becauſe the *Europeans* have not ſettled amongſt them; whereas from this Account, it is moſt evident, that it is impoſſible for them to ſettle there for a Multitude of Reaſons, which muſt naturally occur to every judicious Reader. But there is notwithſtanding a great Trade carried on there, inſomuch that ſome hundred Sail of Ships are laden annually with the Product of their Cocoa-Trees, that is, with the Oil, Honey, Cordage, and Sails made from this kind of Palm-Tree, which grows no where either in ſuch Abundance, or to ſuch Perfection, as on theſe Iſlands; neither do they want other valuable Commodities, particularly the fineſt Tortoiſe Shells in the World, ſtained naturally with very beautiful Figures, and wrought up by them in Cabinets, Combs, and other Curioſities. But what plainly proves the Riches and Induſtry of the People is, on the one hand, the Cheapneſs of Cotton, Silk, Oil, Iron, Steel, Spices, and *China* Ware, with other foreign Goods, which could not be brought about, if their own Manufactures did not enable them to balance the Account with the Foreigners, who import them; and, on the other hand, that Plenty of Gold and Silver which has been always viſible in thoſe Iſlands, and which muſt have been very ſoon carried away, if ever the Balance of Trade had been againſt them.

It ſeems alſo to be no ſmall Honour to the Country, that neither the Force of the *Portugueze*, the Ambition of the *Engliſh* on their firſt coming into the *Indies*, or the Frauds of the *Dutch*, have deprived the Inhabitants of theſe Iſlands of their Liberty. It is true, that from the Account our Author has given, this does not appear to be a very difficult Matter, ſince the King of *Bengal* was able to make ſo great an Impreſſion with ſo ſmall a Force; but at the ſame time we ought to reflect, that this Conqueror thought fit to abandon the Iſland of *Male* as ſoon as he had reduced it, which appears to me a very plain Proof that he thought it impracticable to keep it; and, indeed, where a whole Nation are ſo much uſed to live at Sea, as well as on Shore, it will be always found a very difficult, if not impoſſible Matter, to reduce them. The great Policy of the Legiſlator of theſe Iſlands, whoever he was, very plainly appears in his adjuſting, ſo nicely as he has done, the Nature of their Conſtitution to the Situation of their Country, and that Courſe of Life which from thence they are oblige to follow. To this we may juſtly aſcribe the long Continuance of their Monarchy, the Force of which does not ſeem to be at all impaired by the Settlements made by the *Europeans* in thoſe Countries; but, on the contrary, the People have encreaſed their Riches, and the King has extended his Power, by falling into Trade with them, which is more than can be ſaid of any other Country in the *Indies*.

It muſt, however, be allowed, that very few Travellers or Voyage-Writers have taken the Pains to deſcribe the *Maldives*; ſo that if we had not this Account of *Pirard*'s, we ſhould ſcarce be able to ſay any thing about them, the Reaſon of which is very eaſily aſſigned; for theſe Iſlands have no Mines, either of rich Metals or precious Stones; nor do they abound with Spices, or any other highly valued Commodities; but it appears very clearly, that notwithſtanding the Want of theſe Advantages, they are much more populous, and enjoy, beyond Compariſon, more Liberty than thoſe People do who are richer, and conſequently more eſteemed. But as theſe Iſlands lie only in the Entrance of the *Indies*, it muſt appear requiſite to furniſh ſome Deſcriptions of the principal Places mentioned in the foregoing Hiſtories, by ſuch as have viſited them in Perſon, and that too within ſuch Periods of Time as may afford the greateſt Lights to thoſe Hiſtories; from which Conſideration we have been led to make Choice rather of Voyages than Travels, becauſe the latter belongs ſtrictly and properly to the ſucceeding Volume, in which the moſt curious and beſt eſteemed to all Parts of the *Indies* ſhall be included: At preſent we ſhall give a general Voyage to the *Indies* by a *French* Officer and Commander in Chief, whoſe Work has been always eſteemed more accurate in its kind than any other written by that Officer himſelf, who, like our Sir *Francis Drake*, was capable of performing every Office in his Ship, and of whom his own Pilot declared, that he was at once the moſt ſkilful and the moſt careful Man in that Profeſſion with whom he was ever acquainted. His Knowledge, however, was not bounded by his maritime Skill; but, on the contrary, was every Way as correct in other neceſſary Branches of Science, ſo that he was as capable of writing the Deſcription or Hiſtory of the Countries he viſited, as of carrying his Veſſel to them.

Theſe ſingular Properties, and the Conſidearrtion that we have not room for a Multitude of Voyages, led to the Choice of this, which may ſerve inſtead of many, and which

which the original Publiſher, the celebrated Mr. *Thevenot* declared he made publick with no other View, than that it might ſerve as a Model to his Countrymen, not in Point of Science only, but of Method alſo, eſteeming the Author as conſiderable in that Character as in the Quality of a Commander. This Apology I thought neceſſary, that the Reader might not ſuſpect me of Partiality, and in the ſucceeding Sections we ſhall put that Point farther out of Diſpute, by doing the like Juſtice to *Engliſh*, *Dutch*, and the eminent Sea-Officers of other Nations, who have not only benefited thoſe they ſerved, but have likewiſe tranſmitted Teſtimonies of their Skill to Poſterity.

I cannot diſmiſs this Subject without obſerving that it is to be wiſhed our own Countrymen would be more careful in this Particular, ſince, as there are not better Seamen, or better Officers in the World, it is very hard their great Actions ſhould not be communicated to the Publick, with all the Advantages that may be derived from Method and Language; both which might be acquired with as little Labour as is requiſite to get over the Difficulties in keeping a Sea-Journal; and therefore we may well hope, that in an Age which diſcovers greater Curioſity in regard to theſe Subjects, than has been ſhewn in any other; Gentlemen will have that regard to their own, and their Officers Characters, as not to let them ſuffer for want of a candid Repreſentation.

SECTION XXV.

The Expedition of Commodore Beaulieu *to the* Eaſt-Indies; *containing a curious and accurate Deſcription of the Sea-Coaſts and Commerce; as alſo Abundance of curious Obſervations on the Manners of the Peple, the Nature of their Governments, and the Means of eſtabliſhing Colonies amongſt them.*

Written by M. *Beaulieu* himſelf, and publiſhed by M. *Thevenot*, in his large Collection of Voyages.

1. *An Introduction to the Voyage, with an hiſtorical Account of its Author and his Work.* 2. *Their Departure* Octob. *the* 2d 1619, *and Occurrences in their Voyage to Cape* Verd, *on the Coaſt of* Africa. 3. *Remarkable Accidents and Proceedings at Cape* Sierra Liona, *where they touched for Refreſhments.* 4. *Remarkable Obſervations in thoſe Seas, with the Sentiments of the Author concerning them.* 5. *A very curious and accurate Deſcription of* Table-Bay, *under the Cape of* Good-Hope. 6. *A very candid and circumſtantial Account of the* Hottentots, *their Cuſtoms*, &c. 7. *An Account of ſome remarkable Letters found there, and the Author's Reſolution on reading of them.* 8. *A Deſcription of ſeveral remarkable Animals, and other Curioſities met with here.* 9. *A very entertaining Relation of what paſſed between Commodore* Beaulieu *and the Negroes in the Bay of* S. Auguſtine, *during his Stay there.* 10. *A farther Account of this Matter, and of the Cloſe of his Tranſactions with thoſe People.* 11. *A ſuccinct Hiſtory of the Government, Language, Manners*, &c. *of this* Negro *Nation.* 12. *The Author ſails along the Coaſt of* Africa, *and obſerves ſeveral notorious Errors in the Sea-Charts.* 13. *A large and curious Deſcription of the* Comorro *Iſlands, and their Inhabitants, with his Reception there.* 14. *Remarkable Occurrences at the Iſland of* Nangaſija, *and ſome Remarks on the* Arabian *Shipping.* 15. *The Author proſecutes his Voyage for the Cape of* Guardafu, *and meets with a great Storm in his Paſſage.* 16. *An exact Deſcription of this Coaſt, and of the Difficulties met with in procuring Refreſhments.* 17. *A very ſingular Method of obtaining freſh Water, which may be of great Uſe in long Voyages.* 18. *An Account of the Country about Cape* Guardafu, *and the Author's Reſolution to ſteer directly for the Coaſt of* Malabar. 19. *Their Arrival upon that Coaſt, and their taking a* Mooriſh *Ship richly laden.* 20. *They double Cape* Comorin, *and obtain a Pilot, who conducts them to* Ticow. 21. *Their Arrival there, and the News they received of their Vice-Admiral, and other Tranſactions.* 22. *A large Relation of what paſſed during their Stay in that Port, and of the Behaviour of the Inhabitants.* 23. *A Deſcription of the Country, its Product, and the Nature of the Commerce there, with other Obſervations.* 24. *The Author's Arrival at* Achen, *with a copious Deſcription of that Country and its Commerce.* 25. *The Author's Audience of the King of* Achen, *and of what paſſed upon that Occaſion.* 26. *A very curious and exact Account of the State of that Country, the Character of its King and his Subjects.* 27. *A farther Account of our Author's Proceedings there, and of the many Difficulties he met with.* 28. *Obtains a Licence to buy Pepper, and yet finds it extremely difficult to procure his Lading.* 29. *Our Author obtains a Letter from the King of* Achen *to the King of* France, *in Anſwer to one he preſented.* 30. *Other Tranſactions during the Time of his Stay in that Country, and his Reſolution to ſail to* Queda. 31. *Occurrences in his Voyage thither, and his Proceeding there, in order to obtain a Lading of Pepper.* 32. *A Deſcription of the Iſland of* Pulo Lada, *or* Pepper-Land, *on the* Malacca *Coaſt.* 33. *A very curious and exact Deſcription of the Manner of cultivating Pepper, and of the Value of that Commodity.* 34. *A ſuccinct Hiſtory of the Revolutions of* Queda, *and of the Reduction of that Kingdom by the Monarch of* Achen. 35. *The Author's Return to that Country, and the Reception he met with there the ſecond Time.* 36. *A large Account of what happened to the Vice-Admiral, and of the Difficulties the* French *met with in eſtabliſhing a Trade in theſe Parts.* 37. *The Author preſents a rich Diamond to the King of* Achen, *and obtains from him a Licence to trade at* Ticow. 38. *A Deſcription of the Iſland of* Sumatra, *its Climate, Soil, and Produce, with other Particulars.* 39. *The Iſlands upon the Coaſt of* Sumatra, *and their reſpective Products, together with an Account of the different Kingdoms in* Sumatra. 40. *The Character of the People of* Achen, *their Government, Cuſtoms, Laws*, &c. *as obſerved by the Author.* 41. *The Military State of that Kingdom, and of the Forces and Power of the Monarch then on the Throne.* 42. *The Nature of his naval Eſtabliſhments, and of the Means made uſe of by him to ſupport them.* 43. *Of the Riches of the King of* Achen, *his Houſes, Slaves, Revenues, and ſeveral Methods of raiſing Money.* 44. *The ancient State of the Kingdom of* Achen *to the Acceſſion of the reigning King's Grandfather.* 45. *The civil Wars that hap-*

pened from that Time, and the dreadful Conſequences attending them. 46. *The Manner in which the then King of* Achen *mounted the Throne, and his Character.* 47. *The Author ſails for* Europe, *and meets with a pleaſant Paſſage as far as the Iſland of* St. Helena. 48. *A Deſcription of the Iſland of* Aſcenſion *and a farther Account of the Voyage to their Arrival at* St. Vincent. 49. *An exact Deſcription of that Iſland, its Climates, Soil, Product, and other Particulars.* 50. *Continuation of the Voyage to the Author's ſafe Arrival at* Havre de Grace, Dec. *the 1ſt* 1622. 51. *Some farther Memoirs of Commodore,* Beaulieu, *to the Time of his Deceaſe.*

1. THE following Voyage was not only undertaken, but written alſo by one of the beſt Officers that ever was in the *French* Service, of whoſe Character and Adventurers we ſhall ſay ſomewhat at preſent, and ſupply the reſt at the Concluſion of the Section. *Auguſtin de Beaulieu* was deſcended of a good Family at *Rouen*, which has been always conſidered as one of the principal Ports in *France*. He addicted himſelf from his Youth to the Sea, and ſtudied with great Application all the Sciences neceſſary to make him an able Man in his Profeſſion, and more eſpecially Geography, Aſtronomy, and Navigation. His firſt Expedition was to the River *Gambia*, on the Coaſt of *Africa*, under the Command of the Chevalier *de Briſqueuille* of *Normandy* in 1612. The Deſign upon which the went was to erect a Fort, and eſtabliſh a Colony; but ſailing unluckily a little too late in the Year, they loſt the beſt Part of their Men before they were able to accompliſh any thing, and were therefore obliged to return home, *re infecta*, after a vaſt Expence, to very little Purpoſe.

In this Expedition our Author commanded a Sloop, and tho' he got nothing by the Voyage in Point of Profit, yet he improved himſelf exceedingly, and eſtabliſhed a juſt Reputation for Courage, Diligence and Application. About the Year 1616, the *French* formed the firſt Notion of trading to the *Eaſt-Indies*, and ſome Merchants at *Paris* and *Rouen* agreed to furniſh a Joint-Stock for that Purpoſe. They fitted out two good Ships, the Command of the biggeſt of which, with the Title of General, was given to Captain *de Nets*, who at that Time ſerved the King in the Marine. The leſſer Ship was beſtowed upon our Author, who had no other Recommendation than his Merit. The Voyage was in all Reſpects fortunate, and well conducted, though in the End it did not turn to any great Account; for the *Dutch* Preſident in the *Indies* having publiſhed an Order, requiring all the Subjects of the States-General that were on board thoſe Ships to quit them immediately, which Order they obeyed, the two Captains found it thereby out of their Power to bring home both the Veſſels, and therefore that which had been commanded by Captain *Beaulcau* was ſold to a little Prince of the Iſland of *Java*, and all their Effects brought home on Board the largeſt; notwithſtanding which Misfortune, and the great Expence with which this Undertaking was attended, they managed ſo prudently, as to make a ſaving Voyage.

It was his Care and Diligence in this Expedition, that recommended him to that Command of which he has written the following Account. He was extremely careful in the Choice of his Men, that he might not run the riſque of failing in this, as he had done in his former Voyage; and that Poſterity might be the better for the Pains he was obliged to take, he provided, before he left *France*, all the neceſſary Inſtruments of Navigation in the higheſt Degree of Perfection, and conſtantly obſerved the Variation of the Needle every Morning and Evening, on four or five different Compaſſes, that he might be the leſs liable to Miſtakes. At his Return home, he not only tranſcribed his Sea Journal, which is ſtill preſerved, but compoſed likewiſe the following Hiſtory of the Voyage from his Papers, with a Deſign to have committed them to the Preſs, but by ſome unforeſeen Accidents, and by his premature Death, of which more ſhall be ſaid hereafter, this was prevented, and theſe Papers remained for twenty Years afterwards in private Hands, till ſuch Time as the famous M. *Melchizedeck de Thevenot* formed his noble Deſign of publiſhing a curious Collection of the beſt Voyages, when theſe Memoirs were put into his Hands by M. *Dolu*, to whom they had been confided by the Relations of the Author.

That great Man was charmed with the Preſent, and no Wonder, ſince he ſeriouſly profeſſes it appeared to him as perfect a Performance as ever came to his Notice, notwithſtanding the Multitude of *Portugueze*, *Engliſh*, and *Dutch* Memoirs that he had occaſion to ſee, while employed in making that curious and excellent Collection. The principal Reaſon of his valuing it ſo much, was the high Character the Author had born in point of Integrity as well as Abilities; ſo that as he related every thing that was worth relating in the Courſe of his long Expedition, all he relates may be very ſafely depended upon; as being exactly agreeable to Truth, and to the Lights which he received. One may ſafely affirm, that the Work itſelf carries along with it enough to juſtify all that has been ſaid in its Favour, ſince there are ſo many viſible Marks of the Writer's Sincerity, in thoſe Paſſages which regard his own Conduct, that the moſt ſcrupulous Critick muſt be obliged to confeſs, there is not the leaſt Ground to ſuſpect he could entertain any Deſign of impoſing on his Reader. The Variety of Events, the curious Deſcriptions, the juſt and weighty Remarks with which it abounds, ſufficiently enhance the Value of this Performance, which therefore we have given the Reader in his own Words, and muſt at the ſame Time own, that it would be no eaſy Taſk to make Choice of better, ſince his Stile is exactly ſuited to his Subject; and he relates every thing with ſo much Modeſty and Freedom, that it is hard to determine whether his Memoirs are more inſtructive or entertaining.

2. I ſailed *Octob.* 2. 1619, from *Honfleur* Road with three Ships; the *Montmorency* of 450 Tuns, carrying 162 Men, 22 Guns, and 20 Patereroes, the *Hope*, of 400 Tuns, 117 Men, 26 Guns, and 20 Patereroes, and the *Hermitage*, an Advice-Boat, of 75 Tuns, 30 Men, 8 Guns, and 8 Patereroes, all victualled for two Years and an half. The ſeventeenth we came in Sight of *Madera*, and at Night its weſtern Point lay about 7 Leagues off to the S. E. and a quarter Eaſt. The 18th we ſtood South with the Wind at Eaſt, expecting by that Courſe to deſcry the Iſland of *Palma*. *Madera* lies very high, but the Weather was, as it is commonly, ſo foggy, that we could ſcarce deſcry it. The Commodore's Ship being deep loaden, and embarraſſed with an unwieldy Rudder, that two or three Men could ſcarce manage, we reſolved to make the beſt of our Way to Cape *Verd*, in order to have a new one made, or to put the old one to rights, which was encumbered with too much Wood.

On the firſt of *November* we made the Coaſt of *Africa*, between the River *Senegal* and Cape *Verd*, which lies very low, running N. E. and S. W. and is waſhed by a ſandy Sea. Next Day, about Eight in the Morning, we doubled Cape *Verd*, and coaſted along the Shore, in order to get into *Ruffiſque* Road; at which Place, in the Afternoon, we ſaw three *French* Ships at Anchor, and a ſmall Bark, which had Captain *Drowet's* Equipage on Board, and lay off of that Place waiting for him. In the Evening I caſt Anchor within a Cannon-Shot of the three Ships, for the Wind being contrary, I could not come up with them, and the rainy Seaſon in that Country was ſcarce over.

The fifteenth, having reſolved to ſend the Advice-Boat to the Idol Iſlands, to buy up Proviſions, I furniſhed it with Kaſſade and Knives, which were proper Commodities for that Place, and reinforced its Complement with Captain *Seyer* and ſix Soldiers, ordering Captain *Ridel*, who commanded the Pinnace, not to treat with the Natives without Hoſtages, and withal, not to ſtay there above three Days at moſt, but to come with all poſſible Expedition to rejoin us at *Tegrin*. When ſhe parted from us, we were in the Lat. of 10° 30′. From the Time we paſſed Cape *Verd*, we had but little Wind, and the Tides run againſt us W. N. W.

The nineteenth about Noon, we deſcried the Idol Iſlands, about eight Leagues off to the E. N. E. and our own Pinnace making into the Shore. Theſe Iſlands lie in 9° 30′ N. L. They are covered with Wood, and bating *Tagrin*, are the higheſt Land between Cape *Verd* and Cape *Sierra Liona*. *Great Idol* being the largeſt and moſt ſouthern of thoſe Iſlands, affords Water, and ſeveral Sorts of Fruits and Fowls; but its Inhabitants, who are very numerous, are not to be dealt with without Hoſtages. The *Leſſer Idol* affords likewiſe Water: Beſides theſe two, there are other ſmaller Iſlands, which are ſo inconſiderable, that they are not diſtinguiſhed by any Name. The Names of theſe two are taken from a River ſo called in the Continent, the Mouth of which lies oppoſite to them about three or four Leagues off. The King of this Country reſides up that River; the Natives are Negroes, Idolaters, great Hunters, and Eaters of Elephants. They have no Commerce with the Continent, and it is hard to get aſhore upon them, becauſe their Coaſt lies very high: I believe they put off their Elephants Teeth in the River of *Tagrin*. At Night we loſt Sight of thoſe Iſlands, which are diſtant 25 Leagues from Cape *Sierra Liona*, or *Tagrin*. Next Day we ſaw, about a Quarter of a League off, ſeveral Spouts, or Guts of Wind, whirling about upon the Sea, and forcing up the Water with great Violence, two of which were very formidable. As ſoon as we perceived them, we furled all our Sails, for fear of any Miſchief from them.

3. We arrived *November* the 23d at Cape *Sierra Liona*, and caſt Anchor at *Tagrin*, where ſeveral Negroes coming on Board, gave me to underſtand, that there was an *Engliſh* Veſſel about four Leagues off at *Saſana*, the Reſidence of the King of *Tagrin*. On the 28th I cauſed the Rudder to be taken off the Stern-poſt, and hauled aſhore, where having poſted a ſtrong Guard, and fortified the Place with felled Trees, I ſet the Carpenters to work. Having walked a little further into the Country, I found it very pleaſant. At the Bottom of the Creek there was a ſmall Brook of ſweet and clear Water, the Banks of which towards the Sea were decked with great Quantities of Citron Trees, Willows, and pretty thick Woods. I likewiſe found ſome Plains good for Paſture; but the Soil is nothing but Stone, or Iron-coloured Rock. Their Houſes are infinitely better than thoſe at Cape *Verd*. The Natives, who are Negroes, worſhip little horrible Images reſembling Devils, and ſmall Lumps of black Earth in the Form of Sugar Biſcuits, which I underſtood to be the Neſts of Ants. To theſe they offer Fruits, the Heads of Monkies, Baboons, and other Beaſts.

They call the Idols *Gigris*, which Name I take to be derived from the *French*; for they commonly ſalute one another in theſe Words, *Tout, Haut*; but when they ſalute a White, they cry, *Tu*. As Men, they are a much better ſort of People than the other Negroes, though they begin now to improve their Cunning, by converſing with the People of ſeveral Nations that touch there. The Place where we lay being the third Creek from Cape *Sierra Liona*, is very convenient for taking in Water, Wood, Citrons, Oranges, and Hoops for Water-Caſks, which are all to be had for little or nothing. There we had very good Rice in Exchange for equal Quantities of Salt. It affords no Fleſh unleſs Pullets, which are very ſcarce, and has little Accommodation for Hunting; but all its Creeks are well ſtored with ſeveral ſorts of Fiſh.

The Cape lies in 8° of North-Latitude, and the Needle varies there 2° 45′ North-Eaſt. One of our Trumpeters that could not ſwim was unfortunately drowned in a little River near this Place, which was nine or ten Feet deep. 'Tis preſumed he was deceived by the extream Clearneſs of the Water, which repreſented the Bottom of the River to be nearer the Surface than it was, and that thereupon going to waſh himſelf, but not meeting with the expected Ground, was ſo frightened with the Surprize, that he neglected taking hold of the Banks of the River, which was not above ten Foot broad. *December* the 3d two Negroes came on Board, one of whom was armed with a Bow, Arrows, Sword, and Knife; the other, who was the Interpreter, told me, that he who bore the Arms was ſent by the King to acquaint me that the *Portugueze* up the River had murdered the Captain and the whole Crew of a *St. Malo*'s Bark: That his Maſter was ſorry ſuch a thing ſhould happen near his Territories, and that if I had a mind to reſent it, he would furniſh me with Negroes to conduct me to the Place where the *Portugueze* had lodged the Bark. This I underſtood to be about ſeven or eight Leagues above the *Saſena*, whither the *St. Malo*'s Captain had gone to buy a ſort of Wood not unlike that of *St. Martha*, which in *France* might be worth eight or nine Livres a hundred Weight.

When I firſt heard the News, I ſuſpected that the *Portugueze*, underſtanding that my Rudder and many of my Men were aſhore, had contrived the Meſſage to induce me to ſend a Detachment out of the Land Guard, and ſo give them an Opportunity of poſſeſſing themſelves of the Rudder and Water-Caſks that were aſhore; but upon ſecond Thoughts, calling to mind the Humour of the *Portugueze* in that Country, and the Weakneſs of the *St. Malo*'s Ship, I concluded the Account not improbable, and withal ſaw that the ſlighting ſuch Intelligence might leſſen the Reputation of the *French* in that Country. At laſt, having reſolved to ſend out a Detachment, purſuant to the King's Meſſage, the Interpreter with ſeveral other Negroes offered to go along with my Men to the Place, ſaying, they would go any where to have an Opportunity of killing *Portugueze*. To carry on this Affair with more Security, I ordered the Rudder to be brought aboard, for the Carpenter's Work being then finiſhed, there wanted nothing but the Iron-work, which might be done on Board, by ſetting up a Forge in the Ship.

I reinforced the Land Guard with ten Men, ordering them to plant Barricades of Water-Caſks before the principal Avenues of the Place where they lay, and to ſuffer neither white nor black to come near them in the Night-time, and got Captain *Pile* to accompany my Men in the Expedition. Accordingly, the next Day I ſent up the River our Sloop, with an Addition of ten Men to her Complement, together with Captain *Pile*'s Bark manned with his own Men, and the *Hope*'s Long-boat, with twenty Men and four Patereroes, all under the Command of Monſieur *Monteurier*. *December* the 8th Captain *Datel* of *Dieppe* arrived in the Bay, and told me, that at the Iſle of *St. Vincent* he met a *Dutch* Ship of four hundred Tuns, manned with *Dutch* and *Engliſh*, bound for *Bantam*. in order to convey thither the News of the Agreement between thoſe two Nations. At Three of the Clock in the Afternoon M. *Monteurier* returned with the *Hope*'s Long-boat, and Captain *Pile*'s Bark, our Pinnace not being able to keep up with their Oars, and reported that he had been ten or twelve Leagues up the River, where, finding the River very narrow and rocky, inſomuch that the Bark ſtruck ſeveral times, and having no Commiſſion from me to venture the Loſs of the Bark, he returned back without meeting any *Portugueze*, or their Veſſels.

4. On the 31ſt we were in 3° 30 North-Latitude; after our Departure from *Tagrin* the Weather was various, ſometimes ſtormy, and ſometimes very calm, as it uſes to be in thoſe Seas, and we found our Rudder much more ſerviceable than before. *January* 1ſt, 1620, at Sun-riſing we found the Needle 3° 30′ North-Eaſt, and the Latitude 3° 5′ North. The 6th we croſſed the Equinoctial Line, and celebrated the uſual Cuſtom of throwing Sea-Water upon thoſe who had never paſſed it. From the third of this Month we had the Wind at South-Eaſt and South-South-Eaſt, and ſailed cloſe to the Wind, in order to raiſe the South Pole, purſuant to the common Courſe of Navigation. The 24th we were under the Tropic of Capricorn, and the Neeedle varied 13° to the North-Eaſt from our paſſing the Line; we had the Wind at Eaſt and Eaſt-South-Eaſt. On the 1ſt of *February* we began to have the weſterly and other variable Winds, being then in 13° South Latitude, and the Needle varying 13° 30 North-Eaſt.

The 3d, being becalmed, I obſerved at the Sun-riſing that the Needle was 13° N. E.; whereas at my laſt Obſervation, when I was almoſt a Degree farther from the antarctick Pole, it was 13° 30′; ſo that inſtead of increaſing it decreaſed, upon which I concluded its Variation to be irregular, and that it is not fixed on two Meridians cutting the World in four Parts, as the *Portugueze* and others imagined.

During this Calm we ſaw two great Fiſh with long Snouts, or Beaks, which ſeemed to be of that ſort that are known to pierce lined Ships. I could ſcarce have credited the Story of their penetrating through Ships, if the Governor of *Dieppe* had not ſhewed me a Piece of the Beak or Horn of ſuch a Fiſh found in the Side of a *Dieppe* Ship, when it was laid up to be caulked after an *Eaſt-India* Voyage; the Captain of which had found ſomething ſtrike againſt his Ship, as ſhe ſailed from the Coaſt of *Braſil* to the *Cape*, but did not know what it was till that Diſcovery happened. This Piece of Horn reſembled the Tooth of a Sea-Horſe, only it was ſtrait all along, and of the Colour of Ivory. Its Thickneſs was an Inch and a half Diameter. It had run five Inches into the Wood, and was broke off where the Lining joined the Wood, probably by the ſtruggling of the Fiſh, which could not recover it without breaking. Several Perſons have met with the ſame Adventure in their Voyages: But I ſhall only mention one more of a *Dieppe* Captain, who upon a Voyage to thoſe Parts had his Boat ſtaved to Pieces by a Blow from one of theſe Fiſhes; for the Fiſh endeavoured to withdraw its Horn, disjointed all the Planks. Thoſe which I ſaw on this Occaſion ſeemed to be of the ſmalleſt ſort, one of them that came juſt under me appeared to be ten Foot long, beſides its Beak. It was a fleſhy Fiſh, though not ſo big proportionably to its Length as a Porpoiſe. Its Colour was a dark blue, and its Fins and Tail, which were very large, repreſented a bright Azure in the Sea. It had a pretty high Lump upon its Back, reſembling that of a Rechien, or *Indian* Sea-Calf, which ſometimes riſes above Water. Its Head was not unlike a Porpoiſe, only it was longer, and inſtead of a Snout had this Horn, or Bill, which was very ſharp at the Point, and almoſt two Foot long, and as thick as a Boy's Wriſt. It is a very ſtiff and ſwift Fiſh, for I have ſeen it fly at Bonitoes, with which it wages continual War. I have often obſerved Bonitoes and Albacores wounded by this ſort of Fiſh, and the Sea tinctured with the Blood. I am certain there are ſome of this ſort much greater than thoſe I ſaw this Day, which attack the Whales, and probably it is their miſtaking a Ship for a Whale that occaſions their encountering with a Ship. However, I doubt not but a great Ship may be endangered by the ſplitting and gaſhing of its Planks, occaſioned by this Fiſh endeavouring to withdraw its Horn after it has ſtruck.

While the Calm and the exceſſive Heat continued, we ſaw a certain white thing about the Bigneſs of an Oſtrich-Egg floating upon the Water, which ſunk when the Ship came within fifty or ſixty Paces of it; our Pinnace's Crew ſaid they ſaw a great many of them. It reſembled a Man's Head without Hair, and ſome ſay they obſerved two black Eyes and a Mouth upon it; We likewiſe ſaw a ſtrange ſort of Fiſh, about as large as an ordinary Lamprey, and equally round, with a large Fin or Creſt, which ſeemed to be above a Foot high over its Head, and ſloped in a continued Series down to its Tail. It ſwims upon one Side, ſo that the Fin, together with the Body, repreſents a large Fiſh in a triangular Form, and it makes its Way by ſhifting from one Side to the other; but when it catches its Prey, the Fin is ſtraight, and appears above the Water to be of an aſhy Colour, though the Body of the Fiſh is as white and as round as a Tallow-candle.

5. On the Tenth we were in 31° 45′ S. Lat. the Needle varying 12° 20′ N. E. The Twentieth our Lat. was 24°, and the Variation 9° 30′. Here we ſaw a great deal of Wreck, or Sea-graſs, of a reddiſh Colour, which ſome ſay comes from the *Triſtan de Acuna-Iſlands.* The next Day there happened a violent Storm, the Wind at Weſt, which had almoſt broke down our Maſts, our Topmaſt-Sails being then out. Such Storms are common, and very violent in thoſe Seas in Winter; but it was then Summer there, and the Autumn was juſt approaching. On the 8th of *March* our Lat. was 34°, and the Variation no more than 20′, which I took for a certain Sign that we were not above Seventy or ſeventy-ſix Leagues off of the *Cape of Good Hope.*

The 11th we ſaw Trambs, or Sea-weeds, about three or four Fathoms long, Cormorants, Sea-Bears, and the Fowls called by the *Portugueze* Alcatras, which are white all over, only the Tips of their Wings are black; and all theſe were certain Signs of our approaching to the Land. We likewiſe ſaw innumerable Shoals of Porpoiſes, and a great many Whales; towards Night we diſcovered Land, and found the common Navigation to be very juſt, being then in 33° Lat. which is over againſt the Bay of *de Soldaigna.* We reſolved to ſteer our Courſe to the *Table-Bay*, which lay from us about twenty Leagues S. E. a Quarter S. in order to take in freſh-Water; but the Wind being contrary, that is, S. and the Tides being N. N. W. we did not arrive at the *Table-Bay* till the 15th at Night, at which Time we caſt Anchor there, having loſt only one Boy in the Voyage. The next Day I ſent fifty Men on ſhore with Sails to make Tents of; when the Boat returned, they told me they had found ſeveral Corpſes of dead Men and Cloaths ſcattered up and down, and a ſmall Fortification of Earth, which we gueſſed to be built by the *Danes*, for one of the Natives that ſpoke a ſort of Jargon or broken *Engliſh*, gave us to underſtand, though more by his Signs than his Language, that five Ships had ſailed from thence to the Eaſtward about three Months before.

The 19th it continued to be very ſtormy, with a North-Eaſt Wind. Some Muſqueteers, whom we had ſent in Queſt of a Soldier who had ſtraggled from us, reported, that they had paſſed along the South-Side of an inland Mountain, joining to the *Table* Mountain, where they ſaw an Infinity of very large Baboons and Monkies; and from thence continued their Courſe along the declining Part of the Mountains that bound the Weſtern Shore, till they deſcried the Sea about half a League off, which I took to be another Bay between this and the *Cape of Good Hope*, that then they turned back, and when they were upon the Mountains, deſcried the Sea to the Southward, which muſt be that to the Eaſtward of the *Cape of Good-Hope.* That they had a plain View of other Mountains, between which and theſe they were upon, there lay an open Plain about ten or twelve Leagues broad, the Soil of which was very good, and capable of producing ſeveral Fruits, the Plain terminating upon the Sea, without any Mountains between *Cape-Falſo* and the *Cape of Good Hope.* That at the Foot of the Weſtern Mountains they met with Woods and large Trees, like Apple-trees, which bore no Fruit, but were very hard Wood; and in the ſame Place were very pleaſant Paſtures, and ſome Cattle, and excellent clear Water.

This Report inſpired me with a Curioſity to ſee the Country; accordingly, the next Day, I walked out by the Back of the *Table* Mountain, and when I was got three Leagues into the Country, obſerved very good Grounds, ſprinkled with Graſs and pleaſant Flowers, with a ſmall Rivulet of freſh-Water gliding along the Plain, and loſing itſelf in the Sea at the Foot of the Bay, at a Place where there is no great Confluence of Water, which we call the River. This Rivulet riſes out of the Mountains that lie between the Point of the Cape and this Bay, and ſerve for Boundaries to the Weſtern Sea. I likewiſe obſerved that this Rivulet makes ſeveral Fens to the Northward, along the Downs or Banks of Sand, that terminate the Bay and to that Place which we call the River, where Barks of fifty or ſixty Tun may enter at high-Water. I returned along the Mountain, and, at the Foot of the *Table* Mountain to the Southward, met with a great many Trees, ſome of which afford Planks a Foot broad, and eighteen or twenty Foot long, their Trunks being ſtraight like that of a Pear-tree, their Leaves whitiſh and ſmall; their Bark about two Inches thick and reddiſh; the Heart of the Wood white and hard, and the whole Tree full of Sap.

I likewiſe obſerved Herbs of the ſame Nature with thoſe in our Country, ſuch as Sorrel, Fern, Broom, *&c.* From this Mountain I ſaw *Cape-Falſo*, and the Sea that waſhes the Eaſt Side of the Cape, which forms a large Bay as far as the Cape, where a great many Rocks ſhoot out into the Sea, that muſt needs be dangerous to Ships on a Southern Wind. Upon the Side of the Mountains of *Cape-Falſo* there runs either a great River, or an Arm of the Sea, that ſhoals very far up; and I obſerved the like upon the inland Side of the Mountains upon the *Cape of Good-Hope.* Upon all theſe Mountains there are great Quantities of Goats Fallow-Deer as big as Harts, Partridges, and all ſorts of Fowl; Baboons, Monkies, Lions, white Wolves, Foxes, Porcupines, Oſtriches, and other Animals, unknown to me. In this Day's Journey I ſaw one of the Natives, they having retired for fear of us.

6. Thoſe who lived towards the Point of the Cape, are the moſt miſerable Savages yet diſcovered, for they neither ſow nor cultivate the Ground: neither do they fiſh, or venture themſelves two Steps into the Sea. They are of a very low Stature, eſpecially their Women, and are ſo meagre, that they always look as if they were dying for Hunger. Their common Food is ſome white Roots, about the Bigneſs of Cheſnuts, which have a Stalk like a Leek, only a little narrower, and not indented, that bear a white Flower. If they find any Cockle-fiſh, or Whales, or any other dead Fiſh upon the Shore, tho' never ſo much putrified, they throw them upon a Fire, and then feed heartily upon them; nay, when the very Skins, Heads, and Entrails of the Sea-Bears and Penguins, which our Men fed upon, were thrown out of the Tents, and had lain for ſeven or eight Days, till their Stench obliged our Men to remove their Tents, and ſcared the Wolves and other wild Beaſts from touching them, even then, I ſay, the Savages would take them up; and after having put them under the Aſhes, and ſqueezed them between two Stones, would eat up every Bit of them.

When they meet an *European*, the firſt Thing they do is to ſhew their Stomach, which they throw into their Body, ſo that it makes a Hollow, or great Pit upon their Breaſt. They have Wars one with another, probably upon account of their Cattle, which they do not eat, unleſs theſe are ready to die through Leanneſs, Age, or any other Accident. They cover their Privities with Sheeps Tails, and wear the Skin of a Sheep, or ſome other Animal, over one Shoulder, like a Scarf. The better ſort have dried Tripe about their Necks, upon which there hangs a little Knife, ſhaped like a Lance, in a wooden Sheath; and this I take to be the Inſtrument with which they cut off one of their Teſticles at ten or twelve Years of Age, that being a Cuſtom among them, perhaps to qualify themſelves for running, in which Exerciſe they outdo all the Nations that ever I ſaw.

Some hang upon their Necks a Plate of Copper, as thin as a Teſtoon, and about a Hand long, and four or five Inches broad; others wear Bracelets, being Pieces of Copper or Iron, with a Hole in the Middle. Thoſe who ſeem to have ſome Command over the reſt, have commonly a Stick in their Hands, with a Fox's Tail at the End of it. I could not perceive any Religion among them. They marry indeed, and dance, and their common Salutation to us is dancing to a Song, which, from the Beginning to the End, is nothing elſe but *Hautitou*. Their Arms are an Aſſagay, with a weak ſort of a Bow and a Quiver, which they hide under ſome Buſhes when they come to our Tents. They are very apt to ſteal any thing of Iron or Copper, but Linen or Cloaths they do not covet.

They are Negroes, and have frizzled Hair, as well as thoſe in *Guinea*; but they wear no Ornament upon it. They have no Cottages to live in that I could perceive; but in the Night-Time they ſhelter themſelves, with their Wives and Children, with Buſhes, and have ſome Skins, ſtretched like an Umbrella, upon two Sticks laid a-croſs, with one in the Middle to faſten it in the Ground, under which they lie buried in the Sand quite up to their Belly. They are altogether ignorant of Agriculture, and the making of Canoes; whereas could they but tack ſome Pieces of Wood together to convey them to the Iſlands juſt by the Continent, they would find vaſt Quantities of Penguins and Sea-Bears (which to them are moſt delicious Food) not only for their own Suſtenance, but for Sale among their Neighbours.

This *Table-Bay* lies in 34° Lat. the Needle varying 1° 45′ N. W. Its Air is very wholeſome. Sometimes you may treat here with the Natives for Beef and Mutton, but that is very uncertain. It is a ſecure Road to anchor in, and has about ſix or eight Fathom Water: There is more Rain and Wind in the Bay than aſhore, for the high Mountains ſtop the Clouds and Vapours, which being driven by the Wind, break and fall down in Hurricanes upon the Bay. The Height of the *Table-Mountain*, from the Sea-Side to the Top, is 1350 Foot perpendicular.

7. Some of our Men going aſhore, happened to light upon a great Stone, with two little Packs of pitched Canvas, underneath which we afterwards found ſome *Dutch* Letters. When we opened them, we found, firſt, a Piece of pitched Canvas, then a Plate of Lead wrapped round the Packet, under that two Pieces of freſh Cloth, then a Piece of red Frize, all wrapped round a Bag of coarſe Linen, in which were the Letters very ſafe and dry. They contained an Account of ſeveral Ships that had paſſed by that Way, particularly of an *Engliſh* Advice-Boat that was gone to *England* to acquaint the Company with the Injuries the *Dutch* had done them in the *Eaſt-Indies*. They alſo gave Notice to all Ships that paſſed that Way, to take care of the Natives who had murdered ſeveral of their Crew, and ſtole ſome of their Water-caſks. Farther, they contained Advice that the *Dutch* had beſieged *Bantam* with thirty-five Ships, and that the *Engliſh* were forced to abandon it for want of Proviſions; that the King of *Bantam* and the *Dutch* committed ſeveral Acts of Hoſtilities, and many other Things too long to be inſerted.

Having read this Letter, I was at a Loſs whether I ſhould go to *Bantam* or not, for I readily imagined that *Bantam* being blocked up by the *Dutch*, they would not ſuffer us to enter, and far leſs to traffick there, ſince they always endeavoured there to keep the Trade out of our Hands: Beſides, I was apprehenſive they might carry the Place, in regard that Prince *Mataran*, who called himſelf Emperor of all *Java*, and alledges, that the King of *Bantam* revolted from him, would readily join with the *Dutch* in reducing the Rebel King. Upon theſe Conſiderations I reſolved to ſteer my Courſe to the Coaſt of *Coromandel*, to put off ſome Goods that were proper for that Coaſt, and buy up others that ſhould be ſaleable at *Achen*, and upon the Coaſts of *Sumatra* and *Java*; and, after all, to take in at *Java* a Ship's Loading of Pepper; after which, if the Siege continued, to leave there a Factory with the Pinnace to trade up and down the Coaſt; but, if the Siege was raiſed, I deſigned not to ſettle any Factory at *Achen*, but to ſend one of the Ships back to *France*, and the other, together with the Pinnace, to *Bantam*, where we might get two or three hundred *per Cent.* upon the Coaſt-Goods, and there to load the Ship, and leave a Factory, together with the Pinnace.

In the mean time I called to mind that the Directors intended I ſhould go ſtrait to *Bantam*, and ſend at leaſt one of their Ships back to *France* that Year, which I could not do if I touched upon the Coaſt of *Coromandel*: Beſides, if the Siege ſhould happen to be raiſed, I was apprehenſive the Company would blame me for not following their Orders; but even that Conſideration was counterpoiſed by this, that I could not at any rate ſend back one of their Ships that Year, ſince I could not reach the Coaſt of *Sunda* till *Auguſt*, nor get out from thence till *October* or *November*, by reaſon of contrary Winds, and upon that Score I ſhould be obliged to ſpend the whole Year without doing any thing, and eat up all my Proviſions, which in that Country are ſo ſcarce, that the *Engliſh* are forced to ſpread themſelves along the Coaſt to be ſupplied; not to mention that I ſhould be expoſed to the Diſcretion of the *Dutch*, who never meaned us well. Having maturely weighed all theſe Conſiderations, I aſked Advice of the principal Deputies, ſome of which ſaid they would ſubmit to my Judgment, and others told me, that ſince I had a poſitive Commiſſion for *Bantam*, and ſince *Bantam* was a Place of too great Importance to the *Dutch* to be long at Variance with the King, I had beſt ſteer my Courſe thither. Theſe different Opinions put me upon another Expedient of ſending the *Hope* to *Bantam*, and giving her Captain, Mr. *Grave*, an ample Commiſſion.

8. On the 3d of *April* we weighed Anchor, and being becalmed, about two Leagues off from the Bay, were driven by the great Waves coming from the South, and the Tides running North upon a little Iſland, and caſt Anchor within a League of it in twenty Fathom Water, the Ground being muddy Sand. The Iſle lay from us North one Quar-

ter North-Eaſt, and the Southerly Waves made us roll prodigiouſly, ſo that every thing in the Ship cracked. This Iſland is almoſt round, and about a large League in Circumference; within it affords nothing but Sand, and ſome Buſhes, under which the Penguins hatch their Eggs; a great many Rats and Adders live in it, as well as Cameleons and Lizards. Upon its Rocks, by the Sea-ſide, we ſaw a great many Sea-Bears, which bleat like Sheep, ſome of which are very large, and have a Skin as thick as a Wolf's, with very ſoft Hair. Both theſe and the Penguins taſte very rank of Oil, of which a great Quantity might be taken from them, if one were at the Pains. They have two Paws before, and two Fins behind; they cannot ſtay long under Water without taking Air; they live upon Fiſh, and in the Night-time retire to the Rocks.

The Penguins are Fowls without Wings, which have two Fins, and two broad Paws, upon which they walk upright, and with which they dig the Ground to make their Neſts. They are a little bigger than a Cormorant, having a white Belly, a black Back, a very thick Head, and a Bill like a Raven. In the Morning they repair to the Sea, where they ſwim, and feed upon Fiſh, and at Night they return to their Neſts; they have nothing of the Taſte of Fleſh, and for my Part I take them to be feathered Fiſh. While I was aſhore there was ſuch a Storm from the South-Eaſt, that I could not reach the Ships, but was forced to ſtay upon the Iſland all Night, notwithſtanding that it was a perfect Calm where the Ships rode; on the 7th it thundered and lightened violently, and the next Day the Weſterly Winds began to ſwell, beſides that the Fog was ſo thick, that we could not ſee from one End of the Ship to the other: Upon which, having given a Signal for the other Ships to follow me, by the Sound of Trumpets and Drums, I returned ſounding all the way, and caſt Anchor in *Table-Bay*. On the 12th we weighed Anchor again, and all that Day but little Wind, and that very variable: However, on the 14th we doubled the *Cape of Good Hope*, and the 15th were in 36° Latitude.

The Day following we had a violent Storm from the North-Eaſt at Full Moon, which we foreſaw the Night before; for at Sun-ſetting reddiſh Rays aſcended from the Sun, and underneath him was a Bank of the ſame Colour; towards the Wind there appeared, as it were, a Circle from the Centre, of which there proceeded great Rays; under the Wind there appeared a great blackiſh Cloud, and in the Middle of it we ſaw what the *Portugueze* call the Ox's Eye, which is generally taken notice of as the Forerunner of a great Storm. When the Moon came low, the Sea ſwelled mightily, and the Storm was indeed very great, notwithſtanding that the Air was ſo clear, that in the Night-time we ſaw the Riſing and Setting of the Stars. The Storm parted me from the other two Ships till the 17th, that the Wind abated, and became Southerly; after which I perceived our two Ships about a League before, and found, to my great Admiration, that none of them had ſuſtained any Harm: However, this wonderful Deliverance made me reſolve not to part with the *Hope*, but to go all in Company to *Bantam*, purſuant to my Orders; accordingly I dropped all my former Projects, and ſailed Eaſt and South-Eaſt directly for *Bantam*; but on the 12th of *April*, in 36° Latitude, and 12° North-Weſt Variation of the Needle, a violent Storm overtook us, and not only broke my Bow-ſprit, but damaged the Pinnace's Maſt; upon which I was obliged to take up my former Reſolution of ſending Captain *Grave* with the *Hope* ſtrait to *Bantam*, deſigning to carry my own Ship and the Pinnace to *Madagaſcar*, in order to have them refitted.

9. On the 1ſt of *May* I parted with the *Hope* in 37° 30′ South Latitude, and 18° Longitude, reckoning the *Cape of Good Hope* for the Meridian. The 17th in the Morning we deſcried *Tillac* about ten Leagues off, which is a running Coaſt that appears very high, and that Night had Sight of *St. Auguſtine*'s Bay.

The 17th we were oppoſite to the two little Iſlands of *Sand*, which lie about three Leagues from the Bay, which having no Trees upon them, lie very low; but in the Night-time the contrary Winds carried us Weſt-North-Weſt, where finding none, and not being able to make the Bay, I reſolved to ſtand for the Iſlands of *Comorro*. During the light Quarter of the Moon, in theſe Seas the Surface is very plain and ſmooth, and the Air very clear. While we ſtood for theſe Iſlands the Wind turned North, upon which I tacked about for the Bay, and arrived there on the 21ſt, anchoring in ſeventeen Fathom Water upon a Clay about a Quarter of a League from the Shore. On the 22d I went with two Long-boats, and fifteen Muſketeers, to obſerve the River: Upon our Approach to the Shore, we obſerved nine or ten of the Natives upon a Point of Sand, who made a Signal to come to them: Upon this we went aſhore, and though we were armed, they joined and talked with us above an Hour, ſignifying by their Language and Signs, that they were very well pleaſed with us, and would viſit us next Day on board. They were very curious in obſerving what Things we had about us, and one of them, who ſeemed to be a leading Man, ſpying a Silver Whiſtle with a Chain to it that my Mate had about him, begged it very earneſtly. I ordered the Mate to ſhew it him, though I was ſorry for the Diſcovery, for fear they ſhould inſiſt upon having that, and no other Commodity, in Exchange for theirs, and for that Reaſon had cautioned all our Men to hide them. However, they all liked it mightily, and the chief Man among them promiſed to give for it an Ox, which might be worth twenty Crowns at leaſt: Upon which I made him underſtand that we could not ſell it, becauſe we had Uſe for it; but if any of them would come aboard, I would ſhew them Things that they would like as well.

Without farther Deliberation, this principal Man and three others embarked with us, deſiring that ſo many of our Men might be left aſhore, which I agreed to. In the mean time, at one Caſt of a Sean, we drew up an infinite Number of little Fiſh, reſembling Herrings both in Form and Taſte; but I could not make any material Remarks upon the River, only that it was very great, and very rapid. The Natives of this Place are the handſomeſt Negroes that ever I ſaw; they are large, and well ſhaped, they feed well, and are neither flat noſed, nor thick lipped, neither do they ſtink like the *Guinea* Negroes. They are very curious in their Hair, which is long, frizzled, raiſed upwards, and made up in Wreaths at the Top. Their Teeth are very white, even, and ſmall, and they rub them every Minute with a ſmall Piece of Wood; their Garment is a Cotton Cloth all woven, of two or three Colours, with which they cover their Privities, the reſt of their Body being naked. As for their Ornaments, he whom we took to be the chief Man, had a large Plate, like a Piece of Bone or Ivory, perfectly white upon his Forehead, a large Ring of Copper at his Ears, about his Neck a Collar of Raſſade, beſides Glaſs Beads of ſeveral Colours, and a Necklace of fine yellow Amber, which he eſteemed very much; the reſt had Ornaments correſponding to all his, excepting the Trinkets on his Forehead. As ſoon as we came on board of the Ship the Natives were ſurprized at its Size, and mightily taken with the Sound of the Trumpets and Drums: I preſented them with ſome enamelled Rings, and others of Pearl and falſe Amber, and entertained them with Diſcourſe till Supper was ready.

But in the mean time they were ſeized with the Sea-Sickneſs, inſomuch that they would needs go upon Deck, and lie upon a Sail. One of them, who was not ſo ſick as the reſt, did nothing but jeer his Companions all Night, and imitated every Word that the Men upon the Watch ſaid to one another. In a word, theſe are very jolly Negroes, and have nothing in them that is brutiſh; they readily apprehend what is ſaid to them, and in my Opinion are much preferable to all other Negroes. Next Morning, by Break of Day, I went to look for my Gueſts, and found them upon their Legs, and much better than before: Then I ſhewed them ſeveral little Things I thought they would like, ſuch as Coral, yellow Amber cut fine, Raſſades of all Colours, (they liked the blue, red, and green, but not the white) Knives, Razors, Combs, Iron, Tin Veſſels, a Copper Baſon, and red Cloth, as well as Cloth of other Colours. They ſeemed to like every thing, and deſired the Gift of them.

But when I ſpoke of their Beeves, they always came back to the Silver Whiſtle and the Chain. Finding I could make nothing of them, I ſent them aſhore again, as well as ſome of our Men, with ſeveral of the above-mentioned Goods, to try what they could do with the other Natives. One of the Natives offered a fat large Ox, with Bunches upon his Shoulders (like to thoſe on Camels Backs) in Exchange for a Copper Baſon; but he that bore the Trinket on his Forehead ſpoke to him, upon which he gave back the Baſon, and aſked for a Silver Whiſtle with a Chain to it. In ſine, I found they reſolved not to truck with me for any thing elſe but Silver Chains. The next Day, hearing that the Natives were come down to Shore with their Cattle, I ſent our Men aſhore with Chains of Steel, Lattin, Copper, Jet, and other Things reſembling Pearl, ordering them to conceal the Silver Chain, and not exchange it till they had tried if any of the former would do; for I had no mind to make them acquainted with that Metal; but after all, they gave me to know, that they would deal in no other Thing but the Silver Chain, and would give no more than one Cow for as much of it as would go round the Neck of the talleſt of them, and meet with two Ends at his Navel.

Being unwilling to part with the Silver Chain, and at the ſame time in great Want of their Cattle, becauſe we could not live upon Fiſh, I reſolved to have a Chain made of Pewter, by a Goldſmith that we had on board, and for that End melted a Platter, hoping to do as much with a Pewter Chain as with a Silver one; for when I offered them Silver and Pewter Spoons in a Heap together, they choſe the Pewter ones, becauſe they were neweſt. In like manner, when I offered them a large Silver Baſon, and Silver Cups, and even a Chain of Gold, they would give me nothing for them, but ſtill wanted the Chain that was along with the Whiſtle. The next Day they came aboard without Hoſtages, and brought with them ſome Hens and Capons, a pretty deal of Milk, ſome Peaſe, and ſome Horn Spoons, made after their Faſhion. Theſe were very fond of our red Raſſade, but we had but very little of it; however, we exchanged what we had at a pretty good rate, for they gave us a large Capon, or ſome ſuch Poultry, for every String of it. Theſe Natives lodged all Night on board of us, and were not ſick as the others were; they fed heartily, and eat a great deal of broiled Fiſh, and thrice as much Bread as any of our Men. The Peaſe they ſold us were white, and as large as a Muſket-Ball, and the beſt I ever ſaw; they eat them raw, and next to their Milk I believe they are their beſt Food.

10. On the 26th, I ſent ſome red Raſſade and the Tin Chain aſhore, but they quickly perceived that the Chain was not the Right; they gave us Fowls for half a String of Raſſade a Piece, as well as a Weather for one String, and Aſſagays and Darts very well made for half a String apiece. Theſe Natives work very prettily in Iron and Copper, and to my Mind, their Iron, of which they have great Plenty, is as good as any in *Spain*. They ſold us a ſmall Quantity of Rice, which they valued very high. When our red Raſſade was all gone, I ſhewed them ſome red Coral, Chriſtal, and other pretty little Things, but they did not like them. On the 27th they brought down as many Cattle as covered a Quarter of a League, and ſtill demanded the Silver Chain for an Ox, the red Raſſade for their Sheep and Pullets, and the Blue for their Milk, of which they brought great Quantities for the Silver Chain. I demanded three Oxen and a Sheep for two Strings of red Raſſade. In the mean time their King, or Governor, ſent me Word to come aſhore (for I marketed in my Long-boat) and ſhew him the Chain, but I gave him to know that I could not come aſhore; but if he would be pleaſed to come on board, he ſhould be very ſafe, and I would ſend ſome of my Men aſhore for Hoſtages.

After ſome Deliberation he came on board, and I was ſorry I had no nice Thing to preſent him with; however, having four Strings of red Raſſade in my Hand, though I thought them too mean a Preſent for him, yet finding he looked upon them with an agreeable Eye, I complimented him with them, which he accepted with Pleaſure, and gave me a Sheep for my Recompence. I had a great mind to have given him the half of the Silver Chain, which was five Foot and an half long, and weighed three Ounces and an half; but conſidering, if I was prodigal of the Chain, I ſhould have nothing to fetch Beeves, or elſe I ſhould be obliged to rob the Mates of their Silver Whiſtles, I put it off till the next Opportunity. But ſome time after the King reflecting upon the Chain, ſent one of the ſtatelieſt Oxen I ever ſaw, which we bought for half the Chain; but we had a great deal of Trouble in bringing it aboard; for though it received in its Head two Piſtol-Shot, one Harquebuſe, and one Muſket-Shot, yet it was ſo ſtrong, that we were forced to ſtifle it under Water, and give it ſeveral Blows on the Head with an Axe before we could get it on board: Such an Ox might be worth an hundred Livres in *France*. Theſe Oxen are neither high, nor ſo large as thoſe in our Country; but they are ſhort and thick, their Head is ſmall, their Neck ſhort, with a large Bump or Lump of Fat upon the joining of the Neck to the Shoulder, which at a Diſtance appears as if it were a Burthen tied upon that Part. Their Sheep reſemble thoſe of *Barbary* as to their Head and Wool; but their Ears hang down like a Hound's, and their Tail contains ten or twelve Pound of pure Fat, which does not diſturb the Stomach as the Fat of the Body does; their Fowls are large, fat, and well taſted. In a word, their Men are in ſo good a Caſe, and the Cattle ſo fat, that the Iſland muſt needs be a very good Country. As to their Fruit, I queſtion whether we were there in their Seaſon, at leaſt they brought us none but a little Rice, ſome Beans, and very large white Peaſe.

They have a great many Gourds and Bottles made of them, in which they put their Milk. The 28th I was to ſee a little Iſland in the Mouth of the River, and then returned to the Place of Barter, where the Natives waited for us with a great Number of Cattle. This Day I bargained to double the Advantage of what I did Yeſterday; but having allowed ſome of our Men to go aſhore and treat for themſelves, whether they ſpoiled the Market by being too prodigal of their Commodities, I cannot tell; but ſo it was, that the Natives all of a ſudden demanded four Strings of red Raſſade for a Sheep; whereas they had ſold me ſeveral for two apiece but juſt before; upon which I called all my Men into the Boat, for I always marketed in my Long-boat from the Commencement of the Treaty.

I had no ſooner recalled my Men, but the Governor of the Natives, whom they call *Aurea*, appeared in a Paſſion, and ordered all the Natives to retire. Leſt our mutual Friendſhip ſhould be thus broke, I made a Signal that I would ſpeak with the Governor, upon which he came down to the Shore-ſide, and I going aſhore, preſented him a Cutlaſs with a Silver Hilt, aſſuring him that I was his Friend, and earneſtly deſired that I and my Men ſhould live in perfect Amity with him and his People. This done, he expreſſed a great deal of Satisfaction, the Negroes made loud Acclamations of Joy, and I cauſing the Trumpets to ſound, and the Drums to beat, ordered a Party of our Men to come aſhore, who joined in and ſhook Hands with the Natives; in the mean time the Governor made me ſit down by him, and admiring the Trumpets and Drums, offered me an Ox for one of either; but I told him I could not part with them. After that we ſold the reſt of our Silver Chain for two Heifers, and a String of Coral Beads for an Ox, and then we returned on board, giving the Natives to underſtand, that within four or five Days I ſhould be gone, which they heard with Grief. The next Day one of our Officers went on Shore, and ſold four Ounces of a Silver Chain for ſix luſty Oxen, which I ordered to be ſalted.

11. On the 1ſt Day of *June* I went into our little Skiff with twelve Men, deſigning to reach the Mountains by a ſmall Creek, and from thence to deſcry the Vallies where the River runs; but finding the Creek very inacceſſible, and ſurrounded with Buſhes, ſteep Rocks, and alſo Plants, I left it, and rowed about half a League up an Arm of the River to the Southward, where I found a Landing-Place. Having walked up a third Part of the Mountain, I diſcovered that the other Arm of the River to the Northward was yet greater, for it appeared as broad as the *Seyne* a League below *Roan*. Upon the Sea-ſide, and for two Leagues up the River, there is nothing but thick and black Woods; but beyond that, there are very pleaſant Fields. This Bay is ſo covered with Flats to the North and South, that it is only acceſſible by the N. W. and W. N. W.

I do not believe the great Storms do ever reach it, for the Coaſt does not ſeem to be much beaten by the Waves; and all the fifteen Days I obſerved but one Cloud in the

Zenith; neither is the Heat exceſſive, being tempered by the Land Breezes, that never fail blowing from the Sun-ſetting to Ten or Eleven o'Clock in the Morning, and the Sea-gales that blow from that Time to Sun-ſetting. I found the Air of that Bay very healthy, for we had not one ſick aboard, to which the Abundance we had of freſh Meat and good Water contributed not a little. As for the adjacent Country, the Valley is very pleaſant, and affords excellent Paſturage, being watered with a large River, which would render the Ground very fertile, if it were cultivated. The Sea ſwells the Mouth of the River to ten or twelve Foot running Water, ſo that ordinary Ships might enter it. The Mountains are a dry Rock, the Surface of which looks as if it were burnt. The low Country is clad with an Infinity of Buſhes and Shrubs, and the greateſt Quantity of Tamarinds I ever ſaw, as well as with Ebony, and Aloe-Roots.

Their Tamarinds were not then ripe, but I met with another Fruit, almoſt ripe, that reſembled a large Walnut, having a green Rind, which, when I opened it, gave a fragrant Smell, and the Fruit within it was black, and full of little Stones, like *Caſſia Fiſtula*, and the Pulp being of the ſame Taſte and Colour, though not ſo thick, was, as I take it, of the ſame Qualities. This Fruit is called Tamborins, and ſaid to reſemble Poppy-Heads, but without any Reaſon. We ſaw, in the Hands of the Savages, ſome ſmall Cucumbers, which ſeemed to be better than ours, which they eat as we do Pears, a great many Gourds, ſome Beans, very good Peas, and a little Rice, and only one Citron. The Natives are jolly, proper, handſome Negroes, they are very friendly one to another, and obey one Sovereign, called *Aurea*, and he was only his Deputy, to whom I made a Preſent of the Silver Cutlaſs, for they told me, with great Concern, that their Aurea had been ſtabbed. I could not perceive them guilty of any brutiſh or inhuman Action, for they dealt with us very friendly and honeſtly; they did not ſteal the leaſt odd Thing, or offer the ſmalleſt Injury to our Men.

One Day, when one of our Prieſts was ſaying Maſs, and had but very few Auditors, twenty-five or thirty of the Natives came about him, and being deſired to kneel, did ſo, and behaved themſelves very reſpectfully till the Sermon was over. As for Religion, I could perceive none they had amongſt them: Indeed they are circumciſed, and though the Inſtitution came to them Time out of mind, yet I believe they had it from the *Mohammedans* upon the Coaſt of *Ethiopia*, who have long had, and ſtill have, Traffick with that Country. Their Language ſounds pretty ſmooth, for they pronounce it very glibly. They do not reckon beyond Ten in Computations, and their ten Numbers are thus expreſſed in Order, *Iſſa*, *Rowa*, *Tello*, *Eſſad*, *Linne*, *Euning*, *Frutto*, *Virollo*, *Sinay*, *Foulo*. As for their Women, and their Houſes, I ſaw neither. Some of our Men told me, they left their Women about half a League off in the Woods, and that they ſaw three or four of them that were very handſome, being covered from their Breaſt to their Knees with a party-coloured Cloth of Cotton, and having their Ears pierced in many Places, with a great many Ear-rings and Bracelets hanging upon them.

Having refitted our Ships, and furniſhed ourſelves with freſh Proviſions, Wood, and Freſh-water, and rode fifteen Days in this Bay, which is a very proper Place for taking in freſh Proviſions, and ſheltering diſtreſſed Ships, and might be made as uſeful for thoſe who trade to the *Indies* as *Mozambique* is to the *Portugueze*; having rode, I ſay, fifteen Days in this Bay, which lies in the Iſland of *Madagaſcar* or *St. Laurence*, under the Tropick of *Capricorn*, we weighed Anchor, and ſtood North-Weſt to avoid the Flats; and, having ſailed all the Day with little Wind, at Night the Bay lay about ten Leagues off S. E. a Quarter E. at which Time we perceived another Bay about ſix Leagues off to the Eaſtward; the Coaſt runs N. and S. as far as we could ſee, and appears high, ſmooth, and all of a Piece, like the Coaſts of *Picardy*, *Normandy*, and *Bretagne*.

12. *June* the 9th we came in Sight of the *Terra Firma*, between *Sophala* and *Mozambique*, and at Night, being in 9° 10' Lat. and ſailing N. E. a Quarter E. were in Danger of being caſt away, becauſe our Sea-Charts are very defective in thoſe Parts, for the Pinnace being ordered to ſail a-head and ſound, and, if ſhe apprehended any Danger, to give us a Signal of three Guns; about an Hour and a half before Day, the Signal being given, we immediately tacked about and dropped an Anchor; and when Day came, perceived that if we had gone a little farther we had run our Ship a-ground, for, about a Quarter of a League off there lay a little Iſland, ſcarce a Mile in Circumference, covered with Buſhes and Greens, having two tall Trees together upon its Weſtern Point, and to the W. N. W. of this Iſland, which has a long Bar before it, there lies another of the ſame Bigneſs very low, and covered all over with Trees.

The Continent lay about four Leagues from the firſt Iſland to the S. W. We ſaw a high and ſandy Coaſt with a woody Country behind it, and to the Weſt we deſcried a low Land, with large Trees upon it, as if they had been planted in the Sea. I was ſurprized to ſee the Continent ſo near me, taking my Meaſure from the Sea-Charts; for over Night, when we ſaw the *Terra Firma*, and the Iſlands, we took them, according to the Latitude in the Charts, to be what the *Portugueze* call the *Primieras*, and reckoning theſe three Leagues to the Weſtward of us, the Courſe laid down in the Charts from theſe Iſlands to a large Flat, lying in 16° 30' about twelve Leagues from the *Terra Firma*, being N. E. and S. W. and the laſt of the *Primieras-Iſlands* being placed in 17°, above ten Leagues from the *Terra Firma*, we reſolved to ſtand N. E. a Quart. E. thinking to ſail nearer to the Flat than the *Primieras-Iſlands*; but we were miſtaken, for the *Primieras-Iſlands* are not above two or three Leagues from the *Terra Firma*, from which the Coaſt runs away E. a Quart. N. E. Beſides, the Charts have no Flats or Iſlands along that Coaſt, unleſs it be thoſe of *Angoxa*, which are placed more to the Southward, *viz.* 16°; though after all, I ſaw that Morning a String of Iſlands diſtant one from another, and lying 16° 40', which I took for them; ſo that the Charts miſplaced them alſo two thirds of a Degree. Being at a Loſs to know what little Iſlands theſe were, and finding the Chart ſo much out, I reſolved to ſtay there no longer; accordingly I weighed Anchor, and ſailed between the two Iſlands, the Pinnace ſounding a-head of me.

We ſailed cloſe by the Land-Side of the firſt Iſland, where we had ten or twelve Fathom Water, with a good Ground of muddy Sand, and no Banks, ſo that this Side, together with the Bar, affords a very good Road for Ships; then ſtanding E. S. E. with a freſh ſoutherly Gale, we got clear of the ſecond Iſland, between which and the Continent I doubt not but there is a good Paſſage, for I obſerved not any Banks or Shallows. Having paſſed this ſecond Iſland, we deſcried a third of the ſame Bigneſs with the former, which convinced me that theſe were the Iſlands of *Angoxa*. The next Day it was as much as we could do to ſee the Land to the North-Weſt of us, being then about ſix Leagues off; but, according to the Charts, we ſhould have been above twenty.

13. The thirteenth we deſcribed one of the Iſlands of *Comorro*, which is very high, and as conſpicuous as *Madera*. The next Day we perceived another not ſo high, which is called *Majotta*, and abounds with all ſorts of Proviſions and Fruits, lying about ten Leagues from the Iſland that is neareſt the *Terra Firma* of *Mozambique*, the South Point of which we made the next Day, but could find no Conveniency of coming to an Anchor. Notwithſtanding it is inhabited all along the Shore, this laſt Iſland is very cool, moiſt, and full of Verdure, by reaſon of its Height, which gathers a great Number of Clouds that break upon it. It has a great many Brooks of Water running down from the Top, which, in my Opinion, does not ſpring from the Rock, but are occaſioned by the continual Vapours and their Condenſation. The ſixteenth we made the North Cape, which is fifteen or ſixteen Leagues diſtant from the South. Having doubled the Cape, we perceived a ſandy Creek, which appeared like an old ruinous Caſtle, where two Ships may ride at Anchor, in ſix Fathom Water, upon a ſandy Ground: We thought to have rode there, but the Tide carried us by it.

Having doubled the Point of this Creek we came before an inhabited Place, furniſhed with Houſes like thoſe of our own Country, where we thought to come to an Anchor; but finding no Bottom but from fifty to thirty Fathom Water, upon a rocky Ground, we ſtood to Sea, deſpairing of Anchorage upon that Iſland. In the mean time the Tide carried us weſtward along the Coaſt, to a Point where we came in Sight of a Ship, and having ſent out our long Boat with ten Muſketeers, we underſtood it to be a *Mecca* Ship of forty Tuns, that upon our Appearance upon that Coaſt, had run all their Goods on Shore, taking us to be *Dutch* Ships. The Captain ſhewed me two Letters, one from an *Engliſh* Captain called *Martin*, and another from Captain *Bannar*, intimating to all their Countrymen, that they had taken in ſeveral Refreſhments at that Place, eſpecially Fruits, but little Meat; that they had found no Water there; that Linen Cloth and Paper were proper Commodities for that Place, and adviſing them to take Care of diſobliging the Iſlanders, who tho' they appeared friendly enough, were capable to do them a great deal of Injury.

Having aſked the *Arabian* Maſter where I could find the beſt Conveniency for coming to an Anchor, he told me, the Place of Anchorage lay to the Windward of their Ship, but withal adviſed me to fetch a Pilot from the Shore, by reaſon that the Road is ſurrounded with Rocks and Banks, and the Inhabitants of the Iſland being great Sorcerers, and having the Wind at their Command, could, upon Occaſion, change it to our Diſadvantage. Purſuant to his Advice, I ſent my Boat aſhore along with him, and in the Afternoon he returned with two of the Inhabitants, who were Negroes, and brought our Ship ſafe to Anchor before Sun-ſet. In the mean time I ſent the *Arabian* Maſter back to his own Ship, with full Aſſurances of the Innocency of our Deſign, and the friendly Diſpoſition of the *French*, together with a Letter to the ſame Purpoſe, addreſſed in *Spaniſh* to the King.

On the ſeventeenth, the King ſent ſome of his chief Favourites to aſſure us of his Friendſhip, and Readineſs to ſupply us with the Product of his Country. I acknowledged my Obligations to the Prince, and ſent him a Preſent of a ſilver-hilted Hanger, a couple of very pretty Knives, a Ream of Paper, and a Looking-glaſs, which he received with Pleaſure, and returned me a Compliment of a young Kid and ſome Fruit. At the ſame time I deſired the *Arabian* Captain, who was then aſhore, to buy ſome Proviſions for me, promiſing to ſend ſuch Commodities as were proper to be given in Exchange; but the Captain ſent me Word, that the Inhabitants of that Iſland were of ſuch a particular Humour, that they would not ſtrike a Bargain of half a Rial Value in a Day's Time, for that they would not buy half a Yard of Cloth without calling all their Relations and Neighbours to concert the Meaſures of the Bargain. I was likewiſe informed by a *Portugueze*, that a *Portugueze* Carrack had been loſt upon that Iſland about three Years before, and by that Means the Inhabitants were ſo over-ſtock'd with Rials, that they put no Eſteem upon that Coin.

Accordingly I found, that tho' they had vaſt Quantities of Fruits, they would not ſell them to your Men for Money, but only for Paper, white Cloth, and Knives; in fine, I perceived, that it would coſt me a Fortnight's Attendance to make up two Pipes of Peaſe, which I wanted, tho' I did not deſign to ſtay above three or four Days. The eighteenth, having deſcried a couple of Ships of that Country, I brought the Captains aboard, who acquainted me, that they came from the Iſland of *Majotta*, were laden with Rice and dried Fleſh, and bound for *Monbaze*. Next Day they ſupplied me with as much Rice, Peaſe, and hung Beef, as would ſerve us for four Months, and I was glad of the Opportunity, for I could buy nothing from the Inhabitants without an infinite Loſs of Time; beſides, I began to ſuſpect the Honeſty of their Intentions, for the Day before, when we were ſounding for Anchorage, ſome of the Inhabitants gave a Signal to come to a Place where we ſpied a long Ridge of Rocks, and had certainly been loſt, if we had anſwered the Signal; and upon that ſcore, I preſumed, that the Advantage they had made by the Shipwreck of the *Portugueze* Carrack tempted them to wiſh us the like Fate.

The twentieth I thought to have taken up ſome freſh Water on Shore, but finding it blackiſh, and hard to be put on Board, by reaſon of the great Waves, and obſerving withal that the Ship rode in the midſt of Shelves, I dropped that Deſign, and weighed Anchor on the twenty-firſt by break of Day. The *Arabian* Captain underſtanding that I deſigned to double Cape *Comorin*, had adviſed me to ſtop at the Iſle of *Soccotora* for ſix Weeks, to avoid the uſual Storms upon the Coaſt of *Malabar*. I would gladly have taken one of their Pilots along with me, to ſhew me the Coaſting of that Iſland, but they pleaded the Difference of the Religion, and our Mens eating of Pork, for an Excuſe.

14. This Iſle of *Nangaſija* extends itſelf from North to South about fifteen or ſixteen Leagues, with about three or four Leagues in Breadth. We could obſerve no Anchorage round it but that where our Ship rode, which lies upon the N. N. W. Point in 11° 10′ S. Lat. but the middle of the Iſland is in 12°. In that place we rode at 25 or 30 Fathom Water, upon a Ground of Sand; but within a Piſtol Shot of us there lay Flats, which had not above two Feet Water at low Water, and rocky Ground all about. It is a very dangerous Road, and hard to be found by Strangers. Indeed, among many Inconveniences, it has theſe Advantages, that the Tide always runs againſt the Wind, ſo that the Ships ride eaſy, and that cauſes a kind of perpetual Calm at Sea, becauſe the Wind then takes the Land. Beſides the Inconveniency of Anchorage, it is likewiſe a very improper Place to take in freſh Proviſions, for its Water is very bad, and the Inhabitants are ſo over cautious, that they will be two Hours in marketing to the Value of Five-pence; ſo that *Majotta* is upon that ſcore infinitely preferable to it.

The Iſland itſelf affords a pleaſant Proſpect, eſpecially to the Northward, for on that Side the Mountains riſe gradually, being covered with ſeveral ſorts of Trees, and below, upon a clear Creek of Sand, along the Sea-ſhore, there ſtand a great many Houſes, ſheltered with an infinite Number of Cocoa, Orange and Citron Trees. Their Oranges are very ſmall, but very ſweet and delicious, reſembling both in Shape and Taſte thoſe of *China*. The Inhabitants are Negroes, and call their Iſland *Nangaſija*. They are all very zealous *Mohammedans*, and marked with a hot Iron upon the Temples and middle of their Forehead. They are neither ſo handſome nor ſo well ſhaped as the Negroes of *St. Laurence*. The Iſland is governed by fifteen petty Kings, of whom the King of the Place where is the Anchorage, is the ſtrongeſt and beſt allied. Theſe Kings war with one another, and ſell their Priſoners of War to the *Portugueze*, and other Nations.

Their Fighting conſiſts in throwing of Stones, beating one another with Sticks burnt at the End, and flinging Sand in one another's Eyes. We ſaw no Arms among them but what the King had, and thoſe were Fuzees and Piſtols, with which the *Engliſh* preſented him ſome time ago, which he valued mightily. They are reckoned great Sorcerers, but are civil and reſpectful enough to Strangers, unleſs it be when they ſee a Stranger ſtand upright and make Water, for then they ridicule him with a prodigious Shouting. The *Arabian* Ships, which they call *Pengays*, are ſtrangely built, for the Planks are neither nail'd nor caulk'd, but ſewed together with a ſort of Thread made of the Rind of Cocoa Tree, and tarred or pitched above the Seams, ſo that they are very leaky, and there are always five or ſix Men employed to heave out the Water; beſides that they always obſerve the Trade-Winds, ſo as to ſail right before the Wind, for they won't venture to ſet their Side to the Windward. They are undeck'd, and carry about fifty or ſixty Tuns. When we weighed Anchor in this Road, we ſtood N. N. E. and without the Points of the Land met with violent Tides, bearing to the Weſtward, *i. e.* S. S. W. At Night we deſcried another ſmall Iſland to the Sea-ward, which muſt be that called in the Maps *Juan de Caſtraval*, and lies fifteen Leagues N. E. and a Quarter N. from *Nangaſija*.

15. The twenty eighth we croſſed the Equinoctial Line, and *July* the firſt, the Wind blowing very high, we ſailed fifty-five Leagues in twenty-four Hours, notwithſtanding that moſt of our Sails were furled, which gave me to underſtand, that upon that Coaſt the Tides ran rapidly before the Wind. Next Morning we diſcovered a clear and rocky Coaſt, with good Ground, a great Way from it, for at three Leagues Diſtance we had thirty Fathom Water, upon a fine white Sand. On the ſecond of *July* we ſtood againſt the Wind, hoping the Storm would bate upon the Change of the Moon; but by our Latitude found, that the Tide and Storm had carried us thirty-eight Leagues, tho' in the Night we ſtood to Sea, and by Day towards the Land, which ſeemed very wonderful.

The fourth we made Cape *Orpin*, which in the Maps is placed in ten Degrees Latitude, and dropped two Anchors, the Storm ſtill continuing. The eighth it blew ſo very hard, that a Man could not walk upon Deck. Upon which we tried all the Inventions imaginable of lowering our Topmaſt, running out above one hundred and eight Fathom Cable to every Anchor, *&c.* and our Pilots declared us loſt. At the ſame Time our Pinnace was drove from two Anchors, the Ropes being cut by the Rocks. The fourteenth, fifteenth, and ſixteenth, it blew ſtill harder, inſomuch that the Pinnace was obliged to quit the Coaſt, but the ſeventeenth ſhe returned, and caſt Anchor nearer the Shore, at ſix Fathom Water, upon very good Ground.

The high Winds continued without Intermiſſion till the third of *Auguſt*, during which Time we could neither ſend our Boats aſhore, nor hoiſt up a Sail. However, I reſolved to ſtand for Cape *Guardafu*, in order to conſider the State of our Tackling, as well as to take in freſh Water, and receive Directions from the Natives about our Coaſting on *Soccotora*, where none of us had ever been. With this View I fitted out our Long-boat with Proviſions for three Days, ordering the Men, by all Means, to make the Land, and know of the Natives where they might come at freſh Water.

16. They returned on the twelfth, and reported, that they had coaſted along the Shore to the Eaſtward of the Place, where we rode under ſteep Mountains, on the Tops of which they ſaw Perſons in mean *Arabian* Habits, who ſeemed to be Negroes, and threw ſo many Stones on them from the Tops of the Mountains, that they were obliged to ſheer off; for, notwithſtanding all the Signals they could make of Peace and Friendſhip, the Natives ſeemed to intimate by their Swords and Aſſagays, that if they came aſhore, they would cut their Throats. Upon which they ſteer'd to that Part of the Coaſt which was oppoſite to our Anchorage, where ſome of them got up the Precipice by a Gap, and found an open champain Country, as far as they could ſee, without any Trees, except it was ſome withered Buſhes, and ſome Herbs, burnt up by the Sun: They ſaw likewiſe two or three of the Natives, who fled further into the Country.

Having lain that Night under the Precipice, they ſteered next Day two or three Leagues to the Weſtward, and ſaw ſome Natives along the Shore, who marched up Hill as ſoon as the Boat offered to come near them. After they had doubled the Cape, from which a Ridge of Rocks ſhoots above half a League into the Sea, and there found a large Bay, three Leagues broad, and ſhooting very far into the *Terra Firma*, but very ſhallow; for about two Leagues from the Mouth of it they found but three and four Feet Water, the Ground Sand and thick Gravel, with a great deal of Wreck, and an Infinity of Fiſh. In this Bay they found two of the Natives a fiſhing, who fled as ſoon as they made up to them. Our Men went aſhore there, and met with a great many of the Inhabitants, who, notwithſtanding all the Signals they could make of a white Standard, ſtill fled from them, crying aloud, *Illa, Alla, Illa la Mohammed reſulala*, which is the *Mohammedan* Confeſſion of Faith.

Upon the Shore they found an *Arabian* Boat with nothing in it; a little further in the Country they met with a few ſmall Trees, and a little Lodge, with two or three very pretty Mats in it, which they did not touch. After they had re-embarked they ſaw the Natives peep out again, but could find no Opportunity of treating with them either by Friendſhip or Force. Upon this unfavourable Report, I reſolved to weigh Anchor as ſoon as the Storm abated. This Anchorage in which we encountered this Seaſon, and which is, indeed, the Winter of that Country, lies in 10° 30′ N. Lat. the Needle varying 17° 40′ N. W. and the Coaſt running E. and W. I would not adviſe any one to pitch upon that Place to lie till the proper Seaſon of Coaſting upon *Malabar*, for not only the Land is deſert and inacceſſable, by reaſon of the continued Violence of the Wind, which never varies farther than from S. S. W. to S. W. but it affords no Water, either from Earth or Heaven, as being altogether deſtitute of Rain.

17. The Storm being abated, we weighed Anchor the ſeventeenth, and the eighteenth came within a League of Cape *Guardafu*. That Night we tacked about, and ſtood to the Seas, ſteering E. a Quarter S. E. and S. S. E. in order to make the Iſles of *Curia* and *Muria*, which lie between the Iſle of *Soccotora* and the Cape, and afford good Water. But miſſing of them, we returned next Morning, ſtanding for the Cape, and in the Afternoon came to an Anchor within Cape *Guardafu*, in nine Fathom Water, upon good Ground, within one-fourth of a League of the Iſland, that runs away N. W. a Quarter W. Next Morning I ſent one Boat's Crew in queſt of ſome Spring of freſh Water, falling from the Mountains into the Sea, on its S. Side, and another to coaſt along the Shore, N. W. three Quarters W. which extends to the Mouth of the Red-Sea, in order to find Water, or to ſpeak to ſome of the Inhabitants. At the ſame Time I ſent out the little Skiff, to try what Conveniency they could have for Fiſhing.

The Skiff brought back Word, that along the Shore, for twenty or thirty Paces, the Ground was ſo rocky that they durſt not venture to bend their Scan. Thoſe who went in Queſt of Water to the Southward returned, and gave me an Account that they had travelled four or five Leagues into the Country, which was extremely deſart, dry, and unſufferably hot, the Sun being in the Zenith of the Horizon, and there being no Shade or Wind. The other Boat's Crew reported, that about three Leagues Weſt-North-Weſt from us they came to a Place which ſeemed to be pretty green in Compariſon of that dry Country, where they went aſhore, and meeting with ten or twelve Negroes, aſked them where they could have Water to drink? That one of the Negroes aſked a Piece of Cotton Cloth that one of the Seamen had, as a Reward for the Diſcovery, and upon having it, ſhewed him ſome Ditches and Wells dug out of the Ground, in which was abundance of Water; and that the ſaid Negroes aſked them, if they were *Engliſh*, and promiſed to give them Cattle in Exchange; upon this Report we weighed Anchor, and ſet Sail for that Place.

The 22d, about Noon, we came to an Anchor, at ſix Fathom Water, bad Ground, about four Leagues from Cape *Guardafu*, over againſt ſome Buſhes and Greens, which are not common upon that Coaſt. Having ſet thirty Men aſhore to dig for Water, I found that the Water, which came in great abundance, after they had digged but one Foot deep, was at firſt ſweet, but after we had filled a Barrel or two, the reſt came very ſalt, inſomuch that for twenty-two Tun of Water we were obliged to dig in above ſeventy Places, which we did in four Hours, the Soil being Sand; while we lay here it was inſufferably hot, without any Wind.

18. Cape *Guardafu* lies in 12° Degrees Latitude, the Needle varying 17° 45′ North-Weſt; 'tis the higheſt Land upon all this Coaſt, and riſes to a Precipice. All this Coaſt is wonderfully deſart, ſcorched by the Sun, inſomuch that I do not believe there is a hotter Place in the World. We ſaw no Appearance of Houſes, but there appeared to us ſome Negro Men wandering upon the Shore, who were ſo large, that we ſhould have taken them for Rocks, if we had not ſeen them move. I ſaw one of their Bows, which by its Largeneſs and Strength ſpoke the huge Stature of the Owner. I was mightily ſurprized to find no manner of Wind when we lay cloſe by this Cape; whereas it had blown very hard but a few Leagues off, in the Latitude of 10° 30′.

The Reaſon I imagine to be this, the Point of Land lying in 10° 30', being a Peninſula not above three or four Leagues broad, ſerves for a Shock to heighten and inflame the Wind, which runs along the Coaſt North-Eaſt and South-Weſt; whereas Cape *Guardafu* is very high, and the Wind paſſing over a long Tract of dry and hot Land, in Conjunction with the Rays of the Sun, does ſo heat its Surface, that the Wind is waſted above it. The 27th we weighed Anchor, and as we advanced found the Wind grow briſker; after we had ſailed about twelve Hours, we fell in with great Tides running out of the *Red-Sea*, and a few Hours after that found the Sea very much troubled, and ſtained with red Spots; ſome took it for Flats, but we could diſcover no ſuch thing by ſounding. My Senſe of the Matter was, that we then being in the Mouth of the *Red-Sea*, and that being the Day of the Moon's Conjunction, ſome great Floods, joined to the Preſſure of the Sun and Moon, occaſioned this Violence of the Tides.

Next Day a Conſultation of the Pilots being called, it was reſolved that we ſhould run ſeven or eight Days to and again in the Mouth of the *Red-Sea*, for fear the Wind we then had ſhould waft us too ſoon upon the Coaſt of *Malabar*; purſuant to this Reſolution, we ſteered North toward the Coaſt of *Arabia*. *Auguſt* the 31ſt we came within two Leagues of the Coaſt of *Arabia*, we were then in 14° 20' Latitude, over-againſt a Bay, in which, according to the vulgar Maps, there ſhould be ſome Iſlands called *Caramberumma*, and *Xael*, which produce great Quantities of Frankincenſe. I thought to have made *Caramberumma*, but the contrary Winds and Tides prevented me. I underſtood that there came to that Place every Year a great many *Mohammedan* Pilgrims, ſome of whom continued there a long time.

In the Entry of the *Red-Sea*, and along the Coaſt of the *Caffines*, or *Guardeſines*, there is a prodigious Quantity of Fiſh, eſpecially Thornbacks, ſome of which are as long as a Boat, and proportionably thick; ſome of our Men ſtruck at them with a Grapple, but it pierced their Skin no more than if it had been Iron. This Coaſt of *Arabia* is ſandy, and in ſome Places low; but in the inland Parts there are very high Mountains, which were covered with Fogs all the Time we were there. The Calm obliging me to ſtay in the Mouth of the *Red-Sea* till *September* the 10th, I began to be apprehenſive we might come too late to double Cape *Comorin*, and for that Reaſon ſtood North-Eaſt with what Eaſt and Eaſt-South-Eaſt Wind we had, till we fell in with the South-Weſt Winds, and ſo ſteered our Courſe South.

Having called a Conſultation of the Pilots and other Officers, in order to determine what Courſe we ſhould ſteer to Cape *Comorin*, whether through the Channel of *Mammale*, or along the Coaſt of *Malabar*, it was alledged, that paſſing through the Straights of *Mammale* at that Seaſon would abridge our Voyage; but on the other hand the Tides running South-Weſt were againſt us, and to ſtand to South-Eaſt we ſhould be obliged to ſail cloſe by the Wind, ſo that the Ship would make but little Way; and for that Reaſon it was alledged, that we might ſooner make the Coaſt of *Malabar* than the Latitude of that Channel, and for my Part, I was apprehenſive of being becalmed on that Coaſt, upon which we had a hundred and twenty Leagues to ſail before we could double Cape *Comorin*. It was likewiſe alledged, that we could not reach the Latitude of that Channel, which was 9°, without falling in upon the *Terra Firma*, by reaſon that ſtanding South-Eaſt would make more than an Eaſt Courſe; others again pleaded, that South-South-Eaſt would do our Buſineſs.

In this Difference of Opinions, I reſolved to put the Caſe to a Trial, by ſtanding South-South-Eaſt, and remarking from the Latitudes what Way we made: Accordingly we ſteered South-South-Eaſt till the next Day at Noon, and then having taken the Latitude, found that our Way was no better than Eaſt-South-Eaſt. After this I called together the Pilots again, the Majority of which agreed that we ſhould go directly in queſt of the Coaſt of *Malabar*, in the Latitude of 13° 20'. The chief Reaſon they inſiſted upon was, that the Channel of *Mammale* lying in 9° 30', it would be a long Time before we ſhould reach it; beſides, that in that Courſe we ſhould be in Danger of falling in with the Flats to the Northward of the Channel. Though I was very apprehenſive of being becalmed on the Coaſt of *Malabar*, yet I yielded to the Plurality of Votes, and ſtood Eaſt-South-Eaſt.

19. The 26th we came in Sight of the Coaſt of *Malabar*, which is very high and mountainous; within the Country, the 27th, we deſcried Mount *Deli*, about eight Leagues off, which lies between *Cranganor* and *Mangalar*, and appears at that Diſtance like an Iſland. In that Place the Needle varied 15° 15' North-weſt; having ſpied a Galliot about a League off, and the Wind varying about to the North, we gave her Chace, but could not come up with her. The 28th, being becalmed, we ſaw a Ship two Leagues to the Windward of us, and I ſent Mr. *Monteurier* with twenty-three Men in the Long-boat, ordering them not to board the Ship, but to command the Captain to ſend his Pilots and Purſer on board of us, and to acquaint him that I deſigned them no Harm, but only to know if it was not too late to double Cape *Comorin*; ſome time after I ſaw our Long-boat board the Ship, and ſome Muſkets fired, and after that a Boat came off from the Ship, and made towards us.

The Calm continuing, and the Boat advancing but ſlowly, I ſent our Skiff to know their News, which I was in Pain to hear: Upon its Return I underſtood that the People in the Boat were five of our Men, three of whom were dangerouſly wounded. When theſe came aboard they recounted a tragical Story, *viz.* that upon their Approach to the Ship, which was a large one, M. *Monteurier* gave them Notice to lower their Sails; that they not obeying, he fired upon them two Braſs Guns, and a Broadſide of Muſket-Shot; that thereupon they ſtruck, and told him he might board them if he would; upon which our Men boarded them upon the Quarter-deck, and having killed all the Men abaft, thought themſelves intirely Maſters of the Ship, when of a ſudden ſixty or eighty Men ſtarted up in the Forecaſtle, and with Shields and Hangers in their Hands, fell upon our Men with ſuch Fury, that they obliged them to retire to the Boat. But there happened an unlucky Miſchance, the Boat was ſo belayed, that they could not diſengage her, ſo that moſt of our Men were killed with Pick-axes, Arrows, and Hand-Granades, which were thrown into the Boat, and the reſt being forced to leap into the Sea, one of them ſwam to the *Moor*'s Boat, and having cut the Cable, ſaved himſelf, and the other four Men, without ſtaying for the reſt, who in all probability were drowned.

Next Morning I made all the Sail I could to come up with the Ship, and having boarded it, found nobody on board but fifteen poor old Wretches with white Beards reaching to their Girdle, who with Tears and Lamentations threw themſelves at my Feet, and raiſed my Compaſſion more than Revenge; beſides that, the five Men who were ſaved, unanimouſly aſſured me, that they did not ſee them in the Engagement. The Account I had from theſe Men was, that the Ship having carried a Cargo of Pepper to *Mecca*, was upon her Return to *Panama* near *Calicut*, to which Place ſhe belonged; that themſelves were poor People coming from *Mecca* to beg upon that Coaſt; that the Owners of the Ship, in Number eighty, had gone off the Night before in our Boat, with the Gold and Silver, and the Boat being almoſt overladen, had left them behind.

Upon the Whole, I conſidered that thoſe poor Men were innocent, and that the Ambition and Avarice of our Men was the Cauſe of their Death, ſince the *Moors* had ſtruck, and deſigned them no Harm, till our Men fell upon them; for theſe Reaſons I ſpared the poor old Men. I found aboard of the Ship a great Quantity of Salt, Dates, Wine, two Puncheons of Opium, ſome hundreds of Pounds of Coral, ſome Cotton Cloth of ſmall Value, Roſe-water, and Knives; and I underſtood from the old Men, that if our Men had not boarded the Ship, the Owners would have furniſhed me with forty thouſand Ducats of *Cairo*, which is a Golden Coin worth about four Livres apiece.

20. *October* the 2d we were off Cape *Comorin* in 7° 30', the Needle varying 14° 20', the Tides bearing to the South having carried us farther off than we deſigned. After that, being adviſed by our Pilots to ſtand for *Ticow* rather than *Achen*, I ſteered South-Eaſt, and South-Eaſt a Quarter Eaſt. The 11th we had a violent Guſt of Wind, which

laſted for two Hours, and ſoon after had another, which broke our Foremaſt, being then in 1° 20′ S. Lat. The 12th being in 1° 10′ S. Lat. we ſaw a few Land-Fowls, which made us hope to ſee the Land in a ſhort time; and moſt of my Ship's Crew, as well as that of the Advice Boat being then ſick, *November* the 11th we came in Sight of Land in 1° 40′ N. Lat. but the Frequentneſs of the Calms, and the Sickneſs of my Men, retarded me mightily, for the Pinnace had not above two or three Hands fit for Buſineſs; and in our Ship there were not eighteen that were able to work; beſides, both our Surgeons were dead. I deſcried ſeveral Ships of that Country under Sail, and put out a white Antient to make them ſteer towards us; at laſt, finding they would not come, I ſent out my Skiff to ſpeak with one that ſtood between us and the Shore, and tho' they endeavoured to run aſhore, yet the Skiff came up with them, and agreed to give thirty-five Pieces of Eight for a Pilot to conduct us to *Ticow*.

They were of *Prioman*, a Town about eight or ten Leagues to the Southward of *Ticow*, and told our Men that *Ticow* lay about ſeven or eight Leagues off, beyond ſome Iſlands a-head of us. Our Pilot carried us nearer the *Terra Firma* than we were; and when we came to be off of the above-mentioned Iſlands, made us put back to Sea. Having paſſed theſe Iſlands, we came in Sight of a high Promontory of the *Terra Firma*, which had two Banks, one about half a League before its outmoſt Point, and another about two Leagues to the S. E. of it; and we had certainly run foul of the laſt, if one of our Men had not given us Notice of it from the Main-Top-Maſt, for we could not ſpy it upon Deck, and our Pilot had told us nothing of the Matter. Having weathered this dangerous Place, and ſtanding S. S. E. we ſaw another a-head of us, about the ſame Diſtance from the laſt. We ſteered between theſe two, which lie S. E. and N. W. ſounding all the Way, and had all along ſixteen Fathom Water, the Ground muddy, with a little Sand.

The Night overtaking us, we were obliged to drop an Anchor between them. This Shoal lies off of a Place called *Pageman*, juſt under the Equinoctial, which affords a great deal of Pepper, making a large Creek, the Bottom of which is a low Country, covered with Woods, but in the inland Parts there ſtands an high Mountain, pointed like a Pike, which is ſeen above twenty Leagues off, and runs S. E. a Quarter E. Having weathered the Point of this Creek, we deſcried the three Iſlands of *Ticow*, and, at laſt, having ſpent two Months upon a Voyage that is commonly performed in eight Days, landed at *Ticow* the 1ſt of *December*. Between that time and the 2d of *October* I had loſt twenty-five Men, and if the Calm had continued but fifteen Days longer, I believe I had loſt all the Men in my Ship.

21. We caſt Anchor at *Ticow*, between the greateſt of the Iſlands and the *Terra Firma*, at four Fathom Water, and the Ground muddy, and ſent our Skiff aſhore, which brought us one *Pedro*, who had been Interpreter to the *Engliſh* Factory in that Place. This Interpreter told me, that the *Engliſh* and *Dutch* had been expelled by the King of *Achen* two Months before, and that there was a great deal of Pepper, but we could not buy it without a Licence from the King of *Achen*, who was Lord of all that Coaſt. He likewiſe acquainted me that the *Hope*, our ſecond Ship, had touched upon the Coaſt about twenty Leagues off, in the latter End of *July*, and had ſent their Long-Boat with fifteen Men to this Place, to take in freſh Proviſions, which they wanted mightily. That upon the Boat's Arrival, a *Dutch* Ship in the Road fired upon them, but, upon Complaint, excuſed themſelves, pleading that they took them to be *Engliſh*. That the fifteen Men having met with a kind Reception, and taken in what Proviſions they wanted, ſet out in Search of their own Ship, but could not meet with it; upon which they returned to this Place, where ſeven of them died in *October*; four went for *Achen* in a *Dutch* Ship, three for *Bantam* in another *Dutch* Ship, and one continued in the Country, and earned his Bread by gathering of Pepper.

I was infinitely grieved to hear that Captain *Grave* had been ſo inconſiderate as to ſend his Long-boat ſo far from him, eſpecially when I was informed that, among the fifteen Men he had loſt, there were two principal Commiſſaries and a Pilot. Upon farther Enquiry, *Pedro* informed me that the Place where the *Hope* had caſt Anchor was a great Iſland, about twenty Leagues to the Weſtward of that Place; that he was aſſured they had not ſuffered Shipwreck, either upon that Iſland or along the Coaſt, ſince the Praws (ſo the Ships of that Country are called) going to and fro had never diſcovered any Wreck. That the two Commiſſaries, before they died, were of Opinion that the Ship had been drove from her Anchors by Storm, and not being able to make her former Station, made the beſt of her Way to *Bantam*, expecting that I would touch at this Place, according to my Promiſe, and take up her Men. As to the Affront offered them by the *Dutch*, he told me, that the *Dutch* knew them to be *French*, having ſpoken with them before they fired: That the News of the Peace between the *Dutch* and the *Engliſh* was arrived before this happened: That the *Dutch* had repreſented to the Governor and the Inhabitants of that Place, that the *French* were Robbers, and meant only to obſerve the Landing-place, in order to ſack them: That they would not aſſiſt our two Commiſſaries any manner of way, whether in Health or Sickneſs, nor give the leaſt Relief to any of our Men, bating ſome few Sailors that they ſtood in need of; and that the *Engliſh* had ſerved our Men to the utmoſt of their Power. He added, that the Governor was very ſenſible of the Malice of the *Dutch*, who meant only to engroſs the *Indies* to themſelves, and had but lately abuſed the King of *Jacatra*, and uſurped his Territories, for which Reaſon the King of *Achen* thought fit to diſlodge them from *Ticow*.

As to the Death of our Men, he ſaid, it had been a very ſickly Year in that Place as was ever ſeen; but, after all, the *Dutch* were ſuſpected to have ſhortened their Days, conſidering thoſe who died were the Perſons they hated moſt, and were not the firſt who had received Poiſon from their Hands, witneſs the Death of ſeveral *Engliſhmen*, occaſioned by that Means. I queſtioned him about the Injury done by the *Dutch* to the King of *Jacatra*, and whether they had laid Siege to *Bantam*; he aſſured me that it was ſtill beſieged, inſomuch that there was no Commerce nor Traffick with that City; that the *Dutch* had poſſeſſed themſelves of *Jacatra*, and expelled the King; that they had razed the antient City, and built a ſtrong Fort and City after the Faſhion of their own Country, which they had peopled with all ſorts of Nations; and, in fine, that they were at that time Maſters of the Straight of *Sunda*, where nobody could ſail without their Paſſport. Having maturely weighed all the Particulars of this Advice, I reſolved to ſend both to *Achen* and to *Bantam* at any rate, to have ſome Account of Captain *Grave* and his Ship, for whoſe Condition I was greatly concerned.

22. *December* the 2d the King and Governor allowing me to come aſhore, I carried ſome Preſents along with me, without which one will ſcarce be made welcome in that Country. Upon my landing, the Governor and principal Officers gave me an honourable Reception, under a Roof, or, as they call it, Baly. Having told them my Country and Buſineſs, they informed me that I was free to buy up what Proviſions I wanted, provided I paid for them in Rials and Knives, and no other Commodity. But as for Pepper, and the other Commodities of the Country, they could not diſpoſe of any without a Licence from the King; but if I would go to *Achen* and obtain Leave of the King to erect a Factory with them, they would be glad to deal with us. I aſked Leave to hire a Houſe in the City, to accommodate my ſick Men, and to remain aſhore to buy up Proviſions; but they replied, they could not anſwer for the Safety of my Men aſhore, there being ſo many Rogues about the Town; but, if I pleaſed, I might leave two Men to buy up Proviſions, and that only for the Space of a few Days.

The next Day I ſent a Letter to *Achen*, directed for Monſ. *Grave*, Captain of the *Hope*, if he was there, having obliged the Maſter of a Praw bound thither, by ſome Preſents and Promiſes of a Reward, to carry it to the Captain. I agreed with the Maſter of a Praw that lived at *Ticow*, to give him a hundred Rials to carry one of my

Men to *Bantam* or *Jacatra*, in queſt of the *Hope*, provided he returned in twenty Days. The Articles of Agreement were drawn up in Writing, and lodged in the Hands of *Pedro*, the *Engliſh* Interpreter; and both he and the Maſter of the Praw deſired that his Voyage might be concealed from the Governor and Inhabitants of *Ticow*. The Governor having ſent me a Buffalo and ſome Fruit, I went to return him Thanks, and, by virtue of ſome Preſents I made him, obtained Leave to hire a Houſe, in which I lodged forty-three ſick Men, with three Surgeons, a Prieſt, and three more to attend on them. In the mean time, I had ſeveral Preſents made me of Fruit and young Kids, particularly from the Governor of *Priaman*, who preſſed me earneſtly to make him a Viſit: I returned him Thanks, together with ſome Preſents, and a Promiſe to wait upon him the firſt Opportunity.

The 8th an *Achen* Galliot arriving, aſſured me that no *French* Ship had touched at *Achen*; upon which I concluded that our Conſort muſt, of Neceſſity, be either at *Bantam* or *Jacatra*. The 10th there arrived three Gallies, belonging to the King of *Achen*, with an Elephant and three hundred Men in each of them; and the Inhabitants of *Ticow* acquainted me, that they expected a further Reinforcement of Elephants and Men, in order to carry on a War againſt a Prince that had revolted againſt the King of *Achen*. Upon this News, conſidering I had fifty Men at *Ticow*, and fifty more at an Iſland, with the Water-Caſks, beſides eight or ten that were always out with the Skiff; ſo that I had but few Men left on Board, tho', at the ſame time, I uſed to have eighty or a hundred of the Natives on Board, ſome by way of Viſit, and others to ſell their Eggs, Fruit, Pullets, Fiſh, and other Proviſions. Upon theſe Conſiderations I nailed down the Hatches, and run a Rail between the great Maſt and the Fore-Maſt, which was fortified by two great Patereroes mounted on Wheels, and five more upon the Bittacle, together with a Guard upon the Deck, and two Muſketeers, with as many Halberdiers ſtanding at a Door in the ſaid Rail, which I never ſuffered to be opened but when I received a Viſitant into my Cabbin; ſo that two hundred Men upon the Deck could do us no Injury, while our Men were upon their Guard.

The 13th I went aſhore, and found my Men recovering by degrees; being to wait upon the Governor to aſk Leave to ſtay fifteen Days longer, he granted my Requeſt, but withal entreated me to go to *Achen*, and obtain a Licence of the King for erecting a *French* Factory, which would be infinitely more acceptable to the Inhabitants than that of any other Nation. He likewiſe adviſed me not to be jealous of the Inhabitants or fear any Injury from them, which it ſeemed I did, ſince I had made a Fortification in my Ship, and mounted more Guns than before.

I made anſwer, that my coming ſo careleſly aſhore, and leaving fifty ſick Perſons in their Hands, was a ſufficient Evidence of the Confidence I put in the Natives; that the Deſign of the Barrier of my Ship was only to keep out thoſe I did not know from running into my Cabin, that ſo I might be capable of diſtinguiſhing an Orankay, or a noted Gentleman, from a Fiſherman; and that I had not mounted ſo many Pieces of Cannon, if I had not heard that two *Dutch* Ships were expected here, of whom I had Reaſon to be jealous. Upon this, he told me, that I had a great deal more Reaſon to miſtruſt the *Dutch* than them, and that, if I pleaſed, he would forbid the Natives to go on Board of me: But I aſſured him, they ſhould be at all times very welcome, and that I did not at all miſtruſt them. After that, I viſited the Captains of the three Gallies, who aſſured me a-freſh, that there had no *French* Ships come lately to *Achen*.

23. The nineteenth the King of *Ticow*'s eldeſt Son viſited me on Board, with a great Retinue, and I gave him the beſt Reception I could. That Night the Praw I had ſent to *Bantam* returned, in eleven Days, and the Maſter made the following Reports. Four Days after they had put to Sea, they arrived at the Port of *Sarabaya*, which lies on the Coaſt of *Sumatra*, in 4° S. Lat. there being a *Dutch* Ship in the Road. M. *Iſaac*, the Man whom I had ſent on Board the Praw, in queſt of the Vice-Admiral, would needs ſpeak with them, though he diſſuaded him. The *Dutch* Captain acquainted him, that *Bantam* was blocked up, ſo that no Ships of any Nation could get in; that the *Hope*, which was then at *Jacatra*, had been in great Diſtreſs upon that Coaſt, there being only four or five Men on Board, till a *Dutch* Veſſel reinforced her; and that the Streights of *Sonda* were infeſted with the *Java* Praws and *Caracaus*, they having, from the King of *Bantam*, a Sum of Money for every Head they kill'd, of what Nation ſoever.

Upon this Advice, M. *Iſaac* thought it not ſafe to go further in a Praw, but took the Opportunity of a Veſſel, the Maſter of which promiſed to land him in *Jacatra* in ſeven or eight Days. The Maſter of the Praw brought alſo a Letter from M. *Iſaac* concerning the foregoing Account. This News vexed me more than the former, for I had poſitively ordered *Iſaac* not to ſtop for any Ship, but to go ſtrait on. After mature Cooſideration, we reſolved not to go to *Bantam*, where our Ship and Cargo might be in Danger, in a Time of War; beſides, that we ſhould be obliged to ſpend *January* and *February* in going thither, and managing the Traffick of the Place, and *March* would be too late a Seaſon for returning along this Coaſt to *Achen*. At the ſame Time we diſpatched the Advice-Boat with a Reinforcement of twenty Men for *Jacatra*, in order to aſſiſt and ſupply Captain *Grave*, whom we ordered to return to *France*, if he could get his Lading at *Bantam*, or if he failed of it there, to return forthwith to *Achen*, where he would find us.

Ticow lies in twenty Minutes S. Lat. The inland Country is very high, but towards the Shore it falls very low, being covered with Woods, and watered with ſeveral little Rivers, which render it marſhy. It is chequered, with ſeveral pleaſant Meadows, well ſtored with Buffaloes and Oxen, which may be purchaſed for four or five Rials a-piece. It affords Plenty of Rice, Cattle, Poultry, Ducks, and ſeveral ſorts of Fruits, ſuch as Durions, Ananas, Potatoes, Mangoes, Pomegranates, Oranges, Citrons, Water-melons, Cucumbers, *&c.* The Riches of the Country conſiſt in Pepper, which it produces plentifully, and which is much more eſteemed than that of *Bantam*; as for other Rarities, Drugs and Manufactures, it affords none. The City of *Ticow* is but a pitiful Place; it lies about half a League from the Sea-ſide, upon the Shore, oppoſite to the little Iſland where the Ships ride; there are ſome Houſes, but both the City and Suburbs do not contain eight hundred Houſes, which are built of Reeds, and are neither ſtrong nor convenient: However, the Country is very populous, eſpecially at the Foot of the Mountains, where the Pepper grows.

The King of *Ticow* is ſubject to the King of *Achen*, who puts in a new Governor every three Years, without whom the King of *Ticow* cannot do any thing of Importance. So the Foreigners have more Buſineſs with the Governor than with the King; nay, the very Inhabitants pay more Reſpect to him, calling him *Bangaran Lima*. The Inhabitants of the City are *Malayans*, and no other Language is ſpoken all along that Coaſt. The inland Parts are poſſeſſed by the Natives, who diſown the King of *Achen*'s Authority, having a peculiar Language and King of their own. Theſe are Idolaters, and eat human Fleſh. They have rich Gold Mines, but do not know how to manage them, for they only gather the Gold out of ſome little Ditches, which are not very deep, and out of the Caverns made by Floods. This Gold they exchange with the *Dutch*, or the Inhabitants near the Shore, for Pepper, Salt, Iron, Cotton Cloth dyed red, and *Surat* Pearl, which they eſteem mightily; but among the *Malayans* Gold is as dear as in *France*, and in *Achen* it is dearer.

Theſe *Malayans* are all of them very ſuperſtitious *Mohammedans*, but withal, great Robbers, inſomuch that the People are not ſafe in their Houſes in the Night-time, and far leſs in the Fields. They are of an olive Colour. Their Women are all kept up, and not ſuffered to appear in the Streets. From *July* to *October* the Air is very unhealthy, being attended with Fevers that ſeldom admit of a Cure; inſomuch that if it were not for their Pepper, nobody would venture to come near them. They gather

Pepper at all Times, but eſpecially in *December*, *January*, and *February*. No Trade can be carried on at this Place without a Licence from the King of *Achen*, which they call *Chappa*, or *Chop*, and if you have that, neither the Governor, nor the King, can diſturb you. For want of it, I could neither ſell any Commodities, nor buy any Pepper, excepting about 8000 Pounds that were brought by Night from *Priaman*, and ſold me at a reaſonable Price.

The *Surat* Commodities go off very well here, as well as the *Maſſulipatan* Commodities. Rials are current enough, but the Money of *Achen* does not paſs. All their Money is ſome ſmall Pieces of Gold that come from the Mine, which they weigh with Scales; and ſell their Pepper by Bahars, a Weight containing 115 Pounds *Averdupois*, and the King of *Achen* has 15 *per Cent*. of all that is ſold, that is 7 and an half for the Export of the Pepper, and 7 and an half for the Import of the Rials, or Commodities given in Exchange for it; this Cuſtom is either paid in Commodities, or in Rials, ever valuing the prime Coſt. Beſide the above-mentioned Impoſt for every hundrd Bahars, we pay twenty-five Rials to the King of *Ticow*, and a quarter Part to the Weigher, and ſome inconſiderable Allowance to ten or twelve Perſons more. But above all, one muſt make the Governor his Friend, and have a watchful Eye over all the *Malayans*, who are apt to wet the Pepper, or to put Sand and little Stones among it.

24. *January* the firſt 1621, having brought on Board my ſick Men, who began to recover apace, I weighed Anchor, and ſteered for *Achen*. The fourteenth we were off of *Barros*, one of the moſt conſiderable Places on that Coaſt belonging to the King of *Achen*, where no Perſon can traffick without the King's Leave. This Place is half Way between *Ticow* and *Achen*, and affords Plenty of Benjamin, which ſerves the Natives for Money. It is a pleaſant Country, abounding with all ſorts of Wines and Fruits, but bears no Pepper. It affords Plenty of Camphire, which is worth fourteen or fifteen Rials the Catti, or twenty-eight Ounces. Rials will ſcarce paſs there, but the *Surat* or Coaſt Commodities go off very well. Both the Inhabitants of the Coaſt, and the *Dutch* and *Engliſh*, buy up their Camphire to carry it to *Surat*, and the Strait of *Sonda*. The twenty-third we deſcried the high Lands of *Achen*, and the Iſlands that lie to the Seaward of that Road. We ſtood directly for theſe Iſlands, but it was eight Days before we could make them, notwithſtanding that we were but four Leagues off; for, wanting a Pilot, we took the Channel that lies neareſt the Land, where the contrary S. E. Winds incommoded us very much; at laſt, with much ado, we weathered them about a League and a half from the Road, which lies oppoſite to the Mouth of a River, upon which there ſtands a Fort, very remarkable for its Moſque.

The thirtieth I came to an Anchor juſt by an *Engliſh* Ship of 600 Tons, that rode there. Immediately a Boat came off from Shore with ſeveral of the King's Officers, and one of his Eunuchs, carrying a Chappe, as they call it, which is a Dagger with a gold Handle and Scabbard, belonging to the King, made uſe of for a Badge, or Sign, that the Perſon who bears it is commiſſioned by the King. After a profound Silence, he who carried the Chappe welcomed me in the King's Name, and ordered me to come forthwith aſhore. Accordingly I made myſelf ready, but before I could come off, I was obliged to pay the Officers Dues, which amounted to above eighty Rials, beſides a great Looking-glaſs for the *Eunuch*, and another for a Friend of his, and ſome ſmall ones for his principal Officers. This done, I came aſhore, where the Captain of the *Engliſh* Ship invited me very kindly to Dinner, and to lodge in his Houſe. I accepted his Invitation to Dinner, and was very handſomely entertained. After Dinner I went to look upon a Houſe, and offered forty Rials a Month for it, but could not have it under fifty-four. In the mean Time, the *Engliſh* Captain complained heavily of the King, that he would not let them have the Pepper under fifty-four Rials the Bahar, tho' thirty Rials were as much as it was worth. Finding that I could not ſpeak with the King that Day, and that the King had ſent his Chappe twice for an Emerald I wore on my Finger, and would not be ſatisfied with my Promiſe of bringing it the next Day, I went on Board again.

On the firſt of *February* I came aſhore again, and by the Way met ſome *Portugueze*, whom the King of *Achen* had laid in Irons, and who told me, that the *Dutch* and *Engliſh* had a Deſign to poiſon me. I told them, I did not believe the *Engliſh* would do me any harm; however, I would be upon my Guard. They replied, that if I went to dine with the *Engliſh* Captain that Day, I would never return, and very affectionately begged me to avoid it, becauſe they had no Hopes of being delivered from their Captivity, but through my Means. But after all, purſuant to my Promiſe, I went and dined with the *Engliſh* Captain, Mr. *Roberts*, who treated me very kindly and handſomely, and gave me nothing to eat or drink but what he and the reſt of his Company took part of. After Dinner the King's Officers came for the Emerald, which I gave them, and told me, I could not ſpeak with the King till the Day after. Then conſidering that I was troubleſome to the *Engliſh* Captain, and that it was not my Intereſt to lodge with him, I agreed to give fifty Rials a Month for a Houſe.

On the ſecond I was taken with a violent Looſeneſs and Vomiting, and being apprehenſive of what the *Portugueze* had told me, took ſome *Maldiva* Cocoas, with Bezoar, which in that Country are reckoned a ſovereign Counterpoiſon. Next Day I went aſhore, where I met with bad News, *viz.* that the *Dutch* and *Engliſh* had taken the *Hope* off of *Bantam*, and ſhared the Cargo, and murdered moſt of the Men, and that they would do as much to me if they were able. This Diſcovery came from a *Dutchman*, who being diſobliged by his Countrymen, had taken Protection under us, and lodged in one Apartment of the Houſe I had taken. I was unwilling to take this Man on Board, by reaſon that in a former Voyage I was challenged at *Bantam* for having *Dutchmen* on Board, and thoſe I had, who were the moſt uſeful and neceſſary Officers in my Ship, were taken from me; but after all, finding that the Fellow was ready to turn *Moor*, and that he ſpoke the Language of the Country naturally, and might be uſeful to me as an Interpreter, I told him, if he would lie cloſe, without giving any Notice to the *Dutch*, or *Engliſh*, till I was ready to ſail, I would do my utmoſt to convey him on Board; for *Pedro*, the *Engliſh* Interpreter, whom I had brought from *Ticow*, had then left my Service, being checked and threatened by the *Engliſh* Factor for entering into it, and hated by the King's Officers, who, upon my ſcrupling at firſt to pay the Duties, thought he had ſuggeſted to me ſomething to their Diſadvantage.

In the mean Time, one of our Men, that had been drinking with the *Engliſh* Seamen, pumped out of them, that their Ship, in Company with the *Dutch* Ship, had given Chaſe, in the Strait of *Sonda*, to a Veſſel which they took to be *French*, and the *Dutchman* falling behind, was mad that he could not come up with her, but their Ship being the better Sailer, made up to them, and found it was an *Engliſh* Veſſel, upon which they left her; that before I came into the Road, they hearing I had not twenty ſound Men, had a Deſign to take me: but finding upon my Arrival that I was ſo ſtrong, they dropped their Deſign.

The *Engliſh* Captain told me, that the *Dutch* Admiral aſſumed the Authority of King of *Jacatra*, and ſhewed me a ſort of Money, half Silver, half Copper, that he had coined in that Country, bearing on one Side a Lion with a Hanger in one Hand, and Arrows in the other, and on the Reverſe *Trajectum*, in Roman Letters, with the Date of the Year underneath. The fourth I kept on Board, and received Advice from the Shore, that a Draught was a brewing for me in the *Engliſh* Ship. The ſixth I was invited to Dinner on Board the *Engliſh* Ship, where *Reiſembrant* the *Dutch* Factor was to be preſent. I returned Thanks for all their Civilities, and promiſed to wait upon them, if I was not obliged to go aſhore to an Interview of the King, or if I was, to ſend Captain *Riddle* to ſupply my Place; next Morning I went aſhore betimes, and ſent my Excuſe to the *Engliſh* by Captain *Riddle*, whom I acquainted with the Reaſon of my Abſence, and cautioned him to be upon his Guard.

25.

25. As ſoon as I was aſhore, I cleaned and prepared the Preſent I deſigned for the King of *Achen*, and withal, meaning to oblige him as much as poſſible, took a blank Letter which I had by me, with the King's Seal affixed to it, and having addreſſed it *To our deareſt Brother the King of* Achen, ſealed it with red Wax, bearing the Impreſſion of the Arms of *France*. That my Preſent might not be unworthy of my Prince, in whoſe Name I deſigned to preſent it, I ſet apart the following Things for that Uſe; the compleat Armour of a Horſeman carved and gilded, a *German* Hanger, with a carved and gilt Hilt; upon which hung a Piſtol, ſix Muſkets, the Barrels of which were partly carved and partly gilt, the Butt-ends enriched with Mother of Pearl, two Heads of Pikes enamelled and gilded, a very large Looking-Glaſs, which was broken; but I pretended I had received it entire, and that I durſt not but deliver it at any rate, having received the King's Orders to that Effect; two large Flaſks full of excellent Roſe-Water, and two Pieces of watered Camblet of a Crimſon Colour.

The Captain of the *Surat* Veſſel came to ſee it, and told me it was ſo magnificent a Preſent, that it was more fit for the Great Mogul his Maſter, than for the King of *Achen*. The King's Officers came alſo to our Houſe to taken an Inventory of what I deſigned to preſent to their Maſter, and gave me to underſtand, that they feared the Preſent I deſigned was not conſiderable enough for their Prince, who was a great Sovereign, and had but few Equals in the *Indies*. I replied, that I was not unacquainted with the Grandeur of the King of *Achen*, and at the ſame time I knew the Value of the Preſent, which did not come from a private Man, but from a puiſſant Prince, and merited a Reception from any Potentate whatever; and withal, that my Maſter had given me nothing elſe to preſent. The 8th I was conducted to an Audience to the King by the Sabandar, and four of the principal Orankays, with two Elephants, and that with the following Ceremonies: Upon a great Elephant ſat one of the principal Orankays in a covered Pulpit, who ſent me a great Silver Diſh covered with a Cloth, embroidered with Gold and Silk of divers Colours, in which I put the Letter, and then gave it to him. By his Command one of the Orankays mounted the other Elephant, and after him the Sabandar, then I, and after me another, ſo that four of us rode upon one Elephant, and I ſat between two Perſons.

The other two Orankays rode upon *Arabian* Horſes before the Elephant that carried the Letter. Before them were fourteen or fifteen Men, each of them carrying a Piece of the Preſent covered with yellow Cloth, without which nothing could be preſented to the King; ſix Trumpets, ſix Drums, and ſix Hautboys led the Van, which ſounded till we arrived at the Caſtle, about a League off. In the Rear followed three Sabandars, and all the Officers of the Albandeque on Foot; when we arrived at the Caſtle, we alighted at a great Palace before it, and when we entered the outer Gate, all the Men were obliged to retire: Then we paſſed two other Gates; I was ordered to put off my Shoes, without which Ceremony I could not have Audience of the King; ſome time after the Royal Chappe was brought, and being firſt put into my Hands, then raiſed above my Head, and re-delivered to him that brought it, I was ordered to follow it, being accompanied by a Sabandar and an Orankaye.

We waited ſome time at the King's Chamber-Door, which was covered with Silver Plate: At laſt an Eunuch came out, who gave the Sabandar to underſtand, that tho' the King was more indiſpoſed that Day than uſually, yet, as I was ſo near, he ſhould bring me in; upon which I was led into the Chamber by two men, one holding me by each Hand, and ſet upon a *Turky* Carpet with my Legs acroſs, according to the Cuſtom of that Country. Then the two Men retired, and I ſaluted the King in the uſual Form, *viz.* by joining my Hands, and lifting them up to my Forehead, bowing my Head a little. The Cuſtom does not oblige one to take of one's Hat, but I being unaccuſtomed to appear before People of that Quality with my Hat on my Head, choſe to put it off. The King ſat upon a Place about two Feet higher, and informed me by the Sabandar, that he was infinitely obliged to the King of *France* for the Preſent he had ſent him, which he eſteemed more than ten Bahars of Gold. Then he opened the Letter, and gave it me to interpret to the Sabandar, who underſtood a little *Portugueze*: But his Knowledge of that Language was ſo very imperfect, and the Stile of the Letter ſo uncommon amongſt them, that I could not make him underſtand it; for the very firſt Word, viz. *Moſt Illuſtrious*, put him to a ſtand; upon which I turned it to *deareſt Brother*, which the King liked mightily, ſaying, that he knew very well Chriſtian Princes uſed to uſher in their Letters by ſuch Expreſſions.

At laſt, ſince I could not make the Sabandar underſtand every Word of the Letter, I repeated the Subſtance of it in ſhort, *viz.* That his Moſt Chriſtian Majeſty deſired his Mightineſs to grant me a free and undiſturbed Traffick in his Territories, and promiſed, in like manner, to protect his High Mightineſs's Subjects, if any of them ſhould happen to come into his Kingdom: That he deſired nothing more than that a Commerce between his Subjects and thoſe of *Achen* ſhould bring him to the Knowledge of ſo great a Prince, and that he had ſent him a Preſent of Arms, a Pattern of the Manufacture in which his Subjects excelled.

This done, the King acquainted me by the Sabandar, that I was both welcome and ſafe in his Territories; that as to the Buſineſs of Trade, the *Dutch* and *Engliſh* uſed heretofore to have Pepper in his Country at an eaſy rate; but now that they had ſhewn ſuch flaming Ingratitude, in making War upon the King of *Bantam*, who had formerly vouchſafed them a kind Reception, he had thereupon cauſed all the Pepper Plants to be cut down, for fear hereafter they ſhould prove the Occaſion of Trouble; that by this means the Price of Pepper was raiſed to ſixty-four Rials the Bahar, and that even at that Price he did not much care to let them have it, knowing them to be an ill Sort of People, that would rob and pillage, and do any thing in order to engroſs the Trade of the *Indies* to themſelves.

I replied, that the Inſolence of that Nation, in offering to dethrone Kings that have ſhewn them Civilities, would be a ſurpizing Piece of News in *France*; that for my part I was ſtruck with Amazement to find that a People, who pretended to nothing but fair Merchandize, and whom the King of *France* had long protected againſt the *Spaniards*, ſhould on this Side of the World ſlight us, and uſe all means to do us Injuries; and that in regard I had no Commiſſion to uſe any manner of Violence, or to fortify any Place, but only to ſell and buy in a fair Way, I ought not to be ranked with a Nation whoſe very Converſation I avoided. Upon this the King ordered ſome Sallad to be given me in a large Gold Veſſel, and a Suit of his Cloaths laid upon a Silver Platter, which he ordered me to put on. Having retired to the next Chamber, and put on his Cloaths above my own, I returned to his Majeſty, who told me, the Arms my Maſter had ſent him would be very ſerviceable to him in the Siege of *Malacca*, which he had in his View, and aſked me, if I would accompany him thither? I replied, I ſhould place my ſupreme Happineſs in doing him any manner of Service: Then he put ſeveral Queſtions to me about the Age, Puiſſance, *&c.* of my Maſter, and when I told him that my Maſter was in Peace with all the World, particularly with the Grand Seignior, he ſaid he would enter into a ſtrict Alliance with the King of *France*: This done, I was mounted upon an Elephant, and conducted home.

One thing happened upon my firſt ſetting out, in order to an Audience of the King, that I muſt not omit; juſt as I was mounted upon the Elephant, the *Dutch* and *Engliſh* Commiſſaries, with twenty or thirty of their Dependants, having hid themſelves in a Porch of the *Engliſh* Houſe that was juſt oppoſite to mine, ſeized upon the *Dutchman* I mentioned above, whom I deſigned to make uſe of as an Interpreter to the King. Being then upon the Elephant, I could not conveniently get down, but I repreſented to the Sabandar the Impudence of thoſe Men, in offering to lay Hands upon one that was carrying Preſents from his Majeſty of *France* to the King of *Achen*, and preſſed him to order the *Dutchman* to be releaſed. The Sabandar replied, he would take care of it, but could not ſtop at that Time. When I had Audience of the King, I importuned the Sabandar to let the King know my Reſentment of that Action, but he told me it was not a proper Time, and the

King perceiving I wanted to ſay ſomething, aſked the Sabandar what it was? who replied, he did not underſtand me.

Upon this I went next Day and viſited the Orankay *Laxemane*, a great Favourite of the King's, and made him a Preſent of two Arquebuzes, a Piece of watered Camblet, a gilded Head-piece, a Looking-glaſs, ſix Ear-pendents, and two Glaſs Chains. He received me very graciouſly, and after ſome Diſcourſe I mentioned to him the Story of the *Dutchman*, whom I pretended to have entertained, becauſe he ſaid he had been formerly under the Orankay's Protection; but the Orankay told me, that if the *Dutchman* ſaid any ſuch Thing, he was a Cheat and a Villain. Next Day, to prevent all further Correſpondence with the *Engliſh*, I ſhut up the Gate of our Houſe that was oppoſite to theirs, for they haunted the Houſe perpetually, ſo that I could not do or ſay any thing without their Knowledge; beſides, they frequently viſited my Commiſſaries and Purſers, which made me ſuſpect that they deſigned either to do them an Injury, or to pump out of them an Account of my Deſigns.

26. On the 11th, being called to ſpeak with the King, he ſhewed me the two Pike-heads I had preſented him with, which above the carved Work were at firſt covered with an Enamel Colour, but the King having given them to one of his own Goldſmiths to be carved and gilded, the Paint went off as ſoon as the Goldſmith put them in the Fire, ſo the King wanted to know if I could think of any body that could put them to rights as they were. I told him I knew none; upon which he cauſed the poor Fellow's Hands to be cut off that had put them into the Fire.

Then the King told me, he heard I had a Goldſmith on Board, and deſired I would order him to enamel a large Gold Ring of his that weighed above an Ounce, which he delivered to me. This Prince was very curious in all Lapidary and Goldſmiths Wares, for he had above three hundred Goldſmiths that wrought daily for him, and he ſhewed me a great Number of Stones, ſome ſet, ſome not, which for the moſt part were bored at the Ends, ſeveral Necklaces and Chains of large Emeralds, Caſſacks or Garments after their Faſhion, embroidered with Jewels, great Veſſels of Gold, covered with Jewels, a great many Swords, Hangers, and Daggers, covered all with Jewels, both upon the Hilts and Scabbards, and a vaſt Number of Gold Claſps to put upon the Caſſacks, and told me that he had above three Bahars of Gold in Caſſacks and Claſps, and that ſix Days would not ſuffice for taking a View of all his Jewels and Stones.

Whether he ſaid this out of Oſtentation or not I cannot tell; but the greateſt Part of what I ſaw were rather Stones of Shew than Value: Tho' after all, I muſt own, he ſhewed me ſome that were very rich, particularly three Diamonds that might weigh from fifteen to twenty Carats apiece, two very large Rubies, and an Emerald that he got in the Conqueſt of *Pera*, which was one of the lovelieſt Stones I ever ſaw. After that I ſet our Goldſmith to work for the King, and was ſorry I had one on board, being apprehenſive that if the King liked his Work, he would retard us to get his Jewels enamelled.

Having occaſion to build a Long-boat to ſupply that I had loſt, I went to the Orankay *Laxemane* to deſire he would obtain me a Licence for the cutting of Wood in the Iſlands oppoſite to the Road, and let me have his Boat, which carried about fifteen Tun, to bring the Wood aſhore. He granted my Requeſt, upon the Conſideration of paying him twenty Rials a Month for his Boat, which was indeed extravagantly dear; but I was obliged to give it, or elſe I had not had the King's Licence ſo eaſily.

The 19th the King ſent a Sabandar to invite me to Dinner: when I came, I found the King in a ſquare Hall, the Floor of which was covered with a *Turky* Carpet, upon which he made me ſit down; and after he had ordered ſome Sallad to be given me in a large golden Diſh, the Cover of which was ſet all over with Emeralds, and aſked ſome Queſtions concerning the Grandeur and Puiſſance of Chriſtian Princes, there came about thirty Women, each of which had a large Silver Diſh in her Arms, which they ſet on the Ground on the Carpet; each Diſh was covered with a Cloth of Gold, or half Silk half Gold, with Jewels, trailing upon the Ground. After theſe Women had ſtood for ſome Time, the King ordered them to ſet Dinner before me, upon which they uncovered the Diſhes, each of which was as big as a large Baſon, and together with the Lid were about two Feet and an half deep. Out of each of theſe Diſhes they drew ſix Plates of Gold, full of Comfitures, Meat, and Paſty, after their Faſhion; ſo that, in leſs than a Minute, I found myſelf ſurrounded with golden Diſhes, ſome containing Water, others Sauces, and one, which was very large full of Rice, beſides two other Diſhes of *Temback*, which they eſteem more than Gold, containing Rice, (made uſe of for Bread all over the *Indies*) of which the King ordered me to eat, and I found it very good, for its Taſte reſembles our Marchpane.

After that, by the King's Order, an Eunuch brought me ſome Drink in a gold Cup, ſet in a large gold Baſon: I drank to his Highneſs's better Health, and thought to have drank it up, but the Liquor was ſo very ſtrong and fiery, that it quickly baulked my Tip, and put me into a great Sweat. The King told me, as I had drank to his Health, I ſhould drink it out; and that if he were to drink the King of *France*'s Health he would not leave a Drop of it: But, upon my Requeſt, they exchanged the Liquor for a weaker Sort. They preſſed me mightily to eat and drink; but, at laſt, being quite tired by ſitting with my Legs a-croſs, I prayed the Sabandar to preſs me to eat no more; upon which the King ordered all the Diſhes to be removed, and bid me drink his Heath once more: This done, they brought a very fine Carpet, done upon a Ground of Gold, and laid between me and the King.

Then came fifteen or twenty Women, who ranged themſelves by the Wall Side, and each of them having little Drums in their Hands, ſung their King's Conqueſts, making their Voices anſwer the Drums; after that there came in at a little Door two little Girls, very oddly dreſſed, but very handſome, and whiter than any I ever ſaw in ſo hot a Country. Upon their Head they had a ſort of Hat, made of Spangles of Gold, which glittered mightily, together with a Plume about a Foot and an half high, made of the ſame Spangles. This Hat hung down upon one Ear. They had large Ear-pendants of Spangles of Gold, hanging down to their Shoulders. Their Neck was covered with Necklaces of Gold, and upon their Shoulders was a ſort of Jacket of Gold, curiouſly engraven, under which was a Shift, or Waiſtcoat of Cloth of Gold, with red Silk, covering their Breaſt, and a very broad Girdle, made of gold Spangles. Their Girdle was tied above the Haunches from which there hung a Cloth of Gold, with ſtraight Breeches underneath, which were likewiſe made of Cloth of Gold, and did not paſs the Knees, where ſeveral Bells of Gold hung upon them.

Their Arms and Legs were naked, but, from the Wriſt to the Elbow, were adorned with Bracelets of Gold and Jewels, as well as from the Ancle to the Calf of their Leg. At their Girdle each of them had a Sword, the Hilts and Scabbards of which were covered with Jewels: and in their Hands a large Fan of Gold, with ſeveral little Bells about it. They advanced upon the Carpet with a profound Gravity, and, falling upon their Knees before the King, ſaluted him, by joining their Hands, and lifting them up to their Head; then they began to dance, with one Knee upon the Ground, making ſeveral Motions with their Body and Arms; after that they danced upright with a great deal of Agility and Cadence, ſometimes putting their Hands to their Swords, another Time making as if they ſhot a Bow, and ſometimes as if they had a Shield and Hanger in their Hands. This laſted about half an Hour; after which they kneeled before the King, and, in my Opinion, were pretty well tired, for each of them had above forty Pound Weight of Gold upon her. However, they danced with a very good Grace, and if our *French* Dancing-Maſters had ſeen them, they would have owned their Performance not to have been what we account barbarous.

At laſt it grew late, and, upon my Requeſt, the King ſuffered me to go, having firſt preſented me with two hundred Pieces of Gold of his Coin, which they call Mas, and are worth about Ten-pence a Piece; then the Sabandar conducted me home by Water, and aſſured me he never ſaw the King ſhew ſo much Reſpect to any Stranger, eſpecially in ſuffering his Women to dance before me; for, during the Entertainment. the whole Company ſhut their Eyes, it being a capital Crime to look upon the King's Women, though, indeed, I looked upon them very earneſtly all the while, preſuming that they were not brought thither to make me ſhut my Eyes. This Prince told me he had above a hundred Bahars of Gold, *i. e.* 18,000,000 of Livres, beſides his Silver, Jewels, and other Treaſures, but then he keeps it cloſe, and has no Occaſion to ſpend it. Beſides, the Royal Treaſure has been handed down from Father to Son; for *Achen* was never pillaged or ſacked by any Nation, and the King often boaſts that he fears no Prince but the Grand Seignior, who, according to antient Prophecy, handed down by Tradition, ſhall, one Day, conquer that Place.

On the Nineteenth of *February* an Orankay and two Sabandars came aboard, in the King's Name, to demand two Swords that I had, one of which I had promiſed him. Before they boarded me, they were in ſome Danger in the Mouth of the River, where there lies a very dangerous Bar, eſpecially towards the Evening, when the Sea-Breezes break the Water upon it. I gave them both my Swords, but withal, prayed them to acquaint his Majeſty, that I had no more; and it being an unwonted Thing in *France* to go Abroad without a Sword, I hoped he would let me have one of them again. Next Day he returned one of them, with a Preſent of a Dagger made after the Faſhion of the Country. He who brought it ſaid, the King liked the one mightily, becauſe it did not bow when they offered to bend it, and that if this had not bowed, I had never ſeen it again. After that I went aſhore, and addreſſed the King, that he would pleaſe to order ſome of his Officers to make ſome Overtures about the Price of his Pepper, to the Merchants that were with me. He gave me no Anſwer to that Point, but aſked me what ſort of a Ship the *Hope* was, that I had ſent to *Bantam*, and what the Cargo might amount to? I anſwered him as near as I could; upon which he aſſured me, ſhe was taken by the *Dutch*, and that in a ſhort Time I ſhould have certain Intelligence of it.

He told me withal, that while I continued in his Road, he would ſecure me from receiving any Injury at their Hands, the *Dutch* and *Engliſh* Factory being worth more than my Ship; but that without the Road he would not intereſt himſelf in the Quarrel. It ſeems the King had mentioned the taking of the *Hope* at my firſt Audience, but the Sabandar did not make me underſtand it; and indeed, I was at a great Loſs both in that and many other Things, becauſe I could not make uſe of an Interpreter of my own, for without a particular Licence from the King it is not to be done. Beſides, no Interpreter is fond of appearing before the King, for if he makes but the leaſt Trip in his Diſcourſe, or ſays any thing that the King does not like, though ordered to ſpeak it, he is in Danger of being cut to Pieces.

An Inſtance of this we have in one *Pedro Lorenzo*, a Native of *Achen*, and deſcended of a very good Family, who being Interpreter for the *Dutch*, and having ſpoke ſomething by their Orders that diſpleaſed the King, was ordered by his Majeſty to be cut in two alive, and the Orders had certainly been put in Execution, if the *Engliſh* had not interceded very earneſtly by their Prayers and Preſents on his Behalf. All this while I could do nothing in the Pepper Concern, for nobody durſt ſell a Grain till the King had ſold his, and it was not proper for me to preſs the King much upon it, becauſe he was out of Humour with ſome of his Grandees, having put three of them to Death for appropriating to their own Uſe ſome Jewels they had met with in the late Conqueſt of *Pera*, and condemned the Serjeant-Major for retaining ſome Booty in the War with *Queda*, who with much Interceſſion got off for 1200 Rials. Whenever the King was in theſe Humours, no body durſt ſpeak to him upon any Subject, and the People of that Country imagine, that he is more ſubject to them about New Moon, than any other Time.

27. On the Seventh of *March*, about an Hour before Sun-riſing, we had a great Earthquake at full Moon, which the Natives ſaid was predicted about four or five Days before by the Cady, or Biſhop of *Achen*, whom they believe to be the wiſeſt of Men. I am informed, there are commonly three or four Earthquakes in this Place every Year. On the Ninth I waited upon the King with ſome Preſents, in order to obtain Leave to buy up Pepper from private Perſons, which he would not allow till his own was ſold off, which he always kept up half as dear again as the other. The next Time I waited upon him I found him at a Cock-fighting, and laying very high Wagers with his Orankays. Upon my Entrance he preſented me with a Dagger, which had about five or ſix Livres of Gold about the Handle; but I found him ſo intent upon his Bets, that it was not proper to mention my Affair at that Time. I could not but take Notice of one Inſtance of the King's Avarice, and his Readineſs to ſacrifice all Things to his covetous Temper. It was this: One of the Company pitched upon a middle-ſized Cock, offering to bet upon his Head againſt any other, of what Size ſoever. Upon which an Orankay, that had ſome of the King's Cocks in keeping, preſented a very large Cock, and upon this the King betted very high; but the little Cock beat the great one, and ſo the King loſt his Money. Being fretted by the Loſs, he aſked the Orankay, how it came to paſs that the little Cock had more Strength than the great one? The Orankay anſwering with all poſſible Humility, that he could not conceive how it was, the King replied, he could conceive it very eaſily, that it proceeded from the Cock's being ill fed, and that he had given the Cock's Rice to his Whores, or elſe eat it himſelf. This ſaid, he ordered his Right-hand to be cut off, which was immediately put in Execution.

Next Day the Sabandar came to my Houſe, and acquainted me, that the King aſked for his Pepper 64 Rials the Bahar: I told him I could not buy it at that Rate. Then he aſked me what I was willing to give. I anſwered, I could not pretend to ſet a Price upon the King's Goods, but would gladly treat with his Subjects, if his Majeſty would give me Leave. Upon which he let me know, that could not be granted till the King had ſold his. At that Time the King kept up his Pepper at 64 Rials, the private People would have ſold it for eight Taels in Gold. The common Value of a Tael is four Rials, but ſince we arrived in this Place, the Gold roſe, and the Rials fell; whereas we uſed to have ſixteen Mas for four Rials, now we cannot have above fourteen. This Alteration is occaſioned by the King's engroſſing all the Gold in his own Hands, coining lead Money to circulate among the People, who put it off at any Rate for Gold. Beſides, Rials would have no Circulation in that City, were it not for thoſe of *Surat* and *Muſilipatan*, who ſupply this Place with Commodities, that they cannot be without, and export nothing but Rials, upon which they gain conſiderably. Now there being no *Surat* Ship there at this Time to take off the Rials, their Value ſunk apace, which was an infinite Loſs to me, who had nothing elſe but Rials, at a Time when the *Dutch* and *Engliſh* had Gold enough in their Hands. To return to the Sabandar: He told me after all, that the King, out of his particular Affection to me, would perhaps let me have his Pepper at the ſame Price that the *Dutch* had offered, *viz.* forty-eight Rials the *Bahar*. I replied, that the King had given ſeveral Inſtances of his Affection to me, that I would take Care to report to the King of *France* the Reſpect that his Majeſty of *Achen* had ſhewn to his Letters, and that the Obligation I lay under to the King of *Achen* would be much ſtrengthened, if he would allow me to take in my Lading at *Ticow*, ſince I could not do it at *Achen*, where the Pepper was ſo very dear, unleſs I had a Mind to return to *France* with half my Lading.

Then the Sabandar aſked me, what Preſent I would make to the King for that Favour, and what I would give him for procuring of it? I told him, I would conſider of the Matter, and acquaint him with my Reſolutions that Night. Having communicated the Motion to our Merchants, it was unanimouſly agreed, that *Ticow* would be a Place of more Profit for us, though it coſt us 3000 Rials for a Licence to trade there. Thereupon, I ſent one to ſound the Sabandar, in order to know what his Demands might be. The Sabandar told him, the *Dutch* and *Engliſh* had offered the King two Ships laden with Goods, for the Privilege of an eight Years Factory at *Ticow*, and that if I would give him four thouſand Rials, and make the King a Preſent of 20,000 Rials, he would procure me a Factory for two Years. Hearing this extravagant Demand, I perceived the Sabandar to be a Villain, and reſolved to make my Addreſs to Orankay *Laxemane*. Accordingly I gave him a Viſit, and repreſented to him, that I had been a long Time there, without making any Progreſs in my Buſineſs; that the Pepper was ſo dear at *Achen*, that I could not buy it there without a conſiderable Loſs; that *Ticow* was the moſt proper Place for me within the King's Dominions. That foraſmuch as I could not trade at *Ticow*, without the King's Licence, I thought it the ſafeſt Way to have recourſe to him, knowing, that if he favoured me, the King would certainly grant it, and that out of a grateful Senſe of ſuch Favours, I would make him a Preſent of 400 Rials, and another to the King, of four iron Guns, weighing 3500 *lb.* each. Upon this he adviſed me not to deſire any ſuch Thing of the King, who had a great Affection for me, and was deſirous of Lading my Ship with his own Pepper. I replied, that I was infinitely obliged to the King, but could not come up to the Price that the *Dutch* had offered him. Then he told me, that I did not know what the King would do on my Behalf, and that the Guns I mentioned were not a proper Preſent for the King, who had more already than he knew what to do with.

The Twenty-third I interceded with the King for the Redemption of four *Portugueze* Chriſtians, that were his Captives at *Negapatan*. Their Ranſom came to 650 Rials, 128 of which I was forced to advance, retaining one of the Men for my Security, the reſt of the Money being gathered by a charitable Contribution from the People of *Negapatan*. There were five of thoſe Slaves for whoſe Redemption I interceded, but the King would needs detain one to bleed him, or any of his Family upon Occaſion; for all of them not only knew how to open a Vein, as indeed moſt of the *Portugueze* in the *Indies* do, but likewiſe practiſed ſome ſort of Surgery to earn their Bread in the Time of their Captivity. The Sabandar and an Eunuch came next Day to acquaint me, that the King wanted to ſpeak with me. In Obedience to his Commands I went, and found him very much out of Humour, and giving Orders for torturing five or ſix Women. To my great Mortification, I ſaw theſe poor Creatures tortured in his Preſence, to the laſt Degree, for three Hours, and the King's Wrath increaſing in Proportion to their Torment. After the torturing was over, he ordered their Hands and Legs to be cut off, and their Bodies to be thrown into the River. The Occaſion of this Execution was as follows:

On the preceding Night, there being five or ſix of his Women in a Room adjoining to his, one of them gave a hideous Shriek, upon which the King enquired into the Matter, and at firſt they all told him there was nothing in it: But after many Threats, ſhe that had cried out, confeſſed, that ſome body came in the Night-time, and pricked her in the Thigh with a Dagger through the Reeds upon which they lay. Upon which ſhe ſaid, ſhe cried out, and awaked the Reſt; but the Reſt did not agree in their Anſwers, ſome ſaying that they heard a Noiſe, and others that they heard nothing. However, the Dagger was found, but no body would own it. After all, the King having aſked them who it was that came with the Dagger, and why they did not tell him the Truth at firſt, and finding they would give him no Anſwer, was led into the Suſpicion of a Deſign againſt his Life, carried on by his own Mother, who, as he imagined, had alarmed theſe Women, that their Outcry might induce the King to come out of his Chamber, which would have afforded a favourable Opportunity to the Aſſaſſins. Thinking to extort a whole Confeſſion of the Matter by Torture, he put all the Women upon the Rack; but their Reſolution, Courage, and Conſtancy, was invincible; for notwithſtanding the King's frequent Offers of Pardon, in caſe they would diſcover the Plot, and the repeated Intreaties of the Cady of *Achen*, and the whole Court, who begged of them to be kind to themſelves, yet they did not ſhrink or relent. One of them being very old, and ſwooning away from time to time, the King took Compaſſion upon her, and graciouſly ordered her to be put to Death. Upon which ſhe aſſumed a gay Countenance, and thanked the King for his Grace and Mercy, wiſhing him, in Recompence for his Favour, a long and happy Life of one thouſand Years. In a Word, all of them ſtood out undaunted to the laſt Gaſp, and even after their Hands and Legs were cut off, one of them had the Courage to ſay, that for the Space of ten Years they had longed for this happy Hour that delivered them from the Drudgery of the Caſtle. When the Execution was over, the King aſked me what I thought of it? Though the Spectacle was very mortifying to me, yet I diſſembled upon the Matter, and anſwered, that without the Execution of Juſtice no Kingdom could ſubſiſt.

Then the King told me in a long Diſcourſe, that if the laſt Night's Action had paſſed with Impunity, his very Life had been in Danger. That his Orankays were fooliſh and unthinking Men, who charged him with Cruelty, not conſidering that it was their Wickedneſs that drew upon them the Anger of God, who made uſe of him as an Inſtrument to puniſh their Impiety; that they had no Occaſion to complain of him, who ſuffered them to poſſeſs their Wives, their Children, and Slaves, and competent Eſtates to maintain them, who maintained their Religion, and preſerved them from the Captivity of neighbouring Kings, and the Robberies of Strangers: That in former Times *Achen* was a Neſt of Murderers and Robbers, in which the weaker were oppreſſed by the ſtronger, and no Man was ſafe, all of them being obliged to keep off the Robbers with Arms by Day, and barricade themſelves in their Houſes by Night; whereas at preſent they had no Occaſion either for Arms in the Day, or Doors to their Houſes at Night. That his Nobles hated him becauſe he ſuppreſſed Extortortion, Maſſacres, and Robberies; that they longed to ſet up Kings at Pleaſure, and murder them when diſobliged: That his Mother was in the ſame Intereſt, and wanted to make away with him, in order to prefer another that would give way to their Inſolence..

This he delivered with ſo much Vehemency and Paſſion in his Looks, that all his Courtiers threw themſelves upon the Ground, imploring his Mercy, and among them even the Cady, a Man of above eighty Years of Age, for whom every body had a vaſt Veneration, and who could boaſt of the nobleſt Deſcent in *Achen*. In fine, the Cruelty of this Prince is unparalleled; notwithſtanding that all his Tortures could extort no Diſcovery, yet he impriſoned his own Mother, and put her upon the Rack, and put to Death five of the principal Lords of his Court, whom he ſuſpected of favouring his own Mother. He barbarouſly murdered his own Nephew the King of *Johor*'s Son, ſaying, his Mother meant to prefer that young Prince to the Throne. He put to Death the Son of the King of *Bantam*, as well as the Son of the King of *Pan*, who were both his Couſins.

He has not left one of the Royal Family but his own Son, who has been thrice baniſhed the Court, but now begins to return in Favour, and is only ſafe for being more cruel than his Father, and being hated by all the World. He has extirpated all the ancient Nobility, and raiſed a new Set of Orankays, who, in my Opinion, would live much happier in a meaner Capacity. In fine, his Cruelty is without a Parallel; he takes Advice of no body, and never lived a Day, while I was at *Achen*, without the Execution of one, and ſometimes ſeveral of his People.

28. The 28th the King ſent for me to ſee two Elephants fight: After I came two Elephants were brought into a large Court, each of them having a Cable faſtened about their hind Feet; then came ſeveral Men with long Pikes, barbed at their Heads. The two Elephants fell upon one another with a prodigious Roaring; but all of a ſudden the King was taken ill, and the Fight was interrupted on account of that Accident. Having preſented the Orankay *Laxemane* with an enamelled Ring, which he again pre-

ſented to his Majeſty, I at laſt obtained Leave to buy up Pepper in the City. Being ſenſible of this Favour, and meaning to oblige the King as much as I could, I proffered to buy ſix hundred Bahars of his own Pepper; but he replied, he was my Friend, and would not put it upon me, ſince it was too dear, in regard he had made an Oath not to ſell it under ſixteen Taels the Bahar. Next Day I made a Publication of the King's Licence, that the Inhabitants might not ſcruple to ſell their Pepper; but at the ſame time the King was buying up Pepper for himſelf, and the Inhabitants feared, that if they ſold me any, he would alledge they had preferred my Cuſtom to his.

To ſtifle this Apprehenſion, I firſt bought ſome of the Sabandar, thinking his Example would expel their Fears; but by an unlucky Accident, before he had delivered me any, the King took him up, and laid him in Irons, for not having ſome enamelled Work ready, which he had committed to his Care to get done by our Goldſmith by a prefixed Day, at which Time he had promiſed it to a She Favourite; though, after all, it was not the Sabandar's Negligence, but the Goldſmith's being taken ill, that occaſioned the Delay. After this, notwithſtanding I had the King's Licence, they would not ſell me one Bahar, ſome pretending they durſt not, while the King bought, others refuſing to take Rials, or any other Coin but Ænas, which is a Gold Coin current in the Country. In the mean time I ſent Don *Franciſco Carnero*, a *Portugueze*, to the Court of the Great Mogul, by the Way of *Muſilipatan*. His Errand at that Court was to obtain Leave from the Great Mogul to ſettle a *French* Factory at *Surat*, the Sovereignty of which belonged to him.

The Deſign of that Factory was to render a Factory at *Achen* more uſeful to us; for there being no Acceſs to *Bantam*, there was a Neceſſity of having a Factory at *Achen*, ſince the Rials and *French* Commodities would not be put off at *Achen* without Loſs; whereas at *Surat* the Rials are pretty high, and ſome *French* Commodities may be put off at *Cent. per Cent.* Profit; ſo that it would be our Intereſt not to ſail directly from *France* to *Achen*, but to *Surat*, where we might put off our Commodities at a good Rate, and buy up ſome Commodities at *Surat*, that the People of *Achen* can as little do without as the very Rice they eat; and this would fetch us the *Achen* Pepper at an eaſy Rate. This *Carnero* was an everlaſting Gameſter, and won great Sums by the Help of ſome falſe Dice he had brought from *France* with him, particularly from the Sabandar, whoſe Loſſes at Gaming made him very hungry in his Demands upon me, and yet I could not take off the *Portugueze* from playing with him. One Time when *Carnero* was playing, he happened, by beating his Hand againſt the Table, to break one of his falſe Dice, upon which there run ſome Quickſilver out of it, that quickly ſlipped through the Chinks of the Table; this put his Company into a horrid Conſternation, for *Carnero* quickly hid the Pieces of the broken Dice, and they imagined there was ſome Magick in the ſubtile Spirit that appeared and diſappeared ſo ſuddenly.

On the 15th of *April* I made a Diſcovery that the King had played me a Trick, and that no Recommendation or Preſents whatſoever would get the better of his avaricious Temper; for he only gave me the Licence to amuſe me, and keep me from leaving the Place, as I had threatened to do before. He knew very well, that his buying of Pepper at the ſame time would ſtifle my Market, and if any one had ſold me Pepper, he would certainly have puniſhed him under Pretence of preferring my Cuſtom to his. Beſides, the true Reaſon of the Sabandar's Confinement was not the Buſineſs of the King's, but his miſunderſtanding the King's Deſign, in giving me the Licence; and the Sabandar ſent to intreat me to intercede with the King that he might not be diſgraced, for that he had expoſed his Life to Danger by doing me Service. Next Day I went to intercede with the King on the Sabandar's Behalf; but he interrupted me, by aſking, if I had bought any Pepper? I anſwered, that I had not endeavoured to buy any, nor would till his Majeſty's Market was over. Then he laughed, contrary to his Cuſtom, and told me, he would ſell me ſome cheap. I ordered the Interpreter to offer him a Catti, or thirty-two Rials a Bahar: But the Interpreter durſt not mention the Sum, and pretended he did not underſtand me; upon which I told it myſelf in the *Malagas* Language. The King was ſilent for ſome Time; after which he gave me to underſtand, that though he had ſwore that whoſoever offered him leſs than ſixty-four Rials for his Pepper ſhould loſe his Favour, yet he would overlook it in me, and that the *Engliſh* and *Dutch* had offered him forty-eight Rials, and at that Price I might have what I would. I made Anſwer, that the *Dutch* and *Engliſh* had a larger Purſe than I, and dealt in ſeveral Branches of Trade that compenſated the Dearth of the Pepper, and that in fine I had not ſo much Money to give. However, being informed that unleſs I took ſome of his Pepper, they durſt not ſell me a Grain in the City, and conſidering withal that *Bantam* being blocked up, there was none to be had but in his Dominions. Upon theſe Conſiderations I offered to take four hundred Bahars at forty Rials; but the King would not abate any thing of his Price, ſaying, he had uſed me more kindly than the *Dutch*, ſince he would not let them have it at the ſame Price. Finding him reſolute, I offered to take three hundred Bahars at his Price, provided he would give me a Licence to buy three hundred more at *Ticow*; at laſt he agreed to it, and ordered the three hundred Bahars to be delivered. I preſſed him to ſign my Licence for *Ticow* out of hand, in regard he was about to take Phyſick for his Illneſs, ſo that I could not have Audience of him for ſome Time; but he told me that would be over before I was ready to go.

Notwithſtanding the King's Orders, it was a long Time before I could get the Pepper which the King had ordered me, by reaſon of the Avarice and Villainy of his Officers, who always found out ſome Trick or other to put off thoſe they have to deal withal, till they they are ſufficiently bribed. For, beſides that they have no Salary, they are obliged to make the King a rich Preſent once a Year. As for dealing with private Perſons, I found them all unwilling to take Rials, and for that Reaſon employed a Broker to make a Propoſal to the *Dutch* and *Engliſh* of giving them my Rials at the current Price, in Exchange for Gold; but the Broker acquainted me, that they were ſo far from liſtening to the Propoſal, that they had a great Hand in ſinking the Value of the Rials, in order to ſpoil my Market, and prevent my trading at all. Being diſappointed on that hand, I made my Addreſs to the Orankay *Laxemane*, offering him the Rials at Ten *per Cent.* Diſcount. At firſt he agreed; but next Day when I came with the Rials, he retracted, and ſaid he would give but three Mas and an half for them, ſince they went for no more in the City; finding I could not mend myſelf, I condeſcended to let them go; but after all, when I came to deliver the Rials, he retracted again.

The notorious Perfidiouſneſs of this Nation made me think of leaving them in Time before the bad Seaſon was farther advanced. In the mean time the Officer of the *Alfandeque* ſtopped twenty-one Bahars of Pepper for the King's Duty. It was a great Surprize to me to hear that the King demanded Duty for the Pepper he had ſold me himſelf, eſpecially conſidering that before I made the Bargain, my Interpreter aſſured me he never did. But when I repreſented the Matter to the Orankay, and deſired Acceſs to the King, in order to complain of the Injury done to me, he told me, that I was obliged to pay Cuſtom for it, that the *Dutch* had always paid it, and that ſuch a Complaint would be very diſagreeable to the King; and ſuſpecting that my Interpreter had miſinformed me upon the Matter, would have tied him to a Poſt, if I had not brought him off as one of my Domeſticks.

At laſt I found my Interpreter to be one of the Spies of the *Alfandeque*, and perceived he had diſcovered all my Intrigues to the King's Officers. Though this Fellow was born of Chriſtian Parents, and profeſſed Chriſtianity for forty Years when among Strangers, yet he inſtructed his Children in the *Mohammedan* Religion, a certain Evidence that he was worſe than a true *Mohammedan*, and had neither Religion nor Conſcience. The Duties upon the Pepper that I was obliged to pay were Seven *per Cent* to the King, Ten *per Cent.* of the King's Duties to the Officers, and a Mas for every Bahar to the Weigher. When I paid this Duty to the Officers they ſeized upon the Interpreter, who had made me believe there was none due, and having tied him to a Poſt, beat him ſoundly, and made him pay more than he had got in my Service to get clear.

On the 5th of *May* I could have had Pepper enough for eight Taels and a Quarter in Gold, which, as Rials went then, came to thirty-ſeven Rials and an half; ſo that the Loſs upon Rials was unſufferable. Another Miſchance that galled me mightily was, that their Mas, or Gold Coin, is often clipped by the *Chineſe*, and that there are a great many of a falſe Coin; for at *Achen* they are ſo nice, that if the Edge be but any ways ſhrunk or broke, they will not meddle with it; ſo that in the Payment of any Sum they will return a third Part, or a half. However, I bargained with one Man for three hundred Bahars at thirty-eight Rials the Bahar. The Chapman I dealt with called himſelf *Xerif Nepuen* of *Jeſus Chriſt*; he was a *Mohammedan*, and a great Doctor in the Law of *Mohammed:* He bore the Character of a Prophet, and came to this Place to make ſome Remonſtrances to the King of *Achen*, who was ſo little moved with his Remonſtrances, that he ordered him to keep within Doors, and not to meddle with his Department, ſo that the Oracle was ſtruck dumb all of a ſudden.

When I came to have my Pepper weighed, the Prophet alledged that I bargained with him for thirty-nine Rails, and offered to appeal to the Broker; but I told him roundly, that I had promiſed no more than thirty-eight, and that my Word was as much to be taken as either his or his Broker's. After ſome wranggling he yielded; but when we had weighed about one thouſand two hundred Bahars, I began to perceive ſome black Sand among the Pepper, and returned it; he pleaded for his Excuſe, that ſome of his Domeſticks had mixed Sand with the Pepper without his Knowledge, and though I might have done him an Injury, in regard that the King of *Achen* cuts off their Hands and Feet, without any Mercy, who are found guilty of that Trick, yet conſidering his Credit upon the Place, I was willing to overlook it. After that we continued to weigh till I obſerved the Pepper wet; upon which I ſtopped, and would have no more, alledging only that his Houſe was faulty, and that ſome Rain had fallen upon the Pepper. What ſort of a Doctor or Prophet this may be I cannot tell; but both he and moſt of his Followers ſeem to place their Goodneſs in cheating a Chriſtian, eſpecially about *Achen*.

29. On the 22d one of our Men waſhing himſelf by the Ship's Side, had all the fleſhy Part of his Leg, and both his Hands bit off by a great Fiſh, or Sea-Calf, which the *Portugueze* call Tiburou, and immediately expired. By this Time the Pepper was become very ſcarce; for not only the King continued to buy, contrary to his Promiſe, but an *Engliſh* Veſſel that lately arrived from *Surat*, laden with Cotton-Cloth, trucked their whole Cargo for Pepper, not to mention the *Dutch* and *Engliſh* upon the Place, who, having the Advantage of Gold and Commodities vendible in that Country, ſtill bought it up underhand.

June the 4th there happened a great Fire in the City, which, in an Hour's Time, conſumed two hundred and ſixty Houſes; and the King cauſed the Women in whoſe Houſe it began to be impaled alive. On the 10th I had Audience of the King, and repreſented, that ſince the Pepper was become very ſcarce and dear, I wanted to be gone, and prayed that he would allow me to buy three or four hundred Bahars at *Ticow*. The King replied, that I might have ſome more of his, which he had ſold me at a lower Rate than any body elſe. I told him that his Pepper was ſo dear, and the Loſs upon it would be ſo great, that, if I offered to take it at his Rates, it would diſcourage the *French* from coming again to kiſs his Hands. His Majeſty replied, that the *French* might hereafter make a more profitable Voyage, by bringing Gold, or Commodities vendible in the Country, that being infinitely more valuable to him than Silver, which he eſteemed no more than Dirt. As for the Buſineſs of *Ticow* he made me no Anſwer, neither durſt the Interpreter remind him of it, becauſe he found he did not like the Motion. However, I repreſented to him, that ſince I had no more Buſineſs in that Place, I hoped he would give me Leave to be gone: Upon which he ſaid he would firſt write a Letter to the King of *France*.

On the 15th we had a violent Storm of Wind and Rain from S. W. and W. S. W. commonly for three Days before, and three Days after the new Moon and full Moon. We had heavy Rains and Floods that ſwelled the River mightily, together with violent Guſts of Wind called Samatra. The 19th one of my Merchants died of an uncommon ſort of a Diſtemper, who, in my Opinion, was poiſoned by the *Dutch*. In this Place we loſt fourteen Men, moſt of whom were ſeized with a violent Vomiting and the Bloody-Flux, which no Remedy could ſtop. In Earneſt, this Climate is ſo much hotter than *France*, that one can ſcarce avoid Sickneſs at firſt: But a regular Diet goes a great Way, if not in preventing, at leaſt in abating the Sickneſs. For my Part, I eat little or no Roaſt-meat, but moſtly Fiſh, and drank Cyder, or, for want of that, fair Water firſt boiled, and then cooled. But the unwary Sailors filled their Bellies with Beef, and drank a great deal of Arrack, beſides other Liquors, and when they were out of Order, drank Water, and ſlept with their Stomachs expoſed to the Air; by which means the Stomach being at once overcharged, Vomitings and Fluxes enſued. The Cure for this Diſtemper is to be let Blood, and take ſome cooling Medicines, and to abſtain from Meat, Wine, and Arrack.

The 27th the King ſent his Letter for the King of *France* to our Houſe, with a great deal of Splendor, the Letter being carried upon a great Elephant by one of the principal Orankays; after which followed three of the principal Officers of the Houſe upon another Elephant, with all the Officers of the Aſendague on Foot. Before the Elephant went four Drums and four Trumpets, and four large Umbrellas ſurrounded it. But all this Splendor was to my Coſt; for I was obliged to ſatisfy not only the principal Orankay, who brought the Letter, but all thoſe who accompanied him. The Letter was carried in a Silver Baſon in a red velvet Bag, with gold Strings, being written in the *Achen* Language in Letters of Gold, upon very ſmooth Paper, with ſeveral Gildings and Colourings round it. The Form of it was thus:

"The Letter of the *Grand Siri Sultan*, Subduer and Conqueror, by God's Aſſiſtance, of ſeveral Kingdoms, King of *Achen*, and, by the Divine Favour, of all the Countries that lie to the Eaſt and Weſt; to the Eaſtward the Kingdom, Territories, and Sovereignties of *Dehli*, the Kingdom of *Ichor*, with its Lordſhips and Territories; the Kingdom of *Paham*, the Kingdom of *Queda*, and the Kingdom of *Pera*, with their Lands and Seignories; to the Weſtward the Kingdom and Territory of *Priaman*, the Kingdom and Territory of *Ticow*, the Kingdom and Territory of *Paſſuruma*; to be delivered to the Great and Puiſſant King of *France*. May the King of *France* know, that the Letter he ſent me by Commodore *Beaulieu* was delivered, and that I have ſeen all that was written in it. And foraſmuch as he recommended the ſaid Admiral, I have done him a great deal of Honour, both in the Matters of Traffick, and in allowing him the Quality and Rank of my principal Gentlemen. As for the Offer made me, in caſe I have any Buſineſs in *France*, I ſend a Memorial by the ſaid Commodore, to ſhew how much I eſteem it; ſaying, further, that if God bring this Letter ſafe to hand, I expect an Anſwer by the Ships that ſhall come to trade in this Place, which to me will be a great Satisfaction. So I pray God preſerve the States of the King of *France*. And ſince God hath made us Kings in this World, it ſeems reaſonable we ſhould live in Friendſhip, and correſpond one with another. For a Token of Friendſhip I ſend eight Bahars of Pepper, which is the Product of this Country. God preſerve the illuſtrious Perſon of the King of *France*." Given in the Month *Raab* (or *June*) in the Year 1630.

On the 28th my Goldſmith aſked Leave to ſtay at *Achen*, promiſing to find another to ſupply his Place that would me more ſerviceable than himſelf; and though he could not find one according to his Promiſe, yet, confidering that he was blinded by the Promiſes of the King and the Orankay *Laxamane*, who were mightily taken with his Work, and that he had a great Mind to ſtay, I left him in the *Engliſh* Houſe, wiſhing I had never brought him from *France*, or turned him off ſooner, for the King of *Achen* retarded my Affairs upon the Account of having more of his Work.

50. On the 1ſt of *July* the *Portugueze* Captives and ſome others, having adviſed me to go to an Iſle near *Queda*, upon the Coaſt of *Malacca*, about two hundred Leagues from hence, were I might have Pepper cheaper than any where elſe, *viz.* at ſixteen Rials the Bahar, I reſolved to follow their Advice, conſidering that I had no Proſpect of a Licenc to trade at *Ticow*; that here, at *Achen*, the Dearth and Scarcity of Pepper, the Charge of keeping Houſe, and living on Shore, the coſtly Preſents and Bribes that the King and his Officers expect out of the Profit of the Trade, made it impracticable, that I had no Hopes of ſeeing our ſecond Ship or Advice Boat there, the laſt being gone from me above ſeven Months, and there being no Poſſibility of hearing from *Bantam* or *Jacatra* till *October*, by reaſon of contrary Winds; that the preſent weſterly Winds ſtood fair for *Queda*, and in *October*, when they began to vere to the Eaſt, they would favour my Return. That tho' the King had lately conquered the Place I was bound for, and prohibits all Perſons to go there without his Conſent, yet I might manage it ſo as not to diſpleaſe him, by pretending to be forced in by the Winds which blow right upon it. Beſides, the *French* having no Factory in *Achen*, and he having uſed me unkindly, I had no great Reaſon to fear his Diſpleaſure.

Theſe Conſiderations induced me to reſolve upon a Voyage for that Iſland, where I might live more ſecurely till the weſterly Winds were over, as well as make a better Bargain for Pepper. To this End I reſolved to give two-hundred-and-fifty Rials, by way of Ranſom, for two *Portugueze* Captives, one of whom having been in that Iſland, would ſerve for a Pilot, and the other had been a Merchant at *Pera*. The Number of my Men being reduced by Sickneſs and Detachments, to a ſmall Complement, I likewiſe redeemed ſeven more Chriſtian Slaves for three-hundred-and-ſixty-one Rials, that had formerly ſerved the *Portugueze* at Sea. Some *Engliſhmen* offered to ſerve me, but, not having Leave of their Superiors, I rejected them.

The 15th I had Audience of the King, at which time the *Dabul* and *Surat* Captains preſented their Ladea, *i. e.* a Preſent of the Commodities of their Country, computed to be worth 1500 Rials. After theſe Captains had ſo done, the King aſked me if the King of *France* was ſubject to the King of *England?* I anſwered, that *France* was inferior to none of the Chriſtian Monarchies, having continued for 1300 Years under the Government of their own Kings, without ſubmitting to any foreign Power whatſoever. Upon which he told me he had ſeen a Letter from the King of *England*, in which he aſſumes the Title of King of *France.* But I ſhewed him how ſlender a Right he had to that Title, which proceeded from a Spite that one of our Kings had againſt his Succeſſor. After he had put ſeveral Queſtions about the Grandeur of Chriſtian Princes, I humbly requeſted he would ſuffer me to put into *Ticow* for one Month, in order to buy two hundred Bahars of Pepper, and to ſend a Praw from thence to *Bantam*, to enquire after my two Ships, adding, that ſuch a Favour would be a laſting Obligation upon the *French* Nation. He anſwered me very coldly, that I might diſcourſe that Subject with the Orankay *Laxemane.* This done, I took Leave of his Majeſty, who wiſhed me a good Voyage.

After that I went to wait upon *Laxemane*, who told me that the King had ſworn never to ſuffer any Nation to trade at *Ticow* after the *Dutch*, and that it was a Sign he had no Mind to give me a Licence, ſince he had put it off by ſending me to him: However, I preſſed him to ſpeak to the King about it, and let me have his anſwer. After ſome Time he ſent me Word, that the King would allow me to put into *Ticow* for a Month, provided I gave him half a Bahar (*i. e.* 3200) of Rials. At laſt, being ſo much ovoked by the inſatiable Avarice and Ingratitude of this Nation, that notwithſtanding all my Preſents, gave me ſuch Uſage, I reſolved to ſteer for *Ticow*, and if they would not deal with me in an amicable Way, to ſtop the Ships that were to come from thence, and take out of them what Pepper I wanted, allowing for it the Market-Price at *Ticow:* But if I could not weather the Point of *Ticow*, as it was probable I might not, by reaſon of the violent Winds and Tides from the Weſt, I deſigned to ſail for *Pulo Lancabuy*, or *Pulo Lada* (ſo the Pepper-Iſland near *Queda* is called) notwithſtanding the King had ſent, about two Days before, three large Gallies, and thirty Sail of other Ships to *Pera*, with Orders to return by that Iſland, and cut down all the Pepper-plants.

31. On the 24th having taken in ſeven hundred Bahars of Pepper at *Achen*, I ſet ſail for that Road, which lies in 5° 30' N. Lat. the Needle varying 5° 30' N. W. The 25th we weathered the Iſles of *Gomiſpola* and *Polloway*, which fence in this Road on the North Side. In this Seaſon the Trade-Winds blow S. W. with which I endeavoured to double the Cape of *Achen*, in order to reach *Ticow*, ſteering our Courſe W. N. W. but the Tides ſtill bringing me right before the Wind, I was obliged to ſteer directly for *Pulo Lancabuy*, though the Calms were ſo great that I could not make it till the Seventh of *Auguſt*, whereas it is commonly but four Days Sail with that Trade-Wind.

The next Day after my Arrival, the Pangoulow, or Governor of the Iſland, came on Board, and told me that he would not ſuffer me to trade with the Inhabitants without a Licence from the King of *Queda*, which, he doubted not, but I might have, eſpecially if I aſſiſted him with ſome Artillery. On the 12th the Governor, accompanied with two of my Men, (in lieu of whom he had left me his own Son, with one of the principal Men of the Iſland for Hoſtages) went in Perſon to acquaint the King with my Arrival. At that Time the King of *Queda* had retired from *Queda* to *Perleys*, about three Days Journey farther into the Country, for fear of the King of *Achen*'s Army. The 20th I received a Letter from Sieur *d'Eſpine*, (one of our Company that went along with the Governor) acquainting me, that he underſtood the King of *Queda* had but little Pepper, and that this Iſland had not much. To my infinite Regret I found this Intelligence too true; for I found that we came too late for the laſt Year's Pepper, and too early for that of this Year's, which is not gathered till *December*. *September* the 2d Sieur *d'Eſpine* ſent me Word that he could not come to ſpeak to the King, who had retired into the Woods, under the Apprehenſion that we were employed by the King of *Achen* to do him an Injury; but, in the mean time, he had ordered all the Pepper that could be had to be gathered in, in order to buy ſome Cannon of me, if I would ſell them.

Upon this Advice I ſent poſitive Orders to Sieur *d'Eſpine* to inform himſelf particularly of what Quantity of Pepper might be expected in that Place; and if it was under a hundred Bahars, to return immediately, without troubling himſelf about it; or, if it was above that Number, to ſolicit the King to ſend a Commiſſioner with full Power to treat with me, and that without any Delay. The 9th Sieur *d'Eſpine* returned in Perſon, and reported that the King had but very little Pepper in *Queda*, but had a mighty Mind for my Cannon, offering, if I would ſtay till *December* (which is the Seaſon for gathering the Pepper) to give me twice as much Pepper for my Cannon as I had aſked; and farther, to furniſh me with a thouſand Bahars more if I had occaſion for them; and if I had a Mind to eſtabliſh a Factory there, to furniſh it every Year with 2000 Bahars, and exclude all other Nations from trading in his Territories. The King ſent me a Letter, impowering me to trade freely with the Natives, and deſiring two of my Cannon for thirty Bahars of Pepper, which he ſaid was all he had. In the mean time they had detained my Purſer at *Perleys*, about ſeven or eight Leagues from this Iſland, thinking I would come and lie off of that Place to eſtabliſh a Factory in the ſame: But I underſtood that the Channel between this Iſland and that at *Perleys* was embaraſſed with Shelves and Flats; and at the ſame time obſerved that my Ship did not anſwer the Helm as it uſed to do; upon which I reſolved rather to continue where I was, threatening to ſet ſail with the Hoſtages I had on Board, if they would not return me my Man.

On the Firſt of *October* the Purſer was returned, and I delivered them their two Hoſtages. He reported that the King had only twenty Bahars of Pepper, and deſired to pay the other ten in Rials, at the Rate of twenty Rials a Bahar. That the Country was very poor, and the Rice extremely dear. That upon the Arrival of every Praw the People fled into the Country, thinking them to be the Partizans of the King of *Achen*. That about eight or ten Days before, they had received Advice that ſeventy Sail had Arrived at *Pera*, with the King of *Achen*'s Army on board, and by yet freſher Intelligence that the King of *Achen* was dead. Upon this Report, though I had reſolved not to let them have any Cannon, becauſe I meant to return by the Way of *Achen*, yet I thought fit to amuſe them with fair Words, till I had taken in freſh Water; and with that View ſent back the Purſer to acquaint them that I was very much diſpoſed to deal with them.

That I could not bring my Ship to *Perleys*, becauſe my Rudder was out of Order; and that to ſhew my Willingneſs to oblige them, I was ready to ſend one of my Cannon on Shore, provided they gave me two Hoſtages to inſure the Delivery of twenty Bahars of Pepper within eight Days, or elſe deliver the Pepper itſelf. This Offer pleaſed them ſo well that they ſent me Word there were no Occaſion for giving Hoſtages, or putting a Cannon aſhore till the Pepper was got ready, which would be in ſix or ſeven Days. In this Place I did nothing to the Purpoſe, only I cauſed to be cut down for me a Main-Top-Maſt, a Mizen-Maſt, and Boltſprit, which I could not have elſewhere. If I could have ſtaid there till *January*, I could have loaded my Ship with Pepper at a Quarter of the Price it coſt me at *Achen*, beſides that at that Time the Trade Winds came Eaſt, and ſo would have ſtood fair for returning directly to *France*, but the Men I had were ſo few, and were ſo diſcouraged, that I could not think of waiting.

32. This Iſland, called by the Inhabitants *Pulo Lanchchuy*, and by the Natives of *Achen Pulo Lada*, *i. e.* the *Iſland of Pepper*, lies in 6° 15′ N. Lat. the Needle varying 2° 30′ N. W. It is about fifteen or twenty Leagues in Circumference, and is mountainous in ſome Places, eſpecially where it faces *Pulo Botton*, where it lies three Leagues off to the Weſtward. In the middle of the Country there is a high Mountain, divided into two by a very narrow Valley, which is not obſervable but on the South-ſide. The Pepper grows at the Foot of this Mountain as well as in the intervening Plain, which extends itſelf three or four Leagues in Length. The Pepper Plants are dreſſed after the ſame Manner as our tall Vines. Were this Iſland more cultivated, it would produce many more than it does, for there are not at preſent above an hundred Perſons in the Iſland, whereas formerly it was inhabited by above ſeven hundred.

The Soil of the above-mentioned Place is very convenient for all Sorts of Drugs, Fruit, Rice, and Cattle, being enriched with excellent Paſturage and plenty of Rivers and Springs. The Reſt of the Iſland is covered with very thick Woods, in which, eſpecially upon the Mountains, there are ſome Trees exactly ſtraight, of an incredible Height and proportionable Thickneſs. On the South-Side the Shore is frequently interſected with Arms of the Sea, leaving little Iſlands and Rocks, covered with Woods. On the North there lies a large Iſland about a League off. On the Eaſt it has a Bay, covered with a little Iſland, in which Ships of two hundred Tuns may ride with Safety, and be ſheltered from all Winds. In a Word, there is a very ſafe Anchorage all round the Iſland, and any Part of it affords excellent freſh Water. From the Beginning of *July* to the End of *October* the Winds are there weſterly, at which Time it rains very much, and the Climate is unhealthy, as it happens in all other Places of the ſame Latitude.

33. The Pepper ripens in *November*; its Harveſt is from the Middle of *December* to the End of *February*. At preſent this Iſland produces every Year 500,000 Pound Weight of excellent, large, and dry Pepper, which is preferable to that of any other Place in the *Indies*. This Iſland is ſubject to the King of *Queda*, without whoſe Permiſſion no Trade can be carried on there. The *Portugueze*, who reſide at *Malacca*, come there every Year to trade, and continue there from *December* to *February*. The Commodities they bring are Guzurat Pluſh, Salt, Rice, and a few Rials, which go all of them well off there, by reaſon of the Vicinity of the *Chineſe*, a good Number of whom are ſettled at *Patavi*, a Town ſituated on the oppoſite Coaſt.

They ſell their Pepper by Meaſure, and not by Weight, which is better for the Buyer, ſince, at that Rate, he cannot be ſo eaſily injured by wetting it, or deceived by the putting Stones or Sand into it, as they commonly do at *Achen*. They ſell it by the Nali, which contains ſixteen Gautals, each Gautal containing four Chuppas, fifteen Nali make a Bahar, which is four-hundred-and-fifty Pounds *Averdupois*; ſo that the Meaſure in this Iſland is greater by one quarter than in the King of *Achen*'s Territories. The common Price of a Bahar is ſixteen Rials. The Pepper-Plants grow in a fat free Soil. They are planted at the Root of every Tree, round which they creep and twiſt like Hops. The Way is to take a Shoot or Sprig of an old Pepper-Plant, and Plant it under ſome Shrub, taking care to clean the Ground, and weed out all the Herbs about it; it will bear no Fruit till the third Year, after which it bears every Year ſix or ſeven Pounds weight of Pepper. Its firſt, ſecond, and third Yeras Crops are much at one, but the fourth, fifth, and ſixth decreaſe one third both in the Quantity and Size of the Pepper; and in the ſeventh, eighth, and ninth, the Pepper becomes very ſmall and ſcanty; ſo that after its twelfth Year it bears no more, and a new Shoot muſt be planted in its Room; for the firſt three Years the Ground about them muſt be kept very clean, or they will not bear, and even that requires a great deal of Pains, for the Climate is extremely moiſt, by reaſon partly of the Rains and partly of the Dew, which is ſo great, that if one walks among Trees or Graſs before the Sun-riſing, they will be as wet as if they waded through Water. When the Plant begins to bear, the Branches of the Tree, through which it creeps, muſt be lopped off, leſt they intercept the Rays of the Sun, which above all Things that Plant ſtands moſt in need of. When the Cluſters of this Fruit are formed, Care muſt be taken to ſupport them with Poles, leſt the Weight ſhould draw down the Plant, which of itſelf is tender enough. Care muſt likewiſe be taken that no Buffaloes, or Oxen, or large Animalsi get in amongſt them, leſt they ſhould be entangled among the Branches, and ſo break them.

They muſt be planted at a convenient Diſtance one from another, that one may get round them with a Ladder to prune them after their Fruit is gathered, for, otherwiſe, they would grow too high, and ſo bear leſs Fruit. Commonly this Plant has a white Flower in *April*; in *June* this knots, in *Auguſt* it is large, green, and ſtrong, and the Natives make uſe of it for Sallad, or make a rich Pickle of it, and other Fruits in Vinegar, which they call Achar, and which will keep for a Twelvemonth. In *October* it is red, in *November* it begins to grow black, in *December* it is all over black, and conſequently ripe. This is the moſt general Method, though, in ſome Places it is ripe ſooner or later than in others. When the Fruit is ripe, they cut off the Cluſters and dry them in the Sun, till the Grain falls off from its Stalk, which it does not in leſs than fifteen Days, though the Sun is very hot; and during that Time they muſt be turned from ſide to ſide, and covered up in the Night-time. There are ſome of the Grains that neither redden nor blacken, but continue white, which are made uſe of phyſically, and ſold for double the Price of the other. Of late Years the Inhabitants obſerving that Foreigners wanted theſe for the ſame Uſe, have found out a Way for whitening the black ones, by taking them when they are yet red, and waſhing off the red Skin with Water and Sand, ſo that nothing remains but the Heart of the Pepper, which is white.

By this Account we may perceive the Pepper does not grow ſo eaſily as many are apt to imagine, and that the Pepper-Plants require a great many Hands to dreſs them, which at preſent is mightily wanted in this Iſland, both it and the Country of *Queda* being laid deſolate by the King of *Achen* within theſe three or four Years, inſomuch that the King of *Queda* is now obliged to put himſelf under the Protection of the King of *Siam*. The Inhabitants are *Malayans*, but not ſo crafty and roguiſh as thoſe of *Achen*; their Habit is much the ſame, but not ſo rich. They are very zealous *Mohammadans*, and in their Cuſtoms and Way of Living differ but little from the Inhabitants of *Achen*. They have a Sort of Coin not unlike our *French* Sols, but of a little better Alloy, which they call Tras, and thirty-two of theſe make a Rial. They reckon by Taels, but one of their Taels make four of thoſe of *Achen*.

34. *Queda* is a good marſhy Soil, cut by ſeveral Brooks, taking Riſe from a large River, in which are many large and dangerous Crocodiles. It former Times the Country was well peopled, and abounded with all ſorts of Proviſions, eſpecially Rice and Cattle, and *Queda* was reſorted to by all ſorts of Merchants from *Pegu*, *Aracan*, *Bengal*, *Jerſelin*, the Coaſts of *Coromandel* and *Surat*, beſides the *Portugueze* reſiding at *Malacca*, and even the Merchants of *Achen*. The Cuſtoms and Impoſts at this Place were very moderate, till the Father of the preſent King came to reign, who was a perfidious and cruel Tyrant, and by Divine Vengeance (as the Natives will have it) was carried off in Captivity by the King of *Achen* about three Years ago. This Place, to ſay the Truth, bears ſeveral Marks of Divine Wrath; for about four Years before it was ſubdued, two-thirds of the Inhabitants, amounting to above forty thouſand Souls, were carried off by a Plague. The next Year after that a Murrain ſeized upon the Cattle, and carried off all the King's Elephants, and ſeven-eights of their other Cattle. The third Year there was ſuch a Scarcity of Rice, and all Manner of Fruit, that they underwent a terrible Famine.

The Year after that the King of *Achen*, who always lies in wait to pillage his Neighbours, laid Siege to *Queda*. The City held out three Months, and then the King with his Family and Retinue, conſiſting of a hundred-and-twenty Men, retired to his Palace, which he had fortified, and where he was reduced to the laſt Extremity of Want, till about two Months after that the King of *Achen*'s Officers perſuaded him to ſurrender, by alledging that the King admired him for his Valour, and would certainly reinſtate him in his Throne, if he truſted to his Clemency. This Siege was carried on by the *Achen* Army with a great deal of Vigour, inſomuch that they fought when up to the Middle in Water in Winter; for the King had ſent them word that he would cut them all in Pieces if they did not bring him the King of *Queda*; at laſt, having demoliſhed the City and the Caſtle, they carried the King and his Family, and about ſeven thouſand of the Inhabitants, to *Achen*.

The King of *Achen* gave the captive King a tolerable Reception, till he had drained him and his Friends of all they had; after which he put to Death not only him and his Children, but the principal Men among the other Captives, confining the Reſt to a remote Part of the City, where moſt of them were killed by Miſery and Want, and the ſorry Remainder, amounting to about five hundred Souls, work at preſent in little Huts one half of the Week, for their own Maintenance, ſuch as it is, and the other half in the building the King of *Achen*'s Houſes, and manuring his Grounds. The preſent King of *Queda*, the Son of this miſerable Predeceſſor, was ſhut up with his Father in the Caſtle of *Queda* before it was ſurrendered; but finding that his Father was inclinable to ſurrender, and carry all his Children and Treaſures to *Achen*, to procure a better Reception from the King, he made his Eſcape privately without his Father's Knowledge.

35. On the Twelfth of *October* I weighed Anchor, and ſtood for the Road of *Achen*, in order to try if I could hear any thing of our Ships; ſoon after the Tides carried me upon the Iſles of *Pulo-Botton*, about five Leagues off, where I was obliged to drop an Anchor to keep clear of a Rock. Theſe Iſlands are three in Number, but there are alſo a great many ſmall ones. They are inhabited and covered with Woods, in which there are ſome Trees fit for Maſts of Ships; they afford good Anchorage all round about, and the largeſt of them has good freſh Water upon a ſandy Creek. Next Day we came in Sight of *Sumatra*. The 27th we came within two Leagues of the Iſland of *Pooloway*, and I deſigned to double it, in order to caſt Anchor on the Weſt Side of the Road of *Achen*, where I might eaſily get off, in caſe the King of *Achen* ſhould uſe me otherwiſe than well.

But the Tides were ſo ſtrong, and the Winds blew ſo hard from Weſt and Weſt-North-Weſt, that I was drove above ſix Leagues before the Wind, and obliged to put into a ſmall Creek of Sand about half way between *Podor* and *Achen*. That Evening a Praw came up to me with a Commiſſion from the King of *Achen* to know who I was, whence I came, and whither I was going; for it ſeems the King had heard of a Ship cruizing upon his Coaſt fifteen Days before I came to an Anchor in this Place. By this Commiſſioner I underſtood that a ſmall *French* Ship had arrived in the Road of *Achen* about eight Days before. It happened that the King's Commiſſioner knew me to be the Perſon that had been at *Achen* before, and when he aſked me whence I came, I ordered my Interpreter to ſay, that when I went from *Achen* I was bound for *Bantam*, by the way of *Ticow*, but having loſt two of my Maſts by a Storm, I was forced to put into an Iſland to refit. I deſigned to conceal the Name of the Iſland, knowing that the King would be angry at my going thither without his Leave, and to pretend that I knew not the Iſland, and could meet with no Inhabitants upon it to inform me; but my Interpreter precipitately told him, I had been at the Iſland of *Pulo Lanchobuy*.

Next Day a Praw came on Board with an *Achenman* in her that I knew, and he aſſured me there was a ſmall *French* Veſſel in the Road, and ſome *Frenchmen* that ſaid they belonged to me, adding withal as a Secret, that the King of *Achen* detained them there againſt their Will. In the mean time I ſent my Long-boat on Shore for ſome freſh Proviſions, but the People would ſell none, alledging that the King had prohibited them to ſell without his Command. Upon the Whole, I was apprehenſive that the King of *Achen* might ſtop our Advice-Boat (for I took the *French* Ship in the Road of *Achen* to be it) to prevent their coming to an Interview with me, and thereupon I weighed Anchor, and ſtood for the Road of *Achen*; but the Wind being contrary, and very high, I was forced to come to an Anchor at the Point of a large Bay, and ſent by Land one of the Men I had redeemed at *Achen* in a *Moor*'s Habit, to carry a Letter to the People belonging to the *French* Veſſel in the Road of *Achen*, promiſing him his Freedom if he brought me an Anſwer in two Days; for we were then but four Leagues off *Achen*, and he knew the Way exactly well, for which Reaſon I ſent him aſhore in the Night-Time, ordering him to walk it before Day, leſt any body ſhould meet him, or enquire after his Buſineſs. The next Day a large Ship with *Engliſh* Colours made up to us, and when they came within a Quarter of a League, put out their Long-boat, which brought on Board of me M. *du Parr*, one of the Men belonging to the *Hope*.

36. The State of poor Captain *Grave*'s Affairs, according to *du Parr*'s Report, was as follows: This great Ship was an *Engliſh* Ship of ſix hundred Tons, and thirty-two Guns, and had on board Captain *Grave*, the Captain of the *Hope*, who was very ſick, and not finding me at *Achen*, was going to *Jacatra* to find ſome paſſage for *France*. After the *Hope* parted from me, they came to an Anchor at a long Iſland about twenty Leagues from *Ticow*, and ſent their Long-boat to *Ticow*. Twelve Days after the Departure of their Long-boat they ſtood for *Ticow* themſelves to put aſhore M. *Talier* the firſt Commiſſary, who was then ill; but the Winds and Tide being contrary, they not only loſt the Men in the Long-boat, but even thoſe they had on board were all ſick, except the Captain and five or ſix more. In this diſaſtrous Condition they met with a *Dutch* Ship of one thouſand two hundred Tons, called the *Leyden*, and commanded by *William Schouten*, and Captain *Grave* went on board them to deſire their Aſſiſtance; he was no ſooner on board, but the *Dutch* Captain ſent ſixty Men in two Long-boats to board our Ship, which accordingly they did without any Oppoſition, and not only plundered the Ship, but uſed our ſick Men moſt barbarouſly, turning them out of their Hammocks, and throwing them upon the Deck.

In the mean time the *Dutch* Captain having detained Captain *Grave*, told him both he and his Ship was a good

Prize, and if they met with me, they could ſerve me the ſame way. Some few Days after this they met another *Dutch* Ship that had a great many ſick aboard, and was going to put them on Shore on the Iſle of *Naſſau.* Captain *Grave* deſired his Men might likewiſe be ſet aſhore at the ſame Place for the Recovery of their Health, which indeed they did, but with ſo much Cruelty, that one would think that Nation had neither Humanity, Religion, or Conſcience; for they threw the ſick Men like ſo many Logs of Wood out of the Ship into the Boat, and ſome they dragged through the Water with a Rope faſtened to them, particularly one, who being ſo dragged, expired immediately upon the Rocks on the Shore. In the mean time the Commiſſary of the *Leyden* being ſenſible of his Crime, told Captain *Graves* they were miſtaken, and that upon a Review of his Commiſſion he found he had no Authority to take any *French* Ship, ſo that he was at liberty to return to his own Ship.

Captain *Grave* conſidering that he ſtood in need of their Aſſiſtance, anſwered with a great deal of Complaiſance, that the Commiſſary was not the firſt who had been miſtaken in Matters of as great Conſequence, and deſired he might have ſome of their Seamen to man his Ship; the Commiſſary granted his Requeſt, upon a Proviſo that the Captain ſhould forget what had paſſed, and give ſomething to that Effect under his Hand. Captain *Grave* receiving this Re-inforcement went on board of his own Ship; but the *Dutch* Seamen threatened every Day to throw him and his Crew over-board, and he believed they had certainly done it, if the other *Dutch* Ship, called the *Horn*, had not been in Company: Sometime after they fell in with three *Dutch* Ships near *Selibar* upon the Coaſt of *Sumatra*, one of which having a Flag upon its Maſt like an Admiral Ship, Captain *Grave* went on board of her; but as ſoon as Captain *Grave* was on Board, that Admiral's Ship fired upon his Ship, in order to make them take down their *French* Colours; upon which the Captain ſent back his Boat with Orders to take them down.

This done, they ſailed all together for *Jacatra*, where they arrived in *December*, and Captain *Grave* went to wait upon the *Dutch* Admiral, and deſired he would aſſiſt him with ſome Seamen to conduct his Ship to *Bantam*, purſuant to his Commiſſion. The Admiral promiſed to aſſiſt him, and to allow him to go to *Bantam*, provided he would there buy up all the Pepper he could get at a limited Price, *viz.* two Rials a Sack, and diſtribute two-thirds of it to the *Dutch* and *Engliſh* in that Road. The Captain conſidering his miſerable Condition, was forced to ſubmit, and ſign an Obligation of buying fifteen thouſand Sacks of Pepper, five thouſand of which ſhould be given to the *Dutch*, and five thouſand to the *Engliſh*. In the mean time the Pinnace I had ſent in queſt of him arrived at *Jacatra*, but the Bargain being ſtruck before its Arrival, Captain *Grave* was obliged to go to *Bantam*: Accordingly he went, and arrived there the End of *January*, where the King gave him a welcome Reception, but would ſell him no Pepper under four Rials a Bag.

In the mean Time, the *Dutch*, contrary to their Promiſe, ſent out armed Barks up and down *Bantam* Road, in purſuit of the *Javaneſe*, within Cannon-Shot of their Walls, returned always on Board our Ship the *Hope*, in order to make thoſe of *Bantam* believe, that the *French* gave ſhelter to their mortal Enemies. However, the King of *Bantam* reſented it no otherwiſe than by keeping the Pepper at the firſt Price; upon which Captain *Graves* reſolved to take it at the current Price, and when he had got his Lading to return to *France*; he offered Part of what he had got to the *Dutch*, but they would not have it at that Price: The *Engliſh*, indeed, took 150 Bags of him, but never paid for it. The *Dutch* and *Engliſh* paying him no Money, he had not enough to pay the King of *Bantam* for the 15,000 Bags he had bargained for, and therefore deſired he would let him have only 2000 Bags more; but the King refuſed to let him have any, unleſs he would take all that he had bargained for.

At laſt the Commiſſary of *St. Malo*'s Company at *Bantam* ſupplied him with as much as would compleat his Loading, taking the *Hermitage* Advice-Boat as a Pledge for 1500 Rials in Part of Payment. This done, he reſolved to return directly for *France*, but three Ships that lay juſt by him commanded him to go to *Jacatra*; accordingly he went, and was there ordered to unlade two Thirds of his Cargo, and notwithſtanding that he ſhewed Letters under the *Dutch* Preſident's Hand, importing, that they would not ſtand to the firſt Bargain, yet they arreſted the Captain on Shore, and made ſeven or eight of their Ships ride at Anchor round the *Hope*, and began to unload the Pepper themſelves, through none of Captain *Grave*'s Crew put their Hands to it. In the mean Time Captain *Grave* entered a Proteſt againſt the Injuſtice of the *Dutch*, declaring, that all Damages iſſuing from that Action ſhould be put to their Account. Soon after, in a very dark Night, a Praw was ſeen to come from the Place where the *Dutch* Ships lay at Anchor, and to make up to the Stern of the *Hope*, near which it continued for a little Time, and after that putting off, one of their Men cried out in the *Malayan* Language, that the *Hope* was on Fire; immediately the *Dutch* Ships were ſeen under Sail, having weighed Anchor before, which was a certain Proof that they knew of the Deſign; and when the Preſident of *Jacatra* received the firſt Advice that a Ship was on Fire in the Road, he replied, without any Concern, that he knew it was the *French* Ship. In the mean Time, the *French* Seamen finding the Fire too far advanced to be extinguiſhed, came off in the Long-boat, and abandoned the Ship. Next Morning Captain *Grave* ſent ſix Praws to ſave ſomething in the Ship, but the *Dutch* kept them off, ſo that they ſaved all the Pepper and Artillery, and put them in their own Magazines, and ſold the Hulk of the Ship by Beat of Drum.

This done, Captain *Grave* hearing I was at *Achen*, ſet out for *Achen* in the *French* Commiſſary at *Bantam*'s Pinnace, and the Reſt of the Men came in another Bark; but as ſoon as he arrived there, the Bark, and all that was in it, was ſtopped by the King of *Achen*, and Captain *Grave* being taken ill, and not meeting with me there, took the Opportunity of returning to *Jacatra* by the *Engliſh* Ships above-mentioned. Having heard this fatal Account of our Affairs, I ſent a Boat for Captain *Grave*, and received him on board. *November* the Fifteenth we weighed Anchor, and making the Road of *Achen*, came to an Anchor among five more Ships that were in that Road, in order to be in a Capacity to force the King of *Achen* to deliver up my Men, if he would not do it with good Will.

Immediately upon our Arrival, the King ſent an Eunuch on board to welcome me, and deſire me to come aſhore. I made Anſwer, that I could not truſt myſelf aſhore, ſince the King had impriſoned my Men like Robbers, and ſeized upon the ſorry Remains of a burnt Ship, contrary to what might have been expected, after the Services offered him by the King of *France*, and by me in Particular. The Eunuch replied, that the King took them to be *Portugueze* that had ravaged his Coaſts, and as ſoon as he was undeceived had ſet them at Liberty, and returned them their Money. That it was true he had hindered them from going on board the *Engliſh* and *Dutch*, for fear they ſhould come to any Harm from their mortal Enemies, deſigning to put them into the Hands of the firſt *French* Captain that ſhould have arrived in that Place. To this I anſwered, that the *French* were eaſily diſtinguiſhed from the *Portugueze*, and that though I underſtood the King had returned them ſome Rials, yet he had not returned the Value of 2500 Rials he took from them, in Muſk, Jewels, Bezoar, Coral, and other Things. The Eunuch told me, the King would certainly pay that.

But after all, I gave him to underſtand, I was firmly reſolved not to come aſhore till all my Men were on board, after which, I would come and receive his Commands. Then they demanded the Duties of the King's Chappe, beſides 400 Rials of Anchorage for the King, and 200 for the Officers of the *Aiſandegue*, a late Impoſition laid upon all Ships that ſhould come into that Road; but I told them, I did not come to traffick, and therefore would not pay a Farthing. Sometime after the Chappe returned, and brought all my Men on board; upon which, purſuant to my Promiſe, I went aſhore, when I waited upon the King, who complained heavily that I did not come to ſee him ſooner, and told me that the *Dutch* and

Engliſh had ſpread falſe Reports, in order to exclude the *French* from the Trade of *Achen*. That the Men he had impriſoned were repreſented to him as Robbers and Pirates, but as ſoon as he underſtood they belonged to me, he immediately ſet them at Liberty. That he was afraid the King of *France* might have taken it ill, if he had put his Subjects into the Hands of the *Engliſh* and *Dutch*, who were their mortal Enemies, and that he only waited for the Arrival of a *French* Ship, in which he might ſend them Home. But after all, when I thanked him for ſending the Men on Board, he told me, he had only ſent them to viſit me, but not to ſtay with me, for that they being ſhip-wrecked and loſt Men, belonged to him, into whoſe Port they came.

This, as I took it, he ſaid to prevent me from aſking for what he had taken from them, the Value of which amounted to very near 2000 Rials. However I reſolved to play him a Trick for it, and with that View deſired M. *Limmony* (ſo the firſt Commiſſary of the *St. Malo's* Company at *Bantam* was called) who was now Proprietor in the Pinnace, to retire from *Achen* as ſoon as he could, to avoid the Danger he might incur through the Inſolence and Perfidiouſneſs of the King. But *Limmony* made Anſwer that he had ſome Goods to put off, which would require ſome Time, and he being of another Company, I could not force him to act as I would have had him. Upon this Anſwer I reſolved to put in for a Licence for *Ticow*, and for that Purpoſe I offered Orankay *Laxemane* a Diamond if he would procure it me. The Orankay told me, it might be done, provided I made a Preſent of ſome fine Diamond to the King, who was then paſſionately fond of Diamonds.

I ſhewed him a rough Diamond weighing 12 Grains, which I deſigned for the King, and another cut of five Grains for himſelf. Next Day he acquainted me, that he had ſhewed the Diamonds to the King, but the *Engliſh* having very lately preſented him with large ones, he did not value mine; but after all, that if I could find any extraordinary Rarity, I might certainly obtain my Requeſt. Upon this Advice, I bought of *Periby* the *Portugueze*, who was lately returned from *Maſulipatan*, two Diamonds, one weighing 18 Grains, cut lozenge-wiſe, and very prettily ſet, which coſt me 550 Rials, and another of nine Grains, cut point-wiſe, which coſt me 120 Rials. I ſhewed them to *Laxemane*, who adviſed me to preſent them myſelf; upon which I deſired *Quylin* the Goldſmith, who was my Interpreter, and who uſed to ſpeak very boldly to the King, to acquaint him, that I had ſome Jewels to ſhew his Majeſty, without telling him whether I meant to ſell them or give them to him.

37. Accordingly, after ſome Time, the King ſent for me, and deſired a Sight of the Diamonds he heard I had. I ſhewed him the large one which he looked upon, and when he aſked the Price of it, I told him, it was at his Service, if he would allow me to buy 300 Bahars of Pepper at *Ticow*. His Anſwer was, that if the *Dutch* ſhould offer him 30000 Rials for that Liberty he would not give it them; but to me he would give a Licence of ſtaying at *Ticow* twenty Days, provided I gave him another Diamond like that. I told him I had none ſuch, nor could poſſibly find any. Then he deſired I would preſent him with a Cannon in the room of it, but I begged his Majeſty's Pardon. Upon which he ſaid, all other Nations had preſented him with Cannons, and I ought not to refuſe him. I prayed him to excuſe me, in regard I had ſo many Enemies, and that there were ſome Ships near *Ticow*. He replied, I need not fear the *Dutch* at *Ticow*, ſince they had a Factory at *Achen*, which was more valuable than my Ship. After all, finding he was ſo bent upon the Gun, I agreed to let him have it.

Upon which he called for the Orankay *Laxemane*, and ordered him to give me a Commiſſion to trade at *Ticow*. After that, he began to queſtion me very particularly concerning M. *Limmony*'s Circumſtances, the Force of his Ship, the Value of his Cargo, and at laſt, adviſed me to carry him and his Pinnace along with me, and not leave him expoſed to the Diſcretion of the *Portugueze*, *Dutch*, *Engliſh*, and even the *Moors* themſelves, who would be eaſily tempted to fall upon ſo ſmall a Veſſel; repreſenting, that his Affection for the King of *France* moved him to give that Advice; and that tho' M. *Limmony* was not under my Command, yet out of Reſpect to my Countrymen and Acquaintance, I ought to reſcue them from the Danger they were in. *December* the 5th, having aſked *Laxemane* often for my Commiſſion, and finding he only ſhuffled and put me off, I complained of him to the King who bid me give him a Diamond, as if that had been agreed to at firſt. To make ſhort of my Story, I very ſoon diſcovered that the Orankay *Laxemane* could do nothing, for that the King diſpatched all his Commiſſions himſelf, and that the Deſign of turning me over to him, was to worm out of me another Diamond for the King's own Uſe. On this Diſcovery, I gave him another Diamond that weighed about 6 Grains, and at laſt, after many Stops and Delays, I received out of the King's own Hand a Letter impowering me to traffick in *Ticow* for twenty Days, and ordering the King and Governor of that Place to aſſiſt me in carrying on the Trade of Pepper, for which I was to pay the uſual Duties.

At the ſame Time, the King ordered me to pay the Duty of ſome Goods that I had bought up in order to ſell at *Ticow*, which I thought to have been excuſed from, in regard I meant to put them off within the Territories of the King of *Achen*: However, I was forced to pay it. I had frequently deſired my Interpreter to deſire Reſtitution of the King for what he had taken from my Men, but the Interpreter would not venture to mention it, becauſe he found it was diſagreeable to the King.

After all, I preſſed Orankay *Laxemane* to repreſent my Requeſt to the King, which at laſt he did, and then gave me to underſtand it was in vain to expect it; that the King had a Title to all the Goods of thoſe who were ſhipwreck'd upon his Coaſt, and that the King had been very favourable in delivering the Men themſelves. On the ſixteenth we weighed Anchor, and arrived in the Road of *Ticow*, the laſt Day of this Year. *January* the firſt 1622, I ſhewed the Inhabitants of the Iſland the King of *Achen*'s Letter, who received it with Pleaſure. In this Place I bought above four hundred Bahars of Pepper, which coſt me about 25 Rials the Bahar, including the Charges of my Commiſſion, and the Preſents I made at *Achen*. *February* the 1ſt we weighed Anchor in the Road of *Ticow*, in order to return Home, having on Board 75 Men, all in good Health, and Proviſions for nine Months. But before I proceed farther, I will give here a ſuccinct Deſcription of the Iſland of *Sumatra*.

38. The Iſland of *Sumatra* is larger than *Great Britain*. It extends 11 Degrees in Length, running S. E. and N. W. *i. e.* from the Point of *Achen*, which lies in 5° 30′ N. Lat. to the Straight of *Sunda*, the Lat. of which is 5° 30′, ſo that its Length may be computed 300 *French* Leagues. Its South End is broader than the North, but one with another its Breadth will make about 70 Leagues. The Coaſt for the moſt part lies low, tho' there are very high Mountains within the Country. Its Vallies afford excellent Paſturage, and are fertile in Rice, and all other Fruits. It is watered with many noble Rivers, ſome of which are very great; for Inſtance, *Cinquel*, *Baaros*, *Daya*, *Achen*, *Pedir*, *Jambi*, and *Ripoura*, beſides ſeveral ſmall Rivers and an Infinity of Brooks, by which means it is rendered very moiſt, and in ſome Places marſhy: beſides, it is ſubject to frequent Rains, for the Equinoctial cuts it directly in the Middle.

It bears very large Trees, which retain their Verdure all the Year round. The Air is unhealthy for Strangers, eſpecially near the Equinoctial Line, as in *Ticow*, *Paſſaman*, &c. nay, the very Inhabitants of *Achen* don't care to live in thoſe Places during the wet Seaſon, which laſts from *June* to *October*, and in which the weſterly Winds, mixed with Whirlwinds, Rains, Tempeſts, and ſudden Calms, blow upon the Coaſt. In theſe Calms, the Air being unmoved, and the Ground ſoaked with conſtant Rain, the Sun, by its perpendicular Rays, attracts very ſtinking Vapours, which occaſion peſtilential Fevers, that carry Strangers off in two or three Days, or at leaſt terminate in obſtinate Swellings, and Dropſies. The City of *Achen*, ſituate on the North Point, is more temperate. It ſtands upon a great River, about half a League from the Sea, in the midſt of a great Valley, that is ſix Leagues broad. The Soil is very proper for all ſorts of Grain and Fruit, but the Inhabitants ſow nothing but Rice, which is their principal Food, together with Cocoas, with which the Iſland abounds.

This Place is well ſtored with Fruit-Trees, which bear in their proper Seaſons, for there is not a Month in the Year without ſome ripe Fruit here. They ſow no Pulſe or Pot-Herbs, but they have excellent Paſturage, and Abundance of Buffaloes, which they employ in manuring the Ground, and in drawing, or carrying. They have Plenty of young Kids, and Horſes of a ſmall Breed, but their Sheep are good for nothing. The Peaſants breed up great Numbers of Hens and Ducks, in order to ſell their Eggs. Hunting is a Sport they are much accuſtomed to, for they have an infinite Number of wild Boars, though not ſo large and furious as they are in *France*, and their Stags and Does are larger than ours. They have but few Hares or Roebucks, but in the Woods, and at the Foot of great Mountains, there are Numbers of wild Elephants. Upon the uninhabited Mountains and Hills there are great Numbers of Tygers, ſome Rinoceroſſes, Porcupines, wild Buffaloes, Civet Cats, wild Cats, Monkies, Adders, large Lizards, and in ſome Rivers poiſonous Crocodiles.

The better Half of this Iſland is poſſeſſed by the King of *Achen*. If you go along the Coaſt to the Eaſtward of *Achen*, about 12 Leagues from it you meet with *Pedir*, a large and populous City, and after that *Pacem* and *Dely*; about twelve Leagues to the weſtward of *Achen* lies *Daya*, a conſiderable City, and then the King of *Achen*'s late Conqueſts, *viz. Labo, Cinquel, Barros, Batham, Paſſaman, Ticow, Priaman*, and *Padang*; the other Half of the Iſland is poſſeſſed by five or ſix Kings, who, though they are Lords of very good Countries, yet if you put them all together, they are not ſo conſiderable as the King of *Achen*. Upon the Eaſt-ſide, near the Equinoctial, lies the little Kingdom of *Andrigri*, and beyond that *Jambi*, the richeſt of them all, and a little farther *Palimbac*. To the weſtward of *Padang* lies the Kingdom of *Manimcabo*, and beyond that *Andripoura*. The reſt of the Coaſt extending to the Streights of *Sunda*, is woody and uninhabited; that Part of the Coaſt that faces thoſe Streights is ſubject to the King of *Bantam*.

Thus you have an Account of the whole Coaſt of *Sumatra*, the Inhabitants of which are *Malayans*, ſo that they all underſtand the *Malayan* Language. The inland Parts of this Iſland are inhabited by Aborigenes that ſpeak a different Language from the *Malayans*, and are under the Government of ſeveral petty Kings, of which the richeſt and moſt powerful is one that reſides between *Ticow* and *Manimcabo*, as being poſſeſſed of all the Places where the Gold of this Iſland lies.

It is very certain, there is a great deal of Gold to be found in this Iſland, but the Inhabitants are altogether ignorant of working of Mines, and what they gather is only in Torrents, and little Ditches that they dig in the Places where the Floods diſcharge themſelves. This Gold the Natives truck with the Inhabitants of *Manimcabo* for Rice, Arms, and Cotton Cloth, and with thoſe of *Priaman* for Pepper, Salt, *Surat* Cloth, and *Maſulipatan* Steel. *Ticow*, and the other Kingdoms, they have but little Commerce with. As for Strangers, they have no Dealings with them, but murder and eat them where-ever they catch them, as well as their Enemies; for when they are at War with one another, they never ranſom Priſoners, but eat their Fleſh raw with Pepper and Salt. Though they have no Religion, yet they have ſome Polity relating to Marriage, Juſtice, and their Duty to their King, which they obſerve with an inviolable Reſpect.

39. Upon the Weſt Coaſt of *Sumatra* there are a great many Iſles, ſome of them large, about eighteen or twenty Leagues off, and others but ſmall, about three or four Leagues from the Continent, which do not belong to any of the abovementioned Kings. Thoſe which are inhabited are poſſeſſed by the original Natives, whom the *Malayans* never expelled, becauſe theſe Iſlands were not for their Purpoſe. Upon the South Side of *Sumatra*, in the Latitude of 5° lies the Iſland of *Engane*, inhabited by barbarous Savages that ſpare nobody, but maſſacre all that come upon their Shore, whether white or black. They go naked, with long Hair, and have Canoes, in which they fiſh. Their Arms are Bows and Arrows. Upon the ſame Coaſt, in the Latitude of 31° 30′, lies a long Iſland called by the *Dutch Naſſaw*, which may contain about fourteen or fifteen Leagues in Length, but is not inhabited; about four or five Leagues from this, near the Equinoctial, we meet with another uninhabited Iſland about ſeven or eight Leagues long; then we come to a great Iſland in the Latitude of 1° 30′, called *Montebey*, above twenty Leagues long, the Inhabitants of which are cloathed, and trade with thoſe of *Ticow*, though they ſpeak a different Language.

Under the Equinoctial there are twenty or twenty-five Iſlands, ſome great, ſome ſmall, ſome inhabited, ſome not. Having croſſed the Line, we met with the Iſland of *Pulo Nyas*, in 2° North Latitude, which is fifteen or ſixteen Leagues long, and inhabited by a good ſort of People that hurt nobody, unleſs they be injured, and traffick with the People of *Barros*, and Strangers, to whom they ſell their Children and Slaves. In 3° 30 there are ſeveral other inhabited Iſlands, many of which are covered with Palm-trees that bear Cocoas, which the Inhabitants of the maritime Towns carry off in their Ships, and make Oil of; others are covered with very high Trees, and differ much from thoſe of *Europe*.

To return from the great Iſland of *Sumatra*, and take a circumſtantial View of what it produces, the Kingdom of *Andrigri* affords a conſiderable Quantity of Pepper, but very ſmall. Gold is cheaper there than in any other Country poſſeſſed by the *Malayans*.

The Kingdom of *Jamby* produces a great deal of Pepper, which is much better than that of *Andrigri*. The *Engliſh* and *Dutch* have a Factory in it, as well as the *Portugueze* of *Malacca*. The City, which is very unhealthy, lies fifty or ſixty Leagues up a River, which one muſt row up with a Boat. The Inhabitants drive a great Gold Trade, not only with thoſe of *Manimcabo*, but with the Natives of the Country. The Kingdom of *Polimban* abounds in Rice and Cattle, and affords but little Pepper; it is a pleaſant Country towards the Shore, and is poſſeſſed by the King of *Bantam*. *Andripoura* is ſeated on a rapid River in 3° 30′ South Latitude, and furniſhes every Year two or three Ships Loading of ſuch Pepper as we have in *Jamby*. The Inhabitants trade likewiſe in Gold with thoſe of *Manimcabo*. Next lies that Kingdom which ſhoots into the Country, but has ſome Harbours upon the Sea-ſide, particularly *Cartatinga*, where the *Engliſh* and *Dutch* come often; they have little Pepper, but a great deal of Gold, which is not above thirty or thirty-five *per Cent.* cheaper than in *France*, becauſe they deal with ſo many Countries in that Commodity; they ſell it by the Tael, of which one and a half makes barely two Ounces; it is in Duſt, and ſmall Pieces, for they make but few Bars of it.

As for the Dominions of the King of *Achen*, the Territories of his principal City are not ſufficiently cultivated for maintaining the Inhabitants, ſo that a great Part of their Rice comes from abroad. In former Times it produced a great deal of Pepper; but one of the Kings obſerving they minded nothing elſe, and neglected the manuring the Ground, cut down all the Pepper-Plants, ſo that at preſent it does not produce every Year above five hundred Bahars of Pepper, and that of the ſmalleſt ſort. Six Leagues from *Achen*, towards *Pedir*, there is a high Mountain that furniſhes great Quantities of Sulphur, as well as the Iſle of *Pooloway* in the Road of *Achen*, which ſupplies in a manner all the *Indies* with Sulphur to make Gunpowder. The Territory of *Pedir* being very fertile in Rice, is called the Granary of *Achen*. This Place affords pretty large Quantities of a yellow and hard ſort of Silk, Part of which is by the Natives made into Stuffs that are eſteemed all over *Sumatra*, and the reſt they ſell to the Inhabitants of the Coaſt of *Coromandel*. At *Dely* there is a Fountain of Oil, which is ſaid to be unextinguiſhable when once it is ſet on Fire, and with which the King of *Achen* burnt two *Portugueze* Galleons near *Malacca* about eight or ten Years ago.

Daya abounds in Rice and Cattle; *Cinquell* affords every Year a large Quantity of Camphire, which the Inhabitants of *Surat*, on the Coaſt of *Coromandel*, buy up very eagerly, for fifteen or ſixteen Rials the Catti, or twenty-eight Ounces. *Barros* is a pleaſant Place, ſeated upon a pleaſant

River, in an open and well cultivated and champaign Country, about a League from the Shore. The Benjamin of this Iſland is much eſteemed, and ſerves the Inhabitants for a Meaſure in all their Bargains, for they have no other Money. This Place affords likewiſe Plenty of Camphire. The Camphire of *Batabam* is reckoned the beſt, but there is very little of it. *Paſſaman* ſtands at the Foot of a very high Mountain, that may be ſeen in a clear Day thirty Leagues off. It has excellent large Pepper, being the firſt Place on this Coaſt where we meet with Pepper-Plants. Seven Leagues from this Place ſtands *Ticow*, which is yet more fertile in Pepper. *Priaman* has not ſo much Pepper, but has a better Air, and very well peopled, and plentifully furniſhed with all ſorts of Proviſions, and drives a great Gold Trade with the Inhabitants of *Manimcabo*. The *Dutch* had a Factory there for a long time, but the laſt Year the King of *Achen* expelled them. *Padang* has little Pepper, but deals pretty much in Gold, and has the Conveniency of a fine River, where great Ships may come up and ride ſafely. All theſe Places are well peopled and cultivated, and ſome of the Inhabitants are rich, and live happy, by virtue of their Remoteneſs from the tyrannical Court of *Achen*.

40. The Inhabitants of *Achen* are a worſe ſort of People than thoſe of *Ticow* and *Priaman*, and the other Places along the Coaſt; they are proud, envious Men, of no Faith or Conſcience, eſpecially in their dealing with Chriſtians, treacherous, and given to Robbing and Poiſoning. They deſpiſe their Neighbours, and take all other Nations but themſelves to be brutal; they are very prodigal in their Cloaths, and would be the ſame in their Houſes, Slaves, and other things, if the King did not cramp them. They ſpeak well in their own Language, and ſome of them ſet up for Orators. They are very fond of Similies, and happy enough in applying them; but the Frequency with which they uſe them would be nauſeous and impertinent in any other Country. They compoſe ſome Poems and Songs, and apply themſelves to Writing, and the *Arabian* Arithmetick, which differs but little from ours. Some of them are very good Mechanicks, eſpecially for the building of Gallies, and they make all ſorts of Iron-work as well as any where elſe, though they do not work with the ſame Facility and Dexterity as the *Europeans*. They work very well in Copper and Wood, and ſome of them are ſkilled in caſting of Artillery.

The King entertains three hundred Goldſmiths in his Caſtle, beſides a great many other Artiſans. Since this King came to the Throne, the Subjects of *Achen* have got the Name of the beſt Soldiers in *India*; for they endure Fatigue wonderfully, and are excellent Pioneers, as appeared in the Sieges of *Queda* and *Dely*, the laſt being a Place of great Strength, fortified by the Aſſiſtance and Contrivance of the *Portugueze*, and defended by a Perſon of great Valour and Reputation, which nevertheleſs the King of *Achen* took in ſix Weeks Time, by cutting Trenches, and gradually advancing them. They live very ſoberly, and for the moſt part upon Rice, to which the richer ſort may add a ſmall Matter of Fiſh, and a few Herbs; and he muſt be a great Lord indeed that in a Day's Time eats a Hen boiled or broiled upon the Coals. It is a common Saying among them, that if there were two thouſand Chriſtians in that Country, all their Beef and Fowls would quickly be conſumed. They pretend to be very ſtrict *Mohammedans*, but are great Hypocrites and Diſſemblers, eſpecially in their Reſpect to the King, whom they would ſee hanged if they could. If they ſuſpect, though without Reaſon, that any one does not love them, to prevent his being in a Capacity to miſrepreſent them to the King, they'll form an Accuſation againſt him before the King, and it is the Frequency of theſe Accuſations that makes the King ſo cruel; foraſmuch as it perſuades him that there are more Conſpiracies againſt him than there are.

In fine, they are ſuch a wicked ſort of People, that it is a common thing among them for one Brother to accuſe another, or the Son the Father, and if you charge them with Inhumanity, and Want of Conſcience, upon that Score, they'll tell you that God is far from them; but the King of *Achen* is near at hand. Purſuant to the Law of *Mohammed*, they marry as many Women as they are able to maintain, one of which is entitled to a Preference before the reſt, her Children being reckoned the lawful Heirs. They ſuffer their Slaves and Concubines to go abroad, but not their Wives; if a Man marries a young Woman, he commonly pays ſome Money for her to her Relations, and allots her a Jointure upon his own Eſtate. If a Woman has any thing of her own, ſhe lodges it in the Hands of her Huſband, and takes from him a Note, entitling her to the Recovery of it in caſe of Separation, or bad Huſbandry; and if the Huſband dies firſt, this Note, together with the Jointure ſtipulated in the Contract of Marriage, muſt be firſt ſatisfied out of the Goods of the deceaſed, to the Prejudice of all Creditors; if the Woman dies firſt, the Huſband is entitled to all that ſhe brought him. Man and Wife may ſeparate when they will, provided they both agree to it; but the Conſent of one Party is not ſufficient. In *Achen* Uſury is prohibited, and the Intereſt of Money is limited to twelve *per Cent*, *per Annum* without Pledges, whereas in *Bantam* they will give five *per Cent*. a Month, and a Pawn beſides. If the Debtor refuſe to pay, he is cited before a Court of Juſtice, where, if the Debt be made appear, he is condemned to pay it in a little time; and if he does not pay it in the appointed Time, he is cited a ſecond time, and muſt either pay it in Court, or elſe have his Hands tied behind his Back with a Wyth, in which Poſture he continues (for nobody dare to untie him) and is obliged to appear before the Court every Day that it ſits, till he ſatisfies the Debt. At laſt, if the Judge perceives that he appears every Day, and is not capable of ſatisfying the Debt, he delivers him up to the Creditor to ſerve him as a Slave, impowering the Creditor to carry him home, or ſell him, or to do with him as he pleaſes, ſo as he does not put him to Death.

This Court ſits every Morning, except *Friday*, under a great Bali near the great Moſk, and one of the greateſt and richeſt Orankays preſides in it. Under another Bali, by the Caſtle Gate, there ſits the Criminal Court, in which ſeveral of the principal Orankays preſide by turns. Under the Cognizance of this Court are all Quarrels, Murders, Robberies, *&c.* committed in the City. Any Criminal may be ſtopped, or taken up, by a Girl or Child of four or five Years of Age; for whenever Hands are laid upon him, he dares not but ſtand like a Statue, and ſuffer his Hands to be tied, in order to be dragged before the Court, where Juſtice is immediately put in Execution. I have ſeen great lazy Scoundrels dragged in that Faſhion by little Children, and condemned to receive Laſhes of a Wyth upon the Shoulders, for ſtealing the Value of a Farthing. After the Execution is over, neither Criminal nor Informer dare complain; nay, ſometimes they return together equally unconcerned. I ſaw a Man tried there for having peeped through a Hedge to ſee his Neighbour's Wife waſhing herſelf, and condemned to receive thirty Laſhes upon the Shoulders; but after the Sentence was pronounced, the Criminal capitulated publickly with the Executioner, and after ſome Words gave him twenty Meas in open Court, in Conſideration of being only whipped above his Cloaths.

It is a common Cuſtom in that Place to bargain with the Executioner for mitigating the Puniſhment; for there is never a Day but the King orders a Noſe, Eye, Ear, Hand, Foot, or Teſticle to be cut off from ſomebody or other; and upon theſe Occaſions the Executioner gets Money for doing his Buſineſs handſomely, and with little Pain; for if the Criminal does not come up to his Price, and pay him in ready Money upon the Spot, he will cut the Noſe, for inſtance, ſo deep, that the Brain may be ſeen through the Wound, or mangle a Foot or a Leg in two or three Pieces, *&c.* In all theſe cruel Mutilations, and even Gelding itſelf, ſcarce any one dies, though ſome of the Perſons thus maimed are above fifty or ſixty Years of Age; and the only Remedy they uſe is, to put the wounded Part immediately into Water, and after it has bled a little, waſh it and bind it up with Linen Cloths. After a Criminal has thus ſuffered Juſtice, whether by the King's Command, or by the Judge's Sentence, all the Ignominy of his Crime is wiped off, and if any one upbraids him with it, he may kill him with Impunity.

There is another Court, in which the Cady or Biſhop preſides, that takes Cognizance of all Infringements upon their Religion. In the Alfandague likewiſe there is a Bali for determining Differences among Merchants, whether Natives or Foreigners, the Preſident of which is the Orankay *Laxemane*, who in a manner governs the whole City. In this Alfandague they keep an exact Account of all the Cuſtoms, Gifts, Fines, and Commodities belonging to the King, with a particular Liſt of all the Perſons Names that buy of the King, or pay the Duty, or make him Preſents, to the end they may be capable to give his Majeſty a ſatisfactory Account how every thing is diſpoſed of; for if their Accounts be perplexed they can expect nothing but Death. Beſides theſe, there are four Officers called Pangoulow Cavalo, who take Cognizance of all Things done in the Night-time, ſuch as running the Goods without paying the Duty, Robberies, &c. Each of theſe has a Quarter of the City under his Juriſdiction. Farther, each of the Orankays hath a Province or Country-Diſtrict under his Juriſdiction, where he gives Orders, and adminiſters Juſtice to the Inhabitants.

Some of the principal Orankays reſiding near the City, are obliged to give Orders for a Watch of two hundred Horſe that patroles every Night in the Country and along the Shore. As for the Caſtle, or King's Palace, the inner Part is filled with three thouſand Women, which he keeps partly for a Guard, and partly for other Uſes. Theſe Women come ſeldom out of the Caſtle. They have a Market-place of their own, and traffick with one another in ſuch Manufactures as they make. They are ranged under ſeveral Captains, and have their Civil Judges, and Night-Officers as well as the City. None are allowed to enter into their Apartments but the King's Eunuchs, who are ſaid to be in Number about five hundred. Beſides theſe, the King has a great many Wives and Concubines; and of theſe his Wives, twenty are the lawful Daughters of the Kings whom he has pillaged. The laſt Wife that he had by ſuch Means was the Queen of *Pera*, who is ſaid to be very handſome, and from whom he contracted a Diſeaſe that is likely to carry him off, unleſs the Vigour of his Age, which is now in its Prime, be able to overcome it.

By all theſe Wives be has but one Son of eighteen Years of Age, who is yet more cruel than himſelf. This Prince has only the Quality of a ſimple Orankay, and is always confined to the Caſtle, except when he goes to the Moſque, and then he has a pompous Retinue. Some time ago his Father gave him the Inveſtiture of the Kingdom of *Pedir*; but his Government was ſo cruel and licentious, that the King called him home, and put him to ſtrange Torments; from which Time he hath ſtill kept him with himſelf. In the great Court, where the King's Apartments are, the Eunuchs keep Guard; beſides which there is a Guard of an hundred and fifty Slaves at one Gate, and another of the like Number at the outer Gate of all. Theſe Slaves are moſtly Foreigners, taken in young, and bred up in the Exerciſe of Arms and Shooting. They are confined within the Caſtle, and allowed to converſe with no body; ſo that the King makes uſe of them to over-awe his own Subjects, and fright them from treaſonable Deſigns. All the Puniſhments inflicted in the Caſtle are put in Execution by theſe Slaves.

To put the Orankays in the Cuſtody of thoſe Slaves, he ranges them in three Companies, one of which is obliged to keep Guard in the Caſtle Day and Night, without Arms, in a Court ſurrounded by Slaves; ſo that every third Night every Nobleman comes upon Guard; and if any ſuſpicious Plot ſhould be diſcovered, the King has always a third Part of his Nobility in his Hands. If any of the Orankays fail to obſerve the third Night, he undergoes the Loſs of his Life, together with the Confiſcation of his Goods, Wives, Children and Slaves. The Orankays dare not converſe familiarly, or have frequent Interviews one with another, for the King ſuſpects all Familiarity among them; ſo that they never converſe together, unleſs it be upon an accidental Rencounter that they ſalute each other with a great deal of Complaiſance. Whenever they, or any body elſe, enter the Caſtle, they are obliged to take off their Sword, and put it into the Hands of the Guard at the ſecond Gate.

41. The City of *Achen* is more like a Village than a City, being an open Place without Walls, and the Caſtle is no more fortified than any ordinary Gentleman's Houſe. It has about half a League in Circumference, of an oval Figure, ſurrounded with a Ditch of twenty-five or thirty Feet deep and broad, the Banks of which are almoſt inacceſſible, by reaſon of their Steepneſs, and being covered by Thickets. Before the Caſtle the Earth is caſt up in Banks, which ſerve for a Wall. On the Top of this Bank there grow a great many large Reeds as tall as Aſh-trees, and planted ſo thick that one cannot ſee through them. It is preſent Death for any one to touch the leaſt Branch of theſe Reeds; for the King of *Achen*'s Embaſſador to *Holland*, upon his Return home, having forgot this Order, and unluckily pulling off a ſmall Twig, was immediately put to Death. Theſe Reeds enjoy a perpetual Verdure, and cannot be ſet on Fire. I could obſerve no Planks or Baſtions round the Caſtle, but upon the Side which faces the Moſque; I ſaw the Beginnings of ſeveral Ramparts, but nothing yet finiſhed. Before the Gates there are neither Ditches nor Draw-bridges, but on each Side of every Gate there is a Stone-wall about ten or twelve Feet high ſupporting a Terras, on which a Couple of fine Braſs Guns are planted. The Gates are as high as the Wall, and are made of a ſtrong ſort of Wood, being ſhut on the Inſide with two great Croſs-bars fixed in the Wall, beſides other Bolts. Through the Middle of the Caſtle there paſſes a ſmall River, that deſcends from the Mountains, the Water of which is very cool and agreeable. Upon the Banks of this River there are Steps for People to go down and waſh themſelves.

Before we come to the King's Apartments we paſs four Gates, from one of which there runs a high Wall, backed with a Terras, with ſeveral Braſs Guns upon it, within which, as I take it, is the King's Arſenal. This Rampart incloſes Part of a very long Court fronting of the Houſes, in which I have ſeen three hundred Elephants at a time. The other Part of this Court is incloſed by four great Pavilions, and a ſort of a Stone Rampart, which commands the Terras, being fortified with a Parapet. As for the inner Part of the Caſtle, I can give no Account of it, being denied Acceſs. To conclude, the Fortifications of this Place are inconſiderable, but its Avenues are very difficult, for the Country about it is full of Rivers, Marſhes, Trees, and very cloſe Thickets. Where the Rivers enter the Caſtle, there is a Stone-Fort, conſiſting of a large Baſtion and two Courtines, with ſeveral Guns mounted upon them. Upon the Land-ſide theſe Courtines are joined by a Rampart made of Turf, in which there is a Gate, but without either Ditch or Draw-bridge, theſe being wanting to the whole Fort. The Walls both of the Baſtion and Courtines are eighteen Feet broad and twenty Feet high. Before this Fort the King has a Pleaſure-houſe, by which there are ſeveral Fiſh-ponds and pleaſant Walks, the whole being incloſed with an Intrenchment made of Turf, the Breaſt of which is ten or twelve Feet high, and moated about, where two or three thouſand Men may lie. Before this Intrenchment is a ſmall Fort, covered with Thickets, and ditched about, upon which there are ſeveral Pieces of Cannon.

The Country round all theſe Forts is ſo full of Marſhes, Ditches, and Trees, that they call Nippiers, that it is almoſt impracticable to march through it. Paſſing Eaſtward from the Caſtle along the Shore, we met with ſeveral little Forts of Turf, ſurrounded with Thickets, and placed at a Muſket-ſhot Diſtance one from another; on each of which there are two or three Pieces of Cannon, but ſo covered with Buſhes that they are not viſible. In theſe Forts there is no Guard by Day, but in the Night-Time the Horſe-watch, as before-mentioned, patrole round them; the Weſtern Shore is more acceſſible and deſtitute of Forts. About a Piſtol-ſhot from this Shore is a Canal above forty Feet broad, and very deep, that riſes out of the great River, and runs along the Shore to the Side of the Mountains. Having paſſed that, we met with a plain open Country, free from Ditches and Trenches.

It is computed that *Achen*, and the adjacent Places in that Valley, are able to raiſe 40000 Men; but they have no Fire-Arms or Powder, for the King keeps thoſe up in the Caſtle, as well as his Artillery. That Prince has above two thouſand Braſs Guns in his Gallies, Forts, and two Houſes, where they are heaped one above another. He is likewiſe well furniſhed with Firelocks; but they are ſhort, and ill mounted.

But his greateſt Strength he places in 900 Elephants, which are bred to tread Fire under their Feet, and to be unmoved at the Shot of a Cannon; and likewiſe to ſalute the King when they paſs by his Apartments, by bending their Knees and raiſing their Trunks three Times. The King gives a Name to each Elephant, and confers many Honours on ſuch of them as are moſt ſtout and docile, for he orders Umbrellas to be carried before them as they paſs the Streets, for ſome ſix, for others four, and for others two, in Proportion to their Merit. Now there is not a Man in *Achen*, beſides the King, that is allowed the Privilege of an Umbrella. He matches the Male Elephants with their Females, and to ſome that are deareſt to him, he allows ſeveral Concubines. The Elephants that the King commonly makes uſe of, have a great deal of Honour paid them, for as they paſs along every body ſtops and makes Way for them; for which Purpoſe a Boy goes before them with a copper Inſtrument in his Hand, with which he makes a Noiſe to give the People Notice. When the Oil drops from their Ears they are furious, and it is not ſafe to come near them; and at that Time the Boy runs above two hundred Paces before them, to give the People earlier Notice, for they will ſteal upon a Man ſtrangely; and notwithſtanding their huge Bulk, make no more Noiſe when they walk than a Rat; though, at the ſame time, upon that marſhy hollow Ground, the Trot of a Horſe makes the Earth in a manner tremble.

Sometimes the King is out of Humour with his Elephants, as well as with his Subjects, and ſhews his Diſpleaſure by robbing them of their Wives, Concubines, and other Honours, and inflicting corporal Puniſhments in the Preſence of the reſt; for exemplary Correction has the ſame Influence upon them as upon Men, as appears by the following Inſtance. The King having ordered the Embarkation of an hundred Elephants for the Siege of *Debly*, when the Elephants were brought down to the Shore, not one of them would enter the Ship. The King being acquainted with the Matter (which ſome took to be an ill Omen) came in Perſon to the Shore, and having checked and chid them with a great deal of Paſſion, and upbraiding them with the Breeding and Honour he had beſtowed upon them, cauſed one of the principal Elephants to be cut in two before their Eyes, threatening the reſt with the ſame Uſage if they did not embark immediately. This done, they embarked very peaceably, and were extreme tractable during the whole Voyage.

There never was a Prince in *Achen* that had ſuch a Dexterity in managing theſe Animals; he will ſtand upright upon their Backs while they run a full Speed: For my part, I had rather run ten Stages on Foot than ride four Leagues upon an Elephant, for it is a very uneaſy Poſture to thoſe who are not accuſtomed to it, eſpecially if one ſits behind, for the Forepart of the Shoulders is the ſofteſt. When the King was well, he uſed to hunt every other Day. In his Stables he has about two hundred Horſes, fifty of which might be worth five hundred Crowns apiece in *France*. All of them have rich and magnificent Trapping.

42. The King of *Achen* is ſtronger by Sea than any of his Neighbours, for he has about an hundred great Gallies, of which a third Part is much larger than any we build in Chriſtendom. I ſaw the Keel of an ordinary one that was an hundred and twenty Foot long, all in one Piece. They build their Gallies very prettily in that Country, but they are too heavy, for they are broader and higher than they ought to be; beſides, their Rigging is too weak for their Bulk. Their Oars have neither Length nor Weight ſufficient, being only Poles, with a Piece of Board at one End. They put but two Men to an Oar, who ſtand upright when they row. Their Sails are not made like Mizen-Sails, but ſquare, like thoſe of a Ship. The Sides or Planks of theſe Gallies are ſix Inches thick; ſo that conſidering their Dulneſs, one of our *European* Gallies might beat ten of them.

They have commonly three good Pieces of Cannon, of which that planted in the Bourſey is not leſs than a Battery-Gun; for ſome of them will carry a Bullet of forty Pound: Beſides theſe they have ſeveral Falconets, which they plant before and abaſt. The largeſt Gallies have commonly ſix or eight hundred Men. Their Crew conſiſts not of Slaves, but of poor People, that row very well. The King's Wars are not very chargeable to him, for all his Subjects are obliged to march at his Command upon their own Charges, and carry Proviſion with them for three Months. The King gives them Arms, of which a Regiſter is kept, they being obliged to reſtore them at their Return. Their Wives, and Children, and their Parents, if they have any, are anſwerable for their Behaviour; for if they ſhrink, or give way before the Enemy, not only themſelves, but theſe, their innocent Relations, ſuffer for it. By this means the King has brought them to be good Soldiers, and the Terror of their Neighbours. If they continue above three Months in the Field, the King is at the Charge of Rice to maintain them.

His Gallies coſt him as little as his Land Armies, for he divides them among his principal Orankays, obliging them to fit them out, take care of them when they return, and repair them at their own Charges, and orders a certain Number of People to be ready upon the Command of ſuch and ſuch an Orankay, to aſſiſt at theſe Services. The Orankays are very careful of the Gallies, for if theſe fail, they either loſe their Lives, or build new ones in their room. For that reaſon, when the Gallies come into the River to be laid up, they cleanſe the Dock very carefully, and then lay great Pieces of Wood acroſs it, which are ten Feet diſtant from one another, and lie upon an exact Level, leſt the Gallies ſhould bow when they lie upon them. When the Tide comes in the Elephants draw the Gallies up upon theſe Sommers, which lie above ten Feet from the Ground, that they may get underneath to view and caulk the Ship's Bottom. This done, they run a Dyke of Turf, Stone, and Planks between it and the River, and then fill the Dock with Water, to the upper Surface of the Sommers; this they do, that the Gallies may be refreſhed by the Water, but ſo as not to dip into it, leſt Sea-Worms ſhould breed in them. Having laid up the Sails and Rigging, they cover the Maſts very carefully with Palm-tree Leaves, ſo that neither Rain nor Sun can hurt them; beſides, they have a great Roof that they bring entirely over the Galley: After that, they put Water into it, to the Depth of four or five Feet, to keep the Planks freſh, and prevent their being ſplit by the Heat.

All this is done in five or ſix Days, and one cannot imagine how well they preſerve the Galley, and how readily they launch it again: For, the Dock being full of Water, there is no Occaſion for caulking, and the Rigging is at Hand, and the Roof is taken off in a Minute. The Water in the Galley being thrown out into the Dock, augments the Water there, which ſets the Sommers afloat, ſo that they are eaſily removed; upon which the Water ruſhing into the River, carries the Galley along with it. Every Morning and Evening, upon the opening and ſhutting of the Caſtle Gates, the King cauſes a Gun to be fired, and if any of the neighbouring Kings ſhould offer to do the like, he would declare War againſt him, alledging, that being the Inventor of that Cuſtom, he has a Right to engroſs it, as a Mark of his Grandeur: He prohibits the ſhooting of Muſkets, or Firelocks, in the City, on any other Days but *Mondays* and *Thurſdays*.

43. From what has been ſaid, it is manifeſt, that this King cannot but be very rich, for in War he is only at the Charge of Arms, Powder, Lead, and Rice, which is very inconſiderable, and in Peace he ſpends yet leſs; for as to the Maintenance of his Family, he has more Rice, Fleſh, Fiſh, Fowl, Oils, Sugar, and Herbs, paid him by his Subjects, than is conſumed in the Caſtle, and the Surplus is ſold in the Market for his Advantage: Beſides, he allows his Servants nothing but Rice; if they eat any thing elſe, they muſt purchaſe it by their own Labour and Induſtry. He amaſſes together great Quantities of Rice

every Year; for, having large hereditary Countries, he parcels them out among his Subjects to be manured, obliging them to furniſh him with a certain Quantity of Rice every Year, whether the Crop be good or bad, and he calculates the Product of his Land ſo very nicely, that the Farmers cannot be idle if they maintain themſelves, and pay the King, who never bates them a Grain. The Rice he puts into his Magazines, and keeps it up till the latter End of Autumn, at which Time it fetches a double Price, and drains all the poor People of their Money; if it be a plentiful Year in *Achen*, he ſends it to ſome neighbouring Country where Rice is ſcarce.

He has vaſt Herds of Cattle kept by his Slaves. His Elephants coſt him nothing, for he gives them no Rice, only the Trunks of *Banana* Trees, which being cut, a Sprout comes up next Year that bears Fruit. As for his Cocks, they coſt him nothing, for the Orankays take more Care of them than their own Children. He is at no Charge for his own or his Womens Cloaths, for one certain Day of the Year, all that have any Offices, or Places in *Achen*, are obliged to make him a Preſent of one or more Garments, according to the Incomes of their Places, or elſe of Stuffs for cloathing the Women, and every one ſtrives to out-do another in the Magnificence of his Preſent, in order either to procure a better Place, or to ſecure what he has. If he does not like the Garments, or Stuffs, he returns them back, and the Officer that gave them is ſure to be turned out of his Poſt, unleſs he quickly accommodates the Matter by a large Sum of Money; or if he be a Man of Riches, he ſhall be charged with ſome Male-Adminiſtration in his Office, and perhaps put to Death.

He cauſes a great many Houſes to be built of rough Stone, which coſt him but very little, though they would be very chargeable to another, becauſe he has ſuch large Numbers of Slaves. Though theſe Houſes are reckoned inimitable in that Country, yet they are infinitely ſhort of what we have in *Europe*. His Slaves indeed have a better Life than any Slaves I know, for he does not chain them, unleſs they endeavour to eſcape, or to rebel againſt their Maſters; and out of eight Days he allows them four to work at what Work they will for their own Livelihood; and thus the King pays nothing for their Maintenance. He employs them moſtly in cutting of Wood, making of Mortar, labouring in the Quarries and Buildings. There are three or four Overſeers of their Work, who are maintained by the Slaves; for thoſe who underſtand any Trade may live very handſomely, and be excuſed from working for the King, for Five-pence a Day, which is received by Commiſſaries appointed for that Purpoſe, and goes towards the Maintenance of the Overſeers, the buying of Iron, and all other Materials.

The King gives the Model of his Building himſelf, and very often, if a Window, or a Door, or any ſuch Thing be not exactly to his Fancy, down goes the Houſe, and another muſt be built in its Place. He appoints them a certain Time in which the Work muſt be finiſhed, which is commonly but very ſhort; for in the ſix Months that I was at *Achen*, I ſaw more Buildings reared up and pulled down again, than I could have imagined to have been done in two Years. Theſe Slaves may redeem themſelves, but their Ranſom riſes according to their Quality. The King is Heir to all his Subjects that die without Male Iſſue, and if they leave any Daughters then unmarried, he puts them into the Caſtle, which occaſions his Women to be ſo numerous. In that Country, Daughters have no Titles to any Heritage; and not only the People of *Achen*, but even all the *Mohammedans* are ſo loath to part with their Money, and ſo buoyed up with the Hopes of having male Children by one of their many Wives, that they ſeldom or never give any Thing to their Sons-in-Law in their Life-time, and after their Death they cannot have it; nay, even in their Life-time, if the King's Spies obſerve them, it may do them more Injury than Good.

The royal Treaſury is likewiſe conſiderably enlarged by the forfeited Eſtates of thoſe whom he puts to Death every Day; for to prevent their alienating their Eſtates, or Goods, he takes them at a Surprizal, and has their Wives, Children, Slaves, Cattle, Money, and all ſorts of Moveables lodged in the Caſtle before they know their Sentence. While I was there, I ſaw the Jewels, Gold, Silver, and all the moveable Goods belonging to his Mother, brought in upon the ſame Occaſion. The Perſons he thus puts to Death, are commonly the Orankays, or great Lords, and that for one of theſe two Reaſons, *viz.* either their Reputation and Intereſt among the People, or their Riches; the former giving him Occaſion of Jealouſy, and the latter awakening his covetous and avaricious Temper.

The King is Heir to all Foreigners that die within his Territories; for as ſoon as a Foreigner ſickens, the King's Officers preſently take Poſſeſſion of his Houſe, and upon his Death remove his Effects to the Caſtle, and very often his Servants, Friends, and Slaves, are put upon the Rack; to diſcover where his Gold, Silver, and Jewels are, or where any Thing is due to him; but the *Engliſh* and *Dutch* having Factories here, are exempted from this Law, as we were, while we ſtaid there, by the King's Conceſſion. The King has another bad Cuſtom of appropriating to his own Uſe all the Men and Goods of all Ships that ſuffer Shipwreck upon his Coaſt. No Foreigner can enter the Caſtle without making a Preſent to the King; it is true I went without any, being allowed the Quality and Privilege of a principal Orankay, but at the ſame Time I never could have Audience upon my own Affairs, but when I uſhered it in with a Preſent; nay, if either Foreigner or Native put in any Requeſt to the King, the former is not heard, and the latter is puniſhed; and after all, the Requeſt will not be granted, unleſs the Preſent be liked; for I have ſeen the *Dutch* and *Engliſh* Preſents frequently returned, and in that Caſe they were obliged to make more valuable Gifts, ſuch as would pleaſe the King, before they obtained their Deſire. No Foreigner can enter the King's Chamber without the Chappe, for which he pays a Rial to the Officers that bear it.

When a Ship comes into the Road of *Achen*, none of their Crew muſt go aſhore till the Chappe comes, and till the Duty of that be paid, which amounts to fifty or ſixty Rials, according to the Bigneſs of the Ship; and upon their Departure from the Road, they are obliged to pay about half as much. The *Moors* pay nothing upon the Export of Goods, but upon the Import the Duty is very heavy; for they pay 10 *per Cent.* in Gold upon the Entry of all Goods which are appraiſed by the Officers of the *Alfandeque*, and commonly over-rated 50 *per Cent.* The *Dutch* and *Engliſh* pay as much, but then they pay it in the Commodity itſelf, and not in Gold. But the greateſt Damp upon the Trade in that Place is, that the King engroſſes it all into his own Hands; for what Commodities he buys, he muſt have them under a Market Price, and what he ſells riſes to 50 *per Cent.* above it; ſo that if he continues to carry on his Commerce at this Rate, the *Dutch* and *Engliſh* will be obliged to abandon this Place, and it is with that View, as I take it, that he does it; for at preſent he is very jealous of their Strength. From what has been ſaid, we may ſafely infer, that the King of *Achen* is infinitely rich, eſpecially if we conſider, that over and above the before-mentioned Articles, he had an opulent Exchequer left him by his Father.

44. To underſtand how this preſent King of *Achen* came to the Crown, we muſt know, that before the Reign of his Grandfather, the Orankays being never oppreſſed by their Kings, nor pillaged by other Nations, were very rich in Lands and Houſes, beſides Gold and Silver, and gave a licentious Range to their inſolent and proud Tempers. In thoſe Days the City was ſix Times greater than it is now, and ſo crowded with People, that one could ſcarce paſs along the Streets. No City in *India* had ſo flouriſhing a Trade. The *Alfandeque* required no Cuſtoms but that of the Chappe; Merchants might unload and load again in 15 Days Time.

The Orankays lived in large ſtately Houſes, with Cannon at their Gates, and great Numbers of Slaves, both to ſerve and guard them. They had magnificent Garments, and pompous Retinues, and were much reſpected by the People. This Grandeur and Authority of the Orankays not only leſſened the King's Authority, but was often fatal to his Perſon, inſomuch that it was a great Matter if a King enjoyed his Crown two Years, and if he did, it was with ſo much Trouble and Dependance upon the Orankays, that nothing but the Title of his Dignity was left him. Things continued at this rate till the Extinction of the ancient Royal Line, which happened about forty Years ago.

Upon that the Orankays met, in order to chuſe a King, but every one affecting the Dignity for himſelf, they could not agree upon the Matter, and reſolved to decide it by Force. In this Ferment the Cady, or Great Biſhop, by his Authority and Remonſtrances, perſuaded them to liſten to an Expedient that would remove all their Jealouſies; namely, to put the Crown upon the Head of a certain Orankay, who in all theſe Diviſions had not ſtirred or affected any Thing for himſelf or his Family, but had lived in the Reputation of a wiſe, experienced Man, being then ſeventy Years of Age, and deſcended of one of the nobleſt Families in *Achen*. The Orankays accepted the Propoſal, in regard it did not ſink their reſpective Pretenſions, ſince they only entitled him to a Preference by reaſon of his Age and Prudence. But, after all, the old Nobleman deſired to be excuſed, alledging that he had retired for ſome Time from the Affairs of the World, and deſired to paſs the Remainder of his Life in Peace. Upon this the Orankays fell together by the Ears; but at laſt, finding that every Thing run in Confuſion, they endeavoured to threaten the old Orankay into an Acceptance of the Crown; but both their Threats and Intreaties were equally ineffectual.

At laſt they came all in a Body to his Houſe, the Cady carrying the Crown, and one of the Orankays a naked Sword. There they repreſented to the old Gentleman that they could not poſſibly find any other Remedy for their preſent Calamity, but that of making him King: That as they had frequently importuned him to accept of the Crown, ſo they came now once more to make the laſt Offer, and that if he refuſed it, they were determined to cut him off immediately, to prevent their inſiſting any longer on an uſeleſs Expedient. The old Orankay, finding himſelf in a Dilemma, told them, that though he had firmly reſolved to finiſh his Days without the Diſturbance of publick Affairs, yet ſince nothing but his mounting the Throne could prevent a pernicious War, he accepted their Offer with this Proviſo, that they ſhould reſpect him as a Father, and he ſhould treat them as his Children, and they ſhould receive his Correction as from the Hands of their own Father. This ſaid, they all thanked him, promiſing not only to honour him as their Father, but to reſpect him as their Sovereign Lord, and inveſted him inſtantly with the Royal Dignity.

45. After his Coronation he took Poſſeſſion of the Caſtle, and invited all the Orankays to a Feaſt upon an appointed Day, and made ſuch vaſt Preparations for their Reception, that the Orankays were ſtruck with Admiration. The Orankays were drawn up in Order in a Court near the King's Apartment, and conducted by the Chappes into a Hall; but as every Man entered the Hall he was immediately ſeized, and dragged into another Court behind the Buildings, where the King had cauſed a deep Ditch to be dug, upon the Brink of which their Throats were cut, and then their Bodies were thrown into it. In the mean time the Muſick played, and nothing but Songs and Mirth was heard in the Hall; and the Matter was carried on ſo warmly, that one thouſand one hundred were cut off before thoſe in the Rear could perceive any thing of the Matter; at which Time the ſmall Remainder ſlipped ſoftly out of the Caſtle, without knowing diſtinctly the Occaſion of their Miſtruſt, till the next Day that the principal Orankays were miſſing.

The King having thus cut off all he ſuſpected, and fortified himſelf with a good Body of Men in the Caſtle, he publiſhed a Declaration, ſetting forth, that this great Execution was neceſſary for the Safety of his own Perſon and the State; that as in former Times the Orankays had made and dethroned many Kings at Pleaſure, and extinguiſhed the ancient Line, ſo when they were at the Point of cutting one another's Throats, they could find no other Remedy than that of making him King by Force, in order to uſe him as they did the former Kings upon Occaſion; that ſince he was King he would not be expoſed to the inconſtant Humours of the Orankays, who, after they had maſſacred him, would have relapſed into their former Animoſities, and made the People ſuffer by their Quarrels; and in fine, that all his Deſign was to preſerve the general Peace, to reign in Equity, and execute ſevere Juſtice upon Offenders.

After this Declaration, when he ſaw that no body ſtirred, and none came near him to pay him their wonted Reſpects in the Caſtle, he demoliſhed all the Houſes of the executed Orankays, and lodged their Cannon, Arms and Goods in the Caſtle. He prohibited any to build with Stone, or to have Cannon or Intrenchments about their Houſes; he ordered the Trenches that then were to be filled up, and the Stone Walls to be pulled down. He enjoined, that all their Houſes ſhould be but one Story high, and their Walls be made of Mats, as they are at this Day. He conferred the Quality of Orankays upon his Favourites and Abettors, allowing them Part of the Lands of the executed Lords. He put to Death the ancient Orankays, and thoſe of the People that teſtified any Diſlike to his Conduct, inſomuch that in the firſt Year of his Reign he put to Death twenty thouſand Perſons, and in the ſecond ſome thouſands more.

This Prince reigned a long Time, and reduced the City to the Condition that it is now in. He uſed the *Mooriſh* Merchants very unkindly, but was extreme civil to the *Engliſh* and *Dutch*, who ſettled there in his Time. He brought up this preſent King, who is the Son of his own Daughter, and for whom he had a particular Love. He died in the Year 1603, aged ninety-five Years, leaving behind him two Sons, who were already advanced in Years. To the eldeſt of theſe he left the Kingdom of *Achen*, and all his Territories along the Coaſt of *Sumatra* to the Weſtward, and to the other the Kingdom of *Pedir*, with the Territories upon the Eaſt Coaſt of *Sumatra*. The two Princes were of too meek and humble a Temper for their Subjects, ſo that Murders, Robberies, Oppreſſion, and an Infinity of Diſorders, reigned in *Achen* for want of a ſevere Execution of Juſtice. The King of *Achen* happening to give ſome ſlight Rebuke to his Nephew the preſent King, whom he entertained at his Court, the young Prince made his Eſcape out of the Caſtle, and fled to his Uncle the King of *Pedir*, who gave him a very kind Reception. The King of *Achen* deſired his Brother to ſend his Nephew to *Achen*; but his Brother made Anſwer, that he would not offer Violence to a young Prince whom their Father had recommended to their Care. Upon this the two Brethren declared War one againſt another, the Forces of *Pedir* being commanded by the Nephew, who is now King. In this War above ſixty thouſand Men were killed between them, and the Nephew had oftentimes the Advantage: But at laſt the Forces of *Achen* being more numerous, thoſe of *Pedir* refuſed to march. Upon which their King was obliged to deliver up his Nephew into the Hands of the King of *Achen*, who immediately put a ſtrong Guard upon him, and laid him in Irons.

Some time afterwards the *Portugueze* made a Deſcent upon *Achen*, and carried the firſt Turf Fort at the Entry of the River, but could not maſter the Stone one. In this Juncture the young Prince deſired his Uncle would let him go and fight againſt the *Portugueze*, remonſtrating that he had better die in Battle with the *Cafres* (ſo they call the Chriſtians) than lie in Chains to no Purpoſe. The King of *Achen* being at that Time in Conſternation, releaſed him, and ſuffered him to go upon that Deſign. The young Prince behaved himſelf with ſo much Bravery in two or three Engagements with the *Portugueze*, that he acquired a great Reputation among the People of *Achen*.

46. Upon this his Mother being an active ambitious Woman, formed a Deſign of making him King of *Achen*, and furniſhed him with large Sums of Money to be diſtributed among the principal Orankays; with the ſame View, the young Prince was very familiar in his Converſation, whatever he had was common to his Friends and Courtiers; he refuſed nothing that was aſked of him; in a word, he ſhewed himſelf liberal to the Orankays, affable to the Rich, a Companion to thoſe that profeſſed Arms, and extreme courteous to the common People. In the mean time the King of *Achen* died ſuddenly; at the Hour of his Death the young Prince gets into the Caſtle, bribes the Guards, makes vaſt Promiſes to the Officers, advances a large Sum of Money to the Governor of the Caſtle, diſtributes Money

among the principal Orankays, and threatens the Cady, who ſcrupled to crown him.

In fine, he managed the Intrigue ſo happily, that he was proclaimed King that very Night, to the great Joy of all the People who had conceived great Hopes of his Liberality, Courteſy, and Familiarity, as well as his Valour. *Pedir* being twelve Miles from *Achen*, the King of that Place was quickly acquainted with his Brother's Death, and came the next Day to receive the Inveſtiture of his Patrimony; but as he approached the Caſtle with a ſmall Retinue, he fell into the Hands of his Nephew the King of *Achen*, who, forgetting his former Favours, kept him a Month Priſoner in the Caſtle, and then, pretending to ſend him to a more agreeable Retreat at a Diſtance from the City, cauſed his Throat to be cut by the Way. Thoſe who put the Crown upon his Head were not better uſed; for he began with the Maraja, or Governor of the Caſtle, who had taken moſt of his Money, and ended with thoſe that received the leaſt. In a Year's Time they found a great Alteration; for inſtead of being humane, he was very cruel. Inſtead of Liberality, he diſplayed an extreme Avarice, and his familiar meek Temper became auſtere and inexorable.

In fine, he has ſhed more Blood than his Grandfather did in his whole Reign. He has diſpeopled the whole Territory of *Achen*, and drained not only the Natives, but the Foreigners that reſide there, of all their Money. It is true, he endeavoured to re-people this City with his Conqueſts, or rather Ravages (properly ſpeaking) for having ruined the Kingdoms of *Jor*, *Dehly*, *Pahan*, *Queda*, and *Pera*, he tranſported from thence to *Achen* about twenty-two thouſand Perſons; but at preſent there are ſcarce one thouſand five hundred of them left: So that this Policy ſerved rather for an Inſtance of his Cruelty, than any other Thing; for the People being brought naked to *Achen*, and allowed not a Grain of Rice for their Maintenance, died of Hunger in the Streets. Hitherto this King hath been ſucceſsful in all his Enterprizes, inſomuch that ſome take him for a Sorcerer.

For my part I regard him as a Man of great Judgment, one that undertakes nothing raſhly, or unſeaſonably, but after a mature Deliberation, and upon very probable Conjectures. He never aſſaulted one of his Neighbours, but when they were reduced to ſome Extremity. All his preparatory Meaſures are incomprehenſible, till the Deſign is put in Execution; for he never aſks or receives Advice of any, and being inveſted with an abſolute Authority, his Commands are immediately put in Execution; ſo that all this may be done without the Aſſiſtance of Devils. Beſides, I have often heard that Sorcerers are poor, ſorry Wretches; but I am certain that this King is by far greater and richer than any of his Neighbours.

47. *February* the 3d we were in Sight of the Iſland of *Montabay*; the 5th we came to an inhabited Iſle that lies between *Naſſaw* and *Montabay*; the 6th we paſſed between *Naſſaw* and another Iſland not marked in the Charts. This Channel is four or five Leagues broad; all theſe Iſlands lie very low, whereas the oppoſite Coaſt of *Sumatra* is very high and conſpicuous. I would adviſe all Sailors rather to put into *Sumatra*, than into any of theſe little Iſlands; for the former is peopled all along the Shore with Perſons acquainted with the Converſation of Strangers, whereas the Inhabitants of theſe are barbarous Savages, that have no Communication with any other People, and conſequently not to be truſted.

April the 20th, in 33° 30′ Latitude, the Needle varying 7° 45′ North-Weſt, we deſcried a ſmooth and uniform, but rocky Coaſt; upon which we ſtood to Sea, and next Day encountered a violent Storm, that laſted to the 23d of *May*; the 1ſt we perceived the Land between Cape *Auguilles* and Cape *Falſo*, and on the 5th we came to an Anchor in *Table-Bay*; our ſick Men did not recover at this Place, as I expected, either by reaſon of that extreme Cold, or becauſe I could not take in ſuch freſh Proviſions as I had a Mind to, there being ſome *Dutch* Ships in the Bay that I miſtruſted. I believe the Cold was the great Cauſe of it; for all the *Dutch* Sick died as well as mine. The Wind continued at Weſt North-Weſt from my firſt Arrival in this Bay to the 24th, that I weighed Anchor, and paſſing by the North-Eaſt, was becalmed within Cannon Shot. The 30th we ſet Sail, the Wind at South-South-Eaſt.

On the 21ſt of *June* we deſcried *St. Helena*, about fifteen Leagues Weſt-North-Weſt of us: Next Day I came to an Anchor over-againſt it, and ſent our ſick Men on Shore, who were ſomething benefited by the Air. This is a very convenient Place for the refreſhing Men, not only in regard to the Temperance of the Air, but by reaſon of the Plenty of young Kids and Hogs, the Facility of coming at good Water, the Conveniency of Fiſhing in the Road, and upon the Shore, the Abundance of Oranges and Citrons, which are excellent Remedies againſt the Scurvy, beſides ſeveral good Herbs, ſuch as Purſlain, a ſort of Tarragon, in large Quantities, ſome Fenugreek, Tobacco, and the Herb Mayoe: Not to mention the Partridges, Pigeons, and, as ſome ſay, Oxen, that this Iſland abounds with; for though the Country be mountainous, and very ſteep, and the Graſs withered-like, yet on the Top there is a great deal of Moiſture, and there is not a Valley without a Brook or Rivulet, the greateſt of which runs in the large Valley, where a large Chapel is built, though it is not above a hundred and fifty Paces broad, and one thouſand long. At the End of this Valley there is a ragged Cleft Ridge of Rocks, upon which there falls down a Stream of Water from a very high Mountain, inſomuch that it is beat as ſmall as Rain before it falls. This Iſle lies in 16° South Latitude, the Needle varying 5° 45′ North-Eaſt, and always has the Wind South-Eaſt.

48. On the 16th of *July*, we ſaw the Iſle of *Aſcenſion* about twelve Leagues North-Eaſt of us. It is very high, and its Anchorage lies over-againſt a ſandy Creek. This Iſland has neither Wood, nor Freſh-Water, nor any Herbs, being nothing but a hard Rock; yet it affords ſome Hogs, and a great many Fowls, ſuch as can live without Freſh-Water, upon the Rocks, and in the Road it has Abundance of Fiſh and Tortoiſe. Its Circumference may make about eight Leagues, which is as much as that of *St. Helena*'s. It lies in 8° S. Lat. After we had croſſed the Equinoctial, we had ſuch Calms, and drizling Rains, that moſt of our Men were ſeized with Dropſies and Tumours, upon which there enſued great Mortality in the Ship.

Auguſt the 6th the Calms and drizling Rains continuing, there came a ſudden Whirlwind that laſted for two Minutes, and broke all our Sails, carrying the Main-Top-Sail quite off. The next Day we ſaw ſome Swallows and Butterflies, which ſignified that we were near Land. The 13th we ſaw an Iſland to the North, in 16° Lat. which we knew to be *Saint Nicholas*, one of the *Cape-Verd* Iſlands. The 16th we made the Iſle of *Saint Vincent*, and caſt Anchor at five Fathom Water. The 17th I ſent my ſick Men aſhore, who were very numerous, and in a ſorry Condition; but, when they came upon Land, they recovered apace.

49. The ordinary Anchorage of this Iſland lies in 17° 20′ Lat. the Needle varying 2° 15′ N. E. It affords at this Seaſon great Plenty of Tortoiſes, which they call Free-Tortoiſes, and are diſtinguiſhed from the others they call Cohouanes, by the Smoothneſs, Plainneſs, and green Colour of the Shell, the Largeneſs of their Body, and the Smallneſs of their Head, and the Form of their Snout, which reſembles the Teeth of a Saw. The Fleſh of theſe eats as well as that of a young Heifer, and ſome of them are ſo large that they weigh 300 Pounds. They come out in the Night-Time, and lay their Eggs upon the Sand, which they bury a Foot deep. Thoſe who have a Mind to catch them watch them at that Time, and getting behind them turn them upon their Back; after which they cannot turn themſelves to get upon their Feet, and ſo lie there till the Morning. Moſt of them have 250 Eggs ſhelled, and as many unſhelled in their Bellies, which are very good.

In this Iſland we met with an Herb that in ſome meaſure reſembles Spinnage, but it is infinitely better; we uſed it both in Sallad and Soup, and both it and the Tortoiſe-fleſh kept our Bellies open, and cured our Men of great Dropſies, without any other Purgation, in eight Days, which perhaps could not be cured in *France* in a

Month. It is alſo well ſtocked with young Kids, but you are not ſure of catching them, unleſs you have Dogs. We ſaw no Fruit in it but wild Figs, which were all ſpoiled with Worms. To the Eaſtward, under a high Mountain, there are vaſt Quantities of Purſlain. Commonly the Water of this Iſle is brackiſh; but upon the S. W. Part of the Bay, where the Anchorage is, there is a ſmall Spring, that if it was cleanſed and dug deep, would afford pretty good Water.

It is furniſhed with a conſiderable Quantity of wild

Misfortune of loſing two of his Ships, did not hinder his making a ſaving Voyage even of this, which would have proved highly advantageous to his Owners, if the *Hope* had not been loſt, ſince it is computed that ſhe, at the Time of her being burnt, had on Board a Cargo worth ſeventy-five or eighty thouſand Pounds Sterling. There are few Pieces that let us more effectually into the Secret of Trade than this, which ſhews us perfectly the Methods made uſe of by the *Dutch* to exclude all other Nations from the Commerce of the *Indies*, and very fully

e occaſionally delivered upon that

Bay; our ſick Men did not recover at this Place, as I expected, either by reaſon of that extreme Cold, or becauſe I could not take in ſuch freſh Proviſions as I had a Mind to, there being ſome *Dutch* Ships in the Bay that I miſtruſted. I believe the Cold was the great Cauſe of it; for all the *Dutch* Sick died as well as mine. The Wind continued at Weſt North-Weſt from my firſt Arrival in this Bay to the 24th, that I weighed Anchor, and paſſing by the North-Eaſt, was becalmed within Cannon Shot. The 30th we ſet Sail, the Wind at South-South-Eaſt.

On the 21ſt of *June* we deſcried *St. Helena*, about fifteen Leagues Weſt-North-Weſt of us: Next Day I came to an Anchor over-againſt it, and ſent our ſick Men on Shore, who were ſomething benefited by the Air. This is a very convenient Place for the refreſhing Men, not only in regard to the Temperance of the Air, but by reaſon of the Plenty of young Kids and Hogs, the Facility of coming at good Water, the Conveniency of Fiſhing in the Road, and upon the Shore, the Abundance of Oranges and Citrons, which are excellent Remedies againſt the Scurvy, beſides

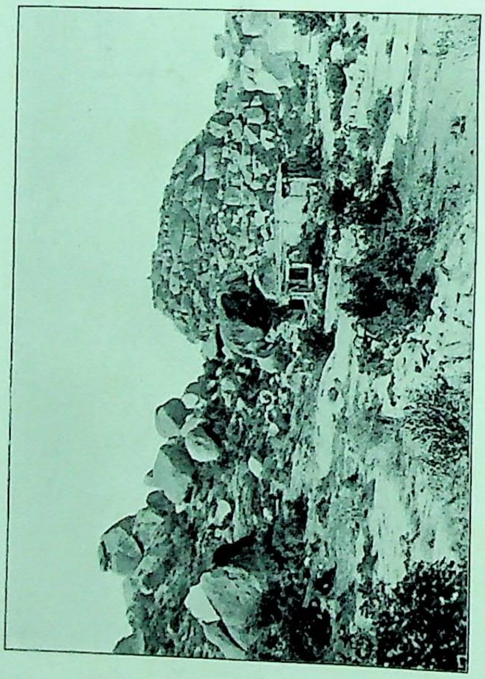
In this Iſland we met with an Herb that in ſome meaſure reſembles Spinnage, but it is infinitely better; we uſed it both in Sallad and Soup, and both it and the Tortoiſe-fleſh kept our Bellies open, and cured our Men of great Dropſies, without any other Purgation, in eight Days, which perhaps could not be cured in *France* in a

Month.



A TYPICAL BIT OF VIJAYANAGAR SCENERY
WITH TEMPLE ON SUMMIT OF HILL

Month. It is alſo well ſtocked with young Kids, but you are not ſure of catching them, unleſs you have Dogs. We ſaw no Fruit in it but wild Figs, which were all ſpoiled with Worms. To the Eaſtward, under a high Mountain, there are vaſt Quantities of Purſlain. Commonly the Water of this Iſle is brackiſh; but upon the S. W. Part of the Bay, where the Anchorage is, there is a ſmall Spring, that if it was cleanſed and dug deep, would afford pretty good Water.

It is furniſhed with a conſiderable Quantity of wild Pines, which may ſerve for Firing; beſides which it has no Wood, except ſome Shrubs, that caſt forth a white milky Juice, that is very dangerous and painful to the Eyes if it touches them. There is very good Fiſhing along the Rocks, and eſpecially at a little Rock at the Entry of the Bay, about a Quarter of a League from the Anchorage. In two Hours Time ſeven or eight may there catch Fiſh enough for two hundred Men. In fine, it is not inferior to *St. Helena* for a Place of Refreſhment, except that its Water is not ſo good. In Compenſation of which Defect, it is all over acceſſible, and furniſhed with pleaſant Walks; whereas the other is the moſt inacceſſible Country I ever ſaw. This Iſle is about nine Leagues in Circumference, and while we were there the Wind was at N. E. it has ſeveral pleaſant Bays; but that towards the Iſle of *St. Anthony* is the beſt Road for Ships that can be, for we rode at five Fathom Water, on an excellent ſandy Ground, and were ſheltered from all Winds. We ſaw neither Men nor Houſes, though we travelled over moſt Part of the Iſland.

50. After our Departure from *St. Vincent* (which happened *September* the 15th) we had ſeveral violent Storms. *October* the 12th we deſcried the *Azores-Iſlands*, but it was the 17th before we could weather them. The 19th, we had a violent Storm from N. W. that broke our Mizen-Maſt, and obliged us to bring our Main-Top-Maſt upon the Deck. The 30th we were 55° Lat. and had ſeventy Fathom Water, upon which moſt of our Pilots agreed that the *Sorlingues-Iſlands* lay about twenty Leagues to the Weſt of us. *November* the 3d we deſcried the *Lizard-Point* in *England*; and *December* the 1ſt came ſafe to *Havre de Grace*, having been out thirty-eight Months.

51. The Difficulties our Author met with, and the Misfortune of loſing two of his Ships, did not hinder his making a ſaving Voyage even of this, which would have proved highly advantageous to his Owners, if the *Hope* had not been loſt, ſince it is computed that ſhe, at the Time of her being burnt, had on Board a Cargo worth ſeventy-five or eighty thouſand Pounds Sterling. There are few Pieces that let us more effectually into the Secret of Trade than this, which ſhews us perfectly the Methods made uſe of by the *Dutch* to exclude all other Nations from the Commerce of the *Indies*, and very fully juſtifies what we have occaſionally delivered upon that Subject. It is really wonderful that the Subjects of the States-General ſhould venture, at that Time of Day, to treat the *French* in ſuch a Manner, to whom they had not only conſiderable Obligations for the Countenance they had given them in the Infancy of their Commonwealth, but were alſo in great Danger from their Power in *Europe*. But however this might affect the States, the *Eaſt-India* Company, it ſeems, gave themſelves very little Concern about it; which ſhews how dangerous it is to leave the abſolute Adminiſtration of their Affairs in theſe diſtant Parts of the World to any Company, without having ſome Check upon them from the State, which muſt be anſwerable to other Powers for the Exceſſes committed by the Agents of ſuch a Company.

As for Commodore *Beaulieu*, after his Return to *France*, he was taken into the King's Service, and behaved extremely well in the Affair of the Iſland of *Rhe*, when the *Engliſh*, under the Command of the Duke of *Buckingham*, made a Deſcent upon that Iſland, and during the long War againſt the Proteſtants. This recommended him ſo effectually to the famous Cardinal *Richlieu*, that he intruſted him with the Command of one of the beſt Ships employed in the Squadron commanded by the Count *de Harcourt* againſt the Iſlands of *St. Margaret*, and *St Honorat*, in which he likewiſe behaved with Reputation; as alſo in the Expedition againſt *Sardinia*, at his Return from which to the Port of *Toulon*, he was unfortunately ſeized with a burning Fever, which carried him off in the Month of *September*, 1637, at the Age of 48; ſo that he may be ſaid to have died in that Seaſon of Life when he was moſt capable of ſerving himſelf and his Country.

SECTION XXVI.

The Remarks and Obſervations made by John Albert de Mandelſloe, *in his Paſſage from the Kingdom of* Perſia *through ſeveral Countries of the* Indies.

Tranſlated from the Original, written by himſelf.

1. *An introductory Account of the Author, and of the Deſign of this Section.* 2. *His Departure from* Iſpahan, *in order to go to* Gambron, *or* Bandar Abaſſi. 3. *A curious Deſcription of the Ruins of the ancient* Perſepolis, *now called* Tchelminar. 4. *The Author continues his Journey to* Laar, *and from thence to* Gambron. 5. *His kind Reception, and generous Entertainment, by the* Engliſh *Merchants there.* 6. *A curious Deſcription of the City and Port of* Gambron, *with the Country adjacent.* 7. *A conciſe Hiſtory of the City and Kingdom of* Ormuz, *and of the Manner of its being annexed to the Empire of* Perſia. 8. *An Account of the Author's Paſſage from* Gambron *to* Surat, *with Remarks.* 9. *His Arrival at the laſt mentioned City, and the Reception he met with there.* 10. *A ſuccinct View of the Dominions of the Great Mogul, as they ſtood at that Time.* 11. *A Deſcription of the City of* Surat, *with a large Account of the Commerce carried on there.* 12. *The Author's Journey from thence to* Amadabat, *with his Adventures by the Way.* 13. *A View of that City, and of the Country adjacent, with various Remarks and Obſervations.* 14. *An Account of ſome memorable Tranſactions which happened during the Author's Stay there.* 15. *His Paſſage from thence to* Cambaya, *with a Deſcription of that City, and its Inhabitants.* 16. *His Journey to* Agra, *with a large Account of that Capital of the Mogul Empire.* 17. *A very full Relation of the Mogul's Court, and of the State of the Empire of* Indoſtan. 18. *The Author's Journey back from* Agra *to* Surat, *with many curious Particulars.* 19. *A ſuccinct Hiſtory and Deſcription of the Kingdom of* Guzarat, *and Provinces adjacent.* 20. *A complete View of the Religion, Cuſtoms, Manners, &c. of the* Banjans, *or native* Indians. 21. *A Continuation of that Account, together with a Deſcription of the other Nations that now inhabit the* Indies. 22. *Of the Commodities, Manufactures, and Commerce of thoſe Countries.* 23. *Of the great Plenty of all Sorts of Proviſions, and of the People's Manner of living.* 24. *Of their Ships, their Trade to the* Red-Sea, Perſian *Gulph, and Coaſt of* Malabar. 25. *Remarks upon the foregoing Section.*

1. THE Accounts afforded us in the foregoing Sections are excellent in their kind, ſo far as they go; but as it is neceſſary to our having a thorough Comprehenſion of the Affairs and Commerce of *India* that we ſhould proceed ſtill farther, and take a complete View of the ſeveral Countries in which this Commerce is carried on, ſo of conſequence it becomes as neceſſary on parting with our old Guides to look out for new. He, with whom we are next to travel, has been allowed to have all the Qualities requiſite to ſuch a Guide, that is to ſay, Knowledge, Diligence, and Fidelity. He was born *A.D.* 1615. of a good Family in the Dutchy of *Mecklenberg*, in the *Lower Saxony*, and received from the Care of his Parents a liberal Education, having before received from Nature an happy and inquiſitive Genius. Theſe good Qualities recommended him to the Notice firſt, and then to the Confidence of the Duke of *Holſtein*, in whoſe Family he lived as a Domeſtick.

When that Prince formed a Deſign of ſending an Embaſſy into *Perſia*, in order to promote a Project he had formed of eſtabliſhing an *Eaſt-India* Company in his Dominions, our Author was choſen to accompany thoſe Embaſſadors in a very honourable Quality: But before his Departure, he repreſented to his Maſter, that though the Reaſons which determined him to ſend his Miniſters no farther than *Perſia* were in themſelves very juſt, and well-founded, yet it would be extremely requiſite to the Accompliſhment of his main Deſign, that a Perſon of their Retinue ſhould make the Tour of the *Indies*, which was what he was ſtrongly inclined to do, and therefore begged his Permiſſion to gratify that Deſire, by taking his Leave of the Embaſſadors when arrived at the *Perſian* Court, and purſuing his Travels as Occaſion offered.

The Duke's Leave thus obtained, he ſet out with the Embaſſadors, in the Year 1636, and accompanied them to *Iſpahan*, or according to the *Perſian* Pronunciation, *Spahawn*, the Hiſtory of which Journey, and of their Negociation, was written at large by their Secretary, and is eſteemed one of the moſt perfect Works in its kind; for which Reaſon it will claim a Place in the ſecond Part of our Undertaking. At preſent we are concerned only with *Mandelſloe*'s Account of his Travels, after he left the Embaſſadors, and proſecuted his intended Deſign of viewing the Countries of *India*, which he executed very happily, and has no leſs faithfully recorded.

There have been few Travellers who have ſet out better furniſhed than our Author; for he had, previous to his Journey, taken great Pains to acquaint himſelf with all that had been written of thoſe Countries he was to viſit, by the beſt Authors ancient and modern, as manifeſtly appears by his excellent Performance. But though he was a Scholar, and a Gentleman, yet as the Deſign he went upon was the Improvement of Trade, he kept that Deſign conſtantly in View, and loſt no Opportunity of making ſuch Enquiries as might enable him to make a juſt and ſatisfactory Report at his Return to the Prince by whom he was employed. It was with this View that he kept a regular and exact Journal of his Travels, and took Care, in every Place where he came, to make the niceſt Enquiries in his Power; and it is for this Reaſon that his Writings have been ſo much eſteemed, and have been always conſidered as the moſt curious and correct Accounts that had been publiſhed to his Time.

He began them, as the Reader will perceive, in the Month of *January* 1638, and having happily atchieved them, returned ſafely to the Court of *Gottorp*, and made his Report of what he had obſerved in them. At the Cloſe of the next Section we ſhall ſay ſomewhat as to the Conſequences of them, and of the Cauſes which hindered the Projects of the Duke of *Holſtein* his Maſter from taking Effect, notwithſtanding they were ſo wiſely laid, and, ſo far as our Author had any Concern in them, happily executed. Thus much, however, may ſuffice by way of Introduction, the rather, becauſe the Author himſelf has been ſo clear and ſo methodical in his Relation, and has taken ſuch Care to avoid Obſcurity on the one hand, and Prolixity on the other, that there is no need of detaining the Reader any longer from his Performance, which we ſhall deliver in his own Words as near as may be.

2. The Embaſſadors of *Holſtein* having left *Iſpahan*, and being not long after followed by *Imanculi Eſcheangaſi*, a Native of *Karabath*, who was ſent in Quality of Embaſſador from the King of *Perſia*, to the Duke of *Holſtein*; I, according to the Permiſſion I had obtained from the Duke my Maſter, prepared for my Journey into the *Indies*, and being on the 12th of *January* 1638, introduced to a particular Audience of the Shah, he permitted me, with much Kindneſs, to kiſs the Hem of his Garment. I ſet out from *Iſpahan* the 16th of the ſame Month, with a Retinue of four Perſons, *viz.* a Chirurgeon, a Footman, a Groom, and one *Perſian* Servant, being conducted out of Town by Mr. *Honywood*, the *Engliſh* Agent, and ſeveral *Engliſh* and *French* Merchants. I took my Leave of them a League from thence, and travelled eight more the ſame Day, to the Village of *Majar*, where I ſtayed the next Day, and continued my Journey to *Kamſcha*, the whole Road being one continued Walk of Trees, made by the adjacent Gardens. The Caravanſera I lodged in, had nothing but bare Walls, but that wherein I was lodged the next Night, at the Village of *Machſud*, ſix Leagues from *Kamſcha*, had convenient Lodging-Rooms and Stables.

The 20th I came to the Village of *Hannabath*, ſeated upon the Deſcent of a very pleaſant Hill. The 21ſt I travelled ten Leagues, in very ſnowy and windy Weather, and lodged in a Caravanſera called *Jurgiſthan*. Between this Place and *Surma*, there being neither Village nor Caravanſera, I was forced to travel the 22d 12 Leagues, and the 23d was obliged to go 12 more, before I could reach the Village of *Guſti*, where we met with very indifferent Accommodation, ſcarce meeting with a Houſe we could put our Heads in, or preſerve our Horſes againſt the bad Weather. The next Day, being the 24th, proved rather worſe, for being forced to travel 12 Leagues through the Mountains covered with Snow, and that in very bad Weather, we, with much ado, very late at Night, reached the large and famous Village of *Meſched Madere Suleiman*, ſo called from a Sepulchre which is within Half a League of it.

This Sepulchre is to be ſeen within a little Chapel of white Marble, the Tomb itſelf being erected upon a high Square of Free-Stone, unto which you may go up by Steps on all Sides. The Air and Rain has penetrated through the Walls in ſeveral Places, and divers Pillars round the Structure are almoſt conſumed by Time. Upon the Walls of the Chapel, I found in *Arabian* Characters, theſe Words, *Mader Suleiman*. The general Opinion of the Inhabitants is, that this is the Sepulchre of *Solomon*'s Mother, but the *Carmelite* Friars at *Schiras* informed me, with much more Probability, that the Mother of Shah *Soliman*, the 14th King of the Poſterity of *Ali*, was interred here. *Elmacinus* gives her the Name of *Wallada*, and informs us, that ſhe was the Daughter of *Abbas Abbaſceam*. He tells us alſo, that this *Soliman* lived in the Year 715, and that being a very handſome Perſon, and viewing himſelf one Day in a Looking-Glaſs, he was ſo taken with his own Perſon, that he ſaid, he might with the ſame Right pretend to the Title of the King of Youth, as of the Kingdom of *Perſia*; which being over-heard by one of the Ladies of his Seraglio, ſhe anſwered, that provided it was in his Power to inſure to himſelf any Continuance of what by the Laws of Nature he might not be able to enjoy long, he might juſtly lay Claim to ſuch a Title. This ſtruck ſuch a Damp upon his Spirits, that he died within a few Days after. We met here with an *Armenian* Caravan.

3. I travelled on the 26th five Leagues to *Sivan*, and the 27th as many more to *Mardaſch*, one of the moſt famous Villages of thoſe Parts, on account of the Antiquities that are to be ſeen near it, which obliged me to take a full View of them. They are the Ruins of a very ancient Structure called *Tſchelminar*, i. e. forty Pillars, by the *Perſians*, who affirm, that this moſt magnificent Palace was built by *Szamſaid Padſcha*, Grandfather to *Alexander* the Great by the Mother's Side, though ſome among them make *Solomon*, others *Darius*, the laſt *Perſian* King, its Founder; but the *Carmelites* of *Schiras* aſſured me, that

was the general Opinion of the Learned, that this was the Place where the antient *Perſepolis* had ſtood, and that theſe were the Ruins of that famous Palace built by *Cyrus.* The Foundation or Ground-Work on which this vaſt Structure was erected, is raiſed twenty-two Geometrical Feet, having at each of its four Corners a Pair of Stairs of white Marble of ninety-five Steps, ſo flat and broad, that twelve Horſes may go up together a-breaſt. Before you come to the main Body of the Structure itſelf, you paſs through a Square, where you ſee the Ruins of a Wall, and the Remainders of two great Gates, each of which have a Horſe garniſhed and ſaddled, after a very antique Manner, carved on one Side, and on the other two Creatures reſembling a Horſe, except that they have Wings on each Side, and the Head is crowned like that of a Lion.

On the one Side you ſee the Ruins of nineteen Pillars of white and black Marble, the leaſt of which are eight, and ſome ten Ells high, without the Baſes; but whether they had been intended for the Support of ſome large Hall, or were built in the open Air, is not to be diſtinguiſhed at this Time. The Inhabitants thereabouts told me, that not many Years before, there were forty of theſe Pillars ſtanding. As you go on further, you meet with the Ruins of two Rooms indifferently large, as may be judged by the Doors and Windows, but every Thing is of the fineſt Marble. Several Figures of Men of an extraordinary Size are to be ſeen on both Sides the Doors, ſome in a ſitting, others in a ſtanding Poſture, their Hair falling down careleſly over their Shoulders, and their Garments reaching down to their Heels, with very wide Sleeves, and a Girdle round their Waiſts. They had very long Beards, and round Caps on their Heads. Not far from thence are two other Chambers much of the ſame Bigneſs with the former, but ſo ruined, that nothing but the Doors and Croſs-Bars of the Windows are left.

This Structure ſeems to have had this in common with moſt of the Buildings of a modern Date in *Perſia*, that it had many Doors, which is done here to give the more free Paſſage to the Wind to cool the Rooms. Hard by theſe two laſt Chambers, you find unknown Characters engraved upon a ſquare Pillar, which have no Reſemblance to the Greek, Hebrew, Arabick, or any other Language, being triangular, or rather pyramidal, not unlike Obeliſks. There are twelve Lines of them, ſo well proportioned, and nicely engraven, that they have not the ſmalleſt Sign in them of Barbariſm. Some believe them to be Teleſms, and to contain certain Myſteries; beſides theſe before-mentioned Rooms, there is, upon the ſame Ground-Work, a large Court of ninety Paces ſquare, with two Gates on each Side, ſome of which are ſix, others only three Paces wide. They are of the fineſt Marble; each of the Pieces are eight Feet long, and three in Breadth; you ſee alſo in another Court, very curious carved Work in Marble: Battles, Triumphs, Olympick Games, every thing in its due Proportion.

Upon each of the Gates you find a graceful Perſon carved ſitting with a Globe in the one, and a Scepter in the other Hand, tho' it is certain that the Kings of *Perſia* never ſat in that Poſture. My Curioſity led me to get up on high, where I ſaw a King repreſented paying his Devotions to the Sun, Fire, and a Serpent. As the Inhabitants at this Day carry from thence a great Quantity of Marble to carry on their private Buildings thereabouts, this, with the Length of Time, has ſo defaced, or rather ruined this noble Structure, that it is impoſſible to determine whether its Architecture was of the Ionick, Dorick, or Corinthian Order; notwithſtanding which, even its Ruins are ſo ſurprizing, that theſe would find Work for a very good Painter for above ſix Months.

If we trace the antient *Perſian* Hiſtory, we find, that according to *Ælian*, the Grand *Cyrus* laid himſelf the Foundation, and built a moſt magnificent Palace at *Perſepolis*, as *Darius* did at *Suſa*. Perhaps the Ruins belong to the famous Palace mentioned by *Diodorus Siculus*, being encompaſſed with three Walls of Marble, the firſt whereof was 19, the ſecond 32, and the third 60 Ells high; and all the Gates and Balconies of Braſs, all which, together with the ineſtimable Treaſure it contained, was in a few Hours reduced to Aſhes by *Alexander* the Great, at the Requeſt of a Harlot. Having ſpent a whole Day in viewing theſe Antiquities, I continued my Journey the 28th of *January*, and travelled that Day ten Leagues to the City of *Schiras.* Here I met with four *Carmelite* Friars, *Italians*, who were poſſeſſed of a goodly Monaſtery, and had the free Exerciſe of their Religion allowed them. Not many Years before, the *Portugueze* had here likewiſe a Convent of *Auſtin* Monks, but they were forced thence, as well as all the other *Portugueze*, after the taking of the City of *Ormuz* by the *Perſians*.

Schiras is the Capital City of the Province of *Fars*, ſituate at the Foot of a moſt pleaſant Mountain, upon the River *Bendomir* (heretofore called *Araxes*) which diſcharges itſelf into the *Perſian* Gulph. This City lies in 29° 36′. It contains about 10,000 Houſes; but the Ruins of a great Wall, at two Miles Diſtance from the City, ſhew its Extent to have been much larger than it is at this Time. It may be truly ſaid, that whatever Nature is able to produce either for Conveniency or Pleaſure, is centered in this Place, and that in great Plenty; as Wheat, Oranges, Lemons, Pomegranates, Almonds, Dates, Piſtachoes, *&c.* The Wine which grows hereabouts is the beſt in all *Perſia*; which being tranſported hence all over the Kingdom, and looked upon as the beſt Entertainment they can give to their Friends: This makes it to be ſold at a dear Rate at *Iſpahan*, where you cannot have a Pottle of good *Schiras* Wine under Half-a-Crown. Its Taſte is not unlike that of *Canary*, but is more ſprightly, and has a more pleaſant Flavour; this City being ſo much celebrated through all *Perſia* for Wine and Women.

The *Perſians* are wont to ſay, that if *Mohammed* had been ſenſible of the Pleaſures of *Schiras*, he would have begged of God Almighty to make him immortal there.

The Sheep hereabouts are of an aſh-grey Colour, with one white Eye, their Wool curled, and their Tails of ſuch a Bigneſs as to weigh ſometimes eighteen or twenty Pounds. The Woods hereabouts afford great Store of Maſtick, which is gathered in Diſhes faſtened to the Tree, and is green at firſt, but afterwards turns brown. After a Stay of eight Days at *Schiras*, I left it the fifth of *February*, and proceeded ten Leagues that Day to a Caravanſera: the ſixth I travelled ſeven Leagues, through very bad Roads; but the Proſpect I had of the many Villages, and a vaſt Number of Date-trees, made me ſome Amends for the Toil of the Day.

The 7th I travelled ten Leagues to the little City of *Sharim*, ſeated in the Middle of a Date-Wood. The 8th we could make no more than five Leagues, the Ways betwixt the ſteep Rocks on the one Side, and the Precipices on the other Side, being ſo rough and narrow that one cannot paſs them without great Danger, of which I had an Inſtance in my Paſſage, for my Horſe's Hoof (which I was leading by the Bridle) being filled with Snow, he ſlipped and tumbled upon me, which forcing me out of the Way, I had infallibly tumbled down the Precipice, had I not by good Luck catched hold of a wild Almond-tree which ſtood there. I was forced to take up my Quarters that Night at a Caravanſera, where there was not any Proviſion either for Man or Beaſt.

The 9th, after I had travelled three Leagues, I came to a Caravanſera, where we had the Opportunity of refreſhing our Horſes, and having gone five Leagues more in the Afternoon, I overtook the *Armenian* Caravan; and in their Company, rode two Leagues farther to the Village of *Berry*, near which I lodged in one of the beſt Caravanſeras I met with in my whole Journey.

4. The 10th I travelled through ſeveral bad Ways, and came late at Night to the City of *Laar*, ſituate in a ſpacious Plain at the Foot of a Mountain. There is no Wine hereabouts, but Dates in abundance. The Air is very unwholeſome here, and the Water very muddy, which breeds in them that drink it certain Worms, betwixt the Skin and Fleſh, of which we ſhall have Occaſion to ſpeak more at large hereafter. They ſay that this City owns for its Founder *Pilaes*, the Son of *Siroes*, whoſe Succeſſor was *Gorgion Meleeh*, the firſt King of *Laar*, and that the thirty-ſecond Succeſſor was one *Abraham Khan*, who was diveſted of the Kingdom in 1602, by Schah *Abbas*, King of *Perſia*. It contains about 4000 Houſes built of Brick

baked in the Sun, but is without any Walls or Gates. The Citadel, which is built by the *Perſians* ſince their Conqueſt, and advantageouſly ſeated upon a ſteep Rock, is very well fortified with a Rampart of Free-ſtone, and commands the whole City.

The Garriſon at that Time conſiſted of no more than 100 Men, a ſufficient Number to defend it againſt any ſudden Attack. The Way which leads to it being cut out of a Rock, and ſo narrow, that ſcarce two Horſes can go a-breaſt; but they have a Magazine of Arms for 3000 Men: The worſt is, that the Water within the Fort being brackiſh, they muſt in caſe of a Siege, live upon Rain-Water, which falls plentifully there at certain Seaſons, and is preſerved in Ciſterns. After a Stay of twenty-four Hours at *Laar*, I was going to leave it the twelfth, but was ſtopped by the Cuſtom-houſe Officers, who demanded half a Tumain, or forty-five Shillings for my Baggage; but having ſent my Letter of Recommendation from the Shah to the Governor of *Gambron*, or Commander in Chief of the Citadel, he ordered my Departure without paying any thing; and I went that Day no leſs than fourteen Leagues, which great Day's Journey, together with the muddy Waters I had uſed, and the exceſſive Heat, put me into a violent Griping and Looſeneſs, which made me continue in this little Village, in hopes of getting a Litter; but no ſuch thing being to be had, I was forced to get upon the Sumpter-Horſe, where I had a Conveniency made to reſt my Back, and ſo continued my Journey the 9th to a large Village within twelve Leagues of *Gambron*.

The ſame Evening we met here with two *Engliſh* Merchants, one of whom was to ſucceed the *Engliſh* Director at *Iſpahan*, who not only recruited my almoſt loſt Spirits with ſome *Spaniſh* Wine, and other Refreſhments, but alſo gave me Letters of Recommendation to an *Engliſh* Merchant at *Gambron*, deſiring him to receive me into the Houſe of their Company there, and to aſſiſt me in every Thing that might conduce towards the Proſecution of my Journey to *Surat*. They continued their Journey the ſame Evening, whereas my Indiſpoſition detained me till the 22d, when I proceeded ſix Leagues to a Caravanſera, where having reſted myſelf a little, till the Heat of the Day was ſomewhat abated, I travelled three Leagues farther to another Caravanſera, and found myſelf all that Night in a burning Fever; but there being no Stay for me here, I made the beſt of my Way to *Gambron*, where we arrived the 23d of *February*.

The *Engliſh*, *French*, and *Dutch* there took ſuch effectual Care of my Diſtemper, which was by this Time changed into a Bloody Flux, and accompanied by a violent Fever, that I was pretty well reſtored in four Days, and found myſelf in a Condition to pay a Viſit to the Governor, unto whom I had ſent Shah *Seſi*'s Letters of Recommendation immediately after my Arrival there. He no ſooner heard of my Recovery, but he invited me to Dinner, and entertained me very courteoſly, in Company of ſeveral *Dutch* Merchants. The ſame Evening arrived at *Gambron* a Veſſel from *Surat* of ſix hundred Tons, belonging to the Governor of *Surat*, that brought hither a certain Dowager Queen, Mother to the King of *Golconda*, who falling in Love with her Daughter, his own Siſter, would have married her; but the Mother refuſing to conſent to ſuch an inceſtuous Match, had been baniſhed the Kingdom with her Daughter, who came along with her; and, as it was reported, is to be married either to the King of *Perſia* himſelf, or one of the chief Princes of the Kingdom.

5. *March* the 11th, being the Naurus, or New Year of the *Perſians*, the Governor invited me again to Dinner upon this ſolemn Occaſion, with ſeveral *Engliſh* and *Dutch* Merchants. The ſame Day returned to *Gambron* Mr. *Chapman*, whom I had met, with the *Engliſh* new Preſident near *Laar*; he brought along with him another *Engliſh* Merchant, with whom having contracted a familiar Acquaintance before at *Iſpahan*, I was extremely pleaſed to meet in this Place, becauſe the *Dutch*, though in outward Shew very obliging to me, had oppoſed our Negociation at *Iſpahan*. *March* the 13th I was intreated by the *Engliſh* to take up my Lodgings at the Houſe belonging to their Company, which I did accordingly. The 21ſt, one Mr. *Hale*, an *Engliſh* Merchant, arrived at *Gambron* with two hundred and thirty-three Bales of Silk, valued at 150,000 Piſtoles, which he had received on Account of the Moiety of the Cuſtom at *Gambron* due to the *Engliſh*, of which I ſhall give a particular Account hereafter.

The ſame Day my Surgeon died of a Fever, the Loſs of whom was no ſmall Affliction to me, he having been a great Traveller, and attained the Knowledge of the *Spaniſh*, *Indian*, *Poliſh*, and ſome *Eaſt-India* Languages. As I was walking abroad one Day to amuſe myſelf a little with ſome *Engliſh*, I met with one of thoſe Trees mentioned by *Q. Curtius*, the Branches of which ſpring out of the Trunk of the Tree, and bowing down to the Earth, had taken Root there, and growing up afreſh, had produced a new Tree fifteen or twenty Foot high, which caſting forth other Branches in the ſame Manner as before, made rather a ſmall Foreſt than a Tree; that which I ſaw being two hundred and fourteen Paces in Circumference, capable of affording Shelter for two thouſand Perſons. The *Portugueze* call it *Arbo de Roys*, and it is generally known by the Name of the *India* Fig-tree, by reaſon of its Fruit, which in Bigneſs, and the Abundance of its Grains, reſembles that Fruit; but its Taſte is more unſavoury, luſcious, and its Colour red; the Leaves of the Tree are like thoſe of Quince Trees.

Near the Head Trunk of this Tree we ſaw a ſmall Chapel, and within the Sepulchre of a certain *Banjan*, we found the Tomb ſtrewed all over with Beans of divers Colours, and ſeveral Lamps, which burn Night and Day, hanging over it under a Canopy. Theſe *Banjans* adhering to the Opinion of *Pythagoras*, that the Souls of the deceaſed retreat into Beans, which Opinion is generally received among the *Pagans* both in the *Indies* and in *China*. Of the Religion of theſe *Banjans* we ſhall have Occaſion to ſay more hereafter. The Guardian of the Sepulchre treated us with ſome Almonds, Nuts, and Dates. An Envoy from Shah *Seſi* being come to *Gambron* to aſſure the Governor of the Continuance of his Favour, I, in Company with ſeveral *Engliſh* and *Dutch* Merchants, invited for that Purpoſe by the Khan, ſaw him go unarmed a Mile out of the City, where meeting with the ſaid Envoy, he received the King's Letter, the Garment, and Turbant, with a great deal of Submiſſion.

6. The City of *Gambron*, or rather *Bandar Gambron*, *i. e.* the Port of *Gambron*, is by the *Perſians* and *Arabians* put at 25°, but erroneouſly; its true Latitude, according to the Computation of the *Hollanders*, whoſe Footſteps we follow in this Point being 27°, moſt of the Maps of *Perſia* being hitherto very defective, which proceeds from hence, that by placing the *Caſpian* Sea too high, they extend the Breadth of *Perſia* from North to South, beyond its true Bounds; for they put the City *Reſch* at 41°, whereas it is in 37°; ſo that the whole Breadth of *Perſia* from *Gambron* to *Reſch* is no more than ten Degrees, which plainly ſhews the Miſtake of *Boterus*, who makes the Extent of *Perſia* eight Degrees, whereas, if according to their own Computation we ſhould grant *Ormuz* to be in 25°, the Breadth of *Perſia* would amount to more than 12 Degrees.

It is not many Years ſince this City was a mere Village, inhabited by a few Fiſhermen; but ſince the Reduction of *Ormuz*, the *Engliſh*, *Dutch*, and *Indian* Ships have found out the Conveniency of this Harbour, and the Traders of *Iſpahan*, *Surat*, and *Laar*, bring thither their Silk, and other Manufactures, which they exchange for *European* and *Indian* Commodities. Its Situation is upon the *Perſian* Gulph. The Entrance of the Haven, in which Ships may ſafely ride at Anchor without the leaſt Danger, in five or ſix Fathom Water, being defended by two ſtrong Caſtles, and a ſquare Redoubt. The Caſtle is fortified with ſome old round Baſtions, but well provided with Artillery. The Houſes of *Gambron* are of Brick, made of a Mixture of ſtiff Clay, and chopped Straw, and Horſe-dung, whereof, having ſet one Layer, they cover it with a Layer of Straw, or Faggots, and ſo alternately, till they have raiſed it to ſix or ſeven Feet high; then they ſet it on Fire and burn it to Brick. Their Morter is a Compoſition of the ſame Ingredients, mixed with Salt-water, and ſome Lime, which very ſoon becomes as hard as the Brick itſelf. The Houſes of Note are the Sultan's Palace, and the Ware-houſes, where the *Engliſh* and *Dutch* are lodged, which are ſo near the Sea-ſide, that at High-Tide the Water comes up to the very Walls of them. The lower Rooms being employed for the laying up of their Merchandize, and the upper for Lodgings, being the moſt convenient for the free Paſſage of the Air. The poorer ſort cover their Houſes only with the Sprigs and Leaves of Date-Trees.

The Streets of this City are very narrow, irregular, and not kept clean, which, together with the exceſſive Heat of the Climate, and the Changeableneſs of the Winds, renders the Air very pernicious here: For, in the Morning they are ſufficiently ſenſible of a cold Eaſt Wind, which towards Noon changes to the other Extreme, *viz.* a very hot South Wind. The Weſt Wind, which blows towards Night from the Sides of *Arabia*, continues the Heat of the Day till Midnight, when a cold North Wind coming from the Mountains, introduces a ſudden Alteration. Beſides this, it rains ſo ſeldom here, that in 1632 they ordered a public Thankſgiving for a plentiful Shower of Rain, after a continual Drought for three Years.

This is the Reaſon that all about the City you ſee no Graſs, or other Herbs, except what is produced with incredible Labour in ſome Gardens, where they have Garlick, Onions, Chibols, Radiſhes, and Cucumbers; but theſe muſt be watered twice or thrice a Day. It is the Iſle of *Kiſmiſch* which chiefly furniſhes this City with Pulſe and Fruits; it lies three Leagues from *Gambron*, being fifteen Leagues in Length, and three in Breadth. In *June*, and the reſt of the Summer Months, this Iſland produces Grapes, Damaſins, Peaches, Mangoes, Quinces, Oranges, Lemons, and Pomegranates, both red and white: And in *October*, Melons, Citrons, Cucumbers, Radiſhes, Onions, Turnips, Almonds, Piſtachoes, Apples, Pears, and divers other Fruits, and that in ſuch Quantities, that they are ſold here at an eaſier Rate than at any other Place in *Perſia*; whence it comes, that the Inhabitants feed for the moſt part on Pulſe, Fruits, and what Fiſh the neighbouring Sea furniſhes them with, the Meat hereabouts being, by reaſon of the exceſſive Heat, not very well taſted, and of little Nouriſhment, though otherwiſe they have ſufficient Store of Cattle, ſuch as Oxen, Cows, Sheep, but eſpecially of Goats, which are ſold at the rate of ſix or eight Shillings apiece. They have here alſo a kind of Rams with four Horns, but no wild Fowl. Amongſt other Fiſh, Pilchards, Smelts, Oyſters and Crabs are catched here in vaſt Quantities. Their ordinary Drink is fair Water, which being brought to the City two Leagues Diſtance, is very dear ſometimes; they drink alſo Arrack, or ſtrong Water, made of Rice or Dates.

Perſons of Note, and the beſt Merchants, have their Cloaths made after the *Perſian* Mode, but the common People take no more Care than to cover their Privities. The Women look upon it as their chief Ornament to have many Rings of Silver, Braſs, or Iron, according to their reſpective Abilities, about their Arms and Legs. To their Hair, which hangs down over their Foreheads, they faſten a kind of Bodkin of Silver gilt, or Braſs, and wear in the left Noſtril of their Noſe a gold Ring, with a Turquoiſe, a Granate, or perhaps only a gold Knob enamelled or plain. Their Pendants are ſo weighty, as to draw their Ears down almoſt to their Shoulders. Their winter Seaſon being from *October* to *May*, when the Heats are leſs violent, this is their chief Time for trading, when the *Perſians*, *Arabians*, *Banjans*, *Armenians*, *Turks*, and *Tartars*, come hither with the Caravans, which ſet out at certain Times from *Aleppo*, *Bagdat*, *Iſpahan*, *Shiras*, *Lahor*, *Herat*, and *Baſſora*, under the Convoy of certain Guards.

The *Engliſh* and *Dutch* commonly come hither by Sea, and beſides their ready Money, bring divers Commodities both out of *Europe* and the *Indies*, which they exchange for *Perſian* Tapeſtry, raw Silk, Cotton, Rhubarb, Saffron, and Roſe-water, which is made in vaſt Quantities about *Shiras*, either by Infuſion, which they call *Gullab*, and look upon it as the beſt, or by Diſtillation, and this they call *Areka gull*, *i. e.* the Sweat of Roſes: Both Kinds are much uſed all over the *Indies*, where they mix it with Perfumes, and they uſe it to ſweeten their Rooms with. Here are alſo Abundance of Callicoes made in portable Looms, which the Weavers faſten to a Tree, or ſome other Place without the City; and having finiſhed their Day's Work, carry it Home again, without any Trouble, being compoſed only of Canes faſtened to the Woof of the Cloth.

They have here a certain copper Coin which they call *Beſorg*, ſix whereof make a *Pays*, ten *Pays* a *Chay*, which is equivalent to Five pence *Engliſh*; two *Chays* make a *Mamoudy*, two whereof make an *Abas*, and three *Abas's* a *French* Crown: an hundred *Mamoudys* make a *Tumain*, which is worth five *French* Piſtoles; but *Spaniſh* Rials and Rix-dollars are preferred before all the other Coins in *Perſia*, by reaſon of the vaſt Advantage they make of them in melting them down. As to their Weights, a *Man* is ſix Pounds, a *Mancha* twelve, and the *Manſurats* thirty Pounds.

The Pearl Trade is alſo one of the greateſt in *Gambron*, and is carried on near the Iſle of *Bahram*, ſix Leagues from the City. The Fiſherman's Head is incloſed in a Bag of oiled Leather, which has a Pipe reaching up above the Water to fetch Breath through; he rakes together all the Shells he can meet with at the Bottom, and having filled his Bag, which hangs about his Neck, at a certain Signal given by him, he is drawn up into the Boat, which is waiting for that Purpoſe.

The Governor of *Gambron* has the Dignity of a *Sultan* annexed to his Office, and has under him a Vizier, or Secretary, and a Couteval, or Captain of his Guards; beſides theſe, there is a Sabandar, or a Receiver of the Cuſtoms; tho' the *Hollanders*, purſuant to a Privilege granted them by Shah *Abas*, pay none, and the *Engliſh* are ſo far from paying any Duty here, that they ought to have a Moiety of all that is received, but are forced to be contented with about a tenth Part, the *Perſians* thinking it no Crime to defraud Strangers, eſpecially if they be Chriſtians, when their Prince's Intereſt is concerned. As the *Perſian* Horſe are incomparably better than the *Indians*, the *Engliſh*, as well as the *Dutch*, pay fifty Crowns Cuſtom for every Horſe they export. However, the *Engliſh* have the Privilege of tranſporting twelve Horſes yearly, without paying any Cuſtom for them, an indifferent *Perſian* Horſe being worth 400 Crowns in the *Indies*. The Inhabitants of *Gambron* are, generally ſpeaking, *Perſians*, *Arabians*, and *Indians*, who all ſpeak the *Portugueze* Language, which was introduced into thoſe Parts whilſt the *Portugueze* were Maſters of *Ormuz*; tho' ever ſince the Conqueſt of it by the *Perſians*, they are not permitted to come to *Gambron*, which is open to all other Nations, *Chriſtians*, *Jews*, *Pagans*, and *Mohammedans*, being permitted to trade here, which is the Occaſion they live in open Hoſtility with the *Perſians*; take their Ships as Prizes, and frequently land in the neighbouring Iſlands: Unto one, which is about three Leagues off the Continent, the King of *Spain*'s Subjects are permitted to come and traffick, paying certain Duties to the Governor of the Caſtle that commands the Iſland.

7. The City of *Ormuz* was ſeated in an Iſland of the ſame Name, about two Leagues from the Continent, and ſix Leagues in Circumference, being compoſed of nothing but ſalt Rocks, not producing the leaſt freſh Water, but it was the Advantage and Goodneſs of its Harbour and Situation, which made it ſo famous for Commerce, that it was a Proverb among the *Arabians*, that if the World were a Ring, *Ormuz* ought to be conſidered as the Diamond. According to *Texira*, Shah *Abbas*, a native of *Arabia*, having in the tenth Century made himſelf Maſter of the Provinces bordering upon the *Arabian* Gulph, paſſed over into the Iſland, where he built the City of *Ormuz*. *Shabedin Mohammed*, of the Poſterity of *Mohammed* the 11th King of *Ormuz*, died 1228, and he who reigned in 1608, when it was conquered by the *Portugueze*, was named *Saffedin*, a Tributary to the King of *Perſia*.

For *Albuquerque* having been ſent to viſit the Coaſts of *Arabia*, being informed that the People of *Ormuz* lived in no good Underſtanding with their King, by reaſon of the Miſmanagement of his chief Miniſter, came the 25th of *September* before the City; and after having defeated their Fleet, obliged the King of *Ormuz* to acknowledge the King of *Portugal* for his Sovereign, to pay a certain Tribute, and permit *Albuquerque* to build a Citadel where he ſhould think it moſt proper, which was performed accordingly,

cordingly, and the Chapel called *Our Bleſſed Lady of Victory.* The *Moors,* ſoon after repenting of their Bargain, made ſeveral Efforts to rid their Hands of theſe unwelcome Gueſts; but they being conſtantly upon their Guard, not only fruſtrated all their Deſigns, but alſo engroſſed all the Commerce of thoſe Parts to themſelves, only permitting *Saffeddin* to live in the Iſle, at a good Diſtance from the Citadel. Shah *Abbas* being provoked by their Inſolence, and eſpecially by their having given Protection to a certain *Italian,* named *Gabrieli,* who was fled out of *Perſia,* engaged the *Engliſh* to join with him in reducing this Place, which was attacked and carried in 1622, and put into the Hands of the *Perſians*; the Wall of the City being demoliſhed, and *Gambron* raiſed upon the Ruins of *Ormuz.*

The *Engliſh,* as a Reward for their Service, had not only an Exemption from all Duties granted them at *Gambron,* but alſo a Moiety of all the Cuſtoms that ſhould be received there. By this Time an *Engliſh* Ship, called the *Swan,* Burthen 300 Tuns, carrying twenty-four Guns, being arrived in the Harbour of *Gambron,* bound for *Surat,* Mr. *Honywood,* the chief Agent for the *Engliſh* Company, recommended me to the Captain, to carry me, and defray all my Charges thither; but what proved very vexatious to me was, that out of eight Horſes which I had brought along with me, and could have ſold for an hundred and fifty Crowns a-piece at *Surat,* I could carry no more than two, being obliged to ſell the reſt at *Gambron* for half what they coſt me.

8. I embarked the 6th of *April* with Mr. *Manley* and Mr. *Hall,* two *Engliſh* Merchants, and went from *Gambron* to *Surat* in nineteen Days; during which Time I was very civilly entertained by the Captain, who reſigned his own Bed to me, and being very plentifully provided with Fowl, Mutton, good Sack, *Engliſh* Beer, *French* Wine, and other Refreſhments: This with the Uſe of a Ptiſan made of Cinamon, and the Rhind of Pomegranates, and of a good Quantity of Tea, reſtored me to perfect Health. The Wind proving contrary that Day, we were obliged to lie at Anchor till the next when we took our Courſe towards the Iſle of *Ormuz*; but, being ſurprized by a Tempeſt from the Weſt, were forced to come to an Anchor in Sight of this Iſland. The 8th we endeavoured, by labouring with a Weſt-Wind, to paſs between the Iſles of *Ormuz* and *Kiſmiſch,* which are four Leagues diſtant from each other. The ſame Day one of our Seamen, who died of the Bloody-flux, being thrown over-board, and I being as yet afflicted with the ſame Diſtemper, the Sight of it cauſed very melancholy Speculations in me. The next Night having paſſed between the two Iſlands, we coaſted it along the Sea-Shore of *Arabia,* which is very ſafe thereabouts.

The 10th being in the open Sea, we diſcovered a Pirate, who ſometimes came pretty near us, but finding we endeavoured to get the Wind of him, he made towards the Iſle of *Socotora,* ſituate in 21° 40′, at the very Entrance of the Red-Sea. To the W. and N. E. it has *Melinda,* or *Ethiopia,* and to the S. the Continent of *Arabia,* from whence it is not above ſixteen Leagues diſtant. Its Length is about twenty-five Leagues, and the Breadth ten, having very good Harbours and ſafe Anchorge on all Sides. The Inhabitants, who are governed by a Sultan, under the Juriſdiction of a King of *Arabia,* are of a mean Stature, inclining to Leanneſs, of a black Complexion, but very hardy. They feed chiefly upon Fiſh and Fruits; they live very friendly with their Wives, who are chiefly *Arabians,* but do no permit them to be ſeen by Strangers. As they are very crafty in their Dealings, and adulterate thoſe few Commodities they have, ſo they are always miſtruſtful of others. They uſe the Paſte of Dates inſtead of Bread. The Iſland affords ſome Oranges, but none of the beſt, Tobacco and Citruls, as alſo ſome Cocoa-Trees, but the Fruit ſeldom comes to Maturity, by reaſon of the ſtony Grounds. Their chief Commodity is Aloes, the Juice of which is gathered in Bladders or Goat-ſkins dried in the Sun. They are alſo well ſtored with the Gum called Dragon's-Blood, and keep Abundance of Civet Cats; ſo that Civet may be bought there for three or four Crowns an Ounce; but the worſt is, that they adulterate it with Greaſe. They have no wild Fowl, and but very little tame; yet are not deſtitue of Cattle, ſuch as Camels, Aſſes, Oxen, Cows, Sheep and Goats, the Hair of which about the Thighs are curled as our Satyrs are painted.

The Reſidence of the Governor is called *Tamary,* being defended by a Fort not above a Cannon-ſhot from the Sea-ſide. They make uſe of Broad-ſwords with large Hilts, without a Guard. Their Poinards, which they wear conſtantly on their Girdles, have Blades of near three Inches broad near the Hilts, but very ſharp towards the Points. They alſo underſtand the Management of Fire-arms, but do not keep them well; and are very expert in the Uſe of their ſmall Bucklers, wherewith they defend themſelves againſt their Enemies. They have no other Shipping than a few flat-bottomed Fiſhing-boats. The Torrents which fall down from the Mountains into the Sea, like a River, furniſh all the Ships that come into that Road with ſufficient Quantities of freſh Water. They eat no Swines Fleſh any more than other *Mohammedans,* but have no Moſques, or any other publick Places of Devotion, which conſiſts chiefly in adoring the Sun every Morning, and at the riſing and ſetting of the ſame, which they repeat three or four Times a Day, beſides muttering out certain Words as they make their Reverence.

The 14th of *April* we were in 23° 24′; the 15th at 22° 40′, and the 16th at 22° 40′; the 17th at 21° 55′, when our Captain fell ſick of a Fever. The 18th at 21° 8′; the 19th at 20° 42′; the 20th at 20′ 50; the 22d 20° 50; the 23d at 20° 18′, and the 25th arrived ſafely in the Road of *Surat,* where we caſt Anchor within two Leagues of the Shore, becauſe the Captain not intending to ſtay here, would be ſure of the Conveniency of going away when he pleaſed; beſides, that from *May* to *September* there is no ſafe riding at Anchor in this Road, by reaſon of the frequent Tempeſts; whereas on the Eaſtern-Coaſts of the *Indies,* in the Gulph of *Bengal,* the Seaſon is very fair and calm all that Time; for, it is to be obſerved, that the Year here has only three Seaſons. In the Months of *February, March, April,* and *May* it is exceſſive hot; in *June, July, Auguſt.* and *September,* there is nothing elſe but Rain, with Thunder and Lightening; and the Months *October, November, December,* and *January* are cold, as far as is conſiſtent with that Climate.

9. *April* the 26th the Captain having ſent Advice of his Arrival, the chief Director of the *Engliſh* Company at *Surat,* ſent two young Merchants on board to deſire us to come to *Surat*; ſo that after having teſtified my Acknowledgments to him for his many Civilities by a ſmall Preſent, I left the Ship the 29th, and no ſooner entered the River *Tape* or *Tynde,* upon which *Surat* lies, but we had a very agreeable Proſpect to many pleaſant Gardens and Summer-houſes all white, and ſurrounded with green Trees. It is ſo ſhallow at the Entrance, that it wil ſcarce carry a Bark of ſeventy or eighty Tun. We landed near the Sultan's Palace, and from thence went ſtraight away to the Cuſtom-houſe to have our Things ſearched, which is done with ſo much Rigour here, that they ſpare not your Cloaths or Pockets; and what is worſe, the Sultan, nay, and chief Cuſtom-houſe Officers, have a Cuſtom to oblige Strangers to part with any thing they like beſt at ſuch a Price as they pleaſe; accordingly the Sultan having ſeen an Amber-bracelet and a Diamond among any Things, would needs cheapen them both; but I telling him that I was no Merchant, and intended not to ſell them, but to keep them for the Sake of thoſe who had preſented them to me, I ſaved my Diamond, but he would needs take the Bracelet, under Pretence that he would reſtore it to me whenever I ſhould honour him with a Viſit.

By this Time the *Engliſh* Governor, having ſent his Coach, drawn by two white Oxen, I went to the Houſe belonging to their Company; at the Entrance of which I was received by the Director himſelf and his Deputy, one Mr. *Fleming*: As the Director underſtood *Dutch* very well, he accoſted me in that Language, telling me, that in ſuch a Country as this, he thought all Chriſtians were obliged to give Aſſiſtance one to another; but that to me he was obliged to do it more particularly in return for the Affection I had expreſſed to ſome of his Countrymen at *Iſpahan.* Having returned the Compliment, I was conducted into a Room where a Collation was ready for me;

we were no ſooner ſat down, but having underſtood my Intention was to return to *Germany* within twelve Months, he invited me very engagingly to ſtay with him five or ſix Months, becauſe no more Ships would come into that Road this Year, adviſing me to ſpend what Time I had in viewing the Country, and offering his Recommendation to the *Engliſh* Merchants living in thoſe Places thro' which I was to paſs.

His engaging Expreſſions obliged me to chooſe my Chamber in the ſame Houſe next to that of the Deputy's; in the Evening ſeveral Merchants came thither to conduct me to Supper in a ſpacious Hall, where I found the Miniſter and about twelve Merchants more. After Supper the Miniſter brought me into an open Gallery, where we found the Director and his Deputy taking the Benefit of the cool Breezes of the Sea-Air, which was our ordinary Rendezvouz after Supper. At Dinner we had commonly fifteen or ſixteen Diſhes, beſides the Deſert. Every thing was carried on in this Houſe with extraordinary good Order and Decorum. We had Prayers every Day twice, and three Times on *Sundays*. On *Fridays*, after Evening-Prayers, we had a certain Club, where we drank our Wives and Friends Healths beyond the Seas in Sack or Punch, being a Mixture of *Aqua Vitæ*, Roſe-water, Juice of Citrons and Sugar. At our ordinary Meeting we, as well as the *Dutch*, were entertained with Tea, inſtead of which the *Perſians* uſe Coffee.

The *Engliſh* have a very fair Garden without the City, where we uſed to take a Walk on *Sundays* after Sermon, and oftentimes on other Days. Our Exerciſe was Shooting at the Butt; and I made a Shift to get near five Pounds Sterling a Week among them. We ſeldom went away without a good Collation, and often bathed ourſelves in a Ciſtern which had five Feet Water. My chief Affliction was, that not underſtanding the *Engliſh* Tongue, I could not converſe with any of them to my Satisfaction, except with the Preſident, who ſpoke *Dutch*. But before I proceed to give you any further Account of what I obſerved at *Surat*, and in my Voyage, it will not be beyond my Scope to give you a ſhort View of the Mogul's Country.

10. The Country which properly challenges the Name of *India* (called *Indoſtan* by the *Perſians* and *Arabians*) begins on the Weſt-ſide from the River *Indus* or *Hindo*, and reaches to the River *Ganges*. It was known among the Ancients by the Name of *Carmania*, and it hath a Haven called *Guader* in 25°. The *Perſians* and *Indoſtans* themſelves have given the Name of *Pangab*, *i. e.* five Waters, to the River *Indus*, becauſe it is joined by ſo many Rivers before it diſcharges itſelf into the Sea. The firſt is the River *Bugal* or *Begal*, whoſe Source is near *Kabul*; the ſecond is called *Chanab*, which riſes in the Province of *Quéſmir* or *Caſſimer*, fifteen Days Journey to the North above *Lahor*; the third is that of *Ravy* or *Ravee*, which riſes not far from *Lahor*, and runs by it; the two others, *viz.* the Rivers *Via* and *Oſuid*, have their Sources at a vaſt Diſtance, their Confluence being near *Bakar*, which lies at an equal Diſtance betwixt *Lahor* and the Sea. Some Authors have confounded this River with that of *Diul*, and placed it at 24°. The vaſt Empire of the Great Mogul borders to the Eaſt upon the Kingdom of *Mavy*, to the Weſt upon Part of *Perſia* and the South-Sea; on the North-ſide it is incloſed by Mount *Caucaſus* and *Great Tartary*; and to the South it has the Kingdom of *Decan*, and the Gulph of *Bengal*. It comprehends in all thirty-ſeven Provinces, which anciently were as many Kingdoms. The Province of *Candahar*, which has given its Name to the capital City, borders upon *Perſia* as the Province of *Cabul* has received its Name from its Metropolis, and borders upon *Great Tartary*. Here riſes the River *Begal*, of which before.

The Province of *Multan*, with its chief City of the ſame Name, extends along the River *Indus* to the Eaſt, as the Province of *Haca-Chan*, or *Hangi-Chan*, has the ſame River to the Weſt. *Bacbar*, or *Buchar*, lies on both Sides of the River *Indus*. The Province of *Tatta* is a Congeries of many Iſlands made by the ſame River. *Soret* is a ſmall Province extending from the Sea-ſide to the Eaſt, as far as the Province of *Guzurat*. The Province of *Iſelmere* is incloſed betwixt the Provinces of *Soret*, *Bachar*, and *Tatta*. The Province of *Attach* is ſeated upon the River *Nibal*, and is by it divided from the Province of *Haca-Chan*; that of *Pangab* is the Chief of all the Kingdoms: Its capital City is *Lahor*. The Province of *Chiſmer*, or *Quexmer*, lies upon the River *Bezat*, or *Badt*, which after it has made a vaſt Number of Iſlands in this Province, joins its Current with the River *Ganges*. The Province of *Bankiſch* borders to the Eaſt upon that of *Chiſmer*, and the Province of *Jengopar*, or *Jemipar*, lies between the Cities *Lahor* and *Agra*. The hilly Province of *Jenba*, or *Jamba*, borders to the Weſt upon that of *Pangab*. The Province *Delly* lies between that of *Jenba* and *Agra* on the River of *Gemini*, which falls into the *Ganges*; the capital City bearing the ſame Name with the Province, was formerly the Metropolis of all *Indoſtan*. The Province of *Bando* lies on the Weſt-ſide of the City of *Agra*.

The Province of *Malway*, or *Malwa*, has for its capital City *Ratapore*, within half a League of the River *Cepra*, which falls into the Sea in the Gulph of *Cambaja*. The Province of *Chitor* borders to the Eaſt upon that of *Candiſch*, and to the South upon that of *Guzurat*. It was formerly a very flouriſhing Kingdom, its Metropolis bearing the ſame Name with the Province, being ſixty Leagues in Compaſs, which was laid deſolate by the Great Mogul *Achobar*, Great-grandfather of Shah *Chiram*. The Province of *Guzarat* (called *Cambaja* by the *Portugueze*, from its Capital City) where they drive a conſiderable Trade, is one of the nobleſt and moſt powerful Provinces in all the Mogul's Country. The Province of *Gandiſch*, the Metropolis whereof is *Burſampour*, or *Brampour*, is divided into the Country of the Prince of *Partapha*, a Vaſſal of the Great Mogul, by the River *Tabet*, or *Tapte*, which diſembogues in the Gulph of *Cambaja*. The Province of *Berar* extends to the South to *Guzarat*, and the Mountain of *Rana*.

The Province of *Gualor*, or *Guallar*, is famous for the Tower, or Caſtle, whither the Mogul commonly ſends his Priſoners of State, and lays up Part of his Treaſure. The Province of *Agra*, and its Metropolis, claims now the Precedency before all the reſt. The Province of *Sambel*, or *Saudel*, is divided by the River *Gemini*, which falls into the *Ganges* from that of *Narvar*. At the Confluence of theſe two Rivers, near the City of *Haliebas*, they make a kind of Iſle, which has given the Name of *Doab*, *i. e.* *inter aquas* to this Province. The Province of *Bakar* extends along the weſtern Bank of the *Ganges*, as that of *Navor* is divided by a very large River, which joins its Current with the *Ganges*. The Province of *Nagaracut*, or *Nakarkut*, is one of the moſt northern Provinces in the Mogul's Dominions; its chief City bears the ſame Name, where in a ſumptuous Chapel, the Floor covered with Plates of Gold, is kept the Figure of a Monſter called *Matta*, unto which the *Indians*, who flock thither from all Parts, offer a little Snip which they cut out of their Tongues. Near the City of *Kalamaka*, belonging to the ſame Province, ariſes a certain Spring out of the Rocks, which caſts forth Flames, and for that Reaſon is reverenced by the Pilgrims that come thither from all Parts. The Province of *Siba* is famous for the Source of the River *Ganges*. Both this and the Province of *Markarkut* are very mountainous, as well as that of *Kakares*, which is divided from *Great Tartary* by the Mountain *Caucaſus*.

The Province of *Gar*, which is alſo very mountainous, gives its Riſe from the River *Perſelis*, which joins its Current with the *Ganges*, as does the River *Kanda*, which divides the Province of *Pitan*, or *Partan*, bordering upon the Weſt upon that of *Jamba*. The Province of *Kanduana*, which, together with that of *Gar*, are the moſt northern Provinces of the Mogul's Dominions, extends on both Sides of the River *Inderaiis*, the Province of *Perena* being incloſed between the four Rivers of *Ganges*, *Perſelis*, *Gemini*, and *Kandach*, is very fruitful. That of *Jewal* is famous only for its City called *Raſapour*, or *Rajapor*. The Province of *Meuat*, a barren Country, extends from the *Ganges* to the Eaſt. That of *Vdeſſa*, or *Voeza*, is the uttermoſt Province in the Eaſt. The Province of *Bengal*, which imparts its Name to the Gulph in which the *Ganges* exonerates its Waters, challenges the firſt Place among all the reſt under the Mogul's Juriſdiction,

diction. It is ſubdivided into ſeveral Provinces, the chiefeſt of which are *Pula*, and *Palan*, which have formerly been dignified with the Title of Kingdoms. *Texcira* mentions a certain Province called *Utrat*, but gives us no more than the bare Name; and what he ſays of the Kingdom of *Cacche*, *viz.* that lies near *Cambaya* to the North, and is famous for the excellent Breed of Race-horſes it produces, can be underſtood of no other than the Province of *Candiſch*.

The whole Extent of the Mogul's Territories is from Eaſt to Weſt 600 *French* Leagues, and from North to South 700, its uttermoſt Frontiers to the South being at 20°, and to the North 43°. The Province of *Guzarat* lies Weſtward along the Sea-ſide, in the Form of a Peninſula, having on each Side a Gulph, or Bay, one whereof is eight Leagues broad at the Entrance, and grows narrower and narrower for forty Leagues. Thence it is bounded to the North by the Provinces of *Soret*, *Quiſmer*, and *Bando*, to the Eaſt by thoſe of *Chitor* and *Bando*, and to the South by the Kingdom of *Decan*; tho' its Extent was much larger formerly, yet does it comprehend above 20,000 Cities, Towns and Villages, the chiefeſt whereof lying near the Sea-ſide, are *Surat*, *Broitſchia*, *Gandeer*, *Goga*, *Cambaya*, *Diu*, *Patapatan*, *Mangelor*, *Gondore*, *Naſſary*, *Gandivi*, and *Balſara*. It has three noted Rivers, *viz.* the *Nadabat*, which paſſes ner *Broitſchia*, the *Tapta*, and the *Waſet*; two of the beſt Harbours of the *Indies*, *viz.* that of *Surat*, and of *Cambaya*. For Fertility this Province may alſo challenge the Precedency before any of the *Indies*, moſt of the adjacent Provinces being ſupplied thence with Fruits and Proviſions. Tho' the great Drought in 1640, and the enſuing Rains did almoſt lay this Province deſolate, which however it has ſufficiently recovered ſince; but it is Time to return to our Relation.

11. The *Perſian* Servant, whom I had brought along with me from *Iſpahan*, being born of Chriſtian *Georgian* Parents, had given me ſome Hopes of returning to the Chriſtian Faith, which was the Reaſon that I treated him with more than ordinary Civility, and allowed him four Crowns Wages *per Month*; but I was much ſurpriſed to underſtand that the young Fellow, in hopes of getting better Preferment by the Aſſiſtance of an Uncle of his, who was Maſter of the Horſe to the Great Mogul, was gone to *Agra*, and could not but be perſuaded that his Intention of leaving me thus on a ſudden, was in part to betray me into the Hands of the *Indians*, he being not ignorant of what had happened betwixt them and our People at *Iſpahan*; but I had afterwards great Reaſon to admire God's Providence in ſending him, as it were, on purpoſe thither to ſave me; for without him I had certainly been loſt at *Agra*; as will appear by the Sequel of this Relation.

In *May* we received News that the Khan of *Candahar* had revolted, and ſurrendered the Place to the Mogul, who had ſent five hundred thouſand Crowns as a Reward for him and the Garriſon. *June* the 16th we went a hunting with a *Dutch* Merchant, and another *Engliſhman*, croſs the River to a Place called *Reneal*, where the *Dutch* have a Warehouſe, and being nobly treated there that Night, went the next day to a Village called *Bedick*, where we killed divers wild Ducks, and a Hern; we alſo ſaw a great Number of Deer with grey Skins, but chequered all over with white Spots. Their Horns were very fair, and had ſeveral Brow Antlers; ſome were inclining to a dark brown, chequered likewiſe with white Spots, with very fine Horns, and of the Bigneſs of our Roe-bucks; ſome are of Opinion, that they are of the kind which produce the Bezoar.

All the Fields have a ſmall Dike raiſed about them here to keep in the Water, the Rice requiring Abundance of Moiſture. Here we alſo drank ſome Liquor they draw out of the Palm-tree, by making an Inciſion in the Bark on the Top of the Tree, unto which they faſten an Earthen Veſſel, into which the Liquor diſtils; it is very ſweet, but ſoon turns ſour.

The City of *Surat* lies in 21° 42' upon the River *Tapta*, which ariſing near *Barampour*, falls into the Sea four Leagues below *Surat*, which is built four-ſquare upon the very Banks of the River. It has no Fortifications on the River Side, but is provided with a good Stone Rampart on the Land-ſide, and the Caſtle is all of Free-ſtone. It has three Gates, one leading to the Village of *Briou*, the ſecond to *Barampour*, and the third to *Naſſary*. All the Houſes are flat on the Top, and have generally good Gardens. The Caſtle has no more than one Gate, which looks into the Great Market-place; not far thence is the Governor's Palace, and the Cuſtom-houſe. The Governor of the Caſtle has not the leaſt Dependance on the Sultan, whoſe Buſineſs is the Adminiſtration of Juſtice, and to look after the Cuſtoms. All Merchandizes exported or imported pay three and an half *per Cent.* here, except Silver coined or uncoined, which pays no more than two *per Cent.* Both the *Engliſh* and *Dutch* have very fair Houſes called Lodges, well provided with Chambers, Halls, and Galleries.

The Harbour of *Surat* is about two Leagues from the City, near the Village of *Subaly*, where Ships are unladen, and Commodities brought thence to *Surat* by Land-Carriage. The Haven lies in 21° 50' upon the Courſe of North-Eaſt and South-Weſt; the Entrance is narrow, and at high Water not above ſeven Fathom deep, at low but five: The Harbour itſelf being not above five hundred Paces broad, a ſandy Bottom, with ſharp and ſteep Banks, which are almoſt dry at low Water; it is, however, ſafe anchoring here, there being no Danger but from the South-Weſt Wind, except from *May* to *September*, when there is no ſtaying here by reaſon of the furious Tempeſts. Moſt of the Inhabitants of *Surat* are either *Banjans*, *Bramins*, or *Moguls*; the laſt are more reſpected than the reſt, as being *Mohammedans*, and becauſe they always apply themſelves to Arms, as on the contrary, the *Banjans* make Traffick their chief Buſineſs, and are much addicted to Religion, of whom we ſhall have occaſion to ſay more hereafter.

Beſides theſe, ſome *Arabians*, *Perſians*, *Armenians*, *Turks*, and *Jews*, are Inhabitants here, but the moſt conſiderable of all Foreigners here are the *Engliſh* and *Dutch*, who have their Settlements, Directors, Merchants, and Clerks; eſpecially the *Engliſh*, who have made this the chief Place of their Trade in the *Indies*. All the other Factories they have at *Agra*, *Iſpahan*, *Muſilipatan*, *Cambay*, *Amadabat*, *Brodra*, and *Broitſchia*, having a Dependance on that of *Surat*, and are obliged to be accountable to their chief Director reſiding in this City; and there is ſcarce an *Engliſh* Ship, which either going or coming into theſe Parts, does not touch at *Surat*. The Country round about this City is very delightful, being adorned with a vaſt Number of Gardens and Fruit-trees, and among the reſt, I obſerved hereabouts one of thoſe Trees, the Branches of which take Root afreſh in the Ground mentioned in the Deſcription of *Gambron*. Among other things, I ſaw a large Ciſtern of Free-ſtone, eight ſquare, having at each Angle a Pair of Stairs, and in the midſt of it a moſt ſumptuous Sepulchre, in which the Founder is buried; this Ciſtern is ſo large, that it ſupplies the whole City with Water.

About the 12th of *September* then the Tempeſt began to ceaſe, two *Engliſh* Ships arrived in the Port of *Surat*, called the *Diſcovery* and the *Mary*, the firſt 1600 Tuns Burthen, 28 Guns, and 190 Men; and the ſecond of 1200 Tuns, carrying 48 Guns. We were very generouſly entertained aboard them for eight Days together, our conſtant Employment being to go aſhore every Day a Hunting, and to return on Board at Night. The 24th of the ſame Month arrived two other Ships, one a *Dutchman* of 1400 Tuns, bound from *Batavia* to *Holland*, the other an *Engliſh* Veſſel called the *Swan*. We were likewiſe very generouſly entertained on Board them, the *Dutch* Veſſel being both the biggeſt and the beſt contrived of any Ship that ever came out of *Holland*; with theſe, and ſuch like Divertiſements, I paſſed my Time pleaſantly enough at *Surat*: But underſtanding it would be ſeveral Months before the *Engliſh* would be ready for their Departure, I reſolved to take the Opportunity of a certain Caravan, ſent by the *Engliſh* to *Amadabat*, under a Convoy of ſome *Engliſh* Soldiers, to take a View of the Great Mogul's Court.

12. Thinking myſelf thus ſufficiently guarded againſt the *Raſhpoots*, I left *Surat* the laſt of *September*, and joining with the Caravan, we took our Way towards *Broitſchia*, croſſing the River at the Village of *Briu*. Four Leagues thence, we paſſed by *Cattodera*, and afterwards by *Entreliſſer*, where we killed abundance of wild Ducks,

and other Water-fowl, as alſo Roe-bucks, Deer, and wild Boars being in ſuch Plenty thereabouts, that one need not be long in want of Proviſions, eſpecially at this Time, when we had a good Cook along with us. Before we came to *Broitſchia* we croſſed a deep but narrow River, and were no ſooner arrived, but the *Engliſh* Secretary invited us to Dinner. The City of *Broitſchia* lies in 21° 56′ twelve Leagues from *Surat*, and eight from the Seaſide, upon a River, which coming out of the Mountains, is the common Boundary betwixt the Kingdom of *Decan* and that of *Baldagat*.

As it is ſituate upon a ſteep Hill, and provided with Walls of Free-ſtone, it is accounted one of the ſtrongeſt Fortreſſes in the *Indies*. It has two large Gates to the Land-ſide, and as many leſſer ones upon the River. All Merchandizes that paſs through it pay two *per Cent.* It is very well peopled, but for the moſt Part with Callicoe Weavers, who make the beſt here of any in the whole Province. The Fields for ſix or ſeven Leagues round the City are very flat, which, as well as the Mountains beyond them to the South-Weſt, called *Pindaſche*, are fertile in Rice, Barley, and Cotton. Theſe Mountains produce Abundance of Agate, which is ſo celebrated in *Europe*. Four Leagues below the City the River divideth itſelf into two Branches, which after they have made an Iſland of two Miles in Circumference, fall into the Sea by two different Channels, eight Leagues beyond *Broitſchia*. Upon the Way leading to *Cambaya* is the Village of *Janbayſar*, or *Jambowſar*, famous for the great Quantity of Indigo it produces. And in the Way to *Amadabat*, is to be ſeen the Sepulchre of a certain *Mohammedan* Saint, whither they come in Pilgrimage with Padlocks on their Mouths, and Chains on their Arms, till they have performed their Vows.

We left *Broitſchia* in the Evening, and travelled all that Night, and Part of the next Day, till the exceſſive Heat obliged us to ſeek Refreſhment near a ſtanding Pool, where we paſſed the Remainder of that Day, and Part of the Night following. The 17th of *October* we came to *Brodra*, where the *Engliſh* Merchants that belonged to our Caravan, and myſelf, were lodged, and moſt nobly entertained in the *Engliſh* Houſe, and among the Reſt, had the Diverſion of Women Dancers, who being very curious to ſee my Cloaths made after the *German* Faſhion, would fain have had me ſtripped myſelf naked, offering to do the ſame, which I refuſing to do, they went away diſcontented at it. The City of *Brodra* is ſeated in a large ſandy Plain, upon a ſmall River called *Waſſet*, about 15 Leagues from *Broitſchia*. It was built of late Years by *Rajab-gi*, deſcended from Sultan *Mohammed Bergeran*, the laſt King of *Guzurat*, out of the Ruins of the old *Brodra*. It is indifferently well fortified after the old Way, and has five Gates, one whereof is dammed up. The City, but eſpecially the weſtern Suburbs, are for the moſt Part inhabited by Callicoe Weavers, Dyers, and other Workmen belonging to that Manufacture, which are made ſomewhat narrower here, and the Pieces ſhorter than at *Broitſchia*. The Governor of *Brodra* has no leſs than 120 Villages under his Juriſdiction, ſixty-five of which are aſſigned for the Payment of the Garriſon, and the other 135 allotted for Penſions to certain Officers belonging to the Mogul's Court, and by theſe Aſſignments his Officers are maintained.

Among theſe there is a Village called *Sindickera*, which produces every Year 25,000 Pounds of Lacque: This Lacque is a red Gum, which comes from a Tree reſembling our Plum-tree, which, being dried and beaten to Powder, they give it what Colour they pleaſe, and make it into Sticks to ſeal Letters with, or for lacquering of Cabinets, *&c.* This Country affords alſo Abundance of Indigo. I went the ſame Day to rejoin the Caravan, which I found at a Corner of a Grove of Cocoa-Trees, without the City, and one of the *Engliſh* Merchants of *Brodra* would needs accompany us as far as *Waſſet*, an old ruined Caſtle, upon a very high Mountain, where is kept a Garriſon of 100 Horſe, who are maintained out of the Cuſtoms paid there; but we having a Paſs from the Mogul, and conſequently not thinking ourſelves obliged to pay it, this occaſioned a Conteſt between them and us, which was very likely to have ended in a bloody Engagement; for we forcing our Way, and having croſſed the River, where we ſtaid that Night, they would have attacked us, but a *Dutch* Caravan coming to our Aſſiſtance, after the Exchange of ſome ſmall Shot, the Matter was compoſed, and the Garriſon forced to be contented with a Preſent of three Crowns. Thence we paſſed two Leagues and a half further through the Village of *Ammenoygii*, and three Leagues and a half further through that of *Sejuntra*, and ſo to the ſmall City of *Niriad*, or *Niriaud*, nine Leagues from *Brodra*.

13. *October* the 12th, after we had travelled five Leagues, and paſſed in our Way by *Canis*, *Batova*, and *Jaſſampour*, got ſafe to *Amadu*; but we were met in a Garden within half a League from that City by Mr. *Benjamin Roberts*, the chief Merchant of the Factory there, who carried me in his Coach drawn, after the *Indian* Faſhion, by two white Oxen, which were as full of Mettle as the beſt Horſes, into the City, ordering the two *Engliſh* Merchants, that were my Fellow-travellers, to wait there for the coming up of the Caravan. The *Engliſh* Factory is a very fair Structure, in the very Heart of the City, fitted with very convenient Apartments, and ſeveral Courts for the Diſpoſal of Merchandize. Mr. *Roberts* gave me a Collation in his own Chamber, which looked into a Flower-Garden, and was very richly furniſhed. We ſupped in a ſpacious Hall, where the *Dutch* Head Factor, with ſome of his Merchants, came to pay us a Viſit.

After he was gone, I was conducted by the whole Company into my Lodging-room, which I had choſen myſelf. Mr. *Roberts* kept me Company there till Midnight, and to give me all imaginable Diverſion, ſent for ſix Women Dancers of the Country, telling me, if I liked any Thing in them beſides their Singing and Activity, I might command it; which Civility I refuſed with a Compliment. They were mightily taken with my Cloaths and Hair, and would ſcarce be perſuaded that I was not a Woman in Diſguiſe. Two Days after my noble Hoſt carried me in his Coach to view the City. The Market-place is called *Meydan-ſhah*, or the Royal-market; it is at leaſt 1600 Feet long, and above 800 broad, planted all round with Palm and Date-trees, intermixed with Orange and Citron-trees, of which there is great Plenty in the Streets, the Sight, Smell, and Shadow whereof are very deſirable and pleaſant. There are, beſides theſe, four *Baſars*, or publick Places for the Sale of Merchandizes. Not far from the *Meydan* we ſaw a Houſe built of Brick, which is the King's Palace, the Apartments whereof were ſumptuouſly furniſhed and adorned with many Pictures, more remarkable for their Diverſity of Colours, than any Exactneſs of Proportion, according to the *Indian* Way. Over the Gate of this Palace was a large Balcony for the Muſick, conſiſting of Violins, Hautboys, and Bagpipes, to play there three Times a Day, *viz.* in the Morning, at Noon, and Night, a Cuſtom obſerved in moſt of the *Mohammedan* Countries.

The Walls of the City were tolerably well built, with twelve Gates, and many Towers; but the Ditch, which is 16 Fathom broad, was ruined and dry in ſeveral Places. We took alſo a View of the Caſtle, which is very large, and built altogether of Free-ſtone. The chief Temple of the *Banjans* is one of the fineſt Structures that ever I ſaw, it being but lately built, and ſtands in the Centre of a vaſt Court, ſurrounded with a very high Wall of Free-ſtone, about which are Piazzas, divided into Cells, in each of which ſtands a Statue, either white or black, repreſenting a naked Woman ſitting with her Legs under her, according to the Eaſtern Faſhion. Some of theſe Cells have three Statues, *viz.* a great one betwixt two little ones. As ſoon as you enter the Temple, you ſee two Elephants of black Marble, done to the Life, and upon one of them the Effigies of the Founder, a rich *Banjan* Merchant, whoſe Name is *Santides*.

The Temple is vaulted, and the Walls adorned with Figures of Men and other living Creatures. There was not the leaſt Thing to be ſeen within this Edifice, except three Chapels, which were very dark, and were divided only by wooden Rails, wherein were placed Statues of Marble, like thoſe in the Cells, the Middlemoſt having a

Lamp hanging before it. We ſaw the Prieſt buſy in receiving from ſuch as were performing their Devotions, and who preſented him with Flowers, Oil, Wheat and Salt; with the firſt he adorned the Images, his Mouth and Noſe being covered with a Piece of Callicoe, for fear of prophaning the Myſtery by the Impurity of his Breath; the Oil was intended for the Lamps; and the Wheat and the Salt for the Sacrifice. He muttered out certain Prayers over the Lamp, and ever and anon put his Hands in the Smoak of the Flame, out of an Opinion they have that Fire having a greater Power of purifying than Water, they may, after this Cleanſing, without Offence, lift up their Hands to God.

Amadabat, the Capital City of the Province of *Guzurat*, is ſeated upon a ſmall River, which, not far from thence, joins its Current with the River *Indus* at 23° 32′, eighteen Leagues from *Cambaya*, and forty-five from *Surat*. It comprehends in its Circuit (including the Suburbs) near ſeven Leagues. Its Streets are very ſpacious, its private Buildings and Moſques very noble, eſpecially the Governor's Houſe. The Mogul keeps conſtantly a good Garriſon here to bridle the *Badures*, a ſort of People living not above twenty-five Leagues diſtant thence, who make frequent Incurſions into the Country. It may be ſafely ſaid, that there is ſcarce any Nation in the World, or any Commodity in *Aſia*, but may be ſeen in this City, where there is alſo a vaſt Manufacture of Silk and Callicoes, as alſo of Gold and Silver Brocades, but they are ſlight and dear, which is the Reaſon the Inhabitants conſume moſtly *China* Silks, which are both finer and cheaper. At the Time of my being here they had invented a new Kind of Stuff of Silk and Cotton with gold Flowers, which was ſold at five Crowns *per* Ell. They alſo deal much here in Sattins and Velvets, Taffeties, Carpets, Sugar candied, or in Powder, Cummin, Honey, Lacque, Opium, Borax, Ginger, Myrobalans, or *Indian* Plums dried and preſerved, Preſerves of all Sorts, Salt Petre, Sal Armoniac, and Indico. They alſo ſell Diamonds here, which are brought thither from *Viſiapour*, and Ambergris and Muſk, which they have from *Pegu*, *Bengal*, *Moſambique*, and *Cabo-Verde*, and is ſold here for eight Crowns *per* Ounce.

Some would have the Ambergris to be the Seed of the Whale congealed, but without the leaſt Probability; others would make it the Product of certain natural Mines like the Naphte, but with as little Likelihood of Truth, it being certain it is found no where but by the Sea-Side, and grows like our Muſhrooms in the Bottom of the Sea, whence it is torn off and caſt aſhore. *Peter Van Brouk* aſſures us, that, in his Time, there was found a Piece of Ambergris at *Cabo-Verde*, near the Mouth of the River *Gambi*, which weighed eighty Pounds, of which he bought a Piece. The Muſk is, by the joint Opinion of all Naturaliſts, the Product of a certain Protuberance or Swelling, riſing about the Navel of a certain Animal, which ſome make only of the Bigneſs of a Fox, others like a Roe-buck. Some call this Creature a Gazel. But the greateſt Conveniency of Traffick at *Amadabat* is, that the *Banjans* have a general Correſpondence in all Parts of *Aſia*, even to *Conſtantinople* itſelf, which makes Trading, by way of Exchange, both very eaſy and very advantageous. Add to this the Exemption from all Cuſtoms of Merchandizes exported or imported, the King's Receiver having no more than Fifteen-pence by way of Preſent for every Waggon, and the Liberty allowed to all Strangers to deal in what Commodities they pleaſe, except that of the Exportation of Lead and Salt-Petre, without the Governor's Licence, is forbidden, which, however, is obtained by a ſmall Preſent.

The City of *Amadabat* having under its Juriſdiction twenty-five large Towns and 2998 Villages, its yearly Revenue amounts to above ſix Millions of Crowns, which the Governor diſpoſes of in maintaining a certain Number of Soldiers for the King's Service, and for clearing the Highways, which are very unſafe hereabouts. The Couteval, or his Deputy, commands under him, and has the Adminiſtration, as well of the Government, as of the Courts of Juſtice, in Conjunction with the Kadi, or Judge of the Place. Among divers noted Sepulchres which are near the City, is that of a certain Kadi, built by a King of *Guzurat*, in the Village *Zirkees*, a League and an half from the City. The whole Structure is of Marble, being ſuſtained by an hundred and forty Pillars thirty Foot high, within which are to be ſeen the Tombs of three Kings that were buried there: At the Entrance of it is a large Ciſtern full of Water, the Wall about it having ſeveral Windows on all Sides; and about a League thence there is a fair Garden and Houſe, the Work of the Mogul, built in Memory of a Victory obtained by him over the laſt King of *Guzurat*. About a Leage and an half on the other Side the City, we were ſhewed another Sepulchre, erected in Memory of a certain *Moor*, a rich Merchant, named *Hajam Majom*, who, being in Love with his own Daughter, and having by fraudulent Means obtained the Kadi's Conſent, would have married his Daughter; but ſhe refuſing to comply, he raviſhed her, for which he had his Head cut off; whence it is called to this Day *Betti Chuit*, *i. e.* the Daughter's Shame diſcovered.

A little Way without the City of *Amadabat*, you may diſcover the vaſt Mountains of *Marva*, extending above ſeventy Leagues towards *Agra*, and above an hundred towards *Ouyou*, where the Rajah *Rana* had his Reſidence in the Caſtle of *Gurchitto* among the inacceſſible Rocks; ſo that the joint Forces of the Mogul and the King of *Pattan* were ſcarce able to reduce it. The *Pagan Indians* retain ſtill a great Veneration for that Prince, who, as they ſay, was able to bring 120,000 Horſe into the Field. In the Mountain betwixt *Amadabat* and *Trappe* lives ſuch another Prince, who, by reaſon of the Inacceſſableneſs of the Woods and Deſarts, maintains his Sovereignty againſt the Mogul; and the Rajah *Inder*, tho' he is his Vaſſal, yet oftentimes refuſes to execute his Commands. Among many noble Gardens which are about this City, that of *Shah-bag*, or the King's Gardens in the Suburbs, called *Bogampour*, claims the Precedency, being encloſed with a noble Wall, within which ſtands a moſt beautiful Summer-houſe richly furniſhed.

I paſſed thence over a very fine Stone-Bridge, four hundred Paces in Length, into another Garden called *Nicoinabag*, *i. e.* the Jewel, which, they ſay, is the Work of a beautiful rich Lady. The Houſe is not ſo remarkable for its Bigneſs, as for the moſt admirable Proſpect it has from the Deſcent on which it lies into a fine champaign Country. It has a very large Fiſh-pond, which, during the Winter-ſeaſon, is ſupplied with Water by the Rains; but, in the Summer, it is filled out of certain deep Wells, the Water of which is drawn up by Engines turned by Oxen. You can ſcarce ever come into the Garden, but you will find ſome Ladies bathing themſelves there: They would not allow the *Indians* to ſee them, but gave us the Liberty to come in and talk with them. The whole Country round *Amadabat*, and the City itſelf, is ſo full of Gardens and Trees, that at a Diſtance it reſembles a great Foreſt. There is among other remarkable Things here, a Walk planted with a double Row of Cocoa-trees on each Side, which reaches to a Village ſix Leagues from the City; but that which reaches from *Agra* to *Barampour* is an hundred and fifty Leagues in Length, and ſurpaſſes this beyond all Compariſon.

Theſe vaſt Numbers of Trees are the Receptacles of Multitudes of Apes, ſome of which are as big as Greyhounds, yet will rarely aſſault any body unleſs provoked. They are generally of a brown Colour, inclining to a green, having white long Beards and Eyebrows. They multiply beyond what can be imagined; becauſe the *Banjans*, who are more numerous than the *Mohammedans*, believing the Tranſmigration of the Soul, and looking upon theſe Creatures as having the greateſt Reſemblance in all Reſpects to Mankind, are ſo far from killing them, that they cheriſh them. Hence it is that you ſhall ſee the Apes come in great Numbers into Peoples Houſes; for at one Time I remember, I counted no leſs than fifty in the *Engliſh* Lodge, and I uſed to give ſome Almonds and Dates to two or three of them, which made them duly attend every Morning at my Chamber-door, in Expectation of their Breakfaſt, which they would take out of my Hand; ſometimes I uſed to catch hold of one, which made the reſt ſnarl till I had let go their Companion.

The Trees alſo harbour Abundance of Wild Fowl, and an incredible Number of Parrots of all Kinds, the biggeſt of which are called *Indian* Crows, being all white, or of a Cream-colour, with a Tuft of Feathers of a Carnation-colour on the Head: They are ſo common all over the *Indies*, that they build their Neſts under the Eaves of the Houſes, as our Swallows do: But the leſſer ſort of Parrots build their Neſts in the Woods on the Extremity of the Top-branches of the Trees; and tho' they do much Miſchief to the Fruits and Rice, the *Banjans* look upon it as a Crime to hinder them from eating it. They do the like as to the Wild Ducks, Herons, and Cormorants, of which there are Abundance in the River. Having had Occaſion to ſpeak of them before, I will only add in this Place, that they ſwallow Muſſels till they open through the Heat of the Stomach, and caſt them out again to eat the Fiſh. This Country likewiſe abounds in all kinds of Wild-Fowl and Veniſon, but Fallow-Deer, Roe-Bucks, Wild-Aſſes, Wild-Boars, and Hares, are in vaſt Plenty here. And as they are ſufficiently ſtored with tame Creatures, ſuch as Buffaloes, Oxen, Cows, and Sheep, and the River furniſhes them with Fiſh in Abundance, I ſcarce know any Place in the World where a Man may indulge himſelf with more Eaſe than here.

The only Thing they want is Wine, inſtead of which they generally make uſe of the Liquor of the Cocoa-tree; and their Water is moſt excellent; beſides that, out of Rice, Sugar, and Dates, they make a kind of *Aqua Vitæ*, which exceeds that made in *Europe*. But as they are ſufficiently furniſhed with beneficial Creatures, ſo they have their Share of others that are as miſchievous. Crocodiles are found here in Abundance, which often ſurprize Men in the River, where they lie lurking among the high Graſs. I am poſitive, that thoſe in the Ditches of *Pegu* were of above thirty Foot long; they did ſo much Miſchief, that ſcarce a Day paſſed but ſome or other were killed by them; notwithſtanding which, the *Banjans*, who believe that ſuch as are devoured by them go ſtraitway to Paradiſe, will not deſtroy them. The King having ordered one in particular, which did more Miſchief than all the reſt, to be killed, they found a Woman with all her Cloaths in his Belly. They lay about thirty Eggs, which they cover in the Sand, where being hatched, they kill moſt of their young ones, without which they would multiply infinitely.

Johnſton tells us, that near *Panama*, in the *Weſt-Indies*, are Crocodiles of an hundred Foot in Length; but I will ingenuouſly confeſs, I ſaw none that were above twelve or fifteen Foot long; the Scales on their Back being Muſket-Proof, they muſt be wounded in the Belly. This Country produces alſo Abundance of Serpents and Snakes, and, among the reſt, ſome with two Heads, as they told me, though, I muſt confeſs, I never ſaw any of them, which has induced me to believe that this Error has been introduced by ſuch as have ſeen Serpents, that, contrary to the Nature of Reptiles, were as big towards the Tail as towards the Head. The Woods are likewiſe full of Lions, Leopards, Tigers, and Elephants; but the moſt troubleſome Creatures all over the *Indies*, are a certain kind of Bats, as big as our Crows, nay, ſome of our Hens, which oblige the Country People to keep conſtant Watch in their Gardens.

The City of *Amadabat* is obliged to maintain out of its Revenues 1200 Horſe, and fifty Elephants, under the Command of their Sultan, who has the Quality of Rajah, or Prince, annexed to his Dignity. *Areb-Khan*, a Perſon of ſixty Years of Age, was Governor of this City at that Time, and, as I was credibly informed, had amaſſed a Treaſure equal in Value to fifty Millions of Crowns. Not long before my Arrival his Daughter was married to the Mogul's ſecond Son, when her Father, at her Departure, ſent her with an Equipage of twenty Elephants, and one thouſand Horſe to Court, beſides ſix thouſand Waggons laden with Riches. His Attendants conſiſted of five hundred Perſons, four hundred of which were his Slaves: The Expence of his Houſe-keeping amounted to five hundred Crowns a Month, not including his Stables, where he maintained conſtantly five hundred Horſes and fifty Elephants for his own Uſe. The chief of his Attendants were generally ſumptuouſly clad, though himſelf ſeldom wore any thing but Callicoe, except when he appeared in publick, when he was carried in a rich Chair of State upon an Elephant, being attended by a Guard of two hundred Men, with many *Perſian* Led-Horſes, and Standards, and Banners before him.

14. *October* the 18th I went with an *Engliſh* Merchant to pay a Viſit to the Khan, whom we found in a Tent looking into a Garden. Having underſtood from the Merchant that Curioſity only had led me into that Country, he aſked my Age, and I having told him that I was twenty-four Years old, three of which I had already ſpent in travelling, he wondered at my going Abroad ſo young, as well as at my Habit, which I ſtill wore after the *German* Faſhion. After an Hour's Diſcourſe, I was entertained with a very noble Dinner, ſerved up after the *Perſian* Way, and at parting, he was pleaſed to tell me in the *Turkiſh* Language, which I had told him I underſtood pretty well, *Senni dahe kurim, i. e. We ſhall ſee you again.* Being encouraged by this obliging Invitation, we went the 20th a ſecond Time, when having changed my Cloaths to the Mode of the Country, I found him very well pleaſed with it. We found him in the ſame Place, buſy in diſpatching ſome Orders, and taking a View of certain Companies of Horſe and Foot, which made us take our Leave of him; but he would needs make us ſtay to Dinner with him.

His Diſcourſe ran much upon Shah *Sefi*, concerning whom he aſked me ſeveral Queſtions, and eſpecially whether he ſtill continued his Cruelties? Unto which I having anſwered, that his Age had moderated much of his youthful extravagant Temper, he replied, that Tyranny and Cruelty was an Inheritance derived from his Grandfather *Abbas*, and that was the only Reaſon why lately the Khan of *Candabar* had put himſelf under the Mogul's Protection. He then was for exaggerating the prodigious Wealth of the Mogul, in Compariſon with that of *Perſia*, aſking my Sentiments upon that Score. Unto which I replied, that it muſt be confeſſed, that the Wealth I had ſeen in the Great Mogul's Country was, without Compariſon, much greater than what could be expected in *Perſia*; but that, on the other hand, it muſt be acknowledged that *Perſia* had one Thing which was to be valued above all the Riches of the World, *viz.* that great Number of brave *Kiſilbachs*, with whoſe Aſſiſtance he might be able to conquer all *Aſia*. Knowing the Khan to be a *Kiſilbach* by Deſcent, out of the Province of *Schirvan*, I ſaid this on Purpoſe to pleaſe his Fancy, which took ſo well with him, that he not only agreed to what I ſaid, but alſo told ſome of his Officers that ſtood hard by him, I believe this young Gentleman is brave, becauſe he ſpeaks ſo advantageouſly of thoſe that are ſo.

After Dinner we took our Leave of the Khan, who would have ſtaid us, and given us the Entertainment of the Women Dancers; but he being called aſide about earneſt Buſineſs, and we not very eager to ſee more of what we had ſeen ſo often before, we returned his Offers with a Compliment. For the reſt, the Governor was a Perſon of extraordinary Judgment, but very rigorous in his Government. One Day, having invited the two chief Directors of the *Engliſh* and *Dutch* Factories to Dinner, and deſirous to give them the Diverſion of the Women Dancers, they came accordingly, who, according to the Cadence of the Hautboys and Timbrels, danced with great Activity through Hoops, with great Variety of Poſtures; which done, he ſent for another Band; but theſe being employed elſewhere in the City, ſent an Excuſe, that being ſick they could not come; but the Khan, not thus contented, ſent a ſecond Time, ordering his Servants to bring them along with him, who returning without them, upon the ſame Pretence, he ordered them to be cudgelled immediately. Theſe poor Wretches, finding themſelves in ſuch Danger, caſt themſelves at the Khan's Feet, acknowledging, that it was not any Sickneſs, but the Hopes of Lucre, that had made theſe Women refuſe to obey his Commands, at which he laughed; but inſtantly ſent ſome of his Guards to fetch them, who no ſooner had brought them into the Room, but he ordered their Heads to be cut off immediately, which was executed in an Inſtant. The Governor, perceiving that the Strangers were ſtartled at his Severity, fell a laughing, and told them, that if he did not by ſuch Examples maintain his Authority, he ſhould not be long Governor of *Amadabat*.

15. *October* the 21ſt I left *Amadabat*, in the Company of a young *Engliſh* Merchant, and travelled that Day to the Garden of *Tſchirbag*. The 22d we made ſeven Leagues to the Village of *Surguntra*; and the 23d five Leagues further to *Cambaya*, where I was very well accommodated at the Houſe of a certain *Mohammedan*, the *Engliſh* Head Factor being from home. The City of *Cambaya* lies ſixteen Leagues from *Broitſchia*, upon ſandy Grounds near the River, which makes there a very great Bay, into which the River *May* diſcharges itſelf. The Haven is none of the beſt; for though at high Water there be ſeven Fathom Depth, yet at low Tide the Ships are almoſt ſwallowed up in Sand and Mud. It has a Wall of Free-ſtone, with twelve Gates, large Houſes, ſtrait and very broad Streets, and is ten Leagues in Compaſs. The Inhabitants are *Pagans*, *Banjans*, and *Raſhpoots*, the laſt of whom apply themſelves to the Exerciſe of Arms, as the *Banjans* do to Commerce. Their chief Trade is at *Achen*, *Diu*, *Goa*, *Mecca*, and into *Perſia*.

Taking a Walk out of the City, I ſaw there, among ſeveral other very curious Gardens, one, that for its Situation and Proſpect to the Sea, and into the faireſt champaign Country that could be to the Land-ſide, deſerves the Precedency of any that ever I ſaw before. It was ſurrounded by a very high Wall, which had within its Compaſs two very fine Structures, and in the midſt of the Garden was a Sepulchre of a *Mohammedan*, who was the Founder of it. Whilſt I was contemplating the Tomb, ſome *Engliſh* Merchants came in to reprove me for the Affront I had put upon them, as they interpreted it, of preferring a *Mohammedan* Houſe before theirs to lodge in; and as a Reparation, aſked me to go along with them the next Morning to a Place where an *Indian* Widow was to burn herſelf; her Huſband, who was a *Raſhpoot*, having been killed two hundred Leagues from thence.

We went accordingly to the Place of this voluntary Execution near the River-ſide, where we ſaw the Woman, who was ſcarce twenty Years of Age, coming up with ſo chearful a Countenance as is ſcarce to be imagined. It is to be obſerved, that the Governor, who was a *Mohammedan*, and conſequently would willingly aboliſh this barbarous Cuſtom of the *Pagans*, had for a long Time oppoſed her Reſolution, under a Pretence that her Huſband's Death might be uncertain at ſo great a Diſtance, in hopes that Time might have changed her Reſolution; but finding her immoveable, he gave at laſt his Conſent. In the Front of the Proceſſion marched the Muſick, conſiſting of Hautboys and Timbrels; theſe were followed by a great Number of Maids and Women dancing and ſinging before the Widow, who was dreſſed in her beſt Apparel, and had many Rings and Bracelets on her Fingers, Arms and Legs: In the Rear came a confuſed Multitude of Men, Women, and Children. She had waſhed herſelf before in the River, and coming near the Funeral Pile, which was made of the Wood of Apricock-trees mixed with ſome Sanders and Cinamon, ſhe ſtopped a little, and looking over it with a great deal of Careleſsneſs, took her laſt Farewel of her Kindred and Friends. I was very near on Horſeback, and ſhe perceiving perhaps by my Countenance that I had Compaſſion of her, ſhe caſt me one of her Bracelets, which I keep to this Day, diſtributing the reſt among her Friends. So ſoon as ſhe had placed herſelf on the Pile, and perceiving that they had ſet Fire to it, ſhe poured a Veſſel full of perfumed Oil over her Head, which the Fire taking hold of, burnt her to Aſhes immediately, without ſhewing the leaſt Sign of Reluctancy, whilſt all there preſent filled the Air with their Shouts and Acclamations.

This Cuſtom, it ſeems, was firſt introduced into the *Indies*, to prevent the Jealouſy of the Women created by Polygamy, which had this diſmal Effect, that they uſed frequently to poiſon their Huſbands, it having been found by Experience, that in one Year there uſed to be four Men buried to one Woman; to prevent which, it was thought convenient, that a certain Law ſhould be introduced for all Women that would be accounted honeſt, to accompany their Huſbands at their Deaths, as the only Way to make them careful of their Lives; yet was no Puniſhment inflicted upon ſuch as did not think to comply with this rigorous Impoſition, except that they were looked upon as infamous ever after.

This Ceremony being over, I paid a Viſit to *Myrſabeg*, one of the chief *Mohammedan* Merchants in that City, unto whom I delivered the Letter of Recommendation from the Director of the *Engliſh* at *Amadabat*. As he underſtood that Language, ſo he complimented me with all imaginable Expreſſions of Civility, endeavouring to perſuade me to remain for ſome time at *Cambaya*, and proffering his Service in every thing that might tend to my Satisfaction. Whilſt I was returning his Civilities, came up to us the King's Lieutenant, or Deputy-Governor, who, with a very engaging Air, entreated me to make him a Viſit, which I promiſed to do. I went home, and had ſcarce eat my Dinner, when the before-mentioned Merchant ſent me two Sheep, twelve Capons and Pullets, beſides ſome Fruits, and a fine Veſſel of *Agat*. I ſent back the Bearer with a ſmall Preſent, telling him, that I would return my hearty Thanks to his Maſter the next Day; but I was ſcarce got out of my Bed, when he came and told me, that the Fear of parting with me without taking his Leave, had made him come ſo early. I thanked him, and as a Pledge of the good Will I bore him, preſented him with a very fine *Engliſh* Pocket Piſtol, which he at firſt refuſed to accept, excuſing himſelf, that it was not handſome to receive a Preſent from a Stranger, were it not that his Refuſal might be miſinterpreted by me to his Diſadvantage; upon which Score he could not forbear to accept of what I had been pleaſed to beſtow upon him with ſo much Kindneſs.

I thought fit to make particular mention in this Place of theſe Civilities, to convince the World that Barbariſm, which the *Indians* are ſo often branded with by ſome Authors, is not ſo deeply rooted among them, but that they underſtand and practiſe Civility as well as ſome other Nations, who challenge the Preference upon that Account before all others, but fall ſhort in that Sincerity which is natural to the *Indoſtans*, who are as good Friends to thoſe to whom they have promiſed their Friendſhip, as they are irreconcileable to their Enemies. I cauſed a Box of Beetle to be preſented to the Merchant, a Drug as commonly uſed in the *Indies*, as Snuff is in *Europe*, of which he having taken a little, took his Leave. Soon after, as I was going to call at the Deputy-Governor's Houſe, I met him in the Street in his Coach, and he no ſooner eſpied me, but he obliged me to go back with him to his Houſe, built in one of the moſt pleaſant Parts of the City; he treated me with ſome Beetle, and ſome Palm-Wine, and ſent one of his Servants to give Orders at the Gates to let me paſs unmoleſted, without paying any Cuſtoms.

I ſtaid not above half an Hour, and immediately proceeded on my Journey; but being pretty late before I could reach *Serguntra*, the *Banjans*, who burn no Lights for fear of hurting the Flies, or other Inſects, would not open the Shops to ſell us Forage for our Beaſts, being a certain Paſte of Sugar, Meal, and ſome Butter, which is uſed here for want of Oats and Hay; but at laſt were prevailed on to let us have ſome, becauſe we threatened to break open their Shops. We travelled five Leagues the next Day before Noon to a great Village, where having baited our Beaſts, we continued our Journey to the Garden of *Tſchirbag*.

This Garden, which we had occaſion to mention before, is looked upon as one of the moſt conſiderable of all the Empire, not only in reſpect of its noble Buildings, and the vaſt Quantity of excellent Fruits, but eſpecially for the Conqueſt of *Guzurat*, in Memory of which it was founded; and thence has got the Name of *Tſchirbag*, *i. e.* the Garden of Victory. The Walks of this Garden are planted with Fruit-trees, ſuch as Oranges, Citrons, Pomegranates, Dates, Almonds, and Mulberry-trees; beſides many of theſe that bear Mangoes, Cocoas, and ſome that were unknown to us. Having taken a ſhort View of it whilſt our Beaſts were baiting, we continued our Journey, and came that Night to *Amadabat*. We were not a little troubled in the Way by Apes, of whom I ſhot two with my Piſtol, which ſo incenſed the reſt, that about twenty of the largeſt

Siz:

Size purſued us about half a League, and by their odd Looks gave us to underſtand that they were ready to do us any Miſchief, if they durſt approach us.

16. At *Amadabat* I met with a Caravan of *Engliſh* and *Banjan* Merchants bound for *Agra*, and being recommended to them by the Director of the *Engliſh* Factory of *Amadabat*, I ſet out with them the 28th of *October*. We met in five Days Journey with no more than one Village worth mentioning called *Paingot*, and came the 6th Day after our ſetting out of *Amadabat* to the ſmall City of *Heribath*, fifty Leagues thence; it is without Walls or Gates, which have been deſtroyed by the famous Conqueror *Tamerlane*, as well as the adjacent Caſtle, the Ruins of which are to be ſeen near a high Mountain.

Betwixt this City and that of *Damtiges*, which is fifty Leagues from *Heribath*, we met a Caravan of *Banjan* Merchants, who told us, that they had been ſet upon by two hundred *Raſhpoots*, who had forced them to pay a hundred Rupees; upon which we ordered our Waggons to be faſtened together, and diſpoſed our Guards in ſuch a manner as we thought might make them moſt ſerviceable; neither was it long before we got ſight of fifty of the ſame Gang that were ſent without Queſtion to view us; but finding us too well guarded, let us go unmoleſted. We travelled fifty Leagues farther before we came to the Village of *Suedeck*, which has a ſtrong old Caſtle. As we were travelling in a Bottom, ten *Raſhpoots* ſurpriſed ſome of our Waggons that were got about ſix hundred Paces before the reſt, and wounded two *Banjans*; but two of our Guards being ſent to their Relief, the Robbers were forced to betake themſelves to their Heels, and to leave the Booty behind them.

After this Rencounter we met with no farther Diſaſter, and arrived ſafely at *Agra*, where I was received with the ſame Civility by the *Engliſh* as I had been in all other Places through which I had paſſed. The City of *Agra* is, without Compariſon, the nobleſt of all *Indoſtan*, and the ordinary Reſidence of the Great Mogul. It is ſeated in 28° on this Side of the Line, in the Province of *Indoſtan*, upon the River *Gemini*, which joins its Waters with the *Ganges*, above the Kingdom of *Bengal*. It being twice as big as *Iſpahan*, a Man can ſcarce ride round it on Horſeback in a whole Day. Its Fortifications are of red Free-ſtone, and the Ditch is above thirty Fathom broad; the Streets are fair and large, there being ſome vaulted, which are a Mile in Length, and are furniſhed with Shops of all Sorts of Trades, each of which have their peculiar Streets and Quarters aſſigned them. It contains fifteen Meydans and Baſars, the moſt ſpacious of which is before the Caſtle; in the midſt of it ſtands a high Pole, where the Mogul himſelf ſhoots ſometimes at a Wooden Parrot faſtened to the Top of it. Eighty Caravanſeras are appointed for the Reception of Foreign Merchants and their Merchandize; they are provided with noble Apartments, and convenient Shops, Vaults, Stables, and other Conveniences.

As the Mogul and the chiefeſt of his Court are *Mohammedans*, ſo there are a vaſt Number of Moſques throughout the City; of which ſeventy are remarkable for their Bigneſs, and ſix of them appointed for their Devotions on Holidays; theſe laſt they call *Matſchidadine*. In one of theſe they ſhew you the Sepulchre of a certain Saint named *Seander*, of the Poſterity of *Aly*, and in another the Tomb of a Giant Saint, being thirty Feet in Length, and ſixteen in Breadth. This Tomb is ſurrounded on all Sides with little Banners, or Flags, as ſo many Tokens of his heroick Atchievements; whence it is, that his Sepulchre is frequented by a vaſt Number of Pilgrims, who bring thither daily their Offerings, out of which, and the ordinary Revenue belonging to it, are maintained ſuch a vaſt Number of Poor, that in thoſe Reſpects, it is not inferior to the Sepulchre of Sheik *Sefi* at *Ardebil*.

Theſe Moſques, with their adjacent Courts, are ſo many Sanctuaries both in criminal and civil Caſes, the Mogul himſelf never preſuming to take any Criminal, though never ſo great an Offender, thence, out of a Veneration all the *Mohammedans* have for their Saints. In the City of *Agra* are above eight hundred publick Baths, which pay a conſiderable Sum yearly to the Mogul; for as Purification is one of the main Ingredients of the *Mohammedan* Religion, ſo theſe Baths are daily frequented by a vaſt Number of People. The great Lords of the Court, who bear the Title of Rajas, or Princes, have many of them, very fine magnificent Houſes both within and without the City, where the King alſo has many Gardens and Summer-houſes to retire to upon Occaſion, with the Women Dancers, who dance before him ſtark naked.

17. But his Palace, which ſtands upon the River *Gemini*, and is four Leagues in Compaſs, ſurpaſſes all that I ever ſaw of that Kind before or ſince. It is ſurrounded with a Wall of Free-ſtone, and a broad Ditch, having a Draw-bridge at each Gate; the Gate at the Weſt Side leading to the *Baſar* is called *Ciſtei*; under this Gate is kept the Court of Judicature, and in an adjoining ſpacious Hall the Prime Vizier, or Lord-Chancellor, diſpatches all Matters relating to Civil Affairs, where the Original Records are kept. Immediately within this Gate you come into a very ſpacious Street, with Shops on both Sides, leading directly to the Mogul's Palace, the Gate of which is called *Achobarke Deſwage*, i. e. King *Achobar*'s Gate, through which all the great Lords of the Court, except the King's Sons, are obliged to go in on Foot; this being the Quarter where the dancing and ſinging Women are lodged.

There is another Gate leading to the River, where the Mogul every Morning pays his Devoirs to the Sun at his Riſing. It is on that Side that great Men pay their Reſpects to the King from a certain Eminency, where the King can take particular Notice of them. The Commanders of Horſe alſo ſtand on that Side, but at a great Diſtance, at a Place where the Mogul ſees the Engagements every Day betwixt Lions, Elephants, Bulls, &c. except *Fridays*, a Day dedicated to their Devotions. There is alſo another Gate, which brings you into the Guard-Hall; through this Hall is a Paſſage into a paved Court, at the farther End of which you ſee a Row of Silver Pillars under a Piazza, where is kept another Guard to prevent the common People from entering. Here I met with my *Perſian* Servant who had left me at *Surat*, he offered me all the Service he was able to do me, and would fain have brought me within theſe Pillars, but that the Guards would not permit it; this being the ready Way to the Mogul's Apartment, where is a Row of Golden Pillars of a leſſer Size, and within them the Royal Throne of maſſy Gold, enriched with Diamonds, Pearls, and precious Stones; and above it a Gallery, where the Mogul appears every Day at a certain time to hear and determine the Complaints of his Subjects: But this Trial is ſo dangerous, that if you do not prove the Matter of Fact by undeniable Evidence, you run the Hazard of your Life.

None but the King's Sons, who fan him, and keep off the Flies, are admitted within the Compaſs of thoſe Golden Pillars; neither is any other Perſon admitted into the innermoſt Parts of the Mogul's Lodgings, except the Eunuchs, who being one thouſand two hundred in Number, wait on the Ladies of the Seraglio. There is another Apartment in the Caſtle very remarkable for its Tower, which is covered with Gold, and the Treaſure it contains, having eight large Vaults filled with Gold, Silver, and precious Stones, the Value of which is ineſtimable. I had it from very knowing and very worthy Perſons, that Shah *Choram*, who reigned in my Time, had a Treaſure which amounted to one thouſand five hundred Millions of Crowns. I had from the ſame Hands an exact Inventory communicated to me of the Treaſure which was found at the Death of Shah *Achobar* his Grandfather, which I will faithfully communicate to the Reader.

An Inventory of the Treaſure of Achobar (*See* Akbar *in the Hiſtory of the* Mogul Emperors) *at the Time of his Deceaſe.*

	Crowns.	Pence.
In certain Sorts of Money coined by the ſpecial Order of the ſaid *Achobar* - - - -	148,790,000	
In another Kind of Money, called from his Name, *Achobar Ropees*	50,000,000	
In another Sort of Money, called *Payſes*, ſixty whereof make a Crown - - -	383,333	10
In Diamonds, Rubies, Emeralds, Saphires, Pearls, and other precious Stones - -	30,026,026	
In Statues of Gold and divers Creatures - - -	9,503,370	30
In Houſhold-ſtuff, Gold-Plate, as Diſhes, Cups, *&c.*	5,866,895	5
In Braſs and Copper Utenſils - -	25,612	30
In Porcelain or *China* Ware, and other Earthen-Veſſels, to the Value of - - -	1,253,873	30
In Brocades, and other Gold and Silver Stuffs, and in Silk and Calicoes - - -	7,654,989	30
In Woollen-Cloths - - -	251,629	
In Tents, Hangings, and Tapeſtry - - -	4,962,772	30
Twenty-four thouſand Manuſcripts richly bound, valued at -	3,231,865	30
In Artillery and Ammunition - -	4,287,985	30
His Magazine of Small-Arms, Swords, Bucklers, Pikes, Bows, Arrows, *&c.* - -	3,777,752	30
In Saddles, Bridles, and other Gold and Silver Accoutrements, to the Value of - -	1,262,824	
In Covering-Cloths for Horſes and Elephants, embroidered with Gold, and Silver, and Pearls - - -	2,500,000	
All which together amounts to	274,113,793	15

This, though, in itſelf an immenſe Sum, yet falls very ſhort of fifteen hundred Millions, which is eſteemed the Amount of the Mogul's Treaſure at preſent. Neither is it at all improbable that it may be ſo; for though it may be true, that the ordinary Revenue of the Crown is not conſiderably encreaſed, yet by the rich Preſents made annually at ſtated Times by his Grandees, and his being Heir-general to all the Officers in his Service throughout his extenſive Empire, there is no Doubt that the groſs Amount of his Receipts muſt be exceedingly augmented ſince that Time.

As there is no Inheritance of Eſtates belonging to the Children of great Perſons, ſo they can claim no Share in their Fathers Dignity. The Title of Rajah being no more inheritable there than that of the Khans in *Perſia*; the only Advantage they have is, that they are entruſted with leſſer Charges by the Mogul, till by their Merits they can raiſe themſelves to the higheſt Dignity. The chiefeſt Officers of the Court are the Vizir, or Prime Miniſter, the chief of the Eunuchs, or Lord High Steward of the Treaſury, Principal Secretary of State, General of the Elephants, and Surveyor of the Houſhold-Stuff, Tents, and Jewels. Theſe are conſtant Members of the Mogul's Privy Council, unto which is alſo ſometimes called the Couteval, who is both Chief Juſtice and Commander in chief of the Mogul's Guards. The Council commonly ſits in the Night-time from ſeven till nine.

The Mogul appears every Morning at Sun-riſing, and the Lords come to pay their Veneration to him about Noon, when he comes to ſee the Fighting of the wild Beaſts, and about Evening when he appears at a certain Window to ſee the Sun-ſetting. According to the Roll of the Kingdom, the Provinces of *Candahar*, *Dehli*, *Bengal*, *Orixa*, and ſome others, bring in a yearly Revenue of eighty-ſeven Millions two hundred and fifty thouſand Crowns. The Province of *Guzerat* is able to raiſe Ninety thouſand Horſe, *Cambaya* Twelve thouſand, and *Cabul* as many; *Orixa* Eighty thouſand, and *Dehli* One hundred and fifty thouſand; beſides thoſe of the other Provinces, of which I could learn no Certainty. His Militia is divided into certain Brigades of twelve or fifteen hundred Horſe, commanded either by the King's Sons, or the chiefeſt Lords in the Empire, ſome of whom have alſo under their Command certain Regiments of 2000, 3000, and 4000 Horſe. Certain it is, that when the preſent Mogul went in Perſon into the Field againſt *Khan-Kabaan* in 1630, his Army conſiſted of 144,500 Horſe, divided into four Brigades, beſides a vaſt Number of Elephants, Camels, Mules, and Artillery-Horſes. The Arms uſed in their Camp were moſtly Bows and Arrows, a Javelin, which they dart with great Dexterity, a Cymitar, Poniard, and Buckler, which hang about their Necks. The Horſemen uſe no Fire-arms, but their Infantry uſe the Muſquet tolerably well; their Pikemen have Pikes of ten or twelve Feet long, which they dart at the Enemy, inſtead of oppoſing the Horſe with them as we do in *Europe*: Some uſe Coats of Mail, reaching down to their Knees, but are without Head-pieces. They underſtand nothing of martial Exerciſes; the Van or Rear, Front and File, being Things never heard of among them; but fight without any Method or Order. Their chief Truſt lies in their Elephants, on the Backs of which are fixed certain wooden Towers, carrying three or four Harquebuſes, with as many Men to them, and the Elephants ſerve them inſtead of Bulwarks, to hinder the Enemy from breaking in upon them: But the worſt is, that theſe Beaſts being terrified by artificial Fire-works, or ſome other ſuch like Means, make a greater Havock among their own People than the Enemy. They commonly have a great Train of Artillery, and ſome very large Pieces. They alſo make Gunpowder, but not ſo good as ours. Their Copper-trumpets and Timbrels make a Noiſe that is not unpleaſant in the Field. Their Armies never march above five Leagues in a Day. As in their Encampments they take up a vaſt Circumference of Ground, ſo they obſerve a very good Order in them, every thing being as well regulated there as in a City; and it is obſervable, that the Mogul and the General of the Army always have their Tents pitched without the Reach of Muſquet-ſhot from the reſt.

His ordinary Guard is 12,000 Men, beſides the 600 that have the Title of the Guard of his Body, and are always attending his Perſon. The Mogul ſometimes confers the Dignity of Rajah or Prince upon his chief Vizir, who has the ſupreme Management of all civil and military Affairs throughout the Kingdom: He is not permitted to take the leaſt Preſent, but his Clerks are ſo little conſcientious in this Point, that for Money a Man may know every thing that paſſes through their Hands. The Rajahs and other great Men pay a moſt profound Veneration to their Monarch; they never approach or ſpeak to him without many Bows and Reverences, and when they are going away they do it backwards, bowing their Heads down to the Ground, putting their Hands over their Eyes, and afterwards upon their Breaſts, to ſhew their Humility. The Mogul never ſtirs abroad out of the City or otherwiſe without a Guard of ten thouſand Men, at the Head of which march one hundred Elephants covered with Scarlet, Velvet, and Brocades, each having two Men upon his Back, *viz.* one who guides the Beaſt, the other carries a Banner of Silk; upon ſeven or eight of the foremoſt are mounted the Muſicians, who play upon the Timbrel. The Mogul is either mounted upon a fine *Perſian* Horſe, or is carried in a Coach drawn by two white Oxen, or carried in a Chair. The chief Men of the Court follow immediately after, and after them the Baggage. He commonly pitches his Tents in a Field, the better to enjoy the Conveniency of the cool Air in the Summer, and he chooſes the warmeſt Places in the Winter, which is the Reaſon he commonly leaves *Agra* in *April*, and paſſes the Months of *May*, *June*, *July* and *Auguſt*, at *Lahor*, or in ſome other northerly Province.

The City of *Agra* is ſo populous, that it is able to raiſe two hundred thouſand fighting Men. Moſt of the Inhabitants are *Mohammedans*, but there is ſcarce any Nation in the World but what trade thither, and all Commodities, whether imported or exported, pay 10 *per Cent.* Cuſtom. This City has under its Juriſdiction forty ſmall Cities, and three thouſand five hundred Villages, its Territories extending above ſixty Leagues about. The adjacent Country is very fertile in Indigo, Cotton, Salt-petre, and ſeveral other Commodities. The Feſtival of the Naurus, or New-years's Day, is celebrated in this City with a great deal of Ceremony. Before the King's Palace a Theatre, or Scaffold, richly adorned, is erected, ſurrounded with ſmall Pillars in the Nature of a Balcony, where the King is ſeated upon richly embroidered Velvet Cuſhions, being attended by his ſeven Miniſters of State, the Empreſs being not far off in a Gallery where ſhe can ſee the whole Ceremony, but cannot be ſeen by any body. Near the King's Scaffold is another erected, painted and embelliſhed with Mother of Pearl, whither the principal Lords come out of their Tents, pitched and furniſhed with their moſt precious Moveables, in the uttermoſt Court in the Palace, to pay their Veneration to the King; which done, he leaves the Theatre, and being ſeated on his Throne, he receives the Preſents of his Subjects, and this he continues for eighteen Days ſucceſſively. Towards the Concluſion of theſe eighteen Days, the King, in return of the Preſents the Lords and others have made him, beſtows upon them his Preſents, which are certain Employments and Honours proportionable to the Gifts he has received from their Hands.

The Mogul's Birth-day is alſo celebrated here after a peculiar Manner. The Day is begun with all manner of Divertiſements, which done, he ſhews himſelf to the Queen-Mother, if living, in her own Apartments, where the great Lords are obliged to appear, and to bring along with them conſiderable Preſents. After Dinner he puts on the richeſt Apparel that can be contrived, laden all over with Gold, and precious Stones. Thus he goes into a Tent, and in the Preſence of the chief Lords, weighs himſelf in a pair of Scales of maſſy Gold, the Chains whereof being of the ſame Metal, are ſet with precious Stones. He is ſet in one of the Scales, and in the other are put ſeveral Bags of Silver, one of Gold, ſome precious Stones, certain Pieces of Silk, Stuffs, Callicoes, Pepper, Cloves, Nutmegs, Cinnamon, Wheat, Pulſe, and Herbs, and an exact Account is kept of the Difference of his Weight from one Year to the other. This done, the King gives the Money with his own Hands to the Poor *Mohammedans*, and the reſt is diſtributed among certain *Banjans*. Then being ſeated on his Throne, he orders to be caſt among the Lords of his Court, Nuts, Piſtachoes, Almonds, and divers other ſorts of Fruit of Gold, but ſo ſlightly made, that one thouſand of them ſcarce weigh thirty Crowns, which tho' it may ſeem incredible, yet it is certain that it has been tried by Experience, that a whole large Baſon full of this kind of wrought things, have not amounted to above ten Crowns, and it is computed, that all this great Monarch beſtows upon this Occaſion, would not amount to above the Value of one hundred Crowns. The Day is concluded with a great Feaſt at Court, unto which are invited all the principal Lords in waiting, who paſs the Night with the Mogul in drinking.

They alſo celebrate another Feſtival, which begins ten Days after the New-moon of the Month of *July*. This is obſerved to perpetuate the Memory of two Brothers named *Janze* and *Jawze*, who being holy Men or Saints, went on Pilgrimage to the Court of *Coromandel*, and were there killed by the *Bramans*, and other Pagans. They carry Coffins covered with Bows, Arrows, Turbans, Cymitars, and Garments of Silk, through the City, the People following in whole Troops with great Lamentation, ſome ſlaſhing their Arms till the Blood iſſues forth plentifully. In the Evening they make diverſe Figures of Straw repreſenting the Perſons who murdered them; at theſe they ſhoot their Arrows, and at laſt burn them to Aſhes. They perform this with ſo much Animoſity, that no Pagan dares to appear about that Time in the Streets. The *Indian Mohammedans* alſo celebrate the Feaſt of the Sacrifice of *Abraham*. It is held in *June*, when they kill a He-goat, which ſerves them to entertain their Friends with that Day. The Great Mogul deduces his Off-ſpring from the famous *Timur*, or *Tamerlane*, in a direct Line, the ſaid *Tamerlane* being deſcended from the Family of *Zingis-Khan* of *Tartary*. *Shah-Choram*, who reigned at the Time of my Travels into theſe Parts, uſurped the Crown from his Nephew Prince *Polegi*, whom, as we told you, we ſaw at *Gaſſonis*.

The Mogul was then about ſixty Years of Age. He had three Sons, the eldeſt was about twenty-five; but his Affections being moſt for the youngeſt, he intended to beſtow the Crown upon him, and to make the other two contented with the Government of certain Provinces. The Beginning of his Reign had favoured not a little of Cruelty, and even afterwards he could not but betray his Inclinations, by putting ſuch as were guilty of High Treaſon to unheard of Torments; for the reſt, he was of a pleaſant Humour enough, taking much Delight of Muſick, and the Women Dancers dance naked before him. Of theſe I heard the *Engliſh* relate a pleaſant Story, that a certain Perſon of Note belonging to the Court, in whoſe Converſation the Mogul took particular Delight, being miſſing at Court, the Mogul aſked the reaſon of his Abſence, and being anſwered, that he had taken Phyſick, the Mogul ordered his Women Dancers to go to his Houſe, to ſtrip themſelves naked, and to eaſe themſelves before him. The Gentleman hearing of their coming, and having got ſome Scent of what their Errand was, aſked them immediately after their coming into the Room, what the King had commanded them to do, and being anſwered, that they were to eaſe themſelves there, he told them, that they might put the King's Commands in Execution as ſoon as they pleaſed; but aſking them at the ſame Time, whether they had any further Commands, they having anſwered no, he bid them have a ſpecial Care not to tranſgreſs the Orders laid upon them; for, ſaid he, if any of you piſs but one Drop, I will have you all ſoundly whipped, which put them into ſuch a Fright, that not daring to run the Hazard of the Laſh, they returned to the Mogul, who underſtanding by what Invention the Gentleman had diverted them from what they were ordered to do, laughed very heartily at his Ingenuity.

His daily Diverſions were to ſee the Lions, Elephants, Tigers, Leopards, and other wild Beaſts fight one with another. He alſo often delighted in ſeeing Men engage with thoſe ſavage Creatures, but never forced them againſt their Will, there being not wanting thoſe, who in Hopes of obtaining thereby the Mogul's Favour, would hazard their Lives upon that Score. I remember the Mogul on his Son's Birth-day being preſent at the Combat between a Lion and a Tiger, which were both very much hurt, he ordered Proclamation to be made upon the Spot, that whoever had ſo much Courage as to fight with one of thoſe Beaſts with Sword and Buckler only, ſhould be, if he vanquiſhed, honoured with the Title of *Khan*. It was not long before three *Indoſtans* appeared to accept the Challenge, and having laid by their Coats of Mail, one engaged with a furious Lion, and for ſome Time made his Party good very couragiouſly, but the Beaſt preſſing very hard upon his left Hand, in which he held his Buckler, the Weight whereof at laſt forced the Buckler out of his Hand; ſo that ſeeing himſelf in unavoidable Danger of his Life, he thruſt a Dagger which he wore in his Girdle into the Lion's Jaws, who thereupon let go his Hold, and was marching off; but the *Indoſtan* followed him, and with a Blow croſs his Head, laid him dead upon the Ground. The Acclamations of the People were loud upon this Occaſion, but the Mogul was ſo far from being pleaſed with the Action, that on the contrary, being highly incenſed at his having made uſe of any other Arms except his Sword and Buckler, he commanded the Fellow's Belly to be riped up, and the Body to be expoſed to the View of the whole City. The ſecond *Indoſtan* made up with no leſs Courage than the former, to a Tyger brought in for that Purpoſe, but this fierce Creature was ſo dexterous and nimble, as to ſeize him by the Throat, and ſo killed him. The third *Indoſtan*, though a Perſon of a mean Stature, and worſe Aſpect, nothing diſmayed at the Misfortune of his

Comrade, engaged the ſame Tyger with unſpeakable Bravery, who was for playing the ſame Game with this, that he had done with the other: But as he was going to faſten on the *Indoſtan*'s Throat, he cut off both his Fore-paws at one Blow, and ſoon after diſpatched him; at which the Mogul was ſo well pleaſed, that he preſented this Man (whoſe Name was *Geily*) with a Garment of Brocade with his own Hands, and beſtowed the Dignity of a *Khan* upon him.

18. I ſhould not have left *Agra* ſo ſoon, had not an unhappy Accident made me alter my firſt Reſolution; for as I was talking one Day in the Streets with my *Perſian* Servant who left me at *Surat*, an *Indoſtan*, of a very goodly Aſpect, came up to me, aſking me what I had to do in thoſe Parts? to whom I made Anſwer, that I was a Native of *Germany*, whom Curioſity had brought thither. He told me, that unleſs he was very much miſtaken, I was the Perſon that had killed his Kinſman in the Engagement at *Iſpahan*, betwixt the *Indoſtans* and *Germans*. As I was convinced in my Conſcience that he ſpoke Truth, ſo I was not a little amazed at it. But two *Engliſh* Merchants that were along with him, proteſting that I was lately come from *England* by Sea to *Surat*, made me perſiſt poſitively in it, that I had never ſet Foot in *Perſia*. This would, perhaps, however, have ſtood me but in little ſtead, had not the ſame Servant declared, and ſworn by his *Mohammed* and *Hoſſein*, that he knew me, and that I ſaid nothing but Truth: So that with much ado we got rid of the *Indoſtan* at that Time.

But as his Sight was not very agreeable to me, ſo I made it my Buſineſs to take the next Opportunity of leaving *Agra*, which I did accordingly, taking the Advantage of a Caravan that was going thence to *Labor*, 60 Leagues further into the Country, all which Way we travelled through one continued Viſto of Palm, Date, Cocoa, and other Fruit-trees, which, with the Company of two *Dutch* Merchants, and ſome *Banjans*, made this Journey very pleaſant, tho' theſe laſt were not very well pleaſed with the Diverſion I took in ſhooting at the Apes, Parrots, and ſome other Creatures, and among the reſt at a Serpent, a thing much eſteemed by them. The City of *Labor* is ſeated upon the River *Ravy*, one of thoſe that with four more join their Waters with the *Indus*. It lies in 32° 30′ having many fair Gardens on the River-ſide, and the Country about it being fertile in Fruits of all ſorts, but eſpecially in Wheat and Rice. The Royal Palace, which lies in the middle of the City, is ſurrounded by a very high Wall, beſides that, it contains many other Palaces, belonging to ſuch Perſons of Note as generally attend the Mogul, where-ever he goes, and a great many Moſques and publick Baths. I had the Curioſity to go into one of theſe Baths, which I found to be exactly after the *Perſian* Faſhion, with ſeveral Partitions made half round, within narrow at the Entrance, and wide at the Bottom, each having its peculiar Door, and two Ciſterns for receiving the Water, which is let in by brazen Cocks, more or leſs, according as thoſe who bathe are pleaſed to order it. After bathing, I was deſired to lie down upon a Stone ſeven or eight Feet long, and four broad, where being ſoundly rubbed firſt upon my Belly, and afterwards all along the Back-bone, down towards the Side; the Fellow would have rubbed the Soles of my Feet alſo, with ſome Sand, which I not being able to endure, he aſked me immediately whether I was a Chriſtian, and I having told him that I was, he gave me the Hair-Cloth to rub them myſelf.

In this Journey to *Labor*, I rode upon four ſeveral Creatures, that is to ſay, a Camel, a Mule, an Elephant, and an Ox, which trotted ſo hard, that he carried me ſix or ſeven Leagues within four Hours. Having received Letters from *Agra*, that the *Engliſh* Director was preparing for his return from *Surat* for *England*, I took the Conveniency of a ſmall Caravan of *Indian* Merchants, that were going to *Amadabat*, where I was no ſooner arrived, but I underſtood that he expected only the coming of the Caravans of *Agra* and *Amadabat*, in order to his Voyage to *England*, deſiring me to make what Haſte I could to *Surat*, being very deſirous I ſhould be preſent at the Reſignation of his Preſidentſhip, which was to be performed in a few Days. Whilſt I was at *Amadabat*, I ſaw the *Mohammedans* celebrate a Feaſt. All the Windows of the Houſes round the great Market-place were filled with Lamps, before which ſtood glaſs Veſſels full of Water, of all ſorts of Colours, which afforded a very delightful Proſpect at a Diſtance, and the Night was concluded with Feaſting and fine Fire-works, compoſed of Squibs, Crackers, and many ingenious Inventions of that kind; among the reſt, they had faſtened certain Lamps to Wheels, which being turned round with great Violence, made a pleaſant Shew.

The Caravan of *Agra* was no ſooner arrived at *Amadabat*, but I prepared to go along with them to *Surat*. The firſt Day we travelled ſix Leagues to *Amadabat*, but the next Day the *Engliſh* Director and his Deputy, being deſirous to be at *Surat*, at the Reſignation of the chief Director there, myſelf and another left the Caravan, taking twenty-four Soldiers along with us for Guards. We croſſed the River *Waſſet* with our Banners, according to the *Indian* Cuſtom, where Perſons of any Note always have Banners, not unlike our Cornets, carried before them. At Night we took our Quarters in the Fort of *Saſalpour*, where meeting with the *Engliſh* Factor of *Borda*, we ſtaid in that Place all the next Day, but continued our Journey in the Evening, and were lodged next Night in a Garden, whence we proceeded the next Day to a noted Ciſtern for freſh Water called *Sambord*, which being at that Time guarded by a Troop of Country People, who pretended to keep us from fetching the Water we had Occaſion for, a Diſpute aroſe betwixt them and ſome of our Soldiers, which at laſt came to Blows; for whilſt our People were drawing up their Water, the Country Fellows wounded five of them with their Arrows, which ſo exaſperated the reſt, that they killed three of the Country People.

But before next Day appeared, we met with another Encounter, which was likely to have proved fatal to ſome of us; for the *Dutch* Caravan (which we had overtaken on the Road) going away about Midnight, we followed ſoon after, but were not gone far before we heard one of thoſe Trumpeters, who in the *Indies* commonly march before the Caravans found his Inſtrument in an adjacent Wood; as we had been already forewarned of the *Raſhpoots*, who had committed ſeveral Robberies, and killed divers Perſons hereabouts the Day before, ſo we did not in the leaſt queſtion, that this was the Signal of our coming given to thoſe Rogues; neither was it long before we found our Gueſs verified by their coming out of the Wood with Pikes, Bucklers, Bows and Arrows; but the beſt was, that they had no Fire-Arms. We had ſcarce Time enough to put ourſelves in a Poſture of Defence; but the *Engliſh* Merchants and I getting on Horſeback, we beſtowed the four Firelocks we had among thoſe of our Company, who were in a Coach, reſerving three Caſe of Piſtols for our own Uſe on Horſeback. Our Agreement was not to fire till we were ſure of doing good Execution, and the *Raſhpoots* gave us a fair Opportunity to employ onr Fire-arms to the beſt Advantage; for as they were coming towards us in a very cloſe Body, we diſcharged our Firelocks, which were charged with ſquare Pieces of Iron, among them, which made three drop at once; but truſting in their Number, they puſhed forward, killed two of our Soldiers, ſhot an Arrow into the Pummel of my Saddle, and another into the Turban of the *Engliſh* Merchant: Nay, they came ſo near us that I received two Thruſts with their Half-pikes upon my Buff Collar, which I was beholden to for my Life at that Time. Nay, two of theſe *Raſhpoots* got hold of my Horſe's Bridle, and were juſt going to carry me off, when the *Engliſh* Merchant came in very ſeaſonably to my Relief, ſo that I made ſhift to kill one of them by a Piſtol Shot, and to get clear of the other. By this time ten Soldiers belonging to the *Dutch* Caravan came in to our Aſſiſtance, and the Caravan itſelf being not much behind, the *Raſhpoots* did not think it convenient to ſtay much longer but made the beſt of their Way to the Wood, leaving ſix of their Comrades killed upon the Spot, beſides ſeveral others deſperately wounded, whom they carried off. We had only two Foot Soldiers killed, and about eight wounded Perſons. We expected another Viſit from them, but we heard no more of them, and ſo arrived about Noon at *Broitſchia*, and travelled eight Leagues more the ſame Day to the Village of *Onclaſſor*, and the next Day, being the 26th of *December*, to *Surat*.

19. The Day after my Arrival at *Surat*, I was preſent at the Reſignation of Mr. *Metwold*, the then chief Director of the *Engliſh Eaſt-India* Company to Mr. *Fremling*, who had been his Deputy before; there were preſent at it five Conſuls, or Head Factors of that Nation in the *Indies*; three Miniſters, two Phyſicians, and twenty-five Merchants. After he had given them Thanks for their Fidelity to the Company, and for the Affection and Reſpect they had ſhewed to his Perſon, he begged of them to continue the ſame both to the Company and Mr. *Fremling*; and thus with a ſhort Compliment he commiſſioned the ſaid Mr. *Fremling*; after which he gave us a very magnificent Entertainment, there being not any thing wanting that the Seaſon afforded; beſides that we had a good Share both of the *Engliſh* and *Indian* Muſick, as well as the Women Dancers. *December* the 28th the new Sultan or Governor of *Surat* made his publick Entry through that Place, having carried before him a certain Number of *Palanquins*, followed by one hundred and twenty Foot Soldiers, twenty of which carried Banners after the *Indian* Faſhion. His Name was *Myrſa Mohammed*, and was mounted on a moſt excellent *Perſian* Horſe. Almoſt all the Perſons of Note of the Province, and among the reſt the chief of the *Engliſh* Merchants, conducted him to his Palace. Immediately after the Eſtabliſhment of the new *Engliſh* Chief, the Factors and Merchants returned to their reſpective Places of Reſidence, and the two *Engliſh* Ships then in Harbour there, called the *Mary* and the *Swan*, were ordered to diſpoſe every Thing for their Voyage, the latter being to ſail ten Days before the other, and to expect our coming at the *Cape of Good Hope*.

But before we take our laſt Farewel of *Surat*, it will be requiſite we ſhould diſcharge ourſelves of our Promiſe of giving you ſome Account of the Province of *Guzarat*, in which it lies. The Occaſion of the Kingdom of *Guzarat* being incorporated with the Mogul's Empire, happened thus: *Hamet Khan*, a Favourite of Sultan *Mohammed* King of *Guzarat*, who died 1545, and conſtituted Guardian to the young King his Son, who was then not above eleven Years of Age, finding himſelf uneaſy in this Station, by reaſon of the Jealouſy of the chief Lords of the Kingdom againſt him, craved the Aſſiſtance of *Achobar* the then Great Mogul, or Emperor of *Indoſtan*, to maintain him in his Dignity, offering the City of *Amadabat* to him as a Pledge for his Fidelity; the Mogul, willing to accept of ſo fair an Opportunity, not only poſſeſſed himſelf of *Amadabat*, but alſo of the whole Kingdom, carrying both the young King and his Guardian away into Captivity. The King being afterwards come to Age of Maturity, found means to make his Eſcape, and to repaſs ſome Part of his Dominions; but the Mogul was ſo cloſe upon his Heels, that in leſs than a Twelve-month's Time he chaſed him thence, and the King of *Guzarat*, finding himſelf a ſecond Time fallen into an Enemy's Hands, from whom he expected no good Treatment, cut his own Throat.

Ever ſince that Time this Province is governed by a Sultan or Viceroy, who has an abſolute Authority here in managing both the publick Affairs of the Government, as well as all the Revenues thereunto belonging, which are very great, and formerly amounted to eighteen Millions of Gold, beſides the Cuſtoms of *Broitſchia* and *Brodra*, which produced eighteen hundred thouſand Crowns *per Annum*, the reſt ariſing for the moſt part out of the third Part of the Arable Lands which belong to the King's Revenues, which are aſſigned to the Governor for the Maintenance of a certain Body of Horſe and Foot, to bridle the Inſolence of certain petty Princes inhabiting the Mountains, and to clear the Highways from certain inſolent Robbers, who iſſue forth out of the Woods in Troops of three or four hundred, and make the Roads very unſafe. But as the Number of Troops that are kept thus falls very ſhort from what they ought to be, this, with the abſolute Diſpoſal of Juſtice, which the Governor is intruſted with, gives ſuch an Opportunity of amaſſing prodigious Wealth, as is almoſt inconceivable. His ordinary Reſidence is at *Amadabat*, and his Court and Equipage ſo ſplendid when he appears in publick, that ſcarce any Court in *Chriſtendom* is to be compared with it; but as theſe Governors are merely depending on the Mogul's Pleaſure, ſo they are ſure to make the beſt Uſe they poſſibly can of their Time to enrich themſelves at any Rate. Hence it is, that he who complains to them firſt, and knows how to back it with Money, ſhall ſeldom go off a Loſer; neither is any Crime ſo great, but what may be bought off with Money.

The Couteval, or Governor's Deputy, has, however, the Privilege of giving Judgment in Affairs of leſs Moment, and it is he who directs the Brothel-houſes, and receives their Taxes; for as they look upon Murder and Adultery (eſpecially if committed with a Woman of Quality) as the greateſt Crimes, ſo they not only allow, but alſo protect Proſtitutes, and that with ſo much Circumſpection, that it is both without Danger and Blame that People frequent thoſe Houſes. Having given you before a ſhort Account of thoſe Cities we paſſed through in our Journey to and from *Agra*, we will here alſo ſay ſomething of the reſt of the Cities belonging to this Province. *Goga* is an open Place, thirty Leagues from *Cambaya*, ſituated upon the Gulph, where it is ſo narrow, that it rather reſembles a River than an Inland Sea. It is chiefly inhabited by *Banjans*; the *Portugueze* Ships keep there their Rendezvous, in order to convey their Ships to *Goa*. *Pattepatan* and *Mangerol*, two large Towns, nine Leagues from *Goza*, are inhabited by Calico-Weavers; the City of *Diu* lies upon the Southern Frontiers of the Kingdom; the *Portugueze* have three conſiderable Forts there. The City of *Biſantagan* contains above twenty thouſand Houſes, and is conſequently one of the biggeſt of the whole Province. The Fertility of the adjacent Country in Rice, Wheat, Cotton, and Paſtures, and its Situation, which is in the Centre of the Province, has raiſed it of late to what it is, it being formerly but an inconſiderable Village. The City of *Pattan* was formerly one of the moſt conſiderable of thoſe Parts, having ſix Leagues in Circumference, and encompaſſed with a good Wall of Free-ſtone, which is now decayed in many Places.

Since the Trade of this Place has been deſtroyed by a certain kind of Thieves, which ſo infeſt the Roads thereabouts, that the Merchants durſt not venture their Perſons and Commodities thither. The Inhabitants live now, for the moſt part, by weaving Silk Stuffs and Calicoes; but the laſt are very coarſe. The Governor has his Reſidence in a very noble Caſtle; and in the very Centre of the City is one of the moſt ſumptuous Moſques of all the Eaſt, the Roof being ſuſtained by one thouſand and fifty Pillars, moſt of Marble. *Cheytepour* is a ſmall City garriſoned only by a hundred and fifty Men for the Security of the Caravans, ſix Leagues from *Pattan*, and twenty-two from *Amadabat*, ſituate upon the Banks of a ſmall River. The Inhabitants are *Banjans*, who live on weaving of Calicoes, and making of Cotton-yarn. *Meſſana* is an open Place, but maintains two hundred Horſe Soldiers in an old ruined Caſtle, for the ſafe Paſſage of the Caravans. Some Calicoes are made here, the Country being very fertile in Cotton. The three ſmall Cities of *Vaſſari*, *Gaudin*, and *Balſara*, are under the Juriſdiction of *Surat*, the firſt lying ſix Leagues, the ſecond nine Leagues, and the third fourteen Leagues thence, and all three not above two Leagues Diſtance from the Sea. Their Trade is in coarſe Cottons, which are made in great Quantities here: The Country thereabouts alſo affords great Plenty of Timber for the building both of Houſes and Ships.

20. The Deſcendants from the ancient Inhabitants of this Province are ſtill *Pagans*, and are called *Hindou*, or *Indou*. The *Mohammedan* Religion was firſt introduced here by *Tamerlane*, and is ſince encreaſed by the great Concourſe of Strangers of the ſame Religion; this Country being inhabited by *Perſians*, *Arabians*, *Armenians*, and ſeveral other Nations; but you ſeldom meet with any *Chineſe* or *Japaneſe* here. As moſt of the *Mohammedans* here profeſs the ſame Religion with the *Perſians*, ſo their Language is as current here as the *Indian*. The *Indian Mohammedans* indeed adhere to the Opinion of *Hembili* and *Maleki*, whereas the *Perſians* admit of no other Expoſitions of the Alcoran but thoſe of *Haly* and *Tzaferjaduck*; but they both, with the ſame Zeal, reject that of the *Turkiſh* Interpreter *Haniff*. They are generally of an

olive or yellowiſh Complexion, though thoſe to the North are not quite ſo dark as thoſe living more to the South. The Men are commonly ſtrong and well made, with large Faces and black Eyes. They ſhave their Heads and Beards, excepting only the *Muſtachoes*, like the *Perſians*; and the *Mohammedans* are clad after the ſame Way, except that they plait their Turbans in a different Faſhion; and the *Indoſtans* wear the Opening of their Garments under the Left-arm; whereas the *Perſians* wear it under the Right. The former tie their Girdle before with the Ends hanging down, and the latter wind it ſeveral Times round the Waiſt, and twiſt the Ends within it: To thoſe they faſten their Daggers, which are about a Foot long, broad towards the Handle, and very narrow towards the Point. Some Swords there are worn here, but the Soldiers generally wear Cymitars.

As the *Indian* Horſes are not very valuable, and yet very ſcarce, ſo their Oxen are frequently uſed inſtead of them, which are as ſwift as Horſes; I have ſeen whole Bodies of theſe Ox-Troopers. Their Women are ſhort, but well-ſhaped; they wear their Hair hanging down over their Shoulders, and on their Heads a kind of a Cap of Lawn, interwoven with Gold, the Ends of which come down quite to their Knees. The richer ſort are very ſumptuous in their Apparel, have Pendants of Pearls and Diamonds in their Ears, and very fine Necklaces of Pearls, which make the fairer Show upon their Necks, which are of a brown Complexion. They ſometimes alſo wear Rings in their Noſtrils. Breeches and Drawers are common to both Sexes, and are generally made of Taffaty or Calicoe, and that of ſuch a Length, as they would cover all the Body, were it not for certain Strings that are faſtened to them, that they can draw them together in Plaits like Mens Boots, though above the Ham they lie cloſe to the Body without any Folds: Over theſe they wear their Shifts, which, however, reach ſcarce to the Navel; and over theſe again a Petticoat of Taffaty or Calicoe, but ſo thin that you may ſee through it. Their Shoes are flat-ſoled and narrow towards the Toe, and commonly of red *Spaniſh* Leather. Their Breaſts and Arms, as far as their Elbows, are bare, but covered with Bracelets. Women that value their Reputation here, never appear abroad with their Faces uncovered; and thoſe of Quality ſcarce ever go out of Doors.

The Women of the *Banjans* are clad after a quite different Manner, for they, as they don't ſhave their Heads, ſo they don't wear their Hair very long; neither do they cover their Faces, but wear Pendants and very rich Jewels, eſpecially in their Ears. Black Teeth are a ſingular Ornament among them, which is the Reaſon they calls us *Europeans*, in Deriſion, *Bondia*, *i. e.* Apes. They alſo wear no Breeches, but, inſtead of them, a Piece of Silk, reaching down to their Hams, over which they put their Smocks, and over them their upper Garments, which are faſtened round their Waiſt with a kind of Girdle: Some of them wear ſmall Waiſtcoats, the Sleeves of which come no farther than the Elbow, being naked from the Breaſt down to the Navel. During the Summer-ſeaſon their Shoes are made of Wood, only faſtened with Straps to their Feet; but in the Winter they have Shoes of Velvet, Brocade, or gilt Leather, the Quarters of which are very low, that they may put them off and on with more Conveniency, when they are going in, or coming out of a Room, the Floor of which is covered with Tapeſtry. Children of both Sexes are kept naked till they are five Years old. For the reſt, the *Banjans* live with a great deal of Circumſpection among the *Mohammedans*, who treat them contemptibly, and much after the ſame Manner as the *Jews* are looked upon with us, in thoſe Places where they are ſuffered to live. Notwithſtanding which they are more ingenious and crafty than the *Mohammedans*, which is the Reaſon both the *Engliſh* and *Dutch* employ them as their Brokers, it being next to an Impoſſibility that any Stranger ſhould be able to find out all their Impoſtures without the Aſſiſtance of ſome of their own Gang.

Their Children, eſpecially their Daughters, they marry at ſeven, eight, nine, or ten Years of Age, it being very rare that they ſtay till the twelfth; for as the *Indians* arrive ſooner at Maturity than other Nations, they are of Opinion, that if a Maid ſtays any Time beyond that Age, ſhe muſt be ſubject to ſome Infirmity. The Day for the Conſummation of the Marriage being come, the Parents of both Parties ſit round a good Fire in a ſpacious Room, the Bride and Bridegroom take three Turns about them, whilſt the Braman gives them his Benediction. If a *Banjan* Bridegroom happens to die before he has taken his three Turns thus, the Bride may challenge the Privilege of marrying another, the Widows of the *Banjans* being not allowed a ſecond Marriage upon any Account, though their Huſbands ſhould chance to die before the Conſummation of the Marriage: So that thoſe who cannot diſpenſe with a ſingle Life, aſſociate themſelves to the Women-Dancers. The *Banjan* Women are not obliged to burn themſelves with their dead Huſbands (as the Wives of the *Bramans* and *Raſhpoots* are) unleſs they will do it voluntarily. The Men are permitted not only to marry a ſecond or third Time, but may have two or three Wives at a Time, provided the firſt or ſecond prove barren; but the firſt challenges, and retains the Precedency. The Sons only inherit the Father's Eſtates, but are to maintain the Mother, and are to provide Huſbands for the Siſters. As they uſe neither Baptiſm or Circumciſion, they muſt be numbered among the *Pagans*: And though they acknowledge one ſupreme Being, the Creator and Preſerver of all Things, yet they pay worſhip to the Devil, for this Reaſon, becauſe that God having conſtituted him to govern the World, he ought to be appeaſed by Offerings.

The Figure under which they adore him, is to be ſeen in all their Pagodas or Temples, ſome of Gold and Silver, ſome of Ivory, Ebony, and Marble, and others of Wood, or common Stone. The Head, which has four Horns, beſides a Triple-crown in the Shape of a Crown, or Mitre, with a grim Countenance, and two great Teeth coming out of the Mouth, like the Tuſks of a Wild Boar, and a great rough Beard all over the Chin. The Arms hang down careleſly on both Sides, and the Breaſts are extended as low as the Navel, under which, betwixt his Thighs, you ſee another Head, with two Horns more deformed than the firſt, thruſting out of the Mouth a very ugly large Tongue: The Feet are like Paws of ravenous Creatures, and behind a Cow's Tail. This Statue is always fixed upon a Stone-table, which is the Altar where the Offerings are made to the Idol. On the Right-ſide of it ſtands a Ciſtern, in which thoſe that come to ſacrifice purify themſelves beforehand; and on the Left-hand a Cheſt, into which they put their Offerings, which are always made in Money. There is another Veſſel not far from the Ciſtern, out of which the Braman, or Prieſt, takes a certain yellow Mixture, made of Water and Sandal-wood, and therewith marks the Foreheads of ſuch as have performed their Devotions. The Braman's ordinary Place is at the Foot of the Altar, but he riſes from thence frequently to ſay his Prayers, and before he goes away, he is ſure to purify his Hands, by rubbing them over in the Flame of the Lamps, which are placed before and about the Altar, and furniſh their Pagodas with Light, and conſequently are kept continually burning, being the chiefeſt, if not the only Ornaments of theſe Temples, which look more like Caves and Holes of Darkneſs than Places of Devotion, there being nothing to be ſeen on the Walls of them but the Figures of Beaſts and Devils: Notwithſtanding which theſe poor Wretches pay their Devotions with more Reſpect and Zeal than is obſerved in moſt Chriſtian Churches.

They are, like the *Mohammedans*, much addicted to corporal Purifications, which they ſeldom fail to uſe every Morning before Sun-riſing. The Bramans deduce their Original immediately from their God *Brama*, and ſay that they are the Product of his Head, whereas the reſt came ought of his Thighs, Feet, and other more ignoble Parts. Mr. *Abraham Rogers*, who lived ten Years in the *Dutch* Service, on the Coaſt of *Coromandel*, ſays, that the *Bramans* acknowledged for their ſupreme God, one *Wiſtul*, or *Etwara*, and that out of his Navel ſprung forth a Flower called *Tamara*, which produced *Brama*; the firſt of all Men who had Power given him, not only to create the World, but alſo to ſettle what Order and Government he thought beſt. They further ſay, that this *Brama*, being

God's Vicegerent, has diſtributed the Adminiſtration of the Univerſe among eight Lieutenants, the chief of whom they ſtile *Deiwendra*, and ſay he commands all the reſt of the Governors, who govern eight diſtinct Worlds, ſuch as ours are, all which they are of Opinion ſwim upon the Surface of the Water like ſo many Eggs.

They ſay farther, that there have been divers Worlds before that which is now in being, and others will be after it; though, they tell us, that the World we live in, is to continue a Million of Ages, ſince that in the Year 1693, there were no more than 4739 Years of the fourth Age of the World elapſed; and that the firſt Age had laſted 17290 Years. That in the firſt Age of the World all Men were juſt and good to ſuch a Degree, that the Devil, who was then created, had no Power to injure them; that in the next following Age, the fourth Part of Mankind became depraved; that in the third there was an equal Mixture of good and bad; and that in this laſt Age of the World, the Number of the good amount only to one fourth of the whole. But let this ſuffice concerning the Theology of theſe *Pagans*; we will only add here, that the *Bramans* have, by their Auſterity of Life and Abſtinence, gained a great Aſcendant over the *Pagans*, who look upon their Expoſitions of the Myſteries of their Religion as ſo many ſacred Oracles; for which Reaſon alſo, generally, they entruſt them with the Education of their Children. They are diſtinguiſhed from the other *Banjans* by a peculiar kind of Linen Coiffure; beſides that, they never cut their Hair, and wear three Strings of Packthread next their Skins coming from their Shoulders croſs their Breaſt to the Waiſt; and as this is the Badge of their Order, ſo they never lay it aſide: They believe the Immortality of the Soul, and its Tranſmigration from the Bodies of Men into thoſe of Beaſts, before they can be capable of the Enjoyment of the Bleſſings of the other World; for which Reaſon it is that the *Banjans* will not allow the killing of any living Creatures, even down to the Inſects; and they are ſo careful in this Point, that they will not keep any Fire, or lighted Candles in the Night-time, for fear the Flies ſhould burn themſelves; and when they do at other Times, they make it in Pits under Ground. Their charitable Inclinations to all living Creatures are ſo great, that they redeem ſuch Birds as are catched by the *Mohammedans* to be killed; nay, they have certain Hoſpitals appointed for ſick and wounded Birds.

Among the *Malabars* theſe *Bramans* are in ſuch Veneration, that they have the Firſt-fruits of all the Brides, and by the richer Sort are invited to perform this Taſk with very conſiderable Preſents; nay, there is ſcarce any body of Note there, when he is to be abſent from Home for any Time, but recommends his Family, eſpecially his Wife, to the Care of a *Braman*, to ſupply his Place.

The *Banjans* are accounted to have thirty-eight principal Caſts among them, not to ſpeak here of the leſſer ones, which are not to be numbered; they have four general Sects, under which all the reſt are included, *viz.* thoſe of *Courawath*, *Samarach*, *Biſnow*, and *Goëgay*. Thoſe of the firſt Sect are very preciſe in the Preſervation of living Creatures, for which reaſon their *Bramans* have their Mouths covered with a Piece of Calicoe, for fear any Inſect ſhould get into and periſh in their Mouths; they for the ſame reaſon ſweep their Rooms continually, and will not ſit down before they have looked, for fear of ſitting upon them; neither do they keep any Fire or Candle in their Houſes. They are diſtinguiſhed from the others by a white Staff they carry in their Hands, and walk always bare-headed and bare-footed. Their Cloathing is only a Piece of Calicoe coming down from the Waiſt to the Knee, the upper Part of their Bodies being covered only with a woollen Cloth. They don't believe an infinite Being as the reſt do, but attribute the Events of all Things to Chance, and know of no other good Deeds but Faſting and Giving of Alms. In Conſequence of this Opinion, they acknowledge in the Sun, Moon, Stars, the Earth, in all Creatures, nay, in Trees, and in Metals, and all viſible Things, the inherent Cauſes of their Production. They allow two Suns, and as many Moons, which they ſay relieve each other alternately every Day. They believe nothing of Heaven, or any Manſion of the Bleſſed, tho' at the ſame Time they acknowledge the Immortality of the Soul, and its Tranſmigration, which they ſay does, after the Separation from the firſt Body, go into another, either of Man or Beaſt, according to the Behaviour of the Deceaſed in this World; they ſay it always makes Choice of a Female, that it may return into the World, tho' in another Body. Their Temples are all four-ſquare, with flat Roofs open to the Eaſt-ſide, under which are the Chapels of their Pagods, or Idols, raiſed ten Feet from the Ground, in the Form of a Pyramid, with Stairs leading up to them, on which you ſee certain Figures of Wood, Stone, or Paper, repreſenting ſome Perſons among them, who have rendered themſelves famous by their extraordinary good Fortune. The chiefeſt Time of their Devotion is in *Auguſt*, when they mortify themſelves, eſpecially by Abſtinence, to ſuch a Degree as would paſs for fabulous, were it not that even their profeſſed Enemies in the *Indies* have unanimouſly born Teſtimony to the Truth of it, that ſome have been known for the Space of fifteen or twenty-one Days, nay, ſome for a Month, or ſix Weeks, not to take any other Nouriſhment than Water mixed with the Shaving of a certain bitter Wood. In this Month they have their general Aſſemblies in their Temples, whither they reſort to hear the *Braman*, who ſits in the Center of them, and reads certain Legends of the Lives of their Saints. Immediately after they come into the Temple they put their Offerings of Money into a Copper Baſon, placed there for that Purpoſe, in return of which the *Braman* beſtows upon them the yellow Mark, either on their Foreheads, or Cloaths: Whilſt they are hearkening to the *Braman* they are entertained with Muſick.

If any aged Perſon dies, they burn the Carcaſe; but Children, which die before they come to three Years of Age, are buried. Their Wives are not obliged to burn themſelves with their deceaſed Huſbands, but muſt live in perpetual Widowhood, and there is none belonging to this Sect, but what is capable of being received into Prieſthood, to reach which he has no more to do, than to change his Habit, vow Chaſtity, and follow the ſame Auſterity of Life preſcribed to their Order. Women are not even excluded from this Function, but they muſt be above twenty Years of Age, whereas Males may come in at ſeven, eight, or nine Years of Age; nay, if either of the married Couple embraces Prieſthood, the other is engaged to Celibacy for Life. Some of them make a Vow of Chaſtity in Marriage, but this is not ſo well kept as made. This Sect is an Abomination to the other *Banjans*, to ſuch a Degree, that they will not eat, drink, or converſe with them: Nay, if they happen to touch them, they are obliged to a very ſtrict Penance.

The ſecond Sort among the *Banjans*, which conſiſts for the moſt Part in Lockſmiths, Farriers, Carpenters, Taylors, and moſt other ſorts of handicraft Men, as alſo ſome Soldiers, Officers, and Clerks, have ſcarce any thing in common with the firſt, except that they allow not the killing and eating of any living Creature, believing for the reſt, that the Univerſe owes its Origin to a firſt Cauſe, which alſo preſerves it by certain and unchangeable Rules. They give the Name of *Permiſeer* to this Supreme Ruling, and affirm, that it governs the World by three Deputies; the firſt they call *Brama*, and attribute to him the Management of Souls, according to the Direction of *Permiſeer*, in order to their Tranſmigration into the Body of Men or Beaſts. The ſecond, named *Buſſiuna*, is appointed to inſtruct the World in their Duty to God, and manages the Wheat, Herbs, and Pulſe, in the Fields and Gardens. The third, called *Mais*, is the chief Manager of the Dead, being *Permiſeer*'s Secretary, who, after having taken an Account of the good and bad Actions of the Deceaſed, makes a Report of it to his Maſter, who, according to every one's Deſerts, ſends the Soul into the Bodies of certain Beaſts, where they muſt do more or leſs Penance, before they can be purified from their Sins. In this kind they look upon the Cow as one of the beſt, having ſomething divine in it above all the reſt. They burn the dead Bodies of their Friends, except thoſe of their Children under three Years of Age, whom they bury near ſome River or Brook, none of the *Indian* Women accompanying their Huſbands with ſo much Chearfulneſs in their laſt Journey, as thoſe of the Sect of *Samarath*; for as they are perſuaded, that ſuch as die with their Huſbands ſhall live with them in the other World ſeven Times as long, and enjoy with him ſeven Times more Pleaſure there, they are ſo fond of ſo plentiful a Bleſſing, of which they have ſo ſlender a Share in this World, that they are ready to ſacrifice their Lives in order to attain it.

This Sect of *Biſnow* agrees with the two preceding in this Point, that they do not feed upon any thing that hath Life. They are alſo much addicted to Abſtinency, and keep their general Aſſemblies in their Temples in *Auguſt*, where they ſing and dance to a Concert of Muſick, conſiſting of Drums, Pipes, and Copper Baſons, before their Pagod called *Ramram*, ſinging Hymns in his Praiſe. They repreſent him with his Wife in Statues, adorned on their Feſtivals with Gold Chains, and Collars of Pearl and precious Stones, with many Lamps, and lighted Wax Candles before them. This God acts without any Deputies; they feed upon nothing but Herbs, Pulſe, Freſh-Butter, Milk and Curds, and are great Admirers of a Pickle made of Ginger, Mangoes, Citrons, Garlick, and Muſtard-ſeed; and their Drink is Water. None but Women or Prieſts dreſs their Meats, and uſe Horſe-dung mixed with Straw, and made up into a kind of Turf inſtead of Wood, for fear ſome ſmall Worms, or other Inſects, ſhould be burnt with it. Moſt of this Sect are Merchants, Factors, or Brokers. They have this Cuſtom peculiar to themſelves, that they will not permit their Widows to burn themſelves with their deceaſed Huſbands, but oblige them to continue Widows. Not many Years ago the younger Brothers among them were obliged to marry their elder Brother's Widows, to raiſe up Seed to him; but this is now aboliſhed.

They commonly waſh themſelves every Morning in ſome Ciſtern, or a River, if any be near them, where they wallow and ſwim in it, whilſt the Braman, who ſtands hard by, mutters out certain Words, and imparts to them his Benediction, and at their coming out gives them the Mark in their Foreheads, or in ſome other Place; for which he is paid with Wheat, Rice, or Pulſe. Thoſe belonging to the Sect of *Gorephy* are a kind of Hermits, neglecting all publick or private Affairs, and dwelling in ſolitary Places, and ruined Houſes, or Woods, ſhun the Converſation of others; they worſhip a God whom they call *Bruin*, and his Servant *Mecis*; but have no particular Temples, or any other publick Aſſemblies, to perform their Devotions in. As they are forbidden to have any Poſſeſſions of their own, ſo they have nothing but a Piece of Calicoe to cover their Privities; they never ſpeak to any body, or will give an Anſwer to any, or aſk for any thing, though they were in the utmoſt Extremity, but will take what is given them; they rub their Bodies all over with Aſhes, and eſpecially their Hair, which makes them look very ſtrangely. They are in great Veneration among all the other *Banjans*, except the Sect of *Courawath*, who abhor them.

They believe that their God is the Creator of all Things, which he preſerves by his own infinite Power, by which he is able to reduce all to nothing; that he is not to be deſcribed under any Shape, being a Light, which, as it is the Cauſe of the Sun, his Brightneſs is not to be ſeen by our Eyes. They differ from all the other *Banjans* in this; that they do not believe the Tranſmigration of Souls; but that they are immediately, after they have left their Bodies, transferred to God, and united to that infinite Light. They are ſo ſtrict Adherers to their Rules, that they admit no *Mohammedans* into their Sect, or re-admit ſuch of their own as have been Priſoners among the *Mohammedans* and *Chriſtians*, and have eaten Meat without a moſt ſevere Penance, which is, to eat for ſix Months together Cow-dung mixed amongſt their Victuals. Nothing can be conceived more ſuperſtitious than the *Banjans* in general; they never ſtir out before they have paid their Devotions, and if in going out of their Houſes they meet with any thing which they look upon as ominous, they return, and undertake nothing further that Day.

The *Raſhpoots* are by ſome reckoned among the Number of *Banjans*, who allow them a Place with thoſe of the Sect of *Samarath*, as believing the Tranſmigration of the Soul; beſides ſeveral other Things affirmed and maintained by that Sect, they are further of Opinion, that the Souls of Men tranſmigrate particularly into Birds. Their Widows are obliged to burn themſelves, unleſs the contrary be provided for in the Marriage-Contract; for the reſt, they are not of that reſerved Temper as moſt of the *Banjans* are, who abhor the Effuſion of Blood, even of that of irrational Creatures; whereas theſe live upon Rapine, eat Fleſh, and addict themſelves altogether to warlike Exerciſes; and as they are a daring Generation, ſo they are employed by the Mogul in his Armies. Some Compaſſion they have for Birds, which they will feed and cheriſh. They, like other *Banjans*, marry their Children very young, which, as I have mentioned before, proceeds from hence; that the *Indians* of both Sexes come ſooner to Perfection in this reſpect than any other Nation in the World. There is beſides theſe another ſort of *Pagans* in *Guzarat* called *Parſis*, deſcended from the *Perſians* of *Fars* and *Choraſan*, who left their native Countries in the ſeventh Century, to avoid the Perſecution of the *Mohammedans*. They dwell for the moſt part along the Sea-Coaſt, and live upon planting of Tobacco, and making of Arrack or Aquavitæ out of Teddy; though many of them addict themſelves alſo to Trade. They believe one God, the Creator and Preſerver of the Univerſe, who acts by his own Power, but has committed the Adminiſtration thereof to his ſeven Servants, whom they repreſent thus: The firſt, named *Hamaſda*, has the Government of Men; the ſecond, called *Bahman*, the Sovereignty over all Beaſts and living Creatures; the third, *Ardabaſh*, takes care of the Fire; the fourth, named *Sarywar*, has the Charge of Metals; the fifth, whoſe Name is *Iſphander*, takes care of the Earth, as *Auwaerdath*, the ſixth, doth of the Water; and the ſeventh, called *Ammadath*, hath the Precedency over Fruit-trees, Herbs, and Pulſe, yet under God's Direction, unto whom they are accountable for their Tranſactions.

Beſides theſe ſeven Head Servants, God, ſay they, makes uſe of twenty-ſix others, each of which has his peculiar Function aſſigned him. The Buſineſs of the firſt is, to take Poſſeſſion of the Soul immediately after its Departure out of the Body, which he carries before two Judges called *Meer Reſos* and *Saros*, who, taking care to have the good and evil Works put into two Scales, pronounce Sentence according to their Weight, and deliver the Soul up either to the good Angels to be carried into Paradiſe, or to the evil Spirits to drag them to Hell, where they are to be tormented to the End of the World, which, according to their Opinion, will be renewed in one thouſand Years. The fourth, called *Beram*, has the Adminiſtration of all military Affairs. The fifth, *Carraſada*, is the Sun. The ſixth, *Auva*, the Water. The ſeventh, *Ader*, manages the Fire. The eighth, *Mobo*, is the Moon. The ninth, *Tiera*, or *Rain*. The tenth, named *Gas*, has the Management of Cattle. The eleventh, *Farwardy*, the Cuſtody of the Souls in Paradiſe. The twelfth, *Aram*, imports Joy or Sadneſs to Mankind. The thirteenth, *Goada*, is the head Manager of the Winds. *Dien*, the fourteenth, is he who is to inſtruct and to infuſe into Mankind the Law of God. The fifteenth, *Apirſanick*, is the Giver of Riches, as *Aſtaſt*, the ſixteenth, has the Diſpoſal of Underſtanding and Memory. The ſeventeenth, called *Aſſamant*, is chief Preſident of Commerce; and *Gamigat*, the eighteenth, has the Government of the Earth. The nineteenth, called *Marriſpan*, is Goodneſs itſelf. And the twentieth, named *Amiera*, the Manager of ready Money. The twenty-firſt, called *Hoem*, has the Management of Generation of Men, Cattle, and Fruits. The twenty-ſecond and twenty-third, called *Dima* and *Borſe*, are looked upon as two Genii appointed to watch all Men; and the three remaining, *viz.* *Dephader*, *Dephemer*, and *Dephaden*, are God's conſtant Attendants, who employs them in what Affairs he pleaſes, without Diſtinction. As the *Parſis* are of Opinion, that God has left the Adminiſtration of the reſpective Affairs in relation to their Station to their Diſpoſals, they adore them in caſe of Neceſſity. Their Teachers are in much Veneration among them, ſome of whom engage themſelves in Traffick and other Employments.

They have no publick Places of Devotion, but perform the ſame in their Houſes, ſitting without any Motion of their Bodies. They have no peculiar Days ſet aſide for their religious Worſhip, except that they obſerve particularly the firſt and twentieth Day of the Moon. Each of their Months conſiſting of thirty Days, they add five Days to the laſt Month to make up the Year three hundred and ſixty-five Days. Their Teachers are not diſtinguiſhed from the reſt by their Habit, which they have in common with the *Parſi's*, and the other Inhabitants of the Country being known only by a certain twiſted Girdle of Wool, or Camels Hair, which comes twice round the Waiſt, and ties with two Knots behind: this being the certain Badge of their Religion, and ſo eſſential to them, that he who loſes it muſt not either eat or drink, or ſtir from the Place where he is before he has bought another from the Prieſt. The Women alſo are allowed to wear them after the twelfth Year of Age. They live very meanly in little dark Houſes, poorly furniſhed, and affect much to live near one another. They have the Liberty of chooſing two of the moſt conſiderable Perſons of the Nation for their Judges. Fire is ſo ſacred a thing among them, that they would not extinguiſh it with Water, though the Houſe were in Flames, looking upon it as the moſt lively Repreſentation that can be made of the Divine Light; for which Reaſon it is that they will rather ſmother their Fire with Earth, nothing being more irkſome to them than to ſee their Fire extinguiſhed at any time. They early engage their Children in Wedlock; but the Marriage is ſeldom conſummated till the fifteenth or ſixteenth Years of their Age, and in the mean time they are committed to the Care of their reſpective Parents. As they look upon Adultery and Fornication as the moſt heinous Crimes in Nature, ſo they allow their Widows to marry a ſecond time to prevent them.

They are very particular in their Burials; for ſo ſoon as the Patient is given over, they lay him upon a little Bed of green Turf, where he yields up the Ghoſt; which no ſooner happens, than five or ſix Grave-makers come, take him from the Bank of Turfs, put a Shroud about him, and lay him upon an Iron Grate made like a Bier, and ſo carry him to their Burying-place, a League without the City, which is divided by a Wall into three Parts, *viz.* one for the Men, the ſecond for the Women, and the third for the Children. Over their Graves are laid Iron Bars like Grates, upon which they leave the Corpſe till the Birds have eaten all the Fleſh, and the Bones drop into the Grave underneath. The Friends accompany the Corpſe till they come within five hundred Paces of the Grave, where they ſtay, and make moſt doleful Cries, till the Grave-makers have laid it upon the Grate. A Month or ſix Weeks after the Burial they carry the Turfs upon which he died, as Things polluted, to the Burying-place, and every Month entertain the neareſt Friends with a Collation, in Memory of the Deceaſed.

If any one happens to touch a dead Carcaſe, or the Bones of a dead Beaſt, they are defiled, and muſt undergo a Penance of nine Days. They reckon thoſe damned whoſe Bones happen to fall into the Water. They are forbidden to eat of any living Creature: yet in Time of War they will now and then make bold with a Sheep, Goat, ſome tame Fowl, or Fiſh, and eat it; but never kill any Camels, Elephants, Horſes, or Hares; and as to the Ox and Cow, they are ſo far from killing them, that they have a Proverb, that they would rather feed upon the Fleſh of their Fathers and Mothers, than upon an Ox or a Cow. Though they are not forbid the Uſe of Wine and Teddy, their Law enjoins them a ſevere Penance for Drunkenneſs, and upon that Score, the drinking of *Aqua Vitæ*. They are but middle-ſized, but of a much clearer Complexion than the Natives of the Country, and eſpecially their Women, who, in this Point, much exceed the *Mohammedan Indoſtans*. The Men have great Beards, but ſomewhat round; ſome cut their Hair, others wear it without cutting; the firſt leave only a Lock of an Inch in Compaſs, on the Crowns of their Heads. They are very induſtrious, and an over-reaching Generation; and were it not for their avaricious Temper, would be much better natured than moſt of the *Mohammedans* are. They have two other ſorts of Pagans in *Guzarat*, *viz.* the *Hindoos* and *Jentives*; the firſt are deſcended from the Province of *Multhan*, and the Parts about *Aſſmeen*. They are ſo far from being *Banjans*, that they won't admit them to be preſent at their Meals, which they eat within a Ring, and they eat of all ſorts of Beaſts, except the Ox and Cow. They apply themſelves for the moſt Part to the Wars. The *Jentives* deduce their Origin out of the Kingdom of *Golconda*, being a ſort of poor ignorant Wretches, who pin their whole Faith upon the Sleeves of their Bramans. Their Belief is, that originally there was but one God; but as in Proceſs of Time Men deſerved well of him by their great Actions, he communicated to the beſt of them ſome Share of his Power: Theſe are their chief Saints whom they worſhip in their Temples.

There is another ſort of People here called *Theers*, being neither *Mohammedans* nor *Pagans*, living without any Religion; their Employment being the cleanſing of Wells, Sinks, Common-ſewers, and the flaying of dead Beaſts, whoſe Fleſh they eat. They are alſo frequently employed as Executioners, which is the Reaſon they are avoided by all other *Indians*, for fear of being defiled by them, and are not permitted to live any where but in the Suburbs. As the Religion of the *Mohammedan Indoſtans*, ſome few Points excepted, approaches very near to that of the *Turks* and *Perſians*, we will not enlarge here upon that Head, but will proceed to give you ſome Account of the Manner of Life of theſe *Mohammedan Indians*, foraſmuch as the ſame is very different both from the *Turks* and *Perſians*. To begin with their Marriage Ceremonies, they are performed thus; on the Day appointed for the Wedding, the Bridegroom mounted on a Horſe, whoſe Mane and Crupper are adorned with Flowers, and a Net over his Head, rides from his Houſe accompanied by his Friends and Kindred, with a Concert of Muſick before him, and certain Fellows are appointed to caſt Squibs and Crackers to the Bride's Houſe, where having given her the Diverſion of Muſick and Fire-works for half an Hour, he diſmounts, and ſits himſelf down in the Houſe, upon Tapeſtry laid upon the Floor for that Purpoſe; ſoon after the Bride, with her Friends the *Molla* and *Kadi*, or Judge of the Place, come in. The *Molla* having read certain Paſſages out of the Alcoran, and taken the Bridegroom's Oath, that in caſe of Divorce he will make Proviſion for his Wife, he gives them his Bleſſing and departs. The reſt of the Company who ſtay behind, are entertained with Betel and Pills of Amphion, or Opium, which they uſe inſtead of Wine, and produce very near the ſame Effect. If the Bride proves an undefiled Virgin by the Marks upon the Sheets, the Friends aſſemble for five, or ſix, and ſometimes eight or ten Days after; but if the Paſſage be found not ſo well guarded as it ſhould be, the Bridegroom takes his Leave of her, and returns her to her Friends. On the other hand, if the Bridegroom finds her ſo ſtrait laced, as that he cannot enjoy her in three our four Days, and conſequently is ſuſpected of want of Ability, one of the neareſt Kinſwomen to the Bride ſends him a Diſtaff, with this Meſſage, that not being made for Man's Work, ſhe has thought fit to furniſh him with ſome Womens Buſineſs. The Marriages of the *Indian Mohammedans* are not ſo ſtrict as thoſe of the other *Mohammedans*, who can't be divorced unleſs both Parties be heard, and Sentence pronounced by a Judge. But here they may be divorced with leſs Ceremony, upon a bare Averſion, or Diſtaſte, with this Proviſo, however, that purſuant to what they promiſe at the Marriage, the Men are obliged to provide for the Suſtenance of their Wives, who therefore have no other Dowries here, but as for the Jewels they bring along with them, they cannot re-claim any thing of that Nature. The Women of any Quality ſtir but ſeldom abroad, and that either in a cloſe Coach, or *Indian* Litter; and if they happen to ride on Horſeback, their Face is covered with a Scarf, none but the meaner ſort, or common Proſtitutes, being to be ſeen on Foot, and with their Faces bare, in the Streets. The *Indian* Women have generally a very eaſy Deliverance, it being a great Rarity to hear of a Woman that is above two or three Hours in Labour.

Their Children they educate with extraordinary Care in Schools, where they are taught to read and write; and ſuch as are not able to do it, they ſend either into the Wars, or into the Service of great Perſons, where their Allowance is ſo ſlender, that they lead but an unhappy Life. It is generally obſerved, that the *Indian* Children have a very tender Regard for their Parents, to ſuch a Degree, that they would ſtarve themſelves to preſerve them. Moſt Perſons of Note are very careful to build themſelves Houſes in very handſome Gardens, which ſerve them and their Families for Sepulchres; theſe Houſes have many ſmall Windows on all Sides. They uſe the following Ceremonies at their Burials; immediately after the Deceaſe of the Patient, the Kindred with great Lamentations come to aſk him what made him die; whether he wanted ſuch and ſuch Conveniencies, which they name to him. This done, whilſt the Corpſe is waſhed and put into a Coffin, the Friends divert their Sorrow by making good Cheer. Three or four *Mollas* remain conſtantly near the Body (which is wrapped in a perfumed Sheet) to pray for the Soul, till it be carried to the Burial-place, whither the Coffin with the Corpſe covered with Callico, Velvet, or ſome other precious Stuff, is carried by ten or twelve Men, the *Mollas* ſinging all the while their Hymns, and the Kindred accompanying it to the Grave. Here the Body is laid down upon the Right-ſide, with the Face to the Weſt, the Feet to the South, and Head to the North, the Coffin being covered with a Board, for fear the Earth ſhould defile the Corpſe. It is let down ſmoothly into the Grave, whilſt the Kindred mutter out certain Prayers, and ſo return to the Houſe of the Deceaſed, where the ſame *Mollas* continue their Prayers for ſeveral Days after, during which Time not a Spark of Fire muſt be ſeen in the Houſe. They ſtile themſelves *Muſſulmans*, or true Believers, looking upon all other Religions as heretical and damnable; but as they have a ſingular Averſion to Images, ſo they ſhew more Hatred to the *Roman Catholicks* than *Proteſtants*, on the ſcore of their Images.

They are generally of a good Stature, without any natural Defects. They have all lank black Hair, tho' thoſe they call *Mogollies* have a clearer Complexion than the reſt. They don't admire flaxen Hair, but hate red-haired People, out of an Opinion they have, that they are leprous, a Diſtemper very common here; one Reaſon of which is, that the Pox being ſeldom cured as it ought to be, by Degrees affects the Blood afreſh, and turns to a Leproſy. The *Mollas* let their Beards grow, but all the reſt ſhave their Beards as well as their Heads, leaving only a Lock on the Crown, by which, they ſay, *Mohammed* is to pull them up to Heaven. There is no Diſtinction in the Dreſs of Men and Women. They make their Garments of Callico, Silk, or Brocade, according to the Abilities of thoſe that wear them. They lie cloſe to their Bodies above their Waiſt, like ours, but grow wider and wider downwards to the Small of their Leg, whereabouts their Breeches, which reach to their Shoes, are gathered by a String into many Plaits. Their Shoes are of *Spaniſh* Leather, Silk, or Brocade, with very low Quarters, becauſe they have frequent Occaſion to pull them off when they go into Rooms, where the Floors are covered with rich Tapeſtry. Their Head-dreſs comes nearer to that of the *Turks* than the *Perſians*, being commonly of thin Callico, or Silk, interwoven with gold and ſilver Thread. They lay it by when they go to Bed. They have over their Garments a kind of Cloak to defend themſelves againſt the Injuries of the Seaſon. Their Garments are tied round their Waiſt with a ſilk Girdle wrought with Gold, and over this they have a kind of a Saſh of fine Callico. In theſe, Perſons of Quality wear their Daggers, the Handle and Sheath of which are generally of Gold, and ſet with precious Stones.

Their Houſes are but ſlightly built, the Walls being nothing but Plaiſter-work made of a Mixture of Free-ſtone powdered, ſome Lime, Gum and Sugar, which being very white and ſmooth, makes no diſagreeable Shew at a Diſtance. They are alſo indifferently furniſhed, eſpecially the Kitchens, where, beſides a few Diſhes and Stoves, you ſee very few other Utenſils; tho' for the reſt, the Houſes of Perſons of Quality are very large, and divided into convenient Halls, Apartments, Chambers and Cloſets; in the two laſt of which the Women take great Delight to ſet them out with their gold and ſilver Plate. When they are to receive Viſits, they place themſelves in the Hall, upon Pieces of Tapeſtry. They ſalute each other at their firſt coming in with their Salam, and an Inclination of the Head, and if the Perſons be of greater Quality, they put their Right-hand to their Heads, to ſhew their Readineſs to ſubmit to them. If they are of an equal Condition, no further Ceremony is obſerved, but a mutual Inclination with their Bodies. Sometimes they touch one another's Locks, adding theſe Words, *Grab ane meas*, be it to you according to the Prayers of the Poor. He who receives the Viſit, never ſtirs from his Place, the Viſitors being ſet on his Right and Left-hand. Their Viſits are made with a great deal of Reſervedneſs, no ſuch thing as the leaſt loud Diſcourſe being to be heard, or any Geſtures made with their Hands or Heads. If they whiſper to any body, they are ſure to hold to their Mouths a Napkin, or ſome ſuch thing, for fear of offending with their Breath him to whom they ſpeak.

Their greateſt Expence is in Cloaths, Eating, and Women; for as by the *Mohammedan* Law they are all allowed to purſue their ſenſual Pleaſures to the utmoſt, as far as may be done without Detriment to their Neighbours, they indulge themſelves in this Point to the Extent of their Power. They keep a numerous Retinue of Servants, each of which hath his Buſineſs aſſigned him. Their Footmen have great Plumes of Feathers on their Heads, and two little Bells on their Breaſts, and are ſo hardy, that they will travel fifteen or ſixteen Leagues a Day, without much Difficulty. They have all their board Wages, and ſome Vails, but both are ſo ſmall, that they can ſcarce keep themſelves from ſtarving. The many Women the *Mohammedans* marry, are very chargeable to them, together with their Eunuchs, for they are very extravagant in their Cloathing, Jewels, and Furniture; the chief Amends they have for this is, that each Woman endeavours by all imaginable Art to gain her Huſband's Affection and Enjoyment before the reſt, there being nothing to be contrived, but what they will make uſe of to excite him to Voluptuouſneſs. The common handicraft People are but in a very poor Condition here, for as every Piece of Work paſſes through ſeveral Hands before it is finiſhed, they can ſcarce get Six-pence a Day, and the worſt is, that the Children muſt be bound to no other Trade than that of their Fathers.

Hence it is that they are forced to live upon Bean-flour and a little Rice boiled in Water, in the Nature of a Haſty-pudding, into which they put a little melted Butter, and their poor Houſes are ſuitable to their Way of Living. Merchants live here in Plenty enough, and would be ſufficiently happy, were it not for the Danger they lie under of being fleeced by the covetous Governors of the Places in which they live, under ſome Pretence or other, as ſoon as they begin to diſcover their Wealth: So that the only Way to keep any thing, is to appear to have nothing.

21. Though all the *Mohammedans* in the *Indies* profeſs the ſame Religion, yet are they diſtinguiſhed into divers Sects, ſuch as the *Patans*, *Moguls*, and *Indoſtans*, beſides ſeveral others, which, as well as their ſeveral Tempers, ariſes more from the different Diſpoſitions of thoſe Countries from whence they came, than from any religious Account. Thus the *Patans*, or *Padars*, are a moſt daring, cruel, and barbarous Generation, who without any Conſideration will thruſt themſelves into hazardous Enterprizes. The *Moguls*, or *Mogulies*, on the other Hand, deduce their Origin from the Natives of *Great Tartary*, are complaiſant and diſcreet, which gains them great Reſpect among the other *Mohammedans*. The *Indoſtans*, or *Induſtans*, are ſomewhat barbarous, and though covetous, yet are not crafty enough to deceive without being found out. They are the true ancient Inhabitants of *Guzarat*, and may be eaſily diſtinguiſhed from the reſt by their Complexion, which is much more inclining to black than the two former.

There is another ſort of People in the Province of *Haca-Khan*, who, as they are very hardy and bold, ſo they are employed chiefly in carrying Merchandizes; they are called *Blottions*, their chief Employment being to let out Camels, and to conduct the Caravans, which they do with ſo much Fidelity, that they would rather ſacrifice themſelves, than ſuffer any thing to be loſt. All over the Mogul's Country, as well as in this Province, no ſuch thing is to be ſeen as publick Inns, except that in the Cities, and ſome Villages, are erected certain publick Buildings out of

Charity for the Conveniency of Travellers, and theſe Caravanſeras have no other Accommodations but four bare Walls and a Covering over Head. They travel with Camels, Horſes, Mules, and Oxen. They make uſe alſo of a certain kind of Coaches, drawn by Oxen, which will travel ten or twelve Leagues a Day; they are covered with Velvet on the upper Part, but thoſe for the Women are ſo covered on all Sides. Perſons of Quality travel for the moſt part on the Elephants, or are carried in Palanquins, or Litters, carried by two Men upon their Shoulders, with a Bar. They are very careful in breeding up their Elephants. Hawking and Hunting is their chief Sport. Their Greyhounds are leſs than ours, but they make uſe of tame Leopards and Tygers in Hunting, which are the beſt in the World at ſurprizing a wild Beaſt, but never purſue it. They catch Water-fowl by the Skin of a wild Duck, filled with Hay, which being tied to the decoy Duck, they ſwim up the Water till they get inſenſibly among the reſt without frighting them. Their Bows are made of wild Ox Horns, and their Arrows of Cane, and they manage them with ſo much Dexterity, that they kill Birds flying. Their Games are Cheſs, and ſome at Cards. They are great Lovers of Muſick, though theirs be ſo rough; but judicial Aſtrology has got ſuch an Aſcendant among them, that nothing of Moment is to be undertaken here without firſt conſulting thoſe who profeſs it. They are not quite deſtitute of Books. *Ariſtotle*'s Works, or at leaſt moſt of them, are to be met with here, tranſlated into the *Arabian* Tongue; as likewiſe certain Treatiſes of *Avicenna*, who is in great Requeſt with them, as being born at *Samarcand*, under the Juriſdiction of *Timur*, or *Tamerlane:* Their Writings are not deſpicable, and have ſomething of Rhetorick in them; and their Annals are ſo well and exactly kept, as to furniſh ſufficient Matter for a good Hiſtory.

Though their Language be divided into ſeveral Dialects, yet it is to be learnt without much Difficulty; they write from the left-hand to the right; the *Perſian* is the Court Language in *Indoſtan*, and ſome have likewiſe a Taſte of the *Arabick*, which is the learned Language. The Bloody-flux and Fevers are the moſt common Diſeaſes in the *Indies*, againſt which they uſe ſcarce any other Remedy but Abſtinence. They don't want Phyſicians, but have no Surgeons. Their Barbers let Blood, and apply Leeches, which is all the Operations they uſe. The Winter begins in *Guzarat* in *June*, and holds till *September*; but the Rains are not as at *Goa*. There are but two Winds which reign on this Coaſt, *viz.* the North and South Winds, which blow each for ſix Months without Interruption. Their greateſt Heat is in *April* and *May*, and the Beginning of *June*, but the Sultrineſs of the Seaſon is ſomewhat tempered by the frequent Breezes, which, however, bring this Inconveniency along with them, that they raiſe the Duſt to ſuch a Degree, as robs you of the very Sight of the Sun at Noon-day.

22. The chief Commodities at *Guzarat* are Calicoes, and ſilk Stuffs, as Sattins, Taffaties, Potolas, Comerbands, Orris of Gold and Silver, uſed for Veils for Women, Brocades, Tapeſtry, ſtriped Carpets, Quilts, Tents, Bedſteads, and Cabinets, Lacque Beds, Chains, Buttons, and Rings, of Ivory, Amber, Rock Chryſtal, and Agate.

In a Village called *Cherchees*, near *Amadabat*, is the beſt Indigo made. The Herb is like that of a yellow Parſnip, but ſomewhat ſhorter and more bitter. It ſprouts forth into Branches like a Reed, and ſometimes riſes ſix or ſeven Feet high. Its Flower is like that of a Thiſtle, and its Seed reſembles Fenugreek; they ſow it in *June*, and cut it in *November* or *December*. It is ſown but once every three Years; the firſt Year they cut off the Leaves within a Foot of the Ground, and after they have cleared them from the Stalk, dry them in the Sun, and afterwards lay them a ſoaking in a ſtone Trough, which has ſix or ſeven Feet Water in it, ſtirring it very frequently, till they think the Water has ſufficiently extracted all the Colour and Virtue of the Herb; then they draw that Water off into another Veſſel, which being well ſettled all Night, they take it off the next Day, and the Settlement in the Bottom is ſtrained through a coarſe Cloth, and dried in the Sun. This is the beſt Indigo, which is adulterated by the Inhabitants by the Mixture of a certain Earth of the ſame Colour, and ſome Oil, to make it ſwim upon the Water, the Goodneſs of this Drug being commonly judged by its Lightneſs.

The Stalks left the firſt Year produce Leaves the next; but theſe are not to be compared in Goodneſs to thoſe of the firſt, tho' they exceed thoſe of the wild Indigo. The ſecond Year is that which produces the Seed; the Product is never tranſported beyond the Seas, but kept by the Country People for their own Dying. The beſt Indigo, which they call *Anil*, is inclining to a Violet Colour, and has ſomewhat of that Smell if burnt. They always let the Ground lie fallow after the three Years are expired, for twelve Months.

There is alſo a great deal of Salt-petre vended at *Surat*, which is made at *Aſmer*, ſixty Leagues from *Agra*, out of the fatteſt Ground. After it has lain fallow for a conſiderable Time they dig certain Trenches, which after they have filled with ſalt Earth, they let in as much Water as is ſufficient to reduce it to the Conſiſtency of thick Mud, and to ſoak it the better, they frequently tread it with their Feet. When they judge the Water has diſſolved all the ſaline Subſtance that was in the Earth, they draw up the Water into another Trench, where in ſome time it thickens, when they boil it like Salt, ſkumming it continually, and afterwards put it into earthen Pots, where the Dregs ſettle to the Bottom; they take it out again, and dry it to a hard Subſtance in the Sun. Borax, well known for its Uſefulneſs in refining of Gold and Silver, is found near a Mountain in the Province of *Purbet*, upon the Borders of *Great Tartary*, which Country alſo produces Spikenard, Quickſilver, Muſk, and Copper, and a certain Colour which dyes the moſt beautiful Brown in the World. The Borax grows like Coral, in the Bottom of the River *Jankenckar*, which coming down from the Mountain, joins its Stream with the River *Maſnoor*, which paſſes through the ſaid Province, and furniſhes it with this Drug. The *Indoſtans* call it *Jankenckar*, from the before-mentioned River, and keep it for its Preſervation in Bags, made of Sheep-ſkins, filled with Oil.

The greateſt Part of our Aſſafœtida is brought from *Perſia*; but that which is brought from the Province of *Utrad*, in the *Indies*, is preferred before it. There are two kinds of this Plant; one grows like a Shrub, with ſmall Leaves like Rue, the other has Leaves as big as Turnips, and in Colour reſembling Fig-tree Leaves. It grows commonly in ſandy and ſtony Ground. Its Gum comes forth in the latter End of Summer, and is gathered in Autumn. The *Banjans* in *Guzarat* are ſuch Admirers of it, that they uſe it in their Sauces, and rub their eating and drinking Veſſels with it. There is abundance of Amphion, or Opium, brought from *Cairo* into *Europe*; that which comes from the Province of *Gualor* in *Indoſtan*, and is vended all over the *Indies*, is only the coagulated Juice of Poppy, which is gathered by making an Inciſion therein, when it begins to be ripe. All the Eaſtern Nations are ſo addicted to the Uſe of it, that thoſe who cannot come at the Juice, will make and uſe the Decoction of Poppy. The *Perſians* boaſt themſelves to be the firſt Inventors of it. They take every Day the Quantity of a ſmall Pea of it, made up into a little Pill, not ſo much with an Intention to make themſelves ſleep, as to raiſe Vigour in them, more eſpecially in the Exerciſe of venereal Acts, for which Purpoſe it is chiefly uſed by the *Indians*. They uſe themſelves to it by taking a little and a little by Degrees, without attending to which it is mortal. It draws this Inconvenience after it, that it quite ſtupefies the Senſes, unleſs they continue it for ever.

Of Lacque we have ſaid ſomething before, and ſhall ſay more hereafter. The Province of *Guzarat* produces abundance of Cummin, Ginger, and Mirobalans, which they preſerve with brown Sugar, beſides which they have ſeveral phyſical Drugs. Diamonds are likewiſe one of the chief Drugs of this Province, but not many, yet they have abundance of Pearls, Emeralds, Garnets, Agates, Alabaſter, red Marble, and Jaſper-ſtone, which are better poliſhed here than any where elſe.

They uſe but one kind of Weight all over *Guzarat*, which is called *Maon*, and contains forty *Ceers*, in the whole thirty Pounds and an half, at the Rate of ſixteen Ounces in the Pound, a *Ceer* containing ten *Peyſes*, a kind of braſs Money weighing twelve Ounces. Their Ells are of two kinds, the leſſer amounts to no more than half a *French* Ell, and a ſixteenth Part, and nineteen of their large Ells make thirteen Ells and three Quarters of the ſame Meaſure. They have alſo no more than two ſorts of Money, *viz.* the *Mamoudies*, and *Roupees*; the *Mamoudies* being coined of Silver, of a baſe Allay, go no farther than *Surat*, *Brodra*, *Broitſchia*, *Cambaya*, and thoſe Parts, and are worth about one Shilling Sterling; but the *Roupees Chagam*, which are worth about a *French* Half-Crown, and made of very good Silver, paſs current all over the *Indies*. The *Peyſes* we ſpoke of are their Copper Money, twenty-ſix of which make a *Mamoudy*, and forty-five a *Roupee*. They count alſo with Almonds, thirty-ſix whereof make a *Peyſe*, and with certain Shells, found by the Sea-ſide, eighty whereof make a *Peyſe*. They account *Spaniſh* Pieces of Eight and Rixdollars equivalent to five *Mamoudies*, becauſe they make great Advantage of them in their Mints. The *Perſian Larri's*, which are very good Silver, are alſo much eſteemed here. They have a golden Coin called *Xerapbins*, worth about thirteen *Roupees*. The *Chequins* and *Venetian* Ducats are current here, and are reckoned to be worth eight and a half, or nine *Roupees*, according to the Riſing or the Falling of the Change.

As there is abundance of counterfeit Money here, and all over the *Indies*, ſo ſcarce any Sum is received but in the Shops of the Changers called *Xaraffa's*, which are at the Corners of every Street. Theſe ſecure the Receipt of the Money for a ſmall Matter, and are ſo expert, that no counterfeit Money can eſcape their Hands undiſcovered. Their Way of computing Sums is by *Lacs*, which conſiſt of 100,000 *Roupees*, and two of theſe *Lacs* make a *Crore*, or *Caroa*, and ten *Caroa's* an *Arab*; a *Theil* of Silver makes eleven, twelve, or thirteen *Roupees*, one *Maſſas* and an half a *Theil* of Silver, and ten of theſe a *Theil* of Gold. No Coin, whether Gold, Silver, or Braſs, muſt be exported out of the Kingdom, on pain of Death. Beſides what we have ſaid of the Products of *Guzarat*, it is very fertile in Wheat, Rice, Peaſe, Beans, Barley, Millet, *Turky* Wheat, Flax, Muſtard-ſeed, Oil, Butter and Cheeſe, the laſt of which is ſomewhat ſalt and dry. Their Wheat is larger than ours. They don't bake their Bread in Ovens, but upon iron Plates, and the *Banjans* in Frying-pans.

23. Their Beans and Peaſe are leſs, but much more delicate than ours, eſpecially their red Chiches, wherewith in many Places they feed their Horſes, Oxen, and Buffaloes, inſtead of Oats, a Grain not much uſed in the Eaſtern Parts. They ſow in *May*, and their Harveſt is in *September* and *November*: They cut no Graſs, but conſume it green. As the Mogul is the ſole Proprietor of all the Lands in his Empire, ſo the Peaſants, when Seeding-time appears, muſt make their Application to the Governor of the Province, and agree with him for ſo much Ground as he thinks he is able to ſow for that Year, for the Uſe of which he pays a third Part, and ſometimes an half, which is the Reaſon that moſt of the Grounds lie fallow, there being but few that think it worth their while to manure them at ſo expenſive a Rate. Their Gardens are well ſtocked with Pot-herbs of all ſorts, as Lettuce, Succory, Sorrel, Parſley, Radiſhes, Cabbages, Cucumbers, Citruls, Garlick, Onions, Parſnips, and, above all, with the moſt delicious Melons in the World.

They don't value their Flowers here ſo much for their Scent as their Colour, the Roſe only excepted, the Scent of which is much admired. The Flowers called Mogaci and Scampe, have alſo a very agreeable Smell; notwithſtanding which they are admired by the Women for their Colour, the firſt being a delicious white, and the latter yellow: They hold all the Year round, as does the Graſs here, unleſs it be dried up by the exceſſive Heat of the Summer-ſeaſon. Beſides their Lemons, Citrons, Pomegranates, and other Trees ſufficiently known in *Europe*, they have thoſe called Anana, Bananees, Jaccas, Cecos, and *Indian* Fig-trees. They have alſo a kind of Vines about *Surat*, the Grapes of which are not ſo big as thoſe of *Perſia*, and are ſold at a dear Rate.

Their Foreſts in theſe Parts harbour, among other Creatures, a kind of wild Dogs called Jacalls; no body dare hurt them no more than any other Beaſts that are yellow or black, under Pain of Death, they being reſerved for the King's Sport, or the Governor's of the Province. The *Indian* Horſes are in no-wiſe comparable to thoſe of *Perſia* and *Arabia*, yet they are very careful in keeping them; they commonly feed them with thoſe Peaſe they call Chiches, which they bruiſe and boil every Morning and Evening, and give them a Paſte made of two Pounds of Barley-meal, half a Pound of Butter, and as much Sugar.

Their Oxen are not different from ours in Shape, except that they have a large Bunch betwixt their Shoulders. The poorer ſort of *Mohammedans* eat abundance of Beef and Mutton; but the better ſort feed upon Kids, either roaſted with a Pudding of Rice, Almonds, and Raiſins in the Belly, or ſtew them with Butter and Pepper. They alſo have *Perſian* Sheep with fat Tails, but they are very rare and uſed ſeldom; but at great Entertainments they have Fowls, Capons, Geeſe, wild Ducks, Peacocks, Teal, Partridges, Pigeons, Sparrows, to which we might add Eagles, Falcons, Hawks, and other Birds of Prey. They are not deſtitute of River-fiſh, ſuch as Carps, Eels, *&c.* but their Salt-fiſh is extraordinary good and cheap there, becauſe the *Mohammedans* prefer Fleſh before Fiſh, and the *Pagans* don't eat it at all: They have alſo Oiſters, Crabs, and Prawns. It is obſervable, that whereas in *Europe* all ſorts of Shell-fiſh are beſt at the Full-moon, here they are beſt at the New-moon, and empty at the Full-moon.

24. Their Veſſels are generally ſlightly built, and their great Guns kept above Deck. They ſeldom venture any farther than to *Java* and *Sumatra*, or to *Aden* and to *Mecca* upon the Red-Sea, whither they go with a vaſt Number of Pilgrims in the Beginning of *March*, and return not till the Middle of *September*, for fear of the Tempeſts, which from *June* till that Month are very violent in that Coaſt, whereas otherwiſe this Voyage might be performed in two Months. They carry to the Coaſt of *Ade* Callicoes, Indico, Camphire, Tobacco, Allum, Sulphur, Benjamin, Pepper, and many other Spices, Mirobalans, and many other Preſerves; in lieu of which they bring back Coral, Amber, a certain red Dye called Miſſet, Coffee-berries and Opium, but their beſt Returns are in ready Caſh.

Their Coaſting Veſſels, which go to *Cambaya* and *Broitſchia*, and ſometimes to *Perſia*, go away in *January* and *February*, and return in *April* or *May*, and bring along with them Brocades, Silk, Stuffs, Velvets, Camblets, Pearls, Almonds, Raiſins, Nuts and Dates, but eſpecially Roſe-water. Their Ships that go to *Achen*, in the Iſle of *Sumatra*, are of two or three hundred Tons Burthen, carrying thither the Products of their Country, in lieu of which they bring back Brimſtone, Benjamin, Camphire, Porcelain, Tin, and Pepper: They ſail in *May*, and return in *October*. The *Malabars* can alſo drive a great Trade at *Surat*, *Cambaya*, and *Broitſchia*. They bring thither Bark of Cocoa-trees, which is uſed for making Cordage, the Pith of the ſame Tree, Arreca, and Betel, a kind of Wood which dyes Red, called by them Patang and Harpus, which they uſe for caulking their Ships, beſides Rice and other Proviſions. Theſe they exchange for Opium, Saffron, Coral, Calicoes, and other Stuffs. They come to the Coaſt of *Surat* in *December*, and return in *April*. Formerly the *Portugueze* uſed to be the ſole Maſters of the Trade of *Guzarat*, by means of their Forts at *Daman*, *Diu*, and *Goa*; but ſince the *Engliſh* and *Dutch* have made their Settlements in theſe Parts, they have been forced to confine their Trade to *Goa*.

25. Theſe Travels and Voyages will ſufficiently juſtify the Character we have given of them and of their Author, at the ſame time that they will fully anſwer our Intention in affording a clear, inſtructive, and entertaining Deſcription of one of the fineſt Countries in *India*, as well as of the ſeveral Nations that inhabit it. There is a Freedom and Plainneſs in our Author's Stile, that as they are inſeparable from, ſo they are the ſureſt and moſt inconteſtable Signs of Truth, which, in Works of this Nature, is of greater

Value than any other Quality whatever. As the Writer often refers to the ancient Hiſtory of *India*, and the Cuſtoms of the People before they were at all intermixed with Foreigners, the former Part of this Work will enable even the unlearned Reader to underſtand all theſe Things perfectly, and to reap a new Pleaſure from peruſing this Performance, as we have placed it, ſince he is already poſſeſſed of all the Lights that are neceſſary to illuſtrate it. By comparing the hiſtorical Paſſages that occur in relation to the Mogul Empire with the ſuccinct Hiſtory we have already given of that Government, theſe Travels will become a Supplement to that Reign in which the Author viſited *Indoſtan*.

We cannot have a better Account of the general Situation of Trade, or of the particular Circumſtances of the ſeveral *European* Nations concerned in the Commerce of the *Indies*, for the Time in which he wrote, than our Author has given; and, therefore, as his Work is elucidated by what is contained in the preceding Sections, ſo his Accounts will ſerve to throw Light upon the following Sections, and deliver the Reader from the Toil of running through a dry Diſcuſſion of Facts, which, though tedious in itſelf, would otherwiſe make a neceſſary Part of this Performance. As to the References that occur in theſe and in the ſubſequent Relation to our Author's Travels through *Perſia*, they will be cleared up by recurring to thoſe Travels in the ſubſequent Volume. At preſent we ſhall proceed with his Voyages through and Remarks on the Reſt of the *Indies*, which will be found no leſs curious and improving than thoſe we have already peruſed.

SECTION XXVII.

The remaining Voyages of John Albert de Mandelſloe *through the* Indies, *including, his Deſcriptions of Countries, hiſtorical Remarks upon ſeveral Nations, and his Obſervations on the Commerce of the* Portugueze, Engliſh, *and* Dutch *at that Time.*

Tranſlated from the Author's original Voyage, written by himſelf.

1. *An introductory Account of the Deſign of this Section.* 2. *The Author's Departure from* Surat *in the Year* 1639. 3. *He arrives in the Port of* Goa, *and gives us a particular Account of that City, and of the Reception he met with there.* 4. *A compleat View of the Government, Manners, Cuſtoms, and Commerce of the* Portugueze. 5. *Continuation of his Voyage, including an Account of the* Malabar *Coaſt, and its Inhabitants.* 6. *A ſuccinct Hiſtory of the Iſland of* Ceylon. 7. *A particular Deſcription of that Iſland, and the Commodities it produces.* 8. *The Informations he received from the* Portugueze *Jeſuits as to the Countries he did not viſit.* 9. *A very large and particular Deſcription of the Coaſt of* Coromandel, *together with the Kingdoms of* Pegu *and* Siam. 10. *The Kingdoms of* Cambodia, Malacca, Patapan, *and* Johore *deſcribed.* 11. *A View of the great Iſland of* Sumatra, *and its Inhabitants.* 12. *A diſtinct Account of the Iſland of* Java, *its ſeveral Principalities and their Inhabitants.* 13. *Of the Iſlands of* Celebes *and* Amboyna; *together with an Account of the Spice-Iſlands, and their Commerce.* 14. *An Account of the* Philippines, *and of the* Spaniſh *Government there.* 15. *The Hiſtory of* Japan, *and the adjacent Iſlands, as delivered to the Author by the Miſſionaries.* 16. *A very ſingular Deſcription of the Iſland of* Formoſa, *and its Inhabitants.* 17. *A ſuccinct Account of the mighty Empire of* China. 18. *The Author's Voyage to the* Cape of Good-Hope. 19. *Obſervations made there, and in his Paſſage to* Madagaſcar. 20. *A very full Relation of the Iſland of* Madagaſcar, *and its Inhabitants.* 21. *An Account of the* Portugueze *Settlement in the Iſland of* Moſambique. 22. *The Author proſecutes his Voyage to the Iſland of St.* Helena. 23. *The Author's Obſervations upon that Iſland, the Iſland of St.* Thomas, *and other adjacent Iſlands.* 24. *An hiſtorical Account, together with the Author's Remarks on the* Portugueze *Settlements in* Africa. 25. *That Subject continued, with a ſuccinct Deſcription of thoſe Colonies at that Time.* 26. *An Account of* Cape Verd *and the adjacent Iſlands.* 27. *Remarks on the* Azores, Madeira, *and* Canary-Iſlands. 28. *Occurrences in their Voyage from the* Azores *to the Port of* London. 29. *Obſervations made by the Author during his Stay in* England. 30. *His Return through* Holland *to* Holſtein. 31. *Remarks and Obſervations on the before-mentioned Voyages.*

1. THE great Kindneſs and many Civilities ſhewn to Mr. *Mandelſloe* by the chief Director of the *Engliſh* Commerce at *Surat*, naturally inclined him to lay hold of the Offer that Gentleman made him of returning to *Europe* in an *Engliſh* Ship, which he the more readily accepted, becauſe it put it in his Power to execute his Commiſſion fully of gaining the beſt Intelligence he could as to the Commerce of the Eaſt. The *Engliſh* Director was to make a trading Voyage, which particularly required his viſiting the *Portugueze* Ports, where he had many Affairs to ſettle; and this could not but be agreeable to a Man who travelled from ſuch Views as our Author had, inaſmuch as it gave him an Opportunity of ſeeing whatever he wiſhed to behold, and afforded at the ſame time the faireſt Occaſions for examining all he ſaw. We ſhall diſcern, from the ſubſequent Section, that he improved theſe Advantages to the utmoſt, and that he carried back with him to his Maſter the cleareſt and moſt circumſtantial Account of the *Indies* that had till that Time appeared in *Europe*.

I cannot but obſerve, with reſpect to this Detail of Facts, that he is, of all Writers, the moſt unſuſpected, and therefore the moſt worthy of Credit. An *Engliſh*, a *French*, or a *Dutch* Writer, can never diveſt himſelf entirely of the Prejudices imparted to him by his Country; but this Gentleman could have none of thoſe Prejudices, and therefore we may ſafely rely upon what he ſays of any, or of all theſe Nations. He had not only an Inclination, but an Intereſt alſo in purſuing Truth. It was this, and this only, that could recommend him to his Maſter, and therefore of this he never loſt Sight. The *German* Probity appears no where with greater Luſtre than in his Writings; and it was the ſingular Felicity of this great Traveller, that with a Capacity equal to his Undertaking, he joined a Candour altogether unblemiſhed. Let us then reſume the Thread of his Narration, and after travelling with him through *Indoſtan*, embark with him at *Surat* for the Voyage of the *Indies*.

2. The *Engliſh* chief Director having taken Leave of the Governor of *Surat* the Firſt of *January* 1639, who received him with extraordinary Civility, and preſented him with a Garment of Brocade, beſides many other Rarities; and having ſpent two Days more in taking our Leaves of our Friends, we went on board the Third, in Company with the new Preſident, and all the other *Engliſh* Merchants, where we feaſted for three Days, and at

laſt ſailed the Fifth in the *Mary*, and came the ſame Night in Sight of the City of *Daman*, where we met with one of our Ships that had ſtaid for a *Portugueze* Veſſel that was to go with us to *Goa*. The Governor of the City ſent us a large Veſſel with Wine, and divers Refreſhments; for though the City was then beſieged by the King of *Decan*, yet the Harbour being open, they had ſufficient Supplies brought them by Sea. The Kingdom of *Decan*, or *Cuncam*, by ſome called *Viſiapour*, from its capital City, extends all along that Coaſt from *Indediva*, which is within twelve Leagues of *Goa* to the South, as far as *Siffardo*. The chief maritime Places belonging to it are *Gatapour*, *Roſſapour*, *Carrapatar*, and *Dabul*; but *Viſiapour*, the capital City, lies eighty Leagues from *Dabul*, and eighty-four from *Goa*. This City is about eight Leagues in Circumference, being encompaſſed with a very high Wall of Freeſtone, and a broad Ditch, and many Out-works, provided with a thouſand Pieces of Iron and Braſs Cannon. The Royal Palace is in the very Centre of the City, three thouſand five hundred Paces in Compaſs, being divided from the Body of the City by two Walls, and as many Ditches. The City has no leſs than five Suburbs, where moſt of the Merchants live; and in the Suburb *Champour* moſt of the Jewellers have their Habitations. The Inhabitants are for the moſt part Natives of the Kingdom of *Decan*, the reſt are *Banjans*, *Moguls*, and *Gentives*.

The City of *Dabul* is ſeated on the River *Helewacko*, in 17° 40′ on this Side of the Line, being one of the moſt ancient Cities in the Kingdom of *Decan*; but is without either Gates or Walls, defended only on the River-ſide by two Batteries. As you enter the River, you ſee to the left Hand a Wood, and near it a Caſtle, as alſo a white Tower, which ſerves for a Pagod; but is a good Direction for Pilots. Its Entrance being none of the beſt, by reaſon of a long Sand Bank at the very Mouth of it, which at low Water is quite dry, the only ſafe Way to eſcape it is to keep to the South Side; there, at low Water, you have five or ſix Fathom Water, though at the very Mouth you have not above twelve or fourteen Feet; within a League before you come to the River is very ſafe riding for Ships, though the Road, in the Bay of *Zanquizara*, four Leagues thence, is incomparably better. The Harbour of *Ceitapour*, the moſt excellent on all that Coaſt, lies twelve Leagues thence, the Veſſels being ſheltered here by an adjacent Iſland againſt all Winds. It lies in 17° 10′, and twenty Leagues from *Goa*. Three Leagues from the ſaid Harbour lies the City of *Roſſapour*, one of the beſt maritime Towns of the Kingdom of *Decan*; and nineteen Leagues thence is the Bay of *Wingurla*, a very convenient Haven. It lies three Leagues from the *Iſlas Quemedas*. We will now come to its Inhabitants, which are either *Banjans* or *Mohammedans*.

The chief Trade of the City of *Dabul* is in Salt and Pepper brought thither from *Oranubammara*. They uſed formerly to drive a conſiderable Traffick to *Perſia*, and the *Red-Sea*; but they ſend but few Ships thither now. The ordinary Cuſtom paid here is 3 *l.* 10 *s. per Cent.* but the *Engliſh* pay only one Moiety of it. Though the greateſt Part of the Inhabitants of the Kingdom of *Decan* or *Cuncam* are *Banjans*, yet are they not ſo averſe to Fleſh as the others in the *Indies*; for they will feed upon any Fleſh, except that of an Ox, Cow, Buffalo, and Swine; for the laſt they have an abſolute Abomination, and the Ox and Cow are in great Veneration with them. In their Life and Converſation, Marriages, Purifications, and other Ceremonies, they follow the Footſteps of the other *Banjans*.

Their Habitations are only Cottages of Straw, the Doors being ſo low that one cannot go in without ſtooping. Their Furniture amounts to no more than a Mat to ſleep upon, and in the midſt of the Hut you ſee a Hole in the Ground, wherein they beat the Rice. They do not differ in their Habit from the other *Banjans*, except that they wear moſtly wooden Shoes tied up over the Inſteps with Leather Straps; but their Children go naked till they are ſeven or eight Years of Age. Their Arms are the ſame with the *Indoſtans*; moſt of them are Goldſmiths by Trade, though ſome alſo profeſs Phyſick and Surgery; they have alſo ſome Carpenters, Maſons, and Barbers among them.

The chief Commerce of the Kingdom of *Decan* conſiſts in Pepper and Proviſions. The firſt is tranſported thence into *Perſia*, *Surat*, and *Europe*, as alſo Abundance of Callico; with the latter they furniſh the Provinces of *Indoſtan*, *Golconda*, and *Coromandel*, who fetch good Quantities of Stuffs there. In the Mountains of *Balagatta* much Lacque is made, but does not approach in Goodneſs to that of *Guzerat*. At *Viſiapour* are Abundance of Jewellers that deal in Pearls; but they are not ſo cheap here as in ſome other Places. The *Portugueze* have a conſiderable Trade in this Kingdom, its Frontiers reaching within four Leagues of *Goa*. There are a Sort of People called *Veneſars* in *Decan*, whoſe chief Buſineſs is to buy up vaſt Quantities of Wheat and Rice here, and then carry it in great Caravans of one thouſand Beaſts at a time to *Indoſtan*, and other neighbouring Countries. They carry their Families along with them, their Wives being ſo expert in managing of the Bow, that they ſerve them for a Guard againſt the *Raſhpoots*, and other Robbers.

Two Sorts of Money are current in *Decan*, the *Larins*, or *Laris*, which come from *Perſia*, and the *Pagodas*; eight of the firſt make a *Pagod*, which is equivalent to ten *Laris* of *Dabul*; their Copper Coin is called *Barſarinques*, nine whereof go to a *Piece*, and eighteen of theſe to a *Laris*; beſides which, each City, nay, each Village of Note, has its peculiar Coin, which, together with the counterfeit Coin, breeds no ſmall Confuſion. Their Weights are the ſame with thoſe of *Guzerat*, except that twenty *Maons* of *Surat* make twenty-ſeven in *Decan*, the ordinary *Maons* conſiſting of forty *Ceeres*, and one *Coppeyſes* make twenty-ſeven Pounds, each of which has two Marks; they have a particular Weight for Pepper called *Geomy*, weighing twelve *Maons*, four of which make an hundred Weight, and twenty a *Canday*.

The King of *Decan*, or *Viſiapour*, is tributary to the Great Mogul, though it be ſuppoſed he can raiſe two hundred thouſand Men; and theſe Kings have had conſiderable Wars with the *Portugueze*, from whom they took twice the City of *Goa* in 1586; but at laſt, finding the War deſtructive to their Commerce, came to a Compoſition with them, which laſted till 1638, when the *Portugueze* having ſeized ſome of the King of *Decan*'s Ships, which, contrary to their Agreement, were carrying Pepper to *Mecca* and *Perſia*, they came again to Hoſtilities. The King of *Decan* is famous for his great Artillery, of which he has more than any of the *Indian* Princes; and among the reſt one great Piece of Braſs Cannon, the Ball whereof weigheth eight hundred Weight, and requires five hundred-and-forty Pounds of fine Powder. The Engineer who caſt it was an *Italian*.

3. But to return to our Voyage, early in the Morning, *January* the 7th, we came before the City *Baccin* belonging to the *Portugueze*, where we ſtaid ſome Hours in Expectation of a certain Jeſuit we were to carry to *Goa*; but he not coming, we continued our Courſe, but were ſcarce got a League before we ſaw a *Portugueze* Frigate come after us; we backed our Sails till ſhe came near us, and found her to be a Veſſel that came on purpoſe to go along with us under *Engliſh* Colours, for fear of being interrupted by the *Dutch*; ſhe brought us ſome Preſents, *viz.* three Oxen, ſome Sheep, Oranges, Citrons, and Bread from the Governor. The 9th we ſailed with another Wind by the Iſles of *Bandera* and *Bombay*, which ſtretched along the Coaſt from *Baccim* to *Viſiapour*; the laſt has a good Road for Anchorage, and is of a pretty large Extent. On the 10th we ſailed by *Raſiſapour* within twenty-one Leagues of *Goa*, and in the Afternoon by the City of *Vingerla*, where the *Dutch* have a Settlement four Leagues from *Goa*, and in the Evening came in Sight of the Iſles about *Goa*, and of two Iſles that ſecure the Harbour. On the 11th we came to an Anchor under the Fort *de Guarda*, which lies not above a Mile from the City of *Goa*; we ſaw ſix Galleons and a Carrack in the Haven; ſoon after came aboard us a *Portugueze* Captain to compliment the *Engliſh* Preſident in the Viceroy's Name, and immediately after the Commodore of the Galleons. The Harbour of *Goa* was then blocked up by twelve *Dutch* Ships, notwithſtanding which we ſaw coming in a Caravan, conſiſting of three hundred ſmall Coaſting Veſſels, laden with Pepper, Ginger, Cinnamon, Sugar, Rice, Fruits, and Preſerves, beſides Abundance of Proviſions.

The *Engliſh* Preſident, whoſe Buſineſs here was chiefly with the Director of the *Exchequer*, went to pay him a Viſit, his Trumpets ſounding all the Way as he went up the River, who received him with great Demonſtrations of Friendſhip, becauſe they had known one another long before; being carried thence to his Lodgings, he deſired and had Audience given him immediately by the Viceroy. His Palace lying on the River-ſide, we found divers of his Gentlemen there to receive and conduct us into the Hall of Audience, in the Anti-chamber of which Palace we ſaw his Guards ſtanding in two Files. The Viceroy himſelf was dreſſed in black, and ſo were all his Courtiers, and at the coming in of the Preſident roſe out of his Chair till the other was ſat down: After ſome Stay the Preſident was re-conducted to the Water-ſide by the ſame Gentleman that brought us thither; as we paſſed along we were ſhewn twelve of the Viceroy's Horſes, richly accoutered, and a Biggel, a Creature much about the Bigneſs and Colour of a Rein-deer. Its Head like an Horſe, its Mane like an Aſs, with black cloven Feet, and two black Horns on his Head.

We had ſcarce dined when we were crowded with Viſitants, moſt of the Perſons of Quality among the *Portugueze*, and the Deputies of all the Monaſteries coming to compliment us, the ten Days we ſtaid at *Goa* being ſpent in nothing but Feaſts and Viſits. The moſt magnificent Entertainment of all we received from a certain *Portugueze* Lord, who was then Governor of *Mozambique*; each Courſe conſiſted of four Diſhes, but we had ſo many of them, and ſuch Variety of Meats, Fruits, and Preſerves, that I ſcarce ever ſaw the like in my Life; and to add to the reſt, we were ſerved at the Table by four very handſome *Malacca* Maids. The 16th we were invited to the profeſſed Houſe of the Jeſuits; it conſiſted of an hundred-and-fifty Fathers, and as many Students; but the Structure, which was four Story high, and very ſpacious, could have contained a much greater Number. We paſſed through the Hall, where we found Tables ſet all along the Walls with Trenchers, Drinking-Cups, and Earthen Pots. In the midſt of the Hall we ſaw another ſquare Table, intended for ſuch of their Society as were bound over to Penance, upon the Account of ſome Delinquency or other. Towards the Entry ſtood a Pillar, from whence iſſued out a Spout of Water for the Conveniency of waſhing their Hands; we were thence conducted into a noble Apartment, richly furniſhed, and adorned with Tapeſtry, where a Table ſtood ready prepared for us in the midſt of the Room, covered with Fruits and Bread in Porcelain Diſhes, which is here preferred before Silver.

The Father Provincial having placed the *Engliſh* Preſident on his right Hand, ſet down, and ſo did the Reſt of the Company; ſo that betwixt every two ſat two Jeſuits to entertain us. The Meat was likewiſe ſerved up in Porcelain Veſſels, as well as the Deſert. After Dinner we were brought into ſeveral Chambers to take our Repoſe, according to the Cuſtom of the Country; after which we paſſed into another ſpacious Hall, where we had the Diverſion of Dancing, by certain *Indian* Children brought up in the Roman Catholick Religion; there were among other Shews an Entry made by fifteen Perſons, having in their Hands ſome Pieces of a broken Pillar, and divers Garlands of Flowers, wherewith they adorned the Pillar, after they had with exact Obſervance of the Cadence, each in their ſeveral Turning put it together; and ſoon after we ſaw at the Top of the Pillar came out a Tulip, which opening of itſelf by Doors, produced the Image of the Bleſſed Virgin, with our Saviour in her Arms: beſides which, the Pillar opened in ſeveral other Places, and caſt forth perfumed Waters; after which the Dancers took the Pillar to Pieces again, and carried it off dancing as they had brought it in. We had another Entry of twelve young Lads, each playing upon a peculiar Inſtrument, ſome Morris-dancers, and the Ball was concluded with another Entry of twelve Boys dreſſed like Apes, who imitated thoſe Creatures in their Leapings and Geſtures to the Life. They farther told us, that they uſed theſe Inticements to bring over the *Pagans* and *Mohammedans* to the Church, and to divert their Diſciples after their Studies.

January the 18th we dined with the Jeſuits at their College called *Bon Jeſus*. The firſt Thing we obſerved in their Halls were the Pictures of many Princes and Perſons of Quality that had been of this Society, and the Hiſtory of their Martyrs; among whom we found thoſe of that Fraternity that were engaged in the Gunpowder Plot in *England*; upon which Account they made us an ample Relation of the Sufferings of their Brethren in *Japan*, and the unheard-of Cruelties exerciſed againſt them, as well as the *Japaneſe* Chriſtians. Thence they brought us into their Church, which for its Greatneſs and Sumptuouſneſs may, without all Compariſon, challenge the Preference before any Church the Jeſuits are Maſters of in *Aſia*. The high Altar was one of the moſt magnificent that ever I beheld of that kind; but that which was dedicated to *Saint Francis Xavier*, whom they ſtile the Apoſtle of the *Indies*, exceeds the other in Riches.

Here we ſaw his Image drawn to the Life upon Wood; and they were pleaſed to tell us, that his Body was yet to be ſeen in the ſame Church as intire as it was the firſt Minute after his Death; nay, they farther told us, that the Body of this Saint being hid in the Iſle of *Ceylon*, was diſcovered by its odoriferous Scent, which was perceived many Leagues at Sea; in which the good Fathers were not a little deceived, ſince the Scent, which is ſmelled at a great Diſtance from the Iſland of *Ceylon*, proceeds from the vaſt Number of Cinnamon-Trees which are all over that Iſland. Beſides, that this Story does not agree with what *Maffæus*, one of their Authors, tells us concerning this Saint, *viz.* that having preached the Goſpel in the *Indies*, he came to *China*, where he died immediately after his Landing; and that the Maſter of the Veſſel having put his Body into unſlacked Lime, in order to carry his Bones away, this corroding Matter did not exert its Virtue upon it, but the Body remained entire and uncorrupted, and had a very odoriferous Smell; whereupon it was reſolved to carry it to *Goa*, which was done accordingly. As we were going from the Church to the Refectory, they forgot not to entertain us with the Miracles of this Saint, of his raiſing the Dead, commanding the Sea and Winds, as well as the Sun, the laſt of which he brought back an Hour after Sun-ſet.

We ſaw in the Hall here Tables for above two hundred Perſons, but only the moſt conſiderable dined with us, the reſt waited: Our Entertainment was much the ſame as in the other College, but we had moſt excellent Canary given us; and though theſe Fathers have the Reputation of extraordinary Sobriety, yet out of Complaiſance to our Company, they were not backward in making the Cup go round when they perceived we liked the Wine. They alſo carried us up into the Steeple, whence we had a full View of all the City, the Sea, the River, and the adjacent Country, as far as the Mountains. The next Morning two of the Fathers came to our Lodgings to ſhew us the Hoſpital which is under the Inſpection of the Jeſuits. It is a very large and noble Structure, containing as many Chambers, Halls, and Galleries as will conveniently lodge and accommodate one thouſand ſick Perſons; each Bed is marked with a particular Number, and ſuch as are not taken up are diſtinguiſhed by a particular Mark. The Kitchen and Apothecary's Shop are well worth Obſervation. I found the chief Diſtempers of the Sick here to be the Bloody-flux and the Pox. They have this Cuſtom, that as ſoon as any Patient is paſt all Hopes of Recovery, he is ſhut up in a private Room with a Prieſt, that the reſt may not be diſturbed by the Groans of the dying Perſon.

Hence we went to the Convent of our Lady belonging to the *Auſtin-Friars*, which, being built upon riſing Ground, makes a moſt glorious Shew at a Diſtance. I delivered to them the Letters of Recommendation I had received from their Brethren at *Iſpahan*, which made them treat me with more than ordinary Civilities, ſhewing me all the rich Capes and Veſtments belonging to the Monaſteries, and offering me all that lay in their Power for my Service. The Preſident having by this Time received nine thouſand Pounds due, and a Promiſe of the Payment of the Reſt to ſuch of the *Engliſh* Merchants as were to ſtay behind at *Goa*, he gave a ſplendid Entertainment to all ſuch as had ſhewed us any Civilities, and after having taken his Leave, the Governor and Commodore of the Galleons ſent him a Preſent of Cinnamon, Canary, Sheep, Fruits, and among the reſt a Bottle of Oil made of the Flowers of Cinnamon.

4. On the 20th we left *Goa*, and upon the River met with an hundred ſmall Veſſels which came from the Coaſt of *Malabar*; we were no ſooner got out of the River, but we made ſtrait to the *Portugueze* Fleet, and went aboard the Flag Galleon called *Bon Jeſus*, carrying ſixty-four Guns, and ſix hundred Men; ſhe was a very noble Ship, and we were entertained with extraordinary Civility by the Commodore, who ſhewed us likewiſe all the other Ships; at parting we had the uſual Salute from the whole *Portugueze* Fleet, as alſo from the Fort *de Guarda*. As ſoon as the Preſident was come on board, he returned them twenty Guns, which the Commodore anſwered with as many, and ſo came to an Anchor in the Road betwixt the *Portugueze* and the *Dutch*.

But before we take our Leave of *Goa*, it will not be amiſs to ſay ſomething of what we found moſt remarkable in a Place which is the Capital of all belonging to the *Portugueze* in the *Indies*. It lies in the Kingdom of *Decan*, 15° on this Side the Line, in an Iſland of the ſame Name, which is divided from the Continent only by a River. The *Portugueze* conquered it the 16th of *February* 1510, but loſt it again the 30th of *May* following, and regained it once more the 12th of *November* in the ſame Year, when they took it by Storm. It was at that Time a very conſiderable Place of Trade, though it has much increaſed ſince the *Portugueze* have been Maſters of it. On the South Side is the Iſland of *Salſette*, likewiſe divided from the Continent by a ſmall River, as is the Iſle of *Bardes* to the North, where there is ſafe Anchorage for Ships with all Winds. The Fort *de Guarda* is built at the Foot of a Rock, upon which is erected a Tower in Form of a Redoubt, which in the Night-time ſerves for a Beacon to Mariners; from the Mouth of the River to the Harbour is about two Leagues, but it has the ſame Breadth all along, though in ſome Places it is ſo ſhallow, that in a dry Seaſon there is not above two Foot Water.

The Iſland of *Goa* is ſo barren, that it produces nothing fit for the Suſtenance of Men or Beaſts, except a few Fruits in the Gardens, and a ſlender Share of Graſs for Lambs and Goats; notwithſtanding which, they are ſo plentifully furniſhed with Proviſions from the two before-mentioned Iſlands, and the Continent, that in ſpight of the Blockade of the *Dutch*, a Hog was then ſold for a Crown, ſix ſucking Pigs, ten Pullets, or eight Wild-ducks, for the ſame Price; but Beef and Mutton is a great Rarity here. There is a Fountain repreſenting *Lucretia*, out of whoſe Wound iſſues forth as much freſh Water as ſupplies the whole City. The Ships provide themſelves with freſh Water out of a Rivulet, which coming out of a Rock falls into the other River near the Caſtle. The City has no other Defence but the River, having neither Gates nor Walls; the Buildings are generally very handſome, and Perſons of Note ſhew a great deal of Magnificence here both in their Buildings and Furniture.

The Inhabitants are of two Sorts, either *Caſtizes*, or *Meſtizes*; the firſt are ſuch as are born here of *Portugueze* Father and Mother; the ſecond, thoſe who were begotten by a *Portugueze*, or an *Indian*. The laſt are inclining to an olive Colour, and in the third Generation becomes as black as the Natives of the Country, which is alſo obſervable in the fourth Generation of the *Meſtizes*, though there is not the leaſt Mixture among them. The *Portugueze* are diſtinguiſhed into ſeveral Ranks; *Tituladoes* are thoſe in publick Employments; *Fidalgos da caſa del Rey*, are Gentlemen in ordinary to the King's Houſhold; *Mocas Fidalgos* are the Sons of the *Tituladoes*, admitted to Gentility by the King; the *Cavaleros Fidalgos*, and *Eſcuderos Fidalgos*, are ſimply Gentlemen; thoſe called *Mocas da Camra*, or Grooms of the King's Chamber, paſs alſo for Gentlemen. All the reſt are *Hombres*, *Honrados*, and *Soldados*; the firſt of which are Merchants, and appear as well as any Gentlemen, there being ſcarce any thing here, except Taylors and Shoemakers, but what are ſerved by Slaves; no Perſon of Quality ever goes on Foot, but either on Horſeback, in a Litter, or Gondola, one Slave among the reſt conſtantly attending him with an Umbrella.

The *Portugueze* have always had the Reputation of being a very proud Nation; but thoſe of *Goa* are ſo to ſuch an Exceſs both in their Geſtures and Actions, as is ſcarce to be expreſſed; however, they are very ceremonious to one another, to ſuch a Punctilio, that if, for Inſtance, in a Viſit any thing ſhould be omitted that is judged cuſtomary, and belonging to the Perſon that requires it, ſuch a Stain could not be wiped off without a Cudgeling, or Blood-ſhed; with the firſt they are very liberal towards inferior Perſons, if they think them to have been wanting in Reſpect due to thoſe of a better Rank.

The South-weſt Winds, which begin to blow here towards the End of *June*, bring the Winter Seaſon along with them, which continues for four Months all along that Coaſt, from *Diu* as far as the *Cape Comorin*, at which Time the frequent Tempeſts make the Sea ſo turbulent, that there are but few Havens where Ships can ride with Safety. This is the more to be admired, inaſmuch as in the ſame Months the Coaſts of *Coromandel*, which extend along the ſame Peninſula on the other Side, and lies under the ſame Degree of Latitude, nay, in ſome Places are not above twenty Leagues diſtant from the Coaſt of *Malabar*, is bleſſed with the moſt pleaſant Seaſon of all the Year.

This is manifeſt to thoſe who travel from *Cochin* by Land to *St. Thomas*, when they muſt croſs the Mountain of *Balagatta*, which divides this *Demi-Iſle* (as the *Appenine* do *Italy*) and no ſooner come to the Top of the Mountain, but they ſee on one Side a moſt clear and temperate Air, and the Country on the other Side covered with Waters, by the continual Rains and Fogs. The Ships that go from *Ormuz* to the Cape of *Roſſalgate* have made the ſame Obſervation; for no ſooner have they paſſed the Cape, but the fair Weather that has attended them thither changes on a ſudden into dreadful Tempeſts, ſo that it is evident there are but two Seaſons in this Country, and the Eaſt and Weſt Winds rule alternately once a Day; for the Therentes, or Land-winds coming from the Eaſt, blow from Midnight to Mid-day, but do not reach above ten Leagues into the Sea; whereas the Sea-Winds coming from the Weſt (call Viraſons) blow all the reſt of the Day.

This ſo ſudden Change of the Seaſon, as well as conſtant Variation of the Winds, prove the Occaſion of many Diſtempers, eſpecially that called Mordexin, which kills without Delay, beſides Fevers and Bloody-fluxes, the only Remedy againſt which here is Bleeding. The Plague is not ſo much as known in the *Indies*: but the Pox deſtroys a great Number, and above all among the *Portugueze*; for though the Country itſelf furniſhes them with Remedies againſt this Diſtemper, yet the Inclinations betwixt the Sexes are ſo ſtrong and violent here, that they wont afford themſelves a proper Time for the Cure of this Diſeaſe, which is thus propagated beyond all Bounds. As the Women in theſe Parts have an exceſſive Inclination to white Men, and are always kept under Conſtraint, they will venture very hard to encompaſs their Ends; and to purſue this End, frequently make uſe of the Herb Doutro, Doutry, or Datura (as it is called by the *Indians*) to ſtupify their Huſband's Senſes to get an Opportunity of enjoying what they ſo much delight in. This Herb, called by the *Turks* and *Perſians* Datula, is a kind of Stramonea, according to the *Garſias ab Horto*, and *Chriſtopher de Acoſta*, being ſomewhat like our Bear's Foot, and grows in the *Indies* in ſhady Places; of this they extract the Juice, whilſt it is green, or only take the Seed beaten to Powder, and mix it either with Preſerves, or in the Drink of thoſe they intend to ſtupify, which it does effectually for twenty-four Hours after he has taken it, being deprived of all Senſe or Motion, though with his Eyes open, unleſs ſome cold Water be applied to the Soles of his Feet, which recovers him, as it were, out of a ſound Sleep.

Scarce any *Portugueze* or *Meſtize* Women are ſeen to walk in the Streets; but if they go abroad upon neceſſary Occaſions, they are carried in Palanquins, or Litters, and ſo cloſely guarded, that it is impoſſible to ſpeak to them. They appear abroad richly dreſſed, in Velvets, Silks, and Brocades, adorned with Jewels, though at the ſame time they go at home in their Hair only, with nothing over them but a Calico Smock, reaching down to the Navel, and a painted Calico Petticoat. Their Fare is not much better, being Rice ſoaked in Broth, Fiſh, Mangoes, and ſuch-like Food. They have certain black earthen Drinking-Veſſels called Gorgollets, which have Pipes coming up as high as the Brim, by which they ſuck the Water out of the Bottles. As Chaſtity is a Virtue here among the Women, produced rather by Neceſſity than Inclination, ſo their Huſbands are extremely jealous of them; notwithſtanding which, they will contrive all poſſible means to have their Satisfaction, in ſpite of the Danger that attends it. This muſt be in a great meaſure attributed to an idle Life, having nothing to do to ſpend their Time but in chewing of Betel, Cloves, and Nutmegs. A remarkable Inſtance of this Affection is the Love the *Indian* Women bear to the Children begotten by an *European*, which is ſuch, that they would rather die than part with them.

The Soldiers at *Goa* live at a very odd rate, being not liſted under any certain Companies, or Officers, unleſs in Time of War; but in Time of Peace are at Liberty to ſeek their Fortune where they can, as having no other Pay but what perhaps their former Officers allow them voluntarily towards their Subſiſtence, that they may keep them at hand upon all Occaſions. You ſhall ſee ten or twelve of them live in a Hut, having not above two or three Suits of Cloaths among them all, which they wear by Turns, when they go abroad a begging, or ſeeking their Livelihood where they can meet with it. The *Portugueze* ſhew a deal of Magnificence in their Marriages and Chriſtenings. The Bridegroom, accompanied by all his Friends and Relations, goes to Church on Horſeback, the Bride following him in a Litter: Both have two Godfathers, who preſents them to the Prieſt; after the Benediction is given, they return in the ſame manner to the Houſe; but none are permitted to enter with the young Couple except the Godfathers, who go all together into a Balcony to give the Company Thanks for this Favour. Their Chriſtenings are performed with the ſame Pomp, ſave that they carry alſo an Ewer with a clean Napkin, a Saltſeller, a Silver Baſon, ſurrounded with Flowers, and a Wax Candle, in which is put a Piece of Gold or Silver for the Prieſt; but the Godfather or Midwife are always carried in a Litter.

The *Portugueze* entertain a great Number of Slaves of both Sexes. Theſe they employ both in their Retinue, and about all other Buſineſs: As for Inſtance, in ſelling of Fruits and other Things, when they will be ſure to pitch upon handſome Wenches, which draw ſooner the Cuſtomers to them, and conſequently ſell at a dearer Rate. All that the Slaves get belong to their Maſters, even their Children, whom they keep, or ſell like Cattle, unleſs the Fathers redeem them within eight or ten Days after they are born. They keep them at a very eaſy Rate, their Diet being miſerable, and their Cloathing being only a little coarſe Callico to cover their privy Parts. The Inhabitants of the neighbouring Country are *Pagans*, and generally *Banjans*, who dwell in Straw Huts, with little Doors, which ſerve alſo for Windows. Their whole Furniture conſiſts of little Mats made of Ruſhes, which ſerve both for Beds and Tables, a Drinking-Cup and Pitcher made of Fig-leaves, their daily Food being Rice. They are ſo ſuperſtitious, that if after they have ſaid their Prayers, they go abroad and meet with a Crow, they return home, and ſtir no more abroad that Day. Upon the Roads they conſtantly pay their Devotions to the Pagods, which the *Portugueze* connive at, their Inquiſition going no farther than to Chriſtians, or ſuch as have been ſo.

Their Ceremonies and Manner of Living are the ſame with thoſe of *Decan*. One Thing is remarkable among them, that their Phyſicians are in ſo great Eſteem at *Goa*, that they are generally preferred before the *Portugueze* themſelves, and are permitted to have their Umbrella's carried along with them, a Privilege allowed here to none but Perſons of Quality. They will not eat with anybody except their own Sect, not even in a Journey, though they ſhould be driven to the greateſt Extremity. There live at *Goa* many *Decanins* and *Canarins*, who keep Shops there, and exchange their Proviſions and other Commodities they bring, for Porcelane, Velvet, Damaſk, *China* Commodities, Silks and Callicoes. They have alſo many Jewellers, Goldſmiths, Gravers, and other Artiſans of this ſort at *Goa*, who exceed all the *Europeans* in that kind. The *Canarins* live either upon Huſbandry or Fiſhing. Some maintain themſelves by managing the Cocoa-trees, ſome by waſhing and whitening of Callicoes. The Huſbandmen furniſh the City with Fowl, Milk, Fruit, and Eggs. Their Wives are ſo hardy, that they never make uſe of a Midwife; and are no ſooner delivered but they waſh the Child themſelves, wrap it in a few Fig leaves, and go about their Buſineſs again as before; which makes them ſo ſtrong and healthy, that they frequently live to an hundred Years of Age. They are ſo excellent at ſwimming, that nothing is more common than to ſee them overturn in their Boats, which hold no more than one Perſon, and ſwim aſhore without any Harm or Loſs of the Boat. They burn their Dead, but their Women are under no Obligation to burn themſelves with their Huſbands, but only make a Vow of Widowhood. Here are two ſorts of *Jews*, either born in the *Indies* both by Father and Mother Side, or that come hither from *Paleſtine*, the laſt of which commonly ſpeak good *Spaniſh*: They enjoy a perfect Liberty of Conſcience, and have their own Synagogues. The *Mohammedans* here deal moſt in Spices from the *Red-Sea*.

The *Portugueze* traffick to *Bengal*, *Pegu*, *Malacca*, *China*, and *Cambaya*, in *Guzerat*. From Seven o'Clock in the Morning till Nine, when the Heat begins to increaſe, you ſee all Perſons of Quality and Gentry meet in the Market-place to divert themſelves, partly with hearing of News, or elſe to ſee what is to be bought and ſold there. Merchants and Tradeſmen have their peculiar Streets or Stations aſſigned them, according to their different Profeſſions; but their greateſt Profit is in exchanging and buying or ſelling of Money, eſpecially the *Spaniſh* Rials and *Perſian Lari's*; alſo their Coin is of divers Sorts. Their ſmalleſt Money is of Tin, having a Globe on one Side, and on the other two Arrows croſs-wiſe. Eight of theſe *Baſorinques* make a *Ventin*, five whereof make a *Tange*; five *Tanges* make a *Serafin* of Silver, which makes 300 *Reis*; ſix *Tanges* amount to a *Pardai*. The *Serafin* has on one Side *St. Sebaſtian*, and on the other a Quiver full of Arrows. There is alſo a *Serafin* of Gold, coined formerly at *Ormuz*, the Metal of which exceeds in Fineneſs any other Coin in the *Indies*. They have alſo *Santemes* of ſix *Tanges*, and *Pagods* of fourteen, fifteen, and ſixteen *Tanges*. Foreigners are obliged to pay eight *per Cent.* on all Commodities exported or imported, but great Moderations are uſed in the Taxations; beſides, that if a Merchant happen to export the ſame Commodities for want of Sale, they are allowed to export them without paying any further Cuſtom. They have alſo a Way of entering the Commodities they buy at *Goa* under the Seller's Name, and ſo they paſs Cuſtom-free.

The Viceroy who was there at our Time was one Don *Pedro de Silva*, who was of no great Aſpect, but was for the reſt ſerved in the ſame State as a King. This Office is never continued above three Years in one Perſon, which is ſufficient to enrich him even to a very high Degree; for he has the Management of the King's whole Revenue, is at the Charge of keeping his Court, and, in the Progreſs he makes once a Year, for ſixty or eighty Leagues round, he receives vaſt Preſents from the neighbouring Princes and Governors; for though he has his Council of State, and Courts of Law and Equity, yet is he the ſole Judge of all civil Cauſes, unleſs they be of very great Conſequence, when an Appeal lies to the King; but in criminal Cauſes no Appeal is admitted, if the Perſon be under the Degree of a Gentleman; for theſe muſt be ſent with the Information brought againſt them to *Portugal*. The Viceroy at his Arrival always lands firſt in the Iſle of *Bardes*, from whence he ſends his Deputies to his Predeceſſor, who thereupon quits the Place.

5. On the 22d the *Engliſh* Director having ſent away the two Ships that came along with us to *Surat*, to carry thither the Money he had received at *Goa*, we hoiſted ſail. In the Evening we ſaw the whole *Dutch* Fleet under Sail, whence we judged that the Admiral, whoſe Name was *Caulon*, would have come on board us, as he had promiſed

he would, but we loſt Sight of them by Night. On the 23d we had Sight of them again, and ſuppoſed that they ſteered their Courſe towards *Ceylon*, to aſſiſt the King againſt the *Portugueze*. About Noon we found ourſelves out of Sight of the Land, in 13° Lat. We intended to ſteer for the Coaſt of *Malabar*, upon Information that an *Engliſh* Ship, richly laden, coming from *Bantam*, was taken by theſe, after a brave Defence, in which it had blown up above 1200 of the *Moors*, after they were entered the Ship. Our Intent was to redeem the Maſter and the Mate, with fourteen Priſoners that were taken aboard her; but coming to an Anchor the ſame Night in the Harbour of *Cananor*, we found three *Engliſh* Ships, the *Dragon*, the *Catherine*, and the *Seymour*, commanded by Captain *Waddel*, a very experienced Sea Officer, who had ſerved at the taking of *Ormuz*, by whom being informed, that moſt of thoſe Priſoners were ſet at Liberty, we reſolved to leave the Coaſt of *Malabar*. The City of *Cananor* is inhabited by *Malabars*, a People that inhabit that Coaſt from the City of *Goa* as far as the Cape of *Comorin*, but the *Portugueze* have a good Fleet at *Cananor*.

All that Tract of Land is very fertile in Spices, but eſpecially in Pepper, which is eſteemed better even than that which is brought from *Sumatra* and *Java*. They go for the moſt part naked, except that they cover their privy Parts, have Holes in their Ears, and are like the *African Moors*, except that their Lips are not quite ſo thick. Their Hair they tie in a Knot upon the Crown of their Heads, and let the Beard grow without any trimming, which makes them appear more like Monſters than Men; neither is their internal Diſpoſition unanſwerable to their external Appearance, being in effect a very uncivilized and barbarous Generation, and making for the moſt part Profeſſion either of Piracy or Soldiery. They are rather fierce than brave, handle their Bows and Arrows, and alſo their Swords and Bucklers, with ſufficient Dexterity. They have their particular King, who being of the Sect of the *Bramans*, is alſo their High-Prieſt, and ſtiles himſelf *Zamorin*, or Emperor of *Cananor* and *Calicut*. The *Nayers* are the Gentlemen of the Country, who by their Bracelets and Rings are diſtinguiſhed from the *Polya's*, or vulgar Sort, theſe laſt being obliged to go out of their Way, and pay them a peculiar Reſpect as they paſs by. I was told, that at the Time of the firſt Settlement of the *Portugueze* in thoſe Parts, the *Nayers* pretended to have the ſame Honours from the *Portugueze*, which theſe (who were no leſs proud than the other) refuſing to comply with, it was agreed, the Difference ſhould be decided by a ſingle Combat betwixt a *Portugueze* and a *Nayer*, in which the firſt having got the better, the *Nayers* ever ſince pay the ſame Reſpect to the *Portugueze* as the *Polya's* do to them.

They have among other Privileges this, that they may freely enter the Houſes of their Comrades, and pleaſe themſelves with their Wives and Daughters, the Signal being to leave their Sword and Buckler at the Door; which done, no-body, not even the Maſter of the Houſe, will enter to diſturb them; but a *Nayer* will never degrade himſelf ſo far as to have any Commerce with the Wife of a *Polya*. The *Malabars* uſe Bodkins, with which they write upon the Bark of Cocoa-trees; their Characters being quite different from thoſe of the other *Indians*, are underſtood only by the *Bramans*. The King of *Calicut* never eats or drinks any thing but what has been preſented before to his Pagod, or Idol. The Inheritance to the Crown does not fall to the Son, but his Siſter's Son, ſince, as the *Bramans* here have the Firſt-fruits of the Bride's Virginity, the Children are ſuppoſed to be begotten by them. As to the City of *Cochin*, Notice muſt be taken, that there are two of that Name in the ſame Kingdom of *Cochin*, one whereof is inhabited by *Malabars*, and lies upon a great River; the laſt, of which we now ſpeak, lies upon the Coaſt, and is under the Subjection of the *Portugueze*, having the Sea to the Weſt, and being ſurrounded on the Land-ſide with a Foreſt of certain black Trees, which the Inhabitants hollow out, and make Boats of, and will go with them as far as *Goa*.

The Entrance of the Harbour is rocky and dangerous. The Rains of the Winter Seaſon, which ſwell the neighbouring Brooks, force ſo much Earth during that Time into the Mouth of the Harbour, that it is ſtopped up and quite unpaſſable, till the Wind, which changes with the Seaſon, carries the ſame into the Sea. The *Portugueze* buy the Pepper here from the King at a certain Rate, who is one of the moſt potent Princes of all thoſe Parts, being able to bring into the Field 100,000 Men, moſtly *Nayers*, who are obliged to appear in Arms at their own Charge. His Subjects are ſomething more civilized than the other *Malabars*, but obſerve the ſame Rule in their Marriages concerning the *Bramans*, and conſequently in reſpect of their Succeſſion. The chief Trade of *Cochin* is in Pepper, Ginger, and Cinnamon. The *Malabars* had formerly but one King, till *Sarama Perymal*, who alone commanded on all that Coaſt from *Goa* to *Comorin*, having embraced the *Mohammedan* Religion, and reſolved to ſpend his Days near the Sepulchre of the Prophet, divided his Dominions among his neareſt Friends, under Condition that the Kings of *Cananor*, *Cochin*, and *Chaul*, ſhould pay Homage to the King of *Calicut*, upon whom for that Reaſon he beſtowed the Title of *Zamorin*, or Emperor; but notwithſtanding this the King of *Cochin* is much more potent than he.

6. On the 26th we left *Cananor*, and the next Day diſcovered eighteen Sail of Ships, which making up towards us, we began to ſuſpect them for Pirates, as indeed they proved. We had juſt Time enough to put ourſelves in a Poſture of Defence, when they began to come pretty near us, but did not think fit to attack us till Midnight, when the Moon ſhining very bright, they ſurrounded us on all Sides, but were ſo warmly received, that we ſunk two and diſabled three or four more, which made them think of retreating. We paſſed that Night in Sight of the Fort of *Cochin*, and the 28th ſaw no more than fourteen of theſe Pirates following us at a Diſtance; we continued our Courſe with a fair Gale in Sight of the Cape of *Comorin*, to the S. E. of us, being the moſt ſouthern Part of the *Indies*, known among the Ancients by the Name of *India*, on this Side the *Ganges*. The next Night the *Malabars* made a Shew as if they intended to venture the other Bruſh with us; but a Volley of Shot, though without Bullets, ſent them a going, ſo that we heard no more of them.

The 29th we came within Sight of the Iſland of *Ceylon*, at the very Point of which we were becalmed for three Weeks. This Iſle extends from the South-Eaſt to the North-Eaſt, between the two Capes of *Comorin* and *Negapatan*, abut ten Leagues from the Continent; its Length being ſixty Leagues, and its Breadth forty; its Circumference two hundred and fifty; and, according to the Report of the Inhabitants, its Compaſs was much greater before the Violence of the Sea carried away a large Part of Land on the Side towards *Comorin*. It is the richeſt and moſt fertile of all the *Indian* Iſlands, which I ſuppoſe to be the *Taprobana* of the Ancients, though I am not ignorant that ſome of our modern Geographers mak it the Iſle of *Sumatra*, of which more hereafter. I did not without Reaſon call the Iſle of *Ceylon* the richeſt and moſt fertile of all the *Indian* Iſlands, it being unqueſtionable that it has not only great Plenty of every thing that other Iſlands produce, but, beſides, this whole Foreſts of Orange, Lemon, and Cinnamon-trees, which diffuſe their fragrant Smell at a great Diſtance into the Sea. Beſides that, there is no precious Stone but what it affords, except Diamonds: Pearls they take there in abundance, but not altogether ſo fine as thoſe of *Babaram*; in Recompence of which it affords the fineſt Ivory in the World. The firſt Diſcovery of it is owing to the *Portugueze* in 1506, when *Laurence*, Son of *Franceſco Almeyda*, made a Treaty with one of the Kings of the Iſland; ſince which Time they took Care to fortify themſelves in the Town of *Colombo*, but were chaſed thence, and conſequently from the whole Iſland, by the *Dutch*, in 1657.

The *Dutch* did not trade here till 1602, under the Reign of *Fimala Derma Suriada*, King of *Candy*, the moſt potent, and in a manner the only ſovereign Prince of the whole Iſland, who aſcended the Throne in a very extraordinary manner; for the Throne of *Candy* being become vacant by the Death of *Derma*, who, from a Baſtard, was advanced to that high Dignity, the *Portugueze* took this Opportunity to eſtabliſh themſelves in *Ceylon*; but *Fimala Derma Suriada*, Son of one of the chief Men in the Kingdom, who had been educated among the *Portugueze* and baptized, and by their Intereſt advanced to the Dignity of High-Conſtable, diſliking the Encroachments of a Nation whom he knew would be in a little Time for graſping at all, had ſo gained the Affection of the Soldiery, that he prevailed with them to kill all the *Portugueze* in the Town of *Candy*, and to declare open War againſt them; which being done, he was by the *Cingaleſe* declared King. The *Portugueze* had among them a certain Princeſs, the next Heir to the Crown, who was baptized, and named *Catharina*. *Pedro Lopez de Souſa* being the General of *Malacca* for the *Portugueze*, reſolving to enter the Country with a good Army, ſtrengthening his Intereſt, brought the ſaid *D. Catharina* along with him, and having cauſed her to be declared lawful Heireſs to the Kingdom of *Candy*, made himſelf Maſter of the capital City of the ſame Name; but being cloſely blocked up by *Fimala Derma*, who intercepted his Foragers, and cut off his Proviſions, found himſelf conſtrained to come to a Battle in 1590, in which he was put to the Rout, himſelf killed upon the Spot, and *D. Catharina* taken Priſoner by *Fimala*; who afterwards, to ſtrengthen his Title to the Crown, married her. Four Years after the *Portugueze* made a ſecond Attempt againſt *Candy*, but not with much better Succeſs; for though they were not abſolutely routed, yet were they ſo harraſſed that they did not think fit any longer to continue the War with him.

The *Dutch*, at their firſt Settlement, had not much better Fortune; for though the King received in the Year 1604 their Admiral with a great deal of Civility, yet in the next following Year, having commanded their Vice-Admiral with ſifty of his Men to be put to Death, the *Dutch* laid aſide their Deſign of trading there, till having found an Opportunity of gaining the Fort of *Punto de Gallo* from the *Portugueze*, and fortifying the Harbour of *Negambo*, they began to eſtabliſh themſelves there, and at laſt accompliſhed it by taking of *Colombo* from the *Portugueze*. The King of *Candy* is the moſt potent and moſt abſolute of all the other Princes in the Iſle of *Ceylon*. He takes great Delight, as well in the *European* Way of Building, as in their Fortifications. The Kingdom is ſituated all along upon that River, upon which lies the City of *Vintain*, which ſerves for an Harbour to the King's Ships. The Inhabitants reſemble the *Malabars*, but that they are not quite ſo black. They generally go naked, except that ſome uſe *Portugueze* Doublets. They all wear Pendants in their Ears and Poniards at their Sides. The Women likewiſe go with their Breaſts uncovered; but for the reſt, they are very modeſt both in their Cloathing and Converſation, dreſſing their Heads much like the *European* Women, with their Hair cloſe behind, and tied in Treſſes. They appear in gold and ſilver Garments, with Rings upon their Hands, Feet, and Legs, ſet with precious Stones. They live conveniently enough in their Houſes, their Wives being good Houſewives, and eſpecially well ſkilled in Cookery. The *Cingaleſe* are ſo much addicted to an idle Life and Effeminacy, that they are neither fit for War nor any thing elſe.

7. *Ceylon* is, as I ſaid before, beyond all Diſpute, the moſt plentiful Iſle of all the *Indies*; nothing can be named either of Proviſions or Fruits, but what is very cheap here; though they are *Pagans* they eat of every thing in general, even Pork (abſtaining only from the Fleſh of an Ox or Cow). The *Mohammedans* enjoy a full Liberty among them; and the *Pagan* Inhabitants abſtain from Wine as well as they. They have a great Veneration for their Bramans; they marry their Maids at ten or twelve Years of Age, and burn their Dead. *Fimala Derma*, whom we ſpoke of before, had got as much Chriſtianity as could be expected among the *Indian Portugueze*, which he ſoon laid aſide; ſo that his Succeſſors continued in their Idolatry. Some of the Inhabitants worſhip the Head of an Elephant cut in Wood or Stone, who, they ſay, out-do Mankind in Judgment, and therefore pray for Wiſdom to them.

They lay up every Day a certain Share of their Proviſions in a Baſket kept for that Purpoſe for their Pagods, and hold it as a Point of Faith, that the World will not periſh as long as their grand Temples, which may be diſcovered at a great Diſtance at Sea betwixt *Punto de Gallo* and *Monte Callo*, ſhall remain ſtanding. They have another Opinion concerning a certain Mountain in this Iſland, named *Pico d' Adam*, where they ſay the firſt Man was created, and that the Spring on the Top of the Mountain aroſe from the Tears that *Eve* ſhed for *Abel*; and that the Iſle of *Ceylon* was the terreſtrial Paradiſe. This Tincture of Chriſtianity gives us ſufficient Hopes, that among a People, docile enough in themſelves, the Chriſtian Religion might be eſtabliſhed, if People were as forward in the Work of Salvation as to gain Riches. There is ſcarce any other King in the Iſle of *Ceylon*, except him of *Candy*, but what pays ſome ſmall Tribute by way of Acknowledgment to the *Portugueze*, of which the King of *Matecale* pays no more than fifty Ducats *per Annum*.

Ceylon affords very good Pepper, but their ſtaple Commodity is Cinnamon. The Kingdom of *Candy* hath certainly both Gold and Silver Mines, but are not wrought by an expreſs Inhibition from the King; neither muſt their precious Stones be ſold to any but the King; but, as they have ſuch Plenty of them that they are found among the Gravel that is waſhed down from the adjacent Mountains, and carried along with the Current of the Water; ſo it is impoſſible to prevent their being ſold underhand to Strangers. This Iſle alſo furniſhes ſufficient Store of Timber and Stone for Building; of Corn, Oil, and Wine, if they would take the Pains to cultivate the Vines, Cotton, divers Roots for the Uſe of Dyers, Ginger, Cardamum, Mirobolans, Corcoma, Nutmegs, and divers medicinal Drugs, and of Rice they have ſuch Store that they furniſh the whole Coaſt of *Coromandel* with that Commodity. The *Dutch* buy the Cinnamon here at the rate of an hundred and twenty-eight Livres the Hundred Weight.

8. While we were becalmed near this Iſle, I had the Opportunity of making an Enquiry of our Preſident and ſome Jeſuits, who were on Board us, and had ſpent moſt of their Days in the *Indies*, concerning thoſe Parts I had not ſeen, according to whoſe Relation I thought fit to inſert the following Account. Near the Cape of *Comorin*, along the Coaſt of *Malabar*, for a Tract of near an hundred and forty Leagues by Sea, extended the Iſles (by ſome accounted One thouſand) called *Maldives* by the *Portugueze*, having the Cape to the North, ſome of which being ſo very low that they are often ſubject to Inundations are not inhabited, others are. The *Malabars* are of Opinion that they were torn from the Continent by the Violence of the tempeſtuous Waves of the Sea, which, in ſome Places, is at ſo ſlender a Diſtance from the Continent, that a briſk active Fellow might leap over it. The capital City, which has given its Name of *Maldives* to all the Iſlands, is built upon four ſmall Iſles, being the Reſidence of the King, who commands over all the reſt, and a Place of good Trade, though they produce naturally ſcarce any thing but Cocoas; but the Induſtry of the Inhabitants ſupplies, in ſome meaſure, the Defect of Nature here, there being not any Nation in the *Indies* more ingenious in making Garments of Silk and Thread than they. The Coaſt of *Coromandel* being in the moſt Eaſtern Part of the *Indies* on this Side of the *Ganges*, is divided from the *Malabar* Coaſt by the Mountains of *Balagatta*, its Extent being one hundred Leagues along the Coaſt from *Cape Comorin*, or rather the Point of *Negapatan*, as far as the River *Nagund* and the Town of *Muſilipatan*, which, as it has excellent Harbours, and the beſt Roads for Anchorage in the *Indies*, ſo it ſerves for a ſafe Retreat for ſuch Veſſels as are by the tempeſtuous Winter-ſeaſon forced from the Coaſt of *Guzerat* thither, where the Climate and Weather is very calm at that Time.

The *Portugueze* are Maſters of the Town of *St. Thomas*: On this Coaſt, they ſay, that when they firſt poſſeſſed themſelves of *Cochin* and *Cranganor*, the Inhabitants of this Coaſt, who were Chriſtians of the *Greek* Religion, implored the Protection of the King of *Portugal*. To back this Tradition, they affirm, that *St. Thomas*, one of the twelve Apoſtles, after he had taught the Goſpel in the Kingdom of *Narſinga*, petitioned the King to give him Leave to build a

Chapel for the performing of Devotion, which being ſtrongly oppoſed by the *Pagan* Prieſts, it happened that a prodigious Piece of Timber being lodged at the very Entrance of the Harbour of the City of *Maliapour*, which hindered the free Paſſage of all the Ships, a Trial was made by Elephants, and all other Ways, even by conſulting the Magicians themſelves, to remove it thence, but in vain; whereupon the King iſſued his Proclamation, by which he offered a conſiderable Reward to ſuch as would undertake to clear the Harbour. *St. Thomas* offered his Service, reſerving to himſelf no other Reward than the Piece of Timber. The Day appointed for this Purpoſe being come, and the Saint appearing without any other Inſtrument to effect it than his Girdle, which he faſtened to the Beam, all there preſent laughed at his Endeavours; but he no ſooner began to pull, than that vaſt Piece of Timber, which could not be moved before by the Strength of ſo many Elephants, followed without the leaſt Difficulty; at which the King being ſurprized to the higheſt Degree, permitted him to build the Chapel according to his Requeſt; which ſo incenſed the Bramans, that they ſet certain People to murder him whilſt he was at his Devotions in the ſaid Chapel. *Maffeus* ſays, that by the ſpecial Command of *John* King of *Portugal*, the Bones of this Saint were ſearched for, and found on the Coaſt of *Coromandel*, and thence transferred to *Goa*, where a very fine Church was erected to his Memory.

On the other hand, both *Rufinus* and *Socrates* affirm, that *St. Thomas* ſuffered Martyrdom at *Edeſſa* in *Meſopotamia*, and that they uſed to go on Pilgrimage to his Sepulchre there. The Town of *St. Thomas*, though none of the biggeſt, yet is well built, moſt of the Houſes being of Stone. The Church has no Steeple; it contains about ſix or ſeven hundred Inhabitants, *Portugueze*, and *Meſtizes*, and ſome *Armenian* Merchants; the *Indians*, *Pagans*, and *Mohammedans* living at a Place called *Maliapour*, ſeated upon a Rivulet two Leagues to the North of *St. Thomas*, which was formerly the capital City of the Kingdom, but is now reduced to a very indifferent Condition.

9. From *April* to *September*, whilſt the S. and S. W. Winds blow upon this Coaſt, the Road here is very ſafe, but all the remaining Part of the Year ſmall Veſſels are obliged to ſhelter themſelves within the River of *Paleacaſte*, and the greater in the Harbour of *Negapatan*; there is five Fathom Water within Cannon-ſhot of the Town, but makes a very ill Landing-place, by reaſon of the Roughneſs of the Sea. The *Dutch* have conſiderable Traffick on this Coaſt, but eſpecially at *Potlapouli*, or *Negapatan*, and at *Palecatte*, where they have the Fort *Gueldria*. This whole Country was formerly divided into three ſeparate Kingdoms, *i. e.* of *Coromandel*, *Narſinga*, and *Biſnagar*, which is now ſubject to one Prince, whoſe Reſidence is at *Biſnagar*, and ſometimes at *Narſinga*. The Kingdom of *Orixa* begins above the Town of *Muſilipatan*, extending from the River of the ſame Name to that of *Guenga*; the *Dutch* include this in the Coaſt of *Coromandel*. *Muſilipatan* and *Golconda* are its two chief Cities; the firſt is conſiderable for its Commerce, the laſt for being the ordinary Reſidence of its Kings. It produces abundance of Salt, and ſome Diamonds, among which all that weigh above five Carats belong to the King. To the North of *Orixa* lies the Kingdom of *Bengal*, whence the Gulph, known to the Ancients by the *Sinus Gangeticus*, has got its Name. Their Traffick is Rice, Sugar, Cottons, Calicoes, but eſpecially in Silk, which for Goodneſs exceeds all others in the *Indies*. Hence alſo are brought the fineſt Canes; and they have another ſort of Canes out of which they make Drinking-veſſels, and being lacquered, will hold any Liquid as well as Cups of Metal. Here grows a certain Herb, the Stalk of which is of the Thickneſs of a Man's Thumb, having on the Top a large Button like a Taſſel; this is ſpun out, and furniſhes Materials for an excellent kind of Stuff, much eſteemed by the *Portugueze*, who call this Shrub *Herba de Bengala*.

The Inhabitants are *Pagans*, leading a very barbarous kind of Life, Thieving and Adultery being their ordinary Vices, though ſeverely puniſhed. They worſhip the *Ganges*, out of an Opinion that its Water cleanſes them from all their Impurities, which is the Reaſon that the King of *Narſinga* ſends for the Water he waſhes himſelf with from that River. The Kingdom of *Pegu* borders to the Eaſt upon *Bengal*, owing its Name to its Metropolis; there the King keeps his conſtant Reſidence. *Gaſpar Balbi* tells us Wonders of this Kingdom, which I had not the Opportunity to ſee; and ſince others alſo have given us an Account of what they themſelves have obſerved, I will only add, that the City is divided into two Parts, *viz.* the new and old City; the firſt of which is inhabited by Merchants, the ſecond is properly the Reſidence of the King and his Court, which is exactly four ſquare, ſurrounded with a broad Moat, in which Crocodiles are kept for its better Security. The Palace Royal is ſaid to be as big as *Venice*, and ſeparated from the City by its peculiar Fortifications, which have no more than two Gates; he keeps above eight hundred Elephants within the Caſtle, among which thoſe for his own Uſe pay him Reverence, being trained to it.

If we may rely on *Balbi*'s Teſtimony, this King is next to the Emperor of *China* the moſt potent upon Earth, being able to bring 1,500,000 Men into the Field, and eight hundred Elephants, who are for the moſt part maintained at the Charge of his Lords. Among other Idols they have in their Temples, there is one of maſſy Gold in the Chapel within the Palace, with a Crown ſet with precious Stones on his Head, and one only of the Bigneſs of a Plum on his Forehead, with Pendants of an ineſtimable Value in his Ears, a Scarf about the Waiſt, and a Croſs on the right Shoulder, and under the left Arm a Chain made all of Diamonds, and other precious Stones. The ſame Chapel has two Silver Idols of the ſame Shape, but two Feet higher than the former, with Crowns ſet with Gems: and a fourth, which exceeds all the reſt, beſides a fifth made of Copper and Braſs, valued at more than the other four. *Pegu* affords more Elephants than all the reſt of the *Indies*; they are taken by means of the Females, who entice them out of the Woods into the Stables, where they have Penns that hold but one of theſe Beaſts, where they are kept till they are tamed. The Arms of the *Peguans* are generally Half-pikes made of Canes, ſhort and broad Swords and Bucklers, and Helmets made of boiled Leather laid double, and gummed over with a certain Gum called Achiran. The People are Pagans, believe one ſupreme God, who has a great many Vicegerents under him, whom they alſo acknowlege for Gods, and that they are the Authors of all Good that happens to Mankind; as on the other hand the Devil is the Author of all Evil, whom for that Reaſon they worſhip, to appeaſe his Wrath. The Day on which they hold their Devotions is *Monday*; they celebrate five Feaſts in a Year, called by them *Sapan*. The firſt, called *Sapan Giacchi*, is celebrated by a Pilgrimage, by the King and whole Court, twelve Leagues out of Town, with the utmoſt Magnificence. The ſecond, called *Sapan Carana*, is celebrated in Honour of the Statues in the Royal Chapel; as is alſo the third, called *Sapan Graioma Segianon*; the fourth, called *Sapan Daiche*, is celebrated by the King and Court, by caſting Roſe-water at one another; and the fifth, called *Sapan Donon*, is a kind of Race of Boats upon the River, in the Preſence of the King and Queen.

When the King dies, they join two Boats together, and putting a Table in the Middle of one, they lay the Corpſe upon the Table, under which they make a Fire of Sandal Wood, Storax, Benjamin, and other ſweet-ſcented Woods and Gums, which being ſent down the Stream, the Prieſts attending, rejoice and ſing; till the Fleſh be burnt to Aſhes, which they mix with Milk into a Paſte, and ſo caſt it into the Sea at the Mouth of the River; but the Bones they preſerve and lay up in a Chapel built for that Purpoſe. The Prieſts carry an empty Bottle at their Girdle, are clad in red Veſtments, coming down to their Heels, with a Cloak reaching to their Hams, and wear a Hat to ſhelter themſelves againſt the Sun-beams, their Heads being ſhaved. They go bare-footed, live by Alms, like our Mendicant Friars, eat but once a Day, and ſleep in the Foreſts in hanging Mats faſtened to the Boughs of Trees. They lead a very exemplary Life, and on *Monday* Morning early go about to invite the People to their Devotions; and in their Sermons they exhort their Auditors to Morality. They have no Averſion to thoſe who turn Chriſtians,

ans, but exclaim againſt the worſhipping the Devil, a Cuſtom ſo deeply rooted among the *Peguans*, that with all their Arguments they are not able to diſſuade them from it.

They are in great Veneration among the moſt ſenſible Men of the Nation. Their Corpſes are burnt like their Kings, with ſweet Woods, the Aſhes caſt into the River, and their Bones preſerved. *Pegu* has no other Corn but Rice, which it produces in ſuch Plenty, that great Part of it is ſent to the neighbouring Provinces. Sodomy was heretofore grown ſo general here, that one of the Queens of *Pegu*, to obviate this Vice, ordered a ſmall Pin to be faſtened betwixt the Skin and the Fleſh, by way of Inciſion; ſhe commanded alſo, that all the Boys, whilſt young, ſhould be painted of a blue Colour on their Poſteriors, thereby to create an Averſion to them; as, on the other Side, the Women take all imaginable Pains to provoke the Men to Venery. Men and Women delight in black Teeth. The King is ſole Heir to all that leave no Children behind them, and even One-third Part of the Eſtates of thoſe that have Children belongs to him. *Pegu* affords no other Spice but Ginger, and ſcarce any other Commodity is exported, except Rice and Silver, in Exchange for which they bring thither Stuffs and Callicoes, Pepper, Cinnamon, Nutmegs, Opium, and Sandal Wood. They will pledge their Children to borrow Money; but if the Creditor enjoys them carnally, they are free, and the Debt is paid.

Siam, one of the next conſiderable States in the *Indies*, confines to the North upon *Pegu* and *Ava*, to the Weſt upon *Bengal*, to the Eaſt upon *Patana*; whence the Coaſt (in which I comprehend the Gulf of *Siam*) runs North to 13° 30′, and turning to the South to twelve Degrees, extends at a great Diſtance from the Sea, making a Semicircle of four hundred and fifty Leagues. The Country is both very woody and mountainous, except towards the Sea-ſide, where it is very fertile, and has ſeveral convenient Iſles and Harbours, beſides ſome Iſlands in the Gulphs. The River *Menam* may vie for Largeneſs with any other River of the *Indies*; for though its Breadth is not very great, its Length is ſuch, that hitherto its Source has remained undiſcovered. It runs from North to South through the Kingdoms of *Pegu* and *Ava*, and afterwards through *Siam*, where it falls by three ſeveral Channels into the Gulf of *Siam*: It yearly, like the *Nile*, overflows the adjacent Country for five Months, which renders the Rice-fields very fruitful. Its Eaſtern Channel, which lies in 13° 30′ Latitude, is moſt proper for Navigation, were it not for a Shelf a League in Length, which lying juſt at the Entrance of it, has five or ſix Feet Water at low Tide; but at high Water, fifteen or ſixteen; and in *September*, *October*, and *November*, ſeventeen or eighteen Feet; for which Reaſon it is that Veſſels of any Burthen anchor in the Road two Leagues from the Shelf; but ſuch as may venture over the Shelf with a high Tide, may go freely up the River as far as the Caſtle of *Banckock*, ſix Leagues from the Sea, and thence as far as the City of *Judda*, twenty-four Leagues from the Mouth of the River, except in the before-mentioned Months, when the River is unnavigable.

This Kingdom is very populous, eſpecially thoſe Provinces bordering upon the Seas. The moſt conſiderable Cities are *Judda*, or *Odya*, the Metropolis of the whole Kingdom; next *Cambaya*, *Camfaa*, *Sincapura*, *Picelouck*, *Lygor*, *Bordalong*, and *Tanaſſerim*, where the *Portugueze* drive a conſiderable Trade; *Banckock*, *Pipry*, *Mergy*, &c. The City of *Judda* is built upon an Iſland in the River *Manam*. It is the ordinary Reſidence of the King of *Siam*, having ſeveral very fair Streets, with ſpacious Chanels regularly cut. The Suburbs are on both Sides of the River, which, as well as the City itſelf, are adorned with many Temples and Palaces; of the firſt of which there are above three hundred within the City, diſtinguiſhed by their gilt Steeples, or rather Pyramids, and afford a glorious Proſpect at a Diſtance. The Houſes are, as all over the *Indies*, but indifferently built, and covered with Tiles: The royal Palace is equal to a large City. *Ferdinando Mendez Pinto* makes the Number of Inhabitants of this City amount, improbably, to 400,000 Families. It is looked upon as impregnable, by reaſon of the Overflowing of the River at ſix Months End. The King of *Siam*, who takes amongſt his other Titles that of *Precau Salſu*, i. e. ſacred Member of God, has this to boaſt of, that, next to the Mogul, he can deduce his Deſcent from more Kings than any other in the *Indies*. He is abſolute, his Privy Counſellors, called *Mandarins*, being choſen and depoſed barely at his Pleaſure. When he appears in Publick, it is done with ſo much Pomp and Magnificence as is ſcarce to be imagined, which draws ſuch a Veneration to his Perſon from the common People, that even in the Streets, as he paſſes by, they give him god-like Titles and Worſhip. He marries no more than One Wife at a time, but has an infinite Number of Concubines. He feeds very high, but his Drink is Water only, the Uſe of ſtrong Liquors being ſeverely forbidden, by their Eccleſiaſtical Law, to Perſons of Quality in *Siam*. As the Thirds of all the Eſtates of the Kingdom fall to his Exchequer, ſo his Riches muſt be very great; but what makes them almoſt immenſe is, that he is the chief Merchant in the Kingdom, having his Factors in all Places of Trade, to ſell Rice, Copper, Lead, Salt-petre, *&c.* to Foreigners. *Mendez Pinto* makes his yearly Revenue riſe to twelve Millions of Ducats, the greateſt Part of which being laid up in his Treaſury, muſt needs ſwell to an Infinity in Proceſs of Time.

Each City has its peculiar Court of Juſtice, from whence an Appeal lies to the chief Court in the City of *Judda*, conſiſting of a Lord Chief Juſtice and twelve Judges, and ſometimes to the Privy Council itſelf, if the Parties will be at the Charge of it. They have their Counſellors, Attornies, and Solicitors, and the Cauſes are pleaded in the Preſence of both Parties. In criminal Caſes they proceed much after the *French* Way; for, upon an Information given, the Party accuſed is committed and examined afterwards, and for want of ſufficient Evidence put to the Rack, if there be very ſtrong Circumſtances; after which the Judges, either upon Confeſſion of the Fact, or ſufficient Evidence, give Sentence, which is confirmed by the King, unleſs he is pleaſed to pardon the Offender. Their Puniſhments are ſo ſevere, or rather cruel, that ſuch as are uſed among us are not ſo much as known here, for the ſlighteſt Crime is thought to deſerve Baniſhment. Theft is puniſhed with the Amputation of Hands or Feet. The common Way of executing Criminals, is to caſt them alive into boiling Oil.

They have three Sorts of Trials for want of ſufficient Evidence, by Fire, Water, and Oil. In the Water Trial both Parties are let down to the Bottom of the River, along a great Pole, and he who can ſtay longeſt under Water obtains thereby his Juſtification, as does he who can hold his Hand longeſt in boiling Oil, in the Trial of Oil. In the fiery Trial they are to make five or ſix Steps through a great Fire, very ſlowly, two Men leaning very hard upon their Shoulders. But that which they look upon as the moſt dreadful of all is, when, in order to their Juſtification, they take a Pill of Rice only, over which the Prieſt has pronounced a certain Malediction: If the Culprit ſwallow it without ſpitting, he clears himſelf to all Intents and Purpoſes, and his Friends carry him off in Triumph.

The Forces of *Siam* conſiſt chiefly of the Militia of the Country, all Subjects being obliged to take Arms when called upon; ſo that as Occaſion requires, he can ſummon the 100th, the 50th, the 20th, the 10th, or 5th Man, who, as well as the Noblemen with their Attendants, ſerve at their own Charge as long as the War laſts. The Infantry are pretty well diſciplined, but want the Uſe of Fire-Arms, being provided only with Bows, Arrows, Swords, Pikes, and Bucklers; their Horſe are alſo but indifferently mounted. Their chief Strength conſiſts in their Elephants, which are very well trained to the Wars, and carry each three armed Men. They are not deſtitute of Cannon, but have but little Skill to manage them to the beſt Advantage. They have alſo great Numbers of Frigates and Gallies, well provided with Guns, but the Gunners and Mariners are ſo unexpert in the Management of them, that they cannot encounter any *European* Fleet with the leaſt Hopes of Advantage; for which Reaſon, ſince of late Years the *Siameſe* have lived in continual Enmity with the *Portugueze*, they have highly courted the Friendſhip of the *Dutch*, who were always ready to give them Aſſiſtance againſt their Enemies. The King of *Siam*, knowing that his chief Strength conſiſts in his Elephants, keeps a greater Number than any other *Indian* Prince, the Elephants of *Siam* being both for their Strength and Quickneſs of Apprehenſion eſteemed above all the reſt. They take them after the ſame Manner as they do in *Pegu*, by ſending divers Females into the Foreſts, who decoy them into the Stables, where they are tamed, either by putting them into Pens exactly fitted to the Bulks of their Bodies, or by tying their Legs to three or four tame Elephants.

It is to be obſerved, that ſometimes they meet with white Elephants in *Siam*, but they are ſo rare, and ſo much admired in thoſe Parts, that in 1568, the King of *Pegu* being informed that the King of *Siam* had two white Elephants, he ſent an Ambaſſador to deſire he might have one of them, at what Price he would be pleaſed to ſet upon it; which the King of *Siam* refuſing to accept, the King of *Pegu* entered *Siam* with a vaſt Army, and conquered it, making the King his Tributary, tho' with the Loſs of no leſs than 500,000 Men. The *Siameſe* call the white ones the Kings of the Elephants, and attribute to them ſomething of Divinity; for which Reaſon alſo the King of *Siam*, when he meets with one, cauſes him to be ſerved in Veſſels of Gold, allows him a good Attendance, and a Canopy to be borne over his Body. The King and his Subjects are Pagans, and have an infinite Number of Idols, of Gold, Silver, Stone, Wood, and other Materials, ſome twenty, ſome thirty, and others forty Feet high. Their Temples have gilt Towers, or Pyramids. Their Eccleſiaſticks are compoſed of a kind of Hierarchy, under the Direction of a High-Prieſt, reſiding in the City of *Judda*, where are at leaſt 30,000 Eccleſiaſticks, that wear Garments of yellow Callico, and have their Crowns ſhaved. The moſt learned among them are choſen for Prieſts to preach in their Temples, and to ſacrifice. They are under a Vow of Chaſtity, upon Pain of Death, but may change their Profeſſions, and marry whenever they think fit. Each Temple has a kind of a Convent to it, for the Entertainment of a certain Number of Prieſts who attend the Service every Day Morning and Evening.

They live for the moſt part upon Alms, like our Mendicant Friars. They have alſo a kind of religious old Women, but theſe are not bound by any particular Diſcipline. They believe one Creator of the Univerſe, who governs the World by divers inferior Gods. They ſay that the Soul is immortal, and after it is purified by paſſing through ſeveral Bodies, is either condemned to eternal Torments, or enjoys Beatitude. They tell you, that this has been tranſmitted to them by Tradition, Time out of Mind; for the reſt, they hold that good Deeds, and eſpecially Charity, are the chief Means to attain Salvation, which is the Reaſon they extend their Charity even to the Beaſts, ſuch as Birds and Fiſh, which they buy to ſet them at Liberty, as believing the Tranſmigration of the Soul. This is the Reaſon why they never condemn any other Religion, or diſpute with them: But their Eccleſiaſticks preach without Intermiſſion againſt the old Cuſtom of invoking the Devil, which is ſtill retained among the vulgar Sort, They have abundance of Lamps hanging before their Idols in the Time of Service. Theſe they ſet out with Garlands of Flowers, and in ſome of them they have certain Days, each Quarter of the Moon, appointed for their general Devotions, and a Lent of three Months.

Their dead Corpſes they ſhave, waſh and perfume, and afterwards burn them near a Temple, where the Aſhes are buried under a Tomb, or Pyramid. The Relations mourn for their Friends by ſhaving themſelves, by giving Alms and Benevolences to the Prieſts, to pray for them at their Obſequies. The Corpſe is attended with Muſick and Fireworks. The *Siameſe* are ſtrong limbed, and well proportioned, but their Courage is not anſwerable to it, which makes them uſe their Victims with a great deal of Inſolence. They are baſe, and very crafty in their Dealings. They are ſo much addicted to Idleneſs, that they leave all Toils to their Wives and Slaves. They wear a painted Piece of Callico from the Middle down to the Knees, tho' the Men have alſo Shirts with Sleeves hanging down to the Elbows. The Women cover their Breaſts with a Piece of Callico faſtened about their Necks; there is ſo little Difference in the Cloathing of the People of Quality and thoſe of the inferior Rank, that they are not to be diſtinguiſhed but by their Train of Slaves. Their Houſes are built either of Timber, or Canes, covered with the Leaves of Cocoa-tree, and raiſed three or four Feet from the Ground; each Apartment has ſeveral Windows for the more commodious Paſſage of the Air; they know of no other Furniture but what is abſolutely neceſſary for their Conveniency in the Chambers and Kitchen.

They feed commonly upon Rice, Fiſh, and Pulſe; their ordinary Drink is Water; but they don't refuſe ſtrong Liquors, if they are invited to them. Perſons of any Faſhion here make no uſe of Prieſts for the Confirmation of their Marriages, which, after the Parents Conſent is obtained, and Agreement made, they conſummate, and live together as long as they like one another; and in caſe of Separation, all the Goods and Children are divided betwixt them, and both Parties are at liberty to marry again; but the Concubines are tied to the Pleaſure of their Maſters, who conſider them no otherwiſe than as Slaves, their Children having but a ſlender Share of their Fathers Eſtates, which, after their Death, are divided into three Parts; one goes to the King, the ſecond to the Prieſts, who are to bear the Funeral Charges, which are very great, and the third to the Children, who have an equal Share, except that the eldeſt is allowed ſome ſmall Advantage. People of an inferior Rank purchaſe their Wives; notwithſtanding which, both Parties are at liberty to be divorced. They don't take the leaſt Care for the Education of their Children till they are ſix Years old, when they put them to their Eccleſiaſticks to be inſtructed in Reading and Writing, afterwards breed them either to manual Arts, Commerce, or the Court.

The Peaſants lead a miſerable Life, by reaſon that Proviſions are ſo cheap here, that they can't gain any thing by their Labour. The chief Trade of the City of *Judda* lies in Stuffs, brought thither from *Surat* and the Coaſt of *Coromandel*, in all ſorts of China Commodities, precious Stones, Gold, Benjamin, Wax, Copper, Lead, Indigo, Calamba-Wood, Braſil-Wood, Cotton, and Deer-Skins, of which they export fifty thouſand every Year to *Japan*; and their Rice is tranſported in vaſt Quantities to all the neighbouring Countries. The King himſelf is a Merchant here, and has his Factors at *Pegu*, *Ava*, *Jangoma*, on the Coaſt of *Coromandel*, and in *China* itſelf. The Money is very good, being of three different ſorts, *viz. Ticals*, *Maſes*, and *Toanges*; two *Toanges* make a *Maſe*, and four *Maſes* a *Tical*, which is equivalent to a *French* Half-Crown; four of theſe *Ticals* go to a *Tael*, twenty of which make a *Catta* in Silver. Their ſmalleſt Silver Money is the *Toang*; but Proviſions being ſo very cheap here, they make uſe of certain Shells brought thither from *Manila*, eight or nine hundred of which go to a *Toang*.

The *Portugueze* being ſufficiently ſenſible what prodigious Advantage they were able to reap from this Kingdom for ſupporting their Traffick to the *Molucca's* and *Philippine* Iſles, the Viceroys of *Goa* were always very careful to cultivate a good Correſpondence with the King of *Siam*, who in Return granted them many Privileges, till ſuch time that the *Dutch* got Footing there at the Beginning of this Age. The *Portugueze* were ſo alarmed thereat, that they not only obſtructed the Trade of the *Siameſe* to *St. Thomas* and *Negapatan*, but alſo attacked a *Dutch* Veſſel in the River *Menam*, which, with ſome other Outrages, ſerved only to incenſe the King of *Siam* againſt them, who ever after encouraged the *Dutch* in their Settlement and Commerce, which is very advantageous to them in reſpect of the Iſles of *Java* and *Sumatra*, of which they are now in Poſſeſſion.

10. The Kingdom of *Cambodia* borders to the North-Weſt upon the Kingdom of *Siam*, being incloſed by the Sea on the other Side; the capital City is ſeated upon a River ſixty Leagues from the Sea-ſhore, which riſes out of a Lake, as do all the other Rivers of this Kingdom. That which runs by *Cambodia* overflows every Year like the *Nile*; its firſt Riſe is in the Beginning of *June*, increaſing by degrees to ten or twelve Feet, and in *July* or *Auguſt* it overflows the Country to that degree, that it is quite unnavigable; for which Reaſon it is that the City of *Cam-*

bodia is built upon a riſing Ground, having but one large Street. The Trade of the *Portugueze* here conſiſts chiefly in *Malacca* Stuffs, which they exchange for Benjamin, Lacque, Wax, Rice, Braſs Veſſels, and Bars of *China* Iron.

The King of *Cambodia* is only a Vaſſal of the King of *Siam*, being not able to bring above thirty-five thouſand Men into the Field. The Nobility or Officers of the Court are divided into four ſeveral Ranks, *viz.* into *Ockinas*, *Ternimas*, *Tenimnas*, and *Nampres*; the firſt of which are the only Men of Conſideration, they being admitted into the King's Preſence, and he confers with them concerning the Management of public Affairs. The *Portugueze* are ſo firmly ſettled here, that the *Dutch* have never been able to get any Footing. Proviſions of all ſorts, Veniſon, Beef, Pork, Goats, Kids, Hares, Cranes, Herons, and, in ſhort, all manner of Poultry, as likewiſe Oranges, Citrons, Mangoes, and Cocoas, are ſold exceſſively cheap; there being ſuch Plenty here of every thing, and eſpecially of Rice, that thoſe of *Quinam* alone export yearly two thouſand Copans of Rice, five of which make eight Tons, at ſeventeen or eighteen *Taels* the Copang.

That Neck of Land which extends in the Form of a Demi-Iſland, from the Kingdom of *Siam* to the S. E. to the N. W. of the Equinoctial Line, betwixt the Gulf of *Bengal* and *Siam*, is called the Iſthmus of *Malacca*, and contains the Kingdoms of *Johore* and *Patapan*. This Country was firſt diſcovered by the *Portugueze* in 1511, who eſtabliſhed themſelves there to that degree that nobody hath been able hitherto to diſlodge them. The City of *Malacca* is ſituated upon the Strait which ſeparates the Iſle of *Sumatra* from the Continent, at two Degrees thirty Minutes on this Side of the Line, at the Foot of a Mountain, which is wholly taken up by the Town, and is about 1800 Paces in Compaſs, 600 whereof extend along the Sea-Coaſt, fortified with a good Wall, as likewiſe to the River-ſide, which incloſes another third Part of the Town, being ſtrengthened to the Land-ſide by four regular-Baſtions; that of *St. Domingo* on the Point of the River-ſide, that of *St. Jago* on the Sea-ſhore, and thoſe called *Madre de Dias*, and of *Eleven thouſand Virgins.* Betwixt thoſe two the *Jeſuits* College, called *St. Paul*'s, ſtands upon the Hill, and upon riſing Ground, in the Plain without the City, a Convent of *Jacobins.* The River runs N. W. is very broad, and brackiſh at High-water, but freſh at Low-Tide; there is a Bridge over it.

It rains conſtantly here two or three Times a Week, except in the Months of *January*, *February* and *March*; the Shore is ſo muddy that there is no landing at Low-water. The two Iſles called *Ilha de Naos* and *Ilha de Pedra* lie not much above a Cannot-ſhot from the City, the Channel betwixt theſe two Iſlands affording as ſafe Harbour for the Galleons and bigger Veſſels, as that betwixt the City and the *Ilha de Naos* for the Veſſels of a middle Size; but ſmall Barks may enter the River. In the City of *Malacca*, its Suburbs, and adjacent Towns, under the Juriſdiction of the *Portugueze*, are computed to be about 1200 Inhabitants, and, among them, not above 300 fighting Men, and ſcarce 200 *Portugueze*, the reſt being either *Meſtizes* or *Malayans.* The *Portugueze* are in Poſſeſſion only of the City of *Malacca*, and its Suburbs, to the Town of *Noſtra Senhora de Guadalupe*, five Leagues thence upon the ſame River, the Territories of the King of *Johore* beginning half a League thence. This City being ſo commodiouſly ſituated for the Trade of *China* and the *Moluccas*, the *Portugueze* had, in all Probability, made this one of the chief trading Places in the *Indies*, if the *Dutch*, who beſieged it in 1606, and laid great Part of it deſolate, had not prevented them; and being by their Settlements in *Ceylon* and *Java* become Maſters of theſe Seas, quite ruined the Commerce of the *Portugueze* to *China* and the *Moluccas.*

The Kingdom of *Patapan* is not of ſo large an Extent, but much more populous than that of *Johore*, the King of *Patapan* being, according to the Computation of the *Hollanders*, able to raiſe 180,000 Men; the capital City bearing the ſame Name, is ſeated upon the Sea-ſide, though its Harbour be above 2000 Paces thence. The Houſes are handſome enough, being built of Timber and Canes. The Royal Palace is fortified only with Paliſadoes, their great Temples are of Brick. The City is able to raiſe 10,000 fighting Men. The Inhabitants are rather inclining to a brown than olive Colour, generally well ſhaped, and proud in their outward Deportment, but obliging enough in their Converſation with their Friends. The Natives are, for the moſt part, employed in Huſbandry and Fiſhing, and drink nothing but Water; Wine, and ſtrong Liquors, being odious to them. The only Pleaſure they delight in is that of Women; ſo that each Man, beſides four or five Wives, maintains as many Concubines as he is able. As they look upon Fornication as a ſlender Treſpaſs, ſo they puniſh Adultery with the utmoſt Severity, though nothing be more common among them than this Crime.

Their chief Wealth conſiſts in their Slaves, whom they feed at a ſmall Charge upon Rice and Fiſh. The Foreigners are the only People here who apply themſelves to Traffick and Navigation. The Air of *Patapan*, though exceeding hot, as lying near the Equinoctial, yet is not unwholſome. They have but three Months Winter, *viz. November*, *December*, and *January*, when it rains without Intermiſſion: The reſt, from *February* to *October*, is their Summer. They ſow nothing but Rice, and till the Ground with Buffaloes. Fruits are here in ſuch Plenty that every Month produces a new kind. Hens lay twice a-day; and Proviſions are in ſuch Quantities as cannot be imagined, as Rice, Oxen, Goats, Deer, Geeſe, Ducks, Hens, Capons, Peacocks, Hares, and all ſorts of Veniſon. Hogs they breed none; but the Foreſts are full of Wild-Boars, and though they eat them not, they kill them, becauſe they are ſo pernicious to the Rice. The Tigers, and great Apes, which are in the Foreſts here, do alſo conſiderable Miſchief; but the wild Elephants do no Damage at all; they hunt them with tame Elephants, and whilſt they are engaged with them, find Means to tie their hinder Feet together, and afterwards tame them by Hunger.

The King of *Patapan* is a Vaſſal to the King of *Siam*. *Johore* is the utmoſt Point of Land of that Peninſula called by the Ancients *Aurea Cherſoneſus*, reaching to the Streights of *Sincopura.* Its chief Towns are *Linga*, *Bintam*, and *Carymon*, and its Metropolis is named *Batuſabar*, which is however divided into two Cities, ſituate upon the River *Johore*, ſix Leagues from the Sea, the firſt of which is called *Batuſabar*; the ſecond *Cottaſabrang*; one having about 1300 Paces, the other 500 in Compaſs. As the Houſes are all built of Free-ſtone along the River-ſide, and raiſed on Piles eight or ten Feet from the Ground, they make a glorious Proſpect as you come up the River; for this City contains at leaſt 4000 Inhabitants fit for Service in the Army. The King of *Johore* is Proprietor of all the Grounds, which he beſtows on any that deſire them, to be manured: But tho' the Grounds are extremely fertile, ſuch is the Slothfulneſs of the *Malayans*, that they ſeldom cultivate them. The *Malacca*, or *Malayan* Language, as it is the moſt elegant of any in the *Indies*, ſo it has gained as much Reputation there, and is as generally uſed, as the *French* is in *Europe*; and having no Inflections in either Nouns or Verbs, it is not very difficult to learn.

11. We will now look over the Continent to the Iſle of *Sumatra*, ten Leagues diſtant from the *Malacca* Shore; it extends from about 5° on this Side to 6° beyond the Line, containing 165 Leagues in Length, and about 60 in Breadth; ſo that thoſe who inhabit the Middle of the Iſland have the Equinoctial Line juſt over their Heads; whence it may be eaſily conjectured, that the Heats are exceſſive here, which, together with the vaſt Multitude of Lakes, makes the Air very unwholſome: This Defect is recompenſed by its vaſt Riches in Gold, Silver, Copper, Iron, and Braſs (whereof they make as good Artillery here as in any Part of *Europe*) beſides Rice, Millet, and Fruits in prodigious Quantities, even in the very Foreſts. Add to this its Wealth in Diamonds and other precious Stones, and its Product of Silk, Spices, Wax, Honey, Cotton, Camphire, Caſſia, and divers other medicinal Drugs. Of white Sandal they have whole Woods, and in the Centre of the Iſle is a burning Mountain, like that of *Veſuvius*, which they ſay is conſtantly ſupplied by a River of Pitch.

Th

The whole Iſland is divided into ten Kingdoms, of which thoſe of *Achen*, *Peder*, *Pacem*, *Camparam*, *Zande*, and *Manambe*, lying on the Sea-ſide on this Side the Line, are only known to Foreigners. Thoſe who have travelled thither, more for Profit than Curioſity, having made but little Search into its inland Provinces, of which the *Portugueze* give us an Account only of two, *viz.* that of *Andigidan* and *Arunan*. The *Dutch* have alſo diſcovered the Kingdom of *Polymbam* beyond the Line, where they have ſettled themſelves at preſent. The Kings of *Achen* are alſo Maſters of *Peder* and *Pacem*, which includes all the Northern Coaſts of the Iſle. The City of *Achen* is ſeated in a ſpacious Plain, upon a broad but ſhallow River, being ſcarce paſſable by ſmall Boats. It has neither Fortification nor Gates; their Houſes are built upon Piles, and covered with the Leaves of Cocoa-trees. The Royal Palace ſtands in the Centre of the City, which, being well paliſadoed and flanked, commands the whole Town, and has ſeven Gates. The Natives are of an olive Colour, and very flat faced; their Garments are only a Callico Gown, a Silk Shirt, and a Turban on their Heads of the ſame Stuff. The King is ſerved by Women and Eunuchs, and is a *Mohammedan*, as well as all the reſt of the Inhabitants near the Coaſt of *Sumatra*. They begin their *Lent* at the New-moon in the twelfth Month, which ends at the ſame Time in the next. They have no Corn, but Rice in great Plenty, as alſo Beeves, Buffaloes, Goats, and Sheep; the laſt of which nobody has the Privilege to breed except the King. They alſo abound in Oranges, Lemons, Bananas, Tamarinds, Batalas, Radiſhes, Spinage, and Lettuces. Their ordinary Drink is Water, but they make a kind of *Aqua Vitæ*, or Arrack of Cocoas.

The Iſle of *Sumatra* produces a peculiar Tree called *Singadi* by the *Malayans*, and *Arbor triſte de Dio* by the *Portugueze*. It is full of Branches with Knots, and ſprouts forth two Leaves like Plumb-leaves, except that they are ſmall like Sage, and are covered with a whitiſh Down: Each of theſe Leaves hath its Bud, which thruſts forth ſmall Heads, having four round Leaves; each Head produces five Flowers in a Cluſter, the fifth being exactly in the Middle; they are as white as Snow, of the Bigneſs of an Orange-flower, and blow in the Twinkling of an Eye, as ſoon as the Sun is ſet; and when it riſes again the next Morning, the Flowers, which have continued all Night, drop in an Inſtant. Thus the Tree continues till Sun-ſet again, when it opens, and produces the Flowers in the ſame manner as before, and caſts them again at the firſt Appearance of that Planet, which invigorates all other Vegetables. The Cocoas, of which there are four Kinds, are very common in this Iſland. The Tree which bears the Cocoa-Nuts grows very high, but not above a Foot Diameter in Bulk. It has not a Branch but at the Top, where it ſpreads like a Date-tree, and theſe don't produce the Fruits, which grow ten or twelve in a Cluſter out of the Body of the Tree. The Flower reſembles that of a Cheſnut. This Tree is of univerſal Uſe in the *Indies*. In the *Maldives* Iſlands they build whole Ships without any thing but what is furniſhed by the Cocoa-tree; the outward Rind affording them a kind of Hemp for their Cordage and Cables, and the Leaves with Materials for Sails, and the Covering of their Houſes; beſides that, they uſe them for the making of Umbrella's, Fans, Tents, Mats and Hats. The Fruit is of the Bigneſs of an Oſtrich's Egg, and the outward Rind, which reſembles that of our Walnuts when dried, affords the Hemp we ſpoke of before. If they gather it before the Nut is come to full Maturity, it affords about a Quart of very pleaſant Liquor, which, if kept in the Shell, by degrees turns to a kind of a Kernel, which becomes yellow, and is of a very good Taſte, and exceeding wholſome.

Their Toddy, or Palm Wine, they draw from the Tree whilſt it is in Bloſſom, and, pulling off the Flower, they faſten it to an Earthen Veſſel well ſtopped, into which runs a Liquor, reſembling in Taſte and Colour our Whey: This when boiled is called Toddy, and, ſet in the Sun, turns to Vinegar immediately; and, if diſtilled, makes a kind of *Aqua Vitæ*. The Pith of the Tree, as it is very white, furniſhes the *Indians* with Paper. The ſecond Kind is called by the *Portugueze Arrequeiro*, from the *Araca* it produces. The Bananas, or *Indian* Fig-tree, is alſo very common in this Iſle; it may rather be called a Shrub than a Tree, as having no Body, but grows to a Man's Height. It brings forth Leaves before it comes to a Foot high, but theſe wither and fall, and others ſprout forth in their ſtead, till ſuch time the Plant arrives at its full Growth, and the Fruit to its Maturity, which is in Shape and Colour like our Figs, being of a yellow green, which being gathered, and hung on a Nail, will ripen in four or five Days. In the Middle of the Leaves comes a Flower of a Violet Colour, of the Bigneſs of an Oſtrich's Egg, whence ſprouts forth a kind of a Branch not unlike a Cabbage-Stalk, loaden with a Bunch of Figs: One Stalk produces no more than one Bunch (but of near an hundred Figs) at a Time; but being cut cloſe to the Ground, another ſprings out, and bears Fruit in one Month, and continues to do ſo through the whole Year. The Leaves of the Tree are ſix Feet long, and a Foot and a half broad, and the Fruit ſeven or eight Inches long, and as big as a good Cucumber; the Figs are incloſed in Huſks, which are very nouriſhing, and eat inſtead of Bread.

The Pepper of *Sumatra* is, next to that of *Cochin*, the beſt of all the *Indies*; it is commonly planted at the Root of Trees, or propped up with Canes as we do our Hops; the Leaves are not unlike that of the Orange-tree, but ſomewhat leſs. The Fruit grows in little Bunches like Juniper-berries. It is green whilſt upon the Tree, but grows black after it is dried, which is done in *December* and *January*. The white Pepper does not grow in ſuch abundance here, and *Bengal* is the only Country that produces long Pepper. It is certain there is more Pepper conſumed in the *Indies* than in *Europe*, becauſe the *Indians* put Handfuls of it in their Sauces, but not beaten or ground.

12. The Iſland of *Java Major* is divided from *Sumatra* to the South-Eaſt only by the narrow Streight of *Sunda*: Its Length is fifty Leagues, and ſome fanſied it Part of the Continent which extends to the Streights of *Magellan*, commonly called *Terra Auſtralis*. *Julius Scaliger* was not in the Wrong of it when he called it the Epitome of the World; it being certain that there is no Animal, Fruit, Metal, or Drug, but what is found here in greater Plenty than in any Part of the Univerſe.

The Inhabitants deduce their Origin from the *Chineſe*; and, to ſpeak Truth, their large Foreheads and Brows, and little Eyes, reſemble much that Nation. Each Town of Note in *Java* has its peculiar Prince, and now they are all Sovereigns independent one of another. The Kings of *Bantam* and *Pallambuam* are at preſent the moſt potent, the laſt of which has given the Name to the Streight that divides the Iſles of *Java* and *Bala*. Ten Leagues to the North is the City of *Panarucan*, near which is a burning Mountain. The King of *Panarucan* and *Palambuam* are *Pagans*; but the King of the City of *Paſſaracan*, ſix Leagues from *Panarucan*, is a *Mohammedan*. Ten Leagues to the Weſt is the City of *Joartam*, noted for its convenient Harbour upon a River, where the Ships going from the *Moluccas* to *Bantam* commonly touch, to take in freſh Water and Proviſions. Upon the ſame River lies the City of *Gorici*. The City of *Surabaca* has its proper King, under whoſe Juriſdiction is alſo the City of *Brandam*, ſix Leagues thence to the Weſt. He keeps his Court at *Sidaya*, which is well fortified, but deſtitute of a ſafe Harbour. Ten Leagues more to the Weſt lies the City of *Taboan*, next to *Bantam* the moſt conſiderable of the Iſle, and five Leagues farther to the North-Weſt the City of *Cajam*. *Mandalicaon* is inhabited only by Fiſhermen. Five Leagues farther to the Weſt is the City of *Japara*, upon a Neck of Land, which runs out three Leagues into the Sea. Twenty-five Leagues hence, and forty-five from *Bantam*, lies *Matram*, or *Matavam*, a great City, and the Reſidence of a powerful King, who once pretended to the Sovereignty over all the reſt of the Iſland, and ſtill ſtiles himſelf Emperor of *Java*.

Five Leagues to the Weſt of *Japara* lies the City of *Pata*, and three Leagues farther that of *Dauma*, both under the Juriſdiction of the King of *Matram*, as well as that of *Tagal* in the ſame Bay. The next is the fair and ſtrong City of *Charabaon*, ſeated upon a River, by which you paſs to the Cities of *Daunago* and *Monucadon*, and ſo thro' the

Village of *Gacon* to the City of *Jacatra*, and thence to *Bantam*, the moſt conſiderable in the whole Iſland, ſeated at the Foot of a Mountain about twenty-five Leagues from the oppoſite Coaſt of the Iſland of *Sumatra*. Three Rivers riſe out of this Mountain, two ſurrounding its Walls, and the third paſſing through the Middle of it. The Houſes are miſerably built, and the Walls very wretched, as well as the Gates, though at every hundred Paces provided with a great Piece of Cannon, which are of little Uſe in a Place where the Curtains are not defenſible, and have, inſtead of Towers, only Scaffolds. The whole City has only three principal Streets, which are not paved, but ſandy, the Channels which run through them being very ſtinking and foul, which ſend forth a very nauſeous Smell all over the City. At each Corner of the Streets ſtand Guards, as alſo at the Priſon Gate near the Palace, and each Perſon of Note keeps a Guard of ten or twelve, for his own Security, in his Houſe. Their Houſes are meanly built upon Piles; they are commonly of Reeds and Canes, and the Partitions all of Bamboes, or Canes ſlit very thin. All the Foreigners here live without the City, and the Merchants meet daily in one or other of the three great Market-places belonging to this City.

The *Bazar*, or Exchange, is chiefly frequented by Foreigners, who meet there at Break of Day, and continue till Nine of the Clock. The ſecond Market-place faces the grand Moſque, where the Women buy and ſelf Pepper, Betel, Areca, Bananas, Melons, Chiches, *&c.* and white and yellow Sandal-wood. The Armourers, who ſell Arms, Guns, Piſtols, Swords, *&c.* ſtanding higher up to the Right; and to the Left the Confectioners with their Sweetmeets: Near them is the Place where they ſell all ſorts of Beans; and next to that the Onion Market, where the Clothſellers and Uſurers have their Meeting. Hard by this you ſee the Poulterers, who deal in Geeſe, Kids, Pidgeons, Parrots, and all ſorts of tame Fowl. Thence you ſee three ſeveral Ways, one leading to the *Chineſe* Shops, the ſecond to the Herb-market, the third to the Shambles. Among the *Chineſe*, to the Right, the Jewelers, who deal in precious Stones, have their Station; and the *Bengalians* with their Toy-ſhops on the Left. The Sale of all theſe Things laſts only till Nine o'Clock, when the Markets for all ſorts of Proviſions are opened before the Palace, and about Noon the *Chineſe* Market begins. The City of *Tuban*, or *Tubaon*, challenges the next Place after *Bantam* in the Iſle of *Java*, being ſtronger than all the reſt, and though not ſo large yet better built than *Bantam*. Its Palace is very ſpacious, and remarkable for the many Apartments made here for divers ſorts of Beaſts that are kept with more than ordinary Care; ſuch as Elephants, Fighting-cocks, and Parrots, the laſt of which are much more beautiful than thoſe tranſported into *Europe*, becauſe they are too tender to endure the Fatigues of ſo long a Voyage. Their chief Traffick lies in Pepper, which they exchange in the Iſle of *Baly* for Calico, Cotton, and Silk, and carry thoſe Commodities to *Banda*, *Ternate*, and the *Philippine* Iſles, to truck for Cloves, Mace, and Nutmegs.

The Natives live moſtly upon Fiſh. They have no other Garments but a Piece of Calico wrapped round their Loins, except that the better Sort wear a kind of looſe Camblet Coats, reaching only to their Thighs. They are great Lovers of Horſes, their Saddles being made like our great Saddles. The Natives inhabiting the inland Countries of *Java* are all *Pagans*, and believing the Tranſmigration of the Soul, eat neither Fiſh nor Fleſh. To the South there are a few *Mohammedans* of the *Turkiſh* Sect. They have two great Faſts, the Chief of which is upon the 5th of *Auguſt*. There are few among the *Javans* but what have three or four, nay, ſometimes ten or twelve Wives, beſides their Concubines, who are obliged to wait upon the Wives, though their Children have the ſame Prerogative as the legitimate Offspring. Their Children go naked, the Girls having only a Plate of Silver or Gold to cover their Privities. They marry at eight, nine, or ten Years of Age. In their Marriages they uſe but few Ceremonies; certain Poles are ſtuck on the Wedding-Day before the Houſe of the Bride and Bridegroom, with Taſſels of white and red Cotton, and after Dinner the Bridegroom goes on Horſeback through the Town, where the Slaves, who are Part of his Dowry, go to meet him, and bring him ſome Preſents.

Women of Faſhion are kept under ſuch Reſtraint that they are not permitted ſo much as to ſee their own Sons in their Chambers; neither does a Man ſpeak, or approach a Woman of Rank when ſhe goes abroad, but every body gives her Way, even the King himſelf. They are known only by their Retinue, being for the reſt clad after the common Faſhion, *viz.* in a kind of Calico or ſilk Petticoat, reaching down from the Breaſt to the Middle of the Leg. They wear neither Stockings nor Head Ornaments, but tie their Hair upon the Crown, except it be at Weddings, or any other Solemnity, when they have Coronets on their Heads, and Rings and Bracelets upon their Fingers, and about their Arms. They are ſo much addicted to Cleanlineſs, that they never do any thing without waſhing and bathing themſelves, which is one of their chief Employments, and which they look upon as a proper Means to intice their Huſbands to Venery, in which they ſtrive to outvie one another.

In their Courts of Judicature, the Plaintiff and Defendant are obliged to plead both their own Cauſes. Their Puniſhment of Criminals is to tie them to a Poſt, and ſtab them with a Dagger. Foreigners have this Advantage, that provided they can make their Peace with the Party complaining, they may redeem themſelves from Death, except in the Caſe of premeditated Murder. The King's Council, which conſiſts ſometimes of five hundred Perſons, meet by Moon-light under a great Tree, where they continue till the Moon ſets. The King, when preſent, ſits in the Middle. The Natives of *Java* are a proud, perfidious, and cruel Generation, and ſo ſtubborn, that ſuch as know they have deſerved Death will rather be killed than taken. Their Hair, which is very long, is generally of a Cheſnut Colour. They have broad flat Faces, and large Jaw-bones and Eye-brows, little Eyes and thin Beards, are for the reſt middle-ſized, but very ſtrong Limbs. They ſeem not to want Courage were they bred up to all the Advantages of our modern Arms, but they are contented with their Pike, Battle-ax, Broadſwords, and a Dagger. Their Bucklers are of Wood, and ſometimes of boiled Leather. They wear alſo Armour, the Pieces of which are joined together with iron Rings. Their Soldiers receive no Pay in Time of Peace. They have a Way of blowing ſmall poiſoned Arrows through Trunks, by which the Wound is made incurable.

But thoſe inhabiting upon the Strait of *Sunda*, being tranſplanted thither from *Paſſarvaſe*, and living under their own King, are much more honeſt and open-hearted. The Grounds of *Java* are either farmed out by the King, or Lords, to certain free People, or cultivated by Slaves, and produce Rice, Pepper, and Cocoa. Some Slaves here take their Maſters Trees, and other Commodities, at a certain Rate, which they ſell to the beſt Advantage they can; others walk abroad for their Maſter's Profit at a ſet Rate *per Diem.* Others maintain themſelves, and work alternately, ſix Days for their Maſters, and as many for themſelves. They commonly adulterate their Pepper with black Gravel, as they do all other Commodities they ſell to Strangers, being very crafty in their Commerce; though very few rich Merchants venture their Perſons on any long Voyage, but traffick, like our *European* Merchants, by the Aſſiſtance of Factors. Bonds and other Securities are written upon the Bark of Trees, the Characters being engraven with a ſort of Bodkin, which is either rolled up afterwards, or laid together four-ſquare, betwixt two Boards, which they have a Way to tie neatly together with Packthread; ſometimes they uſe *Chineſe* Paper.

They have a Language peculiar to themſelves, but the *Malayan* is moſt in Uſe here, and the *Arabian* is uſed by the *Mohammedans*. The Traffick of the *Perſians* that live here is precious Stones, Stuffs, and Drugs, and the *Arabians* and *Banjans* exchange their Commodities chiefly for *China* Ware. Thoſe of *Guzerat* live for the moſt Part upon Fiſhing; all thoſe Foreigners are clad after the ſame Faſhion, in a Calico Garment, with a Turban of the ſame Stuff. At their Arrival they purchaſe a Woman, who is to ſerve for all Uſes. At their Departure they diſpoſe of her again, but muſt make Proviſion for the Children, if they leave any behind. But the *Chineſe* are of all Foreigners here the moſt induſtrious in their Trading, being looked upon in the ſame Light as the *Jews* in *Europe.* Their main Buſineſs is to foreſtal and buy up the Pepper in the Country, againſt the coming of their Fleet to *Bantam* (which conſiſts commonly in ten Ships of 50 Tuns each) in *January.* Theſe bring in a ſort of wretched Money called *Pity* by the *Javaneſe*, and *Cas* in the *Malayan* Language, being a Mixture of Lead and Braſs, ſo brittle, that if they fall upon the Ground they certainly break. They are made in the City of *Chincoa* in *China*, having each a four ſquare Hole in the Middle, through which they ſtring them upon Straw. It paſſed at firſt very current in *Java*, but ſince this Baſeneſs has been diſcovered it goes at a very low Rate. The *Chineſe* ſell their Porcelain here at cheap Rates, and bring alſo Silk, Sattin, and Damaſks of their own Manufactory, which they exchange for Pepper, Lacque, Indigo, Sandal Wood, Nutmegs, Cloves, Tortoiſhells, and Ivory. They have neither Temples nor Prieſts at *Bantam*, but they have both at *Panarucan.*

Java abounds both in wild and tame Beaſts. The Foreſts are filled with Elephants, Rhinoceroſes, Leopards, and Tygers, which make them very unſafe, and is the Reaſon why Frankincenſe, Maſtich, Myrrh, and Benjamin (which is better here than in any other Place) are not gathered in ſo great Quantities, the before-mentioned Beaſts, as well as the Serpents, Lizards, and Salamanders, making the Foreſts ſo very dangerous to paſs. The Hogs here are without Briſtles, but their Bellies hang down to the Ground. The Rivers are very well ſtocked with Fiſh, there having been Oyſters ſeen in thoſe Parts that weighed 300 Pounds, which would ſeem incredible if there were not to be ſeen to this Day two Oyſter-ſhells in the Duke of *Holſtein Gottorp*'s Cabinet, which *Olearius*, in 1675, bought of a Sea-Captain's Wife at *Enchuyſen*, and weighed 462 Pounds. Deer, wild Goats, and Boars, are likewiſe here in vaſt Plenty, but are not eaſily to be taken, by reaſon of the Unpaſſableneſs of the Woods, and the Unſkilfulneſs of the *Javaneſe* in the Uſe of Fire-arms. The Rivers feed alſo Abundance of Crocodiles; the *Chineſe* tame, fat, and eat them for a peculiar Dainty. Their Civet is not ſo white nor well ſcented as that of *Guiney.* They have two ſorts of tame Fowls, one like thoſe of *Europe*, the other of the *Indian* Breed, wild and furious; ſome have black Fleſh, but notwithſtanding this they are very good Food: The Rhinoceroes is in the ſame Eſteem with them now-a-days, as the Unicorn was with the Ancients, his Fleſh, Horn, Blood, and Teeth, nay even his Dung, being applied to medicinal Uſes.

They have alſo Ants here of a much larger Size than ours, they ſpoil every thing they come at. They have a certain kind of theſe Creatures reddiſh, and of the Length of a Man's Finger; but theſe live in the Fields upon the Barks of Trees. Among the Fruit-trees of *Java* the *Arequeco*, which bears the *Areca*, is none of the worſt; it is a Species of the Cocoa, but leſs in Bulk, and with narrower Leaves. The Fruit reſembles a Date incloſed in a Huſk, which falls off when it ripens; it is without Taſte, but taints the Lips and Teeth of a black Colour. The *Indians*, after they have mixed it with a little Lime, wrap it up in a Betel Leaf, and ſo chew it, looking upon it as a good Remedy againſt the Scurvy. It will cauſe in ſuch as are not uſed to it a Dizzineſs in the Head, but it ſoon paſſes over. The *Mango* is a Fruit growing upon a Tree not unlike our Walnut-trees; it is ſomething like our Peaches in Bigneſs and Colour, being of a red and green. The Shell incloſes an Almond, which is of a grateful Taſte when roaſted in the Aſhes; they pickle them whilſt green, and they are accounted a good Remedy againſt the Worms and Looſeneſs; the wild ones are rank Poiſon, which kill without a preſent Antidote.

The *Ananas* grow on a Shrub with Leaves like a *Sempervivum*; is green at firſt, but when ripe turns to the Orange Colour. Its Shape is like a Pine-apple, yellow within, but they are dangerous if uſed in Exceſs, tho' the Taſte is very pleaſant; they are not much larger than a good Lemon. The Stalk is like a Thiſtle, every one bearing but one at the Top; it is very apt to over-heat, and occaſion Fevers. The Fruit called *Samaca* is alſo of the Bigneſs of a Citron, juicy and tart, with black Kernels; the Leaves, which are like to but ſomething leſs than the Lemon-tree, pickled with Salt and Sugar, are accounted a good Remedy in Fevers and Inflammations, as we do our Tamarinds, which alſo grow in great Plenty here. The *Tabaxir, i. e.* a white frozen Liquor, is found in the Knots of certain Canes, of the Bigneſs of a Poplar, with ſtrait Branches and Leaves not unlike thoſe of the Olive-tree, but ſomewhat longer; it is like Starch, and in ſuch Eſteem with the *Perſians* and *Arabians* for the Virtues they attribute to it in the Cure of Fevers and Bloody-fluxes, that they buy it at a very dear Rate. Theſe Canes are ſo big that the *Indians* cleave them aſunder, and make Boats of them, leaving a Knot on each End. The Iſle of *Java* produces alſo another Fruit called *Durions*, not to be met with any where except here and in the *Moluccas.*

The Tree called *Batan* is of the Size of our Apple-trees; the Bloſſom of a pale yellow Colour, the Leaves half a Foot long, and three Inches broad, of a very lively green on the Inſide. The Fruit, both for its Colour, Bigneſs, and outward Diviſion, reſembles our Melons, but within is divided into four Partitions, which being again ſubdivided into two or three leſſer Cells, contain the Fruit, which is as big as a Pullet's Egg, and of the moſt luſcious Taſte in the World. Its Stone is rough, and as big as that of a Peach. It will not keep, and therefore muſt be uſed as ſoon as the outward Huſk opens. One thing is very obſervable, that if you lay but a few Betel Leaves near a whole Room full of *Durions*, they will all rot immediately; and if you have ſurfeited yourſelf with the exceſſive eating of this Fruit, two or three Betel Leaves applied to your Breaſt, or one of the ſame Leaves eaten, will give you Eaſe, and you may digeſt them without any farther Danger. A *Lantor* Tree, another Species of Cocoas, has Leaves five or ſix Feet long, and ſo ſmooth that the *Javaneſe* uſe them inſtead of Paper. *Cubebs* are found no where in the *Indies* but in the Iſle of *Jaca.* They grow upon a Tree not unlike the Pepper, and in Bunches. The *Javaneſe* hold them in ſuch Eſteem that they will not ſell them unboiled, nor will allow ſo much as one Plant to be tranſported into other Places. The *Magoſtan* is much of the Taſte of our Sloes, and grows wild in the Highways of *Java*; and the Herb *Talaſſe*, bearing neither Flower nor Fruit, is uſed green in Sauces, its Virtue being to fortify the Stomach: The Fruit *Java* is of the Bigneſs of a *Citrul*, having a rough Rind, within which are certain Nuts, the Kernels thereof being roaſted, are a preſent Remedy againſt a Looſeneſs. It is obſervable that this Fruit often changes its Taſte; ſometimes it reſembles a Melon, ſometimes a Peach, and at other Times a ſweet Lemon. The Nut is as big as a Date, but is not to be uſed raw, becauſe it occaſions vomiting and griping in the Guts; but roaſted, it is both pleaſant and good, and reckoned a great Reſtorative.

On the Side of the Iſland towards the Strait of *Sunda*, you meet with Abundance of wild Cinnamon, but it is never tranſported into foreign Parts. The *Carcapuli* are a kind of *Indian* Cherries, white, dark, red, and of a Carnation Colour; the Trees and Fruit are like thoſe in *Europe*: The *Coſtus Indicus*, called *Pucho* by the *Malayans*, reſembles in every reſpect, both in Height and Flower, the *European* Elder-tree, wherewith the *Perſians* and *Arabians* drive a conſiderable Trade, as they do alſo with the *Calamus Aromaticus.* There is a yellow and ſpungy Matter in its Stalk, which ſome Women make uſe of to appeaſe Fits. The *Zerumbet*, called *Canlor* by the *Malayans*, is like Ginger, except that it has ſomewhat larger Leaves; it is preſerved or dried like Ginger, but valued above it. Of *Galanga* there are two Kinds, the leſſer is brought from *China*, and is preferable to that of *Java.* The Herb grows wild, about two Feet high, with a white Flower and pointed Leaves; the *Javaneſe* uſe both the Root and Herb in their Sallads; the firſt are knotted like Canes, and of a biting Taſte, and good Scent. *Benjamin* is a Gum of a Tree reſembling a Lemon-tree; whilſt they are young, the Gum is white, but as they grow old it changes black. It is by the *Moors* called *Lovan Javy, i. e.* the

Juice of *Java*. This Iſle produces Abundance of Sandal-trees, which are of the Bigneſs of our Walnut-trees, their Fruit reſembling our Black-cherries, but is inſipid; but the white and yellow Sandal, which are much preferred before the red, grow in the Iſles of *Timor* and *Solor*; of this the *Indians* make a Decoction wherewith they rub their Bodies, looking upon it as a great Reſtorative. Ginger they have alſo in Abundance here, which they eat either green or preſerved, but never dried. *Anacardium* is uſed by the *Javaneſe* as an approved Remedy againſt the Aſthma and Worms; they boil it in Milk, or pickle it like Olives. The Wood called *Pala de Cuebra* by the *Portugueze*, of a pale yellow Colour, is uſed by the *Indians* in Wine and Water againſt Fevers and Stings of Serpents.

That by the *Indians* called *Calamba*, and by us *Lignum Aloes*, grows not only in *Java*, but alſo in *Malacca*, *Sumatra*, *Cambaya*, and other Places. It is not unlike to, but ſomewhat bigger than an Olive-tree, and whilſt green, has no Scent; but as ſoon as it dries, its Scent is perceived. Its Goodneſs is known by its Weight and Colour, which muſt be brown, from whence iſſues an Oil if held to the Fire; the wild *Calamba* is uſed chiefly in Funerals, for the Burning of the dead Corpſe of the *Indian* Prieſts and Princes, Abundance of Lacque is ſold at *Bantam*; but the choiceſt comes from *Pegu*. There certain winged Ants ſuck the Gum of the Trees, which they afterwards caſt upon the Boughs, as the Bees do the Honey and Wax; theſe are cut off, and ſet in the Sun to dry till the Lacque falls off, to which they give what Colour they pleaſe, and is uſed in Sealing-wax, and Lacque Works of China and Japan. The other Drugs of *Java* are *Pody*, which they uſe againſt Winds and Rheums. *Flors*, a Root they dye their Calicoes with. *Canjuapi* is another Root with which they rub their Bodies. *Samparantam* is another Root ſtronger than Ginger, but bitter. *Pantibu* is accounted a ſovereign Remedy againſt Fevers, and upon that ſcore ſold at a dear Rate. *Gotogamber* is a Fruit reſembling Olives, good againſt the Tooth-ach. *Ganti* is altogether like Ginger, but much dearer; they uſe it to rub their Bodies with. *Saſam* is the Name they give Muſtard-ſeed. *Doringi* is given to the Children as ſoon as they are born. The Root *Gallam*, growing in watery Places, is a great Cooler. The Fruit *Tianco* is taken at all Times whenever they find themſelves indiſpoſed. *Maidian*, *Maya*, and *Coroſſani*, are uſed in their Liquors, as having an intoxicating Quality. *Spodium* is the Aſhes of a Tree wherewith they rub their Bodies. They do the ſame likewiſe with the Flower called *Sary*, and the Roots of *Targary*, *Suraban*, and *Sedowaya* are appropriated to the ſame Uſe. *Sambaya* is a Fruit of the Bigneſs of an Acorn, which being accounted a moſt ſovereign Remedy againſt Poiſon, and eſpecially that of venomous Beaſts, is ſold at a very high Price. *Jalava* is of the ſame Uſe as *Sambaya*. The Herb *Paravas* is cooling, but ſcarce and dear. *Tomonpute* is a Root uſed againſt the Inflammations of the Spleen. The *Conduri* are poiſonous Berries, but are uſed to weigh Gold and Silver.

The *Javaneſe* being exaſperated by the ill Uſage they often received from the *Portugueze*, would not for a long time permit any Strangers to have any Settlements there, till at laſt the Hopes of Gain engaged the Kings of *Bantam* and *Jacatra* to let the *Engliſh* and *Dutch* ſet up their Factories there under certain Conditions; which being but ill obſerved by the *Indians*, the *Dutch* took this Opportunity of fortifying their Settlements at *Jacatra*, and that with ſo much Expedition, that the *Indians*, finding themſelves not in a Condition to force them thence, engaged with the *Engliſh* to aſſiſt them in the Expulſion of theſe bold Strangers. In the firſt Sea Engagement, *January* the 2d, 1619, near *Bantam*, the *Dutch* had the worſt; upon which the King of *Jacatra*, in Conjunction with the *Engliſh*, beſieged and attacked their Forts for ſix Months, till the *Dutch* Fleet being reinforced, obliged the *Engliſh* to quit both the Fort and the Straits of *Sunda*, and landing their Men, took the City of *Jacatra* by Storm, and put all to the Sword: The next thing they had to do was to complete their Fortifications, which they did ſo effectually, that in a little Time they made them very regular, with four Baſtions of Free-ſtone, well intrenched and palliſadoed, and defended by a proportionable Number of Half-moons, Redoubts, &c.

The King of *Matram* laid ſiege to it twice ſince, *viz.* in 1628 and 1629, but was forced to raiſe it as often; ſince which Time the *Dutch* remain in the quiet Poſſeſſion of their Traffick here with the *Chineſe*, *Japaneſe*, and *Siameſe*, and other neighbouring Nations, and receive Ten *per Cent.* Cuſtom upon all Commodities imported or exported, each Stranger inhabiting in the City of *Batavia* being obliged to pay a certain Monthly Tax proportionable to what Profits they make, which is very great, and conſequently the Tax not in the leaſt burthenſome; for a Porter, who perhaps gets two Rials a Day, does not pay above one and a half in the Month. The City of *Batavia* being for its convenient Situation in a Bay, which is ſheltered by many Iſlands from the Violence of the Winds, one of the beſt Roads in all the *Indies*, and the chief Place of Commerce belonging to the *Dutch* in thoſe Parts.

To the North-Weſt from *Java*, betwixt that and the Iſle of *Borneo*, lies the Iſland of *Madura*, ſubject to its own Prince, whoſe Reſidence is in the City of *Araſſabaya*; as by reaſon of its Barrenneſs it is a Place of no Trade, they live upon Piracy, eſpecially upon the Coaſt of *Pegu*. The Iſle of *Baly*, lying to the Eaſt of *Java*, has not above twelve Leagues in Circuit; but to the South jets out a Cape a great way into the Sea. The King reſides in the City, bearing the ſame Name with the Iſle; the Inhabitants are *Pagans*, and ſo ſuperſtitious, that they worſhip the firſt thing they meet with in the Morning; they are very black, with curled Hair, but wear no Beards any more than the reſt of the Iſlanders in thoſe Parts, and wear the ſame Garments; for their Women, who have an Averſion to Beards, oblige them to pull out the Hair by the Roots. They have each ſeveral Wives, whence this Iſle is ſo populous, that about ſix hundred thouſand living Souls are accounted within its Compaſs, though Abundance of Slaves are ſold from thence every Year.

They live for the moſt part upon Huſbandry and Weaving, becauſe they abound both in Cotton and Rice, but allow none to be tranſported; they are alſo ſufficiently Provided with Oxen, Buffaloes, Goats, and Hogs, and ſome Horſes, but very ſmall ones. They have whole Foreſts of Oranges, Lemons, and Citron Trees, which furniſh them with vaſt Stores of Pheaſants, Partridges, Peacocks, and Turtles, as their Marſhes do with Ducks and other wild Fowl. It produces no other Spice but Ginger; but they have ſeveral other Drugs, and a certain Fruit growing in a Shell like a Cheſnut, white, and of a delicious Taſte; and is beſides this an approved Remedy againſt the Scurvy. All along the Coaſt the Seas furniſh them with incredible Plenty of Fiſh, which, next to Rice, is their main Subſiſtence. They have but little Commerce with Strangers, except that they ſend now-and-then ſome of their Calicoes in ſmall Veſſels to the Iſle of *Java*. In this Road moſt Ships bound for the *Moluccas* take in freſh Water and Proviſions, which are to be bought here at a very low Rate. They have Iron, Copper, and Gold Mines; but the laſt are not broke up or wrought, for fear the Fame of their Riches ſhould draw thither ſome foreign Nation or other that would without Queſtion reap the Fruits of their Labour. Their King, whoſe Title is *Quillor*, i. e. High-Conſtable, is in great Veneration among his Subjects, and governs his Dominions by certain Governors appointed for each Province. They perſiſt very obſtinately in Paganiſm, as alſo in that diabolical Cuſtom of Women burning themſelves with their Huſbands.

The Iſle of *Borneo* lies farther North than *Java*, one of the largeſt in thoſe Seas, extending ſix Degrees to the North, though its greateſt Part lies on this Side of the Equinoctial Line. Some make it four hundred Leagues in Compaſs; but the *Dutch* with more Probability aſſign it no more than two hundred and fifty Leagues in Circumference; its chief Places are *Borneo*, *Succidava*, *Lanoa*, *Sambas*, and *Bangbemiſſin*. The City of *Borneo* is like *Venice*, built upon divers ſmall Iſlands, interſected with Channels, there being no Paſſage there but by Boats, according to the Account the *Dutch* have given of it; it contains about two thouſand Houſes This Iſle produces the beſt Camphire, as alſo

Gold, and Bezoar; which Stone breeds in a Maw of a Sheep, or Goat, within the Subſtance of which is alſo found a Tuft of Graſs. It is ſmooth, inclining to a greeniſh Colour, its Goodneſs being to be tried by its Weight. In the Country of *Pan*, near *Malacca*, is a certain ſmooth and ſlippery Stone found in the Gall of certain Hogs, of a reddiſh Colour and bitteriſh Taſte, which being ſteeped only in cold Water affords a moſt effectual Remedy againſt all Poiſon and infectious Diſtempers. The Iſle of *Borneo* furniſhes alſo Diamonds, Sapan-wood, uſed by the Dyers, Brazil-wood, Wax, Pepper, Frankincenſe, Maſtich, and divers other Gums. The Iſle is not deſtitute of good Harbours, among which that of *Borneo*, at the Mouth of a very good River, is the largeſt and moſt commodious. Their Cities are not very populous, and their wooden Houſes ſo ſlightly built that they remove them at Pleaſure. They are accounted very ingenious, but will rather live by Piracy than Induſtry, unto which they are ſo much addicted that their Veſſels are ſeen upon the Coaſt of *Pegu* four hundred Leagues thence. They uſe Swords, Bucklers, Lances, Darts, and Pikes. The King and moſt of the Inhabitants near the Sea-ſide are *Mohammedans*, but deeper in the Iſland they are *Pagans*. They are black, and well ſet, wear Calico wrapped about their Loins, like moſt of the other *Indians*, and Turbans on their Heade.

13. The Iſle of *Celebes* lies betwixt that of *Borneo* and *Moluccas*, under the Equinoctial Line. *Mercator* would have it to be one of theſe Iſlands called *Sindas* by *Ptolemy*. Its capital City is called *Macaſſar*, which lies in the moſt Southern Part of the whole Iſle, 5° 17′ beyond the Line. The Inhabitants are ſo induſtrious, that they leave not an Inch of Ground unmanured, and ſow with Rice what they ſtand not in Need of for their Cattle and Cocoa-trees. It is not long ſince they embraced *Mohammediſm*. They much reſemble the *Siameſe* and thoſe of *Pegu*, eſpecially in their Faces, and are of a comely Stature. The Women dreſs their Heads like thoſe of *Malacca*, and in the Street have their Breaſts open, and Breeches reaching down to their Knees. The North-weſt Winds, which blow here from *November* to *March*, make the Shore very unſafe during that Time, and the continual Rains overflow the flat Country, which is the Reaſon that moſt of their Houſes are built upon Piles, nine or ten Feet above the Ground. There are two Kings more, *viz.* one of *Telbo*, and the other of *Battergoa*, in this Iſland.

The Iſle of *Gilolo*, by the *Portugueze* called *Bato China de Moro*, produces Plenty of Rice and *Sagu*, Tortoiſes, *&c.* The Inhabitants are very well limbed, but barbarous, and not many Years ago were Canibals. The Iſland of *Amboyna* is ſo near the *Moluccas* that ſome have accounted it among their Number; its Circuit is twenty-four Leagues. The chief City has to the North-weſt of it a very fair Bay of ſix Leagues, where there is ſafe Anchorage, and good Shelter for Ships againſt the Wind; the Bay enters ſo deep into the Country, and the Sea on the oppoſite Side cuts ſo deep within the Land, that the Iſle is very near divided into two, there being only a ſmall Iſthmus of a hundred and twenty Fathom left, by which it is joined together. The leſſer Part of the Iſle, wherein is the Caſtle of *Amboyna*, contains about a hundred and twenty ſmall Towns, and the greater but four Towns and about ſeven Villages. The Inhabitants were heretofore Savages and Canibals, and applied themſelves to no kind of Agriculture, which made the Country appear a Wilderneſs; but of late Years they have applied themſelves to cultivating the Ground, which being very fertile produces great Plenty of Oranges, Lemons, Cocoas, Bananas, Sugar-Canes, beſides Cloves. They continue ſtill to be ignorant People, the only Skill they ſhew being in the Management of a Dart, which they uſe with ſo much Dexterity, that at ſixty Paces Diſtance they will hit a Crown-piece. They are famed for their Cakes made of Rice, Almonds, and Sugar, which the Inhabitants of the adjacent Iſlands take againſt the Bloody-flux; for their Rice-Bread, made in the Shape of our Sugar-Loaves; and for their ſmall Gallies, which in ſwiftneſs exceed any in *Europe*.

It was firſt diſcovered by the *Portugueze* in the Year 1515; but the *Dutch* having afterwards alſo got Footing there, the *Portugueze* being reſolved to ſpoil their Commerce, ſet upon five *Dutch* Veſſels in the Port of *Banda*; but being repulſed with Loſs, revenged their Diſgrace upon the *Amboynians*, who were ſuſpected to favour the *Dutch* in thoſe Parts. *Stephen Verhagen*, two Years after, *viz.* on the 21ſt of *February* 1603, landed a certain Number of Soldiers near *Amboyna*, in order to attack the Caſtle; but whilſt he was landing his Artillery the *Portugueze* Governor, not daring to ſtand the Shock, ſurrendered the Place without a Cannon being ſhot, though the Garriſon conſiſted of ſix hundred Men. Before *Mohammediſm* was introduced in the Iſles of *Java*, *Amboyna*, and the *Moluccas*, by the *Perſians* and *Arabians* trading hither, they were all *Pagans*; ſome of them continue ſo ſtill; others, though circumciſed, yet perſevere in their *Pagan* Superſtitions.

Nothing is more frequent here than to worſhip the Devil, though they are not able to tell you what he is. They affirm him to be an Aereal Demon; whence they give him the Name of *Lanithe*, i. e. Air, yet make him ſubordinate to another called *Lanthila*, as well as to him they call *Tautay*, who is a Degree lower than *Lanthila*. They give them one general Name, *viz. Tito*, i. e. Evil Spirits, and ſay that they appear to them in human Shape, when they are to produce their Oracles, and reveal unknown Things to them. To do this twenty or thirty of them aſſemble, and by the Help of a ſmall Drum called *Tifa*, ſome Wax Candles, and certain Conjurations, as alſo a Sacrifice of Meat and Drink, make them appear before them. As they are of Opinion that what Ill befalls them comes from the Devil, they are very careful not to neglect his Worſhip; for which Purpoſes they have Wax Candles lighted in their Houſes, where they ſacrifice Meat and Drink to theſe phantaſtick Beings.

Their Circumciſion is alſo different from that of the *Jews* or *Mohammedans*; for inſtead of cutting off the Prepuce, they only ſlit it, and that not till they are twelve or thirteen Years of Age. Their Marriages are ſoon made, and as ſoon diſſolved; for every thing being agreed upon they uſe no farther Ceremonies, except that the Bridegroom's Father gives a ſmall Preſent to the Bride, in lieu of which her Father makes the Wedding Feaſt, where they have their Muſick and Dancing. If a Wife have a mind to part from her Huſband, ſhe has no more to do than reſtore the Preſent; which done, ſhe pours Water on her Huſband's Feet, to intimate, that thereby they are both cleanſed from all Impurities they have contracted during their Marriage, which is thereby diſſolved, and either Party at liberty to provide themſelves another Spouſe as ſoon as they pleaſe When they are to take a ſolemn Oath Water is put into a Diſh, into which having caſt Gold, Earth, and a Leaden Bullet, they dip into it the Extremity of a Muſket-Barrel, the Point of a Halbert, Sword, Knife, or ſome other Weapon, and ſo give the Diſh with Water unto him who is to take the Oaths, to put him in mind that all which has been caſt or dipped into the Water, will be inſtrumental to his Deſtruction if he forſwear himſelf. They have among them a certain Gang who under Pretence of Witchcraft do Miſchief to their Neighbours, either by Poiſon or other Means; they are called *Zevangi*; but whenever they are found out, they are ſure to meet with very ſevere Puniſhment.

The Natives of *Amboyna* are naturally ſtupid, timorous, and void of Underſtanding; they commonly bury their Riches for fear of being robbed; and ſuch is their Simplicity that they are not to be brought up to any Trade. They are ſo far from any Knowledge that they have not ſo much as any Characters among them. All they apply themſelves to is Fiſhing, and cultivating their Gardens, upon the Fruit of which they live very miſerably, though it is obſervable that they are generally ſtrong and well-proportioned. The *Dutch* have three Forts in this Iſle, *viz.* the Fort *Cambella* or *Victoria*, and thoſe of *Hiten* and *Louro*.

The Iſle of *Banda*, which is three Leagues in Length and one in Breadth, lies twenty-four Leagues from *Amboyna*, extending from North to South. It has ſome new Towns, the chief of which is *Nera*. The Inhabitants are very zealous *Mohammedans*; as they are always at War with ſome of their Neighbours, ſo they keep a conſtant Guard along their Coaſts. Their Arms are a Scymitar and wooden Buckler, four Feet long, in the managing of which they are very expert, as being trained up to it in their Infancy.

They make uſe alſo ſometimes of Fire-arms, but what they put their chief Truſt in is the Lance, being eight or ten Feet long, which they caſt with ſuch Dexterity and Strength, that they will run a Man through with it: Of theſe they commonly have two, which, after they have caſt, they betake themſelves to their Swords. They make uſe of a kind of light Gallies, having on each Side, juſt above the Surface of the Water, two Seats like Wings, where the Slaves are ſet to row. There are two allotted for each Seat, every one with his Oar, which being made like a hollow wooden Shovel, they thruſt it as far as they can into the Sea, and in drawing it back, turn it about their Heads with ſuch a Slight and Swiftneſs, that there are but few Ships that can overtake them with all the Sail they can make.

The Natives of *Banda* live very often to one hundred and twenty Years of Age. When they inter their Corps they are carried by twelve Perſons upon a Bier or Coffin, covered with Calicoe, the Men firſt, and the Women following it; after it is buried, they return to the Houſe of the deceaſed, where they feaſt together, order Incenſe to be burnt over the Grave for twenty-four Hours, and ſet up a burning Lamp at Night in a Hut made for that Purpoſe. The Men lead a very idle Life, leaving all Buſineſs to the Management of the Women, who are employed in breaking the Nutmeg-ſhells, and drying the Nut and Mace, the chief Thing they rely on for their Maintenance. As far as ever I could learn, the moſt excellent Spice grows no where but in the Iſle of *Banda*, and the ſix following adjacent Iſlands, which make up the Archipelago called *Banda*, by the Inhabitants, *viz. Gunaxi*, *Pera*, and *Lanter* (which is the beſt Road for Veſſels), *Puloway*, *Pulaim*, and *Bayſingin*.

It is next to a Paradox to believe that theſe ſix ſmall Iſlands ſhould be able to produce ſuch prodigious Quantities of Nutmegs as are ſufficient for the whole World, unleſs it be conſidered, that beſides a few Durions, Bananas, Oranges, and Cocoa-trees, the Iſlands are covered all over with them like one continued Foreſt, the Trees of which are loaded with Flowers and Fruits, which are gathered three times a Year, *viz.* in *April*, *Auguſt*, and *December*; but the beſt are gathered in *April*. The Tree itſelf reſembles our Peach-tree, the Leaves whereof are ſomewhat leſs and round. The Fruit is encloſed within a Huſk as thick as that of our Wallnuts, which, being opened, you ſee a Leaf very thin upon a hard Shell, which may be diſcovered through it. This Leaf is the Flower of Nutmeg or Mace; and to come to the Fruit, you muſt break the Shell. While the Nut is green, the Flower is of a Carnation Colour, which, after it is parted from the Shell, turns to an Orange Colour. It makes a moſt excellent Preſerve, if done with Salt and Sugar. The Inhabitants make a good ſtomachick Ointment of Nutmegs or Mace, powdered and mixed with the Oil of Roſes. The Inhabitants don't amount to above 12000 in all, amongſt them not above 500 fit to bear Arms; yet are they ſo mutinous and ſtubborn, that to bridle them the *Dutch* have two Forts here, called *Naſſau* and *Belgica*, where Veſſels may anchor at nine or ten Fathom Water within Muſket-ſhot, and that without the leaſt Danger.

The *Moluccas*, properly ſo called, are no more than five in Number, *viz.* the Iſles of *Ternate*, *Tidor*, *Motiel*, *Machiam*, and *Bachiam*, known to the antient *Pagans* by the Names of *Cupe*, *Douco*, *Montil*, *Maca*, and *Saque*, and ſituated all together within the Space of 25 Leagues. The Sun-beams are ſo penetrating here that they render the Earth as dry as a Pumice-ſtone, which not only ſucks in all the Rains that fall, but alſo ſwallows the very Torrents near their Sources; but as they are not able to penetrate through the thick Foreſts, ſo the Ground here produces both Trees and Herbs; whence it is that thoſe Iſlands are ſufficiently ſtored with Bananas, Cocoas, Lemons, Oranges, Sandal, and Callamba, beſides Spices of all ſorts; but they produce neither Rice, nor any other ſort of Grain; the Defect of which is ſupplied by the Tree, called by the Natives *Laudan*, and *Seguiro* by the *Portugueze*, the Pith of which furniſhes them with a kind of Meal for Bread, as the Leaves, when come to their full Growth, ſerve them for the Covering of their Houſes, and the bigger Veins for Rafters, as the leſſer make good Cordage: While theſe Leaves are young, they are covered with a Kind of woolly Subſtance, which affords Materials for Stuffs. They are not unlike the Cocoa-leaves, the Tree which bears them being commonly twenty Feet high, and the Trunk a Fathom in Compaſs; but being compoſed only of the Bark and Pith, is eaſily cut down, the firſt not exceeding one Inch in Thickneſs. The Pith is very white, and may be eaten without any farther Preparation, after the Strings of the Wood, which are mixed with it, are removed; but if they intend to make Meal of it, they beat the Pith to Powder, put it in a Sieve, made of the Bark of the ſame Tree, over a Tub, made of its Leaves, and by pouring a ſufficient Quantity of Water upon it, ſeparate the Strings from the mealy Part, which ſettles to the Bottom of the Tub, and being ſeparated from the Water and dried, affords the Meal they call *Sagu*. This they bake in certain Moulds of Earth, made red-hot, with incredible Diſpatch. This Tree, which grows alſo in *Amboyna* and ſome other Places, affords alſo a certain Liquor called Thorack, which taſtes like Wine.

The Iſlanders, though not deſtitute of Cattle, yet live, for the moſt part, upon Fiſh. They have no Gold, Silver, or any other Mines, being furniſhed with Iron from the Iſland of *Amboyna*. They are generally black, though the Women not ſo black as the Men, with black ſhining Hair, large Eyes and Eyebrows, and ſtrong Limbs. They ſoon become grey, yet live to a great Age; are active rather than laborious, and very ſociable in Converſation, but ſomewhat inclining to Boldneſs and Inſolence, and in their Dealings crafty and deceitful: The Men wear generally Turbans, like the *Turks*, covered with Plumes. The King is diſtinguiſhed from his Subjects by a kind of Mitre, clad in Drawers only of blue, red, green, or yellow Sattin. Some of theſe Iſlanders make uſe of a cloſe-bodied Coat, faſtened round the Shoulders, and cut below like the military Garment of the antient *Romans*. The Women wear no Head-dreſſes, but lay their Hair ſmooth over their Heads, which they tie behind, and cover it with Plumes, or Flowers. Their Garments are of *China* Silk; but their chief Ornaments are their Bracelets, Rings, and Necklaces of Pearls, Diamonds, Rubies, and Emeralds. The *Chineſe* were the firſt that made themſelves Maſters of thoſe Iſlands, and after, the *Perſians* and *Arabians*, who introduced *Mohammediſm* here. Their ancient Cuſtoms are their only Law: They allow Polygamy, yet don't puniſh Adultery; but ſtealing is a capital Crime.

At Break of Day certain Perſons who are appointed for that Purpoſe, beat the Drum about the Streets to excite the People to the Performance of their matrimonial Duty. They uſe generally the *Malayan* Language, though every one of theſe Iſlands has its peculiar Tongue, which ſhews them to be deſcended from divers Nations. The Iſle of *Ternate*, the biggeſt of the *Moluccas*, is ſituated in 48° 28 Leagues from the Iſle of *Banda*. Its Compaſs is about eight Leagues. It affords but little Proviſions, except Goats and ſome Poultry; but the Almonds here are moſt excellent, the Shells being ſo hard that the Smiths uſe them inſtead of Coal. It produces alſo ſome Tobacco, but much inferior in Goodneſs to that brought from the *Weſt-Indies*. The Town of *Gamma Lamma*, the Capital of the whole Iſland, conſiſts only of one Street, 2500 Paces long, built along the Sea-ſide, the Houſes being all of Cane or Timber; the Road is not fit for Anchorage, the Bottom being all rocky, which makes the *Dutch* Veſſels always lie at Anchor near the Village of *Tellingamma*, within two Miles of *Malay*, betwixt the Iſlands of *Ternate* and *Tidor*.

But the chief Product of theſe Iſlands is the Clove, called *Clavas* by the modern *Spaniards*, by reaſon of its Reſemblance to an ordinary Nail. The Tree that bears it is by thoſe of the *Moluccas* called *Sigar*, the Leaf *Vacaqua*, and the Fruit itſelf *Champue*. The Tree reſembles the Laurel, its Leaves being however ſomewhat narrower, like thoſe of the Almond-tree, ſhooting forth its Branches at the Top, not unlike the Myrtle. The Fruit is white at firſt, grows green by degrees, and brown when it comes to Maturity, but does not turn black till it be dried in the Sun, which is done in two or three Days. The Tree grows naturally without planting or cultivating, bears

Fruit the eighth Year, and laſts one hundred Years. The Fruit of it is gathered but once every other Year, becauſe the Inhabitants break off the Buds the firſt, that they may have a more plentiful Crop the ſecond Year. The Fruit is ripe from *Auguſt* to *January.* This Tree affords no Gum, by reaſon of its exceſſive Heat, the Fruit being ſo dry that the Inhabitants, to increaſe its Weight, put a Pitcher with Water, within ten Feet of their Clove-Bags, which is ſucked up within two or three Days Time. The *Chineſe* do the ſame with their raw Silk.

As the *Moluccas* yield more Cloves than any other Iſlands hereabouts, this has miſled ſome to affirm that they grow only here, it being certain they yield yearly Six thouſand Barrels of Cloves, allowing Five hundred and an Half to a Barrel; though, at the ſame time, the Iſles of *Ires, Meytarna, Cavaly, Sabugo, Marigoron, Gamoconora, Amboyna,* but eſpecially the Iſle of *Varanula,* produce conſiderable Quantities, but not ſo good as thoſe of the *Moluccas.* In the Midſt of the Iſland of *Ternate* is a very high Mountain, full of Palms and other Trees, which has a moſt miraculous Well on the Top, which is ſo deep that 500 Fathom of Rope did not reach the Bottom, but to a very fair Spring, the Water of which no body hitherto has ventured to taſte, by reaſon of the ſulphurous Exhalations, which, eſpecially about the Equinoxes, iſſue from the Mountain, and ſometimes caſt red Stones at twenty Leagues Diſtance. This Mountain is covered with Wood near half its Height, but afterwards is exceſſive cold, having on the Top a very cold Spring, and a Lake of freſh Water, ſurrounded by Trees. They know not of any certain Difference of Seaſon in theſe Iſlands, except that it generally rains more with the North than with the South Wind.

Serpents they have of thirty Feet long, but not venomous, living for the moſt part upon Fiſh. This Iſland has alſo a peculiar Creature, called by the Inhabitants *Cuſes,* which, as it feeds on Fruits, ſo it is always ſeen upon the Trees, its Tail being of ſuch Strength, that it will hang by it to a Branch of the Tree, the better to come at the Fruit; it is in Shape not unlike our Rabbets; its Colour betwixt a Grey and a Red, with thick, curling, and ſoft Hair, round and fierce Eyes, and very ſmall Feet. As they have ſcarce any domeſtick Bird except the Parrot, ſo their Foreſts are full of wild ones. The *Moluccas* produce a certain Wood which burns, ſparkles, and flames like common Wood, but conſumes not, though you may rub it to Powder with your Fingers. Not far from the Fort of *Ternate* grows a certain Shrub, called *Catopa* by the Inhabitants, from which falls a Leaf, which, by degrees, is ſuppoſed to turn to a Butterfly. The Iſle of *Tidor* is at leaſt as large and fruitful as *Ternate,* the Inhabitants here being ſo induſtrious as to improve the Fruit of the Clove-tree, by pruning and watering it, which, by this means, becomes both fairer and larger than the reſt. Here they have alſo the beſt white Sandal-wood, and thoſe Birds called *Paxeras del Cielo* by the *Spaniards,* and by us Birds of *Paradiſe.* After they have catched them, they cut off their Feet cloſe to the Body, ſo that when the Fleſh dries the Skin and Feathers join inſenſibly together, ſo that many have been of Opinion theſe Birds are without Feet.

The *Dutch* are Maſters of *Malaya,* a well fortified Town of *Ternate,* as alſo of the Fort of *Taluco,* and that of *Marieco* and *Tidor,* of the Fort *Barnevild* in *Bachiam,* and three more in the Iſle of *Machiam,* at *Taſſaco, Tabicalo,* and *Goſſiquia*; they have alſo a Stone-Fort in *Motir.* The Kingdom of *Machiam,* which is governed by its own Sovereign, being ſo well ſtocked with Sago that the Inhabitants have ſufficient wherewith to ſubſiſt without Labour, has made them ſo idle and careleſs, that they are ſcarce able to raiſe 500 fighting Men. The Iſle of *Machiam,* which is ſubject to the King of *Ternate,* is about ſeven Leagues in Circumference; the *Dutch* made themſelves Maſters of it in 1601, ſince which Time they have erected three Forts, the firſt at *Gueſſiqui,* ſituate upon an Eminence, and ſtrengthened by four Baſtions of Stone; as is alſo the Fort of *Taſſaſo* built likewiſe upon an Aſcent at an hundred and ſixty Paces from the Sea ſhore; it is bigger than the firſt. The Fort of *Tobiliala* has only two Baſtions. Beſides theſe five Iſlands, properly called the *Moluccas,* there are about ſeventy-two more, ſubject to the King of *Ternate,* from *Mindanao* on the North Side, and *Bina* and *Corca* on the South, and between the Continent of *New-Guinea* to the Eaſt.

14. The *Philippine* Iſlands, which lie to the North of the *Moluccas,* were diſcovered by *Ferdinand Megallanus* in 1520, but no Eſtabliſhment was made there till 1565, when they got the Name of *Philippines* from *Philip* II. then King of *Spain.* The firſt Settlement of the *Spaniards* was made in the Iſle of *Zebu,* and about ſix Years after that in the Iſle of *Luocn,* now called *Manilla,* from its chief City, which is ſituate in an Iſle made by an Arm of the Sea, in the moſt Southern Part of the Iſle, the whole Compaſs of which is three hundred and fifty Leagues; it is ſeventy Leagues from *China* to the North, and two hundred and ſeventy Leagues to the North-Eaſt from *Japan* to the Eaſt; it is encompaſſed by the Ocean, and to the South by the great *Archipelago,* which is divided into five Seas, and ſtocked with a vaſt Number of Iſlands. The Fertility of the Soil, joined to the Induſtry of its Inhabitants, makes this Iſland abound in Corn, Rice, Fruits of all ſorts, and Drugs; as likewiſe in Beef, Buffaloes, Deer, Goats, and Hogs. Their Cocoa Wine they keep till it becomes as ſtrong as *Spaniſh* Wine; their Lemons, Oranges, Figs, and Pears, are the beſt in the World, and they abound both in domeſtick and wild Fowl, and Birds. They have a peculiar Way here of killing the Crocodiles, of which they have great Numbers: He who is to engage with this Creature, gantlets his left Arm to his Elbow, having in the ſame Hand a Truncheon of a Foot long, piked at both Ends, with a Dagger in the other: Thus armed, he goes into the Water up to the Waiſt, and while the Crocodile is making at him with his Jaws open, he thruſts his left Hand down his Throat, ſo as to keep them from ſhutting, and in the mean while ſtabs him with the Dagger in the Throat, till he drops down dead.

The *Philippine* Iſlands produce more Tygers, Lions, Bears, and ſuch-like wild Beaſts, than *Africk* itſelf, and abounds in Algalias, which are the Creatures that produce Muſk, and Civet Cats. The *Chineſe* drive a vaſt Trade in this Country with the *Spaniards,* who buy their Calicoes, Silks, Porcelain, Gun-powder, Sulphur, Iron, Quickſilver, Copper, Meal, Nuts, *&c.* and carry them to the *Weſt-Indies,* where theſe Things are ſold at a very dear rate. In the City of *Manilla* reſides a *Spaniſh* Archbiſhop, who has three Biſhops under his Juriſdiction, for the ſpiritual Government of the *Philippine* Iſlands; and ſuch is the Influence they have over theſe ignorant Wretches, that they keep them in Subjection without any ſtanding Forces. The Archbiſhop is alſo Viceroy of thoſe Iſlands, and has the Management of all publick Affairs, in Conjunction with the King's Council appointed in that City, which is very large, and its Houſes built of Stone, after the modern Way. Within and about it live above fifteen thouſand *Chineſe,* and vaſt Numbers of the ſame Nation reſort thither every Year for the Conveniency of Traffick. So that from *December* to *April* you may ſee in the Harbour (which is defended by two wooden Forts) near five hundred *Chineſe* Junks. This Place is alſo much frequented by the *Japaneſe,* but not in near ſo great Numbers as by the *Chineſe:* Notwithſtanding which, the *Spaniards* are much more jealous of the firſt than the laſt.

15. *Japan* is compoſed of many Iſlands, divided by ſeveral Arms of the Sea, extended from 31 to 39°, being in ſome Places ſcarce ten, in others thirty Leagues in Breadth. On the Eaſt Side it hath *New Spain,* to the North *Tartary,* on the Weſt *China,* and the Sea to the South, with Part of the *Terra Auſtralis.* The whole Empire conſiſts of ſixty-ſix leſſer Kingdoms or Provinces, fifty-three whereof are comprehended within the two great Kingdoms of *Meaco* and *Amagunce,* nine others within the great Kingdom of *Ximo,* and the remaining four in that called *Xicoum.* According to the *Japaneſe,* they are to this Day uncertain, whether the whole Empire be an Iſland, or annexed to the Continent; foraſmuch as from the Province of *Quanto* to the Borders of the Province of *Tzungaa,* is twenty-ſeven Days Journey to the Eaſt-North-Eaſt, and then they croſs an Arm of the Sea of eleven Leagues broad, which brings them into the Province of *Jeſſo,* ſo incloſed

by inacceſſible Mountains, that nobody hitherto has been able to diſcover the Extent of them. The whole Empire of *Japan* being divided into many Provinces, the ſame are committed to the Government of many Princes and Lords, who have their Secretaries aſſigned them by the Emperor himſelf, whoſe Buſineſs it is to have a watchful Eye over them, and to give an Account of their Tranſactions, and eſpecially concerning their Revenues, which are very great, and according to the Computation of the *Japaneſe*, amount yearly to eighteen Millions four hundred thouſand Kockins (each of which make four *French* Crowns) out of which they are obliged to maintain a certain Number of Forces, both Horſe and Foot, for the Emperor's Service, in proportion to their Revenues, which conſiſt chiefly in Lordſhips and Demeſnes. They have Mines of all Sorts, *&c.* ſo that he who has a thouſand Kockins *per Annum* is obliged to maintain twenty Foot, and two Horſemen; by which means the Emperor is able to raiſe an Army of three hundred and ſixty-eight thouſand Foot, and thirty eight thouſand eight hundred Horſe; beſides the hundred thouſand Foot and twenty thouſand Horſe he keeps up as a ſtanding Force, which is ſo much the leſs to be admired at, ſince ſome of theſe Lords have ſuch vaſt annual Revenues, that, according to the before-mentioned Proportion, they are obliged to furniſh one thouſand two hundred Foot, and a hundred and twenty Horſe.

All the great Lords of *Japan* have three Names, *viz.* their proper Name, that of the Family, and a Surname, which they commonly take from the Province, City, or Caſtle they govern. They have alſo a Cuſtom of changing their Names thrice in their Life-time, the firſt, given them in their Infancy, being altered at the Age of twenty-ſix, and that again at fifty or ſixty Years of Age. They have another Cuſton in *Japan* for the Slaves to offer themſelves a voluntary Sacrifice to their Maſters whenever they die, which is done by a ſolemn Engagement, and confirmed by a Bottle of Wine. As this is chiefly done by thoſe Slaves, to put an End to the Miſeries they endure in their Life-time, ſo there have been ſome who have deſired of their Maſters to bury them under the Foundation they were going to lay for ſome conſiderable Edifice. Their Pagods or Temples are of Wood, about ſeven or eight Fathom ſquare, and raiſed three or four Feet from the Ground. They have ſmall Turrets, with Lights in them on all Sides, and within certain Statues, unto whom they addreſs their Prayers. The King and great Lords have many fair Caſtles beloning to them, among which thoſe that are fortified are garriſoned by the Emperor; but their Cities are generally without any Fortifications, and if ſome few of them have any, they are only ſingle Walls. Their Cities are built after the ſame manner, each Street having two Gates, which are ſhut up, and guarded in the Night-time. They have no Revenues belonging to them, neither pay they any Impoſitions, except a very inconſiderable Rent for their Dwellings to the Governor, for whoſe Uſe they are alſo obliged to keep a man at work at certain Times; but this does not happen very often. The Governors having certain Demeſnes allotted them for their Revenues, and among others the Advantage of Fiſhing, eſpecially of the Whale, of which there are taken yearly near three hundred upon the Coaſt of *Japan*; but they are neither ſo big, nor ſo fat as thoſe in the Northern Parts.

Every *Japaneſe*, of what Condition ſoever, is abſolute Maſter of the Life of his Slave. They are ſo cruel in their Puniſhments, that the leaſt Treſpaſs is puniſhed with Death. Gaming for Money, or killing any Perſon, though in his own Defence, is capital, and ſo is Theft, though it were but for a Penny; and in Offences of a more heinous Nature, the Fathers, Brethren, and Children, are put to Death for the Crime of a ſingle Perſon; nay, the Wives and Daugthers, though ever ſo innocent, are alſo involved in the ſame Misfortune; for they are made Slaves, and their whole Subſtance is confiſcated. Thieves are faſtened with a Rope of Straw to a Croſs, and then the Executioner runs a Pike into the right Side up to the left Shoulder, and again from the left Side up to the right Shoulder; other Malefactors are faſtened only to a Poſt, with their Hands ſtretched out, and held up by two Perſons, and ſo the Executioner runs them with a Pike through the Neck into the Heart. Theſe Crimes which involve the whole Family in the ſame Puniſhment, are Extortion, Coining, Firing of Houſes, wilful Murder, and Raviſhing of Women, and are puniſhed by crucifying with the Head downwards, by boiling in Oil or Water, tearing them to Pieces by four Horſes, *&c.* Lying is alſo capital here, eſpecially if told before a Judge.

Their Princes and great Lords, if guilty of any Crimes, are baniſhed into the Iſle of *Taitſen Sima*, lying fourteen Leagues from the Province of *Jeddo*. It is all Rocks, without any Road or Harbour, producing nothing but Mulberry-trees and Silk-worms, which furniſh thoſe miſerable Priſoners with Materials for the making of Stuffs, in which they employ their Lives, and are relieved from time to time with moſt miſerable Food. It is computed that the Expence the Emperor of *Japan* is at yearly in his Court, amounts to four Millions of Kockins, and five Millions more for his Governors and military Officers. His ordinary Reſidence is in the Caſtle of *Jeddo*, which is two Leagues in Circumference, and ſtrengthened with a triple Wall, and as many Mounts all of Free-ſtone. The Gates are covered with ſtrong Iron Bars, and Lodges over them, which contain three hundred Soldiers, for a Guard to each Gate; his own Palace, with the Apartments for the Women, ſtand in the Centre, and round about it the Houſes of the Princes, and other great Lords, all richly gilt, and ſumptuouſly furniſhed, their chief Emulation being to outvie one another in this kind of Magnificence, which is amongſt them looked upon as the greateſt Mark of Reſpect they can pay the Emperor, who never ſtirs abroad but in the Company of a great Number of thoſe Lords, and their young Kindred, who are the Guard of his Body; and by applying themſelves to Muſick, Phyſick, Writing, Painting, or the Management of publick Affairs, render themſelves qualified for higher Employments. They are all clad in black, and as they march along the Streets, do not ſo much as utter a Word.

As the Revenues of the Emperor of *Japan* are ſo great, that the ordinary Income of two Months is ſufficient to defray his whole Year's Expence, his Treaſure muſt be immenſe, moſt of which conſiſting in Gold and Silver, is laid up in vaſt Cheſts, incloſed in ſeveral Towers belonging to the Caſtle, beſides what is diſpoſed of in the Country. Their Horſe are armed with Corſlets, Fire-locks, not much longer than our Piſtols, with Pikes, Bows, Arrows, and Cymitars. The Foot have only Head Pieces, two Cymitars, each a Muſket, Pike, Half-pike, and broad Knife: Each Company conſiſts of fifty Soldiers, a Captain, a Lieutenant, and ten Corporals; five of theſe Companies make a Battalion, commanded by a peculiar Officer, and ten Batalions a Brigade.

The Emperor of *Japan* has a numerous Council, tho' only four are charged with the Management of all important Affairs, and are to attend daily at Court: Some of theſe have two Millions of Crowns, others three or four hundred thouſand Crowns, others four or five hundred thouſand Crowns yearly Revenue; but their Expences are proportionable to their Revenues, being obliged to live at leaſt half the Year at Court in vaſt Splendor, maintaining perhaps a Retinue of three hundred Perſons, and above a thouſand in their Families, and that in a Place where Proviſions are exceſſive dear; not to mention the vaſt Expences they are at in their Buildings, and the Entertainments they are obliged to give the Emperor whenever he is pleaſed to honour them with a Preſent, perhaps of a Crane, which he has taken in Hunting. As great Perſons are not to marry any Wife but what is preſented to them by the Emperor himſelf, ſo they are put to vaſt Charge in giving them all the magnificent Entertainment, and all the Enjoyments they can, except their Liberty, which they muſt reſign to their Huſbands, and are not permitted to go abroad above once a Year to viſit their neareſt Relations; notwithſtanding the Wives in *Japan* have the Reputation of great Reſervedneſs, and being, beyond all others faithful to their Huſbands, of which many Inſtances might be alledged, which for Brevity's ſake I omit. There are, however, thoſe who aſcribe this Reſervedneſs rather to the Severity of their Laws, than their Inclinations, it being certain, that even the leaſt Suſpicion of Diſhoneſty after

Marriage is puniſhed here with the utmoſt Cruelty ; ſo that if a Huſband finds his Wife locked up in a Room with another Man, he may, without any farther Enquiry, kill them both. The better to allay the Heat of Youth, and the Danger ariſing from thence in reſpect of Adultery, they have in the Cities, nay, even in moſt of the Inns upon the Road, certain Proſtitutes, who are moſt of them Slaves, and expoſe themſelves to Travellers for Money ; and if a Man is to ſtay for any Time in a Place, he may hire one of theſe Concubines from their Maſters at a certain eaſy Rate, and keep her for his own Uſe.

As for their Devotion, it may be ſaid, that they have ſcarce any at all, the moſt devout among them ſeldom praying in publick above once a Month before their Idols, which ſtand in their Temples; near them are their Sepulchres covered with great Tomb-ſtones two or three Feet high, and thoſe of Perſons of Quality have a little Pillar erected near them, containing their Names, and certain other Inſcriptions, in the Nature of an Epitaph. The Eccleſiaſticks are divided into twelve different Sects, eleven of which abſtain from living Creatures, and from Women. If they break their Vow they are puniſhed with Death. Thoſe of the twelfth Sect are allowed to marry, and eat all ſorts of Proviſions; the Chief of this Sect is the Head of all their Clergy, and their Temples are endowed with many Privileges and ſettled Revenues ; whereas thoſe of the other Sects are maintained only by Alms. Some among the *Japaneſe* believe the Immortality of the Soul, and the Rewards and Puniſhments of another Life for ever ; but the moſt have ſo little ſenſe of Religion that they meet in their Temples to drink, and commit other Debaucheries ; whence it is alſo, that never any ſuch thing is heard of as Controverſy about Religion, though they are ſuch irreconcileable Enemies to the *Chriſtians*, that finding Death not to be ſufficient to ſhake their Conſtancy, they invented many cruel Methods to make them renounce their Faith, which, however, at laſt they were not ſatisfied with, unleſs they could diſcover another *Chriſtian* to releaſe them from their Torments, which are ſo various, as would almoſt fill a Volume.

Their Houſes are ſlightly built, and ſeldom above one Story high, becauſe the Country is much ſubject to Earthquakes; they are raiſed three or four Feet from the Ground, and convenient enough within, being divided into ſeveral Apartments, ſome of which are for the Men, the reſt only for the Uſe of the Women, where the beſt Part of the Furniture is beſtowed ; they are alſo very nice in their Gardens and Orchards ; they are very obliging in their Converſation, eſpecially in their Viſits, when they preſent their Gueſts with Tobacco, Tiſſue, or Tea, and with Wine, of the laſt of which they will take a very plentiful Share ; but are ſure never to quarrel over their Liquors. Except at the Inns, for the Conveniency of Travellers, no Drinking-houſes are allowed of in *Japan* ; nay, not ſo much as a publick Cook's Shop, it being their Cuſtom to make their good Cheer in their Houſes, where, among other things, they entertain one another with their Muſick, the chief of which is a kind of Lute, with four ſilk Strings, which they ſtrike with a Peg of Ivory. Their Wine, or rather Hydromell, is made of Rice, Sugar, and Honey, and is as ſtrong as any Wine whatever. Their Marriages are contracted in conſequence of the Agreement of the Relations. The Bride and Bridegroom being not permitted to ſee one another till it is to be conſummated, thoſe of a common Rank may ſoon be divorced, and if they diſlike the Wife, ſend her back to her Relations ; but People of Quality, notwithſtanding any Diſagreement, maintain them in their Houſes.

Their Children they educate with all imaginable Mildneſs, without any beating, as well at home as at School, whither they are not ſent till they be ſeven or eight Years of Age, and when they come to Man's Eſtate, the Father aſſigns to his Son a certain Part of the Houſe, and of his Employment, nay, perhaps the whole, reſerving only a certain Allowance for his Subſiſtence to himſelf ; but their Daughters have neither Dowry, nor the leaſt Share in their Father's Eſtates. They are ſo nice in Point of Honour, that they will rather die than recede an Inch from it ; and a *Japaneſe* will rather run the Hazard of the Ruin of his Family, than break his Promiſe to his Friends, which is the Reaſon moſt of their Delinquents will rather endure the moſt exquiſite Tortures than diſcover their Accomplices. The *Japaneſe* having ſuch vaſt Quantities of all things, ſeldom deal in any foreign Commodities, but leave that Commerce to Strangers, eſpecially to the *Chineſe*, who bring thither the Product and Manufactures of their Country ; though ever ſince the ancient good Correſpondence between thoſe two Empires has been interrupted, the *Chineſe* are forbidden by their Kings to ſend Goods into *Japan*, and therefore are obliged to carry on this Commerce, under Pretence of tranſporting their Commodities to ſome other Parts of the *Indies*, unto which they are the more encouraged by the vaſt Hopes of Gain. All Commodities, either imported or exported out of *Japan*, paſſing free, without paying the leaſt Duty or Cuſtom.

The whole Empire of *Japan* uſes but one and the ſame Language, which is quite different from the *Chineſe*, as well as their Characters; as they always uſe but few Words, they write every thing with Pencils in certain ſhort-hand Notes in a very little time; their Accounts they keep by the means of certain ſmall Beads, which they thread upon little Sticks like a ſquare Board. They are not deſtitute of Books nor Libraries, the *Dairo* (who formerly was the Sovereign of the Country, and ſtill retains the Supremacy over the Clergy) keeps the publick Accounts, and writes the Chronicles of the Country ; neither are any other Perſons except the Gentlemen of his Houſe, and ſuch Lords and Ladies as are deſcended from his Family, allowed to write Books, which makes them conſtantly apply themſelves to Learning. They have but one kind of Meaſure ; their Gold is of the beſt kind, but their Silver none of the fineſt : Of Gold Coin they have three Sorts, one whereof is valued at forty-eight Taals, each of which being worth five Crowns Sterling, amounts to twelve Pounds Sterling. The ſecond ſort are worth each one Taal, and a fifth Part, and the third one Taal, and a ſixth Part. Their Silver Coin goes by Weight, being in the Form of Ingots, ſo divided, that each Piece commonly amounts to fifty Taals. They have alſo a leſſer Silver Coin made in the Shape of a *French* Bean, which goes likewiſe by Weight.

The *Japaneſe* do not geld any Creature, ſo that they are well ſtored with all ſorts of Cattle, as well as Fowl, and ſmall Birds. They alſo abound in mineral and hot Waters: There is a certain hot Spring here which ſpouts forth its Waters duly twice every twenty-four Hours, with ſuch Violence, that though the Water riſes amidſt the Stones, which are laid on the Top of the Hole to the Height of twenty or twenty-four Feet, it is ſo hot that it exceeds the Heat of boiling Water, and burns every thing it touches at its firſt coming out ; but being conveyed by certain Pipes into the adjacent Houſes, it is reduced to ſuch a Degree of Heat, that it is convenient for Bathing. Theſe Mineral Waters are ſufficient Proofs that *Japan* is full of good Mines of all Sorts ; and Experience confirms it ; for they have Gold, Silver, Copper, Tin, Iron, and Lead of their own, as well as Cotton, Flax, Hemp, Silk, and all manner of Proviſions in great Plenty. Their Phyſicians have ſingular Reputation as to their Ability, but Chirurgery is uncommon among them as yet. They make frequent Uſe of *China* Root and Rhubarb, which, as well as moſt of their other Medicines, they make into Pills. The *Portugueze* and *Spaniards* found it no hard Matter to ſettle themſelves in *Japan*, and their religious Ceremonies took ſo well with the Inhabitants, that they were permitted to build divers Churches in the Kingdom ; but the *Spaniards* not being able to contain themſelves within the Bounds of Modeſty, their domineering Temper created ſuch a Jealouſy and Averſion in the *Japaneſe*, that they ſet upon them, burnt their Ships, and, in 1636, totally baniſhed them the Iſland under Pain of Death. The *Dutch* began to trade there in 1611. Some of their Relations affirm the City of *Meaco* to be twenty-one Leagues in Compaſs, and that the City of *Oſſack* and *Bungo* are for their Wealth not inferior to any of the *Indies*.

The Air of *Japan* is very moderate and healthy, but inclining rather to Cold than Heat. They ſow in *May*, but do not reap till *September*. They have neither Oil nor Butter, and have an Averſion to Milk, which they conſider as Part of the Blood and the Receptacle of the Souls of Beaſts. They will not feed upon the Fleſh of tame Beaſts, but are great Lovers of all ſorts of Wild-Fowl and Veniſon. Their Cedars are ſo big here that they make Maſts of them for Ships. The Complexion of the Natives is inclining to brown; and for the reſt, they are luſty and ſtrong limbed, hardy, and patient to undergo any Labour, as well as the Injury of the Seaſons, never changing their Cloaths either Winter or Summer, and very moderate in their Diet. The *Japaneſe* are diſtinguiſhed into five ſeveral Ranks; the firſt is that of the Prince, Lords, and chief Officers, both Civil and Military; the ſecond of the Clergy; the third of the Gentlemen and Merchants; the fourth of Tradeſmen and Seamen; and the fifth of Labourers. Once in five Years the Emperor of *Japan* has an Interview with the Dairo at *Meaco*, which is very remarkable for its Magnificence, and the great Preſents made to the Dairo, an ample Account of which being to be found in the *Dutch* Relation of the Director of the ſaid Company in *Japan*, we will paſs by the Particulars of it here, our Intention being only to give the Reader a ſhort Relation of what we have received from very good Hands, and leaving the reſt to be completed by thoſe who have ſince had the Opportunity of taking a View in Perſon of that Country.

16. After the Baniſhment of the *Japaneſe* out of *China*, the *Chineſe*, to avoid the Penalties inflicted on ſuch as ſhould trade with them, made uſe of the Iſle of *Tayovang*, whither they carried their Commodities, in order to continue their Commerce with thoſe of *Japan*. The *Dutch* being excluded from the Commerce of *China*, followed their Foot-ſteps, and, in 1632, ſettled themſelves in the ſaid Iſland, as the moſt convenient Place in all the *Indies* for carrying on Trade both with *China* and *Japan*, there being a free Paſſage here all the Year, without being obliged to ſtay for the Monſons, which in moſt other Places laſt for ſix Months. The *Dutch*, I ſay, being ſenſible of this Conveniency, built immediately a Stone-Fort of four Baſtions on the Downs, within half a League of the great Iſle of *Formoſa*, which is divided from this Iſle by a Channel only, which, though not very deep, yet affords a ſafe Harbour for Ships againſt any Winds.

For the better Defence of the Entrance of this Channel, the *Dutch* have built a ſtrong Redoubt called *Zealand*. The Iſle of *Formoſa* itſelf is about thirty-two Leagues diſtant from the River of *Chincheu*, and the *Chineſe* Iſland called *Quemoy*, extending from S. W. to the N. E. in Compaſs an hundred and thirty Leagues. It is full of Villages and Inhabitants, which are not governed by any ſingle Perſon, but ſuch as they chooſe themſelves for their Magiſtrates. It has many Rivers full of the beſt Fiſh; their Foreſts are well ſtocked with Wild-Fowl and Veniſon, and their Meadows with Cattle, beſides Deer, Wild-Goats, Hares, and Rabbits. Their Foreſts produce a kind of Horſes, with Hams like a Deer, called *Olavang* in their Language, the Fleſh of which is a great Dainty; as alſo another Creature, not unlike our Bears, but of a very large Size, the Skin of which is much eſteemed in thoſe Parts. Their Grounds are very fertile, but lie neglected, which makes Fruit very ſcarce, and, what they have, not very grateful to the Palate. It produces alſo ſome Ginger and Cinnamon, and, as the *Chineſe* relate, Gold and Silver; but the *Dutch* have hitherto found none of theſe Mines worth looking after. The Places in which the *Dutch* have their Settlements are, for the moſt part, along the Sea-ſide.

Its Inhabitants appear like Savages, being of a more than ordinary Size, black and hairy all over their Bodies, but in their Converſation obliging, honeſt, and good-natured; their Women are not ſo ſtrong and big, but inclining to Fatneſs, and yet not ill ſhaped. They wear a ſort of Garment round the Middle; but when they bathe themſelves (which they commonly do twice a-day in warm Water) they, as well as the Men, ſtrip themſelves ſtark naked, and make no great Account whether they are ſeen by one another or not; for the reſt, they are very conſtant Friends, and religiouſly obſerve the Agreements that they make with Strangers, Treachery being a Thing abominated among them. They neither want Ingenuity or Memory, being very docile in any thing they apply themſelves to. Though their Grounds be very fertile, and able to produce much more than they do, they are contented to live upon their ſmall Quantity of Rice, which is raiſed by the Induſtry of their Wives, who, inſtead of Ploughs, cultivate and dig the Ground with Spades, tranſplant and cut the Rice, and after having dried as much of it every Night in the Chimney-Corner as will ſuffice the Family the next Day, beat it early in the Morning in a Mortar; the Mens Minds being wholly taken up with hunting, eſpecially till they are forty Years of Age, before which Time they ſeldom mind any thing relating to Agriculture.

They ſow alſo three ſorts of Fruits, called by them *Ptingh*, *Quach*, and *Taraun*, not unlike Millet; and a certain ſort of Pulſe, reſembling our French-bean; ſome Roots they have likewiſe, which might ſerve them inſtead of Bread, if they were not furniſhed ſufficiently in that reſpect with Rice. Beſides this, they have Ginger, Cinnamon, Sugar-canes, Bananas, Lemons, and a great Store of Areca, not to mention ſeveral ſorts of Fruits and Pulſe not known in *Europe*. Inſtead of Cocoa-Wine, of which they are deſtitute, they make a certain Mixture of Rice, which, being ſoaked in warm Water, they beat it in a Mortar till reduced to a Paſte; this they mix with Rice-meal chewed inſtead of Leaven; and having put it into an earthen Veſſel, fill it up with Water, which, after it has fermented and ſtood two Months, affords a very pleaſant Liquor, which is ſtronger or weaker, according as it is kept, and the older the ſweeter it is, and may be kept good thirty or thirty-five Years. When they go abroad a hunting they make uſe of Snares, ſmall Pikes, Bows, and Arrows; their Nets they ſpread in the open Fields, or croſs the Highways, and then drive the Wild-Beaſts into them.

Sometimes the Inhabitants of ſeveral Villages make a Hunting-Match, and dividing themſelves into divers Parties, armed with Half-pikes and Lances, ſend their Dogs into the Woods; by which means having forced the Wild-Beaſts into the Fields, they encompaſs them on all Sides, ſometimes for a whole League, and ſo with their Pikes kill all thoſe that come within the Ring. Theſe Lances, or rather Darts, are of Cane, ſix or ſeven Feet long, with ſeveral Hooks, which, being faſtened into the Fleſh of the Beaſts, are not to be pulled out; but as the Iron is not well faſtened to the Wood, but that with the running of the Beaſts through the Buſhes it comes off, a Cord is tied to both, and a little Bell to the Iron, ſo that the Lance annoys the Beaſt, and the Bell diſcovers its Paſſage wherever it runs. By this means they catch vaſt Numbers of Deer, the Skins of which they exchange with the *Chineſe* for their Commodities, they ſeldom reſerving any thing for their own Uſe but the Umbles and the Entrails, which they ſalt and eat half corrupted, being not cleanſed of the Filth before they were ſalted.

When one Village happens to be at War with another, they firſt declare it openly againſt one another, which being the Signal to be upon their Guard, they do not attack by open Force, but dividing themſelves into ſmall Troops, perhaps of twenty-five or thirty Men, lie in Ambuſh near the Village they intend to attack till Night, when they ſet upon the Huts, which lie diſperſed in the open Country, till perhaps they can light upon an aged Man: They kill him, cut off his Head, Hands, and Feet; nay, if they have Time enough, cut the whole Body into ſmall Pieces, that every one of them may take home a Piece of it along with him as a Mark of his Bravery; but if the next Village happens to take the Alarm, they are glad to be contented with the Head alone, or perhaps a good Lock of the Hair, which they carry home in Triumph, as an undoubted Sign of their Victory; when they intend to make a very bold Attack, they enter the Village by Night, force open a Houſe, kill all they meet with, and ſo betake themſelves to their Heels, for fear of being purſued. When they engage in the open Field, their chief Aim is to draw one another into an Ambuſh; but the Death of one Man commonly decides the Quarrel, that Side which has loſt him retiring immediately. Their Arms are Pikes, but without Hooks; their Bucklers are ſo large, that they ſhelter their whole Body; but their Swords ſhort and broad. Beſides which, they alſo make uſe of Knives, or Bayonets, like thoſe of the *Japaneſe*. Sometimes certain Villages enter into a Confederacy againſt divers other Villages, in which caſe they do not chooſe a General, or any Commander in Chief; but ſuch among them as have acquired ſome Reputation of Courage, by having cut off ſome of their Enemies Heads, are followed by a certain Number of Volunteers, who go abroad in Parties, and ſurprize their Enemies.

They commonly engage in War againſt the Iſland of *Tugin*; the Inhabitants thereof are ſo ſuſpicious, that they will not let a Foreigner or others ſet a Foot on Shore, not the *Chineſe* themſelves, who come thither to trade with them, but are forced to remain on board their Veſſels, whither theſe Iſlanders come to exchange Commodities with them. If they are ſo happy as to carry off an Enemy's Head, or perhaps only a Lock of his Hair, or a Pike, they carry it in Triumph, as a Sign of their Victory, appoint a publick Thankſgiving-day, ſing Hymns, and offer Sacrifices to their Gods. He who has done the Exploit, is looked upon ever after as an extraordinary Man, has particular Reverence paid him by all the reſt, and he preſerves the Head, or Pike of his Enemy, as a moſt precious Relick in his Family, which they value beyond any Gold or Silver. No body here claims any Preference above another more than what is allowed to Age. Each Village being governed by twelve Senators, choſen every two Years out of the moſt aged Perſons, who are not inveſted with any other Power or Authority, than that of calling together the whole Village in one of their Temples, and propoſing to them what they think neceſſary to be done, making uſe of all their Eloquence (of which they have ſufficient Share beſtowed upon them by Nature) to perſuade the Chiefs of the Families there preſent to a Compliance with what has been propoſed to them, which they are at Liberty to accept of or reject according as they think fit.

The only Power thoſe Senators are inveſted with, conſiſts in this, that they ſee the Commands of their female Prieſts put in Execution, take care that Satisfaction may be given to ſuch as are injured, not by any corporal Puniſhments, but by enjoining them to give a Piece of Cloth, Deer-ſkin, ſome Rice, or Perhaps a Pot of ſtrong Liquor, as an Atonement to their Adverſaries; for thoſe Magiſtrates have no Power to puniſh Murder, Theft, or Adultery. In the firſt caſe the Matter is commonly compoſed by the Mediation of the Relations on both Sides. If any one be robbed, he goes, accompanied by his Friends; to the Houſe of him who has ſtolen his Goods, and with their Aſſiſtance forces him to make an immediate Reparation; and what is agreed upon betwixt them, he carries away with him to his own Houſe. In caſe of Adultery, the injured Huſband goes, without any farther Ceremony, to the Dwelling-place of his Wife's Gallant, takes from him two or three Pigs, in Satisfaction of the Affront put upon him. We told you before, that there is no Difference of Condition among them, which is ſo abſolutely true, that the very Names of Maſters and Servants are not ſo much as known among them. All the Reſpect they pay one to another is in regard to old Age, which is in ſo high Eſteem among them, that a young Man meeting an old one, goes out of his Way, and turns his Back to him till he is paſſed; nay, ſuch is the Reſpect the young People ſhew to aged Perſons, that they will not refuſe them eaſily any thing they deſire, though it ſhould be to go three or four Leagues upon their Buſineſs. Men are forbid to marry till they are at leaſt twenty Years of Age. They do not let their Hair grow below their Ears till after Seventeen, and inſtead of Sciſſars, or Razors, make uſe of a Chopping-knife, with which they cut it upon a Piece of Wood: The Hair of their Beards they draw out with braſs Pincers.

Maids always let their Hair grow, and may marry as ſoon as they can. The Courtſhip is performed by the young Man's female Relations, whom he ſends to the young Woman's Relations, or Friends, to ſhew them what he intends to beſtow upon his Miſtreſs, which if it be accepted of, the Match is made, and he may conſummate the Marriage the next Day if he pleaſes. The Preſents commonly offered to the Bride conſiſt in ſome Silk or Callico Scarfs the Women wear round the Waiſt; ſome Waiſtcoats, Bracelets of Cane, ten or twelve Rings of Deers Horn, four or five coarſe Cloth Girdles, ſome little Veſtments made of Dog's Hair, ſome *Chineſe* Garments, a Bag of Dog's Hair, and four or five Pair of Stockings of Deer-ſkin, amounting perhaps in all to about 140 Crowns; the poorer Sort are content with a Preſent of a few Bracelets, and two or three Garments, not amounting to above three or four Crowns. When the Marriage is to be conſummated, the Bridegroom gets into his Miſtreſs's Father's Houſe by ſtealth at Night, and without being ſeen by any body, and ſo creeps into her Bed. He continues thus for many Years after, always coming into the Houſe at Night, and going thence in the Morning before Day-light, the Wife living all this while in the Father's Houſe, till her Huſband be forty Years of Age, and never ſee one another by Day, unleſs ſhe happen to be at Home alone, or elſe in the Field. The Women are obliged not to bring any Children into the World till they are thirty-five, or thirty-ſix Years of Age, but deſtroy all their Children in the Womb, by cauſing one of their Prieſteſſes to kneel upon their Bellies till they cauſe an Abortion.

As their Marriages are ſoon made, ſo they are as ſoon diſſolved; for if they grow weary of one another, they may divorce; which Liberty is equally allowed to both Parties, with this Difference only, that if the Huſband ſends away his Wife without any Cauſe, ſhe keeps the Preſents he has given her before Marriage; but if for Adultery, or any other Affront offered to him, ſhe is obliged to make Reſtitution. No Marriages are contracted among them within the fourth Degree of Conſanguinity, or Affinity. Their Houſes are generally large, and better built than is common in the *Indies*, with four Doors to each Quarter of the Heavens: Some have two Doors on a Side; they are commonly raiſed five or ſix Feet from the Ground, and three or four Stories high. Their Furniture conſiſts in ſome wild Boars and Deers Heads, or ſome other Relicks taken from their Enemies, which are their chief Ornaments; the reſt conſiſts in Deer-ſkins, which they uſe inſtead of Feather-beds, certain Stuffs with which they cover themſelves, a Spade, Pike, Bow, Arrows, a wooden Trough inſtead of our Diſhes, or earthen Drinking-Cup, and a Pot to boil their Rice in, which is their ordinary Food; and this is all. Though they have no certain Days appointed for Devotion, yet they meet at ſet Times to make good Chear, eſpecially every Quarter, in their Temples, where the Women alſo appear in a very odd Dreſs made of Dog's Hair; for here, inſtead of Wool, they cut off the Dog's Hair once a Year, and after they have dyed it red, make certain Stuffs of it, which they value as much as we do our crimſon Velvets.

Their Ceremonies uſed after the Death of their Friends are ſcarce to be paralleled in Hiſtory; for no ſooner is any one dead, but by Beat of Drum, made of the Trunk of a great Tree, they give Notice thereof to the Village; upon which all the People repair immediately to the Houſe of the deceaſed, and among the reſt the Women, after they have plentifully drank of Arrack, fall to dancing very ſlowly, upon great empty Cheſts, which make a doleful Noiſe, to expreſs their Sorrow at the Departure of their deceaſed Friend. Eight or ten Women having thus danced for ſome Time, with their Backs turned to one another, they give Way to others, who continue the ſame Exerciſe, which laſts in all two Hours. The next Day Preparation is made for the Funeral Rites, which are performed, not by burying, or burning the Corpſe, as other Nations do, but by drying it in the following Manner. They raiſe a kind of a Scaffold of Canes, five or ſix Feet high, to which they faſten the Body by the Hands and Feet, and ſo dry it, by making a good Fire round about it, which laſts nine whole Days; during which Time they ſacrifice ſeveral Hogs, and feaſt upon the Fleſh, waſhing the Body every Day. After the Expiration of the nine Days, they place it upon another Scaffold, wrapped in a Mat, and ſeveral Garments, where it remains till the third Year; then they take out the Bones, and bury them in the ſame Houſe, in the Preſence of their Friends, who make merry again with Feaſting and Dancing.

They have ſcarce any Religion; for as they can neither write nor read, whatever they have of this kind is founded merely upon Tradition; hence it is that they believe the Eternity of the World, and the Immortality of the Soul, which they affirm ſhall find Good or Evil in the other Life, according to their Merits in this. What Actions are accounted amongſt us the moſt criminal, are taken for ſlender Treſpaſſes among them, *viz.* Murder, Theft, and Adultery; for as for Fornication, it is not ſo much as looked upon as a Sin; and if a young Man can get a Favour of his Neighbour's Wife, it is conſidered but as a very ſlight Offence, becauſe they are not permitted to marry till they are twenty, or twenty-one Years of Age. The greateſt Crimes among them, and of which the Magiſtrates take Notice, are to cover their privy Parts, at certain Times of the Year, when they ſhould not; to wear at certain Times ſilk Garments, when only Callico are allowed them, and not to deſtroy the Fruit in the Mother's Womb, before ſhe arrives to the Age of thirty-five. Among ſeveral Deities, they have two that have the Preeminency over the reſt, *viz.* one *Tamigaſanbach*, and the other called *Sariahſingh*. The firſt, whoſe Reſidence they place in the South, is the Giver of all good and profitable Things to Mankind; the other, unto whom they aſſign the North, they ſay, deſtroys all what the former is pleaſed to beſtow on Man; for which Reaſon they worſhip both, one for doing them Good, the other, that he may do them no Harm.

They have amongſt others two Gods named *Talaſulas* and *Tapuliape*, who, as they are accounted the Patrons of Warriors, are adored only by thoſe Men. They have this Peculiar, that their religious Ceremonies are performed by Women, which they call *Juibs*. Their Worſhip conſiſts in Prayers and Sacrifices of Hogs, Areca, Deer and Wild-Boars Heads, as alſo ſome of their Liquors. After they have feaſted very well, the Prieſteſſes riſe, and muttering certain Prayers, turn up their Eyes, and at laſt fall to the Ground, with dreadful Cries. Sometime after they lie immoveable, like one in a Trance, for an Hour; during which Time, they ſay, they have an Interview with their Gods. This being over, they climb up to the Top of the Temple, walk from one End to the other, and after they have ſaid their Prayers again, ſtrip themſelves ſtark-naked, expoſe their naked Bodies, and waſh them in the Preſence of all the Standers-by, of both Sexes, though but few Men aſſiſt at this kind of Devotion, and the Women have generally taken ſo much ſtrong Liquor, that they ſcarce perceive what paſſes. Theſe *Juibs* alſo pretend to foretel Things to come, and to baniſh the evil Spirits. For the reſt, each Houſe has a peculiar Place for the private Devotions of the Family, which are performed for the moſt Part by Women, who make Offerings to their Gods of what is ſpent every Day in the Houſe, as they do upon certain Altars erected for that Purpoſe upon the great Roads.

17. The *Chineſe* Empire being of ſo vaſt an Extent, that a moderate Account of it would take up a large Volume, we will content ourſelves to give only a Scheme of it here, leaving a more ample Deſcription to thoſe who of late Years have had the Opportunity of taking a full View of it. It is certain, that this vaſt Kingdom of *China* (called *Cathay* by the *Tartars*, and *Chingbou*, or *Chunque*, *i. e.* middle Kingdom, by the *Chineſe*) is the utmoſt Province of all *Aſia* to the Eaſt, having beyond it no other Borders but the Sea, for this Reaſon called by the *Chineſe Tung*, *i. e.* of the Eaſt. To the North its Frontiers extend all along the *Great Tartary*, from which it is divided by a Ridge of great Mountains; and where that fails, by the famous *Chineſe* Wall, which begins upon the Confines of the Province of *Leautung*, and extends to the yellow River upon the Frontiers of the Kingdom of *Tibet*, 300 *German* Leagues in Length to the Weſt. It borders upon the Kingdoms of *Kiang* and *Bengal*, and to the S. and S. W. upon *Cochin-China*, and the Sea, comprehending in its Length all the Southern Parts betwixt the 130° and the 160°, making 1800 *Spaniſh* Leagues in Length, and three thouſand in Compaſs.

It is divided into fifteen great Provinces, among which, ſix, *viz.* thoſe of *Peking*, *Xancung*, *Kiangnan*, or *Nanking*, *Chekian*, *Tokien*, and *Quangtung*, extend along the Sea-ſide, the other nine being inland Provinces, five of which, *viz.* thoſe of *Quangſi*, *Kiangſi*, *Huquang*, *Honan*, lie to the Eaſt, *Xamſi*, *Suchuan*, *Quechan*, and *Juanan*, to the Weſt. The Provinces of *Leautung* and *Corea*, which are on the Eaſt-ſide, do not properly belong to *China*; all which contain one hundred and forty-five great Cities, and 1263 others, which would paſs for conſiderable Cities elſewhere. Their Cities are for the moſt Part built after the ſame Faſhion, ſquare, with two large Streets, dividing the whole into four Quarters, like a perfect Croſs; ſo that from the Centre of each Place you may view the four Gates of it. They are fortified with broad brick Walls, and flanked with Towers, after the ancient *Roman* Faſhion, plaiſtered over with the ſame Earth they make their Porcelain of, which in Time grows as hard as Stone, and preſerves the Walls againſt the Injury of the Air. It has been computed that ſome of them have ſtood 2000 Years without any conſiderable Change. Their Houſes are very neatly and conveniently built, with Gardens, Orchards, Groves, Fountains, and all other Conveniencies and Ornaments, their Architecture exceeding that of the beſt Maſters of *Europe*. They are, of all Nations of the World, the moſt careful in Paving, and keeping their Highways, and providing all Neceſſaries for the Accommodation of Travellers throughout.

The whole Empire is of ſo vaſt an Extent, that the Inhabitants of the Province of *Quantung*, lying on the Torrid Zone, are as black as the *African Moors*; whereas thoſe of the Province of *Peking*, which is moſt northerly, are as white as the *Germans*; which Difference is alſo obſervable in their Fruits, the ſouthern Provinces producing all ſuch Fruits as the *Indies* afford; whereas the more northerly Parts have Plenty of *European* Fruits. Beſides this, *China* abounds in Gold, Silver, precious Stones, Muſk, Silk, Salt, rich Gums, and Drugs, Rice, and Corn, for moſt of which they are beholden to Nature; yet muſt it be withal confeſſed, that the Induſtry of the Inhabitants, and the eaſy Government they live under, is a vaſt Addition to what they are obliged to Nature for, there being not a Fen, Marſh, nay, not a Mountain, but what is planted, cultivated, or put to ſome Uſe or other, no Crime being more heinous in *China* than Idleneſs. The Country of *China* does not only produce all ſorts of living Creatures, but alſo all the Fruits and Simples we have in *Europe*, but much better, and in greater Plenty, and are conſequently ſold at a very cheap Rate; nay, even Spices are ſo cheap here, that you may buy four hundred Nutmegs for a Crown, and two Pounds of Cloves for Half a Crown; and the vaſt Quantities of Silk it produces may be gueſſed at from what is exported thence into foreign Countries. As the Country is full of Rivers, ſo they abound in Fiſh, which they catch by the Help of Cormorants, of which they have vaſt Numbers here. They tie a String round their Necks above their Stomachs; ſo that after they have filled their Bags, which hang under their Throats, with Fiſh, they are forced to diſgorge what they have taken into the Boat unto which they are faſtened.

They have alſo a peculiar Way of breeding Ducks in prodigious Quantities; of theſe they keep three or four thouſand in Cages of Canes, ſet at the Sterns of great Boats, and let them out every Day to go aſhore, and pick the Weeds from amongſt the Rice, and towards Evening call them to their Cages by a Whiſtle, the Sound of which brings them back to the very Boat unto which they belong. Their Duck Eggs they hatch in Dung, and afterwards put the young ones under the Wings of the old Duck in the Cages: This Way of Breeding makes them ſo cheap, that they ſell five or ſix for Two-pence.

The *Chineſe* Women are generally well-ſhaped, and of a good Size; but the Men are flat-noſed, with large Faces, ſmall Eyes, and very little or no Beard. They cut not either their Hair, or their Nails, on the left Side. Their Cloathing is altogether of the ſame Faſhion, with this Difference only, that in the northern Provinces they uſe Furs; whereas in the ſouthern Parts they commonly wear Silk. The Women are very magnificent in their Apparel, and wear Abundance of Jewels and Pearls. They are very remarkable for their little Feet. They ſeldom appear abroad; and whenever they viſit their Relations, it is done in cloſe *Palanquins*, or Litters. The *Chineſe* are ſo quick, not only in all ſorts of Manufactures, but alſo in their Way of Trading, that ſcarce any body is able to over-reach them. Their Money is Gold and Silver, which paſſes altogether by Weight. They are ſo careful in providing for the Poor, that in each City a Judge is appointed to provide for the Relief of ſuch as are unable to provide for themſelves, and ſet to work ſuch as are in a Capacity to get their Bread.

As there are Books extant in *China*, which have been printed above ſeven hundred Years ago, it is certain that they invented the Myſtery of Printing before us, ſince it was not diſcovered in *Europe* till 1450. Their Characters are rather Figures, ſignifying certain Words, than Letters, which they write from the Top downwards, not with Pens, but with Pencils, and that on one Side only, their Paper, which they make of the Bark of *Bamboe* Canes, being very thin. The Emperor maintains at his own Charge many Schools and Academies, the Overſight of which is committed to Viſitors, who at certain Times not only examine the Profeſſors and Scholars, and expel ſuch as are not qualified for Studies, but alſo promote ſuch as have made a ſufficient Progreſs in Learning to the Degree of a *Latia*, a Dignity like our Doctors. They are very ceremonious and obliging in their Converſation, in which Point they are ſo nice, that the firſt Rudiments of Learning given to their Youths are certain Books of Compliments. Their Entertainments are very magnificent, in which they have this Peculiar, that they ſet as many Tables as they have Gueſts. Their Meats are ſerved up either in Plates, or Porcelain. They have ſmall Cups, becauſe they drink often, but no Napkins, and they frequently ſend home to their Gueſts what Meats are left untouched upon the Tables; and are eſpecially careful in entertaining Ambaſſadors with more than ordinary Reſpect.

They allow Polygamy, but puniſh ſeverely Inceſt, which is forbidden in a direct Line to Infinity, and in the Collateral Line to Siſters and Nieces. The firſt, however, is the only lawful Wife, whoſe eldeſt Son inherits half of the Eſtate of his Father; but on his Demiſe, the eldeſt Son of the next Wife has the ſame Pre-eminency. Adultery, though it be a capital Crime here, yet is ſeldom heard of, partly by reaſon of the great Reſtraint the Women are kept under, partly becauſe the *Chineſe* are ſo wiſe, as rather to make the beſt of ſuch an Accident, by an advantageous Agreement, than to expoſe themſelves, by publiſhing their own Diſgrace. Though the Government of *China* be not only monarchical, but alſo deſpotical, yet it is obſerved, that even thoſe Nations which enjoy the greateſt Degree of Liberty in *Europe*, are much more burthened with Taxes than the *Chineſe*, which chiefly proceeds from this fundamental Maxim imprinted in their Kings, that as War is deſtructive, and the chief Means to impoveriſh a Nation, they ought not to enter upon it, in order to extend the Limits, or make any Conqueſts; for which Reaſon it is, that, to avoid all Occaſion of Conteſt with Foreigners, the *Chineſe* are forbidden to go out of the Kingdom without Licence from the Emperor, or the Governor of the Province where they dwell.

The eldeſt Son always ſucceeds the Father in the Throne, the youngeſt Sons having only certain Appenages, with the Titles of Kings allowed them; but have not the leaſt Share in the Adminiſtration of the Government, being under the Juriſdiction or rather Inſpection of the Governor of the Province where they reſide, who pays them their Allowance quarterly. The chief Council of State conſiſts of twelve Counſellors and a Preſident; beſides which, there are in moſt of the great Cities ſix Commiſſioners. The firſt for the Adminiſtration of Juſtice; the ſecond for the Revenues; the third for the Ceremonies; the fourth for martial Affairs; the fifth for ſurveying the publick Structures; and the ſixth for criminal Caſes. To prevent the Miſmanagement of the Governors, and the Corruption of Judges and other Officers, the King ſends every three Years certain Viſitors into the Provinces, who, after having taken an Account of their Tranſactions, make a faithful Report to the King, who changes the Officers of the Province every three Years, with this Circumſpection, that ſo as never any Officer of Note is ſent, but into a Province remote from the Place of his Birth. Debtors are puniſhed by moſt cruel Drubbings, which makes them rather chooſe to ſell themſelves to their Creditors, than to undergo this kind of Puniſhment.

The Priſons, wherewith all the great Cities are provided, are very ſtrictly kept; but at the ſame time want not any Conveniencies, ſuch as Courts, Gardens, Ponds, Walks, *&c.* for the Divertiſement of the Priſoners, and Drinking-houſes and Cooks-ſhops for their Conveniencies. No Sentence of Death is executed without a Warrant from the Emperor, and this muſt be done in the Preſence of the Judges, who are ſo nice in this Point, that they allow a very conſiderable Time betwixt the Condemnation and Execution, make divers Viſits to the Priſoners, and examine them whether they have any thing to alledge in their Behalf; by which Delays it happens, that more Malefactors die in Priſon than are executed. Their ordinary Puniſhments are Hanging, Impaling, and Burning alive; but the laſt is only in Caſes of High Treaſon. Thieves they lay upon their Bellies with their Hands tied back, and ſo the Executioners beat them with Canes moiſtened with Water upon the Calf of their Legs with ſuch Violence, that they frequently expire under their Hands.

The *Chineſe* are *Pagans*, though ſome Authors have taken a great deal of Pains to perſuade the World that they found ſome Remnants of Chriſtianity among them, which they ſay were introduced there by the Apoſtle *St. Thomas.* They acknowledge the Heavens for the Creator and chief Governor of the Univerſe, which is managed by a Vicegerent called *Layocan Tzantey*, unto whom they pay the greateſt Veneration next to the Sun. The next Divinity is called *Canſay*, unto whom they attribute the Government of all ſublunary Things. They allot to theſe three Divinities as many great Miniſters, *viz. Tanquam*, who preſides over the Air; *Teiquam*, whoſe Buſineſs is to look after the Generation of Men, and all living Creatures, as well as the Products of the Earth; and *Tzinquam*, the chief Patron of the Sea. They have alſo three famous Saints; the firſt called *Sicbia*, Founder of all the religious Orders of both Sexes, of which there are great Numbers in *China*; the other two are Females, called *Quanina* and *Neoma*. The *Chineſe* are alſo much addicted to Incantation, and adore the Devil. They believe the Immortality of the Soul, which is communicated to it by Heaven, and that it ſhall either enjoy eternal Felicity or Torments, according to the good or bad Actions done in this World; for which Reaſon it is that they aſſign a certain Place of Abode not unlike Purgatory to the Soul, after its Departure from the Body: There it is purged from its Sins, and, by the Interceſſion of its Relations and Friends, may be eaſed in its Sufferings. Many of them alſo adhere to the Opinion of the Tranſmigration of the Soul, which they derive from the *Indians*.

Their Orders of religious Men have one General reſiding in the City of *Xuntion*, who has under him ſeveral Provincials, and theſe under them the Superiors and Guardians of their reſpective Monaſteries. They make uſe of Beads, and keep to their conſtant Mattins and Offices, not unlike the Monks in *Europe*. The eldeſt Sons amongſt the *Chineſe* are not permitted to enter into religious Orders, and ſuch as have may quit them at Pleaſure and marry, as may all the reſt who have embraced a monaſtick Life. As to their Funeral Rites, the *Chineſe* waſh the dead Bodies, put them in a Coffin of ſweet Wood well cloſed, and ſo keep them upon a Table fifteen Days; during which Time the Prieſts, who come there to ſing and pray over the Dead, are feaſted with Wine and Fruit; their Buſineſs it is to inter them after the Expiration of theſe fifteen Days, which is commonly done in the Country near a Pine-tree; and if that be not to be found, they plant one on purpoſe. Their Mourning is very cloſe, in coarſe Cloth, and Hats, with a Cord tied about their Middle: Sons continue this for two Years, and the other Relations proportionably.

The firſt Time the *Tartars* broke through the *Chineſe* Wall was in 1206, when they made themſelves Maſters of all the Country, and remained in Poſſeſſion of it till 1368, when they were not only forced from thence, but alſo obliged to acknowledge the Sovereignty of the Emperor of *China*. About the Year 1600, ſeven powerful Colonies of the *Tartars* were joined into one Kingdom under the Name of *Niuche*, whoſe King entered *China*, in 1616, with a powerful Army. Many bloody Engagements happened among the *Chineſe* and *Tartars*, eſpecially in 1618, 1619, 1620, 1625, 1627, till at laſt in 1630 the *Tartars* were once more forced to quit the Poſſeſſion of *China*, and to content themſelves with making Incurſions, as they found Opportunity. But in 1641 no leſs than eight Armies of Robbers appearing at once in the *Chineſe* Empire, and the Grandees being divided into Factions, ſome of them called in the *Tartars* to their Aid, and at laſt betrayed the capital City and the Emperor to them, who was ſtrangled in 1644. Upon which the *Tartars*, having ſpent ſome Years in reducing other Provinces, made themſelves abſolute Maſters of the whole Empire, by the Conqueſt of the City of *Quangcheu*, in the Province of *Quangſi*, *Nov.* 14. 1650. But it is now Time to proceed with our Voyage regularly and circumſtantially.

18. We told you how we were becalmed in the Sight of the Iſle of *Ceylon*, where we continued till the 20th of *February*, when the North-Weſt Wind obliged us to ſteer our Courſe to the South-Eaſt. We found ourſelves then 2° beyond the Equinoctial Line. I took this Opportunity to aſk the Maſter of the Ship, whether (according to the vulgar Opinion) I might diſcover both the Poles here; but he ſufficiently convinced me, that the Arctick Pole was not to be ſeen till about ſix Degrees, and the Antartick not till eight beyond the Line, and that when you come to 8 or 10° the North-Weſt Wind reigns there conſtantly for ſix Months, as the South-Eaſt does the other Months of the Year. We ſaw abundance of Birds, ſome white like Pigeons, others like wild Ducks, and vaſt Quantities of certain Birds, called by the *Portugueze Garayos*, being black and white, but larger than our Magpies. Their Tails are divided like a Pair of Taylor's Sheers: All theſe live upon the flying Fiſh, who, to avoid the Purſuit of the *Albicores*, *Bonitos*, and *Dorados*, betake themſelves to the Air. The *Albicores* are white, and without Scales, and ſo are the *Bonitos*; but the firſt exceed the others in Bigneſs, and have but one Bone from the Head to the Tail, but are not extraordinary Meat. The *Dorado* is like a Salmon, but more luſcious, and has ſmaller Scales. We alſo took a Sea-Hog (ſo called from its Snout, which is like that of a Pig) which are ſeen in great Shoals near the Veſſel, and are looked upon by the Seamen as the Forerunners of a Storm, which may naturally be accounted for.

The *Dutch*, in their firſt Voyage into theſe Parts, opened one of theſe Fiſh, and found a great deal of Fat, and a young Pig in the Belly of it. There is another great Fiſh in thoſe Seas called *Hayes* by the *Dutch*, and Shark by the *Engliſh*; their Teeth are very cloſe and ſharp, and as they delight in Man's Fleſh, it often happens that they ſnatch a Limb of an unwary Seaman. Their Mouth being below their Heads, they lie upon their Backs when they are to catch a Prey. That we took had the Heart in the Head, and lived a good while after it was taken. Their Fleſh is not fit to be eaten. There are alſo abundance of that ſort of Fiſh hereabouts called by the *Portugueze Paſupuarco*, becauſe they make a Noiſe like Pigs, and are of the Bigneſs of a Bream. Tortoiſes (the Meat of which is as fine as Veal) are in ſuch Plenty here, that the Seamen draw them at Pleaſure into the Ship with Hooks. *February* the 21ſt we found ourſelves in 1° 20' of the Line, with very rainy and unconſtant Weather, which is common hereabouts. On the 23d one of our Seamen died of the Pox; the 25th we were becalmed; but the next Night there aroſe a Tempeſt, which made us continually upon our Guard, for fear of the Travados, or Whirlwinds, which are ſo ſudden here, that the Seamen have ſcarce Leiſure to furl their Sails. We could not make any Obſervation by the Sun till the 5th of *March*, when we were in 8° 6 Lat. and the 10th in 10° 14, the Wind Weſt.

The 12th and 13th it blew a great Storm, with Thunder and Lightning; but what moſt ſurprized us was, that though we were in 13°, we found not the leaſt Effects of the Monſoon, or ordinary Wind of the Seaſon, which is commonly perceived at 8 or 9°, the South Wind blowing ſo hard, that we were in fear of being forced back to the *Indian* Coaſt. It was not till *March* the 15th that we found the Wind changed to the South; when putting out all our Sail, we made two Leagues in an Hour, and took ſeveral Dolphins that ſwam near our Ship. On the 20th we were becalmed in 16°, where we found the Compaſs decline 30' to the Weſt, and ſo it continued till the 24th; but as ſoon as the *Cape of Good Hope* is doubled, the Loadſtone draws towards the Eaſt. As we were floating thus up and down, the 21ſt of *March* our Ship took Fire, by the Careleſſneſs of the Butler, who ſet Fire to a Barrel of *Aqua Vitæ* as he was removing it. Our freſh Water beginning to be ſcarce, we made uſe of an Engine to draw freſh Water out of the Sea; but its Taſte being ſomewhat nauſeous, it ſerved only for the dreſſing of Meat.

On the 22d we made, by the Help of the Monſoon Winds, two Leagues an Hour, which continued the 23d, 24th, and 25th. On the 26th the Wind held ſtill fair; but, for fear of a Change, and Want of freſh Water, we reſolved to direct our Courſe to *Maurice* Iſland, to take in Refreſhments there. We diſcovered the ſame Night the Iſle of *Diego Rodriguez* in 20° 48', which lies ſixty Leagues from the ſaid Iſland of *Maurice*, ſo called by the *Dutch* from the Prince of *Orange*, who was Admiral of the United Provinces at the Time of their firſt Voyage to the *Indies*. Its Harbour is very ſpacious, being able to contain fifty large Veſſels, and commodious by reaſon of its Depth, which is a hundred Fathom at the Entrance. The high Mountains, which are covered with Trees, may be ſeen at a great Diſtance at Sea. The Vallies produce ſome Fruit, and abundance of other Trees, ſome of which are thoſe that afford the beſt Ebony in the World, black, red, and yellow; but the two laſt are in the greateſt Eſteem, and the Sea abounds in Fiſh. The *Dutch* in their Relations ſpeak of a Thornback they catched near this Iſle, which found two good Meals for the whole Ship, and Tortoiſes of ſuch a Bigneſs, that ten Men might ſit on one Shell. The Iſle was quite deſtitute of Inhabitants at that time; but ſince 1640, the *Dutch* have erected a Fort there. It abounds in Birds; but is deſtitute of four-footed Beaſts; but as for Fruits and Water, it affords ſufficient Refreſhment to Ships that are paſſing that Way.

The Wind continuing fair, when we came within Sight of this Iſland a Council was called, in which it was agreed not to loſe any Time by putting into this Iſland, but to continue our Voyage with all poſſible Speed to the *Cape of Good Hope*, to avoid the Danger of being obliged to winter in the Iſland of *Madagaſcar*. Accordingly we loſt Sight of this Iſle the ſame Day, and paſſed the Tropick of Capricorn *March* the 30th, ſteering our Courſe Weſt-South-Weſt. *April* the 1ſt we found ourſelves in 26° 3', and after having made forty Leagues, were becalmed before Night. We ſaw the next Day divers Whales; and the Weather becoming very ſtormy, carried us to the Weſt-South-Weſt, our Buſineſs being to ſteer to the South, and conſequently to the *Cape of Good Hope*. On the 5th the Compaſs ſtill varying, we held our Courſe ſtill to the Weſt, and though we had not much Wind, made ſeventy-three Leagues in theſe two Days. From the 9th (when we were about three hundred Leagues from the *Cape*) we advanced tolerably well, but the 15th it blew very hard, and thoſe Birds called by the *Portugueze Pintados*, which keep within forty Leagues of the Land, and ſeveral other Birds, came near our Ship. On the ſixteenth theſe Signs perſuaded our Seamen that we were not far from the Shore; the 17th we continued our Voyage with a freſh Gale; but the 18th and 19th we had ſcarce any Wind, through the Roughneſs of the Sea, which proved an infallible Omen of the Tempeſt that overtook us the ſame Night from the South-Weſt in 35° Latitude. As theſe Storms are unavoidable about the *Cape of Good Hope*, we took in our Sails.

On the 20th, perceiving the Water ſomewhat more inclinable to white than before, and a great many Sea-mews, called *Mangas de Valudos* by the *Portugueze*, round our Ships, we concluded that there was Ground within an hundred, or an hundred and fifty Fathom, and, upon Trial, found it at eighty Fathom. We ſaw alſo the ſame Day Abundance of Black-Birds, with a ſmall Spot of white on their Breaſts: Theſe, according to the Opinion of the *Engliſh* Seamen, always forebode a Tempeſt, which proved true; for, before Night, a Storm aroſe from the W. N. W. with a very rough Sea, which took our Carpenter from the Deck, but he was ſaved by means of a Rope. The Ground which ſtuck to the Plummet being black at eight Fathom Depth, we concluded we were not far from the *Cape d' Aguilas*, which is ſixty Leagues diſtant from that of *Good Hope.* The 25th the Tempeſt encreaſing in 36° 20′ beyond the Line, we were in great Danger of being loſt, being forced by the Currents towards the Shore; but the Tempeſt being ſomewhat allayed, we eſcaped the Danger, but were ſoon after threatened by another, occaſioned by a Lamp in the Preſident's Room, which had ſet Fire to the Wainſcot. The 26th the Storm continued till two in the Afternoon, when the Peſcepuereos coming in great Numbers about our Ships, were the Forerunners of fair Weather, and the N. W. Wind which enſued. On the 27th, in the Morning, it was calm; but, in the Afternoon, we made two Leagues an Hour with a N. W. Wind, taking our Courſe to the N. N. W. As we ſaw that Day abundance of Trombas, or a kind of Canes, three or four Feet long, and of the Bigneſs of a Man's Arm, which float upon the Water, and are met with no where but near this Cape, we concluded that we were not far from the *Cape* of *Good Hope*; and the 28th diſcovering the Coaſt from N. to W. ſome thought it had been the Cape; but finding Ground at forty Fathom, and in 30° 40′, we were ſoon convinced it muſt be the *Cape d' Aguilas.*

The 29th the Wind turning S. E. we ſteered our Courſe N. W. along the Coaſt, and the Wind turning to the N. W. we could advance but a little: We then found ourſelves in 34° 27′, and conſequently twenty-four Leagues from *Cape d' Aguilas.* On the 30th the Wind continued againſt us; but the next Day the Wind turning to the N. E. by E. we ſailed along the Coaſt, and at laſt diſcovered the high Shore known by the Name of *Cabo Falſo* (becauſe it reſembles a Promontory) within ſeven Leagues of the *Cape* of *Good Hope. May* the 2d the N. E. Wind continued, we got Sight of the *Cape* of *Good Hope*; but ſoon after turning about to the N. W. we could not get into the Bay, ſo were forced to ſtand out to Sea, ſteering our Courſe to the South. The 3d the Wind ſtill at N. W. brought along with it a moſt furious Tempeſt; notwithſtanding which we made the beſt of our Way to the Coaſt; the 4th doubled one of the Points of the *Cape* of *Good Hope.* Ten Leagues diſtant from the Bay we diſcovered the Mountain, called by the *Dutch* the *Table-Mountain*, from its Flatneſs and ſquare Figure, in 34° 4′, within fifteen Leagues of the Cape. Our Intention was to have got in there, but the Wind proving contrary we kept along the Coaſt as well as we could: But the 5th, at Sun-riſing, we were out of Sight of the Shore, which made us change our Courſe to the N. E. ſo that we diſcovered Land again about Noon, and in two Hours after, by paſſing the Iſle of *St. Elizabeth*, got into the Bay by Night, where we caſt Anchor at ſeven Fathom Water.

19. This Cape of the Continent of *Africa*, extending to the South into the Sea, in 36° beyond the Line, received the Name of *Cabo de Bona Eſperanza* in 1493, from *John* II. King of *Portugal*, when the *Portugueze* firſt went in Queſt of the Paſſage by Sea to the *Indies*, lying as it were at a nearer Diſtance of about 2500 Leagues, betwixt *Europe* and the moſt Eaſtern Coaſts of the *Indies*; ever ſince which Time this has been the Place where Ships bound to thoſe Parts take in their Refreſhments, Water being very excellent here, and Cattle very cheap, their Oxen being very large, with Bunches on their Backs like thoſe of the *Indies*, and their Sheep very good, with long hanging Ears, and Tails as big and weighty as a good Quarter of Mutton: Neither do they want Wild-Fowl, Deer, Wild-Boars, Partridges, Quails, and, among the reſt, a kind of Geeſe, with Stumps inſtead of Wings, but their Fleſh is not eatable. They have alſo Dogs, or rather Sea-Bears, Camels, Tigers, Lions, and Lynxes. The *Dutch* are uſed to leave Letters here under a certain Stone near the Harbour, acquainting their Countrymen that come after them with all the remarkable Paſſages in their Voyages, and what Courſe they intended to ſteer.

The Inhabitants are ſavage, uncouth, and ill-ſhaped: They greaſe their Bodies with Train-Oil, and eat their Fleſh raw; nay, they ſeldom kill any Beaſt, but feed upon them when they die of any Diſeaſe. Both Men and Women go naked, covering their privy Parts only with a Piece of Skin faſtened round their Waiſt with a Leather-Girdle, ſome wrap a Lion's Skin or Ox's Hide round their Buttocks, drawing their Tail between their Legs: Some wear them over their Shoulders down to their Waiſt only, expoſing all the reſt to publick View, and disfiguring their Arms, Thighs, and Legs, by making Characters in them by way of Inciſion. The Women adorn their Arms and Legs with broad Rings of Iron or Braſs. Thoſe living farther up in the Country are no leſs ſavage than the reſt, with this Difference only, that they live a little better; thoſe near the Sea-ſide living upon Oyſters, Fiſh, and eſpecially Whales; for they know not what Huſbandry is, though their Grounds are excellent. They live in the ſame Huts with their Cattle, and ſcarce ever come to the Seaſhore, except when upon the Arrival of foreign Ships they are to truck their Commodities, which are Ox-hides, Lions, Leopards, Tigers Skins, and Oſtriches Feathers, for Knives, Looking Glaſſes, Nails, Hammers, and Pieces of Iron. They know not what Religion is, both God and the Devil being equally beyond their Comprehenſion.

On the 10th we were ready to ſet ſail again out of the Bay; but the Wind proving contrary we did not get to Sea till the 12th, with a N. E. Wind, ſteering our Courſe to the Weſt; but the Wind varying that Day through moſt of the Points of the Compaſs we could not get out of Sight of the Coaſt, and at Night were ſurprized by a Tempeſt, which continued till the 17th with ſuch Violence that our Ship had much ado to reſiſt it. The 18th the Sky began to clear up, and the Fury of the Wind being allayed, we found ourſelves in 30° 40′; whence we conjectured that the Tempeſt had forced us back 25 or 30 Leagues, between *Cabo Falſo* and the *Cape* of *Good Hope.* The Night following there aroſe ſuch a dreadful Hurricane that we gave ourſelves over for loſt, being by the contrary Winds forced to Sea. The 19th were not much better; and the 20th we found but little Alteration, though we hoped for ſome from the Change of the Moon, which happened that Day; but the Storm continued till the 22d, when the Rains having ſomewhat abated the Fury of the Winds, we made uſe of our Sails, ſteering our Courſe to the Weſt, as well as we could. On the 23d we were becalmed in Sight of the Coaſt to the N. E. of us, and finding ourſelves in 37° 6′, we ſuppoſed ourſelves on the Coaſt between *Cabo Falſo* and that of *d' Aguilas*; but another Tempeſt ariſing the ſame Evening from the W. N. W. we were forced out again to Sea.

The 24th the Wind held ſtill contrary, which grew tempeſtuous at Night. The 25th in 36° Lat. we ſteered our Courſe with a W. Wind to the S. The 26th the Wind blowing N. E. we made all the Sail we could to the W. but in the Evening the Wind turning to the N. W. brought along with it a moſt violent Storm, which continued the 28th and 29th; ſo on the 30th it was reſolved, that ſeeing our Ship was not in a Condition to proſecute the Voyage to *England* without manifeſt Danger, to put into the Iſle of *Madagaſcar:* Purſuant to this Reſolution, we tacked about at Two in the Afternoon, in ſtormy Weather, and a very rough Sea, which continued the next Day till about Noon. *June* the 1ſt we made forty Leagues in twenty-four Hours, with a Weſt Wind, ſteering our Courſe to the Eaſt. The 2d, about eleven at Night, the Wind veering about to the S. S. E. the beſt Wind we could wiſh for the Proſecution of our Voyage to *England*, we reſolved to return to the *Cape* of *Good-Hope*, and to take in freſh Water at the Iſle of *St. Helens.* The third we got with the ſame Wind to 35° 8′. On the 4th the Abundance of Birds, called *Mangas de Valudos*, and the Trombas or Canes, floating upon the Sea, gave us great Hopes that we were not far from the *Cape* of *Good Hope.*

The 6th we were becalmed at forty-three, forty-eight, fifty-four, and ſixty-three Fathom Water, and in the Evening the Wind was N. W. but turned the 7th to the W. which, by Night, turned to a violent Storm, and continued the 8th till Midnight, when coming about to the N. we took our Courſe to the N. W. The 9th the

Winds being much abated, we found ourſelves in 35° 30′; but in the Afternoon, we were ſurprized by another Tempeſt, which putting us in imminent Danger of running upon the Shore, the Maſter of the Ship, who hitherto had been the chief Inſtrument of our turning this Way, ſeeing himſelf under the Neceſſity of changing his Reſolution, declared that there was no other Way left to ſave the Ship, than to endeavour to put in at *Madagaſcar*; accordingly we changed our Courſe the 11th with fair Weather; but about Midnight were overtaken with another dreadful Storm, which laſted the 12th, 13th, and 14th. It ceaſed the 15th, and the Wind being W. N. W. we ſailed 33 Leagues in 24 Hours, to the N. E. The 23d at Break of Day we deſcried an *Engliſh* Veſſel, bound to the *Eaſt-Indies*, Captain *Hall* Commander, Burthen 500 Tuns, and it was reſolved that we ſhould make jointly all the Sail we could for *Madagaſcar*, Captain *Hall*'s Ship being much leſs than ours, with a S. E. Wind.

The firſt of *July* he was got out of Sight, and the ſame Evening we diſcovered the Coaſt of *Madagaſcar*, ſo that we were forced to keep continual Watch all the Night, for fear we might come too near the Coaſt, which is very rocky and dangerous, eſpecially on the Point of the Iſle, or might go beyond it, it being almoſt impoſſible to make the Bay if you paſs beyond the true Altitude. The ſecond we arrived in the Bay of *St. Auſtin*, where there is no Bottom till within a Mile of the Shore, where we caſt Anchor at twenty-five Fathom Water. The Day after our Arrival, having eſcaped ſo many Dangers, our joy was redoubled by meeting here, beſides Captain *Hall*'s Ship, an *Engliſh Eaſt-Indiaman*, called the *London*, Burthen 1400 Tuns, commanded by Captain *Willes*, bound for *England*. The third the Captains of theſe Ships came on board ours, to conſult the beſt Methods to prevent the being impoſed upon by the Inhabitants, in the Trucking of what Commodities they had, for their Cattle; accordingly, theſe Commodities being produced by joint Conſent, and committed to the Management of the three Supercargoes, they bought, or rather exchanged every Day four Oxen for forty Pair of braſs Bracelets, a Sheep for two, and a Calf for three Pair; and for a braſs Ring of ten or twelve Inches about, a fat Ox, worth ſix or ſeven Pounds in *England*. The fourth the Preſident and the two Captains went up the River to diſcover what Cattle was coming down towards the Bay. The ſixth the Preſident treated the two Captains and all the Officers of the three Ships aboard ours, and Captain *Willes* did the ſame ſome Days after. The 14th Captain *Hall* proſecuted his Voyage to the *Eaſt-Indies*, as Captain *Willes* did two Days after for *England*, having ſupplied us with what we ſtood in need of for the Proſecution of our Voyage.

The twenty-firſt a certain Tent with Huts being ſet up for the Preſident and Soldiers near the Sea-ſide, he took up his Lodgings there. About four Leagues from the Harbour lived a certain Lord, who had three Sons, the Eldeſt of whom was named *Maſſar*: They came all three to pay us a Viſit, with a Retinue of one hundred Perſons, well armed with Javelins, bringing along with them three hundred Oxen, beſides ſome Sheep, Goats, Poultry, Citrons, and Oranges, in order to exchange them for ſome of our Toys. After having made a little Halt, the eldeſt of the three Brothers preſented the Preſident with twelve Goats, and his two Wives each with a fat Capon; in return of which, the Preſident made a Preſent of three Strings of glaſs Coral to himſelf, two to each Brother, and a Bracelet to each of his Wives, which they ſeemed to value at a great Rate. After having fixed a great Pole in the Ground, as a Token of the Amity they intended to preſerve with us, which they deſired us to maintain alſo on our Side, they ſold us, or rather trucked with us for ten fat Oxen, ſome Sheep, and Poultry; and amongſt the reſt, we had a fat Sheep, the Tail of which weighed twenty, or twenty-four Pounds, for ſeven or eight Grains of Coral, or Agat, and a Capon for three or four Grains of counterfeit Coral. We ſtaid here ſix Weeks, which were ſpent for the moſt part in ſhooting at Buts, and Fiſhing with Angle-rods. We had great Store of Fiſh, and among the reſt Oyſters, as large and delicious as any in *England*. From the fifth to the eighth of *Auguſt* we ſaw ſuch prodigious Numbers of Graſhoppers as darkened the Skies, but one ſmall Shower of Rain diſperſed them all. The Inhabitants eat them.

The Iſle of *Madagaſcar*, called the Iſle of *St. Laurence* by the *French*, lies in the torrid Zone, extending from North to South from the 10° to the 26°. its Length being one hundred and fifty, and Breadth one hundred and eighty Leagues, and conſequently one of the greateſt Iſlands in the World. It has the Conveniency of divers good Harbours, ſuch as the Bay of *St. Auſtin*, where we lay at Anchor, *St. Jago*, *Anton*, *Gil*, *Antipera*, *St. Julian's*, *St. Mary's*, *St. Sebaſtin*, *St. Romanus*, and *Manatenga*. Moſt of their Mountains are covered with Orange and Citron Trees, and the Rocks themſelves are a pure white Marble, from whence ſpring the cleareſt Fountains in the known World. They have alſo Ebony, and Date Trees, and a certain Kind not unlike the *Braſil* Wood, of which they make their Darts and Lances. Theſe Trees ſhelter vaſt Numbers of Apes and Birds, and among the reſt, a kind of Poultry, reſembling our Turkeys, being black all over the Bodies, with little white Spots. Their Heads are of a Mixture of blue and red, with yellow Horns on their Foreheads. They feed by hundreds together in the Woods. Here you meet alſo with that Gum called Dragon's Blood, which they draw out of the Flower of a Tree no bigger than our common Pear-trees, but more branchy, and not ſo full of Leaves, which are longer, but not ſo broad as thoſe of the Laurel.

This Iſle alſo produces ſome Aloes, but not ſo good as thoſe of the Iſland of *Socotra*. They have alſo Cotton, and ſome Indigo, but they underſtand not reducing it into Paſte, as the *Indoſtans* and *Indians* do. As they do not apply themſelves to Tillage, except it be for a little Rice, Beans, Pompions, and Melons, ſo they abound in moſt excellent Paſture, and conſequently in Cattle, in which their chief Riches conſiſt. They have alſo Citron and Orange-trees, which bear Fruit twice a Year, Date-trees, Cocoa-trees, and Bananas; and there is ſcarce a Houſe but has its own Bee-hives; for though they are ignorant as yet of the Advantages of making Honey and Wax, they make a certain Drink of it, with the Addition of Rice, which ſerve them inſtead of Wine. It yields alſo a Salt and Salt-petre, and near the Sea-ſide Ambergris. Some will have it to be rich in Gold and Silver Mines, but as the Inhabitants value Tin beyond thoſe Metals, they neglect to ſearch after them.

The Iſle is very full of Inhabitants, who are well ſhaped, for the moſt part Negroes; they wear no other Garments but a Piece of printed Calico, which they wrap about their Middle, ſo that one End of it hangs down before to the Knee, the other to the Ham. Their Huts, except the little Houſes of their Princes, which are of Wood, are only made of the Branches of Trees, wherein they have no other Beds or Quilts, but ſome few Mats to lie upon. They uſed to make their Fires round about them, to diſperſe the Vapours which are very pernicious here. Their chief Ornaments are certain Strings of Glaſs-beads of different Colours round the Waiſt, and Bracelets of the ſame about their Necks, Arms, and Legs. Both Sexes have Holes in their Ears, in which they put large Copper or Braſs Rings. They have all black Hair, ſome very much curled, others not, but it is ſeldom very long; notwithſtanding which they tie it up in ſeveral Treſſes. There is no conſiderable Difference betwixt the Cloathing of the Men and Women; the laſt wear ſometimes a ſleeveleſs Coat, and the Calico which covers their middle Parts is ſomewhat longer than thoſe of the Men.

The Women are very famous for their Fidelity to their Huſbands, who place ſo great a Value upon them, that they will ſcarce undertake any Thing of Moment without their Advice. They have two Wives at leaſt, each of which hath her peculiar Hut, and though the Huſband is very compliant with both, the eldeſt of the two always claims the Preference. They purchaſe their Wives from their Parents, or Relations, for ſome Oxen, Pikes, Darts, or other Arms. Adultery and Fornication are capital; but as there is no Familiarity ſo great which is able to raiſe a Jealouſy in them, thoſe Things are ſcarce ever heard of. Some of their young Women came very frankly into our Tent, unto one of whom the Preſident preſented one of my Shirts, deſiring her to wear it for my Sake. She made not the leaſt Difficulty to receive it, and wore it two Days, after which, ſhe tore it to Pieces, for ſome other Uſe. Their Men are brave, addicted to martial Exercifes, and very dextrous in the Management of their Lances, Darts, and Pikes, which always lie near them, even when they are at work in the Field, being trained up to the Uſe of Arms in their Infancy; Perſons of Note ſeldom ſtir abroad without having twenty-five or thirty Darts, or ſmall Pikes, carried after them, tied up in a Bundle. Their Bows are four or five Feet long, and the Strings looſe. They have a Sleight of Shooting with great Strength and Activity; and as to their Javelins, they dart them with ſo miraculous a Dexterity, that they will hit a Bird at forty Paces Diſtance.

They are divided into ſeveral Tribes or Clans, of one hundred, two hundred, or three hundred, each under his own Lord, whom they call *Tſebick*. Two of theſe had their Reſidence in a Wood not far from our Tent. Their Wars among themſelves are commonly occaſioned by the want of Paſturage for their Cattle, and the Prince *Maſſar* told us, that he had joined with two neighbouring Lords, and that they intended to attack ſome on the other Side the Mountains with five hundred Men, to drive them from their Paſture Grounds, which they ſtood in need of for their Cattle. This Dignity is not hereditary, but they govern, whilſt they are in the Poſſeſſion of it, with an abſolute Authority. It is not eaſily determined what Religion they profeſs. As far as I was able to learn, they believe one God, Creator of Heaven and Earth, who will reward their good, and puniſh their bad Actions. I remember I ſaw one among them, whom I ſuppoſed to be their Prieſt, getting up on a Tree, and making his Oration to the People; but as I had not the leaſt Knowledge of their Language, I could not be ſatisfied of what he ſaid, neither what Difference there was in the outward Appearance of their Prieſts and Laicks, except that I obſerved ſome of them to carry a Piece of a Cow's Tail at the End of a Cane; and I ſaw one whoſe Nails on the two Fore-fingers of his Right-hand were as long as the Talons of an Eagle. Each Tribe has its own Prieſt, who pretends alſo to Incantations.

21. The Iſle of *Mozambique* is not above half a League from the Continent of *Africa*, and remains in the Poſſeſſion of the *Portugueze*. This ſmall Iſland is ſo beneficial to the Governor thereof, that what with the Trade to *Madagaſcar*, and that of *Soffalo*, he commonly amaſſes a Treaſure of 150,000 Pounds Sterling during his three Years Government. This Iſland was firſt diſcovered by the *Portugueze* in 1506, when a whole Boat of Negroes coming on board the *Portugueze* Veſſels, they were very civilly entertained by the Captain, who alſo gave them divers little Preſents, but they requited his Kindneſs with a Shower of Arrows as ſoon as they were got into their Boat, till the Captain by a Volley of ſmall Shot, and ſome Cannon Ball, made them ſoon give over that Sport. Another *Portugueze* Captain, named *Rodriguez Perera*, being in the ſame Year driven upon that Coaſt by Diſtreſs of Weather, ſent a certain *African* Negro, who had ſome Knowledge of their Language, to ſignify unto them, that he was come thither to ſettle a good Correſpondence and Commerce with them. They ſeemed to approve of this Propoſal, but were no ſooner got at ſome Diſtance from the *Portugueze*, than they fell upon the *Moor*, with Intention to kill him, which they had certainly done if the *Portugueze* had not diſcharged their Fire-Arms upon them, which obliged them to leave the Negro, and to betake themſelves to their Heels, leaving ſeveral of their Companions dead upon the Spot.

Perera ſailed thence to another Place upon the ſame Coaſt, where having ſurprized one of their Princes, he carried him on Board, and gave him ſuch kind Entertainment, that in Requital for his Courteſy, he offered to ſhew him a very good Harbour; accordingly he conducted them to a great Bay, at the Entrance of which was a ſmall but populous Iſland; but the Inhabitants being terrified at the Sight of theſe Foreigners, fled into another adjacent Iſland; ſo that the *Portugueze*, being become Maſters of the ſmall Iſle without the leaſt Oppoſition, they ſent to the Inhabitants, deſiring them to return to their Habitations, the Occaſion of their coming thither being only to ſettle a good Correſpondence with them. Upon this moſt of them returned, and as a Mark of their Good-will, preſented *Perera* with fifty Oxen and twenty Goats; but being nevertheleſs willing to be rid of the Strangers, they tempted the Captain with the Hopes of great Riches, which they ſaid he might meet with in the Port of *Matatana*; which was ſo well approved by him, that he was preparing to go thither, but one of his Ships being ſoon after forced upon the Coaſt of the Iſle, he retired with the other to *Mozambique*: Another Ship of the ſame Fleet being driven by tempeſtuous Weather into the Port of *Matatana*, a Boat of the Country came immediately aboard them, in which the Captain ſent the Maſter of the Veſſel, who was well verſed in the *African* Language.

The *Moors* making more than ordinary Haſte to get aſhore with the Maſter, and the *Portugueze* conceiving ſome Jealouſy at their Behaviour, they purſued them with eighty Men in their Shallop, but too late, the Negroes having reached the Shore before them. However, after they were landed, they got Sight again of the Maſter, who told them he had been treated with much Kindneſs by their Prince, who was deſirous to ſee the Captain himſelf, in order to enter into a ſtrict Correſpondence with him; which the Captain being not unwilling to comply with, went accordingly aſhore, where he was kindly received, and magnificently treated by the Prince, according to the Faſhion of that Country; but in the Evening, being ready to return aboard in the Shallop, there aroſe a violent Tempeſt, that he durſt not venture to commit himſelf to the mercileſs Waves in ſo ſmall a Boat, which continued for four Days ſucceſſively; and there being no Poſſibility to get on board, his Ship's Crew imagining that he had been maſſacred by theſe Barbarians, thought it moſt adviſeable to ſave themſelves, and to return to *Mozambique*, which they did accordingly. The Captain finding the Ship gone was ſo diſcontented that he died not long after, as did eight others of his Retinue. The reſt thinking it better to run the Riſque of the Sea than to periſh without the leaſt Hopes of Relief, embarked in the Shallop, and having by good Fortune met with a *Portugueze* Veſſel, commanded by *John Tonſeca*, he carried them to the next *Portugueze* Port in *Africa*. The firſt Time of the Landing of the *Dutch* in the Iſle of *Madagaſcar* happened rather by Chance than any Deſign, for their Seamen being miſerably infeſted with the Scurvy, ſo that they were no longer able to manage the Ship, they were forced to ſeek for Refreſhment in this Iſland, but loſt ſeventy Men out of the four Veſſels, of which their Fleet conſiſted, before they could get at any. Theſe Men were buried in a ſmall Iſland, which to this Day is called the *Dutch* Church-yard. Some will have the *Madagaſcarians* to be *Mohammedans*; but certain it is, that in their outward Demeanour they do not ſhew the leaſt Sign of it.

22. The Winter Seaſon being pretty well over we began to think of our Voyage; for which Purpoſe having bought, *Auguſt* the 19th, of Prince *Maſſar*, and ſome other neighbouring Lords, twenty-five Oxen and a hundred Sheep, we embarked our Baggage the 20th, and the 21ſt ſet ſail out of the Bay of *Saint Auguſtine* with a South-weſt Wind, which proving favourable all that Night we ſoon loſt Sight of *Madagaſcar*.

The 22d being rejoined by the Monſoon, or Wind of the Seaſon, which happened ſooner than ordinary, we briſkly purſued our Courſe to Weſt-South-Weſt; and the 23d the Wind blowing a briſk Gale from the Eaſt in our Stern, we ſailed briſkly a little more to the South, with an Intention to avoid the *Cape of Good Hope*. The 24th and 25th the Wind was not ſo briſk, but being ſeconded by a freſh Gale, the 26th we advanced bravely, and found ourſelves that Day in 27° 27′ Latitude, and on the 28th in 28° 12′. The 29th we were ſurprized by the Travados, or Whirlwinds, in 31° 15′; but they did not continue long. The 30th it blew aſtern; notwithſtanding which we made the beſt of our way, and the laſt of *Auguſt* found ourſelves in 33° 34′. On the 1ſt of *September* we made fifty Leagues in twenty-four Hours, though the Wind blew very hard; and the 2d we got thirty Leagues farther,

ther, with a South-weſt Wind. The 3d being becalmed, we killed a Cow we bought at *Madagaſcar*, and a Goat. In the Belly of the firſt we found three Calves, and in the laſt four Kids, from which a Judgment may be made of the Fruitfulneſs of this Country. On the 6th we were terribly ſhaken by a moſt dreadful Tempeſt, ſo that our Ship beginning to be leaky, we were forced to pump without Intermiſſion. We found ourſelves in 35° Latitude. On the 7th the Wind being tolerably fair, we ſteered our Courſe to the Weſt-North-Weſt; though the Sea continued very rough. The 8th and 9th we had abundance of Rain, with a South-Weſt Wind, with which we made four Leagues with a moderate Gale, and ſeeing many of the Birds called *Mangas de Valudo*, concluded that we were not far from the *Cape of Aguilas.*

The 11th the Eaſt Wind hindered us from making any conſiderable Progreſs, and finding a ſandy Bottom at twelve Fathom of Water, we were more and more perſuaded that we were near the *Cape of Aguilas.* The 12th we were forced to make the beſt of our Way, ſometimes with a North-North-Weſt, ſometimes with a South-Weſt Wind, which continuing in the Afternoon, we continued our Courſe to the Weſt-North-Weſt, and in the Evening found a yellow Sand at a hundred and ninety Fathom Water. The 13th, the Wind being at South-Eaſt, we continued our Courſe to the Weſt-North-Weſt, and finding a Whale floating upon the Water in the Latitude of 35°, we believed ourſelves to be in the Height of the *Cape of Good-Hope*, where abundance of Whales are commonly ſeen. The 14th, at Sun-riſing, finding the Declination of the Needle 4° 50′, we concluded that we had compaſſed the *Cape of Good-Hope*; the 15th we had a fair Wind and Weather, and found the Declination of the Compaſs to be 1° 5′, and preſently after the Declination of it, near the *Cape of Good-Hope*, is 4°, though ſometimes it does not decline ſo much; and as ſoon as you have paſſed the *Cape*, you find the Compaſs to vary to the Eaſt. At 33° 15′ Lat. lies the Iſle of *St. Elizabeth*, not above twenty Leagues on this Side of the *Cape of Good-Hope*, being not above two Leagues from the *African* Coaſt, on which Side it has a very good Harbour at ſixteen Fathom Water.

The whole Coaſt is but one continued Rock; but the Country is ſo fertile in ſeveral ſorts of the beſt Herbs, that there is ſufficient Reaſon to believe, that if it were cultivated, it would not in its Products be behind the Iſle of *St. Helens*, or any other in thoſe Parts. The worſt is, that it wants freſh Water, except what is ſupplied by the Skies when it rains, which makes this Iſle not to be much frequented; though they have ſuch vaſt Numbers of Sea-Wolves here, that in a few Days they may catch as many, that the Fat would freight a Veſſel of ſix hundred Tons. They call theſe Creatures Sea-Wolves, though both in Colour and Shape of their Heads they rather reſemble our Bears, except that their Snout is not ſo ſharp. They have only two Paws beneath the Breaſt, by which means they draw the other Part of their Body after them, and that with ſo much Swiftneſs, that the nimbleſt Man can ſcarce overtake them. This Beaſt is very fierce, its Teeth being ſo cloſe and ſtrong, that it will bite through the Handle of a Partiſan. This Iſle alſo produces a kind of Badger, the Fleſh whereof is very delicious. The 16th we made the beſt of our Way with a ſmall Wind at 32°, and the 17th and 18th made ſixty-four Leagues with a North-North-Weſt and a South-Weſt Wind, and came the 19th into 29° 16′, when with a South-South-Weſt Wind we made forty Leagues to the North-Weſt, and in the Evening found ourſelves in 28° Latitude. The 6th of *October* a South-Eaſt Wind carried us fifteen Leagues farther to the Iſle of *St. Helens.*

23. The Situation of this Iſland, called *St. Helens* by the *Portugueze*, is in 16° 12′. It is diſtant from the Cape of *Angola* 350 Leagues; from that of *Good-Hope* 550; from *Brazil* 510. It being very ſurprizing, that an Iſland of no more than ſeven Leagues in Compaſs ſhould be found at ſo great a Diſtance from the Continent. It is ſo plentiful in moſt excellent Fruits, and all ſorts of Creatures, that it ſurpaſſes moſt of the Provinces of *Europe*. Some were of Opinion, that there were neither to be ſeen when the *Portugueze* firſt diſcovered it, and that thoſe few Trees and Cattle they brought thither, have received ſuch vaſt Improvements from the natural good Conſtitution of the Ground, that, at preſent, it is able to ſupply whole Fleets with Refreſhments. Figs, Pomegranates, Citrons, Oranges, Goats, Hogs, *Barbary* Hens, Pheaſants, Partridges, Quails, Peacocks, and Pigeons, being to be had here at all the Seaſons of the Year; not to mention the Fiſh which are found here in vaſt Quantities, and Salt ſufficient for the Curing them. The Ground naturally produces ſo many wholſome Herbs, that the *Portugueze* frequently leave there their ſick Men, which are ſure to recover againſt their coming back again that Way the next Year.

The Mountains of this Iſle are ſo high, that they are diſcovered fourteen Leagues off at Sea. The *Portugueze* thought it a Piece of Prudence not to make any Eſtabliſhment in this Iſland, conſidering the Jealouſy which its Poſſeſſion might raiſe in other Nations trading into theſe Parts, which its vaſt Diſtance from the Continent would make it very difficult to keep; whereas its being free would afford a certain Retreat to all Veſſels; and thoſe Refreſhments, eſpecially of freſh Water, which they would be obliged to ſeek for as far as the Coaſt of *Guinea*, where they muſt be forced to ſtay for the Rains, to the great Inconvenience of the Seamen, many of whom muſt in the mean while periſh for want of it. The Fertility of the Iſle ought chiefly to be attributed to the daily Showers of Rain which fall there, which, being animated by the Sun-Beams, ſhining preſently after by Intervals, incredibly advances the Maturity of Things in a Climate like this. It has alſo three Places where Ships may provide themſelves with freſh Water, *viz.* where the three Rivers, which have their Sources among the Mountains, diſcharge themſelves into the Sea. Theſe produce abundance of Snakes, which are eaten by the *Dutch*, who prefer them to Eels. At 190 Leagues to the N. W. of the Iſland of *St. Helens*, you ſee the Iſland of *Aſcenſion*, ſo called from its being diſcovered upon *Aſcenſion-Day* by the *Portugueze*, lying 8° 30′ S. of the Line. It is a very mountainous Iſland, affording neither freſh Water, nor any other Proviſions, except Fiſh, of which there is great Store on that Coaſt. *October* the 17th, the ſame Wind carried us forty Leagues forward; and the 18th forty-two to the 5th Degree.

The Heats were almoſt inſupportable this Day, and we ſaw Millions of Flying-fiſh, and great Numbers of the Birds called *Mangas de Valudo.* The 19th, the Wind blowing from the S. E. we made 40 Leagues to 3° 19′ Lat. and the 20th the ſame Wind continued us 40 Leagues farther to 1° 18′ Lat. The ſame Wind carried us the 21ſt 35 Leagues, when we paſſed the Equinoctial Line. At 1° beyond the Line, we diſcovered the Cape *de Lopez Gonzales*, upon the Coaſt of *Guinea*, which has a ſafe Harbour for Ships, which ſometimes provide themſelves with Proviſions here. The Iſle of *St. Thomas* is ſituate under the Line, the Air of which is ſo unwholſome, and the Heats ſo exceſſive, that few *Europeans* live there to fifty Years of Age, though ſome of the Natives arrive to an hundred. Here is a conſtant Equality of Day and Night throughout the whole Year, and it never rains, except in *March* and *September*; the Defect of which is ſupplied by the Dew, which falls conſtantly every Night, moiſtens the Ground, and renders it very fruitful. When it was firſt diſcovered, a certain kind of Tree was found here, the Branches whereof were exactly ſtrait. And, formerly, this Iſle produced ſuch vaſt Quantities of Sugar, that above forty Ship Loads might be tranſported thence every Year; but the Worm, being got among the Canes, has ever ſince made ſuch Havock among them, that it ſcarce affords now Loading for ſix Ships. Beſides which, this Iſland produces Wheat, Wine, Millet, Rye, Barley, Melons, Cucumbers, Figs, Ginger, red Parſnips, Cabbages, Navews, Lettuce, Parſley, and all ſorts of Roots, Pulſe, and Pot-herbs; and amongſt the reſt, a certain kind of Muſhrooms, the Rind whereof is black, but the Meat white, and ſhoots forth divers Branches below. The Inhabitants look upon it as a great Dainty, and, when baked in the Embers, eat them as we do Cheſnuts, but they have a better Flavour. The *Spaniards* have planted ſome Olive, Peach, and Almond-trees here: They thrive well enough, but bear no Fruit.

This Iſle alſo affords a ſort of Land-Crabs, which live under Ground, and work like Moles; Partridges, Quails, Black-birds, Parrots, and other Birds in abundance. The Sea produces vaſt Quantities of moſt excellent Fiſh, and, among the reſt, Whales of a vaſt Bulk. In the very Centre of the Iſle is a Mountain, covered on the Top with a Cloud, which furniſhes Water ſufficient for the conſtant watering the Sugar-Canes; and what is moſt obſervable is, that the higher the Sun comes above the Horizon, the more Water falls from the Cloud. The Natives are Negroes, but ſuch Foreigners as ſettle there continue their natural Colour to the third and fourth Generation. They affirm, that Lice and Fleas, wherewith the Negroes are much peſtered, never afflict any Stranger. At thirty-five Leagues Diſtance from the Iſland of *St. Thomas* to the South, you ſee another Iſland, called *Rolles* Iſle by the *Portugueze*. It produces ſuch Plenty of Oranges, Citrons, Bananas, Ananas, Ginger, Poultry, Hogs, and other freſh Proviſions, that it is one of the moſt convenient Places for Ships to refreſh themſelves in; its Haven being very commodious at ten Fathom Water.

The Iſle of *Cariſco* lies cloſe to the Continent, and affords nothing but freſh Water. The 25th a S. E. Wind advanced us thirty-two Leagues on our Courſe to the N. N. W. It was very rainy, and we were frequently troubled with the Travados, or Whirlwinds, which are ſo often met with on the Coaſt of *Guinea*, from whence we might be an hundred and fifty Leagues diſtant. The 26th the Wind continued the ſame, and we made twenty-five Leagues to the 7° Lat. N. We obſerved here the Heats to be more intenſe than we had felt them on the other Side of the Equinoctial, notwithſtanding the Sun was 10° farther from our Hemiſphere; the Reaſon of which I conceived to be, that the Sun-beams, which had ſo lately warmed the Septentrional Hemiſphere, had not had ſufficient Time to produce the ſame Effect in the Meridional. The 27th the Wind changing to the N. and by E. we were alſo obliged to alter our Courſe, and made only thirteen Leagues that Day. About Noon we found ourſelves at 7° 50′ Latitude, and it was obſervable, that the further we ſteered from the Coaſt of *Guinea*, the leſs we were troubled with bad Weather, which had ſufficiently afflicted us for ſome Days paſt. The 28th the Wind turned to the N. E. which is the ordinary Wind between the 10 and 20°, which afterwards changes, as it does in our Seas. We made thirty Leagues that Day; and on the 29th thirty Leagues more with the ſame Wind, in 10° Lat. about Noon. On the 30th we made twenty-eight Leagues with the ſame Wind and Courſe to 11° 13′ Lat. and the 31ſt twenty-three Leagues with the ſame Wind, and rainy Weather.

On the 1ſt of *November* the Wind continued the ſame, and carried us twenty-ſix Leagues forward; the 2d we made twenty-four Leagues with the ſame Wind, ſteering our Courſe to the N. W. The 3d we continued our Courſe with the ſame Wind, which brought us about Noon into 14° 41′, and conſequently near the Cape *Verde*, being a Point of Land ſtretching out into the Sea from the *African* Continent between the Rivers of *Gambia* and *Senega*: *Ptolemy* calls it *Promontorium Arſinarium*. The Inhabitants here are *Moors*, large ſized, and not ill ſhaped, but very miſchievous and treacherous. They are *Pagans*, worſhipping the Moon and the Devil; ſome among them call themſelves *Mohammedans*; but ſetting aſide Circumciſion, they have no Marks of that Religion, or any other. They are embroiled in continual Wars with their Neighbours, and very good Horſemen, their Horſes, which are very ſwift, being brought thither from *Barbary*. Their Arms are only Bows and Arrows, and a kind of Lance or Pike, which they manage with marvellous Dexterity. The Privy-Parts of their Enemies are the Trophies they moſt eſteem; thoſe they preſent to their Wives, who make Necklaces of them, and wear them as the greateſt Ornament. They allow Polygamy, and their Wives are forced to do all their Work, both at home and abroad.

Whilſt the Huſband is in his Hut he is attended by his Wives, and then goes a hunting, or about ſome other Sport, at his own Pleaſure. Their Women are very hardy; they are no ſooner delivered, but they waſh their Children themſelves in the Sea or next River. The Men are generally addicted to Drunkenneſs to ſuch a Degree, that ſome of them will take off a whole Quart of *Aqua Vitæ* at a Draught. Their chief Times of Merriment are at the Funerals of their Friends and Relations, where they drink and howl by Turns, and that for four or five Days together, to the Sound of the Drum and Pipe. They believe the Reſurrection of the Dead, and ſay they ſhall then be white, like the *Europeans*. They have a conſiderable Trade with the *French*, *Spaniards*, and *Dutch*, in Ox-Hides, Buffaloes, Elks, Elephants Teeth, Wax, Rice, and Ambergris, which is to be found in its Perfection; for here one Mr. *Peter Van Brouck*, a *Dutch* Merchant, bought 1606 Pieces of Ambergris of eighty Pound Weight.

The Diſcovery of this Coaſt is likewiſe owing to the *Portugueze* in the Year 1417; but this firſt Voyage meeting but with indifferent Succeſs, *Anthony Gonſales*, in 1441, having diſcovered the Cape *del Cavellero*, carried off certain Negroes, who being ſent by the Infant of *Portugal* to Pope *Martin* V. he was willing enough, under the ſpecious Pretence of planting Chriſtianity in thoſe Parts, to grant him all what he ſhould diſcover on the *African* Coaſt, under Condition, that after his Death it ſhould be annexed to the Crown of *Portugal*. The Infant having already diſcovered the whole Coaſt betwixt *Cabo de Noam*, and 100 Leagues beyond the *Cabo Verde*, happened to die in 1453; but King *Alphonſo*, in 1457, granted all thoſe Conqueſts to D. *Ferand*, Duke of *Viſco*, Heir apparent of the Infant, and in 1461, ordered a Fort to be built in the Iſle of *Argoin*, for the Security of Commerce. It was in the ſame Year farmed out to one *Ferdinand Gomez*, under Condition that he ſhould be obliged to diſcover every Year one hundred Leagues on this Coaſt; by which means the *Portugueze* had in 1497 diſcovered the Iſles of *Fernando del Po*, *St. Thomas*, *Anno Bueno*, thoſe of *del Principe*, and the *Cape of St. Katharine's*. King *John* II. was no ſooner come to the Crown, but he ſent, in 1481, *Diego d'Azambuja*, who, on the 19th of *January* 1482, made the firſt Diſcovery of *Mina*, caſting Anchor near a Place called *Aldea de dos Partes*, then under the Command of a certain Prince named *Coramanſa*.

This Place, unto which the *Portugueze* gave the Name of *Mina*, from the great Quantity of Gold found there, is ſituate upon the Coaſt of *Guinea*, in 5° 40′ S. of the Equinoctial Line, between the two Kingdoms of *Acben* and *Cara*, bordering to the N. W. upon *Camana*, and to the N. E. upon *Afuto*, ſmall Countries under the Juriſdiction of thoſe of *Abarambues*. Hereabouts too, *viz.* within the Compaſs of fifty Leagues, is managed the chief Trade of all this Coaſt. They have built a Fort here, upon an Aſcent, on a Point of Land which jets out into the Sea, like a Demi-Iſle, having on one Side, *viz.* to the North, the *Ethiopian* Sea, and to the South a ſmall River. The Town, which is ſituate juſt below the Foot of the Fort, has about 800 Inhabitants, and its Situation is ſuch, that 1500 Men may maintain it againſt a conſiderable Force, being fenny all about, and withal ſo barren, that the Inhabitants are forced to be ſupplied with Proviſions from *Camana* and *Afuto*. The Natives here are ingenious enough, and much more pliable than the Negroes, but are extremely ignorant in Matters of Religion, for they adore every thing they ſee, that is the leaſt ſurprizing to them. At that Time they offered their daily Sacrifices of Water and Meat by their Prieſts to a certain Tree, of an extraordinary Bigneſs, incloſed for that Purpoſe with a high Wall. They adored the Bones of a Whale, and paid Divine Worſhip to a certain Rock, becauſe it exceeded all the reſt in Height. They are extremely addicted to Divination, and therefore ſet a very high Eſteem upon thoſe who profeſs themſelves Sorcerers, but in Effect are nothing elſe but Cheats, who improve the Weakneſs of thoſe ignorant Wretches to their Advantage. They are the moſt religious People in the World in the Obſervance of their Oaths, it being their Opinion, that ſuch as violate them, will be ſnatched away by a ſudden Death. And hence it is, that their Law-Suits are determined in a few Hours, upon a ſolemn Affirmation or Denial of either of the Parties. All Crimes, even capital ones, may be commuted with Money, unleſs the ſame be reiterated ſeveral Times by the ſame Perſon. They have no other Cloathing but a Piece of Cloth, or an Ape's Skin, wherewith they cover their Privy Parts, all the reſt of their Bodies being naked. For Ornament ſake they wear Bracelets of Gold about their Arms and Legs, and twiſt their Hair and Beards with golden Chains. They conſtantly rub their Bodies with Oil, or Fat, to make them ſhine. Their Wars are no more than confuſed Skirmiſhes, without the leaſt Order or Diſcipline. They make uſe of Darts and ſhort Lances; and for their Defence cover themſelves with the Skins of Tygers, Lions, or Leopards. Their *Hidalgo's*, or chief Men, are attended by two Pages when they are going to the Wars, and one carries the Buckler, the other a Stool for his Maſter to reſt himſelf upon, as Occaſion ſerves. They marry as many Wives as they are able to buy and maintain, the Purchaſe of a Wife being commonly ten Rials, which paid, the Marriage is conſummated without any further Ceremony, except that they get heartily drunk. The *Dutch* have erected a Fort called *Bourio*, within four Leagues of *Mina*, beſides which they have their Factories at *Cara*, *Caramantin*, and *Aldea del Puerto*, whence they return vaſt Quantities of Gold yearly, having much undermined the *Portugueze* Traffick with the *Ethiopians*, by their mild Way of Dealing, and being contented with a much leſs Profit than the other.

25. King *John* the IId of *Portugal*, having refuſed the Offer made him by *Chriſtopher Columbus*, of diſcovering the *Weſt-Indies*, bent all his Thoughts upon the Conqueſts of the *Eaſt*; for which Purpoſe he ſent *Diego Can*, and *Juan Alonſo de Avero*, into thoſe Parts. The firſt, directing his Courſe towards *Mina*, came to the *Cape Lopez Gonſales*; and having afterwards doubled the *Cape of St. Catherine*, entered the River *Zaire*, in 7° S. of the Line into the Kingdom of *Congo*, this Kingdom extending from the *Cape of St. Catherine* to the South of the *Cape de Ledo*, is incloſed on the Weſt Side by the *Ethiopian* Sea, to the South by the Mountains of the Moon, and the *Capes*, as it is to the Eaſt by *Mantabas*, and borders to the North upon the Kingdom of *Beny*, reaching in Length from 20° 30' to the 13° beyond the Line, and conſequently near 160 Leagues. It is divided into ſix great Provinces, *viz.* *Bamba*, *Soango*, *Sunda*, *Pango*, *Botta*, and *Pamba*. The Province of *Bamba* extends along the Sea-ſhore betwixt the two Rivers of *Ambriſi* and *Coanſo*, its chief City bearing the ſame Name of the Province, lying twenty Leagues from the Sea-ſide, betwixt the Rivers of *Loſa* and *Ambriſi*. The Province of *Soango* is incloſed betwixt the two Rivers of *Zaire* and *Soango*, reaching from the River *Ambriſi* to the Foot of the Mountains, which ſeparates it from the Kingdom of *Soango*.

The Province of *Sunda* is only eight Leagues in Compaſs, comprehending all the Country about the City of *Congo*, named *St. Salvador* by the *Portugueze*, to the River *Zaire*. Its Metropolis has given its Name to the Province. The Province of *Pango*, formerly under the Juriſdiction of its own Kings, borders to the North upon the Iſland of *Sunda*, and to the South upon that of *Batta*; to the Weſt it has the City of *Congo*, and on the Eaſt-ſide is ſurrounded by the Mountain of the Sun. The Province of *Batta* lies to the North-Eaſt, betwixt that of *Pango* and the River *Barbella*, extending to the burnt Mountains. The Province of *Pamba* has for its Metropolis the City of *Congo*, which is built upon a Mountain, at leaſt fifty Leagues from the Sea-ſide. Another Mountain belonging to this Province, which is above ſix Leagues in length, is ſo well ſtocked with Villages, that its Inhabitants are computed to amount to near one hundred thouſand Perſons. *Duarte Lopez*, who lived ſeveral Years in thoſe Parts, declares, that the Climate here is as agreeable in Winter, as it is in *Italy* in *October*; and that the greateſt Inconveniency they are ſubject to here, are the hot Rains which fall every Day two Hours before, and as many Hours in the Afternoon, during the Months of *April*, *May*, *June*, *July*, and *Auguſt*, being their Winter, which begins the 15th of *March*, and ends the 15th of *September*. The Days and Nights here are of a Length, both Winter and Summer.

The River *Zaire* ariſes out of the ſame Lake whence the *Nile* derives its Riſe: it is beyond all Queſtion the largeſt River in all *Africa*; for being joined with the Rivers *Vambo* and *Barbella*, as it paſſes through the Country, it is at the Mouth, where it diſembogues into the Sea, at leaſt twenty-eight Leagues broad. The River *Goauze* is the common Boundary betwixt the two Kingdoms of *Congo* and *Angola*, and the River *Lelonda* abounds in Crocodiles and Sea-horſes. This Creature is of a duſkiſh Colour, with very little Hair; its Head is without Ears, broad Noſtrils, and in his Jaw two Teeth like the Tuſks of a wild Boar; its Hoof has the Shape of a three-leaved Graſs; it neighs like a Horſe, and will run a great Pace. The hot Rains, which fall in the wet Seaſon, rendering the Grounds very fertile, they produce Herbs, Corn, and Fruit, in prodigious Quantities. The Province of *Pamba* has divers Gold Mines. All the Foreſts are full of Elephants of an extraordinary Size, the Teeth having been found to weigh two hundred Pound Weight. They produce alſo a peculiar Creature called *Zebra*, in Shape not unlike a Mule, but is capable of engendering: It is marked with three Liſts round the Back, reaching down to the Belly, of about three Fingers Breadth; of which one is black, the other white, and the third yellow. This Beaſt is famous for its marvellous Swiftneſs. They have alſo a kind of Oxen called *Empalenges*, but ſomewhat leſs than ours. Wolves, Foxes, Wild-Buffaloes, Wild-Goats, Deer, and Rabbets, being never ſought after here, they are ſeen in prodigious Quantities, the only Thing they hunt being the Civet-Cat, by reaſon of the great Advantages it affords to the Owners. They abound alſo with Birds, ſuch as Pheaſants, Partridges, Hens, Turkeys, Ducks, Geeſe, Turtles, Pigeons, Hawks of all ſorts, and Eagles. Serpents they have of fifteen Feet long, which will ſwallow a Sheep at once; and ſome amphibious Creatures, the Fleſh of which is eaten by the Inhabitants; whereas ſome others are ſo venomous, that ſuch as are bitten by them infallibly die within twenty-four Hours.

The Mountains of *Pamba* are abundantly productive of Citrons, Oranges, Bananas, and divers other Fruits, as plentifully as in moſt Parts of the *Indies*; and the Vallies produce a kind of Wheat called *Seuco*, not much bigger than Muſtard-ſeed, which makes better Bread than any common Wheat, and is reſerved for the Uſe of the better ſort; the Poor being here fed with Rice, and *Turky* Wheat. Of Cocoa-Trees they have two ſorts; ſome are Date-Trees, the other produce Cocoas, and a certain Juice, which is accounted an extraordinary Clearer of the Reins, and conſequently a ſovereign Remedy againſt the Gravel. Their Fruits, as well as Pulſe and Herbs, are, without Compariſon, more excellent here than in other Countries. Their Mountains, which for the moſt part are covered with Fruit-Trees, are green all the Year round; and the Rocks produce white Marble, Alabaſter, Jaſper, Porphyry, and ſometimes Hyacinths.

The Inhabitants are black; but the Women are not ſo dark as the Men; they have neither ſuch thick Lips, nor flat Noſes, as commonly the Negroes have, and their Hair curls naturally. Thoſe of *Bombay* are famous for their Strength. As every Man here is his own Architect and Phyſician, ſo their Houſes are ſmall, low, and ſlightly built; they cure Fevers with Powder of Sandal Wood, and Head-ach by Bleeding; and when they are to procure an Evacuation by Purging, they do it with a certain Bark of a Tree beat to Powder; they generally appear bare-headed, but ſuch as do not, wear a kind of Hats made of the Barks of Trees, or Nut-ſhells. Some have a Way of faſtening with Pack-thread Plumes to their Hair, and both Sexes have Holes in their Ears, in which hang very weighty Rings of Gold ſet with Stones. About their Arms and Legs they wear Rings, or rather Plates of Iron, Tin, or Braſs; but the better ſort are clad after the *Portugueze* Faſhion. They ſleep and eat upon Matts ſpread upon the Ground. Beſides the vaſt Wealth in Gold, Silver, Copper, Cryſtal, Iron, and other Metals this Country produces, a great Traffick is carried on here in Ivory, Civet, and Slaves, whom the *Spaniards* and *Portugueze* employ in their Mines and Sugar-Mills of *Braſil*. They uſe certain Shells, which they fiſh out of the Sea near the Iſle of

Lunda, inſtead of Money, there being a particular Governor appointed there for that Purpoſe, who has the Overſight of it.

The King of *Congo* governs with an arbitrary and uncontroulable Power, both the Lives and Eſtates of his Subjects being at his own Diſpoſal; the Provinces are under the Juriſdiction of certain Governors, among whom the Batta is the head and conſtant chief Miniſter of State, being of the Blood-Royal, which is the Reaſon he ſometimes eats at the King's Table (a Thing not allowed even to the King's Sons) but never ſits down, but ſtands all the Time. He has alone the Privilege of having the ſame Pipers and Muſicians the King has, and of the Uſe of the Fire-arms for his Guard, of whom he keeps a good Number, to bridle the Inſolence of a certain People living upon the *Nile*, called *Giaquer*, who make frequent Inroads into the Territories, of which Notice is given into the Country by the diſcharging of a Muſket. The Province of *Bombay*, however, is accounted the Bulwark of this Kingdom; for though the Province of *Batta* is able to raiſe above ſeventy thouſand fighting Men, whereas that of *Bombay* is only able to raiſe 40,000, yet are the firſt not to be compared to the laſt. They uſe great broad Swords like the *Swiſs*, and handle them with as much Activity as we do our Rapiers. They make uſe alſo of Darts, and Bucklers, the laſt of which are made of the Barks of Trees. They have no Cavalry; their Armies, which are divided into Brigades, conſiſt only of Foot, who engage all at a Time. The General keeps in the Centre, and by the Help of their warlike Inſtruments, called *Manigio*, gives the Signals to the Commanders when to attack, to retreat, to cloſe, or to open. Their Trumpets are of Wood, and make a moſt dreadful Noiſe. Their Drums are made of the Barks of Trees, and are covered with Skin, and are beat with great Ivory Sticks; beſides theſe, they have another kind of Inſtrument, being only an iron Plate of a triangular Form, which they beat with Sticks; they have alſo a Way of hollowing the Elephant's Teeth, and then blow them as we do our Bugle Horns; with thoſe Inſtruments the Commanders of the Army anſwer the Signal given them by the General.

The *Portugueze* were the firſt who introduced the Chriſtian Religion here, under the Reign of *John* II. the King, who, as we told you, ſent *Diego Can* and *John Alonſo d'Avero* into thoſe Parts. It was about that Time that *Caramanſo*, King of *Congo*, ſent *Caſula* his Ambaſſador to the King of *Portugal*, who, being baptized there, was ſent back with three *Portugueze* Ships, commanded by *Gonſalo de Sonſo*; but in touching at *Cape de Verd*, both died there of the Plague. *Ruy de Sonſa*, who ſucceeded in the Command, being forced into the Port of *Finda*, in the Province of *Songo*, the Governor of the Place, who was Uncle to the King of *Congo*, was baptized with all his Family, whoſe Footſteps were followed by the King and Queen, being named *John* and *Eleanor*. *Emanuel*, King of *Portugal*, ſent another Squadron thither in 1504; but, ſoon after, the Diſcovery of the *Indies*, and Proſpect of greater Advantages to be reaped from thence, occaſioned the Diſcontinuance of thoſe Voyages to the *African* Coaſt; the Foundations of Religion were alſo neglected by the *Portugueze*, which the *Dutch* improving to their Advantage, introduced their Traffick, and with it the Proteſtant Religion.

We told you before, that *Diego Can* diſcovered *Congo*; let us now ſee what became of his Comrade *John Alonſo d'Avero*. He, about the ſame Time, made a Diſcovery of the Kingdom of *Beny*, betwixt *Mina* and *Congo*. Its Length is eighty Leagues, and its Breadth forty. The City of *Angatoe* is at twelve Leagues Diſtance from the Sea, and ſomewhat further in the Country, upon the River called *Rio Formoſo* by the *Portugueze*, its capital City bearing the ſame Name with the Kingdom. The King of *Beny*, having engaged in a Treaty with *Alonſo*, was alſo baptized; but this Converſion being not founded upon any real Knowledge of the Principles of the Chriſtian Religion, was of no longer Continuance than the Traffick of the *Portugueze* in thoſe Parts, which was neglected as ſoon as they had mede a Diſcovery of the Paſſage by Sea to the *Indies*.

26. *Cape de Verde* is by *Ptolemy* called *Promontorium Arſinarium*, and put in 10° 40 on this Side of the Line; whereas, by our own Obſervation, we can poſitively affirm it to be in 14° 20′, betwixt the two Rivers of *Senega* and *Gambra*, or *Gambia*, called by *Ptolemy Durago*, and *Stachiris*, and which, according to his Opinion, are very ſmall ones, the Sources of which are unknown; whereas it is beyond all Queſtion, that they ariſe out of two Lakes, one of which is by the ſaid *Ptolemy* called *Palus Chelondies*, now the Lake of *Goaga*, and the other that of *Naba*, though ſome of the Inhabitants are of Opinion, that they have their Riſe from the *Nile*. It is called the *Cape de Verde* from the many Trees near it, and their conſtant Verdure. *Ptolemy* alſo mentions nothing of theſe two Rivers falling into the Sea; whereas it has been found ſince, that the River *Gambia*, after being joined by the Waters of divers other Rivers in the Province of *Mandiga*, diſembogues into the Ocean in 13° 30′, and that the River *Senega* running directly from Eaſt to Weſt falls in 15° 30′ into the River *Geny*, which has imparted its Name to that Country we call *Guinea*. As it is certain that *Ptolemy* had no Knowledge of the Inhabitants betwixt thoſe two Rivers, ſo we muſt rely entirely upon the Credit of thoſe modern Authors, who have given us their Relations concerning them.

They tell us, that a certain People called the *Budumays* inhabit the Eaſtern Part of it as far as the *Cape de Verde*. The *Foules* and *Berbecines* they place deeper in the Country, upon the River *Banaga* to the North of the *Jaloſes*, ſome of which are ſubject to the *Foules*, others to the *Budumays*. It is a plain Country, producing Abundance of Cattle, Wine, Cotton, Wild-Fowl, Ivory, and Horſes; Gold and Silver they have none, but Iron in vaſt Quantities: The Air is accounted very wholſome, and the Inhabitants near the *Cape de Verde* good Horſemen. They are *Pagans*, and very famous for adminiſtring Juſtice, in publick Affairs, with a great deal of Equity, Prudence, and Secrecy, thoſe that are admitted into their Council, or Courts of Judicature, being generally choſen by their Age and Experience. Though they are ignorant of what belongs to martial Diſcipline, ſuch as is practiſed in *Europe*, yet is their Manner of diſpoſing and ordering their Forces not to be paſſed by in Silence; for all ſuch as are able to bear Arms, being divided into certain Regiments under their reſpective Commanders, have alſo their particular Diviſions or Quarters allotted them; ſo that in caſe of Neceſſity, their Orders for appearing together in a Body being diſpatched from one Diviſion to another, the Army is ready in a little Time to be at the Rendezvous appointed, without the Trouble of any new Levies, the Sons ſucceeding conſtantly in their Father's Places, if they happen to die, ſo that their Number is always complete. They are not altogether ignorant of the Degrees of Nobility and Peaſantry; for their Grandees they call *Thubala's*, unto whom they pay more than ordinary Reverence, their King being always choſen out of their Number, but he muſt be thirty Years of Age at leaſt.

Not long after the Diſcovery of the Country of the *Jaloſes* by the *Portugueze*, one *Beomi* reigned in thoſe Parts; but being got into the Throne by ſiniſter Means, and forſaken by moſt of his Subjects, ſought for Aid by *John* II. King of *Portugal*, who had him inſtructed in the Chriſtian Religion, and baptized, and ſent him back with a good Squadron of Ships, under the Command of *Pedro Vaz de Cogna*, who had poſitive Orders to erect a Fort at the Entrance of the River *Senega*, to facilitate their Penetration deeper into the Country. A Fort was built accordingly, but was by the ſaid *Vaz* (but for what Reaſon is unknown) demoliſhed again, and being ſeverely upbraided upon this Account by King *Beomi*, he killed him with his own Hands, and ſo returned to *Portugal*, where he was never called to an Account for his treacherous Proceedings.

Thoſe Iſlands which the *Portugueze* call *Ilhas Verde*, and the *Dutch Salt Iſlands*, lie directly oppoſite to *Cape de Verde*, yet ſo that the neareſt of them is ſeventy, and the moſt remote one hundred and ſixty Leagues diſtant from the Continent, which makes me imagine that thoſe, who would have them to be the *Gorgonides* of *Ptolemy*, are under a Miſtake, ſince it is not very probable that he, who

who has left us ſo confuſed an Account of the *African* Coaſt, ſhould have any Knowledge of thoſe Iſles, at ſo great a Diſtance. They are in all ten, extending from the 15° to the 19° of N. L. The *Portugueze* have given them the Name of Green Iſlands, either from the *Cape*, or elſe from a certain green Weed, called by them *Sargaſſo*, which is like our Water-Creſſes; of this you ſee ſuch prodigious Quantities floating upon the Surface of the Sea, from the 20° to the 24°, that without a ſtrong Gale Ships are ſometimes ſtopped in their Paſſage; but what is moſt ſurprizing is, that the Sea having no Bottom here, and this Herb not being ſeen in any other Part of the Sea, at leaſt not within 150 Leagues of the *African* Shore, how ſhould this Verdure come to this particular Tract? Some alledge, that it is waſhed from the Rocks in the *Weſt-Indies*, and forced thither by the Winds; but as the N. E. Winds reign here all the Year round, there is but little Probability in this Opinion.

When theſe Iſlands were firſt diſcovered by the *Portugueze*, they were without Inhabitants, but now produce Rice, Millet, *Turkey* Wheat, Oranges, Citrons, Banana's, Anana's, Potatoes, Melons, Citruls, Cucumbers, Figs, and Raiſins, twice a Year. And the three Iſlands of *Mayo*, *De Sal*, and *Doa Viſta*, have ſuch Plenty of Cattle, that the *Portugueze* ſend whole Ships Loads of them thence to the *Braſils*. The conſiderable Quantity of Salt theſe Iſlands produce, has made the *Dutch* give them the Name of the Salt Iſlands. The *Portugueze* have alſo taken care to ſtock theſe Iſlands with all ſorts of tame and wild Fowl, which are multiplied at ſuch a Rate, that they may be had almoſt for nothing. They have a peculiar kind of Bird here called *Flamenco* by the *Portugueze*. They are as big, and white all over their Bodies, as our Swans, but their Wings are of a bright Red. Rabbits are here in vaſt Numbers, and the Sea furniſhes them with incredible Store of Fiſh, which is the Reaſon you ſee here at all Times a conſiderable Number of *Portugueze* Fiſher-Boats, who carry what they catch to *Braſil*. Theſe Iſlands are extremely commodious for ſuch Ships as trade to the *Indies*, inaſmuch as going thither they take in Refreſhments, at a very eaſy Rate, in the Iſle of *Mayo*, and, in their Return, at that of *St. Anthony*, the *Portugueze* Inhabitants being not in a Condition to prevent it. The Iſle of *Jago*, as it is the chief, ſo there the Governor and Archbiſhop keep their ordinary Reſidence. The ſpiritual Juriſdiction of the laſt extends not only over theſe Iſlands, but alſo over all the *African* Coaſt, as far as it is in the Poſſeſſion of the *Portugueze*.

27. *November* the 4th we continued our Voyage for twenty-four Leagues with a N. E. Wind, ſteering our Courſe to the N. N. W. and found ourſelves at 16° 1' Lat. The 8th the Wind coming to the E. N. E. we ſailed thirty-two Leagues to 22° 35'. Here we were much peſtered with the *Sargaſſo*, or Green Weed which we mentioned before, which, upon Examination, I found very like our Water-Creſſes, only theſe were of a paler Green, and had a ſmall Seed like thoſe of green Gooſeberries. The 11th the Wind turning in the Morning to E. S. E. and ſoon after to the South, we made but eight Leagues, and were becalmed before Night, the Wind at N. W. Our Courſe was to the W. at 20° 40' Lat. We took that Day a Hay, as the *Dutch* call it (a Shark) which is accounted a Rarity in thoſe Seas, tho' they are frequent in the *Indies*. The 22d the Wind being at W. S. W. we ſteered our Courſe for forty Leagues to the N. N. E. in 35° 20' Lat. The 23d a S. W. Wind carried us thirty-four Leagues to the E. N. E. and the 24th thirty-five Leagues further. The 25th we had a N. E. Wind, ſo ſteering our Courſe to the N. E. we made thirty-three Leagues in 38° Lat. The 26th being becalmed, we got but ten Leagues, and the 27th but twelve more, taking our Courſe E. N. E. in 38° 40' Lat. The 28th the Wind turning to the S. S. E. we took our Courſe to the E. S. E. for 27 Leagues. And the 29th the ſame Wind continuing, we made twenty-four Leagues, taking the ſame Courſe, and at Noon in 33° 30', got Sight of the Iſlands of *Corvo* and *Flores*, which ſome, but erroneouſly, number among the Iſlands called by the *Spaniards Azores*, from the many Hawks found here.

Theſe are generally called by the *Dutch Flemiſh* Iſlands, becauſe the firſt Inhabitants of the Iſle of *Fayal* (one of the *Azores*) were Natives of the *Low-Countries*; who ſettled themſelves on that little River called by the *Portugueze Ribera dos Flamencos*, and their Poſterity live to this Day here, according to the Cuſtoms of their own Country. The ſeven Iſles known by the Name of *Azores*, are *Tercera*, *St. Michael*, *Santa Maria*, *San George's*, *Gratioſa*, *Pico*, and *Fayal*; *Tercera*, being fifteen or ſixteen Leagues in Compaſs, is the biggeſt amongſt them, being a Congeries of Mountains, which make it almoſt inacceſſible, there being no ſafe Road or Harbour here, except at the City of *Angra*, being the Metropolis of this, as well as the other ſix Iſlands, and the ordinary Reſidence of the Governors of thoſe Iſles, and of the Biſhops themſelves. This Road is not ſo ſafe at all Times, tho' the Port is incloſed like a Creſcent by two Mountains advanceing very deep into the Sea. They call theſe Mountains *Breſil*, and may be ſeen thirteen or fourteen Leagues off at Sea. About three Leagues from the City of *Angra*, is a Town called *Villa de Praya*, the Houſes whereof are very well built; but as it is a Place of no Trade, ſo it is not very populous. The City of *Angra* has obtained its Name from its Situation, in the Form of a Creſcent, this Word being uſed by the *Portugueze* to expreſs the Figure of the New Moon. It is defended by two Forts, one of which is built upon the Aſcent of the Mountain, the other upon one of the Points of Land which cover the Haven, and conſequently for the Defence of its Entrance, the oppoſite Point having two high Towers, whence, by a certain Signal, they give Notice to the Inhabitants what Veſſels they ſpy at Sea, and whether they come from *Europe*, or *Braſil* Side.

All thoſe Iſles are ſubject to the Crown of *Portugal* now, though the *Caſtilian* Governor, *Don Alvero de Vizaros*, defended himſelf very bravely in the two Forts of the City of *Angra*, after the Revolution in *Portugal*, and did not ſurrender the Caſtle upon the Mountain till *May* the 6th 1642, after he was reduced to the laſt Extremity by Famine. It is almoſt ſurprizing to behold, that the bare Rocks here, which are not ſo much as covered with Earth, ſhould produce good Store of Vines, which thrive better there than in the Vallies, tho' it muſt be confeſſed, that their Wine does not come near in Goodneſs to thoſe of the *Maderas* and the *Canaries*. Theſe Iſlands produce every thing that is either neceſſary or convenient for human Life (except Oil or Salt) for they have Wheat in Plenty, Pears, Apples, Citrons, Oranges, and Peaches, in great Plenty, beſides Cherries, Plumbs, Walnuts, Cheſnuts, and Pot-Herbs of all ſorts. They have alſo Potatoes, but theſe are more eſteemed in *Portugal* than in the Iſlands; and a peculiar Shrub, which growing up to the Height of five or ſix Feet, ſpreads its Roots by an infinite Number of Branches, as ſmall as the Hair of a Man's Head, of a yellowiſh Colour. They are uſed chiefly for their Quilts and Beds inſtead of Feathers, tho' there is not the leaſt Queſtion, but if they were ſpun into Thread, they would afford Materials for a very good Stuff. Cattle, and all ſorts of tame Fowl, as well as ſmall Birds, multiply here beyond what can be imagined; but they have neither Wild-Fowl nor Veniſon.

Their Wheat is exceeding good, but will not keep, unleſs it be put under Ground; for which Reaſon, each Family has its peculiar Vault, the Entrance whereof is no bigger than is ſufficient for one Man; thence they carry it, after *Chriſtmas*, to their Houſes, where they keep it in Cheſts of Bull-ruſhes the remaining Part of the Year, without ever ſtirring it. The Oxen of the Iſle of *Tercera* are the biggeſt and faireſt of all *Europe*, and very remarkable for the exceſſive Bigneſs of their Horns; they are as tame as our Dogs, and will go and come as they are bid. The Noiſe that is perceived when People go over the Rocks here ſufficiently demonſtrates their Hollowneſs within; whence ariſe Earthquakes, which are ſo frequent in this, as well as the other *Azore* Iſlands: Thus on the 24th of *May* 1614, eleven Churches and nine Chapels, beſides private Houſes, were ruined by an Earthquake; the City of *Angra*, and the City of *Praya*, were almoſt laid deſolate at the ſame Time, and the whole Iſle of *St. Michael* was ſo terribly ſhaken by an Earthquake, on the 16th of *June* 1628, that at ſome ſmall Diſtance from the Shore, the Sea opened in a Place where was 150 Fathom Water, and thence thruſt forth a ſmall Iſle of a League and an half in Length, at leaſt 60 Fathom above the Water. Theſe two Iſlands have alſo certain hot Springs, whence, and at ſome Diſtance from them, ariſe ſulphurous Vapours. About three Leagues from *Angra*, is a Spring which turns Wood to Stone, as is evidently to be ſeen by a certain Tree, the Root whereof, as far it hath been under Water, is abſolutely petrified, whereas the Trunk, and all the reſt, are not the leaſt changed. The Iſle of *Pico* has a peculiar ſort of Wood as hard as Iron, red as Scarlet, in which, when cut, appear certain Veins like the Watering of a Camblet, of which are made very fine Cabinets, which are highly eſteemed in *Portugal.* Cedar is ſo common among them, that they do not only uſe it for their ordinary houſhold Stuffs, but alſo for Fuel; nay, they make whole Waggons and Boats of it. They have ſcarce any Commodities except Proviſions, which they ſell to the Ships that touch here to take in Refreſhments, as they are going to the *Eaſt-Indies.*

The Iſle of *St. Michael* is about 20 Leagues long, lying 28 Leagues S. E. from that of *Tercera.* Its capital City is called *Punta Delgada*, its Soil very fruitful, producing more Wheat than they are able to conſume. The worſt is, that they have no ſafe Road for Ships to ride in. The Iſle of *St. Mary*, being not above twelve Leagues in Compaſs, lies twelve Leagues South from that of *St. Michael*; its Products are Proviſions and Potters Earth. The Iſle of *Gratioſa* lies ſeven or eight Leagues N. E. from that of *Tercera*, its Compaſs being not above five or ſix Leagues. It has got its Name from its Pleaſantneſs, and vaſt Plenty of all ſorts of Fruits. The Iſle of *St. George*, which is twelve Leagues long and broad, lies eight or nine Leagues to the N. W. from that of *Tercera.* It is well ſtocked with Proviſions, though it be full of Mountains, which furniſh them with vaſt Store of Cedar, which they ſell to thoſe of *Tercera*, where it is made into Joiners and Cabinet-makers Works, and tranſported thence to other Places.

The Iſle of *Fayal*, being at leaſt ſeventeen or eighteen Leagues in Circumference, lies ſeven Leagues to the S. W. off of that of *St. George*, being the beſt of all the *Azores* next to thoſe of *Tercera* and *St. Michael.* Its capital City is called *Villa-Deſta*, inhabited chiefly by the Poſterity of the *Flemings* we had Occaſion to mention before. They ſend hence abundance of Proviſions, but eſpecially Fiſh to the other Iſlands. The Iſle of *Pico* has its Name from the high Peak or Mountain within it called *Pico*, ſuppoſed to be as high as the Peak of the great *Canary Iſland*, of which I ſhall hereafter ſpeak. It lies incloſed betwixt the Iſles of *Fayal*, whence it is diſtant three Leagues to the S. E. of *St. George* and *Tercera*, from the firſt of which it lies four Leagues to the S. W. and from the latter twelve Leagues to the W. S. W. Their Lands are accounted more fertile here than thoſe of any of the other Iſles.

The Iſle of *Flores*, as we told you, we got Sight of the 29th of *November*, being ſeventy Leagues to the Weſt of *Tercera. Flores* is twenty Leagues in Circumference, and the Iſle of *Corvo* is no more than two Leagues Diſtance to the North: They are both under the *Portugueze*; but their Diſtance from the *Azores* ſhews them not to be of their Number. As the *Azores* lie very convenient for the Refreſhment of the *Portugueze* Ships bound to the *Eaſt-Indies* and *Braſil*, they are very careful of their Preſervation; whence it is they will allow no Foreigners to view the Coaſt of the Iſle of *Tercera*, for fear they ſhould, by its Weakneſs, be invited to land and ſettle there. The Air is very clear and wholſome, but withal very ſharp, ſo that it corrodes Iron, and conſumes Stones in a few Years, which is the Reaſon they uſe Flint Stones in their Buildings, which having lain for a conſiderable Time under Water near the Sea-ſide, are better qualified than other Stones to reſiſt the Sharpneſs of the Air.

But before we leave the *African* Coaſt, it will not be amiſs to ſay ſomething of the *Canary Iſlands* which lie upon the Coaſt oppoſite to *Gibraltar.* The Wholſomeneſs of the Air, and the Fertility of the Soil, procured them the Name of the *Inſulæ Fortunatæ* among the Ancients, though one of them is alſo called *Canaria* by *Pliny*, *Solinus*, and *Ptolemy*, which contradicts the Opinion of thoſe who affirm that thoſe who diſcovered them in the Year 1342 gave them the Name of *Canaries*, from the many Canes found there. They are ſeven in Number, *viz. Lanzarotta*, *Fortuventura*, the great Canary, *Teneriffa*, *Gomara*, and *Palma*, extending from Eaſt to Weſt, in a manner in a direct Line. *Lewis* Count *Clermont* having, in 1348, got a Grant from the Pope of theſe Iſlands, ſent out a Fleet to endeavour the Conqueſt of them, which was perfected accordingly under the Protection of the King of *Arragon*; but the ſame being afterwards relinquiſhed by *D. Lewis de la Cerda*, the *Biſcayans* and *Andaluſians* having ſent out ſome Veſſels, ſurpriſed the Iſle of *Lanzarotta*, whence they brought back ſo much Wealth, that the King of *Caſtile* then reſolved upon the Conqueſt of theſe Iſlands, which, doubtleſs, he would have effected, had not the more preſſing Wars he was engaged in with his Neighbours diverted him from that Purpoſe.

Not many Years after, a *French* Gentleman, named *John de Bethancourt*, having obtained a Commiſſion from *Henry* III. then King of *Spain*, to conquer theſe Iſlands, under the Condition that he and his Poſterity ſhould acknowledge the Sovereignty of the Crown of *Caſtile*, he was ſo fortunate as to make himſelf ſoon Maſter of the five leſſer Iſlands, but could not bring the two great ones under Subjection. However, the King of *Caſtile*, as Sovereign, having ſent thither a Biſhop, this occaſioned ſuch a Difference between him and *Bethancourt*'s Nephew, who had ſucceeded his Uncle, that the King of *Caſtile* was forced to ſend thither one *Pedro Barba*, who having forced the *Frenchmen* thence, gave the Iſlands, as a Dowry with his Daughter, to one *Perera*, who aſſuming the Name of King of the *Canaries*, left no Stone unturned to make himſelf Maſter of them all by the Conqueſt of the remaining Iſlands; but finding his Endeavours to prove fruitleſs, he ſold four of theſe Iſlands to *Ferdinand*, ſurnamed the Catholick King of *Arragon*, reſerving to himſelf only that of *Gomara*, with the Quality of an Earl. King *Ferdinand* had the good Fortune to reduce the two great Iſlands alſo, which ever ſince, as well as the reſt, have remained under the *Spaniſh* Juriſdiction.

The great *Canary* Iſle is computed to contain above nine thouſand Inhabitants, being alſo the Reſidence of the Biſhop, Inquiſitor, and Great Council, which manage the publick Affairs of all the other Iſles. Beſides that excellent Wine ſo well known and eſteemed in *Europe*, it produces Wheat, Barley, Honey, Wax, and Sugar-Canes, and the Plenty they have of Cattle makes them trade much in Leather with the *Spaniards*, *Engliſh*, *Dutch*, and *Hamburghers*; the firſt, in their Voyages to the *Weſt-Indies*, take moſt of their freſh Proviſions in here. The Iſle of *Teneriff* is famous for its Mountain called *El Pico*, being accounted the higheſt in the World, ſo that it may be diſcovered above ſixty Leagues at Sea; and on the Top a Man may ſee all the other *Canary Iſlands*, though ſome of them are fifty Leagues diſtant from this; but it requires three Days Time to get up, which muſt be either in *July* or *Auguſt*, it being covered with Snow all the reſt of the Year, though there falls none in any of thoſe Iſlands.

The Iſle of *Fierro* claims the next Place to that of *Teneriff*, among the Canary Iſlands; it has got its Name from the Drought of the Ground, which being without Water, ſeems to be of Iron: For, except a few Springs near the Sea-ſhore, this whole Iſland is without a Rivulet, Brook, Well, or Spring, againſt which Default provident Nature has bleſſed this Iſland with a certain Tree, which has no Reſemblance to any other I ever ſaw, either in *Europe* or the *Indies*, and ſtands in the very Centre of the Iſle; its Leaves are very long, but narrow, and never ceaſe to be green, neither in Winter or Summer. Betwixt the Branches hang Clouds, which are never diſpelled, but are conſtantly diſſolved in a liquid Subſtance, which hanging to the Leaves, fall from thence as clear as Water into the Ciſterns that are made under the Tree on purpoſe to receive it, and that in ſuch great Quantities, that they are never empty, but provide ſufficient Quantities to ſupply both Men and Beaſts.

It is the Opinion of the Inhabitants, and thoſe that have frequently ſailed in theſe Parts, that a hundred Leagues Weſt of the *Canaries* there has been ſeen a certain Iſland called *St. Borondon*, very pleaſant and fruitful, and inhabited by Chriſtians; but are not able to tell you how it came to be peopled, and what Language is in Uſe there. The *Spaniards* inhabiting the *Canaries* have made ſeveral Attempts to find it out; but whether the thick Fogs which ſurround it, or the Current of the Sea, which keeps Ships from the Shore, is the Occaſion that it has not been diſcovered, certain it is, that nobody hitherto has been able to give a ſatisfactory Account of it.

28. But to return to our Voyage; the Wind turning to the South the 29th of *November*, we took our Courſe to the North, leaving the Iſle of *Flores* to the Eaſt of us, and ſoon loſt Sight of that as well as of the Iſle of *Corvo*. The 30th of *November* we made thirty-one Leagues to the North with a South-South-weſt Wind, and at Noon found ourſelves in 40° 32' Latitude. *December* the 3d we made thirty-four Leagues with the ſame Wind and Courſe; and the 4th, a North-eaſt Wind advanced us twenty-ſeven Leagues to Eaſt-North-eaſt. The 5th the Wind coming to the South-weſt, we continued the ſame Courſe, and got thirty-ſeven Leagues. It was this Day exactly eleven Months ſince we had been toſſed up and down the Sea, though our Voyage had been tolerable enough ever ſince our Departure from *Madagaſcar*. The 6th it blew a Storm out of the Eaſt, but the Wind being for us, we advanced fifty Leagues. It is obſervable, that as ſoon as you are paſſed the *Azores* Iſlands, you may aſſure yourſelf of a Weſt Wind, let it be what Seaſon of the Year it will, till you come to the Coaſt of *England*, it being very ſeldom known that it turns either directly to the South or North, tho' perhaps it may change a few Points of the Compaſs.

The 7th the Wind turning to the Weſt, we ſailed thirty-nine Leagues to the Eaſt-North-eaſt. The 8th we made forty-ſeven Leagues, with a very briſk Gale, to the South-eaſt, keeping the ſame Courſe; and the 9th, with a South-South-weſt Wind, made thirty-one Leagues to the North-North-eaſt. We found ourſelves in 49° 13', the Weather being very cold, and a ſandy white Bottom at ſixty-eight Fathom, and in the Evening ſounding again, found but fifty-three Fathom, the Sand not ſo white as in the Morning. The Wind chopping about to the North-Eaſt in the Night, was directly in our Teeth till the 10th about Noon, when coming to the South-weſt, we made twenty-two Leagues. The 11th we eſpied, at Break of Day, two *Engliſh* Ships, and in a few Hours after, that Point of *Cornwall* called the *Land's-End*; we endeavoured to double the Point, the Wind being contrary, and with much ado made ſixteen Leagues. The 12th, the Wind being full againſt us, we continued lowering, and at a Diſtance we ſaw another *Engliſh* Veſſel, but could not come near it. The 13th the Wind being at South-weſt and South South-weſt, we ſteered our Courſe to the Eaſt-South-eaſt, and to the Eaſt, with a Point to the South. We made ſixty-four Leagues to 49° Latitude the 14th, after having changed our Courſe to the Eaſt-North-eaſt, in order to make the Channel which divides *England* from *France*.

We ſaw two *Dutch* Veſſels and a *Dunkirker* not far from us; but the Roaring of the Sea prevented our hearing one another. The fifteenth we ſteered the ſame Courſe, and met with three *Dutch* Ships bound for *Braſil*, not far from the *Iſle of Wight*, which lies in 50° 26' Latitude, and 19° 4' Longitude. The 16th, by Ten in the Morning, we paſſed in Sight of *Dover* Caſtle, and about Noon came to an Anchor in the *Downs*, and this completed our Voyage in the 12th Month after our Departure from *Surat*. We ſaw there near a hundred Ships riding at Anchor, in Expectation of fair Weather, it being ſo boiſterous, that for two Days after we could not ſtir out of our Ship. The *Engliſh* Admiral, who was then with ſome Men of War in the *Downs*, invited the 19th (when the Wind was ſomewhat laid) the Preſident to Dinner, who taking me along with him, I had my Share in the Entertainment, which was ſo magnificent both for Meat, and the great Quantity of Plate, that the King's Table could ſcarce have been better ſerved in *London*.

As we were extremely well pleaſed with our Entertainment, ſo it was near Night before we got into our Boat. Our Ship lay not above a Muſket Shot from the Admiral; but no ſooner were we got into it, than a ſudden Storm forced us to Sea, the Waves continually coming over our Boat, ſo that we were obliged to make the beſt Shift we could to caſt out the Water, without Intermiſſion, with our Hats. We now began to reflect, how that, after we had ſurmounted ſo many Dangers during this tedious Voyage, we ſhould at laſt be ſhipwrecked in Sight of our dear Country, and in that very Part whither we were come with ſo much Danger to ſeek for Safety; but, to be ſhort, we were for four Hours thus betwixt Hope and Deſpair, when at laſt we got Sight of a ſmall Veſſel, but ſo miſerably torn by the Tempeſt, that it had loſt all its Anchors but one, which was not ſtrong enough to keep it from being forced out to Sea. However, we betook ourſelves to our Oars, ſitting up to our Waiſts in Water, and with much ado reached the Veſſel, in which in effect we were not much ſafer than in our Boat, as being in Danger to be ſtaved againſt a dangerous Sand-bank, which was not far off; but the Cold we had endured in the Ship had ſo diſabled us in all reſpects, that we were not apprehenſive of our Condition, being in a manner half-dead the next Day, when we were brought to our Veſſel, where they had given us over for loſt, and bewailed our Death.

On the 24th another Tempeſt aroſe, which was ſo violent, that twenty-four Ships were forced to cut their Maſts, among the Number of which was alſo our Veſſel, not ſo much by the Tempeſt, as for two Men of War being forced from their Anchors, which would elſe have run foul upon us. The 26th we got at laſt to the ſo long-wiſhed-for *Engliſh* Shore, and lay the ſame Night at *Canterbury*, the Cathedral of which claims the Preference before any other in *England*, and is not inferior to ſome of the beſt Structures in the World. The 27th we came to *Graveſend*, and the 28th to *London*, being met in our Way by certain Directors of the *Eaſt-India* Company, who ſtaid for the Preſident's coming at *Blackwall*, with eight Coaches.

29. On the 30th I viewed the *Eaſt-India* Houſe, and took that Opportunity to return Thanks to the Directors for the many Civilities I had received at the Preſident's Hands; and they having made a ſplendid Entertainment for him that Day, I was alſo invited. The 31ſt, and the 1ſt of *January*, we were ſplendidly treated by ſome *Engliſh* Merchants, and the 2d by Sir *Edmund Wright*, the then Lord-Mayor of *London*. As he was much delighted in the Relation of the many Adventures that had befallen us during our Voyage, ſo he would needs invite the Preſident and me again the next Day, our Diſcourſe running upon the many Dangers we had eſcaped.

The Lord Mayor, to ſhew us that Sea-faring People were ſubject to ſuch, and often eſcaped much greater Danger, related to us a Story of a certain *Dutch* Seaman, who, being for ſome Crimes condemned to Death, his Puniſhment was changed into that of Baniſhment into the Iſle of *St. Helens*, near which they were, which was done accordingly. This poor Wretch, thinking this Solitude inſupportable to him, reſolved rather to hazard his Life at any Rate, than to endure it; and having met with a Coffin, in which a Sea Officer had been interred the Day before, he, without more ado, took out the dead Corpſe; and having cut out the upper Board of the Coffin, made a kind of Rudder, put himſelf into it, and ſo went out to Sea: As good Chance would have it, the Ship unto which he had belonged, was becalmed at a League and an half Diſtance from the Shore; and the Ship's Crew obſerving ſo odd a kind of Veſſel floating on the Surface of the Water, thought it had been an Apparition, till, coming nearer and nearer the Ship, they ſtood amazed at this unaccountable Boldneſs of the Man, who had ventured ſo far in two or three Pieces of Boards, without being aſſured whether he ſhould be received or not. It being put to the Queſtion, it was at laſt reſolved he ſhould be taken on board, which was done accordingly; and he returned to *Holland*, where he lived afterwards in the Town of *Horn*.

He gave us another Inſtance of this kind, of an *Engliſhman*, who, being taken by a *French* Privateer in the Pacquet-Boat going from *England* to *Dublin*, was freed from the Privateer by a ſudden Storm, which parted them, but ſoon after ſplit the Pacquet-Boat againſt a Rock on the Coaſt of *Scotland*, oppoſite to that of *Ireland*. The *Engliſhman*, with another of the Crew, happened to be caſt away upon the Rocks, where they made a ſhift to erect a Hut out of ſome Boards belonging to their Ship. They lived upon the Sea-mews they catched, which they dried in the Sun, and ſo they eat them raw; as alſo upon certain Eggs they found in the Crevices of the Rocks, which kept them from ſtarving: But their greateſt Want was freſh Water, of which they had none but what the Rain helped them to. They continued in this Condition ſix Weeks; at the Expiration of which the *Engliſhman*, waking in the Morning, miſſed his Companion (whom he ſuppoſed to be fallen from the Rock through Careleſneſs) the only Comfort of his Life. In this Solitude, which almoſt threw him into Deſpair, eſpecially when the approaching Winter made every thing appear with a more doleful Aſpect than before, his Hut being covered with Snow, he made the hardeſt Shift in the World to ſuſtain himſelf, till after a miſerable Life of eleven Months, ſome Seamen belonging to a *Flemiſh* Ship, commanded by Captain *Peckman*, famous for his Art in getting out the great Guns of the *Spaniſh Armada*, forced upon the Coaſt of *Scotland* and *Ireland* in 1588, by Tempeſt, as they were looking for Eggs, diſcovered this poor Wretch, whom, at laſt, with many Entreaties, they took into their Veſſel, being all black, hairy, and meagre, more like a Spectre than a Man; and having given him what Refreſhments the Ship afforded, ſet him aſhore at *Derry* in *Ireland*, from whence he afterwards returned into *England*.

A third Relation he was pleaſed to give us of a moſt ſurpriſing Reſolution of four Seamen, who, being taken by the *Algerines*, and one of them being a Carpenter, they reſolved to make a ſmall Boat, and venture in it in the open Sea, in order to their Deliverance; accordingly, having ſecretly made what Preparation they could for the Execution of this Deſign, they took off five Boards from the Store-Room, two whereof were employed for the Bottom of the Boat, two more for the Sides, and the fifth for the Prow and Poop, their Quilt ſerving for Tow. The Boat being well pitched, and the appointed Time come, they found that their Boat was ſo little as not to contain above two, ſo that two of the Confederates were obliged to ſtay behind; the other two, being an *Engliſhman* and a *Dutchman*, perſiſting in their Reſolution to go forward, let it coſt what it would; accordingly, having found Means to provide a Pair of Oars, a Piece of a Sail, and a ſlender Portion of Bread and freſh Water, they boldly put to Sea, having neither Compaſs nor Aſtrolabe; ſo that being overtaken by a Storm, they were forced to go where the Wind would carry them, their chief Buſineſs being to caſt out the Water which continually came into the Boat, and ſoon ſpoiled what little Bread they had; which, together with the Want of Reſt, had brought them ſo low, that they were ſcarce able to ſtand on their Legs. In this miſerable Condition Chance brought them to the Coaſt of *Barbary*, where lighting on ſome Wood, that ſerved them to refit and enlarge their Boat; which they had no ſooner done, but being in manifeſt Danger of being killed by the Inhabitants, were forced to chuſe the main Sea a ſecond Time, and, at laſt, after being toſſed up and down in the Sea for ten Days, were caſt upon the *Spaniſh* Coaſts near the Cape of *St. Martin*, between *Alicant* and *Valentia*, where, being civilly entertained by the Inhabitants, they after came into *England*.

30. On the 6th I ſaw the King of *England* touch many Perſons that were afflicted with the *Evil*, and the Ceremony being over, my Lord *Strafford* did me the Honour to introduce me to his Majeſty to kiſs his Hand, and afterwards to the Queen; both their Majeſties, at ſeveral Times after, being pleaſed to beſtow ſome Time in hearing my Relations of my Travels, eſpecially of thoſe into *Perſia* and *Muſcovy*. During my Stay of three Months in *England*, I ſpent Part of my Time at Court, and the reſt in taking a View of what was moſt worthy of Obſervation in *London*, and the adjacent Places, ſuch as *White-Hall*, *St. James's*, *Hampton-Court*, *Weſtminſter-Hall*, and the *Abby*, *Greenwich*, the *Tower*, &c. And having by this Time ſufficiently recovered myſelf of the Fatigue of ſo tedious a Voyage, and received the Money I expected from my native Country, I left *London* on the 20th of *March*, and taking Water for *Graveſend*, went thence for *Rocheſter*, and coming the 24th to *Dover*, embarked the 28th for *Dunkirk*, where I arrived the ſame Day. The 26th I continued my Journey thence to *Newport*, where I ſtayed that Night, and came the next Day to *Bruges*, and the 29th to *Ghent*, where I ſtayed only to the 21ſt of *April*, when I proſecuted my Journey to *Bruſſels*, the capital City of the Province of *Brabant*. After a Stay of two Days at *Bruſſels*, I came the 5th to *Louvain*, and travelled the ſame Day four Leagues farther to *Mechlin*; thence I proſecuted my Journey the 6th to *Antwerp*, where I ſtayed two Days, and the 9th and 10th travelled to *Breda*, where, having ſpent the Remainder of that Day, I made five Leagues the next Day to *Bois-le-duc*, or *Bolduc*.

The 12th I ſet forward again for *Gertrudenburg*, whence I took Boat the ſame Day for *Rotterdam*, where I arrived the 13th, and continued my Journey the ſame Day for *Delft*, and ſo farther through the *Hague*, by the Way of *Leyden* to *Harlem*. This City, which is the biggeſt next to *Amſterdam* in the Province of *Holland*, challengeth the Glory of the Invention of the Myſtery of Printing by one of its Inhabitants, named *Laurence Coſtar*, who, in the Year 1420, firſt made the Characters of Beech-wood, and afterwards having alſo found out the Ink that to this Day is uſed by Printers, he changed the wooden Characters into leaden ones; and having at laſt made them of Tin, he brought the whole to Perfection in 1440; in Memory of which the Senate of *Harlem* have cauſed the following Inſcription to be ſet over the Houſe he lived in.

Memoriæ Sacrum, Typographia, Ars Artium omnium conſervatrix, nunc primùm inventa circa Annum 1440.

Leaving *Harlem* in the Evening, I came the ſame Night to *Amſterdam*, of which Place having heard ſo much in the *Indies*, I reſolved to ſpend ſome Time in taking a View of it. The firſt Thing that ſurpriſed me the next Morning was, that vaſt Number of People which ſo crouded the Streets, that a Man could very hardly paſs; but when I came to the Port, I ſtood amazed at the prodigious Number of Ships, which appeared at a Diſtance no otherwiſe than one continued Foreſt, eſpecially when I was informed how many Ships were abroad at that Time, bound to all Parts of the World; and that I ſaw every Day a conſiderable Number go to their own, and other adjacent Coaſts. The vaſt Stores brought thither even from all the moſt remote Parts of the World, eſpecially in the Houſe of the *Eaſt India* Company, made me imagine no otherwiſe than that all I had ſeen in my Travels thro' ſo great a Part of the Globe, was centered in this Place, there being ſuch prodigious Quantities of Spices, Silk, and Porcelain here, that *China*, and all the reſt of the *Indies*, ſeemed to have exhauſted their Store-houſes, to lay them up in this City.

It was in the Year 1595, that the *Dutch*, by the Encouragement of a certain Merchant, whoſe Name was *Cornelius Houtman*, and who had lived a conſiderable Time in *Portugal*, undertook the firſt Voyage to the *Eaſt-Indies*, along the *African* Coaſt; their Deſign of finding out the Northern Paſſage having proved abortive. The firſt Voyage did not anſwer the Expectation of the Merchants, notwithſtanding which they ſent eight Ships more thither. In 1598 and 1599, they ſent another Squadron, but by different Owners, ſo that, for fear of deſtroying this ſo powerful a Trade, a Charter was granted to all the Perſons concerned in 1602, for twenty Years, and ſix Chambers erected, *viz.* at *Amſterdam*, conſiſting of twenty Directors; *Middleborough* for *Zealand*, twelve Directors; at *Delft*, and *Rotterdam* for the *Maeſe*; at *Horn*, and *Enkhuiſen* for *Weſt-Friezland*; theſe four laſt conſiſting each of Seven Directors. According to the ſame Charter the City of *Amſterdam* was to defray one Half of all the Charges, and to ſend eight Deputies to their general Meetings, and thoſe of the *Maeſe* and *Weſt-Friezland* one Half-Quarter each, and to ſend two Deputies each.

Their original Stock amounted to 6,600,000 *French* Livres, which was improved to that Degree, that in the Year 1613 the Perſons concerned had gained two hundred and ſixty upon the hundred, and the next Year the Profits were more conſiderable. The Regularity of the

Streets and Water-channels, and the Neatneſs and Splendor of the Bridges and Houſes of *Amſterdam* is not to be imagined, except by thoſe who have been Eye-witneſſes of it, eſpecially thoſe in the new Town, and many of which ought rather to be called Palaces than the Houſes of private Perſons. Among the publick Structures the old and new Churches are worth Obſervation, and if the Town-houſe be completed, according to the Draught I ſaw of it, it will, beyond Queſtion, vie with any of the nobleſt Structures in the World, and the *Exchange* of *Amſterdam* ſurpaſſes that of *London*, in the Number of People that daily reſort thither, as it does that of *Antwerp* in Magnificence; not to mention here the Gates of the City, and its three Sluices, which cannot be matched in the World, the publick School, College, Arſenal, a Play-houſe, Anatomy-hall, and other publick Edifices, which deſerve the Travellers peculiar Obſervation. But to come to a Concluſion of my Voyage; after a Stay of eight Days at *Amſterdam*, I took Shipping for *Hamburgh* the 23d of *April*, where I arrived ſafely the 28th, and after I had reſted myſelf there for one Day and Night, continued my Journey to *Gottorp*, which I reached the 1ſt of *May*, and had the Honour to be admitted to their Highneſſes the Duke and Ducheſs of *Holſtein*, unto whom I gave a ſhort Account of the Succeſs of my long and toilſome Travels.

31. The Obſervations publiſhed by our Author are of a mixed Nature, Part of them from his own Knowledge, and Part from Information. It may be neceſſary therefore to ſay ſomewhat as to the Reaſons which induced us to prefer theſe Obſervations to thoſe of other Men, who might be Eye-witneſſes of all they wrote. In the firſt place, let it be conſidered, that it is neceſſary to give the Reader the moſt Matter poſſible in the leaſt Room, and therefore one extenſive and well-wrote Voyage anſwers this End better than ſeveral, and at the ſame time avoids uſeleſs and tedious Repetitions. The merit of the Writer was another great Conſideration. It is manifeſt from the Commiſſion with which he was intruſted, that he was a Man of Abilities, or otherwiſe he would not have been choſen. It appears from the foregoing Part of his Travels, that his Conduct juſtified their Choice, and that he made it his Buſineſs to bring back into *Germany* the cleareſt and beſt Intelligence that could be had, with regard to the Deſign which his Maſter had then in View and that was the Opening a new Channel of Trade between *Europe* and the *Indies*. The ſame Reaſons therefore that recommended him to, and procured him the Approbation of, his Maſter, gave his Works a Title to a place in this Collection, notwithſtanding the Objections to which they may ſeem liable at the firſt Sight. But farther ſtill; he was not only a Man of great Judgment himſelf, but of great Experience alſo; and as he was very capable of diſtinguiſhing upon Information what was fit for him to report, and what not, ſo he was no leſs careful in ſeeking his Information from ſuch as had it moſt in their Power to inſtruct, and at the ſame time were leaſt likely to impoſe upon him. The Advantage he had of conſulting the *Engliſh* Preſident upon what he was told by the *Spaniards* and *Portugueze* muſt have been of infinite Service, by enabling him to correct and explain whatever he received from them; therefore taking all theſe Advantages together, we may very ſafely conclude, that there hardly ever was a Voyage Writer better qualified to deliver what was fit for the Publick to ſee than our Author.

It remains to give ſome Account of that Prince by whoſe Direction theſe Voyages were undertaken, the Views he had in cauſing them to be undertaken, and the Conſequences of ſuch extraordinary and hazardous Undertakings ſo well and happily performed. *Frederick* the third, Duke of *Holſtein Gottorp*, was the Son of *John Frederick*, Sovereign of that Country, and the Princeſs *Auguſta*, Daughter to *Frederick* the ſecond, King of *Denmark*. He ſucceeded his Father in his Dominions in the Year 1616, and having ſpent a great Part of his Time in improving his Country, ſettling new Manufactures there, and opening a free Commerce to *Sweden*, *Poland*, and *Ruſſia*, he began about the Year 1630 to think of putting in Execution a Project which had long employed his Thoughts, by which he hoped thoroughly to people, and greatly to enrich, his new City of *Frederickſtadt*. He was led to this by the Incitement of ſome Merchants whom he had drawn to ſettle in his Country by the great Encouragements he gave them, and who ſuggeſted the Poſſibility of bringing into and ſettling the Silk Trade in his Dominions. At firſt Sight this muſt appear a very ſtrange and almoſt impracticable Project; but when attentively conſidered it will appear in quite another Light.

We muſt in the firſt place conſider, that the Northern Countries of *Europe* were at that Time entirely ſupplied with all Kinds of Silk Manufactures from the Southern Countries, and theſe at the greateſt Diſtance from them, which was attended with many and great Inconveniencies; beſides the capital Miſchief of ſending annually vaſt Sums of Money in return for thoſe Manufactures. The only Remedy that could be applied to theſe Miſchiefs was the eſtabliſhing this Commoditity in the North by breeding and managing Silk-worms there, which was indeed a tedious, hazardous, and in all human Appearance, impracticable Undertaking, or elſe to ſink a Step lower, and be content to import the Silk in the moſt reaſonable Method, and at the loweſt Price, ſo that the manufacturing it might prove ſufficiently profitable to the People engaged therein. This Deſign too, though leſs difficult than the other, ſeemed hard enough to compaſs, ſince a Voyage from the *Baltick* to the *Mediterranean*, which was the only means whereby either *French*, *Spaniſh*, or *Italian* Silks could be brought to *Holſtein*, muſt have been neceſſarily attended with ſuch an Expence, and the Silks imported would have come at ſo dear a Rate, that it would have been impoſſible, for many Years at leaſt, to have manufactured them to any Advantage. The Commerce of the *Levant*, and the importing Silk from *Aleppo*, or *Smyrna*, muſt have been attended with ſtill greater Difficulties and Expence, ſo that on this Side there ſeemed to be no Hopes of compaſſing ſuch a Deſign.

But *Philip Cruſius*, who firſt engaged the Duke to think of this Scheme, immediately obviated theſe Objections by ſhewing that the *Perſian* Silks might be had ſooner, and at a cheaper Rate in *Holſtein* than in any of the Countries where they were then manufactured. The Way he propoſed was through *Muſcovy*, the Frontiers of which are divided from thoſe of *Perſia* by the *Caſpian* Sea, the Silk Provinces of *Perſia* lying on the Coaſts of that Sea, ſo that the tranſporting them croſs the *Ruſſian* Empire could ſcarce be eſteemed a more laborious or difficult Undertaking than the conveying them by Caravans from *Perſia* through the *Turkiſh* Empire to *Smyrna* or *Aleppo*; and conſequently, if this Scheme could be executed, the Ports of *Ruſſia*, which were very near, would ſerve as effectually for the Silk Manufacture in *Holſtein*, as the Ports of the *Levant* for the Southern Parts of *Europe*. Theſe were the Principles upon which *Cruſius* went, and on which the Embaſſy, which Duke *Frederick* ſent into *Perſia*, was undertaken. Our Author's Journey from *Perſia* into the *Indies* was, as we have before repreſented it, an additional Project to this, of eſtabliſhing a Silk Manufacture; and the Grounds upon which the Duke went in this were likewiſe very juſt and reaſonable, as in a very few Words we ſhall be able to ſhew. He was informed that a great Trade was carried on between *Perſia* and *India* by Land; and therefore he very rightly conceived, that if his firſt Scheme took place, it might be very practicable to bring the *Indian* Commodities and Manufactures from *Perſia* to the Coaſt of the *Caſpian* Sea, and conſequently, together with the Silk, through *Ruſſia* into his own Dominions.

This, I ſay, was that Prince's Deſign, and I thought it the more neceſſary to inſiſt upon it at large, becauſe there is not a Word dropped about it by our Author; on the contrary, his Obſervations look all another Way, and he ſeems to have employed himſelf chiefly in remarking on the *Portugueze*, *Engliſh*, and *Dutch* Commerce in the *Indies*; which Obſervations, as they were fitteſt to be publiſhed to the World, were likewiſe beſt ſuited to conceal the true Deſign of his Voyages. I muſt take this Opportunity of remarking, that all the Civilities ſhewn him by Strangers in thoſe Parts of the World, may be accounted for from hence, I mean from their being morally certain, that the better he was acquainted, and the more thoroughly he was informed of the Nature of their Trade, the more impracticable his Maſter's Deſign would appear of interfering therein, by a direct Navigation to the *Indies*, which they all along apprehended to be the Duke of *Holſtein*'s Deſign; and therefore thought, and very juſtly too, that a better Method than this could not be deviſed to defeat it. This likewiſe accounts for the rendering the Ambaſſador's and our Author's Accounts publick, in which, though all the Tranſactions are in themſelves equally curious and entertaining, yet they make known little or nothing that relates to the Duke's real Projects, and are therefore conſidered in this Light as nothing more than political Amuſements.

It muſt, however, be acknowledged, that all theſe fine Schemes, though built upon juſt Principles, and purſued with great Wiſdom and Prudence, proved in the End abſolutely ineffectual, which was owing to the Wars and other Confuſions that fell out ſoon after, both in *Germany* and *Ruſſia*; in the firſt of which the Duke of *Holſtein* himſelf had his Share, ſo that the Event ought not in the leaſt to prejudice our Opinion againſt the Duke's Deſign, which has been ſince revived by other great Princes, and will be ſome Time or other effectually executed, and thereby a new Turn given to the Commerce of the *Indies*. The Czar *Alexis Michael*, in the Year 1668, revived this Project, which was then diſappointed by the Rebellion of the *Coſſacks*, who made themſelves Maſters of the City of *Aſtracan*, and thereby cut off for a Time the Correſpondence between *Ruſſia* and *Perſia*. It was with this View alſo, that the late Czar *Peter the Great*, who underſtood all thoſe Points better than any of his Predeceſſors, and perhaps better than any other Prince of his Time in *Europe*, made himſelf Maſter of all the Provinces bordering on his Side the *Caſpian* Sea, and thereby bid very fair for engroſſing the whole Silk Trade, that is, ſo far as it depends upon *Perſia*.

I might here put the Reader in mind, that we too have very lately proceeded upon this Plan, and have very happily begun to eſtabliſh, by the Means of our *Ruſſian* Company, this very Commerce with *Perſia* through the *Muſcovite* Empire, which is more than ſufficient to ſhew, that the Duke of *Holſtein*'s Scheme, though it actually failed by unforeſeen and unavoidable Accidents, was in its Nature perfectly juſt and well founded, ſince, if it can be rendered uſeful and practicable to us, it muſt not only have been more uſeful, and more practicable to him, who was ſo near a Neighbour to *Ruſſia*, but all Circumſtances conſidered, the wiſeſt and beſt laid Scheme for the Improvement of his Dominions that perhaps was within the Compaſs of the human Underſtanding to invent or contrive.

Thus I have done all that lies in my Power to render theſe Voyages intelligible to the *Engliſh* Reader in their utmoſt Extent, by explaining many Things that have hitherto ſlept in Obſcurity, and might poſſibly have been buried therein for ever, if theſe Voyages had not been made a Part of this Collection.

SECTION XXVIII.

A Supplemental Account of the Commodities, Manufactures, and Produce of the ſeveral Countries of the Indies, *together with Remarks on the Nature and Value of that Trade in reſpect to* Europe.

From the Works of *John Baptiſt Tavernier.*

1. *An Introductory Account of the Contents of the Section.* 2. *A ſuccinct View of the Silk, Cotton, Indigo, Spice and Drug Trade in the* Indies. 3. *The Nature of the Diamond Mines, the Manner of their working them, and the Value of their Produce.* 4. *The Mines in the Iſland of* Borneo, *the Nature of the Stones found there, and an Account of the largeſt Diamonds in the World.* 5. *Of coloured Stones, ſuch as Rubies, Opals, Saphires, Turquoiſes, and Emeralds.* 6. *Of the Pearl Fiſheries in the* Eaſt *and* Weſt-Indies, *and of the Difference in point of Size, Shape, and Colour of thoſe Jewels.* 7. *Of Coral Fiſheries, and of the Value of this Commodity in the* Indies. 8. *Of Amber, Ambergris, Muſk, and other Perfumes.* 9. *Of the Bezoar in Cows, Goats, and Apes, their different Virtues and Values, and of the Porcupine and Serpent Stones.* 10. *Of the Gold, Silver, and Tin Mines of the* Indies. 11. *A Deſcription of the Kingdom of* Kachemire, *called the Paradiſe of the* Indies, *and its Produce.* 12. *Of the Provinces of* Multan, Candahar, Cabuliſtan, *and* Lahor. 13. *Of the Provinces of* Haoud *and* Varad, *and of the Fruits and Commodities which they produce.* 14. *Of other Provinces of the Mogul Empire, and of what is moſt remarkable in each of them.* 15. *A Deſcription of the Country of* Bengal, *one of the pleaſanteſt and moſt fruitful Countries of the* Indies. 16. *Of the rich Kingdom of* Boutan, *its Inhabitants, Commodities, and Manufactures.* 17. *Of the Power, Splendor, and Magnificence of the Monarch of that Country.* 18. *Of the Kingdom of* Tipra, *and of the Gold and Silk Trade carried on there.* 19. *Of the noble Kingdom of* Aſem, *and of the rich Mines in that Country; as alſo of Gum Lac and other valuable Commodities which it produces.* 20. *Of* Tonquin, *and its Products.* 21. *A conciſe Hiſtory of that famous Kingdom.*

1. AS we have in the foregoing Sections given great Lights into the Commerce of the *Indies* from Authors beſt acquainted with them, and of the higheſt Reputation, ſo, by way of Supplement to theſe, we ſhall add ſuch Chapters of Mr. *Tavernier*'s Travels as are fitteſt to complete that Deſign, reſerving the Reſt of his Work for the ſucceeding Volume, to which it properly belongs. His Character is ſo well known and eſtabliſhed in the World, that it may ſeem very unneceſſary to ſay any thing of it in this Place, and therefore we ſhall content ourſelves with a very few Obſervations that ſeem more immediately requiſite, in order to connect what we have taken from him with what we have given before on the ſame Subject from others. He was not only a Traveller, but a Merchant alſo, and therefore ſpoke from a perfect Knowledge and Experience in the Matters of which he writes, and more particularly with regard to the Commodities and Manufactures of theſe Countries, in which he dealt for many Years with great Succeſs.

He is more copious, and at the ſame time no leſs exact, than any of the Authors who have attempted to point out the Advantages derived from our Commerce in the Eaſt, by which I mean in general the Commerce of the *Europeans*. We diſcover in his Writings a greater Compaſs of Thought, and a more maſterly Turn in his Obſervations, than in almoſt any other Book of the kind, which is owing to his having conſidered theſe things over and over, in conſequence of the ſeveral Voyages he had made to the *Indies*, and the Pains he had taken to make himſelf Maſter of every thing that had any Relation to the Diſpoſition of *Indian* Commodities after they were brought to *Europe*. It muſt be allowed, that this ſometimes tempts him to digreſs a little from his Subject, and run into a general Repreſentation of the State of the ſame Sort of Commerce in other

Parts of the World; but ſtill this proves ſo far from being tedious and unpleaſant, that we may ſafely affirm, there are no Paſſages in his Writings, either more curious or more inſtructive. It was for this Reaſon that we judged it requiſite to give them entire, without venturing to caſtrate, or interpolate them, which would only diſtract the Author's Senſe, without anſwering any good Purpoſe. After an accurate Account of the State of *Moguliſtan*, at the Time he travelled through it, he proceeds thus:

2. *Kaſembaſar*, a Village in the Kingdom of *Bengal*, ſends abroad every Year twenty-two thouſand Bales of Silk, every Bale being a hundred Weight, which are bought up, either by the *Dutch*, or Merchants of *Tartary* and *Moguliſtan*, to make up their Carpets; ſome all Silk, and others mixed with Silver and Gold, which being for the moſt part made in the Province of *Guzurat*, are ſold either at *Amadabat*, or *Surat*. The Worſted Carpets are made at *Vettapour*, twelve Leagues from *Agra*; Sattins, ſome plain, others ſtreaked with Gold; Taffaties of the ſame Faſhion; Patoles, a very thin Silk Stuff, painted with all ſorts of Flowers. The raw Silk of *Kaſembaſar* is yellowiſh, as that of *Sicily* and that of *Perſia* is; but they can whiten it with a Lye made of the Aſhes of a Tree called *Adam*'s Fig-tree, that it ſhall be like that of *Paleſtine*. In the Kingdom of *Golconda* are made the painted Calicoes (Calicuts) called Chintzes by the Merchants, but Calmender by the Natives, becauſe they are painted with a Pencil.

There are Chintzes made in *Moguliſtan*, but they are all printed, and nothing ſo fine or beautiful as the former. Theſe ſerve for Coverlets of Beds, Table-cloths, Pillowbiers, Handkerchiefs, but eſpecially for Waiſtcoats both for Men and Women. The fine Calicut Chintzes made at *Brampour* are uſed all over *Aſia* for Ormis, or Womens Veils; the Baſtas, or Calicuts, painted red, blue, and black, are carried white to *Agra* and *Amadabat* to be dyed; ſome they dye like watered Camblets, which increaſe their Price. The white Calicuts are woven in ſeveral Places in *Bengal* and *Moguliſtan*, and are carried to *Raioxſary* and *Baroche* to be whitened, becauſe of the large Meadows and Plenty of Lemons that grow thereabouts, for they are never ſo white as they ſhould be till they are dipped in Lemon-Water: They are of two ſorts, wide and narrow, but of various Lengths; ſome Calicuts are made ſo fine, you can hardly feel them in your Hand, and the Thread when ſpun is ſcarce diſcernable. Cotton twiſted and untwiſted comes from the Provinces of *Brampour* and *Guzarat*; but the latter is ſeldom exported, unleſs it be to *Ormuz*, *Balſora*, or the *Philippine* Iſles.

Indigo comes from ſeveral Parts of the *Mogul*'s Country, but differs in Quality; the beſt comes from the Territories of *Biaria*, *Indocea*, and *Corſa*, a Day or two's Journey from *Agra*: That which is made flat of this ſort comes from *Sarqueſſe*, a Day's Journey from *Surat*: The Indigo which is made in *Golconda* is inferior in Goodneſs; as alſo that which is made up at *Baroche* and *Agra*, though this laſt is moſt ſought for, becauſe it is made up in half Balls. The worſt ſort is that made at *Bengal*, *Brampour*, and *Amadabat*. It is made of an Herb much like our Hemp, which is ſown every Year after the Rains. They cut it three Times every Year; but the firſt Cutting makes the beſt Indigo, and the ſecond better than the third: It is known by the Briſkneſs of the Colour. When they have cut it, they caſt it into Pits half full of Water, which they raiſe to the Brim, with the Herb put into it, and then pound it about till it becomes as thick as Mud; then they let it ſettle for ſome Days, and afterwards drain the Water out of it, which done, they take it up in Baſkets, and making it up flat at the Bottom, and ſharp at the Top like an Egg, ſet it in the Sun to dry. Great Quantities of Saltpetre come from *Agra* to *Patna*; but that which is refined is three Times the Value of that which is not.

Cardamum, which is the moſt excellent of all Spices, grows in the Territories of *Viſapour*, and becauſe there is no great Store of it where it grows, it is only made uſe of in *Aſia* at the Tables of the greateſt Princes. Ginger grows in the Dominions of the Great Mogul, and is brought in great Quantities from *Amadabat*, where it grows more than in any other Part of *Aſia*, and it is hardly to be imagined how much is tranſported candied into other Parts. Pepper is of two Sorts, the ſmall and the great; the ſmall comes from *Bantam*, *Achen*, and ſome other Parts of the Eaſt; it is ſeldom or never carried out of *Aſia*, where it is ſpent in great Quantities, eſpecially among the *Mohammedans*; for there is double the Grain of this ſmall Pepper in one Pound to what is in the great; beſides, it is not ſo hot in the Mouth. The great Pepper comes from the Coaſt of *Malabar*, and ſome from *Viſapour*. Nutmegs come from the *Molucca* Iſlands, as alſo from the Iſlands of *Banda*; but the biggeſt grow in the Iſland of *Damme*. It is obſervable of the Nutmeg-tree, it is never planted; but, when the Nutmegs are ripe, certain Creatures come from the Iſlands towards the South, and devour them whole, but are forced to throw them up again before they be digeſted; the Nutmeg then beſmeared with a viſcous Matter falling to the Ground, takes Root, and produces a Tree, which would never thrive if planted. Cloves grow at *Amboyna*, *Ellias*, *Sarem*, and *Bouro*. Cinnamon comes at preſent from the Iſland of *Ceylon*; the Tree that bears it is like a Willow, and has three Barks; the two outermoſt may be taken off, and is the beſt Cinnamon; the third muſt not be meddled with, becauſe then the Tree will die, and therefore great Art muſt be uſed to take off the two uppermoſt, leſt the third ſhould be hurt with the Knife. The *Hollanders* are at a vaſt Expence at *Ceylon* to gather their Cinnamon, becauſe the King ſends his Forces upon them when they are gathering to ſurprize them, and take it from them; ſo that they are forced to have a Guard upon their Workmen of ſeven or eight hundred Men; and this makes Cinnamon dearer, and ſo much the more becauſe the *Dutch* have ſpoiled the Trade for it from the Countries of the *Rajahs* about *Cochin*.

The Drugs brought to *Surat* from all Parts of the *Indies* are Sal-Armoniac, Borax, Gum-Lac, Gum-Lac waſhed, Gum-Lac in Sticks of Wax, Saffron, Cummin, white and black, Arlet, Frankincenſe, Myrrh, Gilet, and Bolti; Caſſia, Sugar-Candy, Aſſutinat, Anni-ſeed both groſs and ſmall, Oupelot, Cointre, Auzorout, Aloes-Succotrine, Lignum-Aloes, ſome in great and others in ſmall Pieces; Liquorice, Vez Cabouli, out of Gum-Lac the Natives extract that lively Scarlet-Colour with which they paint their Calicoes; and for that end it is carried into *Perſia*. That which remains after the Colour is drawn out, is fit only to make Sealing-wax of; and the Women of *Surat* get their Living by cleanſing and colouring it for that Uſe. Powdered Sugar is brought in great Quantities from the Kingdom of *Bengal*, and there is a great Trade for it at *Ougeli*, *Patna*, *Daca*, and other Places. The People of *Bengal* ſay, that there is no Poiſon more dangerous than Sugar kept thirty Years. Loaf-Sugar is made at *Amadabat*, where they have the perfect Art of refining it. Opium comes from *Brampour*, where Tobacco alſo grows in great Quantities, ſo that the Inhabitants having no Vent for it, let it rot upon the Ground.

3. Diamonds, which are the moſt precious of all Stones, are found partly in Mines, partly in Rivers. At *Raolconda*, a Town five Leagues diſtant from *Golconda*, and eight or nine from *Viſapour*, in the Province of *Camatica*, is a Diamond-Mine, diſcovered not above two hundred Years ago: In it are found the cleaneſt Stones, with the whiteſt Water; but being forced to fetch them out of the Rocks with a great Iron-leaver and many Blows, they often flaw the Diamonds, and make them look like Cryſtal: And this is the Reaſon there are ſo many ſoft Stones found in this Mine, though they make a great Shew. If a Stone be clean, they give it only a Turn or two upon the Wheel, that it may loſe as little as poſſible of the Weight; but if it has any Flaws, Points, or black Specks, they cut it into Facets, and work the Flaw into a Ridge to hide it. The Trade at the Mines is free and juſt, and tranſacted without any talking on either Side, the Buyer and Seller expreſſing themſelves by taking each other by the Hands; and ſo, in the ſame Place where there are many People, a Parcel of Goods ſhall be ſold ſeven or eight Times, and no Man know it. At *Gani*, or *Colour*, ſeven Days Journey from *Golconda* Eaſtwards, is another Diamond-Mine: It

lies between the Town and a Mountain, and the nearer they dig to the Mountain, the larger Stones they find; but there is none at the Top.

This Mine was found not above an hundred Years ago by a Countryman, who digging his Ground to ſow Millet, found a large Diamond twenty-five Carats Weight: Upon this, the rich Men in the Town fell to digging in the Place, and found, as they do ſtill, bigger Stones than in any other Mines, *viz.* ſome above forty Carats, and one of 900, which *Margimola* preſented to *Aureng-Zebe:* But the Miſchief of theſe Stones is, they partake of the Quality of the Soil, and are few of them clean; but ſome are black, and others red, and others green and yellow. Near *Soumelpour*, in the Kingdom of *Bengal*, is a River called *Gouel*, where there are Diamonds found mixed with the Sand. The Way from *Agra* to this Town lies through *Halabas*, *Banarous*, and *Saſſaren*, from whence you paſs to the Iſland of *Rhodas*, which is one of the ſtrongeſt Places in all *Aſia*, being ſeated upon a Mountain, fortified with ſix Baſtions, twenty-five Pieces of Cannon, and three Motes full of Water, in which are good Fiſh, to *Soumelpour*, which is a great Town, but the Houſes are built of Earth, covered with Branches of Cocoa-trees. The Road from the Fort lies through dangerous Woods, becauſe much peſtered with Robbers. The Rajah, in whoſe Juriſdiction it is, lives half a League from the Town in Tents ſet upon a riſing Ground, at the Foot whereof runs the River *Gouel*, where Diamonds are found. This River deſcends from the Southern Mountains, and being filled with the great Rains, brings down, in *December*, vaſt Quantities of Sand, which the People in great Multitudes ſearch for fifty Leagues together, and find all thoſe Points which are called natural Points in it, but ſeldom find any large Stones.

4. In the Iſland of *Borneo*, which is the largeſt Iſland in the World, is another River, called *Succadan*, in the Sand whereof they find Diamonds as hard as any in the other Mines; but the Queen of the Mine will permit none to be carried out of it; ſo that all that come from thence are conveyed out by Stealth. In this Iſland it is remarkable that the Queen, and not the King, has the Sovereign Command; as have alſo the inferior Women the Rule over the Men; for the People are ſo deſirous always to have a lawful Heir upon the Throne, that the Huſband not being certain that the Children ſhe bears are his own, they rather chuſe to be governed by a Woman, to whom they give the Title of Queen, her Huſband being only her Subject, and having no Power but what ſhe permits him.

At the Mine of *Rocolconda* they weigh by Mangolins, which are each a Carat and three Quarters, and pay in new Pagods; as they do alſo at *Colour*. At the Mine of *Soumalpour*, in *Bengal*, they weigh by Rahs, which are each Seven Eighths of a Carat, and pay in Roupees. The Roads to the Mines, though ſome fabulous Relations had made them very dangerous, full of Tygers, Lions, and cruel People, are not only free from all wild Beaſts, but the People are very loving and courteous. The Price of Diamonds are thus to be known: If it be a thick Stone, well ſquared, and have all its Corners, and the Water be white and lively, without Specks or Flaw, ſuch a Stone is worth an hundred and fifty Livres, or ten Pounds fifteen Shillings Sterling; or of the ſame Value if it is cut in Facets, which they call a Roſe-Diamond, if it be a fair Breadth, and of the ſame Perfection; and if a Stone weighs more Carats it is raiſed in Price. Imperfect Diamonds are not above half the Value as perfect. The two biggeſt Diamonds in the World, for cut Stones, belong, the one to the Mogul, which weighs two hundred and ſeventy-nine Carats and nine ſixteenths of a Carat; and the other to the Duke of *Tuſcany*, which weighs an hundred and thirty-nine Carats, both clean and well ſhaped. The Miners call a Diamond *Iri*, and the *Turks*, *Perſians*, and *Arabians*, *Almas*.

5. There are but two Places in all the Eaſt where coloured Stones are found, and they are in the Kingdom of *Pegu*, and Iſland of *Ceylon*; the firſt is a Mountain twelve Days Journey or thereabouts from *Sireri*, towards the N. E. it is called *Capelan*. In this Mine are found great Quantities of Rubies, and Eſpenels, or Mothers of Rubies, yellow Topazes, blue and white Saphires, Jacinths, Amethyſts, and other Stones of different Colours. Among thoſe Stones which are hard other Stones are found of different Colours, but being ſoft they are of no Eſteem. All theſe ſorts of Stones the Natives call Rubies, and they are the only Commodity of the Country, which makes it very poor. From *Ava*, which is the chief Fort of *Pegu*, you muſt go by Water to *Sireri*, becauſe the Roads by Land are almoſt impaſſable, by reaſon of the Tygers, Lions, and Elephants, which abound in the adjacent Woods.

The King of *Pegu* keeps all the choice Stones for himſelf and Subjects, and ſuffers few of them more than of three Carats Weight, that are clean, to be exported. Rubies are ſold by Rahs, and the Payment is made for them in Pagods. A Ruby of above ſix Rahs Weight is almoſt invaluable. There are ſome Rubies, but moſt of them are Ballies Rubies, and Abundance of Baſtard-Rubies, Saphires, and Topazes, found in the Mountains that run from *Pegu* to the Kingdom of *Cambaya*. The other Place where Rubies are found is in a River in the Iſland of *Ceylon*, which deſcends from certain high Mountains in the Middle of the Iſland; it ſwells very high when the Rains fall, and when it becomes low again the People make it their Buſineſs to ſearch among the Sands for Rubies, Saphires, and Topazes. All the Stones that are found in this River are generally fairer and clearer than thoſe in *Pegu*. In *Hungary* is a Mine of Opals, a Stone no where to be found in the whole World but there. Turquoiſes are of two ſorts, *viz.* the old Rock and the new, and are only found in *Perſia*. The old Rock lies near a great Town called *Micabourg*, and is reſerved only for the King's Uſe, to adorn Hilts of Swords, Knives, and Daggers, inſtead of enamelling. The new Rock is of a pale Blue, inclining to White, and little eſteemed. Emeralds, though ſaid to be Oriental, are not found in any Part of the Eaſtern Countries, but are brought from *Peru* to the *Philippine* Iſlands, and ſo tranſported into *Europe*.

6. The Fiſhery for Pearls is in divers Places, as in the *Perſian* Gulph, round about the Iſland of *Bachran:* It belongs to the King of *Perſia*, who has a Fort there, and in it a Garriſon of three hundred Men. Every one that fiſhes here pays to the King five Abaſſis, whether he gets any thing or no; and the Merchants pay at a certain Rate for every thouſand of Oyſters. There is a Pearl-Fiſhery likewiſe upon the Coaſt of *Arabia-Felix*, right againſt *Bachran*, near the City of *Catifa*, which, together with all the Country, is under the Juriſdiction of an *Arabian* Prince. The Pearls that are taken here are ſold to the *Indians*, who will give a good Price for all, as well the uneven as round ones. All over *Aſia* they chuſe ſuch as are of a yellowiſh Water, inclining to white before the pure white; becauſe, they ſay, they will never change the Colour as the white will, both by Time and conſtant Wearing. There is a wondrous Pearl in the Poſſeſſion of *Iman-Hect*, Prince of *Maſcate*, which is the beſt in the World, not ſo much for its Bigneſs, for it weighs not above twelve Carats and one ſixteenth, nor for its perfect Roundneſs, but for its tranſparent Clearneſs, for you may ſee almoſt through it: The Great Mogul, by a *Banjan*, offered forty thouſand Crowns for it, but it was not accepted. There is another Fiſhery for Pearls in the Sea that waſhes the Walls of *Manar*, in the Iſland of *Ceylon*; for the Roundneſs and Water they are the faireſt that are found, but rarely weigh above three or four Carats. There are excellent Pearls of a very good Water, and large, found on the Coaſt of *Japan*, but are rarely fiſhed for, becauſe Jewels are of no Eſteem among the Inhabitants.

In the *Weſt-Indies* there are ſeveral Places for Pearl-fiſhing, *viz.* all along the Iſland of *Cubagna*; but the Pearls are ſmall, ſeldom weighing above five Carats. In the Iſland of *Margarita*, a League from *Cubagna*, but a larger Iſland, the Pearls are not found here ſo plentifully, but are of an excellent Water and very big, ſome weighing fifty-five Carats. *Camogatte*, near the Continent, *Rio de la Hachia*, and *St. Martha*, produce weighty Pearls, but ill-ſhaped, and inclining to a Lead Colour. *Scotch* Pearl and *Bavarian*, though a Necklace of them is of Value, yet they are not to be compared with the *Eaſtern* or *Weſt-Indian* Pearl. Theſe ſorts of Pearl do all grow in an Oiſter, like Eggs in the Belly of a Pullet, and there are many in ſome, but none in many others. They fiſh in the Eaſtern Seas twice a Year; the firſt Time in *March* and *April*, and the ſecond Time in *Auguſt* and *September*, and the Fairs are kept in *June* and *November*. Before they fiſh in any Place, they try before-hand whether it will turn to any Account, by ſending ſeven or eight Barks, which are to bring them each a thouſand of Oiſters, which they open, and if the Oiſters *per* thouſand yield five Fanes, or above, as ſome will yield ſeven, then they know the Fiſhing will turn to an Account. They fiſh in twelve Fathom Water; and five or ſix Leagues off at Sea: They are guarded by ſome ſmall Men of War, to defend them from the *Malabars*, to which every Diver pays eight Piaſters for their Attendance. The more Rains fall the more profitable the Fiſhery generally happens to be.

7. Coral, though of little Eſteem in *Europe*, yet is much valued in the other three Parts of the World. There are three Places where they fiſh for it upon the Coaſt of *Sardinia*, viz. *Arguerrel*, *Boza*, and the Iſle of *St Peter*. On the Coaſts of *Africa* alſo they fiſh for it near the Baſtion of *France*, and *Tabarque*, and on the Coaſts of *Sicily*, near *Trepano*, but the Coral is ſmall, and ill-coloured. Near Cape *de Quires*, on the Coaſt of *Catalonia*, the Coral is large, and of an excellent Colour, but the Branches are ſhort. At *Majorca* and *Corſica* there is a Fiſhery for it. Theſe Places are all in the Mediterranean-Sea, for there is none at all in the Main-Ocean. Some think that Coral is ſoft in the Sea, but it is really hard; though it is true, that in certain Months in the Year there is a milky Subſtance iſſues from it, and if it falls upon any thing, produces Coral; and there are certain Worms in the Sea that eat it.

They fiſh for Coral from the Beginning of *April* to the End of *July*, but never above forty Miles from Land, and that in ſuch ſwift Barks, that no Gallies can overtake them. In *Japan* they value nothing ſo much as a good Grain of Coral, wherewith they pull the String that ſhuts their Purſes; and in this they ſeek to excel one another; ſo that a Piece of Coral as big as an Egg, fair and clean, without any Flaw, will produce as much as a Man can, in reaſon, aſk for it. The *Portugueze* have ſold ſuch Pieces for 20000 Crowns. All over *Aſia*, and eſpecially all over the Northern Parts of the Mogul's Dominions, and all along the Mountains, as you go to the Kingdoms of *Aſem* and *Boutan*, the meaner ſort of People wear it for Bracelets and Necklaces.

8. Yellow Amber is only found upon the Coaſt of *Pruſſia* in the Baltick-Sea, for the Sea throws it upon the Sand, when certain Winds blow. The Elector of *Brandenbourg* farms it out for 20, and ſometimes for 22000 Crowns a Year; and the Farmers keep a continual Guard on both Sides of the Sea, that it be not ſtole. It is nothing elſe but a certain Congelation made in the Sea like Gum; for ſometimes Flies and Gnats are congealed in it. In *China* it is a Cuſtom for the great Lords, at their Feaſts, for Grandeur and Magnificence, to ſet three or four different ſorts of Perfuming-Pots on the Table, and to throw into every one of them a vaſt Quantity of Amber, and the bigger the Pieces the more magnificent is the Entertainment accounted. The Waſte of Amber makes it the beſt Commodity that can be carried into *China*; but the *Hollanders* have engroſſed it.

As for Ambergris, no Man knows what it is, or where, or how it is produced. It is moſt probable that it muſt be in the Eaſtern Sea, though ſome have been found on the Coaſts of *England*, and other Nations of *Europe*. The greateſt Quantity of it is found upon the Coaſt of *Melinda*, at the Mouth of the *Rio de Sena*. A *Portugueze*, ſailing from *Goa* to the *Manillas*, after he had paſſed the Streights of *Malacca*, found a Piece of thirty-three Pound Weight, and a *Middleburgher* a Piece of forty-two Pound upon the Coaſt of the Iſland of *St. Maurice*.

The beſt ſort, and greateſt Quantity of Muſk, comes from the Kingdom of *Boutan*; and from thence it is brought to *Patna*, the chief City of *Bengal*, where the Natives truck it away with the Merchants for Coral, Yellow Amber, and other Commodities, rather than Gold or Silver. It grows in a Bladder on the Belly of a certain Creature, between the Genitals and the Navel, which the People who ſell it cut off after it is killed. It looks like clotted Blood when it is new cut off. None of theſe Creatures have above one Bladder, which is not bigger than an Hen's Egg, and will not yield above half an Ounce of Muſk; and ſometimes three or four will not yield an Ounce. The Scent of the Beaſt is ſo ſtrong, that it makes one's Head ach to come near it. Theſe Creatures muſt be certainly very numerous, conſidering the great Quantity of Muſk that is to be ſold.

9. Bezoar comes from a Province of *Golconda*, towards the N. E. It is found in the Paunch of a Wild Goat, which brouzes upon a certain Shrub; and having eaten the Buds or Tops of the Boughs, the Bezoar is produced by them in the Maw of the Goat, and is of divers Shapes, according to the Form of the Bud. The Natives, by feeling on the Belly of the Goat, know how many Stones he has within him. The Excellency of the Bezoar is in the Bigneſs, although the ſmall have the ſame Virtue with the larger; for if five or ſix Stones weigh an Ounce, they are worth no more than ſeventeen or eighteen *Franks*; but if one Stone weighs an Ounce, it is worth an hundred *Franks*; and one of four Ounces and an half was ſold for two hundred Livres. In what Part of the Body the Bezoar is bred, none can tell. As well in the *Eaſt* as *Weſt-Indies*, there are great Quantities of Bezoars that breed in Cows, and of a great Bigneſs, *viz.* ſeventeen or eighteen Ounces, but they are little eſteemed, ſix Grains of the former working more powerfully than thirty of this.

The Bezoar that breeds in Apes is ſo ſtrong, that two Grains will work as powerfully as ſix Grains of Goat's Bezoar; but it is very ſcarce, as being found only in the Apes of the Iſland of *Macaſſar*. The Scarcity as well as Strength makes it dear, ſo that a Piece as big as a Nut is worth a hundred Crowns.

The Porcupine-Stone, which is bred in the Head of that Creature, is more precious than Bezoar againſt Poiſon: If it be ſteeped in Water a Quarter of an Hour, it makes the Water as bitter as poſſible. There is another Stone taken out of the Belly of the ſame Creature, as good as the other; but being ſteeped in Water, it loſes nothing of its Weight or Bulk, as the other does.

The Serpent-Stone, which is about the Bigneſs of a Pigeon's Egg, is almoſt oval, thick in the Middle, and thin about the Sides. The *Indians* ſay it is bred in the Head of certain Serpents; but it is more probably a Compoſition of certain Drugs, becauſe they are to be had of the *Bramins* only: But, however it be, it is of excellent Virtue to drive away Venom from ſuch as are bitten with venomous Beaſts; for, being laid to the Wound, it will not come off till it has drawn out all the Poiſon; and being ſteeped in Womens or Cows Milk, it recovers its former Virtue, making the Milk like Corruption. There is another Stone, called the Serpent's Stone with the Hood, becauſe that kind of Serpent has an Hood hanging down behind the Head, in which this Stone is found. It is often found as big as a Pullet's Egg; but it is not found in any leſs Serpent than of two Foot Length: This Stone being rubbed againſt another Stone, yields a Slime, which, being drank in Water by the Perſon that is poiſoned, powerfully expels the Venom. Theſe Serpents are found only on the Coaſts of *Melinda*: But the Stones are bought of the *Portugueze* Mariners and Soldiers that come from *Mozambique*.

10. Gold is found in the greateſt Quantities in the Iſlands of *Japan*, which lie Eaſtward of *China*; though ſome think it is brought from *Formoſa* thither. The *Chineſe* alſo exchange a ſort of Gold, produced in their Country, for Silver, Weight for Weight, becauſe they, having no Silver-Mines, prefer it before Gold, but it is the coarſeſt of all the Gold. In *Aſia*, in the Iſland of *Celebes*, or *Macaſſar*, there is found Gold among the Sand of their Rivers. In *Achem*, or *Sumatra*, after the rainy Seaſon, when the Torrents are waſted, they find Flints waſhed down from the Mountains with Veins of Gold in them; and the Inhabitants of the Weſt-ſide of the ſame Iſle,

bring the *Dutch*, when they lade their Pepper, great Store of Gold, but as bad, if not worſe, than their *China* Gold. Towards *Thibet*, which is the ancient *Caucaſus*, in the Territories of a Rajah, beyond the Kingdom of *Kachemire*, there are three Mountains cloſe by each other, one of which produces excellent Gold, the other Granats, and the third *Lapis Lazuli*. There is alſo Gold which comes from *Tipra*, but is as coarſe as the *Chineſe* Gold; and theſe are all the Places in *Aſia* that yield Gold. In *Africa* Gold is more plentiful than in *Aſia*. Out of the Empire of *Monomotapa*, which extends itſelf as far as *Preſbyter John*'s Country, comes the pureſt Gold in all *Africa*, where they dig it with Eaſe out of the Earth, not being conſtrained to dig above two or three Foot deep. And in ſome Places not inhabited for want of Water, the People find Lumps of Gold upon the Surface of the Earth of an Ounce Weight or more.

The King of the *Abyſſins* ſent the Mogul a natural Tree all of Gold, two Foot four Inches high, and ſix Inches about in the Stock, with ten or twelve Branches, ſome half a Foot long, and an Inch about, and ſome ſmaller: In ſome Branches appeared Bunches like Buds, and the Roots were thick and ſhort. The Province where the River *Sena* has its Head, called *Monkaran*, has a King of its own, and is very healthy: There the People find great Plenty of Gold-duſt in the Rivers that fall into the *Sena*, but it is much coarſer than the other. The Cafres alſo of the other Provinces bring great Store of Gold yearly to *Sofala* and *Cheapon Goura*, which are under the *Portugueze*, to buy ſuch Commodities as they want, when the Ships come. Some Years there are Cafres that come from the *Cape of Good Hope* to *Sofala*, which is four Months Journey, and bring very fine Gold in Pieces, like that of *Monomotapa*, which, they ſay, they find in the Mountains by digging ten or twelve Foot deep.

They alſo bring great Quantities of Elephants Teeth; for they abound ſo in Elephants, that the Palliſadoes of their Fortreſs, and Pales of their Parks, are all made of Elephants Teeth. Their uſual Diet is Elephants Fleſh. In the Kingdom of *Beroe* grows a Root of a yellow Colour, very bitter, and about an Inch thick, which cures all ſorts of Fevers by vomiting. There are no Silver-Mines in *Aſia*, unleſs it be in *Japan*. But a few Years ſince there have been diſcovered plentiful Mines of Tin at *Delegora*, *Sangora*, *Bordelen*, and *Bata*, which have ſpoiled the Trade of the *Engliſh* thither for that Commodity.

11. The great Extent of the vaſt Empire of the Mogul, as well as the various Temperature and Productions of the Soil and Climate, makes as much Difference between one Province and another, as if they were ſeveral Kingdoms; and therefore there can be no way to give an exact Account of all Things remarkable; but, by conſidering the ſeveral Provinces diſtinctly, and what's peculiarly obſervable in them. We will begin with the Kingdom of *Kachemire*, commonly called the *Paradiſe of Indoſtan*; a Country, tho' mountainous, yet ſo fruitful, that you would take it for an ever-green Garden, being full of Trees, and Paſtures with all ſorts of Cattle, as Cows, Goats, Sheep, Horſes, Partridges, Hares, Gazels, and the Muſk-Animals. There are Abundance of Bees, but no Serpents, Tygers, Bears and Lions. The Fields produce Rice, Corn, Pulſe of divers ſorts, Hemp, and Saffron, being interſected with Ditches, Lakes, and Rivulets, to advance their Plenty. Up and down every where alſo are ſeen ſome of our *European* Trees, Flowers, and all ſorts of Plants, as Apples, Pears, Prunes, Apricots, Nuts, and Vines; and their Gardens are full of Melons, Water-Melons, Skerrets, Beets, Radiſhes, and all ſorts of our Pot-herbs, and ſome that we have not: But their Fruits are not ſo many, nor ſo good as ours.

The People are very induſtrious as well as intelligent, and make Pallekies, Trunks, Bedſteads, Standiſhes, Boxes, and Spoons, with many other Pieces of handſome Workmanſhip, ſending them all over the reſt of the *Indies*; and to ſome of theſe they give ſuch a Varniſh, with counterfeit Veins and gold Streaks, that nothing is finer. They make alſo a kind of a Stuff an Ell and an half long, and about an Ell wide, called *Chales*, and embroidered at each End, for about a Foot, ſo ſoft and fine, as is inimitable, though it is attempted at *Patna*, *Agra*, and *Lahor*. The *Moguls* and *Indians*, both Men and Women, wear of them in Winter upon their Heads, and bring them over their Shoulders like a Mantle: They are made of their own Wool, which is finer than *Spaniſh*, or of the Hair taken from the Breaſt of a wild Goat in *Great Tibet*, called *Touz*: Some of theſe are ſold for a hundred and fifty Rupees to the great Omrahs.

The People are of a fair Complexion, and eſpecially the Women are very beautiful, and of as fair Faces as in *Europe*. Between *Bunbor* and *Kachemire* are ſome Mountains that ſeem to part two Worlds rather than two Provinces; for on the one Side it was ſcorching and hot, as in the *Torrid Zone*, and full of *Indian* Plants proper to it; on the other Side it enjoys a temperate freſh Air, and the Soil produced Hyſſop, Thyme, Marjoram, and Roſemary, Oaks, Elms, Pines, and Plane Trees. Between thoſe Rocks are admirable Caſcades of Water, and among others one not to be paralleled, which running in a Channel between the Trees, on a ſudden precipitates itſelf into the Bottom of a ſteep Rock, with a Noiſe able to make one deaf like a Cataract. In the Month of *May* here is a Fountain that for fifteen Days regularly flows, and ſtops thrice a Day, *viz.* at Break of Day, Noon, and Night: Its flowing fills a Square ten or twelve Foot broad, and as many deep, and then it ſlacks by degrees till about the End of the Month, and then quite ſtops for the reſt of the Year. By it the *Gentiles* have a Temple of the Idol *Brara*, and from thence the Fountain is called *Send Brari*, i. e. the Water of *Brara*, and hither many Pilgrims come to bathe and ſanctify themſelves.

In the Royal Garden at *Achiavel* in this Province is a Pond, where are Fiſhes that will come when they are called, and when you caſt Bread to them; the biggeſt of which have alſo Rings in their Noſes, with Inſcriptions on them. At *Baramoulay* is a Moſk, in which is a Tomb of one of their Friars or Saints, where 'tis ſaid the Sick which flock thither every Day are cured, and eleven Moulahs, with one Finger each, lift a huge Stone, which the ſtrongeſt Man can hardly raiſe eaſily: But theſe things are miraculous only to the credulous and careleſs; but the bubbling Fountain, which riſes gently, and with ſome little Force, making ſome ſmall Bubbles, and bringing up Sand with it, which goes away with it again, and the Water becomes ſtill, and ſo remains awhile without Bubbles, and then riſes again, is certain. In the Mountains near this Fountain is a Lake that hath Ice in Summer, and looks like an Icy Sea; and a little farther is a Place, where making a great Noiſe will preſently cauſe a Shower of Rain. Among theſe Mountains live a People which eat no Fleſh, counting it unclean, yet they have no Religion.

The City of *Azemer* is famous for the Tomb of *Cogea Mandy*, who was in great Reputation for his Sanctity, and therefore they come from all Places in Pilgrimage to it. It is a fair Building, with three Courts, paved with Marble, and hath in it a Reſervatory of Water, walled about; and in the Province adjoining there is a Beaſt like a Fox in the Snout, but no bigger than a Hare, of the Colour of a Stag, and Teeth like a Dog: It yields moſt excellent Muſk; for at the Belly is a Bladder full of Matter, like corrupt Blood, which is the Muſk. They cut off the Bladder for it, but the Beaſt never lives long after it. There are alſo Pullets, whoſe Skin is all over black, as are alſo their Bones; but the Fleſh is white, and their Feathers of another Colour. The Women of this Country are marriageable at eight or nine Years old, and bear Children at ten; the Children go naked, only with a Bit of Cloth to cover their Privities. The People are rude and uncivil, and the Men great Clowns, and impudent; when they quarrel they make a great bawling, but never come to Blows. There are venomous Scorpions in this Country, and the People have ſeveral Remedies to cure the Stinging; but the beſt of all is Fire; for by applying a burning Coal to it, they draw the Venom out, and perfectly cure it.

The Roads thro' this Country being very ſtony, they ſhoe their Oxen, and bridle and ſaddle them like Horſes; and if they be but a little ſpurred, they go as faſt as a good Horſe; with them alſo they draw their Carts and Coaches, for their white Oxen are extraordinary dear. The chief Trade of this Province is Saltpetre, for the Soil being black, affords it plentifully. When it is made they carry it to *Surat* to ſell it to the *Europeans*, and others, who buy it to ballaſt their Ships, and ſell elſewhere.

12. In the Province of *Sinde*, which was anciently the Kingdom of *Diu*, the Inhabitants are wonderfully ingenious in all kinds of Arts, and make abundance of Curioſities, for which they have a great Trade; the fineſt Pallanquins in *India* are made at *Tata* in this Province, and there is nothing neater, nor more convenient, than the Carriages made here; but their Waggon-Wheels are one Piece of ſolid Timber, like a Mill-ſtone.

The Province of *Multan* yields Plenty of Cotton, Sugar, Opium, Brimſtone, Galls, Store of Camels, which are tranſported into *Perſia*, and other Parts of the *Indies*. It furniſhes alſo all *India* with the fineſt Bows that are to be ſeen in it, and nimbleſt Dancers; the chief Town of it, of the ſame Name, is the Rendezvous of the *Banjans*, becauſe of the great Trade managed there, which cannot be carried on without them; for though it is known that they make their Profit of every thing, yet moſt Merchants chuſe rather to uſe them, than do their Buſineſs themſelves, becauſe they will buy their Goods much cheaper, and they refuſe no Service, be it ever ſo baſe or vile. The Country of *Candabar* produces abundantly all ſorts of Proviſions that are neceſſary for human Life, unleſs it be on the Side next *Perſia*, where it is barren. The Inhabitants are great Lovers of Wine, though they are prohibited to drink it; and if any be found drunk, or doing any ſcandalous Action in Drinking, they are ſet upon an Aſs, with their Face to the Tail, and led about the Town, and attended by the Officer of the Controul, who beats a little Drum, and all the Children follow him, whooping and hallooing. There are many *Perſians* in this Province, but they are poor, and employed by the *Mohammedans* in the meaneſt Offices. The King of *Perſia* will not allow the *Gentiles* Wives to burn themſelves in that Part of his Dominions.

In the Mountains of *Cabouliſtan* grow Mirabolans, and many other ſorts of Drugs. The Country alſo is full of aromatick Trees, which turn to a good Account to the Inhabitants; as do alſo the Mines of a certain ſort of Iron fit for all Uſes. Out of this Province come moſt of thoſe large Canes, of which are made Halberds and Lances, for they have many Grounds planted with them. They reckon their Months by Moons, and with great Devotion celebrate a Feaſt called *Houli*, which laſts two Days, firſt in praying, and making Oblations, and then in dancing in the Streets in Companies to the Sound of Trumpets, making Bonfires, and deſtroying the Figure of a Giant. Their Charity conſiſts chiefly in digging Wells, and building little Houſes on the Roads for Travellers, and by them is a Place for ſuch as are heavy laden, to put off and take up their Burdens without any body's Help. This Country ſupplies the whole *Indies* with Phyſicians, which are all *Banjans*, and ſome of them very ſkilful in Medicines, and among other Remedies make great Uſe of Burning.

In the City of *Labor* the Great Mogul has a Palace, on one Gate of which is a Crucifix, and on the other the Picture of the Virgin *Mary*. Some have thought them Marks of Chriſtianity, which was anciently profeſſed in theſe Countries; but it is really nothing but a Piece of Flattery and Hypocriſy of the King *Ieban Guire*, to oblige the *Portugueze* to be his Friends. There are many *Gentiles* in this City, who have ſeveral Pagods all raiſed ſeven or eight Steps from the Ground, and ſome of them are well adorned. This is one of the largeſt and moſt fruitful Provinces in the *Indies*, the five Rivers, which make up the River *Indus*, from whence the Moguls call it *Pangeab*, making it very fruitful; for it yields all ſorts of Proviſions neceſſary for Life, as Rice, Corn, and ſeveral ſorts of Fruits. The Wines made here are pretty good, and in the Towns are not only all ſorts of painted Cloths wrought, but all the other Manufactures uſually made in the *Indies*.

13. In the Province of *Aoud*, or *Haoud*, and *Varad*, or *Varal*, there are many Rajahs that own not the Authority of the Mogul: At *Hagarcot* in this Province is the Pagod of the Idol *Matta*, to which the *Gentiles* that come to pay their Devotions to her are ſaid to ſacrifice always ſome Part of their own Bodies. At *Calamac*, where the *Gentiles* have alſo another famous Pagod, there is a Spring of very cold Water, which iſſues out of a Rock that continually belches out Flames, and the *Bramins* make great Advantage of the People who come to ſee the Miracle. In the Province of *Ouleſſer* is the famous Temple of *Jarganate*, where one of the *Fequirs* undertook to meaſure the whole Kingdom of the Mogul with his own Body, and being about to perform it, was loaded with Charity, and had much Reſpect given him.

The People of this Country, as well *Mohammedans* as *Gentiles*, are extraordinary voluptuous, have a captious and ſubtil Wit, and are much addicted to ſtealing. The Women are very bold and laſcivious, and uſe all Arts to corrupt and debauch young Men, eſpecially Strangers, whom they eaſily trepan, becauſe they are handſome, and well dreſſed. In this Province are above twenty thouſand Chriſtians, who lived in great Unity under potent Kings; but the Mogul becoming Maſter of it, and bringing in *Mohammediſm*, a general Diſorder and Corruption of Manners invaded them.

The Country is full of Torrents, and the People live in much Eaſe, becauſe it is very fruitful, producing Corn, Rice, Sugar, Ginger, Long-pepper, Cotton, and Silk, with ſeveral other Commodities; as alſo Fruits, eſpecially Anana's as big as Melons, and pleaſant to the Taſte, having ſomething of the Flavour of the Apricot. In this Province the Mogul hath a Caſtle, whither he ſends ſuch Traitors as are condemned to perpetual Impriſonment, and to that End 'tis always ſtrictly guarded.

14. In the Province of *Malva* are the Territories of *Raja Rana*, who deduces his Pedigree from *Porus*, tho' he is now tributary to the Mogul. *Ratiſpore* is the capital City of it, and a Place of great Trade; it ſtands upon a Mountain, and hath a Caſtle belonging to it, to which the Grand Mogul ſends ſuch Traitors as are condemned to die. They are kept Priſoners for ſome Time, and always ſomebody is preſent with them, and the Day they are to die they make them drink a great Quantity of Milk, and then throw them down from the Top of the Caſtle upon the declining Side of the Hill, which is full of ſharp-pointed craggy Stones, that tear the Bodies of the Wretches to Pieces before they can reach the Bottom of the Precipice.

At *Chitor*, once a famous Town, but now almoſt ruined, are the Remains of an hundred Temples, or Pagods, and many antique Statues, to be ſeen. In this Country are two kinds of Bats, one like ours in *Europe*, but the other is much different: It is eight Inches long, and the Body is covered with yellowiſh Hair. The Body round, and as big as a Duck's, the Head and Eyes like a Cat's, a ſharp Snout like a Rat, pricked black Ears, without Hair, no Tail, two Teats as big as the End of one's little Finger; under the Wings four Legs, Wings almoſt two Foot long, and ſeven or eight Inches broad, of a black Skin, like wet Parchment; the two Fore-Legs end in five Talons, like a Man's Hand, and black, and without Hair; but it has Claws inſtead of Nails, with which it hangs upon the Branches of the Trees. They fly high, and are ſaid to be good Meat.

The Province of *Candiſh* is the moſt plentiful for Cotton of any Part of *Indoſtan*, and of it the People make abundance of Cloth. They paint ſome, but the white are moſt valued for the lovely Mixture of Gold and Silver that is in them; for the Rich make their Veils, Scarfs, Handkerchiefs and Coverings of them, but they are dear. Here is alſo Plenty of Rice and Indigo growing. In the Country of *Balagate* are a great many Warrs, Manguiers, Bahova, Quiſau, Caboul, and other ſorts of rare Trees. Here are vaſt Numbers of Antilopes, Hares, Partridges, and towards the Mountains are Merons, or wild Cows. Towards *Narpouia* grows the beſt Rice in all the *Indies*; for it has an odoriferous Taſte, which that of other Countries has not. Cotton abounds here alſo, and in many Places they have Sugar-Canes, with Mills and Furnaces to make the Sugar. The Ways here are always ſafely guarded. The Pagods of *Alora* in this Province are ſo numerous, and ſo full of Pillars and Pilaſters, and have ſo many thouſand Figures all cut out of the natural Rock, that they may be ſaid to be Works almoſt ſurpaſſing human Force.

In the Province of *Daltabat* are bred the moſt active Tumblers in the World, who do all the Tricks of ours in *Europe*, and many more; they are as ſupple as an Eel, and will turn their whole Body into a Bowl, which others may roll about with their Hands; but the moſt active are Girls, in the Province of *Chitanagar*, which is diverſified with Hills and Plains. The Hills afford Iron, of which, at the Town of *Indelvar* chiefly, the People make a great many Swords, Daggers, and Lances, which are vended all over the *Indies*. All the Plains are good Ground, ſome ſowed with Rice, and the reſt planted with Cotton-Trees, Tamarinds, Warrs, Cadjours, Manguires, Quieſan, and others, and all watered with ſeveral Rivers, which turn and wind every Way with fair Tanques, out of which they draw the Water with Oxen; but thoſe Parts are much troubled with Thunder, Lightning, Whirlwinds, Rain, and Hail-ſtones, as big as Pullets Eggs.

In the Province of *Telenga*, as there are many *Gentiles*, ſo there are none more ſuperſtitious than they. They have abundance of Pagods, with Figures of Monſters, which can excite nothing but Horror inſtead of Devotion, unleſs in ſuch deluded Souls. They uſe frequent Waſhings; for Men, Women, and Children, as ſoon as they are out of their Beds in the Morning, go to the River to waſh, and the Rich have Water brought them, and ſo again as often as they eat. Women, who have loſt their Huſbands, are conducted to the River by their Friends that comfort them, to waſh, and ſo are Women as ſoon as they were brought to Bed; for in no Country are Women ſo eaſily delivered as here. They will eat nothing but what is dreſſed by themſelves, or their own Caſt or Tribe, and buy all their Food of the *Banjans*. They drink nothing but Water, wherein they put Tea or Coffee, nor uſe any Diſhes, but Leaves of Trees, for fear any Perſon of another Religion ſhould have eaten out of it. They eat no Fleſh, except it be on a certain Day of the Year, and that very privately; but the *Raſhpoots* eat any Fiſh, or Fleſh, except the Cow; they uſe Faſting very much, their ordinary Faſt is twenty-four Hours; and there are a great many that will faſt, eſpecially Women, ſix or ſeven Days, and ſome will faſt a Month, eating no more than a Handful of Rice a Day, and others will eat nothing at all, only drink Water, in which the Root of Criata has been boiled, which is good for many Diſtempers, and ſtrengthens the Stomach. When the Faſt is at an End, the Bramin goes with a Drum to the Houſe of the Penitent, and gives him or her Leave to eat. Laſtly, in the Province of *Baglana*, and alſo the People on the Sea-Coaſt, who are much given to Sea-faring, the *Gentiles* offer many Sacrifices to the Sea, eſpecially when any of their Relations are abroad upon a Voyage. The manner of ſacrificing is thus: They make a Veſſel of Straw about three Foot long, and cover it with a Veil, and carry it down to the Shore, with a Baſket or two of Meat and Fruits; there they throw it into the Sea, and having made ſome Prayers, leave the Baſket on Shore, that the Poor and others may come and eat what it contains.

At the End alſo of *September*, when the Sea, after the tempeſtuous Seaſon from *May*, becomes again navigable, they offer another Sacrifice, but with no great Ceremonies; for they only throw Cocoa-nuts into the Sea, and every one throws one, the Boys plunging themſelves into the Sea to catch them, and ſhewing many Tricks in the Water, which are pleaſant to behold. In this Province the *Indians* marry their Children very young, and make them cohabit ſooner than in any other Part of the *Indies*; they marry them at four, five, and ſix Years old, and ſuffer them to bed together when the Boy is ten, and the Girl eight; but they leave bearing by thirty, and grow extreamly full of Wrinkles; and therefore in ſome Parts of the *Indies* they do not marry till fourteen Years of Age. The Women are very fruitful, becauſe they live very frugally, as well as their Huſbands, and their Children are brought up very eaſily. They go naked till they are about ſeven Years old; and when they are about two or three Months old, they let them crawl about till they are able to go, and when they are dirty, they waſh them; and ſo they come to be as ſtrait as ours, without the Torture of ſwaddling Bands, or Stays.

15. *Bengal* is one of the moſt fruitful Countries in the World, ſuperior even to *Egypt* itſelf. It bears Rice in ſuch abundance, that it not only furniſhes its Neighbours, but very remote Countries, ſuch as *Ceylon*, and the *Maldives*; it abounds ſo in Sugar, that it ſupplies the Kingdom of *Golconda* with it, as alſo *Arabia* and *Meſopotamia*, by the Way of *Mocha* and *Baſſora*, and *Perſia* itſelf, by *Banderabaſſi*. The *Portugueze* make excellent Sweet-meats here, with which they drive a great Trade, and the People preſerve and candy Pome-Citrons, a Root which is long, like Sarſaparilla, very delicate Ambaſs, Anana's, Mirobalans, Lemons and Ginger, great Quantities of which are ſent to us in *Europe*. It is true, it does not produce much Corn, becauſe the People feed ſo much upon Rice; but it produces ſufficient for their Uſe, and to accommodate the Ships of *Europe* with excellent Biſcuits very cheap; three or four ſorts of Pulſe, which, together with Rice and Butter, are the uſual Food of the poor People, are there to be had almoſt for nothing; for a Rupee, which is about Half a Crown, you may buy twenty good Pullets and more, and Geeſe and Ducks in Proportion. Kids and Sheep are very plentiful; and there is ſuch Store of Pork, that the *Portugueze* live on nothing elſe almoſt, and the *Engliſh* and *Dutch* victual their Ships with it. There is alſo Plenty of all ſorts of Fiſh, both in the freſh and ſalt Water, and Want of nothing; for this Reaſon, together with the Liberty that all Men enjoy for the Exerciſe of their Religion there, all the Chriſtians are fled thither from all Ports taken by the *Dutch*; ſo that in *Agouli*, 'tis ſaid there are eight or nine thouſand Chriſtians, and in other Parts of the Kingdom above twenty-five thouſand more; it is the general Magazine for Cotton Cloths and Silks, not only for *Indoſtan*, but all the neighbouring Kingdoms, and *Europe* itſelf.

The *Hollanders* tranſport vaſt Quantities of both, ſome fine, and others coarſe, both dyed and white, into *Japan*, *Europe*, and other Places, beſides what the *Portugueze*, *Engliſh*, and other Merchants ſell elſewhere: 'Tis true, the Silks are not ſo fine as thoſe of *Perſia*, *Syria*, *Said*, and *Bampt*; but then they are cheaper, and very good of their Price. Saltpetre is found in ſuch Quantities in this Country, that the *Engliſh* and *Dutch* load whole Ships full, to carry it to many Places of the *Indies*, and into *Europe*. From *Bengal* alſo there comes Lac, Opium, Wax, Civet, and Long-Pepper; and even their Butter is tranſported into other Places. The Air, indeed, is not over healthy, eſpecially near the Sea, for Strangers, ſo that of the *Engliſh* and *Dutch* many of them died at their firſt coming there; but now by reſtraining their Intemperance, and uſing a little *Bourdeaux* Wine, Canary, or Shiras, they preſerve themſelves tolerably healthy among them. The whole Country is well watered by Channels cut out of the River *Ganges*, which contributes as much to their Commerce as Plenty; it is well peopled, and has abundance of Villages full of *Gentiles*, and the Fields produce, beſides Sugar, Rice, Corn, and Pulſe abovementioned, Seſamum for Oil, ſmall Mulberries to feed Silk-worms, Anana's, and other Fruit-bearing Trees. In the *Ganges* alſo are many other fruitful Iſles covered with continual Verdure; but towards the Mouth ſome of them are abandoned, becauſe they were much infeſted by the *Corſairs* and the *Franks* of *Racon*, ſo that they have no other Inhabitants but Tygers, Gazala's, Hogs, and Poultry. Nature in this Country produces Miracles, as they ſeem to us far diſtant. It is not uncommon in rainy Seaſons to ſee Rainbows of the Moon in the Night, when the Moon is at the full, and in ſome calm Seaſons the Buſhes will be covered ſo thick with little ſtinging Flies, that they ſeem all on Fire, and there ariſe frightful Flames in great Globes, which the ignorant look upon as Devils.

16. The Kingdom of *Boutan* is of a large Extent, and it is hard to come to a perfect Knowledge of it, the Merchants that trade from thence into the *Indies* being able to give but a very imperfect Account of it. The Caravan is three Months travelling to *Patura*, ſetting out at the End of *December*, and in eight Days arriving at *Gorrochepour*, which is the laſt Town in the Great Mogul's Dominions; and there is a heavy Cuſtom of 25 *l per Cent.* impoſed

upon all Merchandize; but the Merchants uſually bargain with the Cuſtomer before they proceed, for they bring it down to ſeven or eight in the Way from *Gorrochepour.* For eight or nine Days Journey the Caravan ſuffers much Hardſhip, for the Country is nothing but Foreſts, and full of wild Elephants; ſo that the Merchants, inſtead of taking their Reſt, are forced to watch, keep Fires, and ſhoot off their Muſkets all the Night long; for the Elephants, who make no Noiſe in treading, will otherwiſe come upon them unawares; not that they will do any Miſchief to the Men, but will plunder the Caravan of their Victuals. Five or ſix Leagues thence you enter into the Territories of the Rajah of *Nupal*, which extends to the Frontiers of the Kingdom of *Boutan*; he is a Tributary to the Great Mogul, and is to pay him every Year an Elephant for his Homage. The Metropolis where he reſides is of the ſame Name; but there is little either of Trade or Money in this Country, becauſe it is all Wood and Foreſts. Having paſſed his Territories, you come to certain Mountains, which are upon the Confines of *Boutan:* All this Road you may travel in Pallekies; but generally the Travellers ride upon Oxen, Camels, or Horſes, bred up in the Country, which, though very ſmall and dear, yet are ſtrong, and will travel twenty Leagues without baiting; and indeed you can uſe no other ſort of Carriage croſs theſe Mountains, becauſe of the Narrowneſs and Ruggedneſs of the Paſſes.

When the Caravan arrives at the Foot of the Mountains called *Naugrocot*, abundance of People come from all Parts of them; but the greateſt Part of them are Women and Girls, who agree with the Merchants to carry them their Goods and Proviſions over the Mountains, which is eight Days Journey. Theſe Women carry upon each Shoulder a Woollen Roll, to which is faſtened a large Cuſhion, that hangs down upon their Backs, upon which they carry Seats. There are three Women to carry one Man, relieving one another by Turns; and for their Luggage and Proviſions they lay them upon Goats that will carry a hundred and fifty Pound Weight apiece: Thoſe that will ride, are forced to have their Horſes hoiſted up with Cords. The Women that carry the Men get for their eight Days Travel two Rupees apiece, and as much for every Burthen that the Goats carry, and for every Horſe which they load. Having paſſed over thoſe Mountains, you may go the reſt of the Journey to *Boutan*, upon Oxen, Camels, Horſes, or Pallekies. The Country is good, abounding in Rice, Corn, Pulſe, and Store of Wine. All the People, both Men and Women, are clad in the Summer with a large Piece of Fuſtian, or Hempen Cloth, and in the Winter with a thick Cloth almoſt like Felt. Both Men and Women wear upon their Heads a kind of Bonnet much like Drinking-Cans, which they adorn with Boars Teeth, and with round and ſquare Pieces of Tortoiſe-ſhell; the richer ſort mix with them Pieces of Coral and Amber Beads, of which their Women make themſelves Necklaces. The Men, as well as the Women, wear Bracelets upon their left Hands only from the Wriſt to the Elbow. The Women wear them ſtrait, and the Men looſe. About their Necks they wear a Silver Twiſt, at the End whereof hangs a Bead of yellow Amber, or Coral, or a Boar's Tooth, which dangles upon their Breaſt. Upon their left Sides their Girdles are buckled with Beads of the ſame. Though they be Idolaters, yet they feed upon all ſorts of Food, except the Fleſh of the Cow, which they adore as the common Nurſe of all Men. They are great Lovers of ſtrong Waters. They obſerve alſo ſome Ceremonies from the *Chineſe*, burning Amber at the Cloſe of their Feaſts, though they do not worſhip Fire, as the *Chineſe* do.

Upon theſe Accounts Amber and Coral are good Commodities at *Boutan*; a Piece of yellow Amber as big as a Nut, bright and clear, is worth forty-five Rupees, and a Piece of nine Ounces two hundred and fifty, or three hundred Rupees. Coral, rough, or wrought into Beads, yields a proportionable Advantage; but they had rather have it rough, to ſhape it into what Figure they pleaſe themſelves. The Women and Maids are generally the Artiſts among them, as to their Toys. The moſt excellent Rhubarb comes from this Country of *Boutan*. It is a Root which they cut in Pieces, and ſtringing them by ten or twelve together, hang them up a drying; being dried, the Merchants muſt carry them carefully, for if it takes wet, it is utterly ſpoiled, and they had need to carry it the moſt ſpeedy Way, for it is liable to corrupt, or if not, it is apt to eat out its own Virtue. This Kingdom alſo produces ſome Muſk, and Plenty of Furs. They have good Store of Martins in their Country, which yield a very rich Fur; but not having the Skill that the *Muſcovites* have to take them, they loſe the Profit of that Commodity, which the *Muſcovites* have; for no ſooner does that Creature peep out of its Hole, but the *Muſcovites*, who lie upon the Watch, have them preſently, ſhooting them, either in the Noſe or Eyes; for ſhould they hit them in the Body, the Blood would quite ſpoil the Skin: From hence alſo is brought the Seed which is accounted ſo good againſt Worms, called therefore Worm-ſeed. It is the Seed of a certain Plant which grows in the Fields, but muſt not be gathered till the Plant is dead, which is the Reaſon that the Wind ſcatters the greateſt Part of it before it can be gathered, which makes it ſcarce. When they gather the Seed, they take two little Hampers, and as they go along the Fields, they move them backward and forward, as if they were mowing the Herb, and ſo bowing it at the Top, the Seed falls into the Hampers.

17. The King and all his People are Idolaters, and worſhip Monſters, as the other Heathen *Indians* do. There is no King in the World more feared and reſpected by his Subjects than the King of *Boutan*, being in a manner adored by them. When he ſits to do Juſtice, or give Audience, all that appear in his Preſence hold their Hands cloſe together above their Foreheads, and, at a Diſtance from the Throne, proſtrate themſelves upon the Ground, not daring to lift up their Heads. In this humble Poſture they preſent all their Petitions to the King, and when they retire they go backwards, till they are quite out of Sight. It is affirmed, that when the King does the Deeds of Nature, ſuch as are about him preſerve it, and dry and powder it, like Sneezing-powder, and ſell it to the Merchants and Farmers, who buy it as a great Rarity, and at their Feaſts ſtrew it upon their Meat. This King has conſtantly about him ſeven or eight thouſand Men for his Guard. Their Weapons for the moſt part are Bows and Arrows, but ſome of them carry Battle-Axes and Bucklers. They have had the Uſe of Muſkets and Cannon a long Time: The Grain of their Gun-powder is long; but of an extraordinary Force; and their Cannon have Letters and Figures upon them, by which it appears that ſome of them are above five hundred Years old.

No Man may ſtir out of the Kingdom without the Governor's Leave; nor is any allowed to carry a Muſket along with him, unleſs their next Kindred will undertake for them that they ſhall bring them back. Their Guns are poliſhed within as ſmooth as a Looking-glaſs, and garniſhed without with emboſſed Wires, and Flowers of Gold and Silver inlaid, and carry large Bullets. There are always fifty Elephants, and twenty-five Camels, with each a Piece of Artillery mounted upon his Back, which carry half a Pound Ball; behind it ſits a Cannoneer, to manage and level it as he pleaſes. The Natives of *Boutan* are ſtrong, and well proportioned, but their Noſes are ſomewhat flat. The Women are bigger, and more vigorous than the Men, but are troubled with Swellings in the Throat more than the Men are, for few of them eſcape that Diſeaſe. They know not what War is, having no Enemy to fear but the Mogul; and from him they are fenced with high, ſteep, craggy and ſnowy Mountains, which he never thought worth his Trouble to paſs. Northward there are nothing but vaſt Foreſts and Snows; Eaſt and Weſt no Water but what is bitter. And as for the Rajahs near them, they are Princes of ſmall Force. They have a Silver-Mine in the Kingdom of *Boutan*, for the King coins much Silver in Pieces of the Value of a *Roupee*; but they have little Gold, and what they have is by the Merchants brought them out of the Eaſtern Countries.

18. The Kingdom of *Tipra* lies on the N. W. of the Kingdom of *Aragan*, twelve Days Journey from *Daca*: It is about fifteen Days Journey a-croſs. They ride upon Oxen and Horſes, which are very low, but very hardy. The King and Nobility ride in Pallekies or upon Elephants

of War. The People are as ſubject to Wens on their Throats as thoſe of *Boutan*, inſomuch that ſome of their Women have them hanging down to their Breaſt, which proceed from the Badneſs of the Waters. There is nothing in *Tipra* which is fit for Strangers.

There is a Mine of Gold, but the Metal is very coarſe; and there is a ſort of coarſe Silk, which is all the Revenue the King has, for he exacts no Subſidies from his Subjects. Only they who are not of the prime Nobility work ſix Days in the Year in the Mine or Silk-Works. He ſends his Gold and Silk into *China*, and for them they bring him back Silver, which he coins into Pieces of the Value of eighteen *Sous*, and others of twenty-two *Sous*. In the Language of this Country he is called *Dieu-Aragari*, which is ſtamped upon one Side of the Money, and on the other *Chattermani Rey de Tipoura*; he alſo makes thin Pieces of Gold, like the *Aſpers* of *Turky*, of which he has two Sorts, four of one making a Crown, and two of the other.

19. The Kingdom of *Aſem* is one of the beſt Countries in all *Aſia*, for it produces all Things neceſſary for human Subſiſtence, without any Need of foreign Supply. There are in it Mines of Gold, Silver, Steel, Lead, Iron, and great Store of Silk, but coarſe. There is a Sort of Silk found under the Trees, which is ſpun by a Creature like our Silk-worms, but rounder, and which lives all the Year long under the Trees. The Stuffs that are made of this Silk gliſter very much, but they fret preſently. This Country alſo produces all ſorts of Gum-Lac, of which there are two ſorts; one grows under the Trees of a red Colour, with which they paint their Linen and Stuffs; and when they have drawn out the red Juice, the remaining Subſtance ſerves to varniſh Cabinets, and make Wax, being the beſt Lac in *Aſia* for thoſe Uſes. As for the Gold, they never ſuffer it to be tranſported out of the Kingdom; nor do they make any Money of it, but preſerve it in Ingots, which paſs in Trade among the Inhabitants; but the Silver the King coins into Money of three Drams four Grains Weight, which make twenty-three *Sous*. Tho' their Country is very plentiful in all Things, yet there is no Fleſh they eſteem ſo much as Dogs Fleſh, which is the greateſt Delicacy at their Feaſts, and is ſold every Month in every City of the Kingdom upon their Market-Days. They have alſo great Store of Vines and very good Grapes, but they never make any Wine, but dry their Grapes to make *Aqua Vitæ*.

They have no Salt but what is artificial, which is made two Ways; firſt, they raiſe great Heaps of that green Stuff that ſwims on the Top of the ſtanding Waters, which the Ducks and Frogs eat; this they dry and burn, and the Aſhes thereof being boiled in a Cloth in Water, become very good Salt: but the moſt uſual Way is to take the Leaves of *Adam*'s Fig-tree, which, being burnt, the Aſhes thereof make a Salt ſo tart that it is impoſſible to eat it till the Strength be taken away, which they do by putting the Aſhes into the Water, and ſtirring them up and down ten or twelve Days together, and then they ſtrain the Subſtance through a Cloth and boil it; for, as the Water boils away, the Bottom thickens, and when the Water is all boiled away, they find at the Bottom very good and white Salt. Of the Aſhes of the Fig Leaves they alſo make a Lye with which they waſh their Silks, which makes them as white as Snow; but they have not Leaves enough to whiten half the Silk that grows in their Country.

In the City of *Kemmeroof* the King of *Aſem* keeps his Court. This King requires no Subſidies of his People, for all the Mines in the Kingdom are his own, and, for his Subjects Eaſe, he has none but Slaves that work in them; ſo that all the Natives of *Aſem* live at their Eaſe; and every one has his Houſe to himſelf, and in the Midſt of his Ground a Fountain incompaſſed with Trees, and moſt commonly every one an Elephant to carry their Wives, for they have four Wives; and when they marry them, they ſay to them, *I take thee to ſerve me in ſuch a Thing*, and to another, *I take thee to do ſuch a Buſineſs:* So that every one of their Wives knowing what ſhe has to do in the Houſe, there is no Difference among them. The Men and Women are generally well complexioned, only thoſe that live more ſoutherly are ſwarthy, and ſubject to Wens in their Throats; nor are they ſo well featured, and the Women are ſomething flat-noſed. In the Southern Parts the People go ſtark naked, only covering their Privy-Parts, with a Bonnet upon their Heads like a blue Cap, hung about with Swines Teeth.

They make large Holes in their Ears, that you may run your Thumb in, and hang in them Pieces of Gold and Silver; Bracelets alſo of Tortoiſe-Shells and Sea-ſhells, as long as an Egg, which they ſaw into Circles, are in great Eſteem among the meaner ſort, as Bracelets of Coral and yellow Amber are among the richer. When they bury a Man, all his Friends and Relations muſt come to the Burial, and when they lay the Body in the Ground, they all take off their Bracelets from their Arms and Legs, and bury them with the Corpſe. In the City of *Azoo* are the Tombs of the Kings of *Aſem* and all the Royal Family; for though they are Idolaters, they never burn their dead Bodies, but bury them. They believe that the Dead go all of them into another World, and that they that have lived well in this have Plenty of all Things; but they who have been ill Livers, ſuffer the Want of all Things, being in a more eſpecial Manner afflicted with Hunger and Drought; and that therefore it is good to bury ſomething with them to ſerve them in their Neceſſity. For this Reaſon their Kings build themſelves, in their Life-times, Chapels in the great Pagods to be buried in, wherein they ſtore up great Sums of Gold and Silver, and other Moveables of Value: beſides, when they bury any of their Kings, they bury with him likewiſe whatever he eſteemed moſt precious in his Life-time, whether it be an Idol of Gold or Silver, or whatever elſe, that being needful in this, is alſo as they think neceſſary in the Life to come.

But that which ſavours moſt of Barbariſm is this; that when any King dies, all his beſt-beloved Wives, and the principal Officers of his Houſe, poiſon themſelves to be buried with him, and to wait upon him in the other World: and they alſo bury one Elephant, twelve Camels, ſix Horſes, and a good Number of Hounds, believing that all theſe Creatures riſe again to ſerve the King. It is thought theſe were the People that firſt invented Guns, and Powder, and that the Invention ſpreading itſelf into *Pegu*, and then into *China*, it from thence became known in the World, and ſo the *Chineſe* were thought to be the Inventors of them. Their Powder is very ſmall and round, like ours in *Europe*, and very ſtrong. As for the Kingdom of *Siam*, and that of *Macaſſar*, the Accounts already given of them diſpenſe us from the Neceſſity of inſerting what this Author has written about them. But with regard to that of the Kingdom of *Tunquin*, or *Tonquin*, it is at once ſo conciſe and ſo curious, that it would be unjuſt to conceal it from the Reader's Notice; and therefore with this Deſcription we ſhall conclude this Part of the Travels of Mr. *Tavernier*.

20. The Kingdom of *Tonquin* is bounded on the Eaſt by *Canton*, a Province of *China*, on the Weſt by the Kingdom of *Brama*, on the North by *Junan* and *Quainſi*, two other Provinces of *China*, and on the South by *Cochin-China*. The Air is mild and temperate, though it lies in the Torrid Zone, and the Ground ſo fertile that there is a continual Spring: Froſt and Snow are never ſeen here, and the Gout, Stone, and Peſtilence are Strangers in it. The North and South Winds, which continually blow, and divide the Year between them equally, ſo moderate the Heats that they are not troubleſome; yet, once in ſeven Years, they have hideous and terrible Tempeſts, which make ſtrange Deſolations, pulling up Trees, and blowing down Houſes. Theſe Exhalations are thought, by their Aſtrologers, to proceed from the Mines, as is alſo believed in *Japan*.

The whole Kingdom is divided into ſeveral Provinces, which together contain, as it is ſaid, 20000 Cities and Towns, though many Families, with their Cattle, live always upon the Water in Boats, after the Manner of the *Cochin-Chineſe*. The Country is for the moſt part level, ſave that in the North there are ſome Hills. It is watered with ſeveral Rivers, ſome of which carry Veſſels of a good Burthen, and ſo are commodious for Trade. In all this Country grow neither Corn nor Vines, becauſe they never have any Rain but in *June* and *July*; but Rice is produced in vaſt Quantities, which ſupplies the People both with Meat and Drink: They have alſo good *Aqua Vitæ*, or Strong-Waters. Their Fruits are excellent, but all different from ours. Their Palms bear larger Nuts than in any Part of *Aſia*; they are as big as a Man's Hand, and ſhaped like a Cocoa, the Pulp is as white as Snow, and taſtes like our Almonds, and every one yields a conſiderable Quantity of Liquor very pleaſing to the Palate. The Gogovier, which reſembles our Laurel, is of two ſorts, the one bears a Plum, green without and red within; but the other a yellower Fruit, which is much more eſteemed. The Papager bears a Fruit like a ſmall Melon, and the Taſte is very delicious. The Arraga, which grows upright and tall, like the Maſt of a Ship, bears Branches only at the Top, and the Fruit is like a Nutmeg; they bruiſe it with Beetle and Chalk, which they chew to make their Teeth white, Lips vermilion, and Breath ſweet.

They have Figs of two ſorts, the one like ours, the other like thoſe called *Adam*'s Figs, as long as a Man's Finger. They have a Tree like our Willow, called the Powder-tree, becauſe of the Wood burnt into Charcoal they make Gun-powder. The Janbagels grow very high, and bear a Fruit reſembling a Citrul-Cucumber, which has a Pulp like a Pomegranate, and is very pleaſant in the hot Seaſons. Their Highways are planted with Warr-trees, which are a great Convenience for Travellers; for ſome of them are ſo big that two or three thouſand Men might ſhelter themſelves under them, ſome of their Branches being three hundred Paces long, and ſupported at every twelve Feet with under Branches, which, having taken Root, ſupport them like ſo many Pillars: the Nuts of them, which are no bigger than a Walnut, have a Kernel like Millet, which ſerves only for Food for the Rere-Mice, which make their Neſts there. They have Bodies as big as a Pullet, and the *Portugueze* prefer them before it. They have a certain ſort of Birds-Neſts, as big as a Swallow's, which they diſſolve in Water for Sauces to all their Delicacies; they give a Flavour above all the Spices of the *Eaſt-Indies* put together; they are found only in the four Iſlands belonging to *Cochin-China*. The *Tunquineſe* alſo catch abundance of Tortoiſes in their Seas, which they not only eſteem excellent Food, and think they cannot treat their Friends as they ought to do without them, but pickle them up, and ſend them abroad, which cauſes a Trade among them. *Tunquin* affords a mighty Store of Ananas, and Orange-trees, which are of two ſorts, the one no bigger than Apricots, the other bigger than *Portugal* Oranges, both well taſted alike, and plentiful for ſix Months. Their Citrons, which are both green and yellow, are too tart to be eaten, but the Juice is made uſe of to cleanſe Copper, Tin, and Iron, for gilding, as alſo to ſcour Silk, whiten Linen, and take out Spots.

In *Moguliſtan* they will make their Calicuts ſo white with the Juice of theſe Citrons, as to dazzle your Eyes. Great Quantities of Silk are made in this Country, of which both Rich and Poor make their Garments; and the *Hollanders* tranſport many into *China*. They have but one ſweet-ſmelling Flower, called the Bague, which grows like a Noſegay. They have abundance of Sugar, and eat it very much after their Meals for Digeſtion, but they eat it out of the Cane, not having the true Art to refine it. In this whole Kingdom there are neither Lions, Aſſes, nor Sheep, but their Foreſts are full of Tygers, Harts, and Apes, and their Fields of Oxen, Cows, and Hogs, Hens, Ducks, and Turtles, which are the general Proviſions of their Feaſts, are numberleſs. Their Horſes are well ſhaped, and the King always keeps five or ſix hundred of them in his Stables. Their Elephants are of a prodigious Bigneſs; there are none ſo tall and nimble in all *Aſia*. The King keeps five or ſix hundred of them for his Service in his Palace, and Wars. They have no Cats, but their Dogs deſtroy the Rats and Mice, which are very large and miſchievous. They have very few Birds, but ſuch Multitudes of Gnats, that they are very troubleſome at Nights, as well by their Noiſe as Stinging; they drive them away by the Smoak of Rice Chaff. But the greateſt Inconvenience of the Country are the white Emmets, whoſe Biting raiſes Bliſters on the Skin; for their Teeth are ſo ſharp, that they will gnaw a Poſt in two in a little Time, and eat a Bale of Silk in twenty-four Hours, as if it were cut in two.

They have no Mines of Gold or Silver in *Tunquin*, neither do they coin any Money. The chief Commodities of this Country are, beſides the Silk above-mentioned, Lignum-Aloes, of which there are ſome worth a thouſand Crowns the Pound, being oily and good: All the *Mohammedans* uſe it to perfume their Boards and Rooms at Viſits, and therefore the *Portugueze* of *Goa* ſent, as a rare Preſent to the Emperor of *Japan*, a piece of Lignum-Aloes ſix Foot Long and round, worth 54000 Livres. The *Tunquineſe* are very faithful in their Dealings, very unlike their Neighbours the *Chineſe*, who will cheat you if they can; and if they are at any Time over-reached, will pay in light Money, for they are blunt and plain. Having no Money, they make uſe in Trade of Ingots of Gold, and Bars of Silver, which they have from *China* and *Japan* for their Silks. They are worth from three to ſix hundred Livres, and therefore in ſmall Payments they either cut them in Pieces, or pay in *Spaniſh* Reals.

The Forces of this King for War is prodigious; his uſual Army is 12000 Horſe, 2000 Elephants, as well to carry the King's and Nobilities Tents and Baggage as for the Service of the Wars, 300,000 Foot and 300 Gallies, and ſometimes the Amount is 500,000 Men. The Condition of the Soldiers is very toilſome and laborious; they are always upon the Guard, or attending their Captains in looking after the King's Elephants, and ſo breeding them that they need not be afraid of Fire, or in building Places of Shelter for the King's Gallies in Winter; yet their Wages are ſo ſmall that they cannot maintain their Wives and Families, but their Wives are forced to follow ſome Trade to ſupport them. Their Companies conſiſt of an hundred, or an hundred and thirty Men, and the Soldiers are obliged to keep all their Arms very neat and bright. The People of *Tunquin* are naturally mild and peaceable, ſubmitting eaſily to Reaſon, and condemning the Tranſports of Anger, and other Paſſions.

They eſteem the Manufactures of other Countries more than their own, yet love to live at home, and honour the Memories of their Anceſtors: Their Speech is ſoft and pleaſing, they have good Memories, and are fluent in their Diſcourſe. They have good Poets among them, and their People generally love Learning; both Men and Women are well proportioned, but of an olive Complexion, and therefore much admire the Whiteneſs of the *Europeans*. Their Hair is black, and they wear it very long, and well combed and tied upon the Crown of their Heads, or about their Necks, to keep it from fluttering in their Eyes. The blackeſt Teeth, and longeſt Nails, they account the moſt beautiful. Their Habit is grave and modeſt, being a long Robe for both Sexes, girt about with a ſilken Girdle, mixed with Gold and Silver. The Soldiers wear an upper Garment, which reaches no farther than the Knees, and Breeches that go down to the middle; but have neither Hoſe nor Shoes.

The common People, except where the King's Court is, work three Months at the King's Palace, and two Months for the Mandarins, or great Lords, the reſt of the Year is left to work for themſelves and Families. One Day in the Year they are obliged to lop Trees to feed the Elephants. Their Rivers are free from Crocodiles, and other dangerous Animals, which haunt the Waters of the *Nile* and *Ganges*; but yet once a Year they overflow their Banks, after the Rains, with that terrible Violence, that they carry away whole Towns and Villages along with them.

The *Tunquineſe* cannot marry without the Conſent of their Parents; and if they be dead, the Permiſſion of their neareſt Kindred, and the Allowance of the Governor of the Place where the Marriage is made; for which the Man muſt pay a certain Sum limited by Law. The People are very induſtrious here, and all the Money the Maids get before Marriage is to buy them two or three handſome Garments, a Necklace of Coral, or yellow Amber, and Beads to garniſh their Locks, and for their Portions. There is no Wedding without a great Feaſt, the poorer ſort for three Days at leaſt, if they are able, and others for nine. The

Laws of the Land permit the Man to divorce his Wife whenever he pleaſes, which they many times do for ſlight Cauſes; but the Woman has not the ſame Privilege; and if ſhe deſires it, obtains it with Difficulty; but the Man is bound to reſtore the Woman what ſhe brought with her, and keep the Children begotten between them; but now Divorces are not half ſo frequent as formerly. Adultereſſes are puniſhed here very ſeverely, the Offender being caſt to an Elephant bred up for that Purpoſe, who throws them up into the Air, and then tramples them under Feet, till they are dead.

Of all the Eaſtern People the *Tunquineſe* are the moſt ſociable, and moſt frequently viſit each other; generally they make their Viſits about Noon, with a Train ſuitable to their Condition; the Princes and Mandarins ride on Elephants, or are carried on Pallekies, and their Train is of fifty or ſixty Perſons; the ordinary Gentry, and Officers of the Court, ride on Horſeback, and are not allowed above ſeven or eight Servants to attend them. They chew Beetle continually, where it is to be had, and at their Viſits always preſent their Friends with ſome at taking Leave; and the richer the Box is, the greater the Preſent is eſteemed. Among the *Tunquineſe*, it is a great Diſhonour to have the Head bare, for they ſhave all Criminals, and if any Perſon be found without Hair, they apprehend him, and carry him to the Governor, who cauſes him to be nailed to a Croſs immediately. They ſit croſs-legged, as the reſt of the *Aſiatics*; but inſtead of Carpets, they uſe Mats made of Reeds, as fine as Thread, and as ſoft as Velvet, which they lay upon Beds, not on the Ground, as the *Perſians* and other *Indians* do. They are not curious in their Diet, but very neat in dreſſing it.

The common People are contented with Rice boiled in Water, dry Fiſh and Eggs (for they eat Fleſh only at their Feſtivals) but the great Lords are ſerved every Day with Fleſh and Fiſh; but they know not how to bake any thing. All their Meat is cut in little Pieces, and ſerved up in little lackered Plates leſs than our Trenchers. They uſe no Napkins or Table-cloths, Knives, Forks, or Spoons; but only two Sticks to take up their Meat; for they never touch it with their Hands. They waſh their Hands, Mouths, and Faces, before they ſit down to Meat; but never after their Meals. They are uſually ſilent at Table; but if they have a Mind to Diſcourſe, the eldeſt begins firſt; for they pay much Honour to Age. When they would know whether any Perſon has eaten ſufficiently, they aſk him whether he has eaten his Rice, meaning thereby the whole Repaſt, as the Scripture does by Bread. They never aſk any Man how he does, but how he eat his Dinner; for the more a Man eats, the better they ſuppoſe him to be in Health. They take much Delight in Comedies, which are uſually acted upon the new Moon, and laſt all Night.

They ſet up their Theatres in great Halls, and adorn their Stages with beautiful Machines and Scenes. They have ſeldom more Actors than eight, either Men or Women, and they are very magnificently clad; they act their Parts perfectly well, and obſerve an exact Time in their Dancing. Their ordinary Paſtimes, and eſpecially for the Lords and Mandarins, are Fiſhing and Hunting: In the former thay take the greater Pleaſure, becauſe their Rivers are full of Fiſh; but they never follow their Sport but upon certain Days, when they may be ſpared from their Buſineſs. The *Tunquineſe* are Lovers of Learning, and apply themſelves to their Studies with Diligence. Their Learning conſiſts in the Knowledge of the Laws of their Country, Mathematicks, and Aſtronomy. They are Admirers of Poetry and Muſick, and are accounted the greateſt Artiſts in them of all the People of the Eaſt.

To acquire Nobility by Learning, they ſtudy hard for eight Years in the Office of a Notary, Proctor, or Advocate; and if upon a ſtrict Examination they are found to underſtand their Office ſo well as to anſwer all Queſtions about it, their Names are preſented to the King, who grants them a Title of the Synde. Having arrived at this Degree, they are ordered to ſtudy Muſick, Aſtrology, Poetry, and Mathematicks, five Years; and if upon a ſecond Examination they anſwer all Queſtions put to them in thoſe Sciences, they are raiſed to the Dignity of Doucan; after this they muſt ſpend four Years more to write and read the *Chineſe* Characters to ſuch Number of Words; for to know or write it fully is almoſt impoſſible, it is ſo copious, and to underſtand the Laws and Cuſtoms of the *Chineſe*; and after a ſtrict Examination by all the Mandarins of Learning, and Tanſi's, or Noblemen, for eight Days, if they anſwer well, they arrive at the Degree of a Tanſi, and are received into the Rank of the Nobility, and the King gives them certain Towns to take the Rents; but to ſome more, and others leſs, according to their Merit, or the Prince's Favour; and the King gives them a Veſt of Sattin.

Then they go to viſit their Towns given them by the King, where they are received in a gilded Branguar, with Muſick, and they ſtay three Months for their Recreation, and then they return to Court to inſtruct themſelves in the Affairs of the Kingdom and Palace, and arrive at the Dignity of Mandarin. In the mean time their Names being written under large Tables, are ſet upon the Gate of the King's Palace eight Days, that all the People may know who are received into the Rank of the Nobility.

The Phyſicians of *Tunquin* ſtudy Books but little, but ſpend their Youth in ſearching into the Virtues of Roots and Simples, and how to apply them to every Diſtemper, which they judge of by the beating of the Pulſe, and its Diverſity of Meaſure, as by the Pulſe of the Right Hand they gueſs at the Condition of the Lungs, and by that of the Arm of the Diſtemper of the Stomach and Kidneys; by the Pulſe of the left Hand they judge of the Condition of the Heart; and by that of the Arm of the State of the Liver; and by the Pulſe of the Temples, both Right and Left, they give a moſt exquiſite Judgment of the Kidnies. They carefully count how many times the Pulſe of a ſick Perſon beats in the Space of one Breathing, and according to theſe ſeveral Pulſes they will tell you which Part of the Body is particularly diſtempered, whether the Heart, Liver, or Lungs, or whether it proceeds from any outward Cauſe. They generally give Decoctions of Herbs and Roots, with a little Ginger. They uſe *China* Ink to ſtop a Dyſentery, and for the Cure of Wounds, and give Powder of Crabs in Dyſenteries and Fevers, often in Water, ſometimes in Brandy.

They preſcribe Tea, which comes to them from *China* and *Japan*, as an excellent Remedy againſt the Head-ach and Gravel, and with a little Ginger for the Griping of the Guts. That is accounted the beſt Tea which colours the Water greeneſt; for that which colours it red is little accounted of. Againſt the Afflictions which proceed from bad Airs, and cold Wines, they uſe a Counter-poiſon mixed with *Aqua Vitæ*, in which alſo they dip a Cloth, and rub the Patient well; but in this they boil a little Ginger, and for a more ſpeedy Cure they ſweat the Patient in a Cloud of Frankincenſe; they never uſe Blood-letting, and in the Purple Fever they uſe Fire, and ſometimes pricking every Spot. The Spot being burnt will give a Whiff like a Squib, which is an infallible Sign that the Venom is gone out of the Body; but the Phyſician muſt take Care that it does not enter his own, for then Death certainly follows. If the Spot be pricked to let out the peſtilential Blood, they burn it, and then rub it with Ginger, not permitting the Patient to take the Air in twenty Days, or eat any Fleſh or Butter. Theſe Remedies are effectual to a Wonder, and cure in a ſhort Time.

The Kingdom of *Tunquin* was anciently a Part of *China*, but has been for ſix hundred Years governed by its own Kings. The firſt that aſſumed the Title of King was a Robber, whoſe Name was *Din*, who heading a great Number of Malecontents, gained many bloody Battles over the *Chineſe*, and ſeized the Province for his Kingdom. The People did not permit him to reign long in Peace; but riſing againſt him, ſlew him; though he left two Sons, yet they reigned but a few Years ſucceſſively, and died without Iſſue. The Kingdom after their Death was mightily diſtracted with Civil Wars, till the *Chineſe* being called in to aſſiſt the weaker Party, brought things to a Settlement, and a Mandarin, of the Family of *Lelequel*, was advanced to the Throne.

He being a valiant and prudent Prince, reſtored Peace and Order to the Kingdom; and after he was eſtabliſhed, built an admirable Palace of Marble of divers Colours, and very large; he left one Daughter to ſucceed him, and ſhe, to ſecure herſelf, married a powerful Mandarin, of the Houſe of *Tran*; but ſhe being depoſed, and ſlain by her rebellious Subjects, the *Chineſe* again ſeized the Government, and held it twenty Years. They ſet Governors over every Province, and laid heavy Tributes upon the People; ſo that being weary of the Oppreſſion, they joined under a valiant Captain of the Houſe of *Lee*, and vanquiſhed the *Chineſe* in three Battles, ſeated him on the Throne, and in his Family the Government continued above eighty Years, the laſt of this Race having given an Affront to a great Lord of the Houſe of *Marr*, which had formerly enjoyed the Scepter, he being aſſiſted by a great Number of Malecontents, ſought to regain the Kingdom, and in one bloody Battle became Maſter of it.

But he enjoyed it not above two Years, being depoſed by one of the Family of *Trin*, who refuſing to aſcend the Throne, reſtored it to the Family of *Lee*, yet reſerving to himſelf and Family the whole Command of the Army, and Diſpoſal of all the Revenues of the State, and all publick Affairs; ſo that the King, whom they call *Boua*, has the Name, Title, and State; but the General, whom they call *Choua*, has the Power. The King hears Cauſes almoſt every Day, but makes no publick Edict which is of any Effect, till it is ſigned by the *Choua*: He lives ſhut up in his Palace, and ſtirs not out but upon certain Days; he has generally two thouſand Soldiers for his Guard, and keeps ſometimes twenty thouſand quartered upon his Frontiers, eſpecially towards *Cochin-China*, and with them fifty Elephants upon the Rivers alſo of the Kingdom, where any Enemy can endanger him; he keeps uſually one hundred great Gallies, with a vaſt Company of ſmall Galliots.

The eldeſt Sons here do not always ſucceed their Fathers in the Throne, but by the Influence of the *Choua* and Counſellors, his Creatures, he is obliged to name which of his Sons he will have to reign after him, if he has many, and him they promiſe to eſtabliſh, ſhutting up all the reſt in the Palace, as in a Priſon, and not ſuffering them to meddle with Affairs of State; yet four Times a Year they are allowed to go out under an Officer appointed by the *Choua*, and have Leave to ſtay out ſix Days. On the firſt they are to viſit the Temples and Prieſts, and give them large Alms, the next two Days they hunt, and the three laſt fiſh.

The Kingdom of *Tunquin* is divided into eight large Provinces, every one of which has its Governor and Magiſtrates; but there lies an Appeal from their Sentence to the King, his thirty-two Counſellors, and one hundred Aſſiſtants. Their Nobility attain that Degree by Merit only, *viz.* by their Valour in the Wars, and Learning; and as theſe latter go through a long Courſe of Studies, and ſtrict Examinations, as is before ſhewn, ſo the former are inſtructed in warlike Exerciſes betimes, *viz.* to handle their Swords, to aim with their Bows, to fire a Muſket, to ride the great Horſe, to ſhoot running, to manage their Zagays, which are long Staves checked with Iron like a Half-pike, and make all ſorts of artificial Fire-works, which they uſe againſt Elephants in War; for though ſome Elephants may be taught not to regard them, though they go off under their Noſes or Bellies, yet one in ten cannot be brought to it; ſo that unleſs their Governors take great Care, inſtead of running upon the Enemy, they will turn upon their Friends, and put a whole Army into a diſmal Confuſion, if not deſtroy it, as they did *Aurengzebe*'s at the Siege of *Daman.*

21. The Kingdom of *Tunquin* paid a Tribute to the *Chineſe* till the Year 1667, when the *Tartars* invaded their Country, and then they concluded a Peace, on Condition that they ſhould ſend every Year an Embaſſador to *Pequin* to do Homage to the Emperor of *China*. They obſerve an exact Order in adminiſtering Juſtice, and regulating Affairs all over the Kingdom; they are very exact in puniſhing Murder, and none can eſcape, but ſuch as have killed one that has no Relations to revenge his Death; for the King can pardon no Man for this Crime, and all the Favour he can ſhew, is to leave him to the Kindred of the Slain.

They take great Care for the publick Good, to repair Bridges and Highways, and every Quarter of a League there is Water and Fire provided for thoſe Travellers who may want them. Though the King has not much Power in his Kingdom, yet he is highly honoured by his Subjects, and keeps a very ſplendid Court the firſt and fifteenth Day of every Month: All the Mandarins, except the General, who is allowed to ſend his Deputy, come in their *Chineſe* Habits to kiſs the King's Hand, as the inferior Mandarins, who are Governors of Provinces, Juſtices, and military Officers, do the *Choua's* on the firſt Day of the Year. All that deſire to ſee the King, are obliged to put on violet Robes, both themſelves and their Servants, and if they beg any Favour, muſt carry a Preſent. On the firſt Day of every new Year the King diſtributes ſeveral Largeſſes and Gifts to his Courtiers, and the Children of ſuch as have done him any important Services, which are Panes of Gold worth ſix hundred Livres each, and Bars of Silver, which are worth forty-ſix Livres each: He alſo releaſes all Priſoners, both Criminals and Debtors, provided their Crimes do not deſerve Death, and the Debts do not exceed two Bars of Silver.

The three laſt Days of the Year the four Mandarins, who are the chief Counſellors of the State, take Oaths of all the Lords and Officers of the Court, and their Wives, to be faithful to the King, and diſcover any Treaſon againſt his Perſon and Government, and the Governors of Cities and Countries do the ſame to the Lords, Gentlemen, Citizens, and Inhabitants of their Juriſdictions, and every one that diſcovers any Treaſon, never fails of a Reward, according to his Quality; and mean People are gratified with a Reward of fifty Panes of Gold, and five hundred Bars of Silver, which amounts to 53,000 Livres; but they eſteem Nobility above Money. They have a Muſter of the Youth every Year, and all ſuch as are found not to be of the Nobility, or not to have learnt a Trade, are immediately enrolled for the King's Service, to be of his Guards, or defend his Frontiers. Some will endeavour to get off by Money; but if they are diſcovered, both Officers and Soldiers are puniſhed without Mercy; for they hang a little Bell about their Necks, and fetter their Arms, and ſend them to the General, who preſently orders their Heads to be ſtricken off, or upon Interceſſion of Friends they are to be hanged, becauſe they are very averſe to Bloodſhed, and believe the Death moſt honourable that is free from it. When the King goes at any time out of his Palace to take his Pleaſure, he is ſeated upon a moſt magnificent Pallanquin, carried by eight Men, where he is ſeen by all the People, the Lords and Officers of the Court attending on Foot, if he goes no farther than the City; but if he goes in the Country, he rides on an Elephant, and the Lords attend him on Horſeback. When the Queen-Mother, or his firſt Wife goes abroad, they are likewiſe carried upon a cloſe Pallanquin, with Lattice Windows, that they may ſee, and not be ſeen, and the Maids of Honour follow it on Foot.

The Mandarins, and great Princes, ſolemnize their Birth-days every Year with great Feaſting, Paſtimes, Comedies, and Fire-works, and at the ſame time give large Alms, eſpecially to poor Widows and Priſoners. When the King dies, and leaves ſeveral Sons, he is ſet up whom the King has appointed his Succeſſor; and on the third Day of his Deceaſe the General, with all the military Mandarins, Lords of the Council, and Governors of Provinces, repair to the Prince's Apartment, where they preſent him with a *Chineſe* Habit, and mounting him on an Elephant, bring him into one of the great Courts of the Palace, which is covered with Cloth of Gold and Silver as a Tent, and place him upon a magnificent Throne, where being ſeated, all the Mandarins proſtrate themſelves to him upon the Earth with their Heads downward; in which Poſture, having lain ſome time, they riſe, and cloſing their Hands together, with their Arms and Eyes lifted up towards Heaven, they ſwear to be faithful to him till Death.

The new King, to requite this Loyalty, orders four Panes of Gold, and ſix Bars of Silver, to be given to every one; but to the Conſtable, or General, he gives two Panes of Gold, and forty Bars of Silver; and to the Preſident of the Council half as many: After theſe Preſents are given, ſeveral Pieces of Artillery are fired about the Palace, with ſome Vollies of ſmall Shot, by the Soldiers then in Arms, which are 30,000 Horſe and Foot, the King ſet upon a magnificent Pallanquin, carried by eight military Mandarins, and eight of the Council, the Conſtable and chief of the Council riding before upon very fine Horſes, is carried to the Apartments of the deceaſed King, when the Lords are retired, the Princeſſes, Ladies of the Court, and chief

Wives of the Mandarins, come to kiſs the King's Hand, and congratulate him upon his Advancement to the Throne; which done, the Lords return to a noble Feaſt prepared for them after the Manner of the Country. Colt's Fleſh, and Dogs, are in moſt Eſteem with them; and the Bird's Neſts, which give their Meat a Taſte of almoſt all ſorts of Spices, are their chief Sauce. The Feſtival is concluded with Comedies, and Fire-works, which laſt all Night.

The next Day the 30,000 Soldiers are drawn up in the Field, and the King appearing on his War Elephant, in the midſt of his Troops, takes an Oath of Fidelity of all the Officers, and then beſtows his Gifts upon them, *viz.* to every Colonel two Panes of Gold, and forty Bars of Silver; to every Captain half as much, and to every Soldier a Month's Pay, which being received, the whole Army diſcharge three Vollies, and then they retreat to their Huts, where they have a Feaſt prepared, as the King has alſo, in a wooden Palace erected for the ſame Purpoſe; and ſo they ſpend the Night in Feaſting, Dancing, and letting off Fire-works. This Ceremony being ended, they ſet on Fire the Palace and Huts, and the King returning to his Palace, beſtows his Liberality on the Comedians and Dancers; then he gives Acceſs to all his People by their Commiſſioners, *viz.* to the Merchants and Traders, People of *Checo*, who aſſure him that their City acknowledge him for their King, and will be faithful to him unto Death; and he gives fifty Panes of Gold, and three hundred Bars of Silver, to the Tradeſmen, and then to the Commonalty of the whole Kingdom, whom he diſcharges from Taxes a whole Year, if they have never taken up Arms againſt their King, and but ſix Months, if they have; all Priſoners for Debt, after they have compounded with the Creditors for half, he freely paying the reſt.

'Tis ſaid, that the King upon this Occaſion ſends above 100,000 Beaſts to the Temples of the falſe Gods to be ſacrificed for him, beſides the Value of one Million of Panes of Gold in Tiſſues and Silks to adorn the Idols, orange-coloured Calicuts for the Bonzes, and blue Calicuts for the Poor that are kept in the Pagods, as Hoſpitals. Sometimes after the Ceremony is over, the King, at the New of the Moon, goes to give his Deities Thanks for his coming to the Crown, and remains for a Week with the Bonzes, living in common with them, viſiting the Hoſpitals, to ſee how the Poor, and eſpecially the Antient, are uſed; and to them he gives new Alms, and orders the building of a new Pagod in ſome fair Situation, which he dedicates to ſome Idol. The ſecond Part of the Moon is ſpent in ſeeing the Gallies row one againſt another, the King and Court having Houſes built on the Plains by the River for that Purpoſe; which Diverſions being over, the Captains come aſhore to kiſs the King's Hand, and they that have behaved moſt ſtoutly and nimbly, receive the Marks of his Bounty, and he gives all the Soldiers two Months Pay extraordinary. During ſeven Days, there are ſuch vaſt Numbers of Fire-works thrown about, that you would think the Air and Water all on Fire. Then the King returns to his Palace, and ſpends the other half of the Month with his Princeſſes, diverting himſelf and his Ladies with Fire-works, Comedies, and Mummeries.

When the King of *Tunquin* dies, he is preſently embalmed, and laid in State ſixty-five Days; all which Time his Table is ſerved as if he were alive; and when the Meat is taken from before the Body, half is given to the Bonzes, and the other half given to the Poor. So ſoon as the King has breathed out his laſt Gaſp, the Conſtable gives Notice to the Governors of Provinces, and orders them how long they ſhall mourn. The military Mandarins mourn generally three Years; the King's Houſhold nine Months; the Nobility ſix; and meaner ſort three; and all the three Years there is a Ceſſation from Divertiſements, except thoſe that are uſed at the King's Elevation to the Throne. All the Meats that are ſerved up to the new King are varniſhed with black, and his Train is cut off, and his Head covered with a Straw Bonnet, as are alſo the Heads of all his Princes and Counſellors of State; nor do they leave this Habit till the deceaſed King's Body is put into the Galley to be carried to the Interment, and the three Bells, which hang in one of the Towers of the Palace, never ceaſe tolling all that Time. The third Day after his Deceaſe all the Mandarins repair to Court, to teſtify their Sorrow for the deceaſed King; and ten Days after all the People are allowed to ſee the Body lie in State, till it be put into the Galley. During the ſixty-five Days which the King's Body lies in State, the Conſtable prepares for the Funeral, which is thus performed: The King and all the Court march on Foot to the Gallies, which they make ſeventeen Days March, though it is not really above two Days Journey, and all the Way is ſpread with Violet-coloured Calicuts, which is the King's Colour. The Order of their March is thus: Firſt go the two Uſhers of the King's Bed-chamber, with Maces of Arms, the Heads of them being full of Fire-works; theſe proclaim the Name of the deceaſed King; next go twelve Officers of the Gallies drawing a Tomb, whereon the King's Name is written; then proceeded twelve Elephants, of which four carry the King's Standards; four ſix-armed Men apiece in Turrets; and four of thoſe the King rode on in his Wars: After theſe rides the Maſter of the Horſe, with two Pages after him on Horſeback; then are led twelve Horſes richly harneſſed, with Bits, Bridles and Saddles; after follows the Mauſoleum, or Hearſe, drawn by eight Stags, trained up for that Service, every one of them being led by a Captain of the Guard; then goes the new King with his Brothers, if he have any, and the Princes of the Blood, all clad in white Sattin, which is their Mourning Colour; they are attended by Muſicians, who play upon Hautboys, and other Inſtruments: After them go ſix Princeſſes in white Sattin, carrying Meat and Drink for the deceaſed King; theſe are attended by as many Ladies of Honour in purple Garments; then go eight Princes of the Royal Blood in purple Garments, with Straw Hats; next proceed four Governors of the chief Provinces of the Kingdom, carrying on their Shoulders certain Bags full of Gold, and Perfumes hung on Sticks, which are Preſents made by their Provinces to be buried with their King's Body, for his Uſe in the other World; then follow two Chariots drawn by eight Horſes apiece, led by a Groom each, in which are two Coffers full of Panes of Gold, Bars of Silver, rich Tiſſues, and other Riches, to be buried with the King's Body, for his Uſe in the other Life: Laſtly, come a great Croud of the King's Officers, and other Nobility, ſome on Foot, others on Horſeback, according to their Offices and Qualities. When the deceaſed King's Body is put into the Galley, the new King and the Company return home, and the Calicut being taken up, is given to the Bonzes.

The Galley, wherein is the King's Body, is committed to ſix of the chief Eunuchs, who are ſworn never to reveal the Place where the King is buried. It is attended by three other Gallies; one carries the Lords, and another the Ladies, who are to be buried alive with the King to attend him into the other World; and the third carries the Treaſure that is to be buried with the King, for his Uſe. The King is buried in inacceſſible Mountains and Deſarts. As for the ordinary Funerals of the *Tunquineſe*, they are more or leſs pompous, according to the Quality of the Perſon deceaſed. At their Interments they uſe great Store of artificial Fire-works, which they uſe alſo in their Times of Joy, as well as Grief. They alſo ſet upon the Tomb good Store of Victuals, and Sweet-meats, believing that the Dead are better for them; and the Prieſts, who train them up in the Error, diſpoſe of them before the next Morning. The *Dutch* Soldiers at *Batavia* robbed the Prieſts of theſe Dainties ſeveral times, but at length paid dear for their Liquoriſhneſs; for the Prieſts finding no Redreſs by complaining to the Governor, poiſoned the Meat and Drink, and ſo deſtroyed many of them.

The Religion of the *Tunquineſe* is divided into three Sects; the firſt is derived from an ancient Philoſopher, called *Confucius*, whoſe Memory is famous over all *China* and the neighbouring Countries. Their Doctrine is, that Men are compoſed of two Parts, one fine and ſubtle, and the other material and groſs. When a Man dies, the ſubtle Part vaniſheth into the Air, and the groſs returns to Earth. They uſe Sacrifices, and worſhip the ſeven Planets. Their chief Idols are *Rouma*, *Betolo*, *Ramonu*, and *Brama*. The Women chiefly worſhip the Goddeſs *Setiſbana*; and the King, Mandarins, and learned Men, adore the Heavens. The ſecond Sect was founded by one *Cha-*

cabout, an Hermit, and the moſt of the common People are of this Sect. He taught his Followers the Tranſmigration of Souls, and enjoined theſe ten Commands, *viz.* 1. That they ſhould not kill. 2. That they ſhould not ſteal. 3. That they ſhould not defile their Bodies. 4. That they ſhould not lye. 5. That they ſhould not be unfaithful to their Words. 6. That they ſhould reſtrain their inordinate Deſires. 7. That they ſhould do no Injury to any Man. 8. That they ſhould not be great Talkers. 9. That they ſhould not give Way to their Anger. 10. That they ſhould labour to their utmoſt to acquire Knowledge.

As for ſuch as deſign to lead a religious Life, they muſt renounce the Delights of this Life, be charitable to the Poor, overcome their Paſſions, and give themſelves up to Meditation. He taught alſo, that, after this Life, there were ten diſtinct Places of Joy and Torment, and that the Contemners of his Law ſhould feel Torments proportionable to their Offences, without any End. That if they endeavoured to fulfil his Law, and failed in any Point, they ſhould wander in divers Bodies for 3000 Years, before they entered into Happineſs; but ſuch as had perfectly fulfilled his Law, ſhould be rewarded without ſuffering any Change of Body. He ſays of himſelf, that he was born ten Times before he came to Bliſs, becauſe, in his Youth, he, for want of Knowledge, had ſinned. This Impoſtor's Opinions are ſpread all over the Kingdom of *Siam*, ſeveral Provinces of *Japan*, and all *Tunquin*, where he died. The third Sect is that of *Lanthu*, a great Magician: He gave out, that his Mother carried him in her Womb ſeventy Years without loſing her Virginity. That by this Miracle, he might gain Credit to his Impoſtures, he taught moſt of *Chacabout*'s Doctrine; and, to gain the People's Hearts, enjoined the Grandees to build Hoſpitals in all Cities where there were none before to look after the Sick in them. The *Tunquineſe* adore three Things in their Houſes, *viz.* the Hearth of their Chimneys, made of three Stones. 2. The Idol *Ticuſa*, who is the Patroneſs of all Handicrafts-Men; and to her they ſacrifice when they put a Child to any Trade, that ſhe may infuſe an Aptneſs to learn it. 3. The Idol *Buabin*, to which they pray, and ſacrifice when they build an Houſe, that he may not ſuffer any Misfortune to befal the Houſe they are going to build; but they ſend for the Bonzes, and they ſtay to offer it, for whom they make great Preparations.

There are ſome among them that adore the Heavens, others the Moon, and others the Stars. Some adore the Earth in five Parts, and that in five ſeveral Colours, *viz.* the Northern in black, the Southern in red, the Eaſtern in green, the Weſt in white, and Middle in yellow; and others ſacrifice to Trees, Elephants, Horſes, Cows, and almoſt all other ſorts of Animals. They that ſtudy the *Chineſe* Characters, ſacrifice every five Months to the Souls of the Dead that were never buried, believing that their Underſtanding ſhall be more enlightned to apprehend Things. At the Beginning of every Year they have a great Solemnity in Honour of the Dead, who were in their Lives renowned for their noble Actions and Valour, reckoning Rebels among them. They ſet up ſeveral Altars, ſome for Sacrifices, others for the Names of the Perſons they deſign to honour; and the King, Princes, and Mandarins, are preſent at them, and make three profound Reverences to the Altars when the Sacrifices are finiſhed; but the King ſhoots five Times againſt the Altars where the Rebels Names are; then the great Guns are let off, and the Soldiers give Vollies of ſmall Shot, to put the Souls to Flight. The Altars and Papers made uſe of at the Sacrifices are burnt, and the Bonzes and Sages go to eat the Meat made uſe of at the Sacrifice.

The firſt and fifteenth Days of every Month are more eſpecially Holy-days for the Worſhip of their Gods, and the Bonzes and Sages redouble their Prayers, and repeat a kind of Charm ſix Times. The People on theſe Days bring Meat and Drink to the Sepulchres of their Kindred, to ſacrifice for the Good of their Souls, to eat. The Bonzes, when they have paid their Worſhip, fall to, and what they cannot eat give the Poor; for this Greedineſs the King and Mandarins make no Account of the Bonzes and Sages, though they lead auſtere Lives, and ſo they are in Credit only with the common People. In *Tunquin* the great Cities have ſeveral Pagods, and every Village and Town almoſt have one: Every Pagod has, at leaſt, two Bonzes and two Says; but ſome maintain forty Pagods, and as many Says, or Sages, who live in common under a Superior, and keep to the Doctrine of *Chacabout*, and a Goat is the Idol which they adore. They wear about their Necks a Necklace of an hundred great Beads made of Wood: They beg for their Living with great Modeſty and Humility, taking no more than is needful; and if they have any thing to ſpare, they give it to the poor Widows and Orphans that cannot get their Living. Their Orders permit them to marry, but then they muſt leave their Monaſtery. They aſſiſt at the Funerals of great Men, where they make a kind of Oration, ſounding their Trumpets and Cornets, while the Bells at their Pagods go at the ſame time. They have a great Veneration for two Magicians and one Witch.

The firſt Magician is called *Tay-bow*, who pretends to know the Events of all Things to come; ſo that when any are about to marry their Children, build an Houſe, buy Land, or undertake any Buſineſs of Conſequence, they conſult him, who, inſpecting his Book, makes them believe what he pleaſes. The other is *Thay-Pou-Thouy*, to whom they have Recourſe in their Sickneſs: When he is conſulted, after ſeveral apiſh Tricks which he acts before the ſick Perſon, to amuſe him, he ſometimes affirms that the Diſtemper comes from the Devil, and then he himſelf and the ſick Perſon, and his Friends that brought him, do Homage to the Devil; but, if he does not recover, all the Friends and Kindred of the ſick Party, with as many Soldiers as they can get, ſurround the ſick Perſon's Houſe, and ſhoot off their Muſkets three Times to drive the Devil away. If the ſick Perſon be a Waterman, or other Perſon belonging to the Water, then he tells them it is the God of the Waters that is the Cauſe of the Diſtemper, and then he orders him to ſpread Carpets, and furniſh Tables in Huts, with all ſorts of Meat, on the Banks of the next River, to invite him to his Habitation.

If theſe Things fail, he ſends him to *Tay-bow*, the chief Magician, to enquire if the Souls of the Dead have cauſed the Diſtemper, and if he anſwers Yes, then the Magician employs his Tricks to get the miſchievous Soul into a Bottle, where he keeps it till the Party is cured. The Magicianeſs is called *Baceti*; ſhe keeps a great Correſpondence with the Devil, and to oblige him, offers her own Daughter, if ſhe has one, as ſoon as ſhe is born. Mothers who have loſt their Children, and deſire to know the Condition of the Soul, conſult her, and thereupon ſhe, by beating of a Drum, pretends to ſummon the Soul before her, and cauſes it to tell her the Condition of it. She generally tells them that the Soul is happy, and bids them be of good Cheer. They have innumerable Superſtitions, but the moſt remarkable are theſe: The more ſtudious People foretel Things that are to come, by looking in a Mirrour. Others ſprinkle the Aſhes of their dead Anceſtors with *Aqua Vitæ*, and beg of them Health, Honour, and Riches. Others, upon their New-Year's Day, make divers Figures upon the Steps and Threſholds of their Doors to drive away evil Spirits. Others, in travelling, if they ſneeze but once, will return back, and if they ſneeze twice, purſue their Journey without Fear of Danger. Some, if at going out of their Houſes they meet a Woman, retire again for two or three Hours; but, if a Man, it is a good Omen. The firſt Fruit which they gather in the Beginning of the Year, is the Araguer, and they poiſon one, and give it to a Child, believing, that in taking away the Child's Life, they ſhall thrive the better all the Year after.

When the Moon is eclipſed, they ſay a certain Dragon endeavours to devour her, and, therefore, to aſſiſt the Moon, and put the Dragon to Flight, they diſcharge their Muſkets, ring their Bells, beat all their Drums, and make a prodigious Noiſe till the Eclipſe be over, and then they think they have reſcued the Moon, and rejoice as much as if they had obtained a great Victory. They divide the natural Day into twelve Hours, and give them the Name of ſome Beaſt, as a Tyger, Lion, Bear, Horſe, *&c.* and ſo the Months and Days have their particular Names. When a

Child is born, preſently the Father and Kindred go to ſee the Name of the Beaſt by which the Hour was called when the Child was born, believing that Animal will prove fatal to it. The preſent King of *Tunquin* was born in the Hour of the Horſe, and he would never give Audience, nor ſtir out of the Houſe, for fear ſome Miſchief ſhould befal him at that Time. And the ſame Prince having a Child that died in the fifth Month, which is called by the Name of the Horſe, would not ſuffer him to be buried, but cauſed him to be burnt, and ſcattered his Aſhes in the Air.

Thus far our Author, whoſe conſummate Knowledge of the Country, People, and Commerce of the *Indies*, enabled him to enter more thoroughly into theſe Points than it was in the Power of any other Writer to do. His Travels through *Perſia*, his ſeveral Journies by Land through the beſt Part of *Aſia*, are no leſs excellent in themſelves, but are reſerved to furniſh another Part of this Work.

But there remains however a Portion of his Labours, which indiſputably claim our Notice here, inaſmuch as they contain whatever is neceſſary towards underſtanding the Oeconomy of all the Nations that inhabit *India*, their Manner of Living among themſelves, and, with reſpect to others, the Nature of their Manufactures, the Method of the carrying on domeſtick Commerce, and, above all, that Relation which the Trades of *India* have to each other; the Routes from their great Cities, the Nature of their Carriages and Caravans; and, in a Word, the Detail of that Induſtry, which, if I may be allowed the Expreſſion, originally eſtabliſhed, and has ſtill preſerved the Trade of the *Indies*. I know the Phraſe is hard, but I know too that it is not in my Power to explain it better; for it is not the natural Wealth alone of theſe Countries that has rendered them famous, who have in all Ages attracted the Trade of the whole World to them, and thereby made the Commerce of the *Indies* the great Commerce of the Univerſe.

It is not, I ſay, the Wealth alone of theſe Countries, but the Induſtry, the Labour, and Addreſs of the Inhabitants, by which we muſt underſtand the native Inhabitants, now called *Banjans*; for, as to the *Turks* and *Tartars*, they have been ſo far from contributing thereto, that, in fact, they ſeem to have made it their Buſineſs to oppreſs and cramp this Spirit, by their tyrannical Government. But, it ſeems, this Spirit of Induſtry has been too hard, even for their Cruelty, and ſtill ſubſiſts to ſuch a Degree, as to excite the Wonder of the beſt Judges, as well as to outdo every thing of the ſame kind in other Parts of the World, *China* only excepted. This will manifeſtly appear from the ſubſequent Section, from which we may ſufficiently gather what a mighty Figure the *Indians* muſt have made in ancient Times, before the People were under the Oppreſſion of a foreign Yoke, before their Spirits were broken by the Tyranny of their cruel Maſters, and before their Manners were corrupted by the Slavery under which they groan at preſent.

It is from hence that we are able to diſtinguiſh how different a Figure they muſt have made in thoſe early Times, when their Religion was pure, when their Government, the moſt exact, and beſt contrived that ever was eſtabliſhed in any Country, was in its full Vigour; when their Laws had their free Courſe, and the People were made happy, by a conſtant Obedience, to an excellent Conſtitution; when every Monarch conſidered himſelf as the Father of his Subjects, and when Subjects obeyed as Children, from a pefrect Senſe of their own Happineſs, flowing from this Obedience; when, in ſhort, every Principality was no other than one large Family well regulated; and when even the minuteſt Matters fell under the Notice of the Laws, and under the Care of the Magiſtrates.

For if even now, when all theſe Advantages are loſt, the Induſtry of the Inhabitants is ſo great, their Manufactures ſo many, and carried on with ſuch Spirit and Diligence, their Trade ſo extenſive and well managed, as not only to employ and enrich themſelves, but to draw likewiſe the Attention of other Nations, and a Concourſe of Merchants from the moſt diſtant Corners of the World, what muſt it have been in its former flouriſhing Condition? What muſt it have been in the Times before deſcribed, when they wrought for themſelves, and when their Induſtry procured Happineſs; whereas now it purchaſes a bare Subſiſtence? This will ſufficiently demonſtrate to the intelligent Reader, the Truth of an Obſervation we have ſo often made, that however Things may have gone in the reſt of the World, and how much ſoever Mankind may have improved elſewhere, they muſt have neceſſarily declined here, and the modern *Indies* muſt, in the Nature of Things, fall as far ſhort of the *Indies* in the ancient and primitive State, as from the vaſt Advantages which they enjoy above other Countries, they ſeem ſtill to excel the reſt of the World.

We may from hence gather, what ſolid, what mighty Benefits are derived from a wiſe and well-ſettled Conſtitution, ſince even the Relicks and Remains of it are able to produce ſuch mighty Effects, as we ſee amongſt the *Indians*; and from thence we may be taught that all Dangers ought to be dared, all Hardſhips undergone, all Fatigues patiently endured to prevent the Ruin, and avert the Fall of ſuch a Conſtitution. It is true, theſe Leſſons may be learned nearer home, and there is no Neceſſity to travel to the *Indies*, in order to acquire this uſeful Knowledge; but, in the mean time, ſince we have a natural Propenſity to travel, ſince Books of Voyages are ſo much read, and ſo juſtly eſteemed, it is ſurely right to make them as uſeful as poſſible, by inculcating theſe Leſſons, which ought to be perpetually in our Minds, becauſe, on our Attention to them, depends our Freedom and Felicity. To what Ends do our Merchants viſit the moſt diſtant Countries, expoſe themſelves to ſuch a Variety of Dangers, and chearfully undergo ſuch innumerable Fatigues, but that they may bring back ſufficient Wealth to live at home in Peace? And, if they act reaſonably in this Way, why ſhould we not read to the ſame Purpoſe? Why ſhould we not gain, by Experience and Reflection, the true Principles of Patriotiſm, and a ſettled Reſolution to profit by other Peoples Miſfortunes, and avoid, by a timely Conſideration of their Miſeries, what muſt, ſome time or other, make their Caſe our own. We have, what the *Indians* once had, an excellent Conſtitution, equally capable of beſtowing Freedom and Felicity: It is to this we owe whatever diſtinguiſhes us from other Nations, our Liberty, our Induſtry, our Manufactures at home, our Commerce abroad, and, in ſhort, whatever can render Life deſirable, or this World valuable. I cannot help thinking, therefore, that every Opportunity ſhould be ſought, or, at leaſt, every Occaſion taken for ſetting theſe important Points in their proper Light, and thereby recommending, in the ſtrongeſt Manner poſſible, inviolable Duty to this our beneficent Conſtitution.

SECT.

SECTION XXIX.

An Account of the different Routes to all the great Cities and chief Marts in the Indies, *the Manner in which the Domeſtick Commerce of that Country is carried on, the State of its Manufactures, and other curious Particulars.*

Taken from the Works of Mr. *Tavernier.*

1. *The End and Deſign of this Section explained.* 2. *A Deſcription of the City and Port of* Surat, *with a large Account of its Commerce.* 3. *That Subject continued and concluded.* 4. *Of the ſeveral Methods of travelling in the* Eaſt-Indies, *of Land-Carriage for Merchandize, and the Expences of both.* 5. *Of the Road from* Surat *to* Agra, *by the City of* Brampour, *with a Deſcription of the laſt-mentioned City.* 6. *Of ſeveral remarkable Curioſities that lie in the Way.* 7. *Of the Road from* Surat *to* Agra *by* Amadabat, *and of what is worth Notice on that Road.* 8. *A compleat Deſcription of* Amadabat, *and of the Trade carried on there.* 9. *Of the Road from* Candahar *to* Agra, *and of the Jew-Brokers in the* Indies. 10. *Of the City of* Caboul, *and the Trade of the Provinces depending thereupon.* 11. *Of the Royal City of* Dehli, *and of the Road from thence to* Agra. 12. *A Deſcription of the laſt-mentioned City, and of the Trade carried on there.* 13. *Of the Road from thence to* Halabas, *once eſteemed the Capital of* India, *including a Deſcription of the River* Ganges. 14. *The Road from* Halabas *to* Patna *and* Daca *in the Kingdom of* Bengal, *with a Deſcription of thoſe Cities.* 15. *Of the Paſſage from* Surat *to* Goa, *with ſome Remarks upon the laſt-mentioned City.* 16. *Of the noble City of* Viſiapour, *and the Principality of which it is the Capital.* 17. *A large Account of the Royal City of* Bagnagar, *and of the Country round it.* 18. *A ſuccinct Hiſtory of the Kingdom of* Golconda. 19. *The Road from thence to the Port of* Maſlipatan, *with ſome Remarks on the Trade carried on there.* 20. *A View of the Country from thence to* Madraſpatan, *now known by the Name of* Fort St. George. 21. *A Digreſſion concerning Elephants, which contains many curious Circumſtances.* 22. *A Deſcription of the Kingdom of* Carnate, *and of the principal Places therein.* 23. *Remarks upon the foregoing Section.*

1. THERE is no Occaſion for a long Introduction to this Section, the Subject of it has been already pointed out, and therefore it is only requiſite to ſay, that the Deſign of the Author therein, was to explain the interior State of the *Indies*, to ſhew where Manufactures were ſettled, how carried on, and after what Manner the domeſtick and inland Commerce of this Country is managed. In treating of this Subject every Paragraph preſents us with ſomething new, and ſomething uſeful. This Diſcourſe tranſports us as it were into the very Country itſelf; and when we have read it, we can no longer conſider ourſelves as Strangers in the *Indies*. It would be very happy if we had as clear and as diſtinct Accounts of every Country in *Europe*, we ſhould know much more of them then than what we do now; we ſhould enter into all the Particulars of their Condition, and underſtand perfectly whatever Relations came from thence. It was for this Reaſon that I judged it proper, before I proceeded to the laſt Part of this Chapter, the Hiſtory of the *Eaſt-India* Companies, to cloſe with this the Series of Voyages and Travels unto and through this Part of the World, and, it is hoped, this Method will be approved.

2. Notwithſtanding the *Indians* ſtretch themſelves beyond the Coaſt of *Perſia* for the Space of above four hundred Leagues together, from the Ocean to *Mount Caucaſus*, or *Taurus*, yet there are not ſo many Ways into the *Indies* out of *Perſia*, as there are of travelling into *Perſia* out of *Turky*, becauſe that between *Perſia* and the *Indies* are nothing but vaſt Sands and Deſarts, where there is no Water to be found; ſo that you have but two Roads to chuſe in going between *Iſpahan* to *Agra*, the one by Land through *Candahar*, and the other partly by Land partly by Sea, taking Ship at *Bander Abaſſi*, or *Ormuz*. Both theſe I have deſcribed as far as the Limits of *Perſia* reach, and ſhall only add concerning this latter, that Sailing is not ſafe at all Times upon the *Indian*, as it is upon the *European* Coaſts; you muſt obſerve the proper Seaſons, which being paſt there is no venturing. The Months of *November*, *December*, *January*, *February*, and *March*, are the only Times in the Year to embark for *Surat* from *Ormuz*; but from *Surat* you muſt not ſtir after the End of *February*; for then the Weſtern Winds that bring Rain along with them into *India* begin to blow; but during theſe four Months there blows a N. E. Wind, which carries the Ships from *Surat* to *Ormuz* in fifteen or twenty Days; and this Wind veering a little to the North, ſerves alſo for thoſe that are bound for *Surat*; but it takes them up thirty, or thirty-five Days for which they are made Amends in *March* and the Beginning of *April*, for then the Weſtern Winds blowing full in their Stern, carry them thither in fourteen or fifteen Days.

The Veſſels that ſail to *Surat*, which is the only Port in the Empire of the Great Mogul, paſs within Sight of *Diu*, and the Point of *St. John*, and come to an Anchor in the Road of *Souali*, which is four Leagues from the Town, and two from the Mouth of the River called the *Bar of Surat*; for the greater Veſſels cannot get into the River of *Surat* till they have unladen, by reaſon of the Sands that choak it up; and the Wares ſo unladen are carried to the Town, either by Waggons or Boats, becauſe the Cuſtoms were often ſtolen when the Ships unladed generally at *Souali*; therefore there is now a Prohibition that none ſhall come to anchor there but the *Engliſh* and *Dutch*, who, indeed, lay many Goods Cuſtom free; yet it is made up by the Veſſels that come to the Bar from *Perſia*, *Arabia Felix*, and all Parts of the *Indies*. When any Commodities are unladen at *Surat* you muſt carry them to the Cuſtom-houſe, adjoining to the Fort, where the Merchants pay for all Sorts of Wares from 4 to 5 *per Cent.* unleſs it be the *Engliſh* and *Dutch*, who indeed pay leſs, but are forced to make it up in Preſents to the Court and Deputations; and leſt any valuable Goods ſhould be concealed, they ſearch every Perſon in the Ship exactly. Gold and Silver pays but two in the Hundred, and when it is brought into the Cuſtom-houſe, the Maſter of the Mint comes and takes it, and coins it into the Money of the Country, which, though it be to the Loſs of the Merchant, yet cannot be avoided as to the Silver; but the Merchants have ſo many Ways to hide their Gold, that it ſeldom comes to the Knowledge of the Cuſtomers.

If they bring any Money ready coined out of other Countries, as *Piaſters*, or *Abiſſis*, out of *Perſia*, they are melted down and refined, to make *Rupees*, becauſe the Silver-Money of the Great Mogul is finer than any other. The *Indian* Money is the Silver *Rupee*, the half Quarter, the eighteenth, and ſixteenth Part. The *Rupee* is as big as the *Baſſi* of *Perſia*, but much thicker; it paſſes commonly for thirty *French Sols*, or 2 *s.* 3 *d.* Sterling. This Money is coined every Year, and the new ones, during the

Year they are coined in, are valued at a *Pecba* more than thoſe of the foregoing Year, becauſe the Coiners pretend that the Silver wears daily. They have alſo another Silver Coin called *Mabmoudi*, which is ten, or about ten Sols and an half, or eight-pence Halfpedny Sterling; but it goes no where but in *Surat*, and in the Province of *Guzerat*. *Abiſſis* brought out of *Perſia* go alſo in the *Indies*, but for leſs than in their own Country, *viz.* at nineteen *Pecbas* or ſixteen *French Sols*, which is one Shilling and Two-pence. The *Pecba* (of which they have half, double, and four-fold) is a Piece of Copper Money as big and thick as a *Rupee*, but in Value about half a *Sous*, or ſomething leſs than half a Peny *Engliſh*. A *Rupee* is worth more or leſs of thoſe *Pechas*, according as your are nearer or farther from the Copper Mines. At *Agra* and *Gebanabat* they are worth fifty-five or ſixty-five *Pecbas*, and at *Surat* ſometimes but forty-ſix, and ſomtimes fifty, becauſe it is at a ſmall Diſtance from the Copper Mines.

Inſtead of ſmall Money, they uſe certain Shells, which they call **Coris**, brought from the *Maldives*, of which they give fifty or more for a *Pecba*, or if they are near the Sea-ſhore, where they are brought in, ſixty. In the Province of *Guzerat*, and the chief Cities whereof *Guzerat*, *Cambaya*, *Boudra*, and *Amadabat*, *Mabmoudis*, half *Mabmoudis*, and *Almonds*, are accounted current Money: A *Mabmoudi* is about nine Sous, three Deniers, or Eight-pence *Engliſh* in Value. The Almonds, which they call *Baden*, are brought from *Ormuz*, and grow in the Deſarts of the Kingdom of *Lar*. They give ſixty-eight Almonds for a *Pecba*, and twenty *Pecba's* for a *Mabmoudi*. There is no fear that the Children ſhould crack theſe Almonds, and ſo deſtroy their Money, for they are as bitter as Colloquintida. Some Years the Almond trees do not bear, and then their Price is much raiſed; for then you will not have above forty or forty-four for a *Pecba*. The *Rupee* of Gold is valued in the Country at fourteen *Rupees* of Silver, and the half and quarter *Rupee* proportionably. Great Sums of Money are reckoned by *Lacks*, *Crores*, or *Courors*, *Padans*, and *Nils*; 100,000 *Rupees* make a *Lack*, 100,000 *Lacks* a *Couror*, 100,000 *Courors* a *Padan*, 100,000 *Padans* a *Nil*. If you bring Gold into the *Indies* in Ingots, or *European* Ducats, you ſhall always have ſeven and an half Profit, if you can eſcape paying the Cuſtoms; but if you pay them, your Gain is loſt.

3. The City of *Surat* lies in twenty-one Degrees and a few Minutes Northern Latitude, and is watered by the River *Tapty*. It is inhabited by three Nations, as they diſtinguiſh themſelves, *viz.* *Moors*, under which Name they comprehend all *Mobammedans*, though they differ in their Opinions, being ſome *Sunnis*, and others *Cbiais*, viz. *Moguls*, *Perſians*, *Arabians*, and *Turks*; 2. *Heatbens*, who adore Idols, of whom there are ſeveral Sorts; 3. *Perſees*, who are alſo called *Gaurs*, or *Atecb-pereſt*, i. e. Adorers of the Fire, which was the Worſhip of the ancient *Perſians*. Theſe Men retreated into the *Indies* when the Khaliff *Omar* reduced the Kingdom of *Perſia* under the Power of *Mobammedans*: Among theſe, indeed, there are ſome *Franks*, and other *Chriſtians*, but they are not accounted among the Inhabitants, becauſe their Number is inconſiderable in Compariſon of the other Parts. There are ſome Merchants in *Surat* vaſtly rich. One *Vergivora*, a *Banjan*, was reckoned worth at leaſt eight Millions.

The City is but of an indifferent Bigneſs, and it is hard to know the Number of the Inhabitants, becauſe the Seaſons render it unequal. There are a great many all the Year round; but in the Time of the Monſoon, *i. e.* the Seaſons for ſailing, *viz.* in *January*, *February*, and *March*, it is ſo full of People that Lodgings can hardly be had either in the City or the Suburbs. The Generality of the Houſes are built of Reeds plaiſtered over with Cow-dung; for in all *Surat* there is not above nine or ten good Houſes, of which the Cha-bender, or chief of the Merchants, has two or three, the *Engliſh* and *Dutch* have alſo ſome of them, and the reſt belong to the *Mobammedan* Merchants; but the *Franks* are only allowed to hire Houſes, leſt if they ſhould have any of their own, they ſhould make it a Fortreſs.

The *Capuchin* Friars have built them a very convenient Convent, according to the Model of the Houſes in *Europe*, and a fair Church by it; but they purchaſed the Ground in the Name of one *Chelebie*, a *Maronite* Merchant of *Aleppo*. The Walls of the Town were formerly of Earth, and that very ruinous; but of late they have built them of Brick, a Fathom and an half thick, and fortified them better, to ſecure it from the Irruptions of the neighbouring Rajah. The Caſtle is built upon the Side of the River, at the South End of the Town, and is ſo placed that you muſt paſs by it at your entering into the Town, whether you go by Land or Water; it is a Fort of a reaſonable Bigneſs, ſquare, and flanked at each Corner with a large Tower. The Ditches on three Sides are filled with Sea-water, and the fourth is waſhed by the River. There are ſeveral Pieces of Cannon; but becauſe there are no Platforms on each Wall, they are planted upon wooden Scaffolds. The Governor of it can only command his Soldiers within the Fort; for he has no Power in the City, which has a diſtinct Governor, who receives the King's Cuſtoms, and his Revenues in his Provinces; but he lays them up in the Caſtle till they are ſent for by expreſs Orders from Court.

The Streets of *Surat* are large and even, but not paved; and there is no conſiderable Building in it. The *Chriſtians* and *Mobammedans* there commonly eat Cow Beef, not only becauſe it is better, but becauſe it is more plentiful than Ox Beef, their Oxen being almoſt all employed in Plowing and carrying Burthens. They have alſo pretty good Store of Mutton, and Abundance of Pullets, Chickens, Pigeons, Pigs, and all Sorts of wild Fowl. They uſe two Sorts of Oil with their Food, *viz.* of Crocus ſylveſtris, or wild Saffron, and Seſſamum. This laſt is more common, but the firſt much the beſt. They eat Grapes from the Beginning of *February* to the End of *April*; but they have no good Taſte, and the Wine made of them is ſour. They have ſeveral Sorts of ſtrong Waters, which they draw from Jagery, and the Bark of the Tree Baborel ſteeped in Water. They have two Sorts from Palm-trees, the one called Cadigour, and the other the Cocoa-tree, Rice, and Dates; but they are none of them ſo good as Brandy. Their Vinegar is made of Jagery, and decayed Raiſins, and to their beſt they put in a little Tari, which is the Juice of the Palm-tree above-mentioned.

At *Surat* are ſold all Sorts of Stuffs and Cottons that are made in the *Indies*: All the Commodities alſo of *Europe* and *China*, as Porcelain, Cabiners, and Cheſts adorned with Torquoiſes, Agats, Cornelians, Ivory, and other Embelliſhments. Here are alſo ſold Diamonds, Rubies, Pearls, and all other precious Stones which are found in the Eaſt; as alſo Muſk, Amber, Myrrh, Incenſe, Manna, Sal Armoniac, Lack, Quickſilver, Indigo, and the Root Rænas, for dying red. All Sorts of Spices, Fruits, and Drugs, which are produced in the *Indies* and the *Levant*, and are bought up by Foreign Merchants to tranſport into all Parts of the World. There are ſeveral great Officers at *Surat*, *viz.* a Mufti, who inſpects and rules all manner of Religion among the *Mobammedans*, and a Cadi, to judge of all civil Matters, a *Vaca Nevis*, or Secretary of State, who keeps a Regiſter of all that happens to his Province, and gives the Great Mogul Notice of all Things that happen of Importance, two Governors, or Nabads, who command one the City, the other the Caſtle, and have no Dependance upon each other, nor incroach upon one another's Offices or Duties.

The Governor of the Town judges in civil Matters, and commonly renders ſpeedy Juſtice; but he meddles not with criminal Cauſes, for they belong to an Officer appointed on purpoſe, called *Cotoual*, who is much the ſame with the *Soubaſſa* in *Turky*, and *Doroga* in *Perſia*. He orders Criminals to be puniſhed in his Preſence, by Whipping or Cudgelling; and this he doth, either in his own Houſe or in the Street, near the Place where the Fact was done. When he goes abroad, he rides on Horſeback, and has ſeveral Officers who attend him, carrying Batoons, Whips, Lances, *&c.* before him; but neither of theſe Judges can put any Man to Death. The King reſerves that Power to himſelf; and therefore when any Man deſerves Death, a Courier is diſpatched to know his Pleaſure, and they fail not to put his Orders in Execution ſo ſoon as the Courier is returned. The *Coutoual* goes his Rounds in the Night to prevent all Diſorders, and if he finds any Man abroad at unſeaſonable Times, he commits him to Priſon, and rarely diſmiſſes him without being baſtonadoed or whipped. This Officer is to anſwer for all the Robberies committed in the Town; but by their Cunning they uſually evade it. When any one is robbed this Officer apprehends all the People of the Houſe, both young and old, where the Robbery has been committed, and cauſes them to be beaten ſeverely. They are ſtretched out upon their Bellies, and two Men laſh the Patient with long Whips, till he has received two or three hundred Laſhes, and is all in a Gore Blood. If at firſt he confeſſes not the Fact, they whip him the next Day, and ſo for ſeveral Days, till he confeſſes all, or the Thing ſtolen be recovered again; but he never ſearches the Houſes or Goods of Robbers.

There is alſo a *Tourſedar*, or *Provoſt*, who is bound to ſecure the Country round about the Town, and to anſwer for all the Robberies committed there. The Burying-places of *Surat* are without the Town, about forty-three Paces from the *Baroch* Gate. The Catholicks have theirs apart, and ſo have the *Engliſh* and *Dutch*, as well as ſome religious *Indians*. The *Engliſh* and *Dutch* adorn their Graves with Pyramids of Brick, whitened over with Lime. The religious *Gentiles* make their Tombs ſquare, and of Plaſter, covering ſome with a Dome, and others with a Pyramid, a little more than three Feet high. The *Banjans* burn their dead Bodies by the River Side, and leave the Aſhes there to be waſhed away by it, becauſe they account it ſacred. They believe that it contributes much to the Soul's Eaſe of the Deceaſed, to burn his Body immediately after his Death, becauſe they ſay his Soul ſuffers after the Separation from the Body, unleſs it be burnt; but they burn not the Bodies of Children under two Years old, becauſe they hold them innocent; nor of the Vartias, or Jogies, who are a kind of Derviſes, becauſe they follow the Right of *Madeo*, who is one of their great Saints, and who ordered their Bodies to be interred.

The Things moſt obſervable about *Surat* are a large Wall built by a *Banjan*, with divers thin Arches over it, to which they go down by certain Stairs; on the Outſide is a Figure of a red Face, but the Features are not diſcernable. The *Gentiles* ſay, it is the Pagod of *Madeo*, and pay a great Devotion to it. Towards *Daman-Gate* begins the lovelieſt walk in all the Country, and by it is a great Reſervatory of Water called the *Tank*. It has ſix Angles, and every one of them an hundred Paces long, and it is at leaſt a Muſket-ſhot in Diameter. The Bottom is paved with large Free-ſtone, and there are Steps all round it in Form of an Amphitheatre, from the Brim to the Bottom, of lovely Free-ſtone, admirably wrought, brought from *Cambaya*. It was made at the Charge of a rich *Banjan*, whoſe Name was *Copy*, to catch the Rain-water to ſupply the Town, and is certainly a Work worthy of a King, being equal to the beſt of the *Roman* Aquæducts made for publick Uſe.

About a Quarter of a League from the Reſervatory is the Princeſs's Garden, ſo called, becauſe it belongs to the Great Mogul's Siſter. It is a large Plantation of Trees of ſeveral kinds, as Manguires, Palms, Mirobalans, Warrs, Maſia-trees, and many other Plants and Shrubs, ſome of them are ſet in a direct Line, and it is cut into many long and very fair Walks. In the midſt is a Building, with four Fronts, having each of them a Divan, and a ſquare Baſon full of Water before it, from whence run ſeveral little Brooks through the Walks, which make it delightful, but much ſhort of the Royal Gardens in *Europe*.

About a hundred and fifty Paces from the Garden is a Warr, or Tree, which the *Portugueze* call the Tree of Roots; it is very large, and high, being eighty Paces in Diameter; the Branches which have taken Root are ſo ſkilfully cut, that one may walk every where under it. The *Indians* account it ſacred, and the *Banjans* have planted Banners on the Top, and higher Branches of it; by it is a Pagod, dedicated to an Idol called *Mameva*, which is thought to be *Eve*. The Soil about *Surat* is brown, and ſo rich that they never dung it, but ſow their Corn after the Rains in *September*, and reap it in *February*. It bears alſo Sugar-Canes, Rice, Manguiers, Palm-trees, and many other Sorts of Trees, which yield great Profit. They water their Gardens, but the great Dews yield ſufficient Moiſture for their Corn-Land. The River *Tapty* is always brackiſh at *Surat*, ſo that they uſe it only for waſhing their Bodies, which they do every Morning, from a Principle of Religion.

4. In travelling up and down *India*, there are divers Sorts of Carriages both for Merchandize and Travellers, and when you leave *Surat*, you muſt make uſe of theſe. For Goods, they make uſe of Oxen, Camels, or Waggons; upon their Oxen they will lay three hundred or three hundred and fifty Pounds Weight; and it is no wonderful thing to ſee ten or twelve thouſand Oxen at a time laden with Rice, Corn, and Salt, carrying the Rice to the Place where Corn grows, and Corn where the Rice is, and Salt to Places where there are none. Thoſe numerous Caravans are very inconvenient to Travellers, becauſe when they meet them they are forced to ſtay two or three Days till they paſs by. This is the moſt ſpeedy Carriage for Merchants Goods, and they commonly make uſe of it when they are in haſte to ſhip them off at *Surat*. They that drive thoſe Oxen follow no other Calling, nor have any Houſes, but carry their Wives and Children along with them.

Some of them have an hundred Oxen of their own, and they have a Captain of the Caravan, who wears a Chain of Pearls about his Neck, and takes as much State upon him as a Prince. All that follow this Trade of Carrying, are divided into four Tribes, called *Manaris*, and conſiſt each of them of an hundred thouſand Souls. They live always in Tents, and are maintained by tranſporting of Merchandize from Country to Country. The firſt of them carries nothing but Corn; the ſecond Rice; the third Pulſe; and the fourth Salt; and they are diſtinguiſhed by certain Marks made by the Prieſts in the Face of every one of three of the Tribes, by a different-coloured Gum, and ſome Grains of the Thing they carry pourtrayed in it; the fourth carries a Bag of Salt about their Necks, of eight or ten Pounds, and with it they thump their Breaſts every Morning before they ſay their Prayers, in token of Repentance. They love their Oxen and Cattle as tenderly as Children, eſpecially if they have none.

Their Women wear only a Piece of Calicut painted, or white, five or ſix times double, from their Waiſt downward, and upwards they cut their Bodies into ſeveral Forms of Flowers, which they paint in various Colours with Grapes. They have Prieſts that go along with them, who every Morning ſets up an Image of a Serpent in Wreaths upon a Pole ſix or ſeven Feet high, and when every one has paid his Adoration to it, their Women going three times about it, they load it upon an Ox appointed for that Purpoſe for carrying it, and accompany the Caravan; they uſe Camels ſometimes, but very rarely, they being appointed to carry the Luggage of great Perſons. The Caravan, or Waggon, ſeldom exceeds two hundred, and is moſt commonly not above an hundred. Every Waggon is drawn by ten or twelve Oxen, and attended by four Soldiers, which the Perſon that owns the Merchandize is obliged to pay; two of them march on each Side of the Waggon, over which there are two Ropes thrown acroſs, the Ends whereof they hold in their Hands, that if the Waggon leans too much to either Side in the bad Way, thoſe on the contrary Side may keep it from overturning, by pulling the Ropes with all their Strength. The Manner of travelling in *India* is upon Oxen inſtead of Horſes, ſo that if any Merchant carries an Horſe out of *Perſia*, it is only for Shew, or to walk in his Hand, or to ſell to ſome *Indian* Prince. Some of thoſe Oxen will pace as eaſy as our Nags.

They manage them as Horſes; but inſtead of a Bit, they have a Rope drawn through the muſcly Part of the Noſe, only that in riding them you muſt take care that the Horns be not above a Foot long; for if they be longer, when the Flies begin to ſting, he will chafe, and toſs back his Horns, and ſometimes ſtick them into the Stomach of his Rider. They never ſhoe them but in rough Places, where the Stones and Heat are apt to waſte and chop the Hoofs. They uſe alſo little Coaches for travelling, which will hold two Perſons; but generally they ride but one in them, when they carry their neceſſary Cloak-Bag and Proviſion, for which there is a proper Place under the Coach;

they are drawn by two Oxen, and ſome of them are ſo ſtrong, that they will travel upon the Trot twelve or fifteen Leagues a Day, for ſixty Days together. When they have got half their Day's Journey, they give them two or three Balls, as big as one of our Twopeny Loaves, of Wheat Flour, kneaded up with Butter and black Sugar.

The Hire of one of theſe Coaches is a *Rupee* a Day, or a little more; for from *Surat* to *Agra* is forty Days Journey, and you pay for the whole not above forty-five *Rupees*. They, who have more to ſpend, may make uſe of a Palanquin for their Eaſe, wherein they travel very commodiouſly; it is a little Sort of a Coach, ſix or ſeven Feet long, and three broad, with Balliſters round about it. It has a kind of Covering over it, of Sattin, or Cloth of Gold, and when the Sun lies upon either Side, there is a Slave goes by the Side to pull down the Covering, and another carries a Targot of Oſiers, covered with ſome genteel Stuff, to keep the Traveller from the Heat of the Sun. Three Men, for the moſt part, apply themſelves to each of the Ends, to carry the Palanquin upon their Shoulders, and they go ſwifter than our Sedan-men, and with more Eaſe, becauſe they practiſe it from their Youth: You give to every one four *Rupees* a Month, but if the Journey exceeds ſixty Days they will have five.

Whether it be in a Coach, or a Palanquin, he that will travel honourably in the *Indies* muſt take along with him twenty or thirty armed Men, ſome with Bows and Arrows, others with Muſkets, who have every one the ſame Pay as thoſe that carry the Palanquin. Sometimes, for more Magnificence, they carry a Banner, as the *Engliſh* and *Hollanders* do, for the Honour of their Companies. Theſe Soldiers watch and keep Centinel for your Defence, and are mighty careful to give Content, that they may deſerve the good Word of the Chief of the Town where you take them; for he is reſponſible for their Fidelity, and has two *Rupees* apiece of them for his Recommendation. In the Villages where a *Mohammedan* commands, you may have Mutton, Pullets, or Pigeons; but where there are only *Banjans*, there is nothing to be had but Flour, Rice, Herbs, and Milk Meats. In the *Indies*, where the Heats are exceſſive, it is more commodious to travel by Night than Day; and therefore, when you come into any fortified Town, you muſt be gone before the Sun be ſet, if you intend to travel the Night following; for the Gates being ſhut, the Commander of the Place is to anſwer for all the Robberies committed within his Juriſdiction, and will ſuffer none to go out, telling them it is the King's Order, to which he muſt be obedient. The Meaſure of Diſtances in *India* is by Coſts, which is a League, and Gos, which is four of our common Leagues.

5. In travelling from *Surat* to *Agra* there are two Roads, one through *Brampour* and *Seconge*, and the other through *Amadabat*. In the firſt of theſe you go through *Barnoly*, a great Borough Town, where you ford a great River; this firſt Day's Journey lies through a Country ſomething woody, yet having many Fields of Rice and Wheat. From *Barnoly* you travel altogether through Woods to *Babor*, a large Village upon a Lake, about a League in Compaſs. Three Quarters of a League before you come at this Town you muſt ford a ſmall River, but with great Difficulty, becauſe it is full of Rocks and Stones, which are ready to overturn the Coach.

From *Babor* the next Stage is through a woody Country to the Inn *Kerkoa*, or *de la Begum*, becauſe it was built by the Charity of *Begum-Sakeb*, the Daughter of the Shah *Jehan*, for the Eaſe of Travellers, who before were forced to travel to *Navapoura*, which, beſides that it was too great a Journey, being upon the Frontiers of thoſe Rajahs who often revolt from the Great Mogul, the Caravans were generally abuſed. This Inn, or Caravanſera, is large, and very commodious. In the Road from hence to *Navapoura* you ford two Rivers.

Navapoura is a great Town, full of Weavers; but Rice is the greateſt Commodity there; for not only the River that runs through the Country makes it very fruitful in that Grain, which requires Moiſture, but the Rice that grows there has a peculiar Excellency, for which it is much eſteemed. It is, indeed, leſs by half than the Grain of the common Rice; but when it is boiled new, Snow is not whiter, and it ſmells like Muſk. This Property makes the *Indian* Grandees ſo fond of it, that they will eat no other; and when they would make an acceptable Preſent to any one in *Perſia*, they ſend them a Sack of this Rice. From *Navapoura* you paſs through *Naſſarbar*, *Dolmedan*, and *Senquera*, to *Tollener*: Here you paſs the River that runs through *Barock*, where it grows very large, and empties itſelf into the Gulph of *Cambaya*.

From *Tollener* your Way lies by *Choupre*, *Senquelis*, and *Nabir*, to *Badelpoura*; here the loaded Waggons pay the Duties of *Brampour*, but the Waggons that carry nothing but Paſſengers pay nothing: And, when this is done, you go on to *Brampour*, which was a great City, but is now very much ruined, and moſt of the Houſes are thatched with Straw. In the midſt of it is the Caſtle, where the Governor lives. The Government of this Province is a very conſiderable Command, and is only conferred upon the King's Son or Uncle; but, ſince they have underſtood the Strength of the Province of *Bengal*, which was formerly a Kingdom, that Province is thought the moſt conſiderable in all the Mogul's Country at this Day. There is a great Trade in this City, as well as in the Provinces adjoining, in Calicuts, of which there are prodigious Quantities made here, clear and white, which are tranſported into *Perſia*, *Turky*, *Muſcovy*, *Poland*, *Arabia*, *Grand-Cairo*, and other Places. Some of them are painted with Flowers of various Colours, and the Women make Veils and Scarfs of them, and of ſome Coverlets for Beds, and Handkerchiefs. They make another Sort of Linnen, which they never dye, and hath a Stripe of Gold or Silver quite through the whole Piece, and at each End, from the Breadth of one Inch to twelve or fifteen, they fix a Tiſſue of Gold, Silver, and Silk, intermixed with Flowers; both Sides are alike. Some of theſe Linnens are made on Purpoſe for Saſhes, and are called Ormi, and contain from fifteen to twenty Ells: Some are of two Ells only, and ſerve the Ladies of Quality for Veils and Scarfs; and vaſt Quantities of theſe Goods are vended in *Perſia* and *Turky*. They make alſo other Sorts of Cotton Cloths at *Brampour*, becauſe there is no other Province in all the *Indies* which has greater Quantities of Cotton.

Leaving this City there is a ſmall River, which, when ſhallow, is forded, and, if ſwelled by the Rains, there are always Boats attending to take over Travellers: And then you come to *Pevinbeſera*, which is an Incloſure of Walls and Hedges, in which are fifty or ſixty Huts covered with Straw, where live certain Men and Women that ſell Rice, Flour, Butter, and Herbs, and make it their Buſineſs to bake Bread, and boil Rice to ſell to the Travellers; when theſe Perſons cleanſe the Hut, take and put into it a Bedſtead, with Girths to lay a Mattreſs or Quilt upon, which the Travellers uſually carry along with them: This is ſignified by the Word *Sara*, which is added to ſuch Places. If any Traveller have a Mind to a Fowl, or a Piece of Mutton, any *Mohammedan* in the Place will go to the City and buy it for him. From hence you go forward through *Pander*, *Balkiſera*, *Conſembar*, *Chenipow*, *Charava*, and *Bichola* to *Andy*, where you paſs a River that falls into the *Ganges*, between *Banazon* and *Potna*, and ſo take the Way by *Onguenas*, *Tiquery*, *Tool-medan*, *Nova-ſera*, *Jehavour*, *Signor*, *Chekaipour*, *Douray*, *Aſſorkair*, *Teler*, and *Sankaira* to *Seconge*.

This City is large, and moſt of its Inhabitants are *Banjan* Merchants and Handicrafts, the Trade paſſing from Father to Son; and, for that Reaſon, there are ſeveral Houſes of Stone and Brick. Here is alſo a good Trade for painted Calicuts, called Chintes, of which the Cloathing of all the meaner Sort of People in *Perſia* and *Turky* are made: And the ſame are uſed in other Countries for Coverlets for Beds and Table-Napkins. The ſame ſorts of Calicuts are made in other Countries, but the Colours are neither ſo lively nor laſting, but wear out with often waſhing; whereas thoſe made at *Seconge*, grow the fairer the more you waſh them. This ariſes from a peculiar Virtue of the River that runs by the City when the Rains fall; for the Workmen having made ſuch Prints upon their Cottons as the foreign Merchants give them, by ſeveral Patterns, dip them into the River often, and that ſo fixes the Colours that they will always hold. There is alſo made at *Seconge* a ſort of Calicut, ſo fine, that when a Man puts it on, his Skin ſhall appear as plainly thro' it as if he was quit naked; but the Merchants are not permitted to tranſport it, for the Governor is obliged to ſend it all to the Great Mogul's Seraglio, and the principal Lords of the Court, to make the Sultaneſſes and Noblemens Wives Shifts and Garments for the hot Weather; and the King and the Lords take great Pleaſure to behold them in theſe Shifts, and ſee them dance with nothing elſe upon them. From *Seconge* you go to *Madalki-ſera*, and paſſing thro' *Paulki-ſera* and *Chaldolki-ſera*, you come to *Callabas*.

6. There is a great Town, which was the Reſidence of a Rajah formerly, who paid Tribute to the Mogul; but the laſt Emperor *Aurengzeb*, when he came to the Crown, not only cut off his Head, but the Heads of many of his Subjects, which he cauſed to be ſet up in ſo many Holes dug in the Ground, about the two Towers which ſtand upon the High-way near the Town. From hence the Way lies to *Ackmate*, and from thence to *Col'eſar*, whoſe Inhabitants are all Idolaters. Without the Town, upon the High-way, grows a vaſt Number of great Trees, which they call Mangues, and in many Places near the Trees are many Pagods, with every one an Idol at the Door: They belong to the *Banjans*. From this Town you travel through *Sanſell* and *Dongry* to *Gate*. This is a ſtrait Paſſage of a Quarter of a League long between the Mountains, and is unavoidable by all that come from the South, as *Surat*, *Goa*, *Viſapour*, *Golconda*, *Maſlipatan*, and other Places, to *Agra*; for there is no other Road but this. At the Entry of it are the Ruins of two or three old Caſtles, and the Paſſage is ſo narrow that two Waggons can hardly go a-breaſt: Formerly there was a Gate at each End of the Strait, and, at the End, next *Agra*, there are five or ſix Shops of *Banjans* that ſell Flour, Butter, Rice, Herbs, and Pulſe. Not far from thence is a Magazine of Rice and Corn, kept by Serpents of thirteen or fourteen Feet long, and of a proportionable Bigneſs.

The People hereabouts get their Living by Paſſengers, from whom they extort as much as they can, for ſhewing them the Way, there being none but them that know it, becauſe it lies through Intricate Rocks, till they come at the River, which, being forded, the Road leads to *Nadar*, which is a great City upon the Deſcent of a Mountain, upon whoſe Top there is a Fortreſs, and all the Mountain is encompaſſed with Walls. The greateſt Part of the Houſes, as in all other Cities of *India*, are thatched with Straw, one Story high; but the rich Mens Houſes are two Stories high, and terraſſed. Round about the City are ſeveral Ponds to be ſeen, which were formerly encompaſſed with hewn Stone, but are now decayed for want of looking after; but there are ſtill very fair Monuments about them. The River which you paſs before you come at this City, encompaſſes the Mountain like a Peninſula, and after a long winding Courſe, falls into the *Ganges*. At *Nadar* are made a great Number of quilted Coverlets, ſome white, others embroidered with Flowers of Gold, Silk, and Sattin. From *Nadar* you go to *Barqui-ſera*, and ſo by *Trie* to *Goualeor*. This is a great City, but ill built, as all the other *Indian* Cities are. It is built on the Side of a Mountain that lies on the Weſt-ſide of it, and at the Top is encompaſſed with Walls and a Tower. In the Incloſure are ſeveral Ponds made by the Rains, with which they water their Grounds, ſown with Rice, and ſo raiſe Corn enough to maintain their Gar- riſon; and, upon that Account, it is eſteemed the beſt in the *Indies*. Upon the Deſcent of this Hill, which looks towards the North-Eaſt, *Cha-Jeban* built an Houſe of Plea- ſure, from which there is a delightful Proſpect all over the City: It is ſo contrived that it may ſerve for a Garriſon. Beneath the Houſe are to be ſeen ſeveral Idols, cut out of the Rocks, repreſenting the Shapes of their Gods; and one of them is of an extraordinary Height.

The *Mohammedan* Princes make this Fortreſs of *Goua- leor* a Priſon for their great Princes and Noblemen that of- fend them. *Cha-Jeban*, who came to the Crown by foul Play, impriſoned all the Princes and Lords he ſuſpected to be Male contents, in this Caſtle, but ſuffered them all to enjoy their Eſtates. But *Aureng-Zeb* his Son takes contrary Meaſures; for when he impriſons any great Lords, he orders them to be poiſoned within ten or twelve Days after; that he may be rid of his Enemies, and yet not be thought a cruel Prince for his bloody Executions. Leaving *Goualeor*, you ford a River called *Lanke*, and come to *Paterki-ſera*, where paſſing over a Bridge, containing ſix wide Arches, and which carries you over the River *Quarinado*, you arrive at *Quarraqui-ſera*, and ſo to *Dolpoura*, where there is a River called *Chamel-nadi*, to which there belongs a Ferry-boat. The River falls into the *Gemena*, between *Agra* and *Hallebas*. From hence you paſs to *Minaſqui-ſera*, where there is a River called *Jagounagi*, but you do not paſs it till you come eight Leagues farther, and then there is a long Bridge built with Stone, called *Quaoulcapoul*. Not far from this Bridge they view the Merchants Goods, that when they come to *Agra* they may not be cheated of their Duties; and more particularly obſerve whether there be any Flaſks of Wine among the Caſks of pickled Fruits. From this Bridge you come to *Agra*, which, from *Surat*, is 339 Leagues, *viz.* from *Surat* to *Brampour* 132 Leagues, from thence to *Seconge* 101 Leagues, and from thence to *Agra* 106 Leagues. In theſe two laſt Stages the Country is full of fine Fields of Corn and Rice, being a lovely Champain, where you meet with very little Wood, and the Villages ſo thick that you may reſt when you pleaſe.

7. The other Road from *Surat* to *Agra*, through *Amanadabad* lies, firſt, through a Country full of Corn, Rice, Millet, and Sugar-Canes; where, having ferried over the River which runs to *Cambaya* and falls into the Gulph, you come to *Barocbe*, which is a great City, and has a Fortreſs belonging to it, but there is no Uſe made of it at preſent. This City is very famous for Trade, on account of the River, which has a peculiar Quality to whiten their Cottons, and which are therefore brought from all Parts of the Mogul's Territories thither for that End; beſides, here are made great Quantities of Baffa's, or long and large Pieces of Cotton, very fine and cloſe woven; the Price of them is from four to an hundred *Rupees*. You muſt pay Cuſtom at *Barocbe* for all Goods carried in and out. The *Engliſh* Preſident has a very fair Houſe in this City.

In this City are a ſort of Mountebanks, who do ſtrange Tricks, *viz.* They will heat a Chain red-hot, and wind it about their naked Bodies ſeveral Times, and though they make as if they felt a great deal of Pain, yet, in truth, they receive no Harm at all: But, what is more miraculous, they will thruſt a dry Stick into the Ground, and, in leſs than half an Hour's Time, make it a Tree of four or five Foot high, bearing Leaves and Flowers as in the Spring-time. An *Engliſh* Miniſter ſeeing this Witchcraft, declared it unlawful to be a Spectator of ſuch Deluſions, and proteſted he would not give the Communion to any that ſhould hereafter do it. Theſe Mountebanks wander up and down the Country to ſhew theſe Tricks, with their Wives and Children, and get a Livelihood by it.

Thoſe who are curious to ſee *Cambaya*, leave the direct Road, which goes to *Broudra*, and paſs through that City, which is not above four or five Leagues out of the Way, and is the ſafer Road. *Cambaya* is a great City at the Bottom of the Gulph, on the South of it; it lies in the Province of *Guzerat*, and though it be not ſo popular as *Surat*, it is as big again. It has very fair Walls about it four Fathoms high, and Towers ſtanding at a certain Diſtance. The Streets of it are large, and have all Gates at each End, which are ſhut every Night. The Houſes are very high, and built of Bricks, dried in the Sun, and were once furniſhed very richly after the *Portugeſe* Manner, but now many of them fall to Decay. Here it is that they ſhape thoſe fair Agates, that come from *India*, into Cups, Hafts of Knives, Beads, and other Workmanſhip. Theſe Agates are fetched out of a Quarry, by a Village called *Minodra*, four Leagues from *Cambaya*, in Pieces as big as a Man's Fiſt. The Shops here are ſtored with aromatick Perfumes, Spices, ſilken and other Stuffs. Moſt Part of the Inhabitants are *Banjans* and *Raſhpouts*. The Caſtle, where the Governor reſides, is large, but not very beautiful. There are ſo many Monkeys in the Town, that ſometimes the Houſes are covered with them, and they often do Miſchief in the Streets, by throwing down ſuch Things as they find upon the Roofs. The Outſides of the Town are beautified by a great many fair publick Gardens. Here is a marble Sepulchre, raiſed by a King of *Guzurate*, in Honour of a Governor of this City, but it is decayed: It contains three Courts, and in one of them are ſeveral Porphyry Pillars.

Anciently, in this City, there was an Hoſpital for ſick Beaſts, but there are only Ruins of it now. The Suburbs are almoſt as big as the Town, and in them they make Indigo of the ſame Nature as that of *Sarqueſſe*. It was famous for Traffick when the *Portugueze* flouriſhed in *India*, but now the Trade is almoſt loſt, becauſe the Sea, that once came up ſo near the Town that little Veſſels could anchor by it, is now become half a League diſtant from it, and near the Coaſt is ſo ſhallow, that great Ships can come no nearer than three or four Leagues. There are great Numbers of Peacocks in the *Indies*, eſpecially in the Territories of *Baroche*, *Cambaya*, and *Broudra*; and in the Day-time they walk about the Fields, but at Night rooſt upon the Trees: The Fleſh of the young ones is white, and well-taſted. In thoſe Parts where the *Mohammedans* govern, you may catch them without Difficulty; but in thoſe Places where there are idolatrous Rajahs Maſters, it is very dangerous to kill them, or any other Bird or Animal; for the *Banjans* count it Sacrilege, and will ſeverely puniſh any they can ſeize: They whipped a *Perſian* Merchant to Death, and took all his Money, to the Value of 300,000 Rupees, for ſhooting a Peacock.

From *Cambaya* you go through a little Village, where there is a Pagod, where the *Indian* Courtezans make their Offerings; and amongſt divers naked Images, there is one that reſembles *Apollo*, with his Privy-parts uncovered. The young Girls, who are trained up to this wicked Art by the old Courtezans, when they are eleven or twelve Years old, ſurrender themſelves up to this Idol, believing that it will bring them good Fortune. And about ſix Leagues farther you come to *Chidabad*, which is one of the faireſt Houſes of the Great Mogul, being in a wide Incloſure, wherein he has vaſt Gardens and large Ponds, with all the Pleaſures and Curioſities whereof the Genius of the *Indians* was capable. And from this Place you travel to *Amadabat*, to which City you come from *Broudra* by *Neriade*.

8. *Amadabat*, which is probably the *Amadariſtis* of *Arrian*, is eighty-two Leagues from *Surat*, and lies in 23 Degrees and ſome Minutes of N. Lat. It is built in a lovely Plain, watered by a little River, called *Sabrametty*, which is not very deep, but ſwells prodigiouſly by the Rains. Without the Town are many large Gardens incloſed with Brick-walls, and every one of them have a kind of Pavilion at the Entry: By them there is a Reſervatory of Water, which has in the Midſt of it a lovely Garden, eighty Paces ſquare, into which one enters over a Bridge of four hundred Paces long; at the End of the Garden are pretty convenient Lodgings. Near theſe you ſee many Houſes, which make a kind of large Village, and a great many Tombs, indifferently well built. From hence you paſs through a Street, which leads you into the Town, which is incloſed with Stone and Brick-walls, which, at certain Diſtances, are flanked with great round Towers and Battlements all over: It hath twelve Gates, and is about a League and an half in Length, if you take in the Suburbs.

All the Streets are wide, and the Meidan is four hundred Paces in Breadth, and ſeven hundred in Length, with Trees planted on all Sides. The Gate of the Caſtle is on the Weſt-ſide, and there are ſix or ſeven Pieces of Cannon mounted. In the Market-place are the Tribunals for the Couteval, or criminal Judge; and in the Midſt is a very high Tree, which has a Ball fixed to the Top of it, for thoſe to hit who exerciſe themſelves by ſhooting with Bows and Arrows. This Caſtle is walled about with good Walls of Free-Stone, and is as ſpacious as a little Town. Near the Meidan is a large Palace belonging to the King, which has over the Gate a large Balcony for the Muſicians, who play there every ſix Hours. The Apartments are adorned with Gold Paintings. The *Engliſh* Factory is in the Middle of the Town, is well ſeated, and hath very fair Courts. Their Warehouſes are commonly full of Cloths from *Labor* and *Debly*, with which they drive a great Trade.

But the Trade of the City is in Silk Stuffs, Hangings of Gold, Silver, and Silk, but with woollen Grounds, Saltpetre, Ginger candied and raw; Lac, Cummin, Opium, Tamarinds, Mirabolans, and flat Indigo: There are many Moſques great and ſmall in it, but that which is called *Juma-meſgid*, or *Friday*'s Moſque, becauſe all the devout People of the Town flock together on that Day, is the chiefeſt and faireſt. It hath a large ſquare Cloiſter, two fine Gates, with high Steeples, from whence the Muezims, or Beadles of the Moſques, call the People to Prayers. It hath ſeveral Domes, and two Minarets, and it is paved with Marble, ſo that all together it is a pleaſant Sight. It is inhabited by many Heathens, as well as *Mohamedans*, who have their Pagods, or Idol Temples there.

The Pagod of *Santidas* was the chief before *Aurengzeb* converted it into a Moſque. It hath three Courts, paved with Marble, and encompaſſed with Galleries; and into the third none muſt enter, till they have pulled off their Shoes; the Inſide is adorned with *Moſaick* Work, and Agates of divers Colours. In it are ſeveral Sepulchres of the ancient idolatrous Kings, of *Moſaick* Work, which look like little Chapels; but the Tomb of *Chaalom*, whom the *Indians* report to have been a Magician, but the *Mohommedans* believe him to have been a great Saint, is moſt honoured, being daily viſited by a great many out of Devotion. The *Banjans* have a great Veneration for Apes, and there are ſome that breed them up in their Pagods to worſhip, and if any one kill any of them, complain of it as a great Injuſtice. There are three or four Hoſpitals for Cows, Oxen, Camels, Apes, and Birds, and other ſick and maimed Beaſts, where they are looked after, and well fed. They buy them from *Chriſtians* and *Moors*, to deliver them as they ſay from the Cruelty of Infidels, and if they are incurable, they keep them there as long as they live; but if they recover, they ſell them to *Gentiles*, and none elſe. This is alſo very remarkable, that every *Tueſday* and *Friday*, all the Apes in the Country adjoining come into the City, and lie upon the Tops of Houſes, during the exceſſive Heats. Upon theſe Days the People never fail to ſet ready in their Terraſſes, Rice, Millet, Sugar-canes, and ſuch-like things; for if they do not find Proviſions, they will break their Tiles, and do a great deal of Miſchief.

About *Amadabat* are a great many Foreſts, where they catch Panthers, which they tame, and ſend to the King for his hunting. From hence you go to *Panſar*, and ſo by *Maſſana* to *Chitpour*, a very good Town, ſo called from a Sort of painted Calicuts, called Chinzes, made and ſold here. They have an Art here of taming Lions, by tying them in a large Plain, and making them a Sport to the People. Hereabouts it is common to meet the Companies of *Faquirs*, or *Mohammedan* Derviſes. They have a Superior, and ſome Aſſiſtants, who have ſome Cloaths better than the reſt, *viz.* ſome Ells of Calicut about their Middles, to cover their privy Parts, and a Tyger's Skin about their Shoulders; but the reſt have only a Cord for their Girdle, and a little Bit of Calicut faſtened to it to cover their Privities. Their Hair is tied about their Head like a Turbant, and they are armed with Bows, Arrows, and Muſkets, Half-pikes, *&c.* When they travel, they carry their Luggage, which is ſome Houſhold Stuff, and a pretty many *Arabian* and *Perſian* Books on Oxen. When they come to any Place, the Superior ſends ſome of his Crew a begging into the Towns and Villages, and what Alms they get is preſently diſtributed equally among them, every one of them taking Care to boil his own Rice, and what is over and above, they give to the Poor in the Evening; for they reſerve nothing for next Day. From *Chitpour* you paſs through *Balampour*, and ſo through *Dantivar* and *Bargant*.

This Town is in the Territories of a Rajah, to whom you muſt pay ſome Duties, and all the Way through theſe Countries is dangerous to be travelled, becauſe the Rajahs live altogether upon Robberies, and therefore unleſs you hire many People for a Guard, you will go near to have your Throat cut; for there is no Likelihood of eſcaping theſe Free-booters. From thence the Way lies through *Bimal* and *Modra* to *Chalaour*, an ancient Town upon a Mountain, encompaſſed with Walls, and very difficult to come to. There is a Lake upon the Top of the Mountain, and another below, and between them lies the Road to the Town. From *Chalaour* you paſs on to *Cantap*, *Satlana*, *Palavaſaney*, and *Pipas*, to *Dantiver*, from whence to *Mirda* is three Days Journey, being a mountainous Country, and belongs to Rajahs, or petty Princes, who pay Tribute to the Great Mogul; but in Recompence of it, the Great Mogul gives them Commands in his Army, which affords them large Appointments. *Mirda* is a great City, but ill built.

This City having offended the King's Siſter *Begum*, the Wife of *Cha-Eſt-Kan*, in not waiting on her, and making her a Preſent on her Journey through that Place, when ſhe went to marry her Daughter to Sultan *Sujah*, ſhe let looſe two hundred Elephants, who tore down their Trees, and did them incredible Miſchief. From *Mirda* the Road lies through *Borondo*, *Coetchiel*, *Bandor*, *Sonnery*, *Ladona*, *Chaſou*, *Nouali*, and *Hindoo*, to *Baniana*. Theſe two laſt Towns are famous for Indigo Cake, which is round, and being the beſt of all the Indigoes, is double the Price. *Vettapour*, a Town famous for weaving Woollen Hangings, is the next Town, and from thence you go directly to *Agra*, to which from *Surat* is four hundred and fifteen Leagues, and thirty-three Days Journey, if they could be equally divided; but becauſe you ſtay in ſome Places, it uſually takes up thirty-five or forty Days.

From *Candahar* there are two Ways to *Agra*, either through *Caboul* or *Multan*; the latter is the ſhorter by ten Days Journey; but the Caravan never goes that Way, becauſe it lies almoſt all through the Deſarts, where there is no Water to be met with for three or four Days together, ſo that their moſt ordinary and beaten Road is through *Caboul*. Now from *Candahar* to *Caboul* is twenty-four Days Journey, and from thence to *Lahor* twenty-two; from *Lahor* to *Dehly*, or *Gehanabat*, eighteen, and from thence to *Agra* ſix, which with the ſixty Days Journey from *Iſpahan* to *Errata*, and twenty from *Errata* to *Candahar*, makes in all from *Iſpahan* to *Agra* one hundred and fifty Days Journey; but the Merchants that are in haſte ride three or four in a Company upon Horſes, and finiſh it in ſixty or ſixty-four Days at moſt.

Multan lies in 29° 40′ North Latitude, and is the capital Town of the Province of the ſame Name, tho' ſome Geographers place it in the Province of *Sinde*. It hath many Towns dependant upon it, as *Cazdar*, or *Cordar*, *Coudavil*, *Saudur*, and others. In this City are made a vaſt Quantity of Linnen Calicuts, for which heretofore there was a very great Trade, becauſe it not being far from the River *Indus*, they could eaſily tranſport them to *Tata*, where the Merchants of ſeveral Countries bought them up; but becauſe of late the Channel of the River is ſpoiled in ſome Places, and the Mouth is quite ſtopped up with Sands, they are forced to ſend all their Goods to *Agra*, and ſo to *Surat*, which ſo inhances the Price by the Carriage, that the Merchants do not care to deal in them; by which means the Trade is much leſſened there, and the Workmen have deſerted the City, ſo that the King's Revenues are much leſſened in thoſe Provinces: Yet there is a ſmall Trade for Sugar, Opium, Brimſtone, Galls, and Camels, which are tranſported into *Perſia*, *Gazna*, *Candahar*, and the *Indies*, by *Lahor*. It furniſhes *Indoſtan* with the fineſt Bows that are to be ſeen in it; and here are bred the great Number of Dancers of both Sexes that ſpread themſelves all over *Perſia*.

The Commander and Officers of this Town are *Mohammedans*, and conſequently it may be ſuppoſed that moſt Parts of the Inhabitants are of the ſame Religion; yet there are a great many *Banjans*, who come to trade, and exerciſe their Arts, and Brokage, and Uſury, in which they much outdo the *Jews*; for they are ſo watchful and cunning, that no Opportunity of Gain ſlips them; and they have ſo wound themſelves in all Buſineſs, that hardly any body can be without them. They take Commiſſions of all Kinds, and though it be known that they make a Profit of every thing, yet the Merchants chuſe to make uſe of them, rather than do their Buſineſs themſelves; for they will buy cheaper and better than any Man can for himſelf. They are of a pleaſant Humour, and refuſe no Service, whether honourable or baſe, and are always ready to ſatisfy thoſe that employ them; and therefore every one has his *Banjan* in the *Indies*, and ſome Perſons of Quality intruſt them with all they have, though they are not ignorant of their Hypocriſy and Avarice. The richeſt Merchants of the *Indies* are of this Claſs or Tribe. They are commonly very jealous of their Wives, who are fairer than the Men, though of a brown Complexion, and love to paint. They have a particular Law amongſt them, which permits them to eat Fowl upon certain Days of the Year, and to have one Wife among two or three Brothers, and the eldeſt of them is accounted the Father of the Children begotten among them.

9. From *Candahar* you travel to *Chariſafar*, and then through *Zealate*, *Betzay*, *Mezcur*, and *Garabat*, to *Chakenitouze*, which is a frontier Town of the *Indies*, and the Country about it under the Command of ſeveral Princes that acknowledge the *Perſian* Emperor. From this City to *Caboul* is forty Leagues, and in the whole Journey there is but three pitiful Villages, where you can rarely get Bread and Barley for your Horſes, and therefore you muſt carry Proviſions for yourſelf.

In the Months of *July* and *Auguſt* there blows an hot Wind in theſe Parts, that takes away a Man's Breath, and kills him upon the Place. It is the ſame with that which blows about *Babylon* and *Mouſſul* at certain Seaſons. In this Road dwells a certain People called *Augans*, towards the Mountains of *Balch*; they are a ſturdy ſort of People, and great Robbers in the Night-time. Theſe People, as the reſt of the *Indians*, have a Cuſtom to cleanſe and ſcrape their Tongues every Morning with a crooked Piece of a Root, which cauſes them to void a great Quantity of Phlegm and Rheum, but not to vomit, as it doth the other *Indians*; nevertheleſs, when they come to eat, as ſoon as they have ſwallowed two or three Bits, their Lungs begin to ſwell, and they are conſtrained to go forth and vomit; after which they return again to their Victuals with a very good Appetit; ſhould they not do ſo, they would not live above thirty Years, and beſides would be troubled with a Dropſy.

Caboul is a large City, the Metropolis of the Province of *Cabouliſtan*, or *Caboul*, and hath two Caſtles well fortified; and becauſe ſeveral Kings have held their Courts there, and many Princes have had it ſucceſſively for their Portion, there are a great many Palaces in it. It lies in 33° of North Latitude, the Mountains about it produce Plenty of Mirabolans, which from thence the Eaſtern People called *Cabuly*, ſeveral Sorts of Drugs, and ſome Spices, with which the Iron Mines in them yield a great Profit to the Inhabitants. In this Town they maintain a great Trade with *Tartary*, the Country of the *Uſbecks*, and the *Indies*. The *Uſbecks* alone ſell yearly in this Town above ſixty thouſand Horſes, and the *Perſians* bring hither great Numbers of Sheep, and other Cattle, by which means they are much enriched. Wine is to be had, and Proviſions are cheap, though the Country about it is but cold and barren, unleſs in ſome Places, which are ſheltered by the Mountains, being rendered a little more fruitful, by the two Rivers that water it, and which have their Source in the Mountains.

From this Province eſpecially come the large Canes, of which they make Halberds and Lances, and they have many Grounds planted with them. The Inhabitants of the City and Province are moſt of them Heathens, and therefore in all Towns and Villages are many Pagods. They reckon the Months by the Moons, and with great Devotion celebrate the Feaſt called *Houly*, which laſts two Days, at the full Moon in *February*. At this Feaſt, they are all cloathed in a dark red, and after they have prayed in the Temple, and made Oblations, they ſpend the reſt of the Time in Dancing, by Companies, in the Streets, to the Sound of Trumpets, viſiting their Friends, and eating together, every Tribe by itſelf. The Great Mogul's Revenue from this Country is four or five Millions yearly.

From *Caboul* the Road lies through *Bariabe*, *Nimela*, *Aliboua*, *Taka*, *Kiamri*, *Chaour*, and *Novechaar*, to *Atech*, a City ſituate upon a Point of Land, where two Rivers meet together. It is one of the beſt and ſtrongeſt Garriſons the Great Mogul has, and no ſtranger is permitted to enter into it without a Paſſport from the King. From hence you paſs to *Calapane*, and ſo to *Roupate*, *Toulapeca*, *Keralay*, *Zerabad*, and *Imiabad*, to *Labor*. This City is the Metropolis of a Kingdom, built upon the River *Rava*, which is one of the five Rivers, which deſcending from the Mountains, ſwell the River *Indus*, and give the Name of *Peniab*, or *Five Rivers*, to all the Region they run through.

It lies in 31° 50′; the River having a very flat Channel, is fallen off from the Town above a League, and being ſubject to overflow, does a great deal of Miſchief in the Country. The City is large, and extends itſelf above a League in Length. It was a very pretty Place when the Kings kept their Courts there, having many Moſques, publick Baths, Caravanſera's, Squares, Tanques, Palaces and Gardens; but all theſe, with the greateſt Part of the Houſes, are fallen to Ruin, by reaſon of the exceſſive Rains, which have waſhed down many of them. The Caſtle remains ſtill, for it is ſtrongly built. It hath twelve Gates, three towards the City, and nine towards the Country, and the Palace which is within it has not yet loſt its Beauty. There are a great many Pictures upon the Walls, repreſenting the Actions of the Great Mogul, and his Forefathers, all promiſcuouſly painted; and on one Gate is the Picture of a Crucifix, and on another the Virgin *Mary*, not out of any Kindneſs to the Chriſtian Religion, but to flatter the *Portugueze*.

The Inhabitants are moſt of them *Gentiles*, and ſo there are many Pagods in the Town, of which ſome are adorned well, and all are raiſed ſeven or eight Steps from the Ground. The Province about it is one of the largeſt and moſt plentiful in the *Indies*, the Rivers that run through it rendering it moſt fertile in Rice, Corn, and Fruits. The Wine alſo is pretty good, and the Sugars the beſt of all *Indoſtan*. All ſorts of painted Cloths, and other *Indian* Manufactures, are wrought here, and it is ſaid that this Province yields the Mogul a Revenue of thirty-ſeven Millions yearly, which is a Proof of its great Trade and Fruitfulneſs. From *Labor* to *Agra* there is one continued Walk of Trees, called Achy Trees, which have long and thick Branches, which cover the whole Way, though theſe Cities be one hundred and fifty Leagues diſtant one from the other. It was planted by King *Gebanguis*, but is not kept up.

At *Tanaſſar*, a Town in this Province, is a Convent of *Gentiles*, who are called *Nartias*; they have a General, Provincial, and other Superiors, and ſay, that it is above two thouſand Years ſince they were founded; they vow Obedience, Chaſtity, and Poverty. They obey the leaſt Signal of their Superiors, and will not look a Maid or Woman in the Face. They live on Alms, which is begged for them every Day at the Houſes of the *Gentiles* of their Tribes, and will leave nothing till the Morrow. They make but one Meal a Day, and that is about Noon; and though they are never ſo thirſty or hungry, muſt not eat nor drink till the ſame time the next Day.

They wear nothing on their Bodies, but a Cloth to cover their privy Parts, which they bring up over their Heads, like a Woman's Coif. The main Point of their Inſtitution is, not to do to others what they would not have others to do to them; and they obſerve it even to the Beaſts, which they will never kill. If any body beat them, they do not reſiſt, and if they are reviled, they make no Anſwer. They employ themſelves wholly in Prayers, and Reading; but conclude the Day with the Sun-ſet; for they never light a Candle. If any break their Orders, he is ſeverely puniſhed; and if they break their Vow of Chaſtity, they are expelled. They have above ten thouſand Monaſteries in the *Indies*. Some of them think it ſufficient to worſhip God in Spirit, and have no Idols, or Pagods. There are alſo religious Nuns of the ſame Order, who live very exemplary.

10. From *Labor* the Way lies by *Menat-kan*, *Tatyabad*, *Sera-dakan*, *Sera-balour*, *Sera-dourai*, *Serinde*, *Sera-Mogoul*, *Sera-Chabas*, *Dirauriel*, *Sera-Crindal*, and *Guemaour*, to *Debly*, or *Gehanabad*. This City is a large Place, and ſtands near the River *Gemma*, which runs on both Sides of it; and after it has paſſed *Agra* and *Kadione*, empties itſelf into the *Ganges*. It it is divided into three Parts or Towns. The firſt is almoſt intirely deſtroyed. The *Indians* ſay it is very ancient, and that it was the capital City of the States of King *Porus*, who oppoſed *Alexander the Great*. The *Indians* ſay it had fifty-two Gates; and there are ſtill remaining a long Stone Bridge, and a Way, with lovely Trees leading to the ſecond Town, by the Sepulchre of *Cha-Humayen*. The ſecond Town was at the Conqueſt of it beautified with many ſtately Sepulchres of the *Patan* Kings, and other Monuments, which rendered it a very lovely Place; but *Cha-Jehan*, the Father of *Aurengzeb* the preſent King demoliſhed it, and left nothing but a Pyramid, or Obeliſk of Stone, which, by its unknown Characters, ſhews a great Antiquity.

The third Town is joined to the Ruins of the ſecond, and was built by *Cha-Jehan* out of the Ruins of it, and from him it had its Name of *Gehan-abad*. This City lies in an open Champain, upon the Bank of the River *Gemma*, and is encompaſſed with a ſingle Wall. All the Houſes even of private Men conſiſt of great Incloſures, in the midſt of which is a Place for Lodgings. The greateſt Part of the Lords have their Houſes without the City, for the Conveniency of Water; for the King chuſeth to keep his Court here rather than at *Agra*, for the ſame Conveniency. As you enter into *Gehan-abad* from *Debly*, you come into a long and broad Street, which has Vaults on each Side, where the Merchants keep their Shops. This Street ends in the great Piazza, where the King's Palace ſtands. There is another Street which leads up to to the King's Palace, where the Merchants live, who keep no Shops: The Fortreſs of it is half a League in Circuit, and has good Walls, with round Towers in them, and Ditches about them full of Water. The King's Palace, where are all the Enſigns of Royalty, is in this Fort. There is a Place by the Water-ſide for the fighting of Elephants, and other Exerciſes. The King's Palace is encompaſſed with Walls of fair red-cut Stone, with Battlements.

The Gate and firſt Court have nothing of Magnificence, for the great Lords may enter into with their Elephants. Out of this Court you go through a long and large Paſſage, with fair Portico's on both Sides, into a great Court, where the Omrahs, *i. e.* the great Lords of the Kingdom, keep Guard in Perſon, having their Lodgings round about the Court, and their Horſes tied at the Doors. From this ſecond Court you paſs into a third, through a great Portal, where on the one Side is the Mogul's Wardrobe, out of which he beſtows the Calaat, or whole Habit of a Man, which he gives to any Stranger, or Subject, in Honour to them. The next is the Place where the Drums, Trumpets, and Hautboys are laid, which are ſounded when the King goes upon the Judgment Seat, and right forward is the Divan, where the King gives Audience and Sentence. In the Middle of the Hall is the Throne, where the King ſits, erected upon a Kind of Theatre. It has a little Bed, with four Columns, a Canopy, Back-piece, Bolſter, and Counterpoint, all embroidered with Diamonds, and covered with a Cloth of Gold when the King ſits on it. Below the Throne is a Place twenty-four Foot ſquare, encompaſſed with Baluſters, ſometimes of Silver, and at other Times Gold Plates. At the four Corners of it ſit the four Secretaries of State, who are the only Advocates in all Cauſes.

Many Lords ſtand by the Baluſtrade, and ſome of the greateſt, with his Children, ſtand by the Throne. While the King is on his Throne, none may ſtir out of the Palace, nor any that have Buſineſs come nearer than the Chancel in the Middle of the Court, till they are called; no, not Embaſſadors themſelves. From the Divan the King paſſes over a Terraſs, where the River is to be ſeen, into the *Haram*. Upon the left Hand of the Court ſtands a little Moſque neatly built, with a Cupola covered with Lead, perfectly gilt. Hither the King goes every Day to hear Prayers, except *Fridays*, when he goes to the great Moſque, which is a very fair one, and raiſed above the Houſes of the City. On the right Side of the Court are the King's Stables, which are full of ſtately Horſes, the worſt of which ſtands the King in three thouſand Crowns, and ſome coſt ten thouſand. On the River the King has ſeveral ſmall Brigantines to take his Pleaſure in.

From *Dehly* you travel to *Badelpoura*, and ſo by *Pel-vel-ki-ſera* and *Catki-ſara*, where is one of the greateſt Pagods of the *Indians*, together with an Hoſpital for Apes, as well for thoſe that are bred thereabout, as for thoſe that come from the neighbouring Parts, which the *Banjans* are very careful to feed. The Pagod is called *Matura*. It was formerly in greater Veneration than now it is, and the Reaſon is this, becauſe the River waſhing the Walls thereof, was convenient for the waſhing the *Banjans* before they went to their Devotions; but ſince the River has left it above a League, many have deſerted; but ſtill it wants not ſome Reſort of the *Indians*, who always bring with them ſome Food for the Apes.

12. Between this Place and *Goodkiſera* is but five Leagues, and then you come to *Agra*. This City lies in 27° 31′ of Latitude, and in a ſandy Soil, which cauſes extreme Heat. It is the biggeſt City in *India*, and was formerly the Reſidence of their Kings, till *Cha-Jehan* fearing the great Heats, uſually ſought a more temperate Air, and ſo removed to *Gehan-abad*. The Houſes of great Perſons are fair, and well built; but the Houſes of the meaner ſort are as plain as in other Parts of *India*, being low and thatched. It is not very populous, unleſs it be when the Court is there; but at that Time it is thronged, the King being attended with an Army for his Guards, and a great Number of Rajahs, Omrahs, Mauſapdars, and other Nobles, with their Retinues, beſides Merchants and Tradeſmen that follow the Court for Trade. The People are moſt of them *Mohammedans*, and theſe have all the Power in their Hands, though there are a conſiderable Number of *Chriſtians*, ſome few *Heathens* and *Perſees*.

The *Dutch* have a Factory here, but the *Engliſh* have left theirs, becauſe it did not turn to Account. The moſt remarkable Things in *Agra* are the King's Palace, and ſome Monuments near and about the City. The King's Palace is in the Caſtle, which is begirt with a Wall of Stone and Brick, terraſſed in ſeveral Places, which is twenty Cubits high. Between the Caſtle and the River is a large Place left on purpoſe for the fighting of Elephants for the King's Diverſion. It is near the Water, to allay the Fury of the conquering Elephant, who preſently comes to his Temper, if he be but two or three Feet deep in the Water. Before the Place is a wide Piazza, it contains three Courts, adorned with Porches and Galleries, that are painted and gilt; nay, ſome Things are covered with Plates of Gold. Under the Galleries of the firſt Court are the Lodgings for the King's Guards; in the ſecond is the Officers Lodgings; and in the third ſtately Apartments for the King and his Ladies: Out of theſe the King goes commonly to a lovely Divan, which looks to the River, to pleaſe himſelf in ſeeing Elephants fight. His Troops exerciſe and play upon the Water, or in the open Place. By this Palace ſtand twenty-five or thirty very large ones, in a direct Line, which belong to the Princes, and other great Lords of the Court, and all together afford a moſt delightful Proſpect to thoſe who are on the other Side of the River. Beſides theſe Palaces, the Beauty of *Agra* conſiſts in the Caravanſeras, which are about ſixty in Number, and ſome of them have ſix large Courts, with their Portico's which lead to very commodious Apartments, where the Merchants Strangers have their Lodgings.

There are above eight hundred Baths in the Town, and a great Number of Moſques, ſome of which are Sanctuaries. There are many magnificent and ſtately Monuments in and about *Agra* for ſeveral great Men, and eſpecially the rich Eunuchs, belonging to the King's Haram, are ambitious to build their own in their Life-time, and to erect Monuments to the Memories of their Forefathers; and this the Great Mogul encourages them in, that he may keep his Money in his own Kingdom, and divert them from going to *Mecca*, whither their blind Devotions often leads them to ſpend it. The two moſt eminent Monuments are that which King *Gehanguir* cauſed to be built for *Ecbar* his Father upon an Eminence in the Town. It ſurpaſſes the Magnificence of all thoſe of the Grand Signors; but the faireſt of all is that which *Cha-Jehan* erected in Honour of one of his Wives called *Tage-Mehal*, whom he tenderly loved, and whoſe Death had almoſt coſt him his Life. It was built by the moſt able Architects of the *Indies*, whom the King called together in a Council to contrive it, and having ſettle Salleries upon them, ordered them to ſpare no Coſt to make it the fineſt Mauſolæum in the World, if they could.

The *Indians* ſay it was twenty Years in building, that twenty thouſand Men were always employed about it, and it was finiſhed at length to Satisfaction. It ſtands on the Eaſt Side of the City, by the River Side. It is a kind of a Garden, with Compartments, like our Garden Plots; but the Walks, inſtead of Gravel, are black and white Marble: You enter into it through a large Portal, and on the left Hand is a fair Gallery, which looks towards *Mecca*, and in which are three or four Niches, wherein the Mufti comes at certain Hours to pray. About the Middle of the Garden are three great Platforms, one raiſed above another, with four Towers at the Corners of each. On the Top is a Cupola covered within and without with black Marble; under it is an empty Tomb (for the Sultaneſs is buried under the loweſt Platform) adorned with Tapeſtries, Candles, and other Ornaments, where there are always Moullahs attending to pray. The Sepulchres of the Eunuchs have only one Platform, with four little Chambers at the four Corners.

The *Indians* are pretty uniform in their Apparel, only the *Mohammedans* and the *Moors* diſtinguiſh themſelves by a particular kind of Coif, or Head Attire; but in all things elſe they are cloathed as the reſt. Their Breeches are commonly of Cotton Cloth, and ſometimes of Silk, and come down to the Leg or Ancle. Their Shirts hang over their Breeches, as the Faſhion is all over the *Levant*, and open before. In cold Weather they wear over their Shirts an Arcalick, or Waiſtcoat, of painted Stuff, quilted with Cotton, and pinked; and over that a Caba of white Cotton Cloth, for Lightneſs and Neatneſs; but if it be hot, they lay aſide their Arcalick. They uſe but one Girdle, and that is of white Cotton Cloth. None uſe the lovely Girdles of *Perſia* but the moſt wealthy Perſons of Quality; in cold Weather they wear a Veſt called Cadeby, lined with Sables. At all times, when they go abroad, they wear a Chal, which is like a Scarf, of ſeveral Colours. Their Turban is commonly little, and the *Mohammedans* wear it always white. The Rich have them of ſo fine Cloth, that twenty-five or thirty Ells of it, put into a Turban, will not weigh four Ounces. They are made at *Bengal*, and are dear. They wear their Hair for Ornament, contrary to other *Mohammedans*, who all ſhave their Heads. They uſe no Stockings, and on their naked Feet Slippers, which are of *Morocco*, or *Turkey* Leather; only the *Banjans* wear Heels to their Shoes, that they may ſtir more freely about their Buſineſs.

The rich *Banjans* cover theirs with Velvet, embroidered with Silk Flowers; but the Poor are ſatisfied with red Leather. The Mogul Women are cloathed almoſt like the Men, but the Sleeves of their Smocks reach no lower than the Elbow, that they may have Room to adorn their Arms with Carkanets, and Bracelets of Gold, Silver, and Ivory, or ſet with precious Stones, as they do alſo the Small of their Legs. The Smocks of the *Indian* idolatrous Women reach down only to the Middle, as doth the Waiſtcoat of Satin, or Cloth, which they wear over it, becauſe from the Waiſt downward they wrap themſelves up in a Piece of Cloth, or Stuff, that covers them to the Feet like a Petticoat: For Shoes they have high Pattens; they wear little flat Rings of Gold or Silver in their Ears, with Engraving upon them, and adorn their Noſes with Rings put through their Noſtrils. They wear alſo Rings on their Fingers for Ornaments, and have generally one with a Looking-glaſs ſet in it an Inch Diameter, to ſee themſelves. If the *Indian* Women are Idolaters, they go bare-faced; if *Mohammedans*, they are vailed.

In ſome Countries both Men and Women go naked to the Waiſt, and cover themſelves from thence to the Knees. At *Agra* they are curious in breeding up Beaſts to fight for Pleaſure, *viz.* He-goats, Weathers, Rams, Cocks, Quails, Stags, and Antilopes; for ſuch as cannot reach Lions and Elephants, are dextrous Fowlers and H[illegible]ers. Pictures alſo in this City are drawn with Art; but being for the moſt part laſcivious, are rarely bought up by *Europeans.* They have a Way in this Town of working in Gold, upon Agate, Cryſtal, and other baſe Metals, which our Goldſmiths and Lapidaries have not.

13. In your Journey from *Agra* to *Bengal* you come firſt to *Beruzabad*, then to *Serail-Haimal* and *Sarail-Sokandria* to *Sauqual:* A League from thence you paſs over the River *Sangeur* upon a Stone Bridge, where thoſe that are paſſing from *Bengal* to *Surat* may leave the Road to *Agra*, and ferrying over the *Gemma*, ſhorten their Journey ten Days: But, ſince ſome of that Way is very ſtony, Travellers generally chuſe to go by the Way of *Agra.* From this Bridge you go on by the *Cheourabad* and the Town *Serail Chajeada*, and *Serail* leaning to *Auren-abad.* This is a great Town, and the Capital of a Province, but it has no Walls. The Governor, who is a Prince, has his Reſidence there; and *Aureng-Zeb* commanded there, as he did at *Candich* in the Reign of his Father: His firſt Wife, whom he loved dearly, died in this Town, and as a Monument to her, he erected a lovely Moſque, covered with a Dome, and beautified it with four Minerets, or Steeples. It is built of white poliſhed Stone, which looks almoſt like Marble.

It hath ſeveral pretty Moſques, Inns, and Baths. The Buildings are, for the moſt part, of Free-ſtone, and pretty high: Before the Doors grow a great many Trees in the Streets, and the Gardens are well cultivated and pleaſant, affording the Refreſhments of the Fruits, Grapes, and Graſs-plats. They have Sheep without Horns, that are ſo ſtrong, that being bridled and ſaddled, they will carry Children of ten or twelve Years of Age. It is a good trading Town, and well peopled, with excellent Ground about it. It took its Name, by which it is now called, from the preſent Monarch *Aureng-Zeb*, who overcame Sultan *Sujah*, his Brother, who was Governor of all the Provinces of *Bengal*, in that Place. From thence you paſs to *Alinchan*, and two Leagues farther paſs the *Ganges*, which, though famous in Hiſtory, is ſo ſhallow from *March* to *June* or *July*, when the Rains fail, that it will not bear a Boat.

The Water being drank cauſeth the Gripes, and therefore the *Hollanders* that live upon the Banks of it, never drink thereof till they have boiled it; but the Natives are ſo accuſtomed to it, that the King and Court drink no other, becauſe they account it lighter than any other Water. The Heathen *Indians* account the Water of this River to be ſacred, and have many Pagods by it, the faireſt in the *Indies*; ſo that it may be ſaid, that here Idolatry is moſt triumphant. The two chief Pagods are at the Towns of *Jagarnat* and *Benevrou:* Nothing can be more magnificent than they are, by reaſon of the great Quantity of Gold and many Jewels with which they are adorned. In theſe Pagods they keep their Feſtivals many Days together, and many People repair thither from all Parts of the *Indies*, where they carry their Idols in Triumph, and act all Manner of Superſtitions by the Encouragement of the *Bramins*, who are numerous thereabouts, and draw much Profit by it. The *Ganges* is full of pleaſant Iſlands, covered with lovely Trees, ſo that it is moſt delicious Sailing upon it. In theſe Iſlands and ſome other Places of *Bengal* is a Bird called *Meina*, whoſe Colour is like a Blackbird, but as big as a Raven; it will ſpeak lik a Starling, and imitates the Neighing of a Horſe exactly. This River has received an infinite Number of Brooks and Rivers from the N. E. and W. into it, and diſcharges itſelf by ſeveral Mouths into the Gulph of *Bengal*, which is eight hundred Miles over, and reaches from the 18 to the 22° of Latitude.

14. Having paſſed the *Ganges*, you arrive at *Hallabas*, a great City, built upon the Point of Land where the *Ganges* and *Gemma* meet; it is the chief Town of a Province that bears the ſame Name. It was, for a long Time, one of the Bulwarks of the Kingdom of *Patans*, and is the ſame Town which *Pliny* calls *Chryſobacra.* It was ſubdued to the Kingdom of the Mogul by King *Ecbar*, who built a ſtrong Citadel in it ſtrengthened with three Walls, of which the outermoſt is of a very hard red Stone. It is adorned with a very ancient Obeliſk, above ſixty Feet high, that has many Inſcriptions, but the Letters are not legible. The Mogul has a fair Palace here, and under it are certain arched Places where the Pagods of *Adam* and *Eve* are kept, whoſe Religion they pretend to follow. Hither, at certain Times, come an incredible Number of Pilgrims from all Parts of the *Indies* to viſit thoſe Pagods, becauſe they ſay *Adam* and *Eve* were created here; but, before they approach the Place, which they eſteem holy, they all waſh themſelves in the *Ganges.* The Province of *Hallabas* pays the Mogul yearly fourteen Millions.

At *Hallabas* there are uſually Troops of *Faquirs*, who call themſelves a religious Order among the *Indians*, and many of them practiſe the Life of Penitents, forbearing to eat many Days, ſtanding conſtantly upon a Stone for ſeveral Weeks or Months, holding their Arms acroſs over their Heads as long as they live, or bury themſelves in a Pit for a certain Time; but others wander up and down the Country like Gypſies, committing Robberies and all ſorts of Rogueries; ſome of them will threaten to kill themſelves, and ſome of them have done it, unleſs the *Banjans* would give them what they demand, and ſo obtain conſiderable Sums of them; for the *Banjans* abhor Murder, and will give any thing to prevent it. The Penitents are extremely honoured by the *Gentiles*, and the Rich think they draw down Bleſſings upon themſelves when they give to them.

From *Hallabas* you paſs over a River, where ſtands a Deroga on each Side, to take Notice of what Goods are tranſported, there being due for every Waggon-load four *Rupees*, and every Coach one, and they ſtop all that travel without a Paſs; and then go through *Yok-del-ſera*, *Sadan*, *Sarael*, and *Bourabi-ſera* to *Benarou.* This is a large City, and handſomely built, moſt of the Houſes being of Brick or Stone, and higher than in any other *Indian* City, but the Streets are narrow. There are many Inns in the Town, and among the reſt one very large and handſomely built. In the Midſt of the Court are two Galleries, where are to be ſold Calicuts, Silk, and other Merchandize, and under them are Cellars where the Workmen live. All the Goods are ſtamped with the King's Seal, before they are expoſed to Sale.

The *Ganges* runs by the Walls on the South Side, and in it is one of the principal Pagods of the Idolaters. About five hundred Paces from the City northward, there is a Moſque, where are many *Mohammedan* Sepulchres, incloſed with a Garden; but there are Holes through the Walls half a Foot ſquare for Travellers to look into them. The moſt conſiderable is ſaid to be that of one of the Kings of *Boutan.* It is a four-ſquare Pedeſtal, forty Paces wide, and in the Midſt of it a Pyramid thirty-two, or thirty-five Feet high, with a great Ball at the Top. All the Fronts are full of the Figures of Animals cut in Stone. It was once very high, but within fifty Years it is ſunk above thirty Feet into the Earth. From *Banarou* you paſs on to *Baterpour*, and ſo by *Satraguy-ſera* to *Maniachy-ſera*; in the Road from thence you ford two Rivers called *Carnaſa-ſou* and *Saod-ſou*, and come to *Gourmabad*, which ſtands upon the River *Gouderſa-ſou.* The City ſtands at the Foot of certain Mountains, near which is great Lake, and in the Midſt of it a ſmall Iſland, with a fair Moſque built upon it, wherein is the Sepulchre of a *Nabador* Governor, called *Seleim-Khan*, who built it for himſelf when he was Governor of the Province. There is a fair Freeſtone Bridge to croſs over into the Iſland; and on the Side of the Lake is a great Garden, in the Middle of which is a fair Sepulchre of the Governor's Son, who ſucceeded his Father in the Government of that Province. Leaving *Sancerou* you ferry over the River *Son-ſou*, which deſcends from the Northern Mountains: Here all Merchandize pays certain Toll; and ſo you go on to *Daud*, *Nargarſera*, and ſo by *Palva-ſera* and *Aga-ſera* to *Patna.* This is one of the biggeſt Cities in *India*, being two Leagues long, and ſtanding on the Banks of the *Ganges* weſtward; but the Houſes are no better than in the greateſt Part of the other Cities, being covered with Bamboos, or Straw. The *Dutch* Company have an Houſe there, becauſe of their Trade in Salt-petre, which they buy up here and refine at *Choupar*, a great Town upon the *Ganges*, ten Leagues diſtant from *Patna.*

The People of this Town having a *Mim Cachi*, or Colonel of a thouſand Foot, ſlain for Sodomy by his Boy, whom he had forced, he juſtified the Fact againſt the Governor, ſo that he durſt not puniſh him for the Murder, but diſmiſſed him after ſix Months Impriſonment. From *Patna* you ſail down the River to *Decu*, paſſing by ſeveral Towns where you lodge at Night; *viz. Sera Beconcour*, which is beyond the River *Pomponſou*, which comes from the South, falls into the *Ganges*, *Sera-Enjab*, between which and the City *Monger* four Rivers, *viz.* the *Raoa*, *Chanan*, *Erguga*, and *Aquera*, fall into the *Ganges* on both Sides. Leaving *Monger*, you ſail by the Mouth of the *Ganges* at a large River, and arrive at *Zangira*, beyond which the *Ronova*, *Tea*, and *Chanon*, empty themſelves into the *Ganges*. And after you arrive at *Baquelapour*, and paſſing by the River *Catare*, you come to *Pongangol*, which lies at the Foot of certain Mountains which come down to the *Ganges*. Beyond this Place you meet with the River *Mart-Nardi*, and by it ſail to *Rage-Mehale*, a City upon the Right-hand of the *Ganges*; if you go by Land to it, the Highway is paved with Brick for a League or two before the Town. Formerly the Governor of *Bengal* reſided here, partly becauſe it was a Place of great Trade, and partly becauſe it is an excellent Country for hunting, as well as to keep the King of *Aracan* in Awe, and ſuppreſs the *Portugueze* Banditti, who have retired to the Mouths of the *Ganges*, and make Excurſions as far as *Decu* itſelf.

But the River having left the City above half a League, the Governor and Merchants are removed to *Decu*, which at preſent is a large City and full of Trade. From this Town, you come firſt by Water to *Donapour*, then to *Tautipour*, where there are abundance of Crocodiles in the River; as alſo at *Acerat*, which is in the Way. The vulgar Report is, that a Muſket-Shot will not pierce the Skins of the Crocodiles; but, upon Trial, it is found falſe. Then you ſail to *Doloudia*, and paſſing the Mouth of the River *Chativer*, you come to *Dampour*, and ſo to *Jatrapour*, near which the *Ganges* divides itſelf into three Arms, and then by *Baga*, *Maga*, and *Kaſiata*; having paſſed the Mouth of the River *Lapicio* two Leagues, you arrive at *Decu*. This Town runs in a ſtraight Line; beſides every one ſtrives to have his Dwelling by the Side of the *Ganges*. It is two Leagues long, but the Houſes are but ſorry Huts, made of Bamboos, and daubed over with Earth. The Governor's Palace is a Place incloſed with high Walls, in the Midſt of which is a pitiful Houſe, built of Wood: He generally lodges in Tents, which he cauſes to be ſet up in a great Court of that Incloſure. The *Hollanders* have here a very fair Houſe, which they have built for the Safety of their Goods, and the *Engliſh* have another, but not ſo handſome. The Church of the *Auguſtin* Friars is alſo of Brick, and is a very ſtately Pile.

15. There are ſeveral Roads from *Surat* to *Golconda*: As by *Surat*, by *Goa* and *Viſapour*, and by *Agra*. Theſe two Roads by Land meet at *Dultabat*, and therefore I will ſpeak firſt of the Road from *Surat*, as the moſt common, and then of that by *Goa* and *Viſapour*. From *Surat* you travel by *Cambari*, *Barnoli*, *Beara*, *Navepour*, *Rinkula*, *Pipelner*, *Nainpour*, *Patane*, *Secoura*, *Bequola*, and *Diſcon* to *Dultabat*. This Town is one of the beſt Fortreſſes in the Dominions of the Great Mogul, being ſeated upon a Mountain every Way ſteep, the only Way being ſo narrow, that but one Horſe, or one Camel, can go at a Time. This Town ſtands at the Foot of the Mountain, very well walled, with a natural ſmooth Rock, and has Battlements and Towers mounted with Cannon; but it is the Citadel on the Top of the Hill that is accounted the main Strength of it; for in it are a great many excellent Pieces of Cannon, and the Cannoneers are generally *Engliſh* or *Hollanders*.

From *Dultabat* you go to *Aurenabat*, before deſcribed, and ſo through *Pipoli*, *Aubar*, *Guiſernner*, *Aſſin*, *Server*, and *Leſona*, to *Nadour*. Here you croſs a River, which runs into the *Ganges*, and muſt pay for every Waggon-load of Goods four *Rupees*, and have a Paſs from the Governor. From *Nadour* you travel to *Patonta*, and ſo by *Kaberi*, *Satapour*, *Sataneg*, or *Satanagar*, where you begin to enter upon the Territories of the King of *Golconda*. The other Road through *Goa* and *Viſapour* to *Golconda* lies thus; you may go from *Surat* to *Goa*, partly by Land and partly by Sea; but the Road being very bad by Land, Travellers generally go by Sea, and hiring an Almadire, which is a Bark with Oars, ſail by the Shore to *Goa*, and ſo they paſs by theſe Towns (which are convenient to lodge in, or victual at, *viz. Daman*, *Baſſain*, *Chacul*, *Daboul*, *Rejapour*, and *Mingrela*) to *Goa*. From *Surat* to *Goa* is two hundred and forty Leagues. The great Danger in this coaſting Voyage, is falling into the Hands of the *Malabars*, or *Indian* Pirates, who are furious *Mohammedans*, and very cruel to the Chriſtians, whom they put to barbarous Tortures if they take them, to make them ſeek their Ranſom the ſooner. The *Malabars* ſometimes carry two hundred, and ſometimes two hundred and forty Men, and ſail together in Squadrons of ten or fifteen Barks to attack a great Ship, for they care not a Ruſh for the great Guns: They come on Board of a ſudden, and caſt ſuch a great Quantity of Pots of artificial Fire upon the Decks, that if there be not a ſpeedy Remedy applied, they do a world of Miſchief. Our Seamen, generally knowing the Cuſtom of theſe Pirates, when they come within Sight, ſhut up the Skuttles, and fill the Deck with Water, to hinder the Fire-pots from doing Execution.

Goa lies in an Iſland ſix or ſeven Leagues about, upon the River *Mandoua*, ten Leagues from the Mouth of the River. This Iſland abounds in Corn, Rice, and ſeveral ſorts of Fruit, as Mangas, Ananas, *Adam*'s Figs, and Cocoas, but all of them are inferior to a Pippin. The Port of *Goa* is very commodious, the City is very large, and the Walls are of good Stone; the Houſes for the moſt part are very magnificently built, eſpecially the Viceroy's Palace; but being cloſely environed with Hills, the Air is made unwholeſome, and ſo exceſſively hot, that the Inhabitants are not ſo many as otherwiſe they would be. Beef and Pork are the ordinary Diet, and they have Plenty of Poultry and Pigeons; but Fiſh is ſcarce, though they are near the Sea: They have abundance of all ſorts of Sweetmeats, and great Plenty of good Water. Before the *Dutch* brought down the Power of the *Portugueze* in *India*, there was nothing to be ſeen at *Goa* but Magnificence and Riches: They made vaſt Profits without any Loſs, and every Man was a Trader except the Governor. But now the *Dutch* having got the Trade every where out of their Hands (tho' they are ſtill Maſters of *Goa*) they have loſt their Mines of Silver and Gold, and are fallen from their Splendor. The Natives of the Country, whom they call *Canarins*, or *Blacks*, are not permitted to bear any Offices among the *Portugueze*, but only in reference to the Law, *viz.* As Advocates, Solicitors, and Scriveners; and they keep them very much under. If one of them happen to ſtrike a white Man, or *European*, there is no Pardon for him, but his Head muſt be cut off. The *Spaniards* and *Portugueze* make uſe of them to tranſact their Buſineſs, and receive their Money; and many of them by that means are grown very rich, and have many Slaves to attend them in good Habits; but they all, both Maſters and Servants, go barefoot; for the *Portugueze*, though they have been offered great Sums to ſuffer them to wear Hoſe and Shoes, yet will not allow it. They are very courageous and good Soldiers, and quick and ingenious at learning of Sciences, but they are Idolaters, and worſhip ſeveral Sorts of Idols, which, they ſay, are the Reſemblance of ſeveral that have done good Works, to whom they give Honour by adoring their Portrait.

There are ſome of theſe Idolaters who worſhip Apes, and have built Pagods to thoſe Beaſts. In the Iſland of *Salſet* there was a Pagod, where the Idolaters keep in a Cheſt the Bones and Nails of an Ape, that had been ſerviceable to their Anceſtors, by bringing Intelligence when any Prince their Enemy ſought their Ruin. The *Indians* came in Proceſſion from ſeveral Places to this Pagod, and made Offerings to it; and when the Clergy of *Goa* took away their Tomb, they offered a great Sum of Money for their Relicks; but the Clergy not thinking ſuch groſs Idolatry ſufferable, cauſed it to be thrown into the Depth of the Sea. The River of *Mandoua* alſo is had in as great Veneration by the *Bramins* and the other *Gentiles* as the *Ganges*, and at certain Times, and upon certain Feſtivals, they flock thither from their ſeveral Parts to perform their Purifications. The

Town hath good Walls, with Towers, and great Guns, and the Iſle is walled round with Gates towards the Land, to hinder the Slaves from running away. The *Portugueze* have a Viceroy reſiding here, with an Archbiſhop, Inquiſitor General, and Abundance of Clergymen, as Dominicans, *Auſtin*-Friars, Franciſcans, bare-foot Carmelites, Jeſuits, and Capuchins. The Carmelites are ſeated in a fine Air, and healthy Ground; the Jeſuits have a College, which being dedicated to St. *Paul*, gives them the Name of *Pauliſts*, with a Seminary, Profeſſor's Houſe, Noviciate, and an Houſe called the *Good Jeſus*, where they paint admirably. There are alſo many fair Churches, and beautiful Palaces.

In this City lies buried *F. Alberquerque*, who conquered it for the *Portugueze*, and Saint *Francis Xavier*, the famous *Indian* Miſſionary. The Hoſpital of *Goa* was formerly the moſt famous in all *India*, both in regard that the Revenues were very great, and the ſick Perſons were very carefully looked after; but ſince the Change of Government, there is but very bad Accommodations, and ſeveral *Europeans*, who have been put in, have never come out but in their Coffins; but of late they have found out a Way to ſave ſome, by frequent Blood-letting, ſpare Diet, and drinking Cow's Piſs.

16. From *Goa* you go to *Bicholly*, which is upon the Continent, and ſo to *Viſiapour*. This City is the Metropolis of a Kingdom of the ſame Name, whoſe King is the moſt potent of all the Kings of *Decan*, and is therefore called King of *Decan*, having under him the two Naiques of *Madura*, whoſe Territories reach to Cape *Comurio* and *Tanjabar*, who has ſeveral Towns on the Coaſts of *Coromandel* tributary to him. It is a great ſtraggling City, above five Leagues in Circumference, fortified with a double Wall, and a great many Cannons mounted, and a flat-bottomed Ditch. The King's Palace is very large, but ill built, and the Acceſs to it is very dangerous, in regard there are an Abundance of Crocodiles in the Ditch, with which it is encompaſſed; but in the City itſelf there is nothing remarkable as to the publick Edifices or Trade, tho' in the Suburbs, which are large, there are ſeveral Goldſmiths and Jewellers. The King of *Viſiapour* hath three good Ports in his Dominions, *Rajapour*, *Daboult*, and *Caropatan*. This laſt is the beſt, having fourteen or fifteen Fathom Water near the Land, and upon the Top of the Mountain adjoining a Fort with a Spring of Water in it.

It lies about five Days Journey to the North of *Goa*. The Kings of *Viſiapour* and *Golconda* were formerly tributary to the Great Mogul, but now they are abſolute of themſelves. The preſent King of *Viſiapour*, was only the adopted Child of the former King, who died without Children, he ſucceeded in his Minority under the Regency of the Queen; but being diſturbed by the Revolt of Rajah *Sevagi*, the Son of the late King's Captain of his Guards, he was forced to come to a Compoſition with him to eſtabliſh himſelf, and ſo loſt all the Coaſts of *Malabar*.

The great Market, where the King of *Viſiapour* ſells his Pepper, is at *Rebeque*. In the Territories of *Viſiapour* is *Mingrela*, a large Town, extended half a League in Length upon the Sea-coaſt; it is one of the beſt Roads in all *India*, where all the Veſſels that come from *Batavia* *Japan*, *Bengal*, *Ceilon*, and thoſe that are bound for *Surat*, *Ormuz*, the *Red-Sea*, *Balſora*, &c. both coming and going, anchor and take in Proviſions, becauſe there is both excellent Water and Rice. This Town is alſo very famous for Cardamums, which the Eaſtern People eſteem above all Spices; but not being to be had in any other Country, are very ſcarce and dear. There is alſo made great Store of coarſe Calicuts that are ſpent in the Country, and great Quantities of coarſe Matting, which ſerves for packing up of Goods. The *Dutch* have a Factory for Trade and Proviſions here, to victual their Ships when they block up *Goa*, which is eight Months in the Year.

17. From *Viſiapour* you paſs to *Golconda*, which is four hundred Leagues croſs the Promontory. The moſt powerful of the Kings of *Decan* next to the King of *Viſiapour*, is the King of *Golconda*; his Kingdom is bounded on the Eaſt by the Sea of *Bengal*, on the Weſt by the Mountains of *Orixa*, on the South by *Biſnager* and *Nariſingue*, which belongs to the King of *Viſiapour*, and on the Weſt by the Empire of the Great Mogul. This whole Kingdom, take it in general, is a good Country, abounding in Corn, Rice, Cattle, Sheep, Poultry, and other Neceſſaries for human Life; and becauſe there are many Lakes, there are alſo many Fiſh, and among others a ſort of Smelts, which has but one Bone in the Middle, which is moſt delicious Food. The Lakes being cauſed by Nature, and lying in Places ſomewhat raiſed, contribute much to the Fertility of the Country, becauſe after the rainy Seaſons they let them down by Sluices into the adjacent Fields. The capital City of the Kingdom is *Banagar*; the *Perſians* call it *Adier-abad*, but the moſt common Name is *Golconda*. It is about fourteen or fifteen Leagues from *Viſiapour*, ſituated in 17° 10 Latitude, in a very long Plain, hemmed in with little Hills at ſome Diſtance from it. The Air is very wholeſome, and a great River waſhes the Wall of it on the South-weſt Side, which, near to *Maſſulipatan*, falls into the Gulph of *Bengal*.

The City is well built, and full of Windows. In entering into it, you muſt firſt paſs through a large Suburb; but the Houſes are only built of Earth, and thatched with Straw, ſo low and ill contrived that they can be reckoned little better than Huts. It is at leaſt a League in Length, and in it dwell all the Merchants, Brokers, Handicraftſmen, and all the meaner ſort of People. Theſe Men are allowed to go into the City from ten or eleven in the Morning till four or five o'Clock in the Afternoon with the foreign Merchants, and then they return to their Houſes. In thoſe Suburbs are two or three fair Moſques, which ſerve for Inns for Travellers, and ſeveral Pagods in the Neighbourhood. The Way to the Fortreſs of *Golconda* lies through thoſe Suburbs; out of them you go into the City over a moſt beautiful Stone Bridge, and enter into a large Street that leads to the King's Palace. On the right Hand are ſome Houſes of the Lords of the Court, and four or five Inns two Stories high, with fair Halls, and large Chambers to let in the freſh Air.

At the End of this Street is a large Piazza on which the Palace fronts, and in the Middle of the Building is the Balcony wherein the King ſits when he pleaſeth to give Audience to the People. The Gate of the Palace ſtands not upon this Piazza, but upon another near adjoining. Through it you enter into a large Court, ſurrounded with Porticos, under which lie the King's Guards. Out of this Court you paſs into another, built after the ſame manner, and ſurrounded with ſeveral Apartments, with terraſſed Roofs, on which are very fair Gardens, and Trees in them of a great Bigneſs. The whole Palace is three hundred and eighty Paces in Length, and ends in a very lofty Pavillion. The Walls are built of great Stones, and have at certain Diſtances half Towers. It is very pleaſant within, and the Water riſes up to the higheſt Apartments. No Man enters into the Palace without an expreſs Order from the King, who grants it very ſeldom; ſo that ſcarce any body comes near it.

At the End of the Palace is a Building, called the Four Towers, which has the moſt lovely Outſide of any thing in the Town, being adorned with Roſes and Feſtoons pretty well cut. In each Tower are four Galleries, which ſerve to make the Water mount into a Reſervatory on the Top, from whence it is conveyed into the higheſt Apartments of the King's Palace through Pipes. There are ſeveral Meidans in the Town, but the faireſt is that before the King's Palace. It hath two Divans, which ſerve for the Cotoual, who has his Priſons under them. The Palace is on the North of it, and there is a Portico over againſt it, where the Muſicians play ſeveral Times a Day, while the King is in the Town in the Middle of it; and in ſight of the Palace is a Space for the fighting of Elephants. The City for the moſt part is inhabited by Perſons of Quality, Officers of the King's Court of Juſtice, and of the Army, and their Houſes are pretty enough. Three Miles from the City ſtands a very fair Moſque, wherein are the Tombs of the Kings of *Golconda*, and about four o'Clock in the Afternoon there is a Dole of Bread and Rice given to all the Poor that come. Upon Feſtival Days all the Tombs are hung with rich Tapeſtry, and then they are a moſt glorious Sight. There are many fair Gardens in the Town, and near it; but their beauty conſiſts not in Flowers or Water-works, but in long Walks, lovely Fruit-trees, and large Baſons of Water.

When a Stranger comes to the Gates, a Soldier ſearches him, to ſee whether he has any Salt and Tobacco about him, that the King may not be defrauded of the Duties, and then ſends to the Deroga about his Admiſſion, which cauſes a Delay of a Day or two. Sometimes when the King ſits to do Juſtice, all that have Buſineſs ſtand below, juſt againſt the Balcony; but the People are kept back with a Row of Poles about the Height of a Half pike. Every *Monday* the Nobility mount Guard, and continue eight Days, ſome of them have five or ſix thouſand Men under their Command, with ten or twelve Elephants, and thirty or forty Camels. The Soldiers have no Cloaths, but three or four Ells of Calicut, with which they cover their Bodies half Way behind and before. They wear their Hair long, and tie it in a Knot on the Crown, as the Women do. They wear Broad-ſwords like the *Switzers*, which ſerve as well for a Thruſt, as a Blow, and hang them in a Girdle. Their Muſket Barrels are neater and better than ours, becauſe their Iron is better. Their Cavalry carry Bows and Arrows, a Buckler, and a Battle-Ax, and a Head-piece, and Jacket of Mail, which hangs down from their Head-piece to their Shoulders. There are twenty thouſand common Women allowed by the Deroga; they pay no Tax, but are a Means of ſpending much Tari, which is a ſweet Drink, on which the King lays a ſevere Impoſt. They are encouraged in their Practices. They are to dance every *Friday* before the King's Balcony, if the King be preſent; if not, an Eunuch diſmiſſes them. They ſtand well dreſſed at their Doors in the Day-time, and ſet up a Candle or Lamp for a Signal in the Night to draw in Men, who are not expoſed to Scandal by converſing with them.

The common People give their Wives great Liberty, being obliged by Promiſe, at their Marriage, to let them walk in the Streets, viſit their Neighbours, and drink Tari, a Liquor which the *Indians* love very much. When any one is found guilty of Theft, he is puniſhed by cutting off both his Hands, which is a Puniſhment uſed almoſt all over the *Indies*. The Tradeſmen of the Town, and Huſbandmen that cultivate the Lands, are Natives; but the Trade is chiefly maintained by the *Engliſh* and *Dutch* Factories, who buy up for the Companies Chints, and other Cloths, which they vend in other Parts of the *Indies*. They bring alſo from *Maſlipatan*, upon Oxen, Cloves, Pepper, Cinnamon, Silver, Copper, Tin, Lead, and other Goods, which they know to be moſt marketable. All the Men and Women at *Golconda* are well proportioned, and of comely Stature, and fair enough in their Countenances; but the Country People are ſwarthy. The moſt current Monies of this Kingdom are the Pagods, Rupees, and Pechas, of the Mogul: The Pagods are Pieces of Gold of which there are two ſorts, the old and the new; the old are worth five Rupees, and the new not above four.

The Rupees and Pechas are alſo worth more at *Golconda* than in *Moguliſtan*. The greateſt Plenty of Diamonds is in this Kingdom, and therefore it may be called the Country of Diamonds. The Caſtle of *Golconda* is two Leagues from the City; is of a large Compaſs, and the Walls of it are built of Stones, three Feet in Length, and as many in Breadth, and is ſurrounded with deep Ditches, divided into Tanquies, which are filled with fair and good Water. All the Strength it has conſiſts in five round Towers, which have a great many Cannon mounted upon them for their Defence. It has ſeveral Gates, but two only are opened, and theſe are guarded by *Indians*. No Strangers may go in without a Permiſſion from the Governor, unleſs he be acquainted with ſome Officer of the Court. The King has a large Palace in it, and well ſituated for the good Air and lovely Proſpect, and moſt Part of the Lords have Houſes near it. There are ſeveral Bazars in it, where all Things neceſſary for Life may be had.

18. The King of *Golconda*, who now reigns, is a Shias by Religion, and bears the Name of *Abdoul-Coutou Shah*. He was the Son of a *Bramin* Lady, and ſucceeded his Father, though not the eldeſt Son, becauſe he was more loved by the Queen, who cauſed his Brothers to be impriſoned, and at laſt poiſoned. He keeps five hundred thouſand Soldiers in Pay, yet is tributary to the Great Mogul. He hath only three Daughters, the eldeſt of which is married to one of the Kinſmen of the Grand Chiek of *Mecca*, the ſecond to Sultan *Mohammed*, eldeſt Son of *Aureng Zeb*, and the third to *Mirza abdul-Coſſing*, the King's Couſin, who has Male Children by her. The King of *Golconda* has vaſt Revenues, for he is Proprietor of all the Lands of his Kingdom, which he leaſes out to thoſe that offer the moſt, excepts ſuch as he gives to his Favourites for a certain Time. The Cuſtoms on Merchants Goods that paſs through his Country, and of the Ports of *Maſlipatan* and *Madraſpatan*, yield him much, and there is hardly any ſort of Proviſions in his Kingdom, from whence he hath not ſome conſiderable Duties by Way of Exciſe.

The Diamond Mines raiſe him a great Revenue, and all ſuch as he allows to dig in them. Theſe that are toward *Maſlipatan* pay him a Pagod every Hour they work there, whether they find any Diamonds or not; but his chief Mines are in divers Places in *Carnate* towards *Viſiapour*, where he has ſix thouſand Men continually at work, who daily find near three Pounds Weight, and no body digs there but for the King. This Prince wears upon the Crown of his Head a Jewel almoſt a Foot long, which is ſaid to be of ineſtimable Value. It is a Roſe of great Diamonds, three or four Inches Diameter, on the Top of which there is a little Crown, out of which iſſues a Branch faſhioned like that of a Palm-tree; but it is round, and the Palm Branch, which is crooked at the Top, is a good Inch in Diameter, and about half a Foot long. It is made up of Sprigs, which are, as it were, the Leaves of it, and each of them have at the End a lovely long Pearl ſhaped like a Pear. At the Foot of this Poeſy there are two Bands of Gold in the Faſhion of Table Bracelets, in which are inchaſed large Diamonds, ſet round with Rubies, which, with great Pearls that hang dangling on all Sides, make an exceeding fair Show; and theſe Bands have Claſps of Diamonds to faſten the Jewels to the Head. Beſides this Jewel, he hath other conſiderable Pieces, and ſuch Numbers of precious Stones, that if there were Merchants who could give him the Worth of them, he would have prodigious Sums of Money, and be the richeſt King in the *Indies*.

The Omrahs are the great Lords of the Kingdom, who are *Perſians*, and all rich; for they have not only great Pay of the King yearly, but large Gifts of Lands and Villages from him, beſides the Advantages of the Soldiery; for they do not liſt half the Number they have Pay to maintain. They generally make a very handſome Figure; for when they go through the Town, an Elephant or two goes before them, on which three Men carrying Banners are mounted; fifty or ſixty Troopers, well mounted and accoutered, follow them; and after theſe Trumpeters and others playing on Fifes on Horſeback; after theſe comes the Omrah on Horſeback, with thirty or forty Footmen about him, and his Palanquin carried by four Men, with other Porters for Change; and all this Pomp is brought up with a Camel or two, with Men beating on Timbrels on their Backs. Sometimes the Omrah will take his Palanquin, and then his Horſe is led.

The Palanquins are ſometimes covered with Silver, and the Bamboos are tipped with Silver at both Ends. They lie at eaſe in them, ſmoaking Tobacco, or chewing Beetle, or Areca, according to the Cuſtom of the *Indians*, who hold them to be excellent for the Stomach, and the Sweetneſs of the Breath. The leſſer Omrahs have not ſo great an Equipage, but all have a Train proportionable to their Revenue. The Winter in *Golconda* begins in *June* with Rains, and ſome Thunder and great Winds, and laſts to the End of *October*, in which Time the Air is cold only in the Night and Morning. The Days are as warm as it is in *May* in *France*; but the Rains cauſe prodigious Floods, which beat down the Houſes, and deſtroy many People. The hot Seaſon begins in *February*. The Rains make the Land very fertile; they have abundance of Fruits and Vines, and two Crops of Rice and other Grains every Year. The Wines they make are uſually white.

19. From *Golconda* there are two Roads to *Maſlipatan*, one more direct, which the Merchants uſually take, and the other by the Diamond-Mines, called *Coulour*, or *Gani*, which ſuch Merchants generally travel, whoſe Curioſity or Buſineſs leads them thither, though it be the fartheſt Way

by twelve Leagues. In the more direct Road you meet with not above four Towns, beſides fifteen or ſixteen Villages, *viz.* *Elmas-kepentch*, *Panguel*, *Sarchel*, and *Penguet-chepoul.* You paſs alſo ſeveral Rivers, the moſt conſiderable of which are *Kachna* and *Moucby.* All the Country as you paſs this Way is always green and pleaſant to the Eye, though the Road be bad, and there grow all kinds of Trees that are in the *Indies*, even Caſſia-trees, though they be ſcarce in other Countries: This Way you come to *Maſlipatan* in ten Days. The other Way, by the Diamond-Mines, lies, firſt, to *Tenara*, where the King has a ſtately Palace, conſiſting of four large Piles of Stone-Building, to every one of which belongs a large Garden. One of them, on the Left-hand, along the High-way, is much more beautiful than the other three; it is built of Free-ſtone, two Story high, and has in it ſeveral fair Galleries, Halls, Parlours, and Lodging-rooms, which are the Royal Apartments. Before this Building is a large ſquare Piazza; and in the other three Fronts is a great Portal, with a fair large Platform, raiſed four or five Feet high, and well arched, where Travellers of Fortune are lodged, and over each Portal is a ſtrong Baluſter, and a little Chamber for the Ladies.

One of theſe Buildings belongs entirely to the Queen, and though no body may lodge in it in the Queen's Abſence, yet any one may ſee it, and walk in the Garden, which is a lovely Place, and is well ſupplied with Water. The whole Piazza is encompaſſed with ſeveral Chambers for the Lodgings of poor Travellers, who, every Day, towards Evening, have an Alms beſtowed upon them of Rice and Pulſe ready boiled; and for this there are alienable Rents ſettled: But for the Idolaters, who will eat nothing that is powdered by other Hands, they give them Flour to make Bread, and a little Butter to dip in it when it is baked, like a thin Bread-Cake. From *Tenara* the Road lies through *Jatenager*, *Patengi*, *Pengual*, *Nagelpar*, and *La'kabaran*, to *Coulour*, or *Gani.* This laſt Part of the Way is very rocky, and among theſe Rocks, where there is any good Earth, you find the Caſſia-trees, that bear the beſt and moſt laxative Caſſia of any in the *Indies.* By *Coulour* runs a River which falls into the Gulph of *Bengal*, near *Maſlipatan.* From hence the Road lies through *Kab-Kaly*, *Bazour*, where you paſs the River of *Coulour*, *Vochir*, *Nilimor*, where they muſt croſs a great River upon a flat Boat of Timber, and ſo by *Nilmol* to *Maſlipatan.* This is a great City on the Coaſt of *Coromandel*, lying in 16° 30′ North Lat. It ſtands upon the Gulph of *Bengal* E. S. E. from *Golconda*; and though it be but ſmall, yet it is well peopled. The Streets are narrow, and it is intolerably hot there from *March* till *July.* The Houſes are built of Wood, and all ſeparated one from another, and the Water is brackiſh, becauſe the Tide comes up to it. There is great Trading in Chints, becauſe, beſides thoſe that are made there, a great many are brought from *St. Thomas*, which are much finer, and better Colours than thoſe from other Parts of *India.* The Coaſt is excellent, and the Road for Ships is the beſt in all the Gulph of *Bengal*, and therefore Ships come hither from all Nations, and go from thence to *Pegu*, *Siam*, *Aracon*, *Bengal*, *Cochin-China*, *Mecca* and *Ormuz*, and for the Iſlands of *Madagaſcar*, *Sumatra*, and the *Manillas.* This Country of *Maſlipatan*, as well as the Coaſts, is full of Idolaters; and the Pagods are ſo full of laſcivious Figures of Monſters, that one cannot go into them without Horror. It is exceeding fruitful, and Proviſions are very cheap there: A Sheep is bought for Twelve-pence, a Partridge for a Half-penny, and a Fowl for Two-pence; and it is the ſame almoſt every where upon the Coaſts of *Coromandel.* From *Maſlipatan* to *Gandicut* the Way lies thus; you paſs *Nilmol*, *Wochir*, and *Patemet*, three ſmall Villages, and the laſt of them a very pitiful one, to *Bezcuart*, a great Town, where all the Inhabitants, except the Governor and ſome of his Domeſticks, are Idolaters.

In this Town is a very large Pagod without Walls, conſiſting of fifty-two Pillars of twenty Feet high, which uphold a flat Roof of Free-Stone. They are adorned with ſeveral emboſſed Figures of very ugly Devils, and ſeveral ſorts of Creatures, ſome with four Horns, others with many Legs and Tails, others lolling out their Tongues, and others in ſeveral other ridiculous Poſtures: And between the Pillars ſtand the Statues of their Gods upon Pedeſtals. The Pagod is built in the Middle of a Court encompaſſed with Walls, adorned within and without with the ſame Figures as the Pagod, and a Gallery, ſuſtained by ſixty Pillars, runs round the Wall. You enter into this Court through a Portal, with Niches one above another, ſupported with Pillars, which have certain *Indian* Characters upon them; but the Prieſts themſelves hardly know the Meaning. By this Town is another Pagod, built upon an Hill, to which there is an Aſcent of 193 Steps, every one a Foot high: It is four-ſquare, with a Cupola at the Top, adorned with Figures, as that at *Bezourat.* In the Middle is an Idol ſitting croſs-legged, after the Manner of the Country; and in that Poſture, about four Feet high; upon the Head is a triple Crown, from which four Horns extend themſelves, and it has the Face of a Man turned towards the Eaſt. The Pilgrims that come out of Devotion to theſe Pagods, when they enter, claſp their Hands together, and raiſe them up to their Foreheads, and then advancing to the Idol, cry out, *Ram*, *Ram*, i. e. *God*, *God:* Then having anointed it with Oil, or beſmeared the Face with Paintings, they ring a little Bell that hangs upon the Idol; after which they make their Offerings of Sugar, Oil, and other Eatables, the richer Sort adding Pieces of Silver.

Theſe Offerings, though the People are made to believe the Idol takes them, yet maintain the Prieſts, their Wives, and Children, except that they relieve the poor Pilgrims with them. There is a great Feaſt made in this Pagod in *October*, for three Days together, at which Time there is a great Concourſe of People from all Parts. Leaving *Bezourat*, you croſs the River that runs to *Gani*, and three Leagues farther come to a Pagod, built upon a large Plat-form, with an Aſcent of fifteen or twenty Steps; in it is the Figure of a Cow of black Marble, and ſeveral other deformed Idols four or five Feet high, ſome with many Heads, and others with many Hands and Legs; and the moſt ugly are moſt adored, and receive the moſt Offerings.

20. The next Town in the Road is *Kab K bi*, near to which is a ſmall Pagod, wherein are five or ſix Idols, well made. And having paſſed that, you come to *Candevar*, a great City, cloſed in with ſtrong Walls, with a Ditch and a Moat paved at the Bottom with Free-ſtone. Eaſtward it ſtretches out to a Mountain about a League in Compaſs, and ſurrounded with Walls with Half-moons: Within them are three Fortreſſes. From hence you travel to *Capanour*, and ſo to *Adanquige*, a very fair Town, where there is a very large Pagod, with abundance of Chambers for the Prieſts, and ſeveral Idols, but they are fallen to decay, yet are ſuperſtitiouſly adored by the People. You go on to *Noſdrepar*, and ſo over a large River, which is dry in Summer, to *Condicour*, *Dakije Nelour*, where there are many Pagods; and ſo croſſing a River to *Gandron*, *Screple*, *Ponte*, and *Senepgond*, to *Palicate*, to which the Way lies for a League through the Sea.

It is a Fort that belongs to the *Dutch*, that live upon the Coaſt of *Coromandel*, and within it are uſually two hundred Soldiers. It is the chief Factory they have in the *Indies*, where lives the Superintendant of all the reſt which are in the Territories of the King of *Golconda.* The Trade managed there by the *Dutch* is in Cotton-Cloth, of which they have large Warehouſes. Here alſo they refine their Salt-petre, which they bring from *Bengal*, and make Gunpowder, with which they furniſh their other Factories. The Fort of *Palicate*, called *Gueldria*, is at a good Diſtance from the Town, that it may not be annoyed by Shot from thence. The Baſtions are well ſtored with good Guns, and the Sea comes up to the Walls of it. The Governor has fifty Crowns a Month for his Pay, and as many for his Table and Cloths. The current Money here are *Rupees* and *Pagods*, which laſt are four Times the Value of the former, *Fanons*, which are half Gold and half Silver, with the ſame Stamp as the *Pagods*, but the ſeventh Part of a *Rupee* in Value, and *Gazars*, which are Pieces of Copper as big as a *Fanon*, but forty of them are but the Worth of it. The *Dutch* coin this Money. The Water of this Town is fetched out of

Holes dug in the Sand, when the Sea is quite out, and it is tolerably freſh.

From hence you go to *Madreſpatan*, or Fort *St. George*, which belongs to the *Engliſh* (here is a Convent of Capuchins) and ſo to *Meliapour*, or *St. Thomas*'s Town (where, they ſay, *St. Thomas* was martyred; and the *Auſtin* Friars here pretend to have the Iron Lance which killed him, the Jeſuits alſo have a Church there) *Serraveron*, and then to *Oudicut*. The Way between thoſe two Towns is through a flat, ſandy Country, and on both Sides of it are Copſes of Bamboos, very high and thick, which breed prodigious Numbers of Apes. Thoſe on one Side are inveterate Enemies to thoſe on the other; and it is very good Sport to Travellers to ſet ſome Baſkets of Rice between them, with Cudgels by them, to make them fight for it, and batter one another with the Cudgels. The Road holds the ſame to *Naravacon* and *Gazzal*. Hereabouts there are Gates and ſtrong Guards at them at every two or three Leagues, who examine all Paſſengers, whence they come, and whither they go; ſo that Men may travel there with their Money in their Hands.

21. The next Place you arrive at is *Courva*, a celebrated Pagod, where there is little to be had for Man or Beaſt; but the Country about it being full of Elephants, the King's Officers come hither often to take them. The Manner of hunting them is thus; they cut ſeveral Alleys or Walks in the Woods where they are, and having digged them full of Pits, which they cover with Hurdles and Earth, ſcare them by hallooing, beating of Drums, and purſuing them with Pikes with Wild-fire tied to the Ends, into thoſe Walks, where, being tumbled into the Holes, the Hunters bind their Feet and Trunks with Ropes and Chains, and ſo take them; yet ſome will eſcape the Snare, and are ever after ſo miſtruſtful, that with a Bough they will examine every Step they take, whether there is not an Hole in the Way; and it is almoſt impoſſible to take them again. Such as they catch, they couple to two tame ones on each Side, and ſet ſix Men about them with lighted Torches at the End of an Half-pike, to talk to them, and give them Meat, which is brown Sugar, boiled Rice, and Hay.

If the wild Elephant will not eat, the Men order the tame ones to beat him with their Trunks, and ſo conſtrain him to learn Obedience. After an Elephant is tamed, he never meddles with the Female, yet is ſometimes taken with a luſtful Rage, which never ends but with ſome Miſchief, as the Death of his Rider, or ſomebody elſe. Though the Elephant's Skin be very hard while he is alive, it is all melted like Glue when he is dead. There are Elephants in ſeveral Parts of the *Indies*, as in the Iſlands of *Ceylon* and *Sumatra*, the Kingdoms of *Cochin*, *Siam*, and *Bantam*, on the Frontiers near the *Great Tartary*; but they are ſaid to be in the greateſt Numbers on the Coaſt of *Melinda*, Eaſtward of *Africa*, where the *Blacks* of the Countries hunt them to eat their Fleſh, but are obliged to give the Lord of the Place their Teeth, inſomuch that there are ſeveral Parks impailed with Elephants Teeth a League round.

It is obſervable of the female Elephant, when ſhe grows hot, that ſhe makes herſelf a great Bed of Herbs and Weeds, four or five Feet high from the Ground, on which, contrary to the Cuſtom of all other Creatures, ſhe lies upon her Back, in Expectation of the Male, whom ſhe calls to her by a peculiar Cry: And thus they take the Male in *Ceylon* by a tame Female. This is alſo peculiar to the Elephants in *Ceylon*, which, though the ſmalleſt is the moſt courageous, yet only the firſt Elephant which the Female produces has any Tuſks. And it is alſo obſervable, that the Ivory from *Achen*, when it is wrought, never grows yellow, as that does which comes out of the Continent and the *Eaſt-Indies*, which makes it more eſteemed than any other. It is hard to find how long an Elephant will live; nor can the Keepers or Governors of them tell you more than that ſuch an Elephant was their Great-Grandfather's; ſo that it may be conjectured that they have lived an hundred and twenty, or an hundred and thirty Years. The Great Mogul keeps five hundred for his Houſhold, to carry his Women, their Tents and Luggage, and about eighty or ninety for his Wars; and to the Chief of them he allows five hundred *Rupees* a Month; but, to the reſt, from fifty to twenty. The chief have Men to attend them, and fan them, and they are maintained out of it.

22. From *Courva* you paſs through *Ragia-Peta*, a large Town, and *Ondecour* to *Outemela*, where there is one of the greateſt Pagods in *India*. It is built of large Freeſtone, and has three Towers, where there are ſeveral deformed Figures of emboſſed Work. It is encompaſſed with many little Chambers for the Prieſts Lodgings. Hard by it is a wide Lake, upon the Banks of which are built ſeveral Pagods, eight or ten Feet ſquare, and in every one of them an Idol, repreſenting ſome Devil, with a Bramin, who takes Care that no Stranger that is not of their Superſtition ſhall come to waſh in, or take any Water out of the Lake: But if any Stranger deſires Water, they give it him in an earthen Pot; but if it touches the Stranger's Veſſel, they break it; and ſay, if a Stranger ſhould waſh in it, it muſt be drained. They are very charitable, and will give any Thing they have to eat or drink to Perſons in Neceſſity. There are ſeveral Women among them, who, having made a Vow to do Acts of Charity for ſeven or eight Years, more or leſs, ſit upon the Road continually for that End, with Fire, Tobacco, Rice boiled with Quicken, a ſort of Grain like Hempſeed, and Beans, and to every Traveller they give ſome of their Beans, Rice-water, an Handful of Rice, Tobacco, if they have none, and Fire. Other Women live continually on the Highways and Fields, having made a Vow to eat nothing but what they find undigeſted in the Dung of Oxen, Cows, and Horſes, which they feed with an hard ſort of crooked Peaſe; and theſe feed the Cattle with Graſs all the Day.

From *Outemela* you travel through *Golupale* and *Gogeron* to *Gandicut*. This Place is one of the ſtrongeſt Cities in the Kingdom of *Carnate*, being ſituate upon the Top of an high Mountain or Rock, to which there is but one Aſcent, not above twenty-five or thirty Feet broad at moſt, and in ſome Places not above ſeven or eight Feet wide at the moſt. At the Right-hand of it there is a moſt hideous Precipice, and at the Bottom of it runs a vaſt River. Upon the Top of the Mountain is a ſmall Plain, but a Quarter of a League broad, and about half a League long. This is ſowed with Rice and Millet, and watered with many little Springs.

The City ſtands on the South-ſide of this Plain, and is ſo encompaſſed with Precipices, at the Bottom of which run two Rivers, that it has but one Gate to the Plainſide, and that too fortified with two good Walls of Freeſtone. Here is a Pagod, which is ſaid to be the faireſt in all *India*, wherein are ſeveral Idols, ſome of Gold, others Silver, and ſix very large ones of Braſs, of which three are ſet upon their Heels, and three ſtood, and yet were ten Feet high a-piece. Theſe Statues, when the Nabab of the King of *Golconda* took the Cities from its own Rajah, he took out of the Pagod to make him ſome Cannon; but with all the Art the Artificer had, who was a *Frenchman*, he could not melt them, and ſo he was forced to leave his Work unfiniſhed. It is a Cuſtom in this City never to put any Man in Priſon, but as ſoon as the Offender is taken he is examined, and Sentence is pronounced upon him according to his Crime, which is immediately executed, and, if he be innocent, he is as ſoon acquitted and diſcharged.

The Puniſhment is generally inflicted at the Diſcretion of the Nabab, or Governor: One that had broken into an Houſe, and killed the Mother and three Children, was condemned upon the Spot to have his Hands and Feet cut off, and to be caſt into the Highway, there to end his Days in Miſery; another, who had robbed upon the Highway, had his Belly ripped up, and was ordered to be caſt upon the Dunghill. In theſe Parts of *India* they have a very quick Way of ſending Letters by Foot Poſts, which are more ſpeedy than Horſemen; and the Reaſon is, becauſe at the End of every two Leagues, there are little Huts, where there are Men always ready to run as ſoon as any Letter comes.

The Highways are planted with Trees like Walks, and where there are no Trees, there are Heaps of Stones white-waſhed, that theſe Poſts may not miſtake their Way in dark and rainy Nights. From *Gandicot* to *Golconda* the Way lies firſt to *Colepalt*, and then to *Coteeri*; here you muſt ferry over a River. The Boats are like Wicker Flaſkets, covered on the Outſide with Ox-hides, and filled with Faggots in the Inſide, over which they ſpread ſome Tapeſtry, to ſecure the Goods from wet. Horſes and Oxen they ſwim over, and Coaches and Waggons. Their Oars are broad Pieces of Wood like Shovels. Being paſt the River, you muſt go to *Morimal*, *Santiſela*, and *Gonmeda*, and ſo to *Kaman*, a Frontier Town of the Kingdom of *Golconda*, till the Conqueſt of *Carnatica* by *Mirgimola*, and from thence you travel to *Emilapata*. Between theſe two laſt Places paſs the Pilgrims, who go from *Bampour* to viſit the great Ram, *i. e.* the chief God which ſtands in the Kingdom of *Carnatica*. They go four thouſand Perſons, Men and Women, in a Company, and in Pallakies covered with Velvet or Sattin, purfled with Gold, and hung with Gold and Silver Fringe, in which they carry their Idols. On each Side of every Pallakie went a Man, with a large Fan made of Oſtriches and Peacocks Feathers of various Colours, and the Handle overlaid with Gold and Silver, with which they keep the Flies from the Idol's Face; and on the ſame Side there goes one with a Fan like a Target, which is adorned with Feathers like the former, but has little Bells of Gold and Silver round the Edges. This is to keep off the Sun from the Idol, and ſometimes they ſhake it, to pleaſe the Idol, as they imagine, with the Sound of the Bells.

This Multitude of Pilgrims, it is ſaid, being on their Way, were ſo ſtopped by ſudden Rains, that they were reduced to great Straits for Food, eſpecially for their Children, which cauſed great Lamentations among them. In this Extremity, the chief of their Prieſts ſat down in the midſt of them, and covering himſelf with a Sheet, called ſuch as deſired Victuals to him, and aſked them what they would have, and for how many? and when they had anſwered he gave them with a great Ladle what they wanted from under the Sheet, and ſo the whole Multitude of four thouſand Souls were fully ſatisfied. The next Town in the Road is *Doupar*, and then *Tripante*, where there is a great Pagod upon a Hill, to which there is a circular Aſcent of Free-ſtone every Way, the leaſt Stone being fourteen Feet long, and three broad. In the Pagod are the Figures of ſeveral Demons, and amongſt others there is a Statue of *Venus* ſtanding upright, with ſeveral laſcivious Figures about her, all cut out of one Piece of Marble; but the Graving is very ordinary. From *Tripante* you travel to *Mainlo*, then to *Macheli*; after which you paſs over a River in Boats like Panniers, where you muſt give the Watermen ſuch Money as will pleaſe them, or they will not carry you over, nor your Goods. They generally burn all the Money they take to try it, and if it turns black in the leaſt, they will refuſe it, and then you arrive at *Dobarpinta*, and ſo go by *Halcora* and *Pondera* to *Atenara*, which is an Houſe of Pleaſure built by the King's Mother, with a large Piazza, and many Chambers for Strangers.

In the Kingdoms of *Carnate*, *Golconda*, and *Viſiapour*, there are no Phyſicians but ſuch as attend Kings and Princes, and therefore the common People, after the Rains are fallen, go out every Morning into the Fields to gather Herbs proper for ſuch Diſeaſes as are common in their Families; and in great Towns, ſuch as have ſome common Receipts, ſit in certain known Places of them, to give them to ſuch as enquire after them, all *gratis*. From *Atenara* you come to *Golconda*; here, beſides what has been before obſerved in the Deſcription of this City, the Way of waſhing the King's and great Mens Elephants is not to be paſſed over. The Elephants go up to the Belly in the Water, and lying down on one Side, throw the Water ſeveral times, with their Trunks, upon that Side that lies out of the Water; and when he has ſoaked himſelf ſufficiently, the Maſter comes with a kind of Pumice Stone, and rubbing the Elephant's Skin, cleanſeth it from all the Filth that clings to it, and when he has cleanſed that Side well, he commands the Elephant to turn the other, which the Beaſt immediately does, contrary to the vulgar Opinion, that an Elephant, if he lies down, cannot get up again. When both Sides are well waſhed, he comes out of the River, and ſtays awhile upright upon the Bank-ſide to dry himſelf; then the Maſter, with ſome red, or yellow Colour, ſtreaks the Beaſt on the Forehead, and about the Eyes, upon the Breaſt, and all behind, rubbing him with Oil of Cocoas, to ſtrengthen his Nerves; and ſometimes, when all this is done, faſtens a gilt Plate upon their Foreheads. The Road from *Golconda* by *Amadabat* to *Surat* is above deſcribed.

All over this Country there ſeems to be a Contraſt between the Tyranny of the great, and the Submiſſion and Labour of the lower Sort. It may not be amiſs to add, that the common People in general, through the *Indies*, are from a Mixture of various Nations, with their natural Stock from the Oppreſſion of foreign Maſters, and from ſeveral other Cauſes that need not be particularly mentioned, become the moſt over-reaching, tricking, and deceitful People upon Earth, ſo that in all things that paſs through their Fingers they cannot help giving a Caſt of their Office, and ſome Way or other hooking a Part to themſelves beyond what was intended for them. Of theſe Arts I ſhall give a few Inſtances.

Plain Silk-Wares may be altered in Length, Breadth, and Quality; the Quality ſhews itſelf when they are of an even Thread, when the Weight is equal, and when there is no Cotton Thread in the Waft. The *Indians*, not having the Art of gilding Silver, put into their ſtriped Wares Threads of pure Gold, ſo that you muſt count the Quantity of Gold Threads to ſee whether the Silk have its due Numbers; and this alſo you muſt obſerve in your Silks, or even with Silver. As for Taffaties, you are only to mind whether the Pieces be all of a Fineneſs, and to ſee, by unfolding ſome of them, that there be nothing within to augment the Weight, and then, weighing all the Pieces by themſelves, to ſee that they all agree. The Colours of thoſe Carpets which are made in *India* do not laſt ſo long as thoſe that are made in *Perſia*; but for the Workmanſhip it is very lovely; the Eye of the Broker is to judge of the Largeneſs, Beauty, and Fineneſs of thoſe Carpets which are wrought with Gold and Silver, and whether they be fine and rich; but whether they be Carpets, or other Stuffs mixed with Gold, it behoves the Buyer to pull out ſome of the Gold and Silver Threads, to ſee whether they be of the right Value or no. The Deceits uſually put upon Calicuts are in Fineneſs, Length, and Breadth; every Bale may contain two hundred Pieces, among which they will juggle in five, or ſix, or ten, leſs fine, or leſs white, ſhorter, or narrower, than according to the Scantling of the Bale, which cannot be found out, but by examining them Piece by Piece. The Fineneſs is diſcerned by the Eye, the Length and Breadth by Meaſure.

But the *Indians* practiſe a more cunning Way, which is to count the Number of Threads which ought to be in the Breadth, according to the Fineneſs of the Scantling; when the Number fails, it is either more tranſparent, more narrow, or more coarſe; the Difference is ſometimes ſo difficult to be perceived, that there is no Way to count it out but by Threads, and yet this Difference in a great Quantity comes to a great deal; for it is nothing to cozen a Crown or two Crowns in a Piece, that comes but to fifteen or twenty Crowns. Thoſe that whiten theſe Calicuts, to ſave Charges of a few Lemons, will knock the Calicuts exceſſively upon a Stone, which does fine Calicuts a great deal of Injury, and lowers the Price. As for their dyed Calicuts, blue or black, you muſt take care that the Workmen do not knock them after they are folded to make them look ſleek; for many times when they come to be unfolded, you ſhall find Holes in the Creaſes. As for their painted and printed Calicuts, which are printed as they come out of the Loom, the Merchant muſt take care, that what he beſpeaks be finiſhed before the End of the Rains; for the thicker the Water is, where they are waſhed, the more lively will the printed and painted Colours appear.

It is eaſy to diſtinguiſh between the printed and the painted Calicuts, and between the Neatneſs of the Work; but for the Fineneſs, and other Qualities, they are not ſo eaſily diſcerned, and therefore the Broker muſt be more careful. The Cheat in the Weight is two-fold; the firſt, by laying them in a moiſt Place, and thruſting in the

Middle of every Skain ſomething to add to the Weight; the ſecond is, by not giving good Weight, when the Broker receives it from the Workmen, or Merchant that delivers it. There is but one Cheat in the Quality; that is, by putting three or four Skains of a coarſer Commodity than that which is uppermoſt, into one Mein, which in a great Quantity, mounts high, for there are ſome Cottons that are worth an hundred Crowns the Mein. Theſe two Cheats being often uſed by the *Dutch* Company, there is no Way but to weigh your Commodity in the Preſence of the *Dutch* Commander, and his Council; and to examine every Mein Skain by Skain; when this is done, they who are ordered to be at this Examination, are obliged to fix to every Bail a Ticket of the Weight and Quality; for if there be a Failure, they who fix the Ticket are obliged to make good what is wanting. I have told you, that when the Workmen have made up the Indigo Paſte into Lumps, with their Fingers dipped in Oil, they lay them in the Sun a drying. Now thoſe that have a Deſign to cheat the Merchants, dry them in the Sand, to the End, that the Sand ſticking to the Indigo, may increaſe the Weight. Sometimes they lay up their Paſte in moiſt Places, which makes it give, and conſequently renders it more heavy; but if the Governor of the Place diſcovers the Cheat, he makes them ſeverely pay for it; and the beſt way of Diſcovery is, to burn ſome Pieces of Indigo, for the Sand will remain.

The Brokers are, as it were, the Maſters of the *Indian* Families, for they have all Goods at their Diſpoſal. The Workmen chuſe the moſt aged, and moſt experienced, who are to endeavour equal Advantages for the whole Tribe they undertake for; every Evening that they return from their Buſineſs, and that, according to the Cuſtom of the *Indians*, who make no Suppers, they have eaten ſome little Pieces of Sweet-meats, and drank a Glaſs of Water, the eldeſt of the Tribe meet at the Broker's Houſe, who gives them an Account of what he has done that Day, and then they conſult what he is to do next. Above all things they caution him to look to his Hits, and to cheat, rather than be cheated.

We will cloſe this Section with a remarkable Paſſage relating to our Author's perſonal Hiſtory, which is very worthy the Reader's Notice, though it does not immediately relate to Trade, the rather, becauſe the Tranſlation that has been publiſhed of his Travels, gives us but a very indifferent Account of it, notwithſtanding the Author has taken great Pains to relate it very circumſtantially, as he thought it would give a true Picture of the Nation it concerns. In the Month of *April* 1665, he embarked at *Gambron* in *Perſia*, for *Surat* in the *Indies*, on Board a *Dutch* Packet Boat; which Opportunity the *Engliſh* Agent took to charge him with a large Packet of Letters for the *Engliſh* Preſident at *Surat*, in which alſo were included ſuch as belonged to private Perſons in that Factory, and in other Places of the *Indies*. This Circumſtance was taken Notice of by one Mr. *Caſembrot*, a *Dutchman*, who had travelled through *Perſia* by Land, and was to go in the ſame Veſſel with our Author to *Surat*, and he communicated this Piece of Intelligence to Mr. *Henry Van-Wuck*, who was then the *Dutch* Chief at *Gambron*, and he immediately formed a Project for ſtealing this Packet, in order to diſcover the State of the *Engliſh* Affairs; but in the firſt place went on Board the Ship, and enquired of our Author, if he had any ſuch Packet, who very innocently told him the Truth. After having thus opened the Matter, and obſerved that the *Dutch* Captain and Pilot were in the Secret, we ſhall purſue the Account in the Author's own Words: Mr. *Caſembrot*, ſays he, having ſeen the Size of the Packet, gave *Van-Wuck* a Deſcription of it, and ſo both together they contrived another of the ſame Form and Bigneſs, as near as they could. When I came on Board I took the *Engliſh* Packet, and locked it up in my Boucha, which is a ſort of Cloak-bag that is uſed in that Country, and laid it behind my Bolſter. There were two Shallops ſent on Board us, wherein there were ſixty Bags of Silver, containing ſome fifty, ſome an hundred Tomans apiece. Theſe Bags they unladed very leiſurely to gain Time, watching when I ſhould be gone to Bed; but when they ſaw that I did not go to reſt, the *Dutch* conſulted together, and agreed to let fall a Bag of Tomans into the Sea, and ſo came all aboard, ſending away a Shallop to *Gambron* for a Diver. When I found that the Veſſel would not ſet ſail, till two or three Hours after Day-light, I went to reſt, my Boucha lying in the ſame Place half out, and half withinſide of my Bolſter; but when my Servants were gone, and I alone, and aſleep in the Cabin; they cunningly ſtole my Boucha, took out the *Engliſh* Packet, and left the other; which they had counterfeited, in the Place, being only ſo many Letters of blank Paper. Coming to *Surat* the 6th of *May* following, I gave the Packet, as I thought, which I had received from the *Engliſh* Agent at *Gambron*, to two *Capuchin* Friars; to deliver to the Preſident at *Surat*; but when the Preſident came to open the Packet before ſeveral of the Company, there was nothing but white Paper made up in the Form of Letters, which when I heard, too much to my Sorrow, I underſtood the villainous Trick that *Van-Wuck* had put upon me.

I wrote a ſmart Letter of Complaint to the *Dutch* General in *Batavia*, but finding no Redreſs, I was forced to undergo the hard Cenſure of the *Engliſh*, who would not permit me to juſtify myſelf. However, as it is rare to ſee Treachery go unpuniſhed, the Complotters all died miſerably. *Van-Wuck* fell into a violent Fever, and being charged with the Theft, thinking to defend himſelf with an Equivocation, ſaid, that if he took the Cloak-bag, he wiſhed he might die without ſpeaking a Word. In three Days ended his Life, juſt in the ſame manner, and at the ſame time that he had imprecated upon himſelf; *Bozon*, his Lieutenant, after a great Debauch, going to ſleep upon the Terraſs of the Cabin, where he lay for Coolneſs (there being no Baluſters) rolling and tumbling in his Sleep, fell down, and the next Day was found dead in the Sea. The Captain, four or five Days after his Arrival at *Surat*, being met in the Streets by a *Mohammedan*, who was jealous of his Wife, and being miſtaken by him for one among ſeveral *Franks* that had parted them, and kept him from correcting his Wife ſome few Days before, was ſtabbed by him in three or four Places with a Dagger, which killed him outright; and this was the End of theſe treacherous People.

23. We may gather from this remarkable Paſſage the Reaſon why our Author had always a ſtrong Diſlike to the *Dutch*; for it is not probable, that after ſuch a Tranſaction, they could either forget him, or he them; but it ſeems not a little ſtrange. that this Account ſhould be ſo much ſoftened in the *Engliſh* Tranſlation, and no Notice taken that the Perſon who did him this Injury was the *Dutch* Chief at *Gambron*, to whom he was particularly recommended, and a long Letter likewiſe omitted, which he wrote to the *Dutch* Governor at *Batavia*. In a Work like this, where we profeſs to make a Collection of Voyages and Travels, ſuch Pieces ought to be left out, as refer only to particular Men; but the Rule is certainly otherwiſe, in reference to Books that are given to the World as expreſs Tranſlations; for which Reaſon I am inclined to think, that there is ſomething myſterious in this Omiſſion, and that the Author of the *Engliſh* Tranſlation was a better Friend to the *Dutch* than M. *Tavernier*, and therefore did not think fit to truſt ſuch an unlucky Story as this with an *Engliſh* Reader, eſpecially at that Juncture; for this Verſion of our Author's Travels was publiſhed in the Reign of King *Charles* II. not long after the Cloſe of the laſt *Dutch* War.

I am the rather inclined to think this, becauſe at the End of the fifth Book of M. *Tavernier*'s Travels, there is a very curious Relation of a groſs Affront offered to King *Charles* II. by the *Dutch* Factory at *Gambron*, who burnt his Picture in the moſt ignominious Manner, which is alſo left out in the *Engliſh* Tranſlation, and of which the Reader ſhall, God willing, have an exact Verſion in the ſucceeding Volume of this Work. At preſent, it is ſufficient that we mention theſe things, becauſe they will ſerve to explain ſeveral Paſſages in the ſucceeding Section, which contains the Remainder of our Author's *Indian* Obſervations, together with an Account of his Return by *Batavia* in a *Dutch* Ship to *Europe*, in which occur a Multitude of curious Circumſtances, and many remarkable Paſſages, in reſpect to the Hiſtory and Trade of the *Indies*, that are no where elſe to be found.

SECTION XXX.

The Concluſion of the Remarks and Obſervations of Mr. J. Baptiſt Tavernier *in his Travels through the* Indies, *together with his Account of the* Dutch *Settlements, and of his Voyage on Board a* Dutch *Ship from* Batavia *to* Europe.

Written by himſelf ſoon after his Return.

1. *An Account of the Kingdom of* Macaſſar, *in the Iſland of* Celebes. 2. *The Grounds of the Quarrel between the King of* Macaſſar, *and the* Dutch. 3. *The Means by which the King was converted to the* Mohammedan *Religion.* 4. *The Author's Voyage from* Mingrela *to the Iſland of* Ceylon, *interſperſed with various Remarks.* 5. *The Author's Departure from* Ceylon, *and his Arrival at* Batavia. 6. *The ill Uſage the* French *meet with from the* Dutch *in the* Eaſt-Indies. 7. *An Inſtance of their Reſpect likewiſe for the* Engliſh. 8. *The Author goes to viſit the King of* Bantam, *in order to ſell him ſome Diamonds.* 9. *A Deſcription of that Monarch's Palace, and of the Reception our Author met with there.* 10. *His Return to* Batavia, *and his Obſervations in that City.* 11. *His narrow Eſcape in his ſecond Journey to* Bantam *from a* Mohammedan *Monk that intended to aſſaſſinate him.* 12. *A diſtinct and impartial Account of the Grounds of the long War between the* Dutch *and the Emperor of* Java. 13. *Our Author meets with new Troubles at* Batavia. 14. *He embarks there on Board a* Dutch *Veſſel, in order to return to* Europe. 15. *Arrival at, and our Author's Obſervations on the Country near the* Cape of Good-Hope. 16. *His Remarks upon the Iſland of* St. Helena, *which they touched at in their Paſſage.* 17. *Return to* Holland, *and baſe Uſage by the* Dutch.

1. WE have before given a large Account of our Author's Obſervations on the Kingdoms in the *Eaſt-Indies* to the very Frontiers of *China*, of which Empire, it ſeems, he had likewiſe collected ſome very curious Memoirs, though his Modeſty would not ſuffer him to publiſh them, becauſe there were already ſeveral general Hiſtories of that Country written by ſuch as had reſided there for many Years, and were therefore likely to be better acquainted with it than he. In order, however, to preſerve the beſt Method poſſible in his Relations, he paſſes from the Kingdom of *Siam*, on the Continent, to the great Iſland of *Celebes*, of which he has given us a very copious and very curious Account, much ſuperior to any thing we meet with in the general Hiſtories of the *Indies* by *Portugueze* Writers, and therefore it comes in here very properly, as a Supplement to what we have before tranſcribed from thoſe Writers in the former Sections, and at the ſame time ſerves for an Introduction to what the Author ſays of the Reduction of that Iſland, or at leaſt of the principal Kingdom therein by the *Dutch*, who are ſtill Maſters thereof, and derive from thence very great Advantages. We may reckon amongſt theſe their excluding all other Nations from any Commerce here. But to proceed now to our Author's Narration, in his own Words.

The Kingdom of *Macaſſar*, which is in the Iſle of *Celebes*, begins at the 15° of Southern Latitude; the Heats are exceſſive all the Day, but the Nights are temperate enough; and for the Soil, it is very fertile; but the People have not the Art of Building. The capital City bears the Name of the Kingdom, and is ſituated upon the Sea. The Port is free; for the Veſſels that bring great Quantities of Goods from the adjacent Iſlands pay no Cuſtoms. The Iſlanders have a Cuſtom to poiſon their Arrows; and the moſt dangerous Poiſon which they uſe is the Juice of certain Trees, in the Iſland of *Borneo*, which they will temper ſo as to work ſwift or ſlow, as they pleaſe. They hold, that the King has only the ſecret Receipt to take away the Force of it, who boaſts that he has the moſt effectual Poiſon in the World, which there is no Remedy can prevent.

One Day an *Engliſhman*, in the Heat of Blood, had killed one of the King of *Macaſſar*'s Subjects, and though the King had pardoned him, yet both *Engliſh*, *Hollanders*, and *Portugueze* feared, if the *Engliſhman* ſhould go unpuniſhed, leſt the Iſlanders ſhould revenge themſelves upon ſome of them, beſought the King to put him to Death, which with much ado being conſented to, the King, unwilling to put him to a lingering Death, and deſirous to ſhew the Effect of his Poiſons, reſolved to ſhoot the Criminal himſelf; whereupon he took a long Trunk and ſhot him exactly into the great Toe of the right Foot, the Place particularly aimed at. Two Surgeons, one an *Engliſhman*, and the other a *Dutchman*, provided on purpoſe, immediately cut off the Member; but for all that the Poiſon had diſperſed itſelf ſo ſpeedily, that the *Engliſhman* died at the ſame time. All the Kings and Princes of the Eaſt are very diligent in their Enquiry after ſtrong Poiſons; and I remember, that the Chief of the *Dutch* Factory and I tried ſeveral poiſoned Arrows, with which the King of *Achen* had preſented him, by ſhooting at Squirrels, who fell down dead as ſoon as ever they were touched.

The King of *Macaſſar* is a *Mohammedan*, and will not ſuffer his Subjects to embrace Chriſtianity; yet, in the Year 1656, the Chriſtians found a Way to get Leave to build a fair Church in *Macaſſar*; but the next Year the King cauſed it to be pulled down, as alſo that of the *Dominican* Friars, which the *Portugueze* made uſe of. The Pariſh-Church, which was under the Government of the Secular Prieſts, ſtood ſtill till the *Dutch* attacked *Macaſſar*, and compelled him to turn all the *Portugueze* out of his Dominions. The ill Conduct of that Prince was, in part, the Occaſion of that War to which the *Dutch* were moved to revenge themſelves upon the *Portugueze* Jeſuits, who had croſſed their Embaſſy to *China*: Beſides that, they offered great Affronts to the *Dutch* at *Macaſſar*, eſpecially when they trod under Foot the Hat of one of the *Dutch* Envoys, who was ſent to treat with the King in Behalf of the Company. Thereupon the *Dutch* reſolved to unite their Forces with the *Macaſſarians* that were in Rebellion againſt their Sovereign, and ſo revenge themſelves at any Rate.

2. Now, as to the Buſineſs of *China*, it happened thus; towards the End of the Year 1658, the General of *Batavia* and his Council, ſent one of the Chief of the *Dutch* Company with Preſents to the King of *China*, who, arriving at Court, laboured to obtain the Friendſhip of the Mandarins, who are the Nobility of the Kingdom; but the Jeſuits, by reaſon of their long Abode in the Country, underſtood the Language, and were acquainted with the Lords of the Court, leſt the *Dutch* Company ſhould get Footing to the Prejudice of the *Portugueze*, repreſented ſeveral Things to the King's Council, to the Detriment of the *Dutch*, more eſpecially charging them with Breach of Faith in all the Places where they came.

Upon this, the *Dutch* Agent was diſmiſſed, and departed out of *China* without doing any Good. Afterwards, coming to underſtand what a Trick the *Portugueze* Jeſuits had put upon him, he made Report thereof to the Governor and his Council at *Batavia*, which ſo incenſed them, that they reſolved to be revenged; for, by the Deputy's Account, the Embaſſy had coſt them above fifty thouſand Crowns; for which they conſulted how to make the *Portugueze* pay double. Underſtanding therefore the

Trade which the Jeſuits drove in *Macao* and to the Kingdom of *Macaſſar*, whither, upon their own Account, they ſent ſeveral Veſſels, laden with all ſorts of Commodities, as well of *India* as *China*. They took this Opportunity, and on the 7th of *June*, 1660, appeared with a Fleet of thirty Sail before the Port of *Macaſſar*.

The King, thinking himſelf obliged to make Defence againſt ſo potent an Enemy, endeavoured to ſuſtain the Brunt of the *Dutch*, with the *Portugueze* Ships in the Road; but the *Dutch* dividing their Fleet, Part of them fought the *Portugueze*, the other battered the Royal Fortreſs ſo furiouſly, that they carried it in a ſhort Time, which ſo terrified the King, that he commanded the *Portugueze* not to fire any more for fear of farther provoking his Enemies. The Prince *Patinſalva* was ſlain in the Fight, which was a great Loſs to the King of *Macaſſar*, who was become formidable to his Neighbours, by the good Conduct of that Miniſter. As for the *Dutch*, they took, burnt, and ſunk all the *Portugueze* Veſſels, and ſufficiently reimburſed themſelves for their *Chineſe* Expences. The Thirteenth of *June* the King of *Macaſſar*, whoſe Name was *Sumbow*, hung out a white Flag from another Tower, whence he beheld the Fight, environed by his Wives. During the Truce, he ſent one of the Grandees of his Court to the *Dutch* Admiral, to deſire Peace; which was granted, upon Condition, he ſhould ſend an Embaſſador to *Batavia*, expel the *Portugueze*, out of the Iſland, and not to permit his Subjects to have any more to do with them.

Thereupon the King of *Macaſſar* ſent eleven of the greateſt Lords of his Court, with a Train of ſeven hundred Men; the Chief of the Embaſſy being the Prince of *Pitiſaloa*. The firſt Thing they did, was to pay two hundred Loves of Gold to redeem the Royal Fortreſs again, and the next, ſubmitting to the Conditions which the *Dutch* Admiral had propoſed. The General of *Batavia* ſigned the Articles, which were punctually obſerved; for the *Portugueze* immediately quitted the Country, ſome departing for *Siam* and *Cambaya*, others for *Macao* and *Goa*. *Macoa*, formerly one of the moſt famous and richeſt Cities of the Orient, was the principal Motive that inclined the *Dutch* to ſend an Embaſſador into *China*; for, being the beſt Station which the *Portugueze* had in all theſe Parts, the *Dutch* had a Deſign to win it wholly now. This City lying in 22° of N. Lat. in a ſmall Iſland, next to the Province of *Canton*, which is a Part of *China*, has very much loſt its former Luſtre.

3. But this was not all which the Jeſuits and *Portugueze* Merchants ſuffered. The Chief of the *Dutch* Factory at *Mingrela*, which is but eight Leagues from this City, underſtanding the bad Succeſs of the *Dutch* in *China*, had a Contrivance by himſelf to be revenged: He heard that the Jeſuits of *Goa*, and other Places, drove a great Trade in rough Diamonds, which they ſent into *Europe*, or elſe carried along with them when they returned; and that for the more private carrying on of their Trade, they were wont to ſend one or two of their Order, that knew the Language, in the Habit of *Faquirs*, which conſiſts of a Tyger's Skin, to cover their back Parts, and a Goat's Skin to cover their Breaſt, reaching down to the Knees. Thereupon the Chief of the Factory of *Mingrela*, taking this Opportunity, and having Notice that two of the ſuppoſed *Faquirs* were gone to the Mines, to lay out 400,000 Pardos in Diamonds, gave Orders to two Men, which he had bribed for that Purpoſe, that as ſoon as the Fathers had made their Purchaſe, he ſhould give Notice to the Officer of the Cuſtom-houſe at *Bicholi*, which is a great Town on the Frontiers of thoſe Lands that part the Kingdom of *Viſiapour* from the Territories of the *Portugueze*, there being no other Way to paſs the River which encompaſſes the Iſland where the City of *Goa* is built. The Fathers believing that the Cuſtomer knew nothing of their Purchaſe, went into the Boat to go over the River; but, as ſoon as they were in, they were ſtrictly ſearched, and all the Diamonds confiſcated.

To return to the King of *Macaſſar*. You muſt know that the Jeſuits once offered to convert him, and perhaps they might have brought it to paſs, had they not neglected one Propoſal which he made them; for, at the ſame time the Jeſuits laboured to bring him to Chriſtianity, the *Mohammedans* uſed all their Endeavours to oblige him to take up with their Law: The King, willing to leave his Idolatry, yet, not knowing what Part to take, commanded the *Mohammedans* to ſend for two or three of their moſt able Moullas, or Doctors, from *Mecca*; and the Jeſuits he ordered to ſend as many of the moſt Learned among them, that he might be inſtructed in both Religions, which they both promiſed to do: But the *Mohammedans* were more diligent than the Chriſtians; for in eight Months, they fetched from *Mecca* two learned Moullas; whereupon, the King ſeeing that the Jeſuits ſent no body to him, embraced the *Mohammedan* Law. True it is, that three Years after, there came three *Portugueze* Jeſuits, but then it was too late. The King of *Macaſſar* being thus become a *Mohammedan*, the Prince, his Brother, was ſo mad at it, that when the Moſque, which the King had cauſed to be built, was finiſhed, he got into it one Night, and cauſing the Throats of two Pigs to be cut, he all beſmeared the Walls of the new Moſques, and the Place which was appointed for the Moulla to perform divine Service, with the Blood; ſo that the King was forced to pull down that, and build another. After which the Prince, with ſome idolatrous Lords, ſtole out of the Iſland, and never ſince appeared at Court.

4. I departed from *Mingrela*, a great Town in the Kingdom of *Viſiapour*, eight Leagues from *Goa*, the 14th of *April*, 1648, and embarked in a *Dutch* Veſſel bound for *Batavia*. The Ship had Orders to touch at *Bokanour*, to take in Rice; whereupon I went aſhore with the Captain, to obtain Leave of the King to buy Rice: We found him upon the Shore, where he had about a Dozen Huts ſet up, which were covered with Palm-Leaves. In his own Hut there was a Piece of Tapeſtry ſpread under him; and there we ſaw five or ſix Women, ſome fanning him with Peacock-Feathers, others giving him Beetel, others filling him his Pipes with Tobacco.

The moſt conſiderable Perſons in the Country were in the other Huts; and we counted about two hundred Men that were upon the Guard, armed only with Bows and Arrows: They had alſo two Elephants among them. 'Tis very probable that his Palace was not far off, and that he only came thither to take the freſh Air. There we were preſented with Tari, or Palm-wine, but very new, and not boiled: It cauſed the Head-ach in all that drank it, inſomuch that we were two Days before we could recover it. I aſked the Reaſon why the Wine came to do us ſo much Prejudice; to which they anſwered me, that it was planting Pepper about the Palm-trees that gave ſuch a Strength to the Wine.

We were no ſooner got aboard, but a mighty Tempeſt aroſe, wherein the Ship, Men, and Goods, had all like to have been caſt away, being near the Shore; but, at length, the Wind changing, we found ourſelves, by the Break of Day, three or four Leagues at Sea, having loſt all our Anchors; and, at length, came ſafe to Port in the Haven of *Ponté de Gallé*, the Twelfth of *May*. I found nothing remarkable in that City, there being nothing but the Ruins made by the Underminings and Cannon-Shot, when the *Dutch* beſieged it, and chaſed the *Portugueze* from thence. The Company allowed Ground to build upon, to them that would inhabit there, and Land to till; and had then raiſed two Bulwarks, which commanded the Port. If they have finiſhed their Deſign which they undertook, the Place cannot but be very conſiderable. The *Dutch* had made an Agreement with the King of *Candy*, that he ſhould be always ready, with twenty thouſand Men, to keep the Paſſages that hinder the *Portugueze* from bringing any Succours from *Colombo*, *Negombo*, *Manar*, or any other Places, which they poſſeſſed upon the Coaſt: In Conſideration whereof, the *Dutch*, when they had taken *Ponté de Gallé*, was to reſtore it to the King of *Candy*; which, they not performing, the King ſent to know why they did not give him Poſſeſſion of the Town; to which they returned Anſwer, that they were ready to do it, provided he could defray the Expences of the War.

But they knew, that if he had three Kingdoms more, ſuch as his own, he could never have paid ſo great a Sum. I muſt confeſs, indeed, the Country is very poor, for, I do not believe that the King ever ſaw fifty thouſand Crowns together in his Life, his Trade being all in

Cinnamon and Elephants. As for his Cinnamon, he has no Profit ſince the *Portugueze* coming into the *Eaſt-Indies*; and for his Elephants, he makes but little of them, for they take not above five or ſix in a Year; but they are more eſteemed than any other Country Elephants, as being the moſt courageous in War. One thing I will tell you hardly to be believed, but that which is a certain Truth, which is that when any other King or Rajah has one of theſe Elephants of *Ceylon*, if they bring them among any other Breed in any other Place whatever, ſo ſoon as the other Elephants behold the *Ceylon* Elephants, by an Inſtinct of Nature, they do them Reverence, by laying their Trunks upon the Ground, and raiſing them up again.

The King of *Achen*, with whom the *Dutch* alſo broke their Word, had more Opportunity to be revenged upon them than the King of *Candy*; for he denied them the Tranſportation of Pepper out of his Country, without which their Trade was worth little; his Pepper being that which is moſt coveted thro' the Eaſt, ſo that they were forced to make a Compoſition with him. The King of *Achen*'s Embaſſador coming to *Batavia*, was ſtrangely ſurprized to ſee Women ſitting at a Table; but much more, when after a Health drank to the Queen of *Achen*; the General of *Batavia* commanded his Wife to go and kiſs the Embaſſador. Nor was the King behind-hand with the *Dutch* Embaſſador another Way, whom the King beholding in a languiſhing Diſtemper, aſked him. whether he had never any Familiarity with any of the Natives? Yes, replied the Embaſſador; however I left her, to marry in my own Country: Upon that the King commanded three of his Phyſicians to cure him in fifteen Days, upon the Forfeiture of their Lives. Thereupon they gave him a certain Potion every Morning, and a little Pill at Night: and at the End of nine Days he took a great Vomit; every body thought he would have died with the working of it; but at length it brought up a Stopple of coarſe Hair as big as a Nut, after which he preſently recovered. At his Departure the King gave him a Flint, about the Bigneſs of a Gooſe-Egg, with Veins of Gold in it, like the Veins of a Man's Hand, as the Gold grows in that Country.

5. On the 25th of *May* we ſet ſail from *Ponte Galle.* The ſecond of *June* we paſſed the Line. The ſixth we ſaw the Iſland called *Nazacas.* The 17th we diſcovered the Coaſt of *Sumatra.* The eighteenth the Iſland of *Ingamina*; and the nineteenth the Iſland *Fortuna.* The twentieth we were in ken of certain little Iſlands on the Coaſt of *Java*, among which Iſlands there are three called the Iſlands of the Prince. The twenty-firſt we diſcovered *Bantam*; and the twenty-ſecond we anchored in the Road of *Batavia.* There are two Councils in *Batavia*, the Council of the Court, where the General preſides, and where all the Affairs of the Company are managed: The other, which is held in a Houſe in the City, and relates to Civil Government, and decides the petty Differences amongſt the Citizens. All the Kindneſs I had ſhewn me here, was to be proſecuted by the City Council, for being ſuſpected to have bought a Parcel of Diamonds for Monſieur *Conſtant*, my very good Friend, and Preſident of the *Dutch* Factory at *Gambron*; but when they could make nothing of it, they ceaſed their Suit, aſhamed of what they had done.

6. Being ſo ill treated at *Batavia*, I reſolved to viſit the King of *Bantam*; to which purpoſe I took my own Brother along with me, becauſe he ſpoke the *Malayan* Language, which in the Eaſt is as univerſal as *Latin* among us. Being arrived at *Bantam*, in a ſmall Bark, which we hired for ourſelves, we went firſt and viſited the *Engliſh* Preſident, who kindly entertained and lodged us. The next Day I ſent my Brother to the Palace, to know when it would be ſeaſonable for me to kiſs the King's Hands. When the King ſaw him (for he was well known unto him) he would not ſuffer him to return, but ſent Orders to fetch me, and to tell me withal, that if I had any rare Jewels, I ſhould do him a Kindneſs to bring them along with me.

When I ſaw my Brother returned not with the Perſons which the King ſent, I was almoſt in the mind not to have gone, remembering how the King of *Achen* had ſerved the Sieur *Renaud*; for the *French* having ſet up an *Eaſt-India* Company, ſent away four Veſſels, three great ones, and one of eight Guns, for the Service of the Company. Their Voyage was the ſhorteſt that ever was heard of, arriving at *Bantam* in leſs than four Months. The King alſo courteouſly received them, and let them have as much Pepper as they deſired, and cheaper by twenty in a hundred than he ſold it to the *Dutch*; but the *French* not coming only for Pepper, ſent away the ſmall Ship, with the greateſt Part of their Money to *Macaſſar*, to try the Market for Cloves, Nutmegs, and Mace. The *French* being ſo ſoon diſpatched at *Bantam*, had not Patience to ſtay till the Return of the ſmall Veſſel which they had ſent to *Macaſſar*; but to paſs the Time, muſt needs run over to *Batavia*, being not above fourteen Leagues off; ſo that you may be at *Batavia* from *Bantam* in a Tide, with a good Wind.

When they came to an Anchor, the General of the *French* Fleet ſent to complement the General of *Batavia*, who failed not to anſwer his Civility, and invited the Admiral. aſhore. Moreover, he ſent to thoſe that ſtayed aboard great Store of excellent Cheer, and a good Quantity of *Spaniſh* and *Rheniſh* Wine, with a particular Order to them that carried it, to make the *French* drunk. His Order was ſo well followed, that it was eaſy to ſet the Ships on Fire. According to the private Inſtructions which they had, ſo ſoon as the Flame was diſcovered from the General's Window, which overlooked all the Road, there was a wonderful pretended Aſtoniſhment amongſt the *Dutch*; but the *French* Admiral, too truly conjecturing the Ground and Authors of the Treachery, beholding the Company with an undaunted Courage, Come, come, cried he, lets drink on; they that ſet the Ships on Fire ſhall pay for them. However, the *French* Ships were all burnt, though the Men were all ſaved in Boats, which were ſent forthwith to their Relief. After that the General of *Batavia* made them great Offers, which they refuſed, and returned to *Batavia*, in Expectation of their ſmall Veſſel. When it returned, they could find out no better Way than to ſell Ship, Goods and all, to the *Engliſh*, and to ſhare the Money among themſelves, every one according to their Condition.

7. But the Trick which they put upon the *Engliſh* was far more bloody. The *Engliſh* were the firſt that found out the Danger of ſailing from *Surat*, *Maſlipatan*, or any other diſtant Parts to *Japan*, without touching by the Way: Whereupon they thought it convenient to build a Fort in the Iſland of *Formoſa*, which not only ſaved the Loſs of ſeveral Veſſels, but alſo brought them in great Gain. The *Dutch*, mad that the *Engliſh* were poſſeſſed of ſuch an advantagious Situation, being the only Place in all the Iſland where Veſſels could ride with Safety, and finding they could not carry it by Force, bethought them of a Stratagem, to which Purpoſe they ſent away two Ships, wherein they ſtored the beſt of their Soldiers, who pretending they had been in a Storm at Sea, put into the Harbour of *Formoſa*, with ſome of their Maſts by the Board, their Sails ſcattered, and their Seamen ſeemingly ſick.

The *Engliſh*, compaſſionating their Miſeries, which was only in outward Appearance, invited the Chief of them to come on Shore to refreſh themſelves, which they were ready to do, carrying as many Men as poſſible they could, under Pretence of Sickneſs. While the chief of them were at Dinner with the chief of the *Engliſh*, they all plied their Cups, and when the cruel *Dutch* ſaw that the *Engliſh* had drank hard enough, taking their Opportunity, they picked a Quarrel with the Commander of the Fort, and drawing their Swords, which they had hidden under their Coats for that Purpoſe, they eaſily ſurprized, and cut the Throats of all the Soldiers in the Garriſon; and being thus Maſters of the Fort, they kept it from that Time, till they were routed out by the *Chineſe.*

8. Now for the Trick that the King of *Achen* ſerved the Sieur *Renaud*, he having got a good Eſtate by Jewels, arrived at length at *Achen*, and as it is the Cuſtom for the Merchants to ſhew the King what Jewels they have, the King had no ſooner caſt his Eye upon four Rings which the Sieur *Renaud* ſhewed him, but he bid him fifteen thouſand Crowns for them, but *Renaud* would not bate of eighteen thouſand. Now, becauſe they could not agree, the Sieur *Renaud* carried them away with him, which very much diſpleaſed the King; however, he ſent for him the next Day, whereupon *Renaud* returning to him, the King paid him his eighteen thouſand Crowns; but he was never

ſeen after that, and it is thought he was ſecretly murdered in the Palace. This Story came to my Remembrance, when I found my Brother did not come along with them that were ſent to fetch me. However, I reſolved to go, taking with me twelve or thirteen thouſand Rupees Worth of Jewels, the greateſt Part being in Roſe Diamond Rings, ſome conſiſting of ſeven, ſome of nine, and ſome of eleven Stones, with ſome ſmall Bracelets of Diamonds and Rubies. I found the King with three of his Captains, and my Brother, ſitting together, after the Manner of the Eaſt, with five great Plates of Rice before them of different Colours.

For their Drink they had *Spaniſh* Wine, ſtrong Waters, and ſeveral ſorts of Sherbets. After I had complimented the King, and preſented him with a Diamond Ring, a blue Saphire Ring, and a little Bracelet of Diamonds, Rubies, and blue Saphires, he commanded me to ſit down, and ordered me a Glaſs of ſtrong Water, to whet my Appetite. The Glaſs held a Quarter of a Pint, and therefore I refuſed it, which the King very much wondered at; but being told, by my Brother, that I never drank any ſtrong Water, he ordered me a Glaſs of Sack. After that he roſe up and ſeated himſelf in a Chair, the Elbows of which were gilded; his Feet and Legs were bare, having a *Perſian* Carpet of Gold and Silk to tread upon. He was clad with a Piece of Calicut, part whereof covered his Body from his Waiſt to his Knees, the reſt being wound about his Back and Shoulders like a Scarf. Inſtead of Shoes he had a Pair of Sandals that ſtood by the Chair-ſide, the Straps whereof were embroidered with Gold, and ſmall Pearl. About his Head he had a thing like a Handkerchief, with three Corners, bound about his Head like a Fillet. His Hair alſo, which was very long, was twiſted, and tied together over his Head; two Perſons ſtood behind him with Fans of long Peacock Feathers, the Handles of which were five or ſix Foot in Length. Upon his right Hand ſtood an old black Woman, holding in her Hand a little Mortar and Peſtle of Gold to beat his Beetle in, wherewith he mixed the Kernel of the Nut of Araqui, and Seed of Pearl diſſolved. When it was all beaten together, the old Woman gave it the King over his Shoulders, who, opening his Mouth, the old Woman fed him, as our Women feed their Children; for the King had chewed ſo much Beetle, and taken ſo much Tobacco, that his Teeth were all fallen out of his Head.

9. The King of *Bantam*'s Palace was never built by any curious Architect: It is a ſquare Place, encompaſſed with a great many Pillars, varniſhed over with ſeveral ſorts of Colours, againſt which the King leans when he ſits down. At the four Corners there are four great Pillars ſet in the Earth, at forty Foot Diſtance one from another, lined with a Mat made of the certain Rind of a Tree, ſo thin, that it looks like a Piece of Linnen, which neither Fleas nor Punes will come near. The Roof was covered with Cocoa Branches. Not far off, under another Roof, ſupported by four great Pillars, he hath ſixteen Elephants, the nobleſt of all thoſe that are in the King's Service; for he has a far greater Number trained up for War, that are not afraid of Wild-fire. For his Guard he might not have above two thouſand Men that were drawn up in Companies under the Shade of the next Trees. They are good Soldiers, as well by Sea as by Land, ſtrict *Mohammedans*, and ſtand not at all in Fear of Death. His Haram, or the Womens Apartment, was certainly a very ſmall Place; for when he had viewed what I brought him, he ſent for two old Women, to whom he gave ſome of the Jewels to go and ſhew them to his Wives. The two Women returned back through a little pitiful Door, the Encloſure being nothing but a kind of a Wall made up of Earth and Cow-dung mixed together. Whatever he ſent to the Women, they never returned any thing again, which made me believe they would bear a good Price; and indeed, whatever I ſold to him, I ſold to good Profit, and had my Money well paid me.

After this we took our Leaves; but the King obliged us to come next Day in the Evening, becauſe he had a Deſire to ſhew us a *Turky* Dagger, the Haft whereof being thin of Diamonds, he had a mind to enrich with more Stones. Coming to the *Engliſh* Houſe with our Money, they wondered that the King had laid out twenty thouſand Rupees, telling me, they believed it was the beſt Part of his Treaſure. The next Day my Brother and I went to wait upon him at the appointed Hour, and we found him ſitting in the ſame Place where he ſat before. There was a Moulla then read to him, who ſeemed to interpret to him ſomething of the *Alcoran* in the *Arabic* Language.

The Lecture being ended, they both roſe and went to Prayers, which being concluded, the King ſent for the Dagger, and the Haft, which was of Gold; the Top of Handle was already ſet with Diamonds, and the upper Part of the Croſs-bar was cut in Facets, which could not be leſs worth than fifteen or ſixteen thouſand Crowns. They told me it was preſented to him by the Queen of *Borneo*, and that it was cut at *Goa*, but that he put a far higher Value upon it than I eſteemed it to be worth. The Dagger, as well as the Sheath, was full of Beazells or Collects, and therefore deſired me to help him to ſome that might come at an eaſy rate. I told him it was impoſſible to find Stones that would fit the Beazells, and therefore it was better, when he had got Stones enough, to fix other Beazells according to the Proportion of the Stones; to which Purpoſe he muſt be forced to range all his Stones in Wax, and I ſhewed him how to do it at the ſame time; but that was above his Skill, and therefore do what I could to excuſe myſelf from the Truſt, he would needs oblige me to carry the Dagger to *Batavia*; whereupon I took my Leave of the King, and departed.

10. About eleven o'Clock at Night we embarked for *Batavia*, for the Night Winds blowing from the Land, are the only Winds to ſerve our Turn, ſo that we were at *Batavia* between ten and eleven the next Morning. There I ſtayed twenty Days for the King of *Bantam*'s ſake, to make him believe I had ſought for that which I knew was impoſſible to be found. I had nothing to do all the while, for in *Batavia* there is no other Recreation but Gaming and Drinking, which was none of my Buſineſs; at that Time the Sieur *Cam* died, one of the *Indian* Counſellors, who was ſumptuouſly buried for his good Services done to the Company; but the People complained heavily of the Injuſtice which he had done, as well to the Soldiers, as the Mariners.

Having ſtayed twenty Days at *Batavia*, I reſolved to go and return the King of *Bantam* his Dagger again, for that it was impoſſible to meet with Stones to fit his Beazells. However, I took along with me ſome other Stones, which he had not ſeen. Coming to *Bantam*, the King cauſed us to be lodged in one of his own Houſes in the City, which was made of Bamboos; thither, in leſs than a Quarter of an Hour, the King ſent us ſome Pateches, or ſweet Water Melons, red within like Scarlet. We had alſo Mangoes, and a certain large Fruit called Pompone, red alſo within, the Meat of it being ſoft and ſpungy, but of an excellent Taſte. Having ſtayed our Stomachs, we went to wait upon the King, whom we found in the ſame Place with his old Mortar-beater, who every Minute fed him with Beetle with her Fingers. There were ſitting about the Hall five or ſix of his Captains, viewing a certain Piece of Fireworks, as Granadoes, Rockets, and other Devices, to run upon the Water, which the *Chineſe* had brought, who are the moſt exquiſite at theſe Works of any People in the World. When the King was at leiſure, I returned him his Dagger, telling him, *Batavia* was no Place to meet with Stones, and that ſuch as were to be found were valued at double the Price they were worth; and that there was no Place where he could fit himſelf, but at *Golconda*, or *Goa*, or the Diamond Mines. Thereupon the old Woman took the Dagger, and carried it into his Haram; nor did the King ſpeak a Word more about it, after that I had ſhewed him what other Stones I had brought, a Parcel whereof I ſold him for good Profit.

The King ordered us to come the next Day for Payment. The next Day, about ſix in the Morning, my Brother, and I, and a *Dutch* Chirurgion, were going along a narrow Way between a River on the one Hand, and the Pales of a great Garden on the other. Behind the Pales a raſcally *Bantamois* had hid himſelf, one of thoſe that was newly come from *Mecca*, and was upon the Deſign of *Mocca*; that is, in their Language, when the Raſcality of the *Mohammedans* return from *Mecca*, they preſently take their Cris in their Hands, which is a kind of Poinard, the Blade whereof is half poiſoned, with which they run through the Streets, and kill all thoſe that are not of the *Mohammedan* Law, till they are killed themſelves.

Theſe Furies think, in ſo doing, they do God and *Mohammed* good Service, and ſhall be ſaved thereby. If any of theſe Madmen be killed, the Rabble of *Mohammedans* bury them as Saints, and every one contributes towards making them a fair Tomb. Sometimes you ſhall have an idle Rogue, in the Habit of a Dervich, that will build him a Hut near the Tomb, which he undertakes to look to, and ſtrews with Flowers; and, as his Alms increaſe, he adds ſome other Ornament to it; for the fairer and better ſet out the Tomb is, the more devoutly it is worſhipped, and the more Alms it brings in.

I remember in the Year 1642, that at *Saualli*, which is the Port of *Surat*, it happened, that a Veſſel of the great Mogul's returned from *Mecca* with a great Number of Faquirs or Derviches; for every Year the King ſends two Veſſels to carry and bring back the Pilgrims, who have their Paſſage free, and when theſe Veſſels are to go, the Faquirs come from all Parts of *India* to embark. Theſe Veſſels are laden with very good Commodities, which are ſold at *Mecca*, and the Profit is diſtributed among the poor Pilgrims; but the Principal is brought back for the next Year, amounting to ſix hundred thouſand Rupees at leaſt. 'Tis an ill Market when they do not gain thirty or forty *per Cent.* by their Commodities; nay, there are ſome that produce *Cent. per Cent.* beſides that the principal Perſons of the Mogul's Haram, and other particular Perſons, ſend very large Gifts to *Mecca*.

11. One of theſe Faquirs returning from *Mecca* in the Year 1642, and being landed at *Souali*, had no ſooner ſaid his Prayers, but he took his Dagger, and ran among ſeveral *Dutch* Mariners that were unlading Goods upon the Shore, and before they were aware, this mad Faquir had wounded ſeventeen of them, of which thirteen died. The Canjare, which he had in his Hand, was a kind of Dagger, the Blade whereof, towards the Handle, was three Fingers broad, and is a very dangerous Weapon. At length the Centinel that ſtood at the End of the Tent, where the Governor and the Merchants were, ſhot him through the Body, ſo that he fell down dead. Immediately all the other Faquirs and *Mohammedans* that were upon the Place took up the Body, and buried it, and at the End of fifteen Days they put him up a fair Monument. Every Year the *Engliſh* and *Dutch* pull it down; but when they are gone the Faquirs ſet it up again, and plant Banners over it: Nay, ſome there are that perform their Devotions to it. But to return to the *Bantam* Faquir, that Villain lying, as I ſaid, behind the Pales, as my Brother, and I, and the *Dutch* Chirurgion, came towards him, all three a-breaſt, he thruſt his Pike between the Pales, thinking to have ſtabbed it into one of our Breaſts. The *Dutchman* being next the River, and ſomewhat before the reſt, the Head of his Pike ran into his Breeches; whereupon we both laid hold of the Staff, but my Brother being next the Pales, preſently leaped over, and ran the Faquir through.

Whereupon ſeveral *Chineſe*, and other Idolators, came and gave my Brother Thanks for killing him; after that we waited upon the King, and told him what my Brother had done, who was ſo far from being diſpleaſed, that he gave my Brother a Girdle: For, the King and his Governors are glad when theſe Rogues are killed, knowing them to be Deſperadoes, not fit to live. The next Day coming to take my Leave of the *Engliſh* Preſident, he ſhewed me two Strings of Diamonds, and two Services of Silver, which came from *England*; he would have ſold them, but I only bought one of the Strings of Diamonds, the other being foul; and for the Silver I would have bought it, had they coined Silver in *Batavia*, as they were wont to do. Formerly the *Dutch* coined Reals, Half-Reals, and Quarter-Reals, bearing on the one Side the Stamp of a Ship, on the other V. O. C. like a Character, ſignifying in *Dutch*, for the *Eaſt-India* Company, which they did for the ſake of the *Chineſe*, who loving Silver better than Gold, carried away all the Silver that was coined at *Batavia* at good Rates; but at length they left it off, finding ſo few People that made uſe of Silver.

12. Having taken my Leave of the *Engliſh* Preſident, I returned to *Batavia*, where, having little to do, I reſolved to give a Viſit to the King of *Japara*, otherwiſe called the Emperor of *Java*. This King was formerly the King of all the Iſland, till the King of *Bantam*, who was only Governor of a Province, rebelled againſt him, the *Dutch* being made by the Diviſion of thoſe two Princes; for when the King of *Japara* beſieged *Batavia*, the King of *Bantam* relieved the *Dutch*; and when they were attacked by the King of *Bantam*, the King of *Japara* came to their Aſſiſtance; and when thoſe two Kings were together by the Ears, the *Dutch* always aided the weakeſt. The King of *Japara* keeps his Court in a City of the ſame Name, diſtant from *Batavia* about thirty Leagues. You may coaſt along the Shore to it by Sea; but the City ſtands above eight Leagues up the Land. From the City there is a fine Walk to the Sea, where there is a handſome Port, and fairer Houſes than any in the City; and the King would live there if he thought it ſafe.

The Day before I departed, I went to take my Leave of one of the *Indian* Counſellors, and telling him that I was going to wait upon the King of *Japara*, he ſtood amazed, in regard the King and the *Dutch* were mortal Enemies, of which he gave me this Account. The deceaſed King, Father to the King that now reigns, ſince the *Dutch* built their Fort of *Batavia*, would never have any Peace with them; and though that, during the War, the *Dutch* took ten of his Subjects for one of theirs, and offered ten for one in Exchange, yet he would never exchange one upon any Conſideration whatſoever, and charged his Son, upon his Death Bed, never to releaſe one. This Obſtinacy very much troubled the *Dutch* General, and all the reſt in *Batavia*, and obliged them how to conſult Means to right themſelves. Now it is the Cuſtom when the *Mohammedan* King dies, that his Succeſſor ſends certain great Lords of his Court to *Mecca*, with Preſents, as well to engage them to pray for the Soul of the deceaſed, as alſo to give Thanks to God and *Mohammed* for the coming of a new King to the Throne, without any Impediment, and to pray for the Bleſſing of Victory over all his Enemies. But the new King and his Council were at a Loſs how to accompliſh this Voyage; for, firſt, the King had none but little Veſſels, that were wont only to ſail along by the Shore, by reaſon of the Inexperience of his Seamen; and, in the next Place, the *Dutch* were always plying to and fro about the Mouths of his Havens, to ſurprize his Subjects, if they ſtirred out. For the Safety therefore of his Pilgrims, the King, at laſt, concludes upon making an Agreement with the *Engliſh*; for which Reaſon he diſpatched away an Envoy to *Bantam* to the *Engliſh* Preſident and his Council, who promiſed to lend him the biggeſt Veſſel, and the beſt mounted which the Company had in the *Indies*; in lieu whereof the *Engliſh* were to pay but half Cuſtoms for all Commodities exported or imported out of his Country; which Treaty being ratified, the *Engliſh* furniſhed him with three ſtout Veſſels mann'd and armed beyond an ordinary Rate.

Thereupon nine of the principal Lords of the Court, and moſt of the Blood Royal, with a Train of one hundred Perſons, embarked themſelves in the great Veſſel. But all theſe Preparations could not be carried on ſo privately but that the *Dutch* had Intelligence of it by their Spies. Thereupon the General of the *Dutch* makes ready three Ships, and lying juſt in the Strait of *Bantam*'s Mouth, ſo ſoon as the *Engliſh* came up (for they had no other Way) let fly at them ſo roundly, that the *Engliſh*, fearing leſt their Veſſels ſhould be ſunk, ſtruck ſail; which the *Java* Lords ſeeing, called them *Engliſh* Traitors, and, drawing their poiſoned Darts, cried *a Mecca* upon the *Engliſh*, killing a great Number of them before they had Time to put themſelves into a Poſture of Defence; and perhaps there would not have one of them eſcaped, had not the *Dutch* come on board as they did: Some of the *Java* Lords, and about twenty of their Attendants, would take no Quarter, ſo that the *Dutch* were forced to fight for it, and, at laſt, they got the better, with the Loſs of ſeven or eight Men.

The *Engliſh* Veſſel being carried into *Batavia*, the General very civilly ſent both the Priſoners and the Veſſel home again, withal giving Notice to the King, that he was ready to make an Exchange of Priſoners with him; but the King would not ſo much as hearken to any ſuch Propoſition, returning for Anſwer, that though the *Dutch* had three times as many of his Subjects, he would not ſo much as releaſe one of the *Dutch*; ſo that the poor *Dutch* were kept Slaves in *Java*, and the *Javaneſe* died miſerable in *Batavia*. As to the *Javaneſe*, they are good Soldiers; and it is reported, that while *Batavia* was beſieged by the King of *Bantam* in the Year 1659, a *Dutch* Soldier lying in Ambuſcade in a March, a *Javaneſe*, little dreaming that any Body had been there, came to this ſame Place to diſcover the Enemy, and was by the *Dutchman* thruſt with his Pike into the Body; upon which the *Javaneſe* finding himſelf wounded, did not ſtrive to pull the Pike out of the Body, but thruſt himſelf farther upon it, to the End he might come at his Enemy, whom he ſtabbed to the Heart as ſoon as he came within his Reach.

13. Whilſt I ſtayed at *Batavia*, my Brother died, and it was pretty to conſider what the *Dutch* made me pay for his Funeral. The firſt Expence is for the Fees of thoſe that beg Leave for the Corps to be buried, of whom the more there are, the more honourable the Funeral is eſteemed; I ſent ſix, and, to my Wonder, paid for that ſeventy-two Crowns. The Fee for the Poor is a Right belonging to the Poor, for which I paid two Crowns. There was a Veſſel of *Spaniſh* Wine drank out that coſt me two hundred Piaſters: I gave twenty-ſix more for three *Weſtphalia* Hams and Neats-tongues, and twenty-two for baked Meats; to the Bearers, I gave twenty Crowns, and ſixteen for a Place in the Church-Yard, for they aſked me an hundred to bury him in the Church. And all theſe are Fees demanded; ſo that my Brother's Funeral coſt me twelve hundred and twenty-three Livres of *French* Money. Being thus put by the two Voyages which I intended to *Japara*, and *Sumatra*, I was adviſed to lay out my Money in Reckonings, or Debentures, of the Servants of the *Dutch* Company, which they that have no mind to return into their own Country, as being ſettled in the *Indies*, will ſell at an eaſy Rate, inſomuch that for ſixty or ſeventy, you may buy an hundred Piaſters, the Act and Acquittance of the Seller being made and regiſtered by the publick Notary.

Thereupon I bought of one of the publick Notaries, who had Bills in his Hands to the Value of about eleven hundred Guilders, at fourſcore and two for the hundred. After that I bought, by means of the Advocate of the Treaſury, ſix thouſand Guilders more at ſeventy-nine for the hundred. But ſome few Days after, meeting with the ſame Advocate again, he paſſed a Compliment upon me, and told me he was very much troubled for thoſe that had bought Debentures, in regard that the General and the Council had commanded him to recal all Debentures that had been ſold; for they had conſidered how ſad a Thing it would be for the poor Men to loſe ſo much of their Salaries; I anſwered him, that, for my Part, I was willing to return mine, provided I might have my Money again.

About ſix or ſeven Hours after, I was ſent for by the General and the Council; when I came there they aſked me why I had not returned my Debentures which I had to the Advocate, who had demanded them by their Order? I anſwered them, that they were at *Bantam*, whither I had ſent them in order to my Paſſage home, in regard that the *Engliſh* Preſident had offered me a Convenience to go along with him. The Council anſwered me, that the *Dutch* Ships were as good as the *Engliſh*, and very certainly aſſured me, that they would give Orders for a Cabin to myſelf in the Vice-Admiral; but withal told me, I muſt deliver up my Debentures before I ſtirred, aſſuring me they would give me a Bill to be reimburſed my Money in *Holland*. I thought it very hard, not knowing how to truſt them, but ſeeing the Merchants, Commanders, and all other Perſons, clapp'd up, and their Papers taken from them by Force that had bought Debentures, I thought it the beſt Way to deliver mine, and ſtand to their Courteſy. I often preſſed the General and the Council for my Bill; but, after many Days, the General aſcertained me, that my Bill ſhould be in *Holland* as ſoon as I. Thereupon deſiring the Vice-Admiral, and ſome others, to be my Witneſſes of what the General promiſed, I took my Leave of him, very much repenting my going to *Batavia*.

14. The next Day I went on board the Vice-Admiral; and, the third Day after, we ſet ſail, and as ſoon as we were out of the Streights, we diſcovered the Iſland of the *Prince*, from thence, being in the Altitude of the Cocoa Iſlands, we beat about two Days to diſcover them, but all to no Purpoſe; thereupon we made directly for the *Cape of Good-Hope*. The forty-fifth Day after we departed from *Batavia*, our Vice-Admiral neglected to put out his Lights, believing all the Fleet had been before at the Cape; ſo that it happened one of the Fleet being behind, and not carrying any Lights out neither, it being a dark Night, fell foul upon us, which put every Man to his Prayers, all the People believing the Veſſel had been loſt; and indeed had ſhe not been a ſound ſtaunch Ship (as ſhe was eſteemed to be) ſhe could never have endured ſo terrible a Shock. At length we cleared ourſelves by cutting off the Yard of the *Maeſtricht* that hung in our Cordage. The fifty-fifth Day we came within Sight of the *Cape of Good-Hope*, but were forced to keep the Sea, becauſe the Waves rolled ſo that we were not able to come to an Anchor; not that the Wind was extream high, but becauſe the South-wind, which had blown, had forced the Water to that Part; when the Sea grew calm we came to an Anchor.

But of all the People that ever I ſaw in all my Travels, I never met with any ſo hideous, nor ſo brutiſh, as the *Comoucks*, of which I have ſpoken in my *Perſian* Travels, and thoſe of the *Cape of Good-Hope*, whom they call *Cafres*, or *Hotentots*. When they ſpeak, they make a Noiſe with their Tongues like the Breaking of Wind backwards; and though they hardly ſpeak articulately, yet they eaſily underſtand one another. They cover themſelves with the Skins of wild Beaſts which they kill in the Woods, in the Winter wearing the hairy Part innermoſt, and in the Summer outermoſt: But there are none but the beſt ſort among them who are thus clad; the reſt wear nothing but a naſty Rag about their Privy-parts. The Men and the Women are lean and ſhort, and when they bring forth a male Child, their Mothers cut out the Right-ſtone, and preſently give him Water to drink, and Tobacco to eat. They cut out the Right-teſticle, becauſe, they ſay, it makes them ſwifter to run. There are ſome of them that will catch a Roe-buck running. They neither know what belongs to Gold nor Silver; and, for Religion, they have none among them.

15. So ſoon as we caſt Anchor, four Women came on board of us, and brought four young Oſtriches, which were boiled for ſome ſick People we had aboard of us; after that they brought great Store of Tortoiſe-ſhells, and Oſtriches-Eggs, and other Eggs as big as Gooſe-Eggs, which, tho' they had no Yolk, taſted very well. The Birds that lay theſe Eggs are a ſort of Geeſe, and ſo fat that they are hardly to be eaten, taſting rather like Fiſh than Fleſh. The Women ſeeing our Cook throw away the Guts of two or three Fowls, which he was dreſſing, took them up, and, ſqueezing out the Ordure, eat them as they were, being highly pleaſed with the *Aqua Vitæ* which the Captain gave them. Neither Men nor Women are aſhamed to ſhew their Nakedneſs; for, indeed, they are but a ſort of two-legg'd Beaſts.

So ſoon as a Ship arrives, they bring their Beavers to the Shore, with what other Commodities they have, to barter for Strong-water, and Tobacco, Cryſtal, or Agat Beads, or any ſort of old Iron-work. If they are not ſatisfied with what you offer them, away they fly, and then giving a Whiſtle, all their Cattle follow them; nor ſhall you ever ſee them again. Some, when they ſaw them fly, would ſhoot and kill their Cattle; but, after that, for many Years, they would not bring any more. It's a very great Convenience for the Veſſels that touch there, to take in freſh Victuals, and the *Dutch* did well to build a Fort there. It is now a good handſome Town, inhabited by all ſorts of People that live with the *Dutch*; and all ſorts of Grain which are brought out of *Europe*, or *Aſia*, and ſowed there, come to greater Perfection than in other Parts. The Country lies in 35° and ſome few Minutes over; ſo that it cannot be ſaid that either the Heat, or the Situation of the Climate, make theſe *Cafres* ſo black. Being deſirous to know the Reaſon, and why they ſtunk ſo terribly, I learnt it from a Girl, that was bred up in the Fort, who was taken from her Mother as ſoon as ſhe was born, and was white, like our Women in *Europe*: She told me, that the Reaſon was, becauſe the *Cafres* rub themſelves with a Greaſe, or Ointment, compoſed of ſeveral ſorts of Drugs, wherewith ſhould they not anoint themſelves very often, and ſo ſoon as they were born, they would become hydropſical, as the *Blacks* of *Africa* and the *Abyſſinians* are, or like the People of *Saba*, that never live above forty Years, and are always troubled with one Leg twice as big as the other. Theſe *Cafres*, as brutiſh as they are, have yet ſome Knowledge of Simples, which they know how to apply to ſeveral Diſeaſes, which the *Dutch* have ſeveral times experienced. Of nineteen ſick Perſons that we had in our Ship, fifteen were committed to the *Cafres*, being troubled with Ulcers in their Legs, and old Wounds which they had received in the Wars; and, in leſs than fifteen Days, they were perfectly cured. Every one of theſe had two *Cafres* to look after him, and according to the Condition of the Wound or Ulcer, they went and fetched Simples, which they bruiſed between two Stones, and applied to the Sore. As for the other four, they were ſo far gone with the Pox, that they would not truſt the *Cafres* with them, having been given over at *Batavia*, and ſo they all died between the Cape and *Saint Helena*.

In the Year 1661, a Gentleman of *Britanny*, being at *Batavia*, was ſo bit by the Gnats in the Night, that his Leg exulcerated preſently, in ſuch a Manner as to puzzle all the Art and Skill of the Chirurgeons of that Town. When he came to the *Cape of Good-Hope*, the Captain of the Ship ſending him on Shore, the *Cafres* came about him, and after they had beheld him, they told him, if he would truſt to them, they would cure him; the Captain therefore committed him to their Care, who cured him, and made him a ſound Man in leſs than fifteen Days. When a Ship comes to an Anchor in the Cape, it is the Cuſtom for him that commands the Ship, to give Leave to ſome Part of the Mariners and Soldiers to go aſhore to refreſh themſelves. The ſickly have firſt Leave by Turns, and go to the Town, where they are dieted and lodged for ſeven or eight Sous a Day, and are very well uſed. It is the Cuſtom of the *Dutch*, when they ſtay here, to ſend out Parties of Soldiers upon the Diſcovery of the up-land Country, and they that go fartheſt are beſt rewarded. With this Deſign a Party of Soldiers, under the Command of a Serjeant, far advanced in the Country, and Night coming on, they made a great Fire, as well to keep themſelves from the Lions, as to warm themſelves, and ſo lay down to ſleep round about it; being aſleep, a Lion ſeized one of the Soldier's Arms, which the Serjeant perceiving, immediately ſhot the Lion with his Carbine; but, when he was dead, they had much ado to open the Lion's Mouth to get out the Soldier's Arm.

Thus it appears a vulgar Error, to think that Lions will not come near the Fire. As for the Soldier, the *Cafres* cured him in twelve Days. There are in the Fort abundance of Lions and Tygers Skins; among the reſt, there was the Skin of a Horſe which the *Cafres* had killed; it was white, croſſed with black Streaks, ſpotted like a Leopard, without a Tail. Two or three Leagues from the *Dutch* Fort, there was a Lion found dead, with four Porcupine Quills in his Body, the third Part whereof had pierced his Fleſh; ſo that it was judged that the Porcupine had killed the Lion. The Skin, with the Quills in it, are kept at the Fort. A League from this Fort is a fair Town, that grows bigger every Day.

When the *Dutch* Company arrive there with their Ships, if any Soldier or Mariner will live there, they are glad of it. They have as much Ground as they can manage, where they have all ſorts of Herbs and Pulſe, and as much Rice, and as many Grapes, as they can deſire. They have alſo young Oſtriches, Beef, Sea-fiſh, and ſweet Water to catch the Oſtriches when they pleaſe; they get their Neſts when they are young, and driving a Stake in the Ground, tie the Birds by one Leg to the Stake, and when they are old enough, they come and take them out of the Neſt, from whence it is impoſſible to fly away. When the *Dutch* began to inhabit the *Cape*, they took a young Girl from her Mother as ſoon as ſhe was born; ſhe is white, only her Noſe is a little flat. A *Frenchman* got her with Child, and would have married her; but the Company were ſo far from permitting him, that they took away above one hundred Livres of the Maid's Wages from her, to puniſh her for the Miſdemeanor, which was ſomewhat hard.

There are great Numbers of Lions and Tygers, which the *Dutch* have a pretty Invention to take; they faſten a Carbine to a Stake driven into the Earth, and lay Meat round about the Gun, which Meat is faſtened with a String to the Trigger, ſo that when the Beaſt ſnatches the Meat, the String pulls the Trigger, and the Gun goes off, hits the Lion either in the Throat or Breaſt. The *Cafres* feed upon a Root like our Carrots, which they roaſt, and make Bread of. Sometimes they grind it into Flour, and then it taſtes like a Walnut; for their Food they eat the ſame Root raw, with raw Fleſh, and with the Entrails of Beaſts, out of which they only ſqueeze the Ordure. As for the Bowels of the wild Beaſts, the Women wear them dried about their Legs, eſpecially the Bowels of thoſe Beaſts their Huſbands kill, which they look upon as a kind of Ornament.

They alſo feed upon Tortoiſes, when they have ſo far heated them at the Fire, as to make the Shells come off. They are very expert in darting their Azagayas, and thoſe that have none make uſe of painted Sticks, which they will launce a great way; with theſe they go down to the Sea ſide, and as ſoon as ever they ſpy a Fiſh near the Top of the Water, they will not fail to ſtrike him. As for their Birds, which are like our Ducks, whoſe Eggs are without any Yolk, they breed in ſuch great Quantities in the Country, that in a Bay, about eighteen Leagues from the *Cape*, you may knock them on the Head with a Stick. The *Dutch* once carried a young *Cafre* to the General at *Batavia*, who bred him carefully up, teaching him to underſtand the *Dutch* and *Portugueze* Languages perfectly well. At length, being deſirous to return to his own Country, the General gave him very good Cloaths, and good Linnen, hoping that he would have lived among the *Dutch*, and have been ſerviceable to them in the Diſcovery of the Country; but ſo ſoon as he got home, he flung his Cloaths into the Sea, and returned wild among his fellow Natives, eating raw Fleſh as he did before, and quite forgetting his Benefactors.

When the *Cafres* go a-hunting, they go in great Numbers together, and make ſuch a prodigious Howling and Yelling, that they fright the very Beaſts themſelves, and in that Affright with Eaſe deſtroy them; and I have been aſſured, that their Cries terrify the Lions themſelves. The Women are of ſo hot a Conſtitution of Body, that if at the Times their monthly Cuſtoms are upon them, they happen to make Water, and that an *European* chances to ſet his Feet upon it, it cauſes an immediate Head-ach and Fever, which many times turns to the Plague.

16. Having ſtayed twenty-two Days at the *Cape of Good Hope*, ſeeing that the Wind was favourable, we weighed Anchor, and ſteered for *St. Helena*; when we were under Sail, the Mariners cried out, they would ſleep till they came into *St. Helena* Road; for the Wind is very conſtant, and carries you in ſixteen or eighteen Days to the Road of the Iſland. All the Trouble that our Mariners had was, that in fourteen Days after our Departure from the *Cape*, they were often forced to the Top-maſt Head, upon Diſcovery of the Iſland; for as ſoon as you diſcover the Iſland, the Pilot muſt take care to ſteer to the North ſide of the Iſland, becauſe there is no caſting Anchor but on that Side of the Iſland, and that very near the Shore too, by reaſon of the Deepneſs of the Water; for if the Anchors come not to take hold, the Current of the Water and the Wind carries the Ship quite out of the Road, which there is no recovering again, becauſe the Wind never changes.

So ſoon as the Ship came to an Anchor, Part of the Seamen were ſent on Shore to get wild Hogs, of which there are great Plenty, and to gather Sorrel, which grows in great abundance; and indeed they not only ſent the Seamen, but all the Pigs, Sheep, Geeſe, Ducks, and Pullets aboard, to feed upon this Sorrel, which purged them in ſuch a manner, that in a few Days they became ſo fat, that by that Time we came to *Holland* they were hardly to be eaten. That Sorrel has the ſame Operation upon the Men, who boiling their wild Swines-Fleſh, Rice and Sorrel together, make thereof a kind of Pottage, ſo excellent, that it keeps their Bodies open, by an inſenſible Purgation. There are two Places upon the Coaſt of *St. Helena* where Ships may come to an Anchor; but the beſt is that where we lay, by reaſon the Ground is very good, and becauſe the Water that falls from the Mountains is the beſt in the Iſland. In this Part of the Iſland there is no Plain, for the Mountain deſcends to the very Shore of the Sea. It is not ſo good anchoring in the other Road; but there is a very handſome Plain, where you may ſow or reap whatever you pleaſe. There are great Store of Citrons, and ſome Oranges, which the *Portugueze* had formerly planted there; for that Nation have that Virtue, that wherever they come they make the Place the better for thoſe that come after them, whereas the *Dutch* endeavour to deſtroy all things whereever they ſet Footing. I confeſs the Commanders are not of that Humour; but the Seamen and Soldiers are, who cry one to another, we ſhall never come here any more, and, out of Greedineſs, will cut down a whole Tree inſtead of gathering the Fruit.

Some Days after their Arrival, came in a *Portugueze* Veſſel from *Guinea*, full of Slaves, who were bound for the Mines of *Peru*, ſome of the *Dutch* that underſtood the Language of the Negroes, told them how miſerably they would be uſed, and thereupon the next Night two hundred and fifty of them threw themſelves into the Sea: and indeed, it is a miſerable Slavery; for ſometimes after they have undermined ſome Places for ſome Days together, the Earth being looſe, falls down, and kills four or five hundred at a time; beſides that, when they have been mining a-while, their Faces, their Eyes, and their Skins change Colour, which proceeds from the Vapours that ariſe from thoſe Concavities; nor could they ſubſiſt in thoſe Places, but from the Quantity of ſtrong Water which they give both to the Men and Women. There are ſome that are made free by their Maſters, who labour, however, for their Living; but between *Saturday* Night and *Monday* Morning, they ſpend all their Wages in ſtrong Water, which is very dear, ſo that they always live miſerably.

Being ready to depart the Iſland of *St. Helena*, the Admiral called a Council, to adviſe which Way to ſteer; the greateſt Part were for ſteering more to the Weſt than to the South, becauſe the Seaſon for ſailing was far ſpent; and for that, if we ſteered towards the *Weſt*, we ſhould find the Wind more proper to carry us into *Holland*; but we had no ſooner paſſed the Line, but we found the Wind quite contrary to what the Mariners expected, ſo that we were forced to ſteer to the ſixty-fourth Degree of Altitude with the Iſland, and ſo return by the North into *Holland*.

17. The next Day after the Admiral had called a Council, we weighed Anchor, and ſet Sail about ten o'Clock at Night. Three Days after our Departure from *St. Helena*, the Seamen were called very duly to Prayers Morning and Evening, though all the Time we ſtayed in the Road they never minded any ſuch Matter, which made me wonder to find they ſhould be more devout when they were out of Danger than when they were in Jeopardy. After ſeveral Days ſailing, we diſcovered the Coaſt of *Iceland*, and then the Iſland of *Terella*, where we joined with the *Dutch* Fleet that ſtayed for us. Here it is that the Commander in chief calls to an Account all the Mariners for their Miſdemeanors during the whole Voyage. Our Ship was bound for *Zealand*, but we were forced to lie out to Sea ſeven Days before we could get into *Fluſhing*, before the Sand had changed its Place.

Coming to an Anchor before *Fluſhing*, two of the Directors of the Company came a-board to welcome us home, and to adviſe us to lock our Cheſts, and put our Marks upon them; for all Cheſts are carried into the *Eaſt-India* Houſe, where, when the Owners come for them, they are ordered to open them, leſt they ſhould have any contraband Goods therein; thereupon I ſet a Mark upon my Cheſts, and went aſhore, after I had given a good Character of the Captain, and his Civility to me all the Voyage, and thence proceeded by Land to *Middleburgh*.

Four Days after I came to *Middleburgh* I went to fetch my Cheſts, and finding the two Directors there, one a *Zealander*, the other of *Horn*, who came firſt a-board us, I produced my Keys, and offered the Cheſts to be opened; but the *Zealander*, more civil than the *Horner*, delivered me my Keys again, and taking my Word, told me, I was free to take away my Goods; and indeed, I have ever obſerved that the Northern People are always more rude and ungenteel than the Southern. As for the ſeventeen thouſand five hundred Florins which the General of *Batavia* promiſed me ſhould be paid me upon my Arrival in *Holland*, I received ſo many Delays and Put off's, that I was at length forced to commence a Suit that laſted two Years; nor could I get a publick Notary, either at *Amſterdam*, or the *Hague*, that would make me out a Proteſt, every one fearing the Directors, who were both Judges and Parties. At length, after five Years wrangling and jangling, the Director wrote to my Brother at *Batavia* (for I was then again returned to the *Indies*) that if I would accept of ten thouſand Livres, he might receive it for me, which he did, and I was forced to give an Acquittance for the whole.

This is the Return which I made from the *Indies* in the Year 1649, and the only time that ever I returned by Sea, having performed all the reſt of my Travels by Land, not counting my ſhort Voyages through the *Mediterranean* for any thing; and as for my firſt Travels, I performed them all by Land from *Paris* through *Germany* and *Hungary*, as far as *Conſtantinople*, whither I returned again in the Year 1669. From *Conſtantinople* I went to *Smyrna*, thence I ſailed for *Leghorn*; from *Leghorn*, I travelled by Land to *Genoa*, thence to *Turin*, and ſo to *Paris*.

The perfect Acquaintance which our Author had with all the Cuſtoms of the *Indians*, expoſed him to a great Number of Enquiries on his return home; and he was very often preſſed, not only by the moſt conſiderable of the *French* Miniſters, but even by the King himſelf, to put the Anſwers he gave to thoſe Enquiries into Writing; and theſe were afterwards reduced under ſeveral Heads, and now make the ſeveral Chapters in his Travels; and this Account of them may ſerve to reconcile the Reader to the ſeeming Incoherency of thoſe Diſcourſes. Among theſe there is one more remarkably curious in relation to the Cuſtom that ſtill prevails in the *Indies*, of Women burning themſelves on the Demiſe of their Huſbands, and alſo of Mens ſubmitting voluntarily to Death, upon extraordinary Occaſions. This Diſſertation, as I judged it, could not but be very agreeable to the Reader, and at the ſame time inſtructive. I thought it not amiſs to add here at the End of his Travels, the rather, becauſe it has no ſort of Connection with any Part of his Relation, but is, as I obſerved before, a ſeparate Diſcourſe upon that particular Subject, in which he has related what occurred to him thereon during his long Stay in the *Indies*, which renders it more perfect in its kind than any thing I have ever met with on the Subject; and therefore I have given it at large, and entirely in the Words of our Author, which are as follows.

It has been a Cuſtom Time immemorial, among the *Indians*, that a Woman ſhould only marry one Huſband, and in caſe of his Deceaſe, continue a Widow to the Time of her Death. As ſoon, therefore, as the Maſter of a Family is dead, his Wife retires to bewail her Huſband ſome Days; after which they ſhave her Head, and ſhe lays aſide all the Ornaments which ſhe had worn during the Time of her Marriage, taking off at the ſame time from her Arms and Legs the Bracelets which her Huſband put on when he eſpouſed her, in token of her Submiſſion, and her being chained to him, and all the reſt of her Life ſhe lives ſlighted and deſpiſed, and in a worſe Condition than a Slave, in the very Houſe where ſhe was Miſtreſs before. This unfortunate Condition cauſes them to hate Life, ſo that they rather chuſe to be buried alive with the Body of their deceaſed Huſband, than to live the Scorn and Contempt of all the World; beſides that, the *Bramins* make them believe, that in dying after that manner, they ſhall revive again with him in another World, with more Honour and more Advantages than they enjoyed before.

Theſe are the Motives that cauſe the Women to burn with their Huſbands; beſides that, the Prieſts flatter them with Hopes, that while they are in the midſt of the Flame, before they expire, *Ram* will appear, and reveal wonderful Viſions to them; and that after their Souls have tranſmigrated into various Bodies, they ſhall at length obtain a high Degree of Honour to Eternity. However, there is no Woman that can burn with her Huſband's Body, till ſhe has the Leave of the Governor of the Place where ſhe inhabits, who being a *Mohammedan*, and abhorring the execrable Crime of Self-murder, is very ſhy to permit them. Beſides, there are none but Widows that have no Children that lie under the Reproach that forces them to violent Deaths: For, as for the Widows that have Children, they are by no means permitted to burn themſelves, but quite the contrary. They are commanded to live for the Education of the Children. Theſe Women, whom the Governor will not permit to burn themſelves, ſpend the reſt of their Lives in doing Penance, and performing Works of Charity. Some make it their Buſineſs to ſit upon the Road to boil certain Pulſe in Water, and to give the Liquor to Travellers to drink; others ſit with Fire always ready for them to light their Tobacco; others make Vows to eat nothing but the undigeſted Grains which they find in Cow-dung.

The Governor, finding no Perſuaſion will alter the Womens Reſolution, but more eſpecially, perceiving by the Sign which his Secretary makes him, that he has received the Coin, in a ſurly manner gives the Woman Leave, bidding the Devil take her and all her Kindred. When they have got this Leave, their Muſick begins to ſtrike up, and away they march to the Houſe of the Deceaſed, with Drums beating, and Flutes playing before them, and in that manner they accompany the Perſon that is to be burnt to the Place appointed. All the Kindred and Friends of the Widow that is to die come to her and congratulate her on the Happineſs ſhe is to enjoy in the other World, and for the Honour which the Caſt ſhe is of receives by her generous Reſolution. She dreſſes herſelf as if ſhe were going to be married, and ſhe is conducted in Triumph to the Place of Execution; for the Noiſe is loud of muſical Inſtruments, and Womens Voices, that follow her, ſinging Songs in Honour of the miſerable Creature that is going to die. The Bramins alſo accompany her, to give publick Teſtimonies of her Conſtancy and Courage, and many of our *Europeans* are of Opinion, that to take away the Fears of Death, which naturally terrify Humanity, the Prieſts give her a certain Beveridge to ſtupify and diſorder the Senſes, which takes from her all Apprehenſions of her approaching Death. 'Tis for the Bramin's Intereſt that the poor miſerable Creatures ſhould continue in their Reſolutions; for all their Bracelets, as well about their Legs as their Arms, the Pendants in their Ears, ſometimes of Gold, ſometimes of Silver (for the Poor wear only of Copper and Tin) all theſe belong to the Bramins, who rake for them among the Aſhes when the Party is burned.

I have ſeen Women burned after three different Manners, according to the Difference of the Country. In the Kingdom of *Guzurat*, as far as *Agra* and *Debli*, they ſet up a little Hut, about twelve Feet ſquare, upon the Bank of a Pond or River; it is made of Reeds and all ſorts of ſmall Wood, with which they mingle certain Pots of Oil, and other Drugs, to make it burn more vehemently. The Woman is placed in the middle of the Hut, in a half-lying-down Poſture, leaning her Head upon a kind of a wooden Bolſter, and reſting her Back againſt a Pillar, to which the Bramin ties her about the Middle, for fear ſhe ſhould run away when ſhe feels the Fire. In this Poſture ſhe holds the Body of her deceaſed Huſband upon her Knees, chewing Beetel all the while; and when ſhe has continued in this Poſture about half an Hour, the Bramin goes out, and the Woman bids them ſet Fire to the Hut, which is immediately done by the Bramins, and the Kindred and Friends of the Woman, who caſt alſo ſeveral Pots of Oil and Ointment into the Fire, to put the Woman the ſooner out of her Pain. After the Woman is burnt, the Bramins ſearch the Aſhes for the Bracelets, Pendants, and Rings, whether Gold, Silver, Copper, or Tin, which is all free Booty to themſelves.

In *Bengal* they burn the Women after another Faſhion. In that Country a Woman muſt be very poor, that does not accompany the Body of her deceaſed Huſband to the *Ganges*, to waſh his Body, and to be waſhed herſelf before ſhe is burnt. I have ſeen dead Carcaſſes brought to the *Ganges* above twenty Days Journney off from the Place, and ſmelt them to boot; for the Scent of them has been intolerably noiſom. There was one that came from the northern Mountains, near the Frontiers of the Kingdom of *Boutan*, with the Body of her Huſband carried in a Waggon. She travelled twenty Days on Foot, and never eat nor drank for fifteen or ſixteen Days together, till ſhe came to the *Ganges*, where, after ſhe had waſhed the Body that ſtank abominably, and had afterwards waſhed herſelf, ſhe was burnt with him with admirable Conſtancy.

Before the Woman that is to be burnt goes the Muſick, conſiſting of Drums, Flutes, and Hautboys, whom the Woman, in her beſt Accoutrements, follows, dancing up to the very funeral Pile, upon which ſhe gets, and places herſelf as if ſhe were ſitting up in Bed; and then they lay a-croſs her the Body of her Huſband; and, when this is done, her Kindred and Friends, ſome bring her a Letter, ſome Pieces of Callicut, and others Pieces of Silver and Copper, and deſire her to deliver them to their Mother, or Brother, or ſome other Kinſman, or Friend. When the Woman ſees they have all done, ſhe aſks the Standers by, three Times, if they have nothing more of Services to command her; if they make no Anſwer, ſhe ties up all ſhe has got in a Piece of Taffety, which ſhe puts between her own Belly and the Body of her Huſband, bidding them ſet Fire to the Pile, which is preſently done by the Bramins and her Kindred. I have obſerved, becauſe there is Scarcity of Wood in *Bengal*, that when thoſe poor Creatures are half grilled, they caſt their Bodies into the *Ganges*, where the Remains are devoured by the Crocodiles. I muſt not forget a wicked Cuſtom practiſed by the Idolaters of *Bengal*.

When a Woman is brought to Bed, and the Child will not take to the Teat, they carry it out of the Village, and putting it into a Linnen-cloth, which they faſten by the four Corners to the Boughs of a Tree, there leave it from Morning till Evening; by this Means the poor Infant is expoſed to be tormented by the Crows, inſomuch that there are ſome who have their Eyes picked out of their Heads; which is the Reaſon, that, in *Bengal*, you ſhall ſee many of thoſe Idolaters that have but one Eye, and ſome that have loſt both. In the Evening they fetch the Child away, to try whether he will ſuck the next Night, and, if he ſtill refuſes the Teat, they then carry him again to the ſame Place the next Morning, which they do for three Days together. After which, if the Infant ſtill refuſes to ſuck, they believe him to be a Devil, and throw him into the *Ganges*, or any the next Pond or River. In the Places where the Apes breed, theſe poor Infants are not ſo expoſed to the Crows; for where the Ape diſcovers a Neſt of theſe Birds, ſhe climbs the Tree, and throws the Neſt one Way, and the Eggs another. Some charitable People among the *Engliſh*, *Dutch*, and *Portugueze*, compaſſionating the Misfortune of thoſe Children, will take them away from the Tree, and give them good Education.

All along the Coaſt of *Corromandel*, when the Women are to be burnt with their Huſbands, they make a great Hole in the Ground nine or ten Foot deep, and twenty-five or thirty Foot ſquare, into which they throw a great Quantity of Wood and Drugs, to make the Fire burn more fiercely; when the Fire is kindled, they ſet the Body of the Man upon the Brink, and then, preſently up comes the Woman dancing, and chewing Beetel, accompanied by her Friends and Kindred, with Drums beating, and Flutes ſounding; then the Woman takes three Turns round the Hole, and every Time ſhe has gone the Round, ſhe kiſſes her Friends and Kindred; after the third Time the Bramins caſt on the Carcaſe of her Huſband, the Woman ſtanding with her Back to the Fire, is puſhed in by the Bramins alſo, and tumbles backward; then her Kindred and Friends caſt Oil, and other combuſtible Drugs, upon the Fire, to make it burn more vehemently, that the Bodies may be the ſooner conſumed. In moſt Places upon the Coaſt of *Corromandel*, the Women are not burnt with their deceaſed Huſbands, but they are buried alive with them, in Holes which the Bramins make a Foot deeper than the talleſt of them, Man or Woman.

Uſually they chuſe a ſandy Place; ſo that when the Man and Woman are both let down together, all the Company, with Baſkets of Sand, fill up the Hole above half a Foot higher than the Surface of the Ground; after which they jump and dance upon it till they believe the Woman to be ſtifled. When ſome of the Idolaters upon the Coaſt of *Corromandel* are upon the Point of Death, their Friends do not carry them to the Side of a River, or Lake, to cleanſe their Souls, but they carry them to the fatteſt Cow they can find, and laying the ſick Party juſt behind the Cow, they lift up her Tail, and provoke her to piſs; if ſhe piſſes ſo that it falls upon the Face of the diſeaſed Perſon, all the Company are overjoyed, ſaying, that his Soul is happy; but if the Cow does not piſs to waſh the ſick Party's Face, they burn him with a great deal of Sadneſs. If a Cow be ſick, the Owner muſt be careful to lead her to a Pond, or River; for, ſhould ſhe die at his Houſe, the Bramins would fine him.

The Rajah of *Valou* having loſt this City, and his Life, through the Loſs of a Battle gained againſt him by the King of *Viſiapour*'s General, he was extremely lamented at Court; eleven of his Wives alſo were no leſs concerned for his Death, and reſolved to burn themſelves when he was burned. The General of *Viſiapour*'s Army underſtanding their Reſolution, thought at firſt to divert them by promiſing them all kind Uſage; but finding Perſuaſion would not prevail, he ordered them to be ſhut up in a Room. He who had the Order, going to put it in Execution, the Women, in a Rage, told him, that it was to no Purpoſe to keep them Priſoners; for, if they might not have Leave to do what they had reſolved, in three Hours there would not be one of them alive. The Perſon entruſted, laughed at their Threats: But the Keeper of thoſe Women, opening the Door at the End of the three Hours, found them all ſtretched out dead upon the Place, without any Mark in the World to be ſeen that they had any way haſtened their own Deaths.

Two of the moſt potent Rajahs of *India* came to *Agra* in the Year 1642, to do Homage to *Shab-Jehan*, who then reigned; who, not having acquitted themſelves as they ought to have done in the Judgment of the Grand-Maſter of the King's Houſhold, he told one of the Rajahs one Day, in the Preſence of the King, that they had not done well to behave themſelves in ſuch a manner towards ſo great a Monarch as was the King his Maſter. The Rajah, looking upon himſelf to be a great King, and a great Prince, he and his Brother having brought along with them a Train of fifteen or ſixteen thouſand Horſe, was nettled at the bold Reproof which the Grand-Maſter gave him, and drawing out his Dagger, ſlew him upon the Place, in the Preſence of the King; the Grand Maſter falling at the Feet of his Brother, who ſtood cloſe by him, he was going about to revenge his Death, but was prevented by the Rajah's Brother, who ſtabbed him, and laid him athwart his Brother's Body. The King, who beheld theſe two Murders, one on the Neck of another, retired into his Haram for fear; but preſently the Omrahs, and other People, fell upon the Rajahs, and cut them to Pieces.

The King, incenſed at ſuch an Attempt committed in his Houſe, and in his Preſence, commanded the Rajahs Bodies to be thrown into the River, which their Troops that they had left about *Agra* underſtanding, threatened to enter the City, and pillage it; ſo that, rather than hazard the City, the King was adviſed to deliver them the Bodies of their Princes. When they were to be burned, thirteen Women belonging to the two Rajahs Houſes came dancing and leaping, and preſently got upon the funeral Pile, holding one another by the Hands, and being preſently after ſtifled by the Smoak, fell together into the Fire; preſently the Bramins threw great Heaps of Wood, Pots of Oil, and other combuſtible Matter upon them, to diſpatch them the ſooner.

I obſerved a ſtrange Paſſage at *Patna*, being then with the Governor, a young Gentleman about twenty four Years of Age, in his own Houſe. While I was with him, in came a young Woman, very handſome, and not above twenty-two Years old, who deſired Leave of the Governor to be burnt with the Body of her deceaſed Huſband. The Governor, compaſſionating her Youth and Beauty, endeavoured to divert her from her Reſolution; but, finding he could not prevail, with a ſurly Countenance he aſked her whether ſhe underſtood what the Torment of Fire was, and whether ſhe had ever burnt her Fingers? No, no, anſwered ſhe more ſtoutly than before, I do not fear Fire; and to let you know as much, ſend for a lighted Torch hither: The Governor abominating her Anſwer, in a great Paſſion, bid her go to the Devil. Some young Lords that were with the Governor, deſired him to try the Woman, and entreated him to call for a Torch, which, with much ado, he did; and a lighted Torch was brought: So ſoon as the Woman ſaw the lighted Torch a-coming, ſhe ran to meet it, and held her Hand in the Flame, not altering her Countenance in the leaſt, ſtill ſearing her Arm along quite up to the Elbow, till her Fleſh looked as if it had been broiled; whereupon the Governor commanded her out of his Sight.

A Bramin coming to *Patna*, and aſſembling all his Tribe together, told them, that they muſt give him two thouſand *Rupees*, and twenty-ſeven Ells of Callicut, to which the Chief among them anſwered, that they were poor, and could not poſſibly raiſe ſuch a Sum; however, he perſiſted in his Demand, poſitively affirming unto them, that he would ſtay there without eating or drinking, till they brought him the Money and the Cloth. With this Reſolution, he climbed a Tree, and ſetting in the Fork between the Boughs, remained there without eating or drinking for ſeveral Days. The Noiſe of this Extravagance coming to the Ears of the *Dutch* Houſe, where we lay, we ſet Sentinels to watch whether it was true, that a Man could ſit ſo long without Victuals, which he did for thirty Days together. The thirty-firſt Day of this ſo extraordinary Faſt, the Idolaters fearing to kill one of their Prieſts for want of granting him his Demand, clubbed together, and brought him his twenty-ſeven Ells of Callicut, and two thouſand *Rupees*. So ſoon as the Bramin ſaw the Money and Cloth, he came down from the Tree, and after he had upbraided thoſe of his Tribe for want of Charity, he diſtributed all the *Rupees* among the Poor, reſerving only five or ſix for himſelf. The Cloth he cut into little Pieces, and gave away, keeping only to himſelf as much as would juſt cover his Nakedneſs; and having made his Diſtribution, he diſappeared on a ſudden, and no body knows what became of him, though diligent Search was made after him.

When a *Chineſe* lies at the Point of Death, all his Kindred and Friends gather about him, and aſk him whither he intends to go? They tell him alſo, that if he wants any thing, he needs but aſk and have, let it be Gold, Silver, or a Woman. When they are dead, they perform many Ceremonies at their Funerals, which conſiſt chiefly in artificial Fires, wherein the *Chineſe* are the moſt expert in all the World; ſo that he muſt be a very poor Man that has no Fire-works at his Funeral. Beſides that, they put Money in a little Box, and bury it by the Deceaſed, and leave good Store of Victuals upon the Grave, out of an Opinion that they riſe and eat; which the Soldiers of *Batavia* obſerving, uſed to fill their Bellies at theſe Graves every Time they marched their Rounds. But when the *Chineſe* perceived it, they poiſoned the Victuals, to ſpoil the *Dutchmen*'s Feaſting. The Townſmen of *Batavia* taking the Soldiers Part, accuſed the *Chineſe* of poiſoning ſeveral of the *Dutch*; but the *Chineſe* pleaded, that if the Soldiers had over-eat themſelves, or ſurfeited themſelves upon what was left for the Dead to eat, it was none of their Fault; for that they did not leave this Victuals for their Soldiers: And beſides that, among all the Multitudes that they had buried, they never had heard the leaſt Complaint before of any one that ever came to any Harm by eating their Food. Thus the Buſineſs was huſhed up, nor did the Soldiers dare to pilfer any more.

Theſe are certainly very ſurprizing and entertaining Paſſages, which carry in them ſtrong Marks of that Enthuſiaſm, which is the Characteriſtick of the Eaſtern Genius; and which, however wild and extravagant it may appear to us in this Part of the World, has in it, nevertheleſs, ſomething ſo ſtriking to ſuch as behold it, even tho' *Europeans*, that they fall into it by Degrees, and are content to adopt the Humour of the *Indians*, under another Name, and for many pretended Reaſons. As a Proof of this, we need only remark, that the *Mohammedan* Lords of the Mogul's Court, not only allow, but encourage their Women to die with them, as a Mark of Affection. It is true, that they don't do this publickly, and in the Sight of the Sun, as the *Indians* do; but when a *Mohammedan* Lord dies, his Women, the Night after they have paid their Duty at the Funeral of the Deceaſed, aſſemble together in ſome private Part of his Palace at a Diſtance from the reſt of the Building, and out of the Hearing, as much as may be, of the Servants; and there they ſet Fire to the Room, having firſt ſecured the Doors, and ſo periſh in the Flames. In all Probability, this Cuſtom has been introduced amongſt the *Mohammedans* from a Principle of Vanity, flowing from a Deſire to ſhew that they are not leſs beloved by their *Indian* Wives, than the *Indians* themſelves, of which, indeed, it is not eaſy for them to obtain a ſtronger Proof than this.

It is likewiſe indiſputably clear, from our Author's Diſcourſe, that the high Spirit and invincible Courage of the *Indians*, both Men and Women, is far enough from being extinguiſhed; but then we ought to make a right Judgment of the Motive from whence this proceeds. In the Men it ſtill riſes from Principle and from the Dictates of Reaſon, whether well or ill employed, I ſhall not pretend to ſay: But, in the Women, it is, in ſome meaſure, the Effect of Habit, and, in ſome meaſure, the Conſequence of Deſpair. They ſee frequent Examples of Women who end their Lives in this Manner, and are highly applauded for it. This draws them on to merit the ſame Praiſes, by ſhewing the ſame Intrepidity. On the other hand, they ſee Numbers of their Sex, who decline this dreadful Trial, reduced to Want and Infamy, and they ſee no Road open for them to eſcape both; which, as it were, drives them to this deſperate Reſolution of deſtroying themſelves; ſince they ſeem thereby, of two great Evils to chuſe the leaſt, which is a glorious Death, rather than a Life of Miſery and Contempt. We may from hence fairly conclude, that if the true and genuine Doctrine of the Chriſtian Faith were inſtilled into the Minds of theſe People, they might be brought to make as great a Figure in the World as ever their Anceſtors did; and how great that was, we have in the preceding Sections, from the Memorials left us in ſeveral Languages, very fully ſhewn.

SECTION XXXI.

Obſervations and Remarks made during his Reſidence on the Iſland of Chuſan, *on the Coaſt of* China, *by Doctor* James Cunningham, *Phyſician to the* Engliſh *Factory at that Place.*

From his own Accounts.

1. *An introductory Account of the Author, and of the Opportunities he had to come to a true Knowledge of the Facts he mentions.* 2. *An Account of the Voyage to, and a diſtinct Deſcription of the Iſland of* Chuſan. 3. *Of the antient and modern State of the Country, and the coming of the* Engliſh *to reſide there.* 4. *Of their Manner of cultivating Tea in that Iſland, and of ſeveral Miſtakes made by* F. le Compte, *and* F. Martini. 5. *Of the* Chineſe *Agriculture, and the Manner in which the Inhabitants make Salt in* Chuſan. 6. *Of the famous medicinal Root* Hu-chu-u, *which prolongs Life, and retards old Age.* 7. *Dr.* Cunningham'*s Removal to* Pulo Condore, *with the Riſe, Progreſs, and Ruin of that Factory.* 8. *Occaſion of eſtabliſhing a new Factory at* Pulolout, *of which Dr.* Cunningham *became Chief.* 9. *The Cauſes of the total Overthrow of that Factory, and the* Engliſh *Trade to* Borneo.

1. IN the Accounts we have hitherto given of the Diſcovery, of the paſt, and preſent Situation of the *Indies*, we have made uſe chiefly of foreign Writers, not that we prefer them to our own Countrymen, who have travelled into thoſe Parts; but becauſe, in a Collection of this Nature, it ſeemed reaſonable to include the Works of ſuch Authors as were leaſt known to the Bulk of our Readers. But, to avoid all Suſpicion of Partiality, and that, at the ſame time, we may ſhew that we have not been at all negligent in conſulting either the old Travellers or the new, of ſuch of the *Britiſh* Nation as have viſited theſe diſtant Climates, we will add a few Inſtances of their Care and Diligence, in obſerving and recording what appeared to them moſt worthy of Notice in the Countries into which they were led, either to ſatisfy their Curioſity, or in Purſuit of Buſineſs.

We will begin with the Remarks made by Doctor *James Cunningham*, Fellow of the *Royal Society*, and Phyſician to the *Engliſh* Factory ſettled at *Chuſan* in *China*. He was a Man diſtinguiſhed both by his natural Parts, and by the Accompliſhments he had acquired, being equally well verſed in ancient and modern Learning; and, at the ſame time, a Perſon, who, from his own Diligence, had obtained all the Lights that are afforded by Experience. Of theſe great Qualities he has left us ſufficient Teſtimony in two Letters of his writing during his Employment in the Service of the *Eaſt-India* Company; and which are ſo much the more valuable, as they plainly manifeſt an Intention not to copy what others had written, or reported, but to ſet down his own Obſervations, and thereby deſcribe Things as they appeared to him; nay, and not only ſo, but to examine and correct the Miſtakes of others, which he was the more capable of doing, for two Reaſons; firſt, becauſe he confined himſelf entirely to what fell under his immediate Inſpection: And, next, becauſe he writes on ſuch Subjects only as belonged to his Profeſſion, in which he muſt, of Neceſſity, be a better Judge than another Man, however learned or intelligent, who had not made thoſe Things his Study. In this reſpect, indeed, I muſt affirm, that the Writers of our own Country are very much to be preferred to thoſe of other Nations, becauſe, if their Relations be leſs extenſive, and poſſibly alſo leſs entertaining; yet they are written with greater Care and Circumſpection, as well as a more than ordinary Regard to Truth. This I ſay in general only, and not with any View to injure or raiſe the Credit of particular Perſons. But, to come to the Point; the firſt of theſe Letters was written in the Month of *September*, 1701, to a Member of the *Royal Society*, and follows in the Author's own Words.

2. My laſt to you was from the Iſland of *Borneo*, in which I gave you an Account of our Arrival there the 17th of *July*, where we ſtayed but two Days, the Seaſon of the Year being ſo far paſt; and from thence made the beſt of our Way through the Straits of *Banda*, with favourable Winds and Weather, till we came on the Coaſt

of *China* the 13th of *Auguſt*, then we had variable Winds which carried us a-breaſt of *Emoy*, the 19th following, at which Time the North-eaſt Wind ſetting in freſh, put us in great Fears of loſing our Paſſage; whereupon we were forced to turn it up againſt Wind and Current all the Way, the Weather ſo favouring us that we were never but by our Top-ſails, elſe we ſhould have loſt more Ground in one Day than we could have gained in eight. The laſt of *Auguſt* we came to an Anchor under the *Crocodile Iſlands*, both to ſhelter us from the bad Weather (which is generally expected on this Coaſt at New and Full-Moon, and has been fatal to a great many Ships) and alſo to look for freſh Water, which was now grown ſcarce with us, not having recruited ſince we came from the *Cape of Good-Hope*. Theſe are three ſmall Iſlands, lying in the Lat. of 26° about ſix Leagues from the River of *Hockien*, on two whereof we found very good freſh Water, with a convenient watering Place on the S. W. Side of the innermoſt of the three; and by the Aſſiſtance of a few *Chineſe* Fiſhermen, who procured ſome freſh Proviſions from the Main-Land, becauſe we did not think it ſafe to adventure ourſelves thither, leſt we ſhould have been brought into Trouble by the Government there.

While we lay here, on the 5th of *September*, we had a ſudden ſhort Shift of the Monſoon to the S. W. the Fury whereof others felt coming upon the Coaſt of *China*, at the ſame time. The 18th of *September* we put to Sea again, turning to windward Night and Day without all the Iſlands, which are very numerous along this Coaſt, to which we were altogether Strangers beyond *Emoy*; and the Hidrography thereof is hitherto ſo imperfect, that there was no truſting to our Drafts, which made our Navigation ſomewhat more dangerous: However, on the 1ſt of *October* we got into 30°, where we came to an Anchor near the Land, until we found the Way by Boat to *Chuſan*, about twelve Leagues within the Iſlands, from whence we had a Pilot, who carried us ſafe thither on the Eleventh. Upon this Iſland the *Chineſe* have granted us a Settlement and Liberty of Trade, but not to *Ning-po*, which is ſix or eight Hours Sail to the weſtward, all the Way among Iſlands; this being the largeſt, is eight or nine Leagues from Eaſt to Weſt, and four or five Leagues in Breadth.

About three Leagues from that Point of the Main-land, called *Cape-Liampo* by the *Portugueze*, but *Khi-tu* by the *Chineſe*, at the Weſt-End of this Iſland, is the Harbour, very ſafe and convenient, where the Ships ride within Call of the Factory, which is built cloſe by the Shore, on a low plain Valley, with near two hundred Houſes about it, for the Benefit of Trade, inhabited by Men whoſe Jealouſy has not, as yet, permitted them to let their Wives dwell here; for the Town where they are is three Quarters of a Mile farther from the Shore, environed with a fine Stone-wall, about three Miles in Circumference, defended by twenty-two ſquare Baſtions, placed at irregular Diſtances, beſides four great Gates, on which are planted a few old iron Guns, ſeldom or never uſed: The Houſes within are very meanly built. Here the Chumpeen, or Governor of the Iſland lives, and betwixt three and four thouſand beggarly Inhabitants, moſt part Soldiers and Fiſhermen; for the Trade of this Place being newly granted, has not, as yet, brought any conſiderable Merchants hither. The Iſland in general abounds with all ſorts of Proviſions, ſuch as Cows, Buffaloes, Goats, Deer, Hogs, wild and tame Geeſe, Ducks, and Hens, Rice, Wheat, Calavances, Coleworts, Turnips, Potatoes, Carrots, Beetach, and Spinage; but, for Merchandize, there is none, except what comes from *Nigo-po*, *Stang-chew*, *Nankin*, and the inland Towns, ſome of which I hope to ſee when I have acquired a little of the *Chineſe* Language.

Here alſo the Tea grows in great Plenty, on the Tops of the Hills, but it is not in ſuch Eſteem as that which grows on more mountainous Iſlands. Although this Iſland is pretty well ſtored with People, yet it is far from what it was in *F. Martinius*'s Time, where he deſcribes *Cheuxan*. And this puts me in mind, that the ſuperſtitious Pilgrimages there mentioned by him, muſt be meant of the Iſland *Pou-to*, which lies nine Leagues from hence: And three Miles to the Eaſtward of this Iſland, whither, they ſay, the Emperor deſigns, in the Month of *May* next (being his Birth-day, and the fortieth Year of his Age) to come to worſhip in an ancient Pagod there, famous for Sanctity, having ſent one of his Bonzes already thither to get all Things in Order. The ſecond Letter, ſomewhat more copious, and no leſs curious than the firſt, our Author wrote to the ſame Perſon from *Chuſan*, dated *November* 22, 1701, according to his Promiſe, and to ſupply the Defects of the firſt.

3. I formerly told you that the Emperor deſigned to have come to the Iſland of *Pou-to* (a Place of great Devotion) to worſhip in the Month of *May* laſt, being the fortieth Year of his Age, I ſhould have ſaid of his Reign. But all Things being prepared there for his Reception, he was diſſuaded from his Purpoſe by ſome of his Mandarines, who made him believe that the Thunder there was very dangerous. This *Pou-to* is a ſmall Iſland, about five Leagues round. At the Eaſt-End of this Iſland, famous for the ſuperſtitious Pilgrimages made thither for the Space of eleven hundred Years, it is inhabited only by Bonzes, to the Number of three thouſand, all of the Sect called *Heſhang*, or unmarried Bonzes, who live a *Pythagorean* Life; and there they have built four hundred Pagods, two whereof are conſiderable for their Greatneſs and Finery, being lately covered with green and yellow Tiles, brought from the Emperor's Palace at *Nankin*, and inwardly adorned with ſtately Idols, finely carved and gilded, and the chief whereof is the Idol *Quonem*. To theſe two great Pagods belong two chief Prieſts, who govern all the reſt. They have ſeveral Ways and Avenues cut through the Iſland, ſome whereof are paved with Flag-ſtones, and over-ſhaded with Trees planted on each Side.

Their Dwellings are the beſt I have ſeen in theſe Parts, all which are maintained by charitable Donations; and their Junks, which go from *Ning-po* and this Place to *Japan*, touch here both going and coming, to make their Offerings for their good Succeſs. There is another Iſland called *Kim-Tong*, five Leagues hence, in the Way to *Ning-po*, whither, they ſay, a great many Mandarins retire to live a quiet Life, after they have given over their Employments. On that Iſland alſo are ſaid to be Silver-mines, but prohibited to be opened.

The reſt of the circumjacent Iſlands are either deſert, or meanly inhabited by a few People, but all of them ſtored with abundance of Deer; for it is not long ſince this Iſland of *Chuſan* began to be peopled. 'Tis true, in *Martini*'s Days, about fifty Years ago, it was very populous for the Space of three or four Years; at which Time the Fury of the *Tartarian* Conqueſt was ſo great, that they left it deſolate, not ſparing ſo much as the Mulberry-trees (for then they made a great deal of Raw-Silk here.) And in this Condition it continued till about eighteen Years ago; that the Walls of the Port, or Town, which now is, were built by the Governor of *Ting-hai* for a Garriſon to expel ſome Pirates, who had taken Shelter there.

About fourteen Years ago, the Iſland beginning to be peopled, there was a Chumpeen, or Governor, ſent to govern it for three Years, to whom ſucceeded the late Chumpeen (who procured the Opening of this Port to Strangers) whoſe Government continued till *April* laſt, being tranſlated to be Chumpeen of *Tien-ching-wei*, near to *Pekin*, and was ſucceeded by the preſent Chumpeen, who is Son to the old Chumpeen of *Emoy*. They have no Arts, or Manufactures here but lackered Ware, a particular Account whereof I cannot, as yet, ſend you. They begin to plant Mulberry-trees to breed up Worms for the Production of Raw-Silk; and they make ſome Tea, but chiefly for their own Uſe.

4. The three Sorts of Tea commonly carried to *England*, are all from the ſame Plant, only the Seaſon of the Year and the Soil make the Difference. The Bohea (or *Voui*, ſo called of ſome Mountains in the Province of *Token*, where it is chiefly made) is the very Bud gathered in the Beginning of *March*, and dried in the Shade. The

Bing Tea is the ſecond Growth in *April*, and *Singlo* the laſt in *May* and *June*, both dried a little in Taches or Pans over the Fire. The Tea Shrub being an Ever-green, is in Flower from *October* to *January*, and the Seed is ripe in *September* and *October* following, ſo that one may gather both Flower and Seed at the ſame time; but for one freſh and full Seed, there are one hundred nought. Theſe make up the two Sorts of Fruit in *Le Compte*'s Deſcription of Tea; as for his other Sort, which he calls *Slymic* Peaſe, they were nothing but the young Buds of the Flowers not yet open. Its Seed Veſſels are really tricapſular, each Capſula containing one Nut or Seed; and although two or one Capſula only comes to Perfection, yet the Veſtiges of the reſt may be diſcerned. It grows in a dry gravelly Soil on the Sides of Hills, in ſeveral Places of this Iſland, without any Cultivation.

Le Compte is miſtaken in ſaying that the *Chineſe* are wholly Strangers to the Art of Grafting; for I have ſeen a great many of his paradoxical Tallow Trees ingrafted here, beſides ſome other Trees. When they ingraft, they do not ſlit the Stock, as we do, but cut a ſmall Slice off the Outſide of the Stock, to which they apply the Graft (being cut ſloping on one Side agreeable to the Slice cut from the Stock) bringing the Bark of the Slice up on the Outſide of the Graft, they tie all together, covering with Straw and Mud as we do. The Commentator, on *Magalhen*, ſeems doubtful in the Length of the *Chineſe* Che or Cubits. Here they have two Sorts, one of thirteen Inches and ſeven Tenths of an *Engliſh* Inch, which the Merchants commonly uſe; the other is of eleven Inches uſed by Carpenters, and alſo in Geographical Meaſures. Though *F. Martini* is cenſured by *F. Magalhen* for ſpelling a great many *Chineſe* Words with *ng*, which the *Portugueze* and others have done with *in*, yet his Way is more agreeable to *Engliſh* Pronunciation, only in ſome Words the *g* may be left out, as in *Pekin*, *Nankin*, &c.

Having made Enquiry about *Martini*'s Account of Sowing their Fields at *Van-cheu* with Oyſter-Shells, to make new ones grow, I was told, that after they have taken out the Oyſter, they ſprinkle the Shell with Urine; then putting them into the Water again, there grows new Oyſters on the foreſaid Shells. *Martini* ſays, he could never find a *Latin* Name for the *Tula Mogorin* of the *Portugueze*; I am ſure it is the ſame with the *Syrenga Arabica flore pleno Albo* in *Parkinſone*. He ſays alſo, that the *Kieu-yeu*, or Tallow-tree, bears a white Flower like a Cherry-tree; but all that I have ſeen here, bear a Spike of ſmall yellow Flowers, like the Iulus of a Salix. The Bean, or Mandarin Broth, ſo frequently mentioned in the *Dutch* Embaſſy, and other Authors, is only an Emulſion made of the Seed of Saſamum and hot Water.

Their chief Employments here are Fiſhing and Agriculture. In Fiſhing they uſe ſeveral ſorts of Nets and Lines, as we do; but becauſe they have large Banks of Mud in ſome Places, the Fiſherman, to go more eaſily thereon, have contrived a ſmall Frame, about three or four Feet long, not much larger than a Hen-trough, elevated a little at each End, in which he reſts upon one Knee, leaning his Arms on a croſs Stick, raiſed ſo high as his Breaſt, and putting out the other Foot often upon the Mud, he puſhes forward his Frame thereon, and ſo carries himſelf along in it.

As to their Agriculture, all their Fields (where any thing is planted) whether high or low, are made into ſuch Plots, as may retain the Water over them when they pleaſe. They plow up their Ground with one Buffaloe, or Cow. Where they are to ſow Rice, they prepare the Field very well, by clearing it of all manner of Weeds, moiſtening to a Pulp, and ſmoothing it with a Frame drawn acroſs, on which they ſow the Rice very thick, and cover it only with Water, for two or three Inches high; and when it has grown ſix or eight Inches long, they pull it up by the Roots, and tranſplant it (by Tufts in a ſtrait Line) to Fields overflown with Water; and where a Field is ſubject to Weeds, when the Water grows up, they prevent the Growth, by overturning the Mud with their Hands, in the Interſtices where the Rice is planted. When they ſow Wheat, Barley, Pulſe, and other Grains, they grub up ſome ſuperficial Earth, Graſs, and Roots, and with ſome Straw, they burn all together; this Earth being ſifted fine, they mix with the Seed, which they ſow in Holes, made with a ſtraight Line, and ſo grows up in Tufts, as the Rice does, the Field being divided into Beds, and harrowed over both before and after the Seed is ſown; this makes them ſomewhat reſemble Gardens. Altho' they meliorate their Fields, where they ſow Rice only, by letting the Water on them, yet for other Grains, where Grounds require it, they make uſe of Dung, human Excrements, Aſhes, *&c.* In watering their Fields here, they uſe the ſame Inſtrument mentioned by *Martini*, in the Preface to his *Atlas*, being all Wood, and the Contrivances the ſame with that of a Chain-pump.

Their Method of making Salt is this; all the Shores here being Mud inſtead of Sand, in the Summer-Seaſon, they pare off the ſuperficial Earth, which has been overflown with the Salt-water, and lay it up in Heaps for uſe. When they are to uſe it, they dry it in the Sun, rubbing it ſmall, then digging a Pit, they cover the Bottom of it with Straw, at which, through the Side of the Pit, they paſs a hollow Cane that leads into a Jar, that ſtands below the Level of the Pit's Bottom. They fill the Pit almoſt full of the foreſaid Earth, and pour Salt-water on, until it be covered two or three Inches with Water, which drains through into the foreſaid Jar, and is afterwards boil'd into a Salt.

6. If I had not found Notice taken in a printed News-Paper laſt Year of a ſingular Root brought from *China* by Father *Fontaney*, I ſhould not have told you, that I have ſeen this Root ſince I came here, and which is called by the *Chineſe Hu-chu-u*, to which they aſcribe wonderful Virtues, ſuch as prolonging Life, and turning gray Hair black by the Uſe of its Tea, or an Infuſion made of it, which occaſions its being ſold at a very high Price, inſomuch that they ſay, that it is to be had from ten Tael to one thouſand or two thouſand a ſingle Root; for the larger it is, the more is its Value and Efficacy, which is too much Money here to try the Experiment. You have it mentioned in *Cleyer's Medicina Sinica*, Number LXXXIV. under the Name of *He-xcu-u*, according to the *Portugueze* ſpelling. It is likewiſe painted in the 27th Table of thoſe Plants Mr. *Pettiver* had of me. If you will have the Story of its Diſcovery, which I will not warrant for Goſpel, it runs thus:

Upon a time a certain Perſon going a Simpling among the Mountains, fell by Accident into ſuch a ſteep Vale, that he could by no means get out of it again, whereupon looking about for ſomething to ſuſtain his Life, in this melancholy Condition, he eſpied this Root, of which he made Trial, and found that in eating thereof it ſerved him both for Proviſion and Cloathing, by keeping his Body in ſuch a Temperature, that the Injuries of the Weather had no Influence upon him during his Stay there, which was ſome hundreds of Years; till at laſt an Earthquake happened in that Place, whereby the Mountains were rent, and he found a Paſſage out to his Houſe, from whence he had been ſo long abſent: But the many Alterations that came to paſs there in ſuch a Space of Time would not permit them to give Credit to his Story, till conſulting the Annals of his Family, which gave an Account of one of them loſt at that Time, they were confirmed as to the Truth of this Relation. With the Leave of our Author, this is no more Goſpel with the *Chineſe* than with him. It is a Fable, invented for the ſake of giving ſuch an Account of the Virtues of this Root, as may make them dwell on the Memory, and that is all.

7. It will be very natural for the Reader to enquire how it came to paſs, that from ſo intelligent and induſtrious a Perſon as this Doctor *Cunningham* appears to have been, we have received nothing farther than what has been already ſet down in relation to the Affairs of *China*; and as I have it in my Power to anſwer that Queſtion very fully, I think it will not be amiſs to add ſome very curious Circumſtances relating to ſo worthy a Man at the Cloſe of this Section, the rather, becauſe if they be not added here, it is very poſſible they may be for ever loſt. We are therefore to obſerve, that the Factory eſtabliſhed at *Chuſan* was broke up in the Year 1702, and therefore the Doctor had not

much Time to compleat the Obſervations he was inclined to make. He removed afterwards to another new Settlement at *Pulo condore*, which is a ſmall Cluſter of Iſlands, four or five in Number, lying about fifteen Leagues South of the Weſt Channel of the River of *Cambodia*; what Advantages were propoſed from this Factory I cannot ſay; but the Memoirs I have, very poſitively affirm, that the Place, in which it was ſeated, was very ill choſen.

The Perſon who had the Direction of the *Eaſt-India* Company's Affairs in thoſe Parts was one Mr. *Katchpole*, and he, according to the uſual Cuſtom of the *Indies*, took a certain Number of *Maccaſſars*, or Soldiers, Natives of that County, into his Service, by whoſe Aſſiſtance he quickly built a little Fort for the Protection of his People, and procured the Neceſſaries of Life, ſuch as Wood, Water, and Fiſh, which, as far as I could ever learn, is all that theſe Iſlands ever afforded. The *Maccaſſars* are a brave, induſtrious, and faithful People, to ſuch as deal well by them; and for theſe Reaſons they are highly eſteemed in the Eaſt, more eſpecially by the *Dutch*. It muſt, however, be allowed, that they are daring, cruel, and revengeful, if once they are provoked. Mr. *Katchpole* had contracted with them for three Years, at the End of which Term they were, if they pleaſed, to receive their Wages and depart. This Agreement, though ſtrictly performed on their Side, was broke by our Director, who kept them beyond their Time, and againſt their Wills. As this was a great Breach in Morality, he added to it as great an Error in Politicks; for after provoking theſe People in ſuch a manner, he continued to truſt them with the Guard of his own Perſon, and the Cuſtody of the Factory, which gave them an Opportunity of revenging the ill Uſage they had endured with that Severity, which is natural to barbarous Minds. In ſhort, they roſe in the Night, and cut the Throats of the Director, and all that were with him in the Factory, not one eſcaping.

But ſome who lodged without, hearing the Cries of thoſe who were murdered within, fled out of their Beds to the Sea-ſhore, where, by a very ſingular Providence, they met with a Bark compleatly equipped, in which, tho' half naked themſelves, they put to Sea, and in ſo good Time, that they eſcaped the Rage of the *Maccaſſars*, who came in Search of them to the Shore juſt as they weighed Anchor. Their Navigation was extreamly difficult, inaſmuch as they were expoſed at once to incredible Fatigue, and which was harder ſtill to the utmoſt Extremities of Hunger and Thirſt; but with much ado they compleated their tedious Courſe of one hundred Leagues in this wretched Condition, and came at laſt into a ſmall Creek in the King of *Johore*'s Dominions, where they were civilly received, and kindly treated.

8. A Year or two after the *Eaſt-India* Company thought fit to ſettle another new Factory on the Coaſt of the great Iſland of *Borneo*. On the South End of this Iſland lies another ſmaller one called *Pulolout*, which has an excellent Harbour. The Country, however, is but very thinly peopled, as yielding nothing but Rice; but lying at the Mouth of the Rivers, coming out of the Pepper Countries, it is extreamly well ſeated for Trade. There is a Channel of the Sea between this Iſland and that of *Borneo*, about two Miles broad in moſt Places, in ſome narrower, and in ſome wider, having from ſeven to five Fathom Water all the Way; and on the Shore there are ſeveral riſing Grounds fit to build on, which made it one of the propereſt Places in this Part of the World for a Factory; and therefore it is to be preſumed, ſuch as had the Direction of the Company's Affairs made Choice of it.

One Captain *Barry*, a very ingenious Gentleman, had the Care of ſettling this little Colony, in which he acted with much Skill and Prudence; but before the Work was compleated. he died, and the Direction of the Factory fell to Dr. *Cunningham*, who, after the Ruin of the Factory of *Pulo-condore*, came thither. He is ſaid to have minded his Studies ſo entirely, that he left the Care of the Company's Concerns too much to thoſe that were under him, and it fell out very unluckily both for the Company and himſelf, that they happened to be People altogether unequal to ſuch a Truſt, which proved the Ruin of him, and of the Factory too, which fell out in the following manner.

9. Before the Fort which they were erecting was half finiſhed, they began to inſult the People of the Country, as they paſſed up and down the River, and among many other Acts of Folly and Weakneſs, they very imprudently took it into their Heads to ſearch one of the King's Boats, which was carrying a Lady of Quality down the River, which ſo provoked the *Indian* Monarch, that he vowed the utter Deſtruction of the *Engliſh*; and to effect it, gathered all his Forces, and embarked them on board his Fleet of *Praws*. The Company had then two Ships in the River, and there were beſides two Merchantmen of inconſiderable Force; but, however, this was all they had to truſt to, and therefore the People of the Factory receiving Advice of the King's Deſign, and the Preparations he had made, left their Factory, and went on Board their Shipping, thinking themſelves more ſecure there than aſhore.

When all things were in Readineſs, the Army came in the Night with above an hundred *Praws*, and no leſs than three thouſand deſperate Fellows; ſome landed and burnt the Factory and Fortifications, while others attacked the Ships which were prepared to receive them, The *Engliſh* had made faſt Nettings from the Mizen to the Fore-Shrouds, about two Fathoms high above the Gunnel, that they might not be ſo ſuddenly boarded by the Enemy, and to have the Opportunity of uſing their Blunderbuſſes and Lances before the Enemy could get on their Decks. As ſoon as they in the Ships ſaw the Fleet approaching them, they plied their Guns with double Round and Partridge, and made a great Carnage; but all did not deter the Aſſailants from boarding, who, when they got as high as the Gun Wall, or Gunnel, were at a Loſs how to get over the Netting, and ſo were killed with great Eaſe. Some got in at one of the head Doors of one of the Ships, and killed ſome *Engliſh* in the Fore-caſtle; but they were ſoon deſtroyed. The two great Ships, though in Danger, beat off the Enemy with ſmall Loſs; but the little Ships were both burnt, with moſt of their Men, and one *Dutch* Gentleman, who was obliged to fly from *Batavia* on board one of the ſmall Veſſels was alſo burnt in her. His Name was *Hoogh Camber*, and had been the Embaſſador of the King of *Perſia*.

Some ſay, who were there at the Time of the Engagement, that the *Engliſh* killed (in two Hours that the Action was hot) above one thouſand five hundred, beſides many wounded and maimed; but the *Engliſh* were forced to be gone from their Settlement. The King thought his Revenge had gone far enough, in driving them from their Settlement; and finding the Loſs of the *Engliſh* Trade affected his Revenue, he let all *Engliſh*, who traded to *Johore*, and other circumjacent Nations, know, that he would ſtill continue a free Trade with the *Engliſh* on the old Footing, but would never ſuffer them, or any other Nation, to build Forts in his Country. Several *Engliſh* have been there ſince, and loaded Pepper, and have been civilly treated; and the *Dutch* ſent a Ship from *Batavia* in *Anno* 1712, to trade with them; but the Natives refuſed Commerce with them.

SECT.

SECTION XXXII.

A ſuccinct Account of the Adventures of Mr. William Adams, *an* Engliſhman, *who reſided many Years in the Empire of* Japan, *and was the Perſon who introduced both the* Engliſh *and* Dutch *to trade thither.*

Collected, as well from his own Letters, as *Portugueze* and *Dutch* Writers.

1. *An Introduction, in which is contained a View of the Trade to* Japan *before Mr.* Adams *went thither.* 2. *He is entertained as a Pilot on Board a* Dutch *Fleet intended for the* Eaſt-Indies, *through the Straits of* Magellan. 3. *His Paſſage through thoſe Straits into the* South-Seas. 4. *The great Miſeries endured by their Seamen on the Coaſts of* Chili *and* Peru, *and their Reſolution to bear away for* Japan. 5. *The many and great Difficulties they met with in their Paſſage.* 6. *Arrival on the North Coaſt of* Japan, *and the Uſage they met with from the Reports ſpread concerning them by the* Portugueze. 7. *Mr.* Adams *ſent for, and introduced to the Emperor, who examined him as to his Voyage, and the Deſign of it.* 8. *He grows into great Favour with the Emperor, and is very happily eſtabliſhed in that Country.* 9. *He builds a Ship for the Emperor, and becomes a kind of Miniſter of State in his Court.* 10. *The Account given by him of the Climate, Soil, Produce, People,* &c. *of* Japan. 11. *Obſervations upon this Account, including farther Remarks.* 12. *The Hiſtory of Mr.* Adams, *continued from Foreign Authors.* 13. *Inſtances of his great Power and admirable Conduct during his Reſidence at the Court of* Japan. 14. *The Turn given thro' his Management to the commercial Affairs of that Empire.* 15. *Concluſion of this Hiſtory, with ſome Obſervations and Remarks tending to explain the Obſcurities in this Account, and to ſet the Authorities which ſupport it in their proper Light, for the Honour of this Man in particular, and of our Nation in general.*

1. IT is neceſſary, at our firſt Entrance on this Section, to put the Reader in mind of the Method we have purſued through the Courſe of this Chapter, which has been to ſpeak, as Occaſion offered, of thoſe Parts of the *Indies* which were neareſt to us firſt, and ſo to proceed gradually to the moſt diſtant. In regard to Time, it is with me only a ſecondary Conſideration; and this is ſufficient to account for what might otherwiſe paſs for a Miſtake, which is the placing here this Hiſtory of Mr. *Adam*'s Proceedings, tho' in Point of Time, before that of the Gentlemen laſt mentioned, near one hundred Years. Now, as it was impoſſible to report both theſe Accounts without treſpaſſing on the natural Order, either of Time or Place, we choſe to diſpenſe with the former rather than the latter, and that for this plain Reaſon, becauſe it occaſions but one Alteration, whereas had we taken the other Method, it would have produced many. We have already, in ſpeaking of the Diſcoveries made by the *Portugueze*, mentioned their firſt coming to *Japan*, and have likewiſe taken notice of the great Pains they took to prevent other Nations from having a Share in the rich Commerce of that new found Country, which, though viſited by them ſo early as *Anno Domini* 1542, yet had they preſerved it entirely in their own Hands, till after the Arrival of the Perſon, whoſe Memoirs we propoſe to give in this Section, and who ought therefore to be conſidered as the Diſcoverer of *Japan* to all the reſt of *Europe*, as we ſhall ſhew at large at the Cloſe of this Section.

At preſent it is our Buſineſs to obſerve, that there was nothing the *Dutch* coveted ſo much as an Opportunity of viſiting the Iſlands of *Japan*, which from the Reports they had received from *Portugal* in *Spain*, as well as from their own Settlements, appeared to them a kind of *Indies* in the *Indies*. There are ſome *Dutch* Memoirs ſtill extant, which ſay, that the Perſons employed by their *Eaſt-India* Company, obtained an exact Account of the Profits of the Trade from *Macao* to *Japan*, from the Year 1580 to 1600, from which Memoirs it appeared, that they cleared one Year with another one hundred Tons of Gold, which was ſufficient to put the *Dutch* upon endeavouring by all means to gain a Share in ſo lucrative a Commerce. It may not be amiſs, however, to prevent Miſtakes, to explain this Term of a Tun of Gold, which I take to be entirely *Dutch*, and therefore, when literally tranſlated into *Engliſh*, is in danger of remaining as much *Dutch* as it was before. In the firſt place, a Ton of Gold is not reſtrained at all to that Metal, for if it had, it would not have been uſed here, moſt of the Returns from *Japan* to *Macao* being made in Silver; neither has it any Reference to the Value of a Ton of Gold, which amounts to ten times the Value of what is meant by this Expreſſion; for by a Ton of Gold the *Dutch* Merchants mean one hundred thouſand Guilders, and conſequently the annual Value of the Trade to *Japan* might be ten Millions of Guilders, or, to keep ſtill to round Numbers, one Million Sterling, a vaſt Sum indeed, and yet ſaid to be much ſhort of the Advantages drawn from thence in the firſt forty Years, after the *Portugueze* ſettled in that Country.

But, though the Trade of *Japan* was a thing ſo deſireable of itſelf, yet the acquiring any Share thereof appeared even to the *Dutch* themſelves, though they were in thoſe Days equally enterprizing, and indefatigable, a Deſign thwarted by almoſt inſuperable Difficulties. In the firſt place, the Navigation was difficult and dangerous to the laſt Degree, of which they were made ſenſible, not only by repeated Accounts from the *Indies*, which repreſented the Commerce with *Japan* as a thing almoſt impracticable on that Account only, but were in a manner convinced of it from Experience, ſince they had ſent a Ship thither *Anno Domini* 1584, with little or no Succeſs. They were in hopes, however, of getting the better of this Evil, by making uſe of *Portugueze* Pilots, and accordingly in 1586, they ſent another Ship, which was entruſted to the Care of one *Franciſco Pais*, a Native of *Portugal*, who had not, however, much better Fortune, which diſcouraged them very much, and was probably the Reaſon that they made no farther Attempts for ten Years afterwards.

But this was far from being all; for they very well knew, that when this Difficulty was got over, there were many others, and ſome of them ſtill greater, that were yet to be ſurmounted. As for example, they knew that the *Japoneſe* were a very powerful and a very brave People, the former from Report, but the latter from Experience. For at the Time they beſieged *Malacca*, then in the Hands of the *Portugueze*, there was in the Place a ſmall Corps of *Japoneſe*, who came thither to trade, and who, when the Place was inveſted, finding it impoſſible to return home, aſſiſted their Friends in the Defence of it, and that ſo effectually, that it was chiefly by the bold Sallies they made, that the *Dutch* were at that Time compelled to raiſe the Siege, which they did with great Loſs. They likewiſe knew, that the *Spaniards*, who were at this Time Maſters of *Portugal*, and conſequently the ſole Poſſeſſors of the *Japan* Trade, had prejudiced the Inhabitants of that Country againſt them to the laſt Degree, by repreſenting them not only as Rebels to that Crown, but as Pirates and Enemies to Mankind in general; and, indeed, their Behaviour in the *Indies* had been ſuch as gave but too much Colour to that Report. Add to this, that a very great Part of the

Japoneſe Nation were become Converts to the Popiſh Religion, and conſequently hated them no leſs as Hereticks, than if they had been Infidels.

Taking theſe Circumſtances therefore together, we need not much wonder that the *Dutch* in ſome meaſure deſpaired of ever carrying their Point, and eſtabliſhing themſelves as a trading Nation in *Japon*; yet ſo frail and feeble a thing is human Policy, and ſo little Certainty there is in the Foreſight even of the wiſeſt Man, that notwithſtanding all theſe Obſtacles, and contrary to all Appearance, they not only carried their Point, but after contributing as much as in their Power lay, to the Ruin of their Competitors the *Portugueze*, they have ſecured the whole of this rich Trade to themſelves, and that too in ſuch a manner, as that it is not very likely it ſhould be ever taken out of their Hands. All this we may ſafely affirm, on the Credit of the *Dutch* Writers themſelves, is intirely owing, and was abſolutely brought about by the Intereſt and Conduct of one poor *Engliſhman*, this very *William Adams*, whoſe Memoirs of this Country, collected from his own Writings, we are now to give the Reader.

The Thing in itſelf is indeed wonderful, and if it was not ſupported by the moſt authentick Evidence, would, to the preſent Age at leaſt, appear incredible; but as it is ſupported, it cannot be denied, or even diſputed, and therefore it ought to convince us, that there is nothing of this Nature impoſſible, or impracticable, if Men once ſet heartily about it; ſo that we have no Reaſon to doubt, that if the ſame Spirit of extending Commerce, which prevailed in this Man's Days, ſhould revive in ours, it would produce like Effects, and diſcover to us ſuch new Routs, ſuch unexpected and unlooked for Means of employing our induſtrious Poor at home, by procuring a Vent for their Manufactures abroad, as would raiſe this Age as high in the Opinion of Poſterity, as the laſt Age appears, or ought to appear, in ours. But it is now Time to return to our Author, and to attend to thoſe Accounts of *Japon* which have been left us by ſo able and ſo experienced a Perſon, than which there are not perhaps any better to be met with in any Language whatever.

2. In this Buſineſs, as we have ſeen, he was not the Servant of his own native Country, but of *Holland*, being an able Pilot, and very ſkilful in all Points of marine Knowledge. He was hired by that People to go to Sea with them; his Poſt was that of Maſter Pilot, the Management of the whole Fleet (which conſiſted of five Sail) being left principally to his Care and Prudence. They ſet ſail from the *Texel June* the 24th, and made it the 21ſt of *Auguſt* by that Time they reached *St. Jago*, one of the *Cape de Verd* Iſles. Here they ſtayed almoſt a Month, ſo long, that a good Part of the Fleet was ſick with the unhealthy Air of that Place; and they found it too true by Experience (which before the *Dutch* would not believe) that it was a very barren Place as to any manner of good Refreſhment. *September* the 15th they paſſed the Line, though with Trouble, becauſe of the contrary ſoutherly Winds that then diſtreſſed them, and this was the Effect of having loitered away too much Time before they came to attempt it.

They were now carried away to the Coaſt of *Guinea*, and coming up with *Cape de Lopez Gonſalves*, they landed their ſick Company there; but this Place denied Relief, as well as the former, and the ſick Men were forced to carry their ſeveral Wants and Diſtempers aboard with them again. At the Iſle of *Annobon* they met with a little better Entertainment. Here were Beeves, Oranges, and other Fruits; but the Plague of having an unhealthy Climate embittered the Comforts of this Refreſhment, and the bad Air made them ſick, as faſt as the good Proviſions made them well. The *Dutch* landed a Party of Men, and took the Town, a ſmall thing conſiſting of eighty Houſes, and like to be of as little Profit to the Conquerors, as it was Honour to them. 'Twas towards the Middle of *November* before they got away from thence, ſo hard is it to leave a good baiting Place, eſpecially when the next is ſo very uncertain, as it is in the Caſe of Seamen between *Annobon* and 4° S. L. they had the Winds perpetually at S. by E. and S. S. E. but about that Parallel they came up by S. E. and E. S. E. and E.

Their Courſe was now for the *Magellanick Straits*, and they made it five Months ſailing between them and the Iſland of *Annobon*; but the Miſeries they endured by Hunger in that Time were extream, and in the higheſt degree dreadful: According to Mr. *Adams*'s Relation, for a good while they had each Man but a Quarter of a Pound of Bread a Day, with a proportionally ſmall Quantity of Wine and Water; but it came at laſt to that paſs, that they eat the very Skins that covered the Ropes of the Ships, and by this unnatural ſort of Diet brought on ſtrange Diſorders and Feebleneſs of Body upon themſelves; through all theſe Difficulties, they made a ſhift at laſt to reach the *Magellanick Straits*, coming into the firſt Narrow of that Paſſage *April* the 6th; but this was but ſtill out of one Difficulty into another; 'twas only altering the Scene of their Misfortunes, and coming to be miſerable in another Place; for the Winter was coming on here apace, the Cold began to be ſevere and pinching, and the great Snows began too. To make their Circumſtances more compleatly diſmal, many a time would the Wind have ſerved to have carried them through the *Straits*, but the obſtinate General would not embrace the Opportunity, at the Advice of thoſe that perſuaded it, and ſo was the Occaſion of the miſerable Confinement of the Fleet all the Winter Seaſon.

Here was Firing, indeed, enough for them all about the *Straits*, every Place abounding with Wood; but there was a worſe Neceſſity amongſt them, which this would never ſupply, and the Cravings of the Belly were to be ſatisfied by another ſort of Proviſion. Here they continued conflicting with Hunger, Diſtempers, and bad Weather, till *September*, ſo that they ſtood the Shock of the whole Winter at this Place, and endured the Extremities of all the very worſt Months of the Year. Abundance of their Men died, being downright ſtarved, and the reſt were as near it as they could well be; and now the General, having had enough of the Winter Pleaſures of the *Magellanick Straits*, very politickly concluded, 'twas time to go away. His Men were half dead, and the Remainder were almoſt famiſhed; the diſmal Winter ſpent and gone, and the chearful Spring coming on with the returning Sun, he thought it high time to put out to Sea again before the Comforts of the approaching Seaſon forſook them.

3. So the latter End of *September* they ſet ſail out of the *Straits*, and being got into the *South-Sea*, were wretchedly toſſed and beaten about in that turbulent Ocean: In ſhort, a furious Storm ſcattered the whole Fleet, and drove them to ſeek their Fortunes, every one by themſelves; they had agreed before, in caſe of any ſuch Diſaſter, that they would ſtay for one another at ſome Place upon the Coaſt of *Chili*, in the Latitude of 46°, and if the reſt came not in a Month, then thoſe that were there ſhould go on. Hither Mr. *Adams*'s Ship came, according to the Agreement, and ſtayed the appointed Time. The Natives were civil and friendly to them at firſt, and bartered Sheep and Potatoes for little Toys, which they gave them; but at laſt they fell off, removed up into the Country, and came no more to them. Their Company not coming, they went away, touching, as they paſſed, at the Bay of *Baldivia*, and the Iſle of *Mocha*; but not coming to Anchor any where, till they did at the Cape *Santa Maria*, which is about twenty Leagues from the Iſland of that Name to the Southward.

Here they found a convenient Bay, and good Ground for anchoring; there were conſiderable Numbers of People that appeared upon the Shore, but their Temper and Diſpoſitions, as they were unknown, ſo they were now to be tried; but they proved very croſs and untoward; for at their firſt Attempt to land the *Indians* looking upon them as Invaders of the Country, ſet themſelves to oppoſe them, and poured in a Shower of Darts and Arrows upon the Boats that came up to the Shore; but they being under the Pinch of Hunger, and driven by an abſolute Neceſſity to endeavour ſome Means for the getting a Refreſhment, broke through the Weapons of the *Barbarians*, and landed their Men. Now they made Signs of Peace on both Sides, and a Ceſſation of Arms being, as it were, agreed on, they came to a Parley in that Language of Signs, and the *Indians* underſtanding what they meant, brought them Wine and Fruits for the little Commodities the others ſhewed them, and then ſignified to them, that they ſhould now return aboard again; and if they came aſhore again the next Day, they ſhould have a farther Supply of Victuals.

Accordingly, the next Day the Captain landed, with a Score or more of Muſketeers, and they had not marched far before a Party of *Indians*, to the Number of a thouſand, that lay cunningly intrenched, fell upon them, and cut them all off.

4. This was a terrible Misfortune upon all Accounts, particularly in that this Execution had ſcarce left them Men enough to do the neceſſary Office of the Ship. With this Loſs they went away from the inhoſpitable Cape, and came to the Iſle of *Saint Mary* itſelf; here they found their Admiral, but in much the ſame diſtreſſed Condition as themſelves, the Natives of the Iſland of *Mocha* having given his Crew the ſame rude Treatment that thoſe at the Cape had given the other, only of the two the Admiral had the worſt on it, for he had loſt more Men by the Darts of the *Indians*, and over and above that, their General himſelf. Now, to get ſome Refreſhment at this Place was the great Difficulty; 'twas hard to lie ſtill, and famiſh on Shipboard, and 'twas as hard to venture on Shore, becauſe they had not Men for it. In ſhort, theſe two Wants were ſo great, and ſo unhappily complicated in their preſent Circumſtance, that for all that appears, if an Accident had not relieved them, they muſt have concluded upon dying here without any more ado.

But a Couple of *Spaniards* that had a Deſign to betray them, came aboard (in a ſeeming friendly manner) for that Purpoſe, and were ſo wiſe as to do it without Pledges, or making any Proviſion for their ſafe Return. So when they had ſeen the Ship, and would have gone back again, they told them no, they were ſenſible of their ill Deſign, and would keep them Priſoners (eſpecially ſince they came of their own Heads too) unleſs they would promiſe to furniſh the Ship with ſo much Proviſions. One may eaſily imagine the *Spaniards* were out of Humour upon it, to find themſelves taken in ſuch a Trap; but 'twas all one, 'twas to no Purpoſe to be in a Paſſion there, and they were forced to ſubmit to thoſe Terms of Deliverance, and glad to eſcape ſo too. The *Spaniards* brought in their Proviſions according to the Agreement, and now they were once more reprieved from a miſerable Death.

After this the two Ships ſet ſail in Company for *Japon*, the reſt of the Fleet were given over for loſt, and one of them they afterwards heard fell into the Hands of the *Spaniards* at *St. Jago*. Beſides this, the King of *Spain*'s Fleet waited for them upon the Coaſt of *Peru*, and had they lighted on them, 'tis very probable they had both followed their Companion in her Fate, ſince they were in ſo very weak and ſhattered a Condition.

5. It was *November* the 29th that they left the Iſland of *Saint Mary* upon the Coaſt of *Chili*, and having paſſed the Line, had a good Wind, and fair Weather for a good while, without any Interruption by Storms and Tempeſts. In the Latitude of fifteen or ſixteen Degrees North, they fell in with ſome Iſlands of Canibals, or Men-eaters, as Mr. *Adams* calls them, without any Scruple, ſince eight or nine of their Men he believes were devoured by them. Theſe Fellows, it ſeems, being weary of ſo long a Voyage, and willing to take up at the next reſting Place, put themſelves into the Pinnace, and ſo ran away; but which Way ſoever the Canibals diſpoſed of them, 'tis certain, they never came aboard more. In the Latitude of 27 and 28° the Weather began to change upon them, the Winds that had lain ſtill and quiet ſo long rouſed, and blew with a prodigious Fury. They had ſuch a Storm of Wind and Rain, that equalled or exceeded the moſt violent any Mariner among them had ſeen.

In this horrible Confuſion they loſt one another, and the Admiral never came up to them more; but they followed on their Courſe for *Japon* alone, being ſtill in hopes to meet her in one Part or other of that Iſland. Certainly, hardly ever any Man performed a Voyage in more Diſtreſs. Our Pilot tells us, that they had of all their Number but nine or ten left, that were able to ſtand, or creep upon their Knees. As for the Captain, and all the reſt, they were all at their laſt Gaſp, as it were, and expected to die every Hour: And this was a very diſmal Caſe: for Storms will make the poor Seamen beſtir and work themſelves to the Purpoſe. But how ſhall Nature be ſupported in the mean time, and where ſhall Men have Strength to do theſe toilſome Works, that have not Food to keep Life and Soul together?

6. It was *April* the 19th before they had Sight of the Coaſt of *Japon*, and by that Time there were but five of their Company that could go, Providence ordering the Matter ſo for them, that they had then a Proſpect of Relief, when Things were run up to the higheſt Extremity: 'twas near to *Bungo* that they ſaw this firſt Iſland, and were then in about 35° 30′; but Mr. *Adams*, by the way, aſſures us, that that Coaſt of *Japon* is falſly placed in all our Maps, Charts, and Globes; for he ſays, it lies in 35° 30′, which makes a conſiderable Difference from the common Account given by them of its Poſition. At *Bungo* ſeveral Boats of the Natives came up to them, and aboard them too, as they had a mind themſelves, and it could be no otherwiſe, for there was no body to make any Reſiſtance.

The Sailors were all quite ſpent, and if the *Japoneſe* would have plundered them, or knocked them on the Head, they might have done it without any Trouble; yet they did them no manner of Harm, as to any Violence, or any ſort of Affront; but they pilfered and ſtole all that they could lay Hands on; for which ſome of them payed very dear afterwards. The Vice-King of the Place proved very kind to them, took them into his Protection, and ſent a Guard (as ſoon as they were come to an Anchor in the Port) to ſee that none of the Merchants Goods were ſtolen. This would have done very well had it come in good Time; but the Thieves were there before them. However, here they had good Store of Proviſions ſent them, and a Houſe provided on purpoſe for them, and, in ſhort, were made very much of, and began in ſome meaſure to enjoy themſelves, after all the Dangers and Fatigues of the Sea.

But 'twas their ill Luck to meet with *Portugueze* and Jeſuits here; they were forced to make uſe of them for Interpreters indeed; but they had far better been without any, and rather to have made uſe of the ſilent Language of Geſtures and Signs, than have made uſe of ſuch Interpreters as they were: For, theſe Men gave the Character of them, that they commonly give of their *European* Neighbours (in all Parts of the World where they meet them) that they were Spies or Pirates, and not trading Men, as they themſelves pretended; and this ſet the *Japoneſe* ſo againſt them, that Mr. *Adams* tells us he was apprehenſive at one time that they ſhould have had the Fate of Pirates in that Country, which is to be ſet up upon Croſſes.

Now, when a Company of poor Seamen came to throw themſelves upon their Mercy, as it were, in a ſtrange Country, where they were not able to ſpeak for themſelves, and where their Liberties and Lives depended entirely upon the Peoples good Opinion of them, to go and ſerve them at that rate, was an unpardonable Piece of Villainy, and an Action ſo very inhuman and baſe, as was only fit for *Portugueze* and Jeſuits to be guilty of; but it was not long before the Emperor, hearing of this Ship, ſent for Mr. *Adams*, being the Pilot, to come to him. The Court was then at *Oſala*, which is about eighteen Leagues from *Bungo*. Hither came our *Engliſhman*, not knowing whether 'twas for Life or Death, to Priſon and Puniſhment, or for their Favour and Enlargement.

7. The Emperor viewed him, he ſays, with a wonderful deal of Attention; but yet with his mild and favourable Aſpect took off, in a great meaſure, from the Dread his Countenance might otherwiſe have impreſſed. He aſked, by his Interpreters, a world of Queſtions about the Country Mr. *Adams* came from, the People, their Manners, their Affairs both as to War and Peace, and Products of it in Beaſts, Fiſh, and Fowl, the Trade and Buſineſs, and Laws and Government; and, in ſhort, the whole natural and civil Hiſtory of it. More than this, he purged him as to his Religion too, and would needs examine his Faith, aſking him what 'twas he believed in? a Queſtion, that if a Man had not known the Emperor's Religion, would almoſt have made him afraid the Jeſuits had ſet up an Inquiſition here, and that he was one of the Tribunal.

But Mr. *Adams* puzzled him ten times worſe, when he ſhewed him the *Magellanick Straits* in his Chart, thro' which he ſailed to *Japon*. The Emperor perhaps had a pretty good Opinion of him before, but now he thought him a downright Lyar, the Myſtery of ſuch a Voyage was ſo incomprehenſible, that he had no Faith to beſtow upon it; yet ſince Mr. *Adams* affirmed it, and he could not confute him, he entertained it as a Man does all Points of pure Myſtery, with ſilent Admiration, and humble Submiſſion of their Reaſon to the Difficulty, though cramped and tortured with it at the ſame time. Though his Underſtanding was affronted by it, yet his good Nature was not, and he was very good Friends with Mr. *Adams* afterwards, as appeared by his holding him in talk till Midnight: He had ſeveral other Conferences with the Emperor after this, but was for a conſiderable Time notwithſtanding kept in Priſon, though he had all Neceſſaries allowed him, and nothing like a Puniſhment, but a large Confinement. The *Portugueze* made all the Intereſt at Court they could poſſibly againſt him, and, by their Agents, were continually infuſing ſome ſcandalous Reports of him and his Country in the Emperor's Ears; but all would not do, and the Prince was ſo juſt and generous as to tell them, that the *Engliſh*, having done him no Miſchief, it would not be fair for him to ſee them ſuffer from any in his Country; and that it would be contrary to all the Laws of Juſtice and Reaſon, for him to ſuffer an innocent Man to be executed, merely becauſe his Country and theirs were at War.

8. Mr. *Adams*'s Circumſtances now began to mend, and grew more favourable; his Enemies were quite diſheartened, and the Emperor expreſſed every Day more and more good Liking to him. In the firſt place, he freed him from his Impriſonment, and gave him leave to ſee his old Ship's Company, who were ſurpriſed with no ſmall Joy at this, having heard ('tis probable from the *Portugueze*, who intended it ſhould be ſo) that he had been executed ſome time before: But here he found the Ship abſolutely plundered, and all his Goods and Inſtruments gone, and all the reſt had loſt what they had as well as he; for being all ſick and weak aſhore, the Goods lay ready for a Prey to thoſe that could be unjuſt enough to ſeize them.

When this came to the Emperor's Ear, a Search was made, in order to the Recovery of them; but being gone too far out of Reach, he commanded fifty thouſand Rials of Eight to be given them in part of Satisfaction; and to make ſure that this Money ſhould not be either fraudulently detained by his Treaſurers, or converted to any other Uſe, he ſaw the Payment of it himſelf into the Hands of one who was appointed to have the Management of their Affairs, and to give it out to them in Parcels as they wanted. After this the Court removed to *Eddo*, about a hundred and twenty-two Leagues from *Oſacça*.

The Emperor ordered Mr. *Adams* to move thitherwards with his Ship, and here they took the Liberty to petition him, that they might be perfectly free, and purſue the Deſign of their Voyage, in going to trade in ſome other Parts; but this would not take, and the Emperor was not diſpoſed to part with them yet; ſo they got the Money into their own Hands, and divided it amongſt themſelves, every Man his Share, and then they diſperſed themſelves about the Country, chuſing thoſe Places to ſettle in that beſt pleaſed their Fancies; but the Emperor ordered them, beſides an Allowance of Rice, two Pound a Day for every Man, and, over and above, ſo much yearly as came to eleven or twelve Ducats: There was no Diſtinction made between Captains, Pilots, and common Sailors; but they all fared alike.

9. Thus four or five Years went over their Heads, and they followed every Man his Buſineſs in the Country for a Livelihood, ſince 'twas determined that there they muſt live and die; but when the Term of Years was expired, the Emperor ſent for Mr. *Adams* to Court, and the Buſineſs was to make him a Ship. This was not his Trade, as he told the Emperor; and though he knew how to guide a Ship at Sea, yet he was not uſed to the making of them; but he was ſo very urgent and preſſing to have it done, that Mr. *Adams* undertook the Work, and built him a Ship of about eighty Tun.

When he came aboard it he expreſſed a wonderful deal of Pleaſure in it, and 'twas a Piece of Service he valued ſo much, that the Maker of it roſe mightily in his Favour, by this very Means; beſides ſeveral very good Preſents, his Penſion was increaſed too, being made ſuch as came to 70 Ducats *per Annum*, over and above the former Allowance of Rice; and theſe well managed, were a tolerable Livelihood for a ſingle Perſon in that Country: But that which recommended him moſt effectually to the Emperor's Eſteem was his Skill in Mathematical Learning; Mr. *Adams* had a good Share of Knowledge in the practical Parts, and was now honoured with having ſo great a Prince for his Scholar. He inſtructed him in ſeveral Points of theſe uſeful Arts, and made him capable of ſolving to himſelf that myſterious Problem of ſailing to *Japon* by the *Magellanick Straits*. He could pleaſe him at any time with deſcribing Geometrical Figures.

The Emperor was plunged in the Study, charmed and conjured within the Circles Mr. *Adams* drew him. This latter uſed his Geometry to ſuch good Purpoſe, that he diſcovered the true Method of managing his Royal Pupil by it, and got, as he ſays, the exact Length of his Foot. His Word was all in all in any Point of Diſpute and Controverſy, and which Side ſoever Mr. *Adams* took, the Emperor was always of the ſame. He had ſo great a Stroke now at Court, that even the Jeſuits themſelves were will- to make uſe of his Intereſt there, and courted him to be their Patron; and he declares, that by his means both *Spaniards* and *Portugueze* received ſeveral Favours from the Emperor, which they were otherwiſe in no likely Way of obtaining. Being in theſe Circumſtances, he thought it not impoſſible to win upon the Emperor, ſo far as to return into his own Country, and for that Purpoſe renewed his old Requeſt, promiſing to do his utmoſt for the bringing both an *Engliſh* and a *Dutch* Trade to *Japon*, if he might be ſuffered to go home.

But the Emperor was too much pleaſed with his Company to hearken to any Propoſal about the loſing of it. Mr. *Adams* ſhould have concealed his Skill in Mathematicks, kept his Geometry and Navigation to himſelf, if he had intended to have ſeen his own Country again; he was too uſeful a Man to be parted with, and there was no Hopes of his Liberty, till he had quite loſt the Knowledge of all thoſe Arts that had ſo charmed the Emperor. In ſhort, there was no going from him, and his Wife and Children muſt be contented without him; yet he procured Leave for the Captain of the *Dutch* Ship he came in to go; and, to make his Life as eaſy and pleaſant as might be, the Emperor ſettled a Lordſhip upon him, in which he had a Compaſs of Land to manage, and a Parcel of Slaves, to the Number of eighty or ninety, appointed to do his Country Work; and this was the Courſe of our *Engliſhman*'s Fortune in that Part of the World, as he himſelf has deſcribed them.

10. As to the State of the Country, and its Affairs, he does not tell us much; he commends the *Japoneſe* largely for their Courteſy and good Humour, Valour in War, Juſtice in their civil Concerns, and the happy Conſtitution of the Government. He believes no People to be Maſters of better Politicks than they in their civil Government, nor have more Superſtition in their Religion. They have various Sects and Opinions amongſt them, and ſome of them had embraced Chriſtianity at the Time the Friars and Jeſuits were very diligently at work to propagate it in ſeveral Parts of the Iſland. So far had they gone in Mr. *Adams*'s Time, as to have ſome Churches, and Proſpect of a conſiderable Number of Convents.

The Character he gives of Trade is, that Silks and Cloths are very vendable Commodities, and that for ready Money; and, according to his Relation, the *Japoneſe* have wherewithal to be very good Paymaſters, and can afford to give the beſt Rates for a Commodity, having Gold and Silver enough in their own Country; a very happy People ſurely, in the common Acceptation of Things, ſince they live in a pleaſant Country, enjoy the Benefit of a rich Soil, and have beſides Mines, which yield them vaſt Quantities of Gold and Silver. If any thing could have contented this Man out of the Limits of his own Country, and without the Enjoyment of the Converſation of his Family and Friends, he might aſſuredly have met with it in *Japon*, where the King of *Surunga*, whom he called Emperor, treated him with extraordinary Kindneſs, and rewarded the Pains taken in his Service with a Magnificence truly royal.

He employed Mr. *Adams* to ſail in the Veſſel he had built for him as far as *Eddo*, which our Author tells us was as far as from *London* to the *Lizard*, or Land's End. As he ſucceeded happily in this, as well as in other Affairs, he was directed to build a larger Veſſel after the *European* Manner, which accordingly he did, with the Aſſiſtance of ſuch as were under him, and who, following his Inſtructions, finiſhed a very good Ship, of the Burden of one hundred Tons; and that ſhe was in every reſpect a very compleat Veſſel, appears from the Uſe that was afterwards made of her; for it ſo fell out, *Anno Domini* 1609, that the *Spaniſh* Governor of the *Manillas*, going in a large Galleon of one thouſand Tun to *New Spain*, was driven out of his Courſe by a violent Storm, which threw him upon the Coaſt of *Japon*, where arriving in the Night, the Crew, through Ignorance, ran the Veſſel on Shore in the Latitude of 35° 50′ North, by which unfortunate Accident one hundred and thirty-ſix Men were drowned; but the Governor with three hundred and fifty more eſcaped, and applied themſelves to the Emperor, beſeeching him to have Compaſſion upon them in their Diſtreſs, and to aſſiſt them in their Deſign of proceeding to *New Spain*.

As the *Japoneſe*, from the Maxims of their Government, were never very deſirous of having many Strangers in their Dominions, this Requeſt of the *Spaniſh* Governor was very readily complied with; and as ſoon as Proviſions and other Neceſſaries could be got together, the Governor and his Men were embarked on board the Ship which Mr. *Adams* laſt built, in which they ſafely proceeded to *Acapulco*. In Gratitude for this Favour, this Governor, in the Year 1611, ſent another Ship in Exchange, with a great Preſent, and an Embaſſador on board, who had Inſtructions to thank the Emperor for his Civility, and alſo to make him a large Preſent.

It was in this Year alſo that our Author had an Opportunity, by the Arrival of a *Dutch* Ship, to give his Countrymen in *England* ſome Account of his Adventures, and of the Condition he was then in. This Letter he addreſſed to his unknown Friends and Countrymen, deſiring it might be carried either to *Limehouſe* near *London*, or to *Gillingham* in *Kent*; and in the Beginning of it he takes notice, that he was born at that Town; that at twelve Years old he was bound Apprentice to Mr. *Nicholas Diggines*, whom he ſerved twelve Years, and was afterwards in her Majeſty Queen *Elizabeth*'s Service, and then ſpent eleven or twelve Years in ſerving the Merchants who traded to *Barbary*, till being deſirous of viſiting the *Eaſt-Indies*, he went over to *Holland*, and there entered into the Service of the *Dutch*.

The Concluſion of his Letter is extreamly curious, and therefore I ſhall give it my Readers in his own Words, that they may better judge of the Genius and Capacity of this Man, who made ſuch a Change in the Affairs of *Japon*, and procured that Settlement for the *Dutch*, which without his Aſſiſtance, it is very probable they had never attained.

“ Now, whether I ſhall come out of this Land I know not; until this preſent there hath been no Means, but now through the Trade of the *Hollanders* there is Means. In the Year of our Lord 1609, two *Holland* Ships came to *Japon*; their Intention was to take the Carrack that yearly came from *Macao*, and being ſome five or ſix Days too late, nevertheleſs they came to *Firando*, and came to the Court to the Emperor, where they were in great Friendſhip received, conditioning with the Emperor yearly to ſend a Ship or two, and ſo they departed, with the Emperor's Paſs. Now, this Year 1611, there is a ſmall Ship arrived with Cloth, Lead, Elephants Teeth, Damaſk, and black Taffaties, raw Silk, Pepper, and other Commodities; and they have ſhewed Cauſe why they miſſed the former Year 1610, according to Promiſe yearly to come.

“ This Ship is well received, and with great Kindneſs entertained: You ſhall underſtand, that the *Hollanders* have here an *Indies* of Money; for they need not to bring Silver out of *Holland* to the *Eaſt-Indies*; for in *Japon* there is much Silver and Gold to ſerve their Turns in other Places, where Need requireth in the *Eaſt-Indies*; but the Merchandize, which is here vendible for ready Money, is raw Silk, Damaſk, black Taffaties, black and red Cloth of the beſt, Lead, and ſuch-like Goods. So now underſtanding by this *Holland* Ship lately arrived here, there is a ſettled Trade driven by my Countrymen in the *Eaſt-Indies*, I preſume ſome amongſt them, either Merchants, Maſters, or Mariners, muſt needs know me. Therefore I have emboldened myſelf to write theſe few Lines, in ſhort, being deſirous not to be over tedious to the Reader.

“ This Iſland of *Japon* is a great Land, and lieth to the Northward in 48°, and the ſouthermoſt Part of it in 35°, and the Length of it E. by N. and W. by S. (for ſo it lies) is two hundred and twenty-eight Leagues. The Breadth South and North of it, thirteen Degrees, twenty Leagues to the Degree, is two hundred ſixty Leagues, and is almoſt ſquare. The People of this Iſland of *Japon* are good of Nature, courteous above Meaſure, and valiant in War. Their Juſtice is ſeverely executed, without any Partiality, upon Tranſgreſſors of the Law. They are governed in great Civility, I think no Land better governed in the World by civil Policy. The People are very ſuperſtitious in their Religion, and are of diverſe Opinions. There are many Jeſuits and *Franciſcan* Friars in this Land, and they converted many to be Chriſtians, and have many Churches in the Iſland.

“ Thus, in ſhort, I am conſtrained to write, hoping by one Means or other, in Proceſs of Time, I ſhall hear of my Wife and Children, and ſo with Patience I wait the good Will of God Almighty, deſiring all thoſe to whom this my Letter ſhall come, to uſe the Means, to acquaint my good Friends with it, that ſo my Wife and Children may hear of me; by which Means there may be Hope that I may hear of my Wife and Children before my Death. The which the Lord grant to his Glory and my Comfort. *Amen.* Dated in *Japon* the twenty-ſecond of *October*, 1611.”

11. As ſhort as our Author's Deſcription of *Japon* may appear, it deſerves ſome Notice and Explication. There is no doubt, that he extends the Latitude of this Country too high, when he tells us, it reaches to forty-eight Degrees; but perhaps he took what he wrote from the Information of the Inhabitants, and might, by his Enquiries, as to the Diſtance they had ſailed and travelled North, be led to take the Land of *Yedzo* into his Computation; and if ſo, we may very eaſily account for his extending the Bounds of *Japon* into ſo high a Latitude; neither is he to be blamed; for ſuppoſing that Country a Part of the Continent, and of the Empire of *Japon*, ſince the Natives were at that Time perſuaded of both, and conſequently in his Circumſtances he was not likely to obtain any better Information. The reſt of his Account is exact enough, and the whole of it is apparently calculated to invite the *Engliſh* thither, by affording them a Proſpect of an advantageous Commerce. It is plain likewiſe, that Mr. *Adams* meant by this all the Service poſſible to his Country; and if it ſhould be enquired why he introduced the *Dutch* there firſt, the Anſwer is very clear, and very evident, becauſe he had no Means of writing to, or correſponding with the *Engliſh*, how much ſoever he deſired it.

It is alſo very evident, that by his Introduction of the *Dutch* he meant to find out ſome Means of correſponding with his own Countrymen; and indeed it was a very natural Method, ſince he came to *Japon* in the *Dutch* Service, and had no other Way of working his own Deliverance, but by their Means. Another natural and juſt Obſervation upon his Letter is, that he ſpeaks very briefly of Facts, and without mentioning any thing to his own Praiſe; in which, without doubt, he acted very prudently, and this for two Reaſons. In the firſt place, if he had given a large and full Account of the *Dutch* Settlement, and of the Pains it coſt him to eſtabliſh it, it would certainly have hindered his Letter from coming at all to the Hands of his Countrymen, by raiſing the Jealouſy of the *Dutch*, who were extremely tender of having their Affairs known. This is the more certain, ſince the latter Part of a Letter which he wrote to his Wife, and which contained a larger and more full Account of the Affairs of *Japon*, was actually torn off, and deſtroyed by thoſe who were entruſted with it. In the ſecond place, ſuppoſing his Epiſtle had been more fortunate, and had come directly to the Hands of the *Engliſh*, it would not have recommended him to them, had he inſiſted on the Pains and Trouble he had taken in procuring the *Dutch* a Settlement in that Country; and therefore the longer and the more attentively we conſider his Manner of Proceeding, the more certain we may be, that he acted in this Reſpect with all the Care and Precaution, and, at the ſame time, with all the Uprightneſs and publick Spirit that it was poſſible.

It is from a juſt Senſe of this, and becauſe I find nothing ſaid of him by any of our Hiſtorians, or Collectors of Voyages, beſides what they have taken out of his own Works, that I judged it reaſonable in itſelf, and a thing that could not but be agreeable to the judicious and intelligent Reader, to purſue the Thread of this Man's Hiſtory, by the Help of Foreign Writers; for *Dutch*, *Portugueze*, and *Spaniſh* Authors have thought the Actions of this Man worthy of being recorded, though there is ſo little ſaid of them by our own; and, indeed, the Affairs in which he was engaged were of ſuch a Nature, and his Conduct ſo extraordinary, that we need not wonder at their taking ſo much Pains, the rather, if we conſider, that in their Turns they all felt the Effects of his Management, and of the Credit he acquired at the Imperial Court.

12. In order to ſet this Hiſtory in a clear Light, it is requiſite to go back a little, in order to ſhew the Reader what Mr. *Adams* has concealed, which is, that it was by his means that *Dutch* Ships were brought thither in the Year 1609, and the Thing happened thus: When he found there was no Hopes of procuring his own Liberty, he not only applied, as he tells us, for the Diſcharge of his Captain, but of another *Dutch* Officer, ſuppoſing that two Lives were better than one, in which he judged very right; for his Captain was ſoon afterwards killed, and it was the other Officer who carried the News of Mr. *Adams*'s Eſtabliſhment in *Japan* to the *Dutch* Settlements in the *Eaſt Indies*.

It was in Conſequence of this, that a Yacht, called the *Lion*, was ſent in the Spring of the Year 1609, from the River of *Johore* to *Japon*. This Veſſel arrived on the Coaſt of *Firando* on the 1ſt of *July*, and two Commiſſioners being ſent to the Emperor's Court, they, by the Intereſt of Mr. *Adams*, procured all they could deſire; and having free Liberty given them to trade, ſailed on the 3d of *October*, arrived at *Bantam* on the laſt of *November*, and from thence continuing their Voyage home, arrived ſafely in the *Texel* on the 20th of *July*, 1610. It was on the Report they made, that another ſmall Yacht was ſent, which arrived at *Firando* on the 1ſt of *July*, 1611.

The firſt thing they did was to have Recourſe to Mr. *Adams*; for at their Arrival they found all things went very untowardly, at leaſt in their Opinion, who were not at all uſed to that ſort of Behaviour which was practiſed by the *Japoneſe*; and therefore they abſolutely refuſed to comply with what was demanded of them, in giving a Liſt of the Merchandize which they brought to the Royal Factor. On the other hand, the *Japoneſe* were but indifferently ſatisfied with them; for, whereas they expected an annual Ship ſhould have been ſent, as there was, from *Macao*, there was now two Years elapſed, and but a very ſmall Veſſel, and a Cargo of very moderate Value ſent at laſt, which did not at all agree with the Humours of the *Japoneſe*, who, like moſt of the Eaſtern Nations, are exceedingly caught by Pomp and Shew.

To heal theſe Breaches, the principal Perſons on board the Ship went to make Mr. *Adams* a Viſit, reſolving to be wholly guided by his Inſtructions, becauſe, as the *Dutch* Writer of this Voyage informs us, they were very well ſatisfied he had as much or more Intereſt with the Emperor than any of his Miniſters or Nobility; and it was purely out of Reſpect to him, that after their firſt Differences with the Officer at the Court, they had obtained Licence to make their Application to the Emperor. On their coming to Court, Mr. *Adams* obſerved to them, that though their Cargo was ſmall, it would be requiſite to make conſiderable Preſents, ſince it depended upon their Behaviour, on this Occaſion, whether the Licence which he had procured for them to trade, ſhould be continued, or ſuppreſſed. The Inſight he gave them into the Commodities and Manufactures of the Country, and the vaſt Profits that might be made, by eſtabliſhing themſelves there, operated ſo powerfully on their Minds, that they came immediately into all that he propoſed, and very wiſely reſolved not to heed the Loſs they might ſuſtain by their firſt Cargo, provided they might ſecure thereby a ſecond Licence to ſend an annual Ship thither.

On the other hand, Mr. *Adams* had ſuch an Intereſt with the principal Perſons, and great Miniſters at the Court of *Japon*, that he ſoon brought them to conſider the *Dutch* in that Light in which it was moſt for their Intereſt that they ſhould be conſidered. There was at that time a *Spaniſh* Embaſſador at the Court of *Japon*, who had a great Train, made a ſplendid Appearance, and took great State upon him; for which Reaſon the *Dutch* Supercargoes were very apprehenſive that he would get the better of them in their Negotiation; but Mr. *Adams* having taken the Affair entirely into his own Hands, turned this very Incident to their Advantage. He repreſented to the *Japoneſe* Miniſters, that this *Spaniſh* Embaſſador treated them with an Air of Haughtineſs and Superiority, and rather dictated to them his Demands, than applied to them for their Favour; whereas the *Dutch* were abſolutely a trading People, no way formidable to them in any reſpect, who deſired to have the Honour of furniſhing the Emperor and his Subjects with ſuch foreign Commodities as they wanted, and were ready to ſubmit to ſuch Regulations, and to carry on their Trade under ſuch Reſtrictions, as for the Safety and Welfare of the Empire they, in their great Wiſdom, ſhould think fit to preſcribe.

By this means, as the *Dutch* Writers themſelves confeſs, Mr. *Adams* wrought ſo effectually in their Favour, that they were every where received, not only with Civility and Kindneſs, but with the greateſt Candor and Complaiſance, while the *Spaniſh* Embaſſador, notwithſtanding the great Figure he made, was not only very coldly treated, and made little Progreſs in his Negotiation, but was likewiſe expoſed to Incivilities and Affronts.

The *Portugueze* Writers attribute alſo to our Countryman *Adams* the evil Impreſſions that about this Time the Emperor began to entertain of their Nation, and particularly of the Miſſionaries; of which, however, we find not the leaſt Footſtep in either *Dutch* or *Engliſh* Author: But, to ſay the Truth, it is probable enough, and what they report is very conſiſtent with the Notions that are aſcribed to Mr. *Adams* by the *Dutch* Writers. In ſhort, he did expreſs ſome Diſlike to the Jeſuits, and when aſked concerning them by the Emperor, he ſaid very freely, that they were the Authors of all the Diſturbances in *Europe*, and that they had been expelled not only *Great Britain*, but *France*, for this Reaſon. It is highly probable, that the Emperor might from hence take a Reſolution of treating them in the ſame manner, for the Security of his own Dominions; but then it muſt be allowed, he would not have thought of taking this Meaſure, if he had not found their Behaviour in *Japon* juſtify the Character which Mr. *Adams* had given him of them: But the *Portugueze* Writers ſay not a Word of the Calumnies ſpread by their Prieſts, and the *Japoneſe* Nobility in their Intereſt, againſt the *Engliſh* and the *Dutch*, repreſenting both Nations as a ſort of Pirates and Free-booters, which might not only provoke Mr. *Adams* to make ſuch Returns, but likewiſe lay him under a kind of Neceſſity of clearing up theſe Points to the Emperor's Satisfaction. But to return to our Subject:

About the latter End of *Auguſt* 1611, the *Dutch*, thro' Mr. *Adams*'s Intereſt ſolely, obtained a Licence to trade in *Japon* under the Emperor's Seal, in which, however, that Clauſe was wanting which chiefly induced them to make this long Journey to Court, and that was an Exemption from being viſited by the Inſpector of Commerce, by whom they had been greatly aggrieved. This Officer, tho' a very bad Man, had a very great Intereſt at Court, his Siſter being one of the Emperor's Wives; and the *Dutch* found, upon Application to the prime Miniſter, that he was ſo much afraid of offending her, that he durſt not ſo much as propoſe that Clauſe to the Emperor, which gave them great Concern, ſince, without obtaining it, they were not much inclined to make uſe of the Licence.

To obviate this Difficulty, the prime Miniſter propoſed, that Mr. *Adams* ſhould draw up a Petition for inſerting of this Clauſe, with ſuch Reaſons as he thought proper, and ſhould take an Opportunity of preſenting it to the Emperor when he was in a good Humour, promiſing that he would do all in his Power to ſupport it; and aſſuring him at the ſame time, that he had written ſuch a Letter to the Inſpector, as would prevent their meeting with any Difficulties for the preſent, adviſing them to leave the whole Affair to the Management of Mr. *Adams*, for whoſe Succeſs he would be anſwerable; but all he could ſay had no Effect upon the *Dutch*, they were reſolved to truſt no body, and not to ſtir from Court, till they had this Clauſe inſerted in their Licence.

To ſatisfy them therefore, if it was poſſible, Mr. *Adams* drew up a proper Petition, and the very next Day preſented it to the Emperor himſelf, whoſe Conſent and Seal he procured; ſo that by his Intereſt the *Dutch* obtained, on their firſt Application, what the *Portugueze* were never able to obtain in the Courſe of ſo many Years as they had been ſettled in *Japon*, which is ſuch a Proof of Mr. *Adams*'s Intereſt at that Court, as, if it was not reported by the *Dutch* Writers themſelves, would ſcarce deſerve Credit; but, as it is, I think there can be no ſort of Doubt raiſed about it. All Things being thus ſettled to their Satisfaction, and every thing done for them that they could deſire, they returned to *Firando*; and having landed their Goods, and ſettled a Factory there, they ſailed from thence on the 28th of *September* 1611.

14. It is of this *Dutch* Ship, and her Reception, that our Author ſpeaks, at the Cloſe of his Letter, in Terms which ſeem particularly deſigned to ſhew his Countrymen how eaſy a matter it would be for them to eſtabliſh a Factory likewiſe in that Empire. I have taken all the Pains I could to diſcover how the Letters of Mr. *Adams* were conveyed to the *Engliſh*, but to very little Purpoſe; for all that I can ſay upon this Subject is, that they were brought to *Bantam* in the Iſland of *Java*, in the Month of *October* the next Year; that is, *Anno Domini* 1612. There were then there a conſiderable Number of *Engliſh* Ships and Merchants, to whom theſe Letters were read, and it was preſently agreed, that ſuch an Opportunity was not to be loſt; whereupon Captain *John Saris*, whom the *Portugueze* are pleaſed to call Sir *William Saris*, was ordered to ſail in the *Clove*, a large *Eaſt-Indiaman*, from thence for *Japon*.

He had on board him ſeventy-four *Engliſh*, one *Spaniard*, one *Japoneſe*, and five *Indians*; and on the 14th of *January* 1613, he proceeded on his Voyage. On the laſt of that Month he had Sight of the great Iſland of *Celebes*, paſſed happily thro' the Streights of *Bouton*, and towards the End of the Month of *February* reached the *Moluccas*: He made ſome Stay there, though he was but indifferently treated by the *Dutch*. On the 24th of *April*, he obſerved an extraordinary Eclipſe of the Moon, about Seven in the Morning, which, he ſays, laſted three Hours and an half. On the firſt of *June* he paſſed the Tropick of *Cancer*, and on the ninth of the ſame Month had Sight of the Iſland of *Ximo*, which is one of the Iſlands of *Japon*. On the eleventh he arrived at *Firando*, and was very well received; but found it, however, impoſſible to do any thing, till the King had ſent to acquaint Mr. *Adams* with his Arrival, who was then at *Eddo*, three hundred Leagues from thence. The Meſſenger, it ſeems, did not make ſo much Haſte as he ought to have done, and therefore the King, upon his Return, ſent him into Baniſhment.

On the 29th of *July* Mr. *Adams* arrived, and Captain *Saris* conferred with him about the Means of ſettling a Trade, and the Proſpect there was of making it worth their while. He was told upon this Subject, that the Commerce of *Japon*, like that of the reſt of the World, was ſometimes more, ſometimes leſs profitable; but that, however, it would be always found worth the ſeeking, and worth the keeping too. Here I cannot but obſerve, that in Captain *Saris*'s Opinion, Mr. *Adams* had acquired a great Affection for that Country, in which he had now ſpent near twelve Years. This was a Remark natural enough to make, for one who was not acquainted, either with him, or with the Country; but the *Dutch* and *Portugueze* Writers, who, for what Reaſon I know not, always ſtile him Sir *William Adams*, report him to have been a Perſon of great Probity, and unblemiſhed Character, and one whoſe Candour and Sincerity made him highly eſteemed, even by ſuch as conſidered him as their Enemy: But Captain *Saris* ſeems to have looked upon him as a mere *Engliſh* Pilot; and therefore much his Inferior, without conſidering that his Circumſtances were now very much changed, and that therefore he ought to have been looked upon as a kind of Miniſter to the Emperor of *Japon*.

He took his Advice, however, and agreed to go with him to the Emperor's Court, to which he was the more readily induced by the King of *Firando*'s offering him all kind of Conveniencies for his Journey. He carried with him Preſents for the Emperor, the Emperor's Son, their prime Miniſters, for the Judge at *Meaco*, for the Admiral, and for the Treaſurer; all of which amounted together to the Value of one hundred and eighty Pounds, which was no mighty Sum to expend for procuring the Privileges which he expected; but it will be more agreeable to the Deſign of this Work, and at the ſame time will afford more Entertainment to the Reader, to give the Hiſtory of this Journey, as near as may be, in Captain *Saris*'s own Words, which I the more readily do, becauſe he has been always conſidered, and I think with good Reaſon, as one of the moſt ſenſible of our old Writers, and in whoſe Travels we find the feweſt Miſtakes. Thus then he relates the Story of his Journey.

We ſet ſail from *Firando*, and paſſed by ſeveral Iſlands; the moſt part are very well inhabited, and had fair Towns upon them; but the firſt of Note that we put in at was *Fuecate*, a very large and conſiderable Place, not much leſs than *London*; within the Walls very well built, and ſo even and uniform, that one might ſee from one End of a Street to another. It has a ſtrong Stone Caſtle, a good Ditch, and a Draw-bridge, all kept in very good Repair; but no Soldiers, or Ordnance. As for Ordnance, indeed, I did not ſo much wonder to find none, ſince there was no ſuch thing at *Firando*; and it is a ſort of military Furniture that the *Japoneſe* are wholly without. All along this Coaſt, and ſo up to *Oſaca*, we found Women that lived with their whole Families upon the Water, getting their Livelihood by Fiſhing, at which they were very great Artiſts; but they had two Strings to their Bow, and 'twas next to impoſſible for the Fiſh to eſcape them; for what they miſſed with their Lines and Nets, they would dive for, and catch that Way without fail; and this they would do with Eaſe, to the Depth of eight Fathom. Theſe Women are very eaſy to be known from all others; for, by continual diving, their Eyes were ſtrangely altered, and looked as red as Blood; and by this Token the diving Women are diſtinguiſhed in *Japon*.

When we paſſed the Streights of *Xemina-ſoque*, the next Town of note we came to was *Oſaca*, nothing inferior to the former in Compaſs and Dimenſions, and one of the principal Sea-ports of the Empire. There is a River comes up to it as wide as the *Thames*, and ſeveral very fine Timber-bridges laid over it. It has a Caſtle very extraordinary for Bigneſs and Strength, with very deep Trenches about it, and ſeveral Draw-bridges artificially made, and Grates ſo ſtrongly plated with Iron, as may ſeem to bid Defiance to any Battery in the World. The whole Building of the Caſtle is of Free-ſtone, and the Walls are of the ſame; but a matter of ſeven Yards thick, and put together without any Mortar, or Cement; the Stones being ſo nicely cut, as to lie perfectly cloſe together, and needs no other Binding; only, if there happens to be a void Space any where, they throw a little Earth to fill up the Crevice, and that's all they do. It is regularly contrived, ſtrengthened with Bulwarks and Battlements, with good Store of Loop-holes for ſmall Shot and Arrows, and various Paſſages for the throwing out of Stones upon thoſe that ſhould come to attempt it; and one would eaſily believe it to be a mighty ſtrong and ſecure Building, without having a particular Account of it, when one hears what uſe the Emperor puts it to, and with what Importance the Jewel is here kept in ſafe Cuſtody.

In ſhort, here lives (locked up in the Caſtle) the true and genuine Heir of *Japon*; here, I ſay, he lives, but ſo happy as to be ignorant of his real Quality, Rights, and juſt Pretenſions; though, at the ſame time, ſo unfortunate as to be excluded from them all. The Truth of the Matter is, the preſent Emperor is an Uſurper, and ſtepped into the Throne, in a way not only contrary to the

Law of that Kingdom, but the more ſacred ones of eternal Juſtice and Reaſon. The old Emperor, when he died, left this Son, then an Infant, under the Care and Tuition of four principal Noblemen; whereof *Ogoſhoſamma*, the preſent Emperor, was one, and the chief. The other three Governors, Men of Intrigue and ill Principles, and fonder by far of flattering their own Pride, and Ambition, than diſcharging their Duties of a ſacred Truſt committed to them, made Pretenſions to the Sovereignty, and put in for the Crown themſelves.

In oppoſition to whom, as alſo to aſſert the Rights of the royal Pupil, *Ogoſhoſamma* took up Arms; and having intirely routed the other Pretenders, had the ſupreme Power, ſuddenly clapped all into his own Hands; and now the charming Opportunity told him, he had as good be Emperor himſelf. All his Competitors were removed out of the Way. The true Heir was incapable of underſtanding and redreſſing his Caſe. All the Power was his own; and he wanted only the Name of an Emperor, which was ſo very ſmall a thing, that he reſolved not to be without that any longer. The young Prince he kept always about him, and in perfect Ignorance of himſelf, and his Relation to the Crown, ſuffering him to know no other, but that he was his Son; all that are about him being ſuch as the preſent Emperor has brought up from their Cradles, and ſo not able to give him any better Information. And to make all ſure, when he was grown to Years, he married him to his own Daughter, and ſo confined them to the Caſtle of *Oſaca*, where they live like the Children of an Emperor, as to all Points of State and Grandeur; only Liberty, that ſweetens all the reſt, civil Policy is pleaſed to deny them.

Over againſt *Oſaca*, on the other Side of the River, lies another great Town, called *Sacay*, a Place of very great Trade for all the Iſles thereabouts. At *Fuſhimi*, to which we came next, we found a Garriſon of three thouſand Soldiers, appointed for the keeping ſome of theſe Parts in good Order. This Garriſon is ſhifted every three Years; and the Change happening when we came thither, we had the Advantage of ſeeing ſomething of the Rules of their military Diſcipline: They generally march no more than five a-breaſt, and to every ten Files there's an Officer deputed, who regulates the March, and keeps all in perfect Order. Their Diſpoſition, according to the Quality of their Arms, is thus. Firſt of all march their Shot, that is, Calievers, for Muſkets they have none, neither will they uſe any; then follow Pikes, then Cattans and Targets, Bows and Arrows, Waggadaſhes or Hooks, and laſtly Calievers again cloſe the March; and among all theſe they have no Colours, Drums, Trumpets, nor any ſort of warlike Muſick.

The *Japoneſe* Horſes are not large, or high, but of the Size of our middling Horſes, ſmall headed, and extremely full of Mettle; and, in my Opinion, far beyond *Spaniſh* Gennets, both in ſtately Carriage and Spirit. Their Soldiers obſerve very good Order upon the Road, and are ſo exactly governed, that they are as welcome at the publick Houſes as any Gueſts whatever; no Man is in the leaſt diſturbed or incommoded by them; they take what they find, as other People do, and pay for it without any quarrelling: The Roads are very well furniſhed with Houſes of Entertainment; and when there are Soldiers upon the March, they provide Victuals for them; ſo that they have, at an Inſtant's Warning, what they want, and at very cheap Rates; a Dinner of good, wholeſome Food, and enough of it, from two Shillings downward, to one Penny.

The Diet generally uſed through the Country is Rice of ſeveral Sorts, the white being counted the beſt; Fiſh, freſh and ſalted, Herbs, Radiſhes, Beans, Duck, Teal, Pheaſant, Partridge, Quail, and Fowls: Of Beaſts they have all ſorts; of Deer, wild Boars, Goats, and black Cattle; Cheeſe alſo in great Plenty; but Butter they make none; neither will they eat any Milk, becauſe they eſteem it the Blood of the Animal; and, for what Reaſon I know not, they will not touch a Bit of any tame Beaſts, tho' they have them in abundance. Their Wheat ought not to be forgotten, which is as plump, and as good as any, but all of the red Colour. We did in our Travels buy Rice at a Half-penny *per* Pound; Hens and Pheaſants, the beſt and fatteſt, for three Pence a-piece; Pigs, very large, for a Shilling; a fat Hog for five Shillings; a good Ox for ſixteen Shillings; and a Goat at three Shillings. The Drinks in requeſt in this Country are only the Spirits diſtilled from the Rice, very ſtrong, and of the Colour of Canary, and common Water, which is the common Drink of the poorer ſort of People, that can't reach to the Price of other Liquor. They always drink their Water warm, and ſay that 'tis good to kill the Worms in the Maw.

Our Motions being directed to *Suranga*, where the Emperor then kept his Court, by the latter End of this Month we had gone as far as our Way lay by Water; and now being to finiſh the Remainder of our Journey by Land, we were furniſhed with Horſes, and all Conveniences for that Purpoſe, at the Emperor's Charge. I had alſo a Palankin, or one of their Sedans, provided for me, and a freſh Supply of Men drawn out of every Place for the carrying me therein, when I was tired of my Horſe; and, for the greater State, a Slave appointed to run with a Pike before the Palankin. The King's Harbingers alſo went before, and took up our Lodging upon the Road. This Part of the Journey was very pleaſant and eaſy; the Way, for the moſt part, is exceeding even and plain; and wherever there was any rugged, mountainous Ground, a ſmooth level Paſſage was cut through it. This Road is all along good Sand and Gravel; it is divided into Leagues for the Benefit of Travellers; and at every League's End are two ſmall Hills raiſed, on either Side one, and upon each a fair Pine-Tree planted. The Deſign of which Mark is to make Travellers competent Judges of the Length of their own Journeys, that they may not be abuſed by the Hackneymen, and thoſe that let out Horſes, and ſo pay for a greater Number of Miles than they have rode.

All along the Road you meet with Multitudes of People paſſing and repaſſing, and Towns and pleaſant Villages, Farms and Country-houſes; and ſometimes Temples, ſtanding at a little Diſtance, in ſhady Groves, with the Habitations of the Prieſts round about them. The moſt unpleaſant Sight we had, was the Sight of the Malefactors, faſtened upon Croſſes, near all the great Towns where thoſe Executions had been performed. Crucifying is a very common Puniſhment among them at *Japon*; and, as they manage it, it is ſome ſort of Puniſhment to Travellers too, to paſs by a Multitude of noiſome, putrifying Carcaſſes and Bodies; beſides the Horror of the Sight, to have the Diſturbance of the Smell thoſe Bodies yield: And we had the worſt Trial of all when we came to *Suranga*; there were Croſſes, Scaffolds, and Gibbets, Heads, Carcaſſes, and Limbs, hanging about in ſo many Places without the City, that our Pleaſure in going along was greatly leſſened. *Suranga* ſeems to be as big as *London*, even taking in the whole Compaſs of the Suburbs: The outer Parts of it we found entirely taken up by Mechanicks and Artificers of all ſorts, who are placed there for the Eaſe and Quiet of the genteeler People, that don't care to be diſturbed with the Noiſe and Buſtle the others make in their Trades.

After a Repoſe of a Day or two, I went, with all my Company in a Body, to the Caſtle, to have Audience of the Emperor, and to deliver the Preſents intended for that Court; I was introduced by two of the greateſt Men then in Attendance, the Emperor's Secretary and his Admiral. Theſe led me firſt into a very fine matted Room, where we ſat down for ſome time, according to their Cuſtom, upon Mats; then they brought me into a Chamber of Preſence, where ſtood an empty Chair of State, to which I was obliged to do Reverence. After ſome ſhort time, Word was brought, that the Emperor was come into the Room of Audience, to the Door of which theſe Courtiers brought me, but durſt not preſume to look in themſelves. The Cuſtom is, for all the Preſents that are brought to be placed in order upon the Mats of that Room into which the Emperor comes; and accordingly, when I came in, I found them all in a very orderly Manner laid before him. He received his Majeſty's Letter with the Civility of that Country, lifting it up towards his Forehead, and then, by his Interpreter, bid me welcome: He deſired me to go and ſee the King his Son at *Eddo*, (with all the Neceſſaries, for which Journey he would take care to furniſh me) and by that time I returned, his Letters ſhould be ready for our King.

The Articles relating to Trade and Privilege, which we requeſted his Majeſty's Confirmation of, were all eaſily granted by him, one only excepted, reſpecting the *Chineſe*: It was to this Purpoſe, That whereas the *Chineſe* had refuſed all Trade and Commerce with the *Engliſh*, if we could take any of them abroad at Sea, it might be lawful for us to bring them into *Japon*, and make ſale of the Goods, ſo taken, in his Majeſty's Dominions. This the Emperor granted at firſt; but his Mind was altered afterwards by a Conference with the Ambaſſador of *China*, and he refuſed to allow it. The reſt all paſſed under his Great Seal, which is not of Wax, like ours, but ſtamped like a Print, and coloured red. The Secretary would take no Preſent, nor any thing like a Gratuity from us; the Emperor, it ſeems, had commanded the contrary, and 'twas as much as his Life was worth to do it.

Having ſeen this Buſineſs done, we ſet out from *Suranga* for the great City of *Eddo*, where the Emperor's Son, the young King, keeps his Court: The Country is well inhabited between theſe two Cities; the Towns and Villages lie thick, and the Totoques, or Temples, ſcattering up and down in good Numbers too. There's one mighty Image, (which they call *Dabis*) that ſtands in this Road, at which all the *Japoneſe* ſtop to pay their Devotions, when they go this Way. It is made of Copper, all hollow within, tho' very thick: 'Tis in the Shape of a Man kneeling on the Ground, with his Buttocks reſting on his Heels, and his Arms extended: He is repreſented wearing a Gown, and notwithſtanding that bending Poſture, is twenty-two Foot from the Level of the Ground, and all the Body proportionably large. Some of our Men went into the Body of it, and then fell a-hollowing and hooping; the Noiſe of which, out of the wide Mouth of the Image, was much ſuch agreeable ſort of Muſick as, I believe, was made by *Phalaris*'s brazen Bull. It ſtands conveniently to entertain the Devotion of Pilgrims in their Paſſage to the celebrated Temple of *Tencheday*; for they always make a Pauſe at *Dabis*; but this is but a ſlight Ceremony.

It is at *Tencheday*'s Temple the great Work is to be done, and the Pilgrims expect to receive the Reward of their Travel. And here one may meet all ſorts of People, rich and poor, ſound and diſtempered, continually coming and going thither, and that by Night, as well as by Day, and all the Year round. About the Middle of this Month we came to *Eddo*, a City much larger than *Suranga*, nobler in its Buildings, and every way more glorious in its Appearance. The very Tiles of the Houſes are gilded, and the Poſts of the Doors ſet off with ſhining Varniſh. They have no Glaſs-windows, but all of Board, which opens in Leaves, and are very delicately painted: There's a Cauſeway runs thro' the chief Street in the City; which Street is as broad as any in *England*; and a fine River paſſes along by, or rather underneath the Cauſeway: At every fifty Paces there is a Well-head, ſubſtantially fitted up of Free-ſtone, and provided with Buckets for the People, in caſe of any Danger by Fire. The Caſtle of this City is a much ſtronger and nobler Edifice than that of *Suranga*; and the young King lives in much greater State, and has a more pompous Attendance, than the Emperor his Father.

He received us in a very obliging Manner, taking the King's Letters and Preſents with a wonderful Satisfaction and Content, and giving us all the Welcome imaginable. He gave us Letters for our King, and a Preſent of two intire Suits of *Japan* Armour, finely varniſhed, and a long Sword for myſelf: 'Tis to be noted, that the Cattans are a common Wear; but the Talahes, or long Swords, are worn only by great Soldiers, and Perſons of the beſt Account. It is ſaid to be no leſs than twenty two Days Journey, on Horſeback, from this City of *Eddo* to the moſt northern Part of *Japon*, which makes it a Country of a vaſt Extent. Our Buſineſs here being no more than the paying a Compliment; which, being done, we had no farther Occaſion of ſtaying; and having got this Prince's Letters and Preſents for the King of *England*, we went back to *Suranga*, where we arrived again at the End of this Month.

We were not obliged to wait long in this City; for our Diſpatches, the Emperor's Letter, and the Inſtrument, containing our Privileges, and the Terms upon which we were to eſtabliſh a Factory in *Japon*, being, thro' the Care, Induſtry, and Intereſt of Mr. *Adams*, both ſpeedily and effectually diſpatched; ſo that we had no Reaſon to complain either of the Delays or Diſappointments that are uſually met with at Courts; and of which we underſtood by Report, that of *Japon* is not more free than others, if one has not a good Agent, as luckily for us we had.

A Tranſlation of the Emperor's Letter, and of the Inſtrument containing our Privileges, is, for the Satisfaction of the Reader, annexed; and will ſufficiently ſhew how wiſe and well regulated a Government that is by which they were granted. It is neceſſary to obſerve, that tho' this Verſion is not literal, yet it is very ſtrict, and expreſſes the Meaning of the Original very exactly, ſo that the Senſe and Spirit of theſe *Japoneſe* Papers may be clearly apprehended thereby.

To the KING *of* GREAT-BRITAIN.

“YOUR Majeſty's kind Letter ſent me by your Servant Captain *John Saris*, (who is the firſt that I have known to arrive in any Part of my Dominions) I heartily embrace, being not a little glad to underſtand of your great Wiſdom and Power, as having three plentiful and mighty Kingdoms under your powerful Command. I acknowledge your Majeſty's great Bounty, in ſending me ſo undeſerved a Preſent of many rare Things, ſuch as my Land affordeth not, neither have I ever before ſeen; which I receive not as from a Stranger, but as from your Majeſty, whom I eſteem as myſelf, deſiring the Continuance of Friendſhip with your Highneſs; and that it may ſtand with your good Liking to ſend your Subjects to any Part or Port of my Dominions, where they ſhall be moſt heartily welcome, applauding much their Worthineſs in the Admiral's Knowledge of Navigation, having with much Facility diſcovered a Country ſo remote; being no whit amazed with the Diſtance of ſo mighty a Gulph, nor Greatneſs of ſuch infinite Clouds and Storms from proſecuting honourable Enterprizes of Diſcoveries and Merchandizing, wherein they ſhall find me to further them, according to their Deſires. I return unto your Majeſty a ſmall Token of my Love (by your ſaid Subject) deſiring you to accept thereof, as from him that much rejoiceth in your Friendſhip. And whereas your Majeſty's Subjects have deſired certain Privileges for Trade, and ſettling of a Factory in my Dominions, I have not only granted what they demanded, but have confirmed the ſame unto them, under my Broad Seal, for better eſtabliſhing thereof. From my Caſtle in *Suranga*, this fourth Day of the ninth Month, in the eighteenth Year of our Dary, according to our Computation. Reſting your Majeſty's Friend, the higheſt Commander in this Kingdom of *Japon*. Subſcribed *Minna Mouttono. Yei Ye Yeas.*”

Privileges granted by Ogoſhoſamma, *Emperor of* Japon, *unto the Right Worſhipful Sir* Thomas Smith, *Knight, Governor, and others, the Honourable and Worſhipful Adventurers to the* Eaſt-Indies.

“I. *Imprimis*. We give free Licence to the Subjects to the King of *Great-Britain*, *viz.* Sir *Thomas Smith*, Governor and Company of the *Eaſt-Indian* Merchants and Adventurers, for ever, ſafely to come into any of the Ports of our Empire of *Japon*, with their Ships and Merchandizes, without any Hindrance to them, or their Goods; and to abide, buy, ſell, and barter, according to their own Manner with all other Nations; to tarry here as long as they think good, and to depart at their Pleaſures.

“II. *Item*. We grant unto them Freedom of Cuſtom for all ſuch Merchandizes, as either now they have brought, or hereafter ſhall bring into our Kingdoms, or

“ ſhall from hence tranſport to any foreign Part; and do
“ authorize thoſe Ships that hereafter ſhall arrive and come
“ from *England*, to proceed to preſent Sale of their Com-
“ modities, without coming or ſending up to our Court.

“ III. *Item.* If any of their Ships ſhall happen to be in
“ danger of Shipwreck, we will our Subjects, not only to
“ aſſiſt them, but that ſuch Part of Ship and Goods, as
“ ſhall be ſaved, be returned to their Captain, or Cape-
“ Merchant, or their Aſſigns; and that they ſhall, or may
“ build one Houſe, or more, for themſelves, in any Part
“ of our Empire, where they ſhall think fitteſt; and at
“ their Departure make Sale thereof at their Pleaſure.

“ IV. *Item.* If any of the *Engliſh* Merchants, or other,
“ ſhall depart this Life within our Dominions, the Goods
“ of the Deceaſed ſhall remain at the Diſpoſal of the
“ Cape-Merchant; and that all Offences committed by
“ them ſhall be puniſhed by the ſaid Cape-Merchant, ac-
“ cording to his Diſcretion, and our Law to take no hold
“ of their Perſons or Goods.

“ V. *Item.* We will, that ye our Subjects trading with
“ them for any of their Commodities, pay them for the
“ ſame, according to Agreement, without Delay, or Re-
“ turn of their Wares again unto them.

“ VI. *Item.* For ſuch Commodities as they have now
“ brought, or ſhall hereafter bring, fitting for our Service
“ and proper Uſe, we will, that no Arreſt be made there-
“ of, but that the Price be made with the Cape-Merchant,
“ according as they may ſell to others, and preſent Pay-
“ ment upon the Delivery of the Goods.

“ VII. *Item.* If in Diſcovery of other Countries for
“ Trade, or Return of their Ships, they ſhall need Men
“ or Victuals, we will, that ye our Subjects furniſh them,
“ for their Money, as their Need ſhall require.

“ VIII. *Item.* And that without other Paſſport, they
“ ſhall, and may, ſet out upon the Diſcovery of *Yedzo*,
“ or any other Part in or about our Empire.

“ From our Caſtle in *Suranga*, this firſt Day of the
“ ninth Month, and in the eighteenth Year of our Dary,
“ according to our Computation. Sealed with our Broad
“ Seal, *&c.* Underwritten

“ *Minna Mouttono Yei Ye Yeas.*”

The *Japoneſe* Language ſeems to agree with the *Chineſe* in this, that they expreſs whole Words compendiouſly, by their ſeveral proper Characters, not compounding them of diſtinct Letters and Syllables, as 'tis in other Languages. The Character is very different from that of the *Chineſe*; and they read, beginning at the Right Hand, ſo downwards, perpendicular-wiſe in the ſeveral Lines. They take abundance of care to ſpeak and write in the ſhorteſt and conciſeſt manner that can be; they are not given to flouriſh and enlarge upon a Subject, but deliver their Minds in very pertinent, exact, and comprehenſive Terms, contracting a great deal of Senſe into a little Compaſs: The Letters, and the Inſtrument, were both written in it, very fair, after their Manner; and the firſt Rarities of that kind that our Nation, I believe, ever had.

Thus was all our Buſineſs at *Suranga* finiſhed too. Upon which we took Leave of the Emperor and Court, and ſet out for *Firando*. Our Way lay by Land as far as *Oſaca*; and in paſſing thither, we took *Meaco* in our Way. This is abſolutely the greateſt City in *Japon*, and a Place of mighty Trade. All the Tradeſmen dwell in a Part of this City by themſelves; and all of ſuch an Employment in ſuch a Street by themſelves. The *Japoneſe* think it very unſeemly and irregular, to have Men of ſo many Profeſſions and Buſineſſes mixed and huddled together in ſuch a confuſed manner, as they are in other Places. They are for making all of the ſame Trade (who are fitteſt to converſe together) Neighbours to one another; Birds of the ſame Feather to be all in a diſtinct Flock by themſelves, that a Man that looks may know where to find them. And the plain Truth on't is, this Order is not without its Beauty and Conveniency; and it added, methought, a peculiar Grace to the City, which all its other Advantages could not have given it.

The moſt magnificent Temple of the whole Country is here at *Meaco*, built of Free-ſtone, and as long as St. *Paul's* in *London* from the Quire, arched, adorned with mighty Pillars, and as lofty as that. It has one peculiar Altar, at which they make their Offerings of Rice, and ſmall Money (called Cundries, twenty of which make a Shilling) for the Maintenance of the Bonzees belonging to it: And by this Altar ſtands the great Idol *Mannada*, made of Copper, and of the ſame Form with *Dabis* before mentioned, but much higher, reaching up to the very Arch. The Temple ſtands advantageouſly upon the Top of a very high Hill, and upon each Side the Aſcent you have a long Row of Columns, of Free-ſtone, about fifty in each Series; ten Paces diſtant one from another, and upon the Top of every Pillar is a Lanthorn, the Lamps in which are lighted every Night, and make a very glaring Shew. There are ſeveral other Temples beſides, but this vaſtly exceeds all the reſt in all Points of Beauty and Grandeur. It was juſt finiſhed at our being there, the Foundation being laid by the famed *Taicoſania*, whoſe Horſe was kept in an Apartment hard by, and is to be maintained here in a Life of perfect Eaſe and Reſt, as long as Nature will allow him to hold it out.

The *Portugueze* Jeſuits have a ſtately College in this City, very well furniſhed with Men of that Society. They breed up abundance of *Japoneſe* Youths, reading Philoſophy, and the Popiſh Divinity to them, making many of them Preachers, and, I ſuppoſe, Jeſuits too. There's no doubt but they endeavour to make them as good as they can; and, amongſt other Arts, teach ſome of thoſe that are peculiar to their Order. They have the New Teſtament tranſlated into the *Japoneſe* Tongue; and, beſides this hopeful Fry breeding up in the College, there are reckoned five or ſix thouſand that profeſs Chriſtianity in *Meaco*.

While we ſtayed here we received the Emperor's Preſents for our King, which were ſent after us, *viz.* ten Beobs, or large Pictures, to hang a Room of State with. From hence we travelled to *Oſaca*, where the Gally that ſet us down before was attending our Return, to tranſport us to *Firando*, and this at the Charge of the brave and generous King of that Place. This Prince was extremely glad at our Return to his Iſland, as alſo of the Succeſs of our Affairs at Court, and had carried it with that ſteady and even Hand of Kindneſs to our Company left there, as he did to all of us, when together; but yet the Trade amounted to little or nothing. In our Abſence the *Japoneſe* had been no good Cuſtomers, tho' we had come from the other End of the World to take their Money. One Reaſon of this was, becauſe it was not yet certain that we were to be allowed in the Country; and till the Trade has its publick Warrant from the Emperor, as no Stranger may offer to ſell, ſo no Native may dare to buy. But another thing was this, the moſt Part of our Commodities we intended for theſe Parts were broad Cloths, (which had not long before been ſold here for twenty Rials of Eight *per* Mat, which is two Yards) a ſort of Wear the *Japoneſe* were now almoſt out of Conceit with, becauſe we did not take care to recommend the Goodneſs of it by our own Wearing. You, ſay they, cry up your broad Cloths to us, and at the ſame time hardly wear a Rag of it yourſelves; but are all for your Silks and Stuffs, and any thing in the World, except juſt what you would have us buy of you. And the Truth on it is, the *Japoneſe* were in the right, and their Objections not eaſy to be anſwered. We ought to be more fond of our own Country Commodities, and tell other Nations they are valuable, by the Uſe we make of them ourſelves. Foreigners won't be ſo ready to believe us, if they ſee we don't order our Faſhions ſo as to give a Reputation to what we recommend abroad in the World; and, for ought I know, other Nations may tell us, as well as the *Japoneſe*, of not wearing our own broad Cloth; may reproach us with the Neglect of our own Commodities, and deſpiſe them till they ſee us do otherwiſe ourſelves.

This *Firando* is a very good Place for our Ships to put in at, with reſpect to the Point of Victualling, and all that; but it is not ſo proper for Trade, becauſe it lies off from the main Iſland of *Japon*, where are not only moſt, but the moſt conſiderable People, capable of giving Encouragement to Trade, which, in thoſe little bye Iſlands, is not to be expected. We might, I don't queſtion, be welcome at any of them all; and the Kings of two of theſe petty Iſlands gave us a formal Invitation. But there's few of them can afford Buſineſs that will turn to account, and defray the Charges of a Settlement: Therefore my Advice is, that our Ships that come to trade here, would not ſail to *Firando*, but to *Oringgaco*, upon the main Iſland, and about fifteen Leagues diſtant from *Eddo*, where they will find very good Riding, and a much greater Proſpect of Advantage. This Place indeed is not capable of affording ſo good an Entertainment as may be deſired: Proviſions are not altogether ſo plentiful there as at *Firando*; but that Want may be ſupplied by a Correſpondence with the circumjacent Country.

Chriſtianity makes no conſiderable Progreſs comparatively any where in this Empire, but at *Meaco* and *Langeſaique*, a Town ſituated upon the Sea-coaſt, about eight Leagues from *Firando*. It had, it's true, gotten footing in *Eddo*; but the Emperor, upon ſome Pique taken againſt the Chriſtians, baniſhed them all from thence, and confined them to *Langeſaique*; and as a Prevention of its creeping into the Court, and rooting itſelf any where near him, he made it Death to any who ſhould offer to build a Church, or ſing Maſs, within ten Leagues of the Place where he reſided. This Change was but a very little before our going to *Eddo*; notwithſtanding which, the Chriſtian Religion is otherwiſe indulged. The Chriſtian *Japoneſe* at preſent have, as far as I ſee, the ſame Protection and Privilege with others; and the Jeſuits ſeem to enjoy an unreſtrained Liberty in the making of Proſelytes. The Foundation of a Factory being now firmly laid in the Emperor's full Grant to that Purpoſe, we proceeded to build upon it, being the rather encouraged to it, in that we were now aſſured that *Engliſh* Factories were actually ſettled at *Siam* and *Patana*; as alſo, that the *Dutch* made ſomething of their Buſineſs here; and we had Reaſon to believe we had not a leſs Share in the Good-will and Eſteem of this Country than they. We therefore appointed ſome of our Company to reſide here upon this Affair, with Inſtructions alſo to make what Diſcoveries they could upon the Coaſt of *Corea*, *Tuſhmay*, and other Parts adjoining, againſt the next Return of the Ships. By exact Obſervations we made, during our Stay here, we determine the Latitude of *Firando* to be 33° 14′ N. and the varying of the Compaſs 2° 50′ Eaſterly.

Thus far we have followed exactly the Memoirs of Captain *Saris*, who farther reports abundance of Civilities received from the King of *Firando*; together with a Letter, written by that Prince, to our King *James*, expreſſing a very earneſt Deſire to render all the Service in his Power to the *Engliſh* Nation; and highly commending their Deſign of eſtabliſhing a Correſpondence between their own Country and the *Japoneſe*; for the promoting of which, he profeſſes himſelf ready to do whatever lay in his Power. Captain *Saris* proſecuted his Voyage to *Bantam*, in the Iſland of *Java*, without any remarkable Accident; and he commends *Linſchoten*'s Voyages as very ſincere, and his Charts as very exact. He arrived at *Bantam* on the firſt of *January* 1614, and found things there in a very indifferent Condition, owing, as he conceived, to their having too many Factories; however, he got his Lading, and in the latter End of the Month of *May* proceeded for *England*, and arrived ſafely on the 27th of *September* following at *Plymouth*. He does not appear to have been very ſanguine in the Affair of ſettling a Factory in *Japon*, but ſeems to have been obliged thereto by his Inſtructions; yet as he was a Man of great Obſervation and Reflection, he took all imaginable Pains to have a diſtinct Account of what Goods were to be ſent there, and what might be expected in return. I apprehend, that the true Reaſon of his Diffidence was, our not having, at that time, an open Trade with *China*, the greateſt Profit reſulting from the *Japon* Trade being made on *Chineſe* Goods; but however, Time and Patience might have overcome all theſe Difficulties, and have eſtabliſhed us as effectually as the *Dutch*. But the Truth of the Matter was, that our People were leſs under Command, and conſequently leſs fit for living in that Country, and eſtabliſhing a Trade there.

As a Proof of Captain *Saris*'s great Merit in examining every thing carefully, and recording from time to time what Notices he received, I think it may not be amiſs to annex to this Account of his Voyage the Report he received concerning the Land of *Jeſſo*, or *Yedzo*, which was then, and ſtill is, a Place very imperfectly known, and on the abſolute Diſcovery of which hang many Points of Importance, but more particularly the Deciſion of the great Point, whether there be, or be not a Paſſage into theſe Seas by the North-Eaſt. I the rather inſert this Account, becauſe, for any thing I can perceive, it is as likely to be true as any we have yet received, only I ſuſpect, that either our *Japoneſe* Traveller was miſtaken in calling this Country an Iſland, or elſe there is both an Iſland and a Continent of the ſame Name, which is indeed agreeable to what we find relating to this Country in the freſheſt Accounts we have received from *Japon*. I muſt likewiſe beg leave to add, that if we reflect on the Stature and Complexions of the Northern *Tartars*, the *Laplanders* and *Samoeides*, we ſhall have the leſs Cauſe to ſuſpect this Writer, either of Credulity or Fiction.

Intelligence concerning Yedzo, *received at the City of* Eddo *in* Japon, *from a* Japoneſe *that had been twice there.*

“ This ingenious Traveller ſays, that *Yedzo* is an Iſland lying on the North-weſt Side of *Japon*, and about ſome ten Leagues diſtant from it. That the People are of fair Complexion, good-natured enough, far more humane in their Temper and Conditions than their outward Aſpect and Appearance, being all over rough and hairy, almoſt like Monkies; yet their Skin (as before hinted) white and clear. The Weapons uſed among them are Bows and poiſoned Arrows.

“ Thoſe in the Southern Parts are very underſtanding People, and fit for Commerce, having the Knowledge of Weights and Meaſures, which in the middle Parts of the Iſland they are entirely ignorant of. Thoſe in the Northern Parts are a People which ſeem to be different from the reſt of the Iſland, and of quite another Race, being ſo extremely ſhort, that they may be called Dwarfs in a ſtrict and proper Senſe; whereas the *Yedzoes* are commonly of the Stature of the *Japoneſe*.

“ They have none of them any ſort of Apparel but what is brought from *Japon*, and ſo the moſt Part of their Rice (if not all they are ſupplied with) is brought from thence too; but then they have that amongſt them which will make other People think it very well worth their while to come and bring them thoſe Neceſſaries, *viz.* a great deal of Silver, and a ſort of ſandy Gold, in which they make all their Payments to the *Japoneſe* for what they take of them.

“ The Commodities moſtly tranſported hither are Rice, Cotton, Cloth, Iron, and Lead; but all things neceſſary for the Back and Belly, are the moſt welcome and acceptable to theſe People; particularly Rice carried from *Japon* to *Yedzo* has yielded four hundred *per Cent.*

“ The chief Town where the *Japoneſe* reſide for Trade is called *Matzuma*, where they have alſo a Fort, and at leaſt five hundred Families of that Nation conſtantly dwelling there. In *September* the Natives come down in vaſt Numbers to buy and lay in their Winter Stores; and in *March* they bring Salmon, and ſeveral ſorts of dried Fiſh, beſides other Wares, which they barter with the *Japoneſe*. This *Matzuma* is the chief Town for Buſineſs known to the *Japoneſe* upon the whole Iſland, and they have no manner of Concern or Settlement any where but here.”

14. When I firſt entered upon this Subject, I muſt confeſs it was not my Intention to have proſecuted it ſo largely, but upon mature Reflection, that I could never have a more proper Occaſion to inſert the Hiſtory of our Acceſs to, and Retreat from *Japon*, which is in itſelf a very curious Subject, and hath this farther to recommend it, that it was never handled before, I thought I could not do better, than to throw all I have been able to learn upon this Head into this Section; by which means it would be better underſtood, and afford a clear Solution to a Queſtion

tion never yet anſwered, *viz.* How being once poſſeſſed of ſuch a Commerce, we came to loſe it? But that we may proceed regularly, I ſhall give the Reader next the Subſtance of a Letter written to Captain *John Saris* by Mr. *Cocks*, who was chiefly intruſted in the new Factory ſettled at *Firando.* This Letter is dated the 10th of *December* 1614, and contains abundance of curious Circumſtances that are not to be found in any other Piece that I have been able to meet with.

As to the Affairs of *Japon*, the Writer of this Letter gives us an Account, that they were at that time in a very diſmal Condition, a civil War being ready to commence, that threatened great Calamities to the whole Country. We have heard before, that the right Heir of this mighty Empire was ſhut up in the ſtrong Caſtle of *Oſaca*, where 'twas deſigned he ſhould live in perpetual Ignorance of himſelf, and his juſt Title to the Crown; or, at leaſt, if he ſhould by any means come to the Knowledge of his true Quality, ſhould by that cloſe Confinement be deprived of all Opportunities of giving any Diſturbance to the preſent Poſſeſſor; but the uſurping Emperor's Plot did not take the deſired Effect: The young Prince came to know himſelf ſome way or other, and accordingly took up Arms to aſſert and maintain his Right. He converted his Priſon into a ſtrong Garriſon, and inſtead of other Keepers got quickly about him an Army of one hundred thouſand Men, bold, reſolute, hardy Soldiers, moſt of them Out-laws, Exiles, and Malecontents, who flocked in to him from all Parts of the Empire, and will ſpend their Blood to ſet him in the Throne. Beſides this Force of Men, he had laid in as good a Strength of Proviſion, having furniſhed the invincible Caſtle of *Oſaca* with Victuals for three Years.

This was the Alarm which the Emperor ever dreaded: Nothing could look with a more threatening, malignant Aſpect upon his State and Power than a black Cloud gathering about the Caſtle of *Oſaca.* However, to maintain his own Pretenſions, he marched in Perſon with an Army of three hundred thouſand Men towards the Prince, and ſome little Bickerings had paſſed between Parties of both Armies at the Time of the writing of this; but now the whole Empire expected the Reſult of a pitched Battle, in which that Controverſy ſhould be ſolemnly decided, which of theſe two Pretenders ſhould finally wear the Imperial Crown of *Japon.*

It was not long before this that the Emperor declared himſelf a publick Enemy to the Chriſtians, giving Orders for the baniſhing all Jeſuits, Friars, Nuns, and their Adherents, out of *Japon*, pulling down their Churches and Monaſteries; and to make ſure Work with them, not only ordering their Baniſhment, but actually ſhipping them away himſelf, ſome for *China*, and others for the *Manillas*: And in a ſhort Space after this Perſecution, a very great Confuſion happened at *Eddo* (one of the largeſt Cities of the Empire) occaſioned by a moſt dreadful Tuffon that raged there. The City was almoſt demoliſhed by it, a great Part of the Buildings being broke down, and the Sea breaking in at the ſame time, threatened to ſwallow up all the reſt, ſo that the Inhabitants were forced to quit the Place, and run up into the Mountains for Shelter. The Pagan and the Chriſtian *Japoneſe* are very contrary one to another in their Opinions and Aſſertions concerning the Cauſe of this horrible Commotion. The latter ſay, 'tis a Judgment from God upon the Nation for the Affronts offered to the Chriſtian Religion, particularly for the Emperor's baniſhing it, with all the pious Jeſuits that preached it, as he lately did, ſo that the Circumſtance of the Calamity, with reſpect to that Place, clearly (as they ſay) expounds the Cauſe of it. On the other hand, the Pagans ſay 'tis Witchcraft; and that the Jeſuits, upon their Baniſhment, fell to conjuring, and raiſed that Storm to plague the Country, in Revenge.

At the Time of Captain *Saris*'s being in *Japon*, it was thought, that if any other *Engliſh* Ship came into thoſe Parts the Goods might immediately be ſold off, without the Formality of carrying another Preſent to the Emperor; but 'twas afterwards found to be otherwiſe, and every Ship that came in was under a Neceſſity of doing it, paying its Cuſtom that Way: More than this, they could not have Liberty ſo much as to ſet out a Junk, without the Emperor's Licence was annually procured; for 'twas made Death for any *Japoneſe* Mariner to ſtir out of the Country without Leave, only their own Ships might go in and out freely whenever they had Occaſion.

A good Project was ſet on foot for beginning a Trade upon the Coaſt of *China*, at a Town near *Languin*, to which Place a Ship might ſail from *Firando* with a good Wind in three or four Days Time. This was firſt propoſed and undertaken by ſome conſiderable *Chineſe* then in *Japon*, who laboured very hard in the Matter, and made no queſtion of accompliſhing it ſo far, that three *Engliſh* Ships ſhould have a Vent for their Commodities every Year at that Place. The Endeavours of the *Engliſh* Factory (ſettled at *Firando*) towards a Trade from *Tuſhma* to *Corea* proved ineffectual, very little to any Purpoſe being to be done there. There was no Vent for any Commodities, but Pepper only, and not much of that, though ſold at ſomething a better Rate. By all Circumſtances, it ſeems to appear, that the *Coreans* are not at all diſpoſed to a Correſpondence with them of *Tuſhma*, ſince they'll allow them but to come into one little Town, and forbid them to go without the Walls of that upon Pain of Death, nor ſo little a Way up into the Country, and that the King of *Tuſhma* is no Subject to the Emperor of *Japon*; ſo that there was no Danger of this latter Prince's getting any Footing amongſt them, by the opening a Correſpondence with the former.

Yet the *Coreans* are poſſeſſed with ſuch Jealouſies and Fears of the *Japoneſe*, as not to indulge any of their Neighbourhood in any manner of Liberties, by which it may be poſſible to faſten any hold upon them: And the Truth is, they are not fearful and miſtruſtful without Cauſe, if, at leaſt, former Attempts upon their Liberty may be a Reaſon why an Adverſary that made them ſhould be diſtruſted for the future; for *Tico-ſam*, the Emperor before this, did actually make an Irruption into *Corea*, intending to carry on his Conqueſts to the very Gates of *Peking*, and ſurprize the *Chineſe* Emperor in his Palace: But he was, in the midſt of that Career of Fortune, prevented by a *Corean* Nobleman, who, to ſerve his Prince and Country in that Extremity, gave the Conqueror his Death in a Cup of Poiſon, dying himſelf with him at the ſame time. By this means the *Japoneſe* loſt all they had gotten in *Corea*, and left *China* to the After-Conqueſt of the *Tartars*, which was very like, at this time, to have fallen to their own Share.

Now 'tis very probable, that this is the Reaſon of the horrid and inveterate Prejudices theſe two People entertain one againſt the other. The *Japoneſe* were the Invaders of the *Coreans*, and the *Coreans* robbed the *Japoneſe* of a glorious and fortunate Prince. But yet that Prince, how dear ſoever to the *Japoneſe*, was an Invader of the juſt Rights and Liberties of the *Coreans*; and they had no Reaſon tamely to give way to a foreign Power, that pretended to enſlave and trample upon them, if they could find any Means, either by Force or Policy, to put a Stop to it. However, it is certain, that the *Japoneſe* mortally hate the *Coreans*, and can never be poſſeſſed with Sentiments of Friendſhip for them as long as the World ſtands, unleſs the Humour of the Nation ſtrangely alters. They cannot, with any Patience, bear the Sight of a *Corean*; and thoſe People they take for ſuch cannot walk the Streets without a whole Rabble at their Heels, flouting and pelting them with Dirt and Stones.

Thus it was with Captain *Saris* in ſeveral Towns in *Japon*, where the People did not know what the *Engliſh* were; there was hardly any paſſing along, the Mob being ſo very rude and clamorous: Nay, the very Children had it in their Mouths, as well as the reſt, *Core, Core, Cocore Ware.* You *Coreans* with falſe Hearts. The *Japoneſe* are the civileſt and moſt well-bred People in the World, only they cannot be civil to a *Corean*, or any body they think to be ſo. It is ſaid, that there are very large Cities in this Province of *Corea*; and alſo towards the Sea a great many Bogs, impaſſable by Horſe or Foot almoſt, ſo that they uſe the Sailing-Waggons, which are furniſhed with Wheels, as other Waggons are, but much broader and flatter, that they may not cut deep into the Mire, and have alſo Sails like a Ship; by which Contrivance, obſerving proper Winds, they paſs all theſe Bogs eaſily. The Country affords Damaſk, Sattins, Taffaties, and other Silks, as *China* does; but they carry moſt of their Goods up and down in theſe Sailing-Waggons.

We have likewiſe ſome other Letters of a later Date from the ſame Factory, but very immaterial, and containing ſcarce any Circumſtances worthy of Notice, except that the *Japoneſe* were very importunate in demanding a Promiſe, that the *Engliſh* would bring no Padres, that is, Prieſts, among them; for the Perſecution being, at this time, very hot, the common People did not care to run any Hazards, as not knowing how to diſtinguiſh between one ſort of Chriſtian Prieſts and another. But the *Engliſh* did not give them any Trouble upon that Head; but, on the contrary, ſeemed to bend all their Endeavours towards the adding the Trade of *China* to that of *Japon*; in which, perhaps, they went too far, and might have done for themſelves, and their Country more, if they had ſtudied this Point leſs; for the *Japoneſe*, who are a very ſenſible People, conſidered this extending their Commerce in a bad Light; and, as they were naturally ſuſpicious of Strangers, could not help fearing they would at laſt employ Force, in caſe fair Means did not ſucceed. In theſe Notions they were confirmed by the News they received, from time to time, of the great Diſputes between the *Portugueze*, the *Engliſh*, and *Dutch*, in the *Eaſt-Indies*; meaſuring their Force at home, by their Actions abroad, and ſuppoſing that they wanted nothing but a ſpecious Pretence to attack the two great Empires of *China* and *Japon*. The laſt Letter we have is dated from *Firando*, *March* the 10th 1619, and in that there are ſome Particulars worthy the Attention of the Reader.

The Perſecution in this Country, which before proceeded no farther than Baniſhment, and Loſs of civil and religious Liberties, has ſince (as this Letter tells us) run up to all the Severities of corporal Puniſhment. The Chriſtians ſuffered as many ſorts of Deaths and Torments as thoſe in the primitive Perſecutions; and ſuch was their Conſtancy, that their Adverſaries were ſooner weary of inflicting Puniſhments, than they of enduring the Effects of their Rage: Very few, if any at all, renounced their Profeſſion. The moſt hideous Forms, in which Death appeared, by the Contrivance of their Adverſaries, would not ſcare them, nor all the Terrors of a ſolemn Execution overpower that Strength of Mind with which they ſeemed to go through their Sufferings. They made their very Children Martyrs with them, and carried them in their Arms to the Stake, chuſing rather to reſign them to the Flames, than leave them to the Bonzees to be educated in the Pagan Religion. All the Churches which the laſt Storm left ſtanding, this had entirely blown down, and demoliſhed, and Heathen Pagods were erected upon their Ruins.

The Dead were perſecuted too, as well as the Living, and the Graves were torn open, and the Bodies there incloſed thrown out into ſome baſer Receptacle; ſo that now, if ever Chriſtianity flouriſhes again in *Japon*, it muſt be upon a ſecond Plantation, the firſt Stock ſeeming at this time to be compleatly pulled up by the Roots. There were other Troubles and Stirs beſides theſe in *Japon*: At this Time another dangerous Rebellion was riſing at *Fruſhma*; but the Prince of that Place happening to be at that Time in the Court, the Emperor commanded him, either to write to his Subjects to lay down their Arms, or immediately to rip open his own Belly: He choſe rather to do the former, and ſo the Tumult was at an End; but he was turned out of that Government, and ſent into a Corner of the northern Part of *Japon*, and the great Caſtle of *Fruſhma* (bigger, by Report, than the City of *Rocheſter*) levelled with the Ground, all the Stones being carried away to *Oſaca* to rebuild that noble Piece, which the laſt Emperor *Ogeſhoſam* deſtroyed after his routing the Army of the Prince *Fidaia*; for it muſt be noted (though our Author does not expreſly tells us of it) that the Emperor ſpoken of in this Letter was not *Ogeſhoſam*, but ſome other his Succeſſor, of whom we have no other Account than theſe Actions of his given us. It is ſaid alſo, that this Prince *Fidaia* was gotten ſafe out of the great Battle, and lay *incognito* ſomewhere about *Meaco*; but this our Author hardly credits, it having been often reported ſo before.

Laſtly, he gives us an Account of the horrid, barbarous, and cruel Deportment of the *Dutch* towards the *Engliſh* then reſiding in *Firando*: Without any manner of Provocation they openly declared War againſt them, declared they would burn their Ships and Effects, and deſtroy their Perſons where-ever they could meet them; and this they did ſolemnly by Sound of Trumpet both aſhore and aboard all their Ships; and to be as good as their Word, they broke into the *Engliſh* Houſe with all their Force, and had actually ſacrificed every Perſon there, if the *Japoneſe* had not come in and fought vigorouſly in their Defence; for the Odds were vaſtly great, and one *Engliſhman* had at leaſt one hundred *Dutch* to deal with. All this, and much more of this kind, they did; but for what Reaſon it cannot be imagined, unleſs becauſe they would be Maſters every-where, and have the whole World to themſelves. One Paſſage only, which ſhews their Modeſty in thoſe Parts of the World, is not to be forgotten; and the rather, becauſe it was in the Preſence of the great Emperor of *Japon* himſelf, and all his Court. Our Author being there to do his Duty to the Emperor, upon the coming of the *Engliſh* Ships, found in the Preſence a certain boaſting *Dutchman*, that told the Emperor ſtrange Stories of his own Country, and extolled his King of *Holland* to the Skies, as the greateſt and moſt potent Prince in all that Part of the World, together with a vaſt deal of ſuch Stuff as that.

But he, who underſtood the *Japon* Language, tho' the *Dutchman* thought he had not, told him before the Emperor, he need not have told his Majeſty ſo loud a Lye as that, ſince all the World knew they had no King in *Holland*, but only a Stadtholder, who did not ſo much govern the People, as the People govern him; and whereas he had the Forehead to ſay, that his King, as he called him, held all other Princes in Chriſtendom in Subjection, it was well known the King of *England* had been his Country's Protector, or they had never been in a Condition to come and make a Noiſe abroad in the World. The *Dutchman* was, it ſeems, pretty much confounded to loſe his King ſo all of a ſudden; but there was no Help for it, and the *Spaniards* and *Portugueze* that were there at the ſame time, well knew the Truth of what was ſaid. Upon the whole, our Author adds, that the Company were extremely diverted with this Paſſage, and that there was old Laughing, eſpecially among the *Europeans*, to ſee the *Dutchman* ſo bewildered to find out this King, which they very well knew he could never do.

All theſe Tranſactions happened during the Life-time of Mr. *Adams*, who ſpent the Remainder of his Days with Honour in *Japon*, where he deceaſed in 1631; but with reſpect to any of the ſubſequent Actions of his Life, they are not recorded in any of the Writers I have met with; but though there be ſomething very ſingular in this, yet I think it much more ſtrange, that we have no diſtinct Account of the Time that the *Engliſh* withdrew themſelves from this Country, or of the Reaſons which induced them to take that Step; but I think it is pretty clear, that they were reduced thereto, either by the Frauds, or by the Power of the *Dutch*; for it is clear enough from the Letters which the Reader has already ſeen, but eſpecially from the laſt, that theſe two Nations began to differ with each other as ſoon as they found that they were become too ſtrong for the *Portugueze*. It was after the Expulſion of this laſt mentioned Nation, that the *Dutch* found themſelves not a little hurt by their own Politicks; for having taught the *Japoneſe* how to be on their Guard againſt all Foreign Nations, this drew upon them thoſe Hardſhips which they have laboured under ever ſince, though they have not ſpared any Pains to free themſelves from ſuch diſagreeable Marks of ſlaviſh Submiſſion; but as we have already inſiſted ſufficiently upon this Point in another Place, we ſhall not dwell upon it any longer here.

Before we conclude this Section, however, it will be proper to take notice of a Tranſaction which is not commonly known, and that is, of an Attempt made by us to recover the Commerce of *Japon* in the Year 1673. It ſeems to have been undertaken by the *Eaſt-India* Company, for the Ship ſent for that Purpoſe ſailed from the *Engliſh*

Factory at *Bantam*, and arrived before the Haven of *Nangazaqui*, which is the only one the *Dutch* are permitted to reſort to, on the 20th of *June*. As ſoon as the Ship appeared in Sight of the Port, there came off two Veſſels, one carrying a *Japoneſe*, and the other a *Dutch* Flag; but on their coming up to the *Engliſh* Ship, they haled them in *Portugueze*, and demanded whence they came? The Captain anſwered in *Engliſh*, and in *Dutch*, that he came from *England*; upon which the *Japoneſe* Officer directed him to let go his Anchor, to forbid his Trumpet to play, and to forbear firing his Guns; to all which Demands he readily ſubmitted.

After remaining at Anchor about two Hours, there came off two Boats, in one of which was the Governor, and his Secretary, accompanied by an Interpreter, who ſpoke *Portugueze*; and in the other Boat there were four Interpreters, who all of them ſpoke *Dutch*. As ſoon as they came on Board, the Captain conducted them to his Cabin, and when all had taken their proper Places, the Governor aſked him very gravely, if he was an *Engliſhman*, and what his Buſineſs was there? He anſwered, that he was an *Engliſhman*, that he was charged with a Commiſſion from the King his Maſter to re-eſtabliſh the Trade ſettled by his Subjects fifty Years before in *Japon*. He added, that he was charged with a Letter from his *Britannick* Majeſty, and another from the *Eaſt-India* Company, addreſſed to the Emperor of *Japon*; and at the ſame time that he ſaid this, he produced a Copy of the Privileges granted to the *Engliſh* by the Emperor, written in *Japoneſe* Characters, which the Governor having read, was very importunate for the Original under the Emperor's Seal. The *Engliſh* Captain, however, told him ingenuouſly, it was not in his Power to produce that, becauſe the Emperor had demanded it ſhould be delivered up at the Time the *Engliſh* quitted *Japon*, with which they could not refuſe to comply. The Governor then put up the Copy of the Privileges, but promiſed the *Engliſh* Captain, that as ſoon as an Anſwer came from Court to his Requeſt, he would deliver it up.

After a ſhort Silence, the Governor aſked him, if *England* was at Peace with *Spain* and *Portugal?* What Religion the *Engliſh* were of? If it was a long time ſince King *Charles* had married the Daughter of the King of *Portugal?* and how many Children he had by her? This very plainly ſhewed, that the *Japoneſe* were very inquiſitive, and at the ſame time very well informed as to the Affairs of *Europe*. The Captain anſwered, without Heſitation, that the *Engliſh* were at Peace with all the World, that it was true King *Charles* had married the Daughter of the King of *Portugal*, but that he had no Children by his Queen; and that as to Religion, the *Engliſh* were ſuch ſort of Chriſtians as the *Dutch*, and not ſuch ſort of Chriſtians as the *Portugueze*, or *Spaniards*; that the Cuſtom of *Europe* required Kings to marry Perſons of like Rank with themſelves, and never the Daughters of their Subjects. To all this he added farther, that he had Preſents of great Value for his Imperial Majeſty; at which the Governor ſeemed to be very much pleaſed, and ſoon after retired. In about two Hours Time he returned again, and then told the Captain, that if the *Engliſh* would be ſatisfied with ſuch a Trade as the *Dutch* enjoyed, very poſſibly they might obtain it; but then, according to the Cuſtom of the Country, it would be fit for them to ſend their Cannon and their Ammunition aſhore; after which he would inform the Emperor of every thing, and that after receiving his Imperial Majeſty's Anſwer, if it proved favourable, he was willing to furniſh them with a Houſe. The Captain took all this in good Part; he delivered up his Arms and Ammunition, and ſuffered the Governor, who brought with him a great Number of armed Boats, to ſtation them as he thought fit; which he did, by ranging ſome a-head, ſome a-ſtern, and cauſing a double Line to anchor on each Side of the Veſſel, and all within half Cannon Shot.

This being done, the Governor came aboard again, attended by his Interpreter, who was a *Dutchman*, and in whom he had great Confidence, and examined every one of the Ship's Company, particularly firſt as to his Country, whether he was an *Engliſhman*, and not a *Portugueze?* whether he had ever been in *Portugal*, or could ſpeak the Language of that Country? and whether he was a Chriſtian after the *Dutch* Form; or the *Portugueze?* Theſe Queſtions being all anſwered, they proceeded next to take an exact Account of all the Bales of Merchandize on board the Ship, and drew up a kind of Bill of Lading with great Exactneſs. After this the Governor aſked, if other Ships did not ſail with them from *England?* what was become of them? how long they ſtayed at *Bantam?* and what other Places they had been at in the *Eaſt-Indies?* Theſe Queſtions being anſwered to his Satisfaction, the Governor retired for good and all, and carried away with him what had been delivered up to him. On the 30th of the ſame Month he came on board again, attended by his Secretary and Interpreters. He was received with all imaginable Civility and Ceremony by the Captain, and after they were ſeated together in his Cabbin, he proceeded to make a kind of Diſcourſe to this Effect: That it was true, there had been formerly an *Engliſh* Factory in *Japon*, that thoſe who compoſed it had been very well treated, and never had expreſſed any ſort of Diſſatisfaction; notwithſtanding which, it was now forty-nine Years ſince any *Engliſh* Ship had entered their Ports, and therefore he would be glad to know the Cauſe of ſo long an Abſence, as alſo the Cauſe of their coming thither again. If we depend upon this Governor's Calculation, it would fix the Time of withdrawing the *Engliſh* Factory to the Year 1624, and then it would appear, that Mr. *Adams* ſurvived that Event near ſeven Years; but if that were the Caſe, it may ſeem ſomewhat difficult to account for the *Engliſh* knowing when his Deceaſe happened, unleſs we ſuppoſe that they received the News from the *Dutch*, which, as it is very probable they might, we may look upon this as a Point ſettled.

But to return to the Captain, who in anſwer to the Speech made him by the *Japoneſe* Governor, told him, that as to the Cauſe why the Factory broke up, he could ſay nothing to it at all, as being totally unacquainted therewith. That as to their long Abſence, he conceived it might be produced by that Confuſion into which his Country had been thrown by the Civil Wars that happened not long after; that ſince that Time they had been likewiſe engaged in two very long and bloody Wars with the *Dutch*, and that after ſo long an Intermiſſion, it was a thing extreamly difficult to find a Pilot capable of conducting a Ship to their Coaſt, which in *Europe* was repreſented as a very difficult and perilous Voyage. The Governor heard him with great Attention, and aſked him, when he had done ſpeaking, whether he had not on Board his Veſſel ſome Perſon who had made that Voyage before? the Captain anſwered, that he had not: Why then, replied the Governor, How came you hither? the Captain anſwered him, that they had ſome old Charts, which were exact enough for that Purpoſe, as they had found by Experience.

The Governor ſeemed mighty well ſatisfied with ſo fair and ſo diſtinct an Account, and when he returned to the Town, left his Secretary on Board to receive all the reſt of the Arms and Ammunition they had, in which he was ſo exact, that he took away with him ſome double barrelled Fowling-pieces, that were part of the Preſent intended for the Emperor; but he made a very curious and exact Inventory of every thing that he got into his Hands, and gave a Copy of it, ſigned by way of Security, to the Captain. After all was over, they parted very good Friends, and the Secretary told him, that ſo far as depended upon him, nothing ſhould be wanting that might procure him a favourable Anſwer from his Court; for which the Captain thanked him, aſſuring him at the ſame time, that his Nation had an intire Confidence in the *Japoneſe*.

On the firſt of *July* the Governor and his Interpreters came on Board again, and aſked ſeveral Queſtions; and upon this Occaſion there happened a Diſpute between the Captain and the *Dutch* Interpreter, who confidently aſſerted, that the Captain had told him ſeveral things which that Gentleman affirmed never entered into his Head. The Governor upon this took a freſh Account of every Man that was aboard, ſetting down his Name, his Age, his Employment; and when he had done this, he deſired the Captain to prepare an exact Liſt of what Commodities every Man had to diſpoſe of, as alſo of what belonged to the Company; and then took the Dimenſions of the Ship, of the Maſts, Yards, &c. At his Departure, he charged the Captain, if he wanted any thing, to make certain Signals, which he mentioned; and at the ſame time told him, that in caſe any of his People died, he ſhould make two Signals, and ſhould not throw the Body over till they came and examined it. The Day following the Interpreters, and ſome Gentlemen of the Emperor's Court, came on Board in the Morning, and aſked abundance of Queſtions, to all which the Captain gave ſuch clear and diſtinct Anſwers, that they ſeemed perfectly ſatisfied.

They returned again after Dinner, and brought a great Quantity of Refreſhments, which had been bought by the Captain of the *Dutch* Ships, and at a very high Price, which, however, the *Engliſh* Captain received with much Complaiſance, and teſtified his Thanks for them, as if it had been a great Favour; and at the ſame time deſired leave to hoiſt his Flag, and to ſound his Trumpets, which Demands were granted. The following Days were ſpent much in the ſame manner; that is to ſay, the ſame Perſons came on Board, and ſtill aſked abundance of Queſtions, which turned chiefly upon Religion, and the Difference between the Faith profeſſed by the *Portugueze* and *Spaniards*, and that held by the *Engliſh* and *Dutch*, which, it may be eaſily ſuppoſed, gave them a good deal of Trouble on both Sides.

At laſt, on the 28th of *July*, about Ten in the Morning, the principal Secretaries, with abundance of Interpreters, and a large Train of Attendants, came on Board the Ship, in order to inform the Captain that they had received an Anſwer from Court, and that it was by no means favourable. It amounted, in ſhort, to this, that his Imperial Majeſty had declared he could not permit any Commerce in his Dominions to the Subjects of a Prince who had eſpouſed the Daughter of the King of *Portugal*, the principal Enemy of him and his Empire, and that therefore he was to prepare himſelf for ſailing as ſoon as it was poſſible.

The Captain repreſented upon this, that the Seaſon of the Year conſidered, it was ſimply impoſſible for him to ſtir, and therefore he hoped they would allow him to ſtay till the proper Seaſon, and the Return of the Trade-Winds, gave him an Opportunity of proceeding thence with Safety. To which reaſonable Demand they, without any great Difficulty, conſented: The Captain from this took occaſion to propoſe another thing, which, he believed, would have been as readily granted, from the Sorrow and Concern which theſe good People expreſſed. In ſhort, the ſecond Favour he aſked was this, that ſince he had ſpent two Years in his Voyage, and ſince it was not probable they ſhould ever have an Opportunity of purchaſing *Engliſh* Commodities again, he might have Leave given him to diſpoſe of his preſent Cargo: But the Reception given to this Propoſition was very different from what he expected; he was told, that none in the Empire durſt either adventure to purchaſe any of the Goods he had on Board, nor ſo much as to requeſt a Licence for that Purpoſe from Court, where, when once a Reſolution was taken, it was abſolutely final, and there was no getting it either reverſed or reviewed. To teſtify, however, their own good Will to the Captain, and to ſhew him how ready they were to do any thing they could oblige him in, they conſented that he ſhould purchaſe Proviſions, and whatever other Neceſſaries he wanted, with Merchandize, and not with Money.

If in the whole Courſe of theſe Proceedings the Captain met with many things that ſurprized him, there was one fell out more ſtrange than all the reſt, and it was this, that the *Japoneſe* Governor acquainted him with more of the Affairs of *Europe* than he was Maſter of; for diſcourſing of the *Dutch* Wars, he enquired how long the *Engliſh* had been at Peace with that Nation? and upon the Captain's giving him a clear Anſwer, and mentioning alſo the Time of his own Departure from *England*, the Governor replied, then you know nothing of the Attempt made to conquer the *Dutch* by your Maſter, in Confederacy with the King of *France*, and the Biſhop of *Munſter*, and that they are already Maſters of three of the ſeven Provinces? The Captain aſſured him, that he did not, and that the News very much ſurprized him. However, he very eaſily underſtood from thence, that he was very little obliged to the *Dutch* for their good Offices in this Negotiation.

Before his Departure, he reſolved to make another Trial as to what might be done hereafter; and with this View, he enquired of the Governor, whether, after the Death of the Queen of *England*, it might not be poſſible for his Majeſty's Subjects to obtain Leave to trade in *Japon?* To which the *Japoneſe* Officer made him this remarkable Anſwer, that he would not adviſe the *Engliſh* to make ſuch an Attempt; for that as the Sweat once expelled, never found an Entrance again into the human Body, ſo the Orders of the Emperor once iſſued, the Matters which occaſioned them never more found Admittance into his Mind. All the Time they remained in the Port, the Governor, his Secretary, and other Officers, made them frequent Viſits, and fatigued them with an infinite Number of intricate, and ſome of them very impertinent Queſtions, which gave them a great deal of Trouble; but if we except this, they were in all other things uſed with as much Kindneſs and Civility as it was poſſible. When the Seaſon came that they might depart with Safety, the Governor came on Board, and brought with him all that he had taken from them, except their Powder, which he declared it was not in his Power to put on Board till they were ready to ſail; but at the ſame time he told the Captain, that he would take care none of the *Dutch* Ships ſhould ſtir out of Port, till he had time to get ſafe to *Bantam*, becauſe, as he was informed, there was a War broke out between the two Nations.

On the 28th of *Auguſt* 1673, the Wind being fair, the Captain received poſitive Orders to ſail without Delay, which accordingly he did, fully perſuaded in himſelf, that if it had not been for the Intrigues of the *Dutch*, he might have ſucceeded in his Deſign, and have raiſed his Reputation by the effectual Execution of his Commiſſion. This is certainly the laſt Attempt made in our Favour, and in all probability, it is the laſt that will be ever made, unleſs a more enterprizing Spirit ſhould riſe in ſucceeding Generations than ſeems to actuate the preſent Race of *Britons*. In the ſucceeding Volume we ſhall inſert ſome farther Accounts of this Country; but before we diſmiſs this Subject, it cannot but be agreeable to the Reader to ſee the great Maxim of the *Japoneſe*, upon which our Excluſion is plainly built, viz. *The Reſolution of admitting no Strangers into their Country on any Terms*, explained, and ſet in a clear Light, the rather, becauſe the Examination of this Point will naturally lead us to explain ſome others that will render the Connection of this Diſcourſe more eaſy and obvious than it would otherwiſe be.

The original Government of *Japon* was by an abſolute Monarch, in whoſe Perſon were united all thoſe Characters that naturally give a Luſtre to a Man in the Eyes of his own Species. He had beſides the Regal Dignity, that of head Prieſt, ſupream Legiſlator and Director of the Forces of the Empire all inveſted in him; but as here and elſewhere Ability is not always annexed to Blood, ſo it fell out, that ſome of theſe ſupream Monarchs, who in their own Language are ſtiled *Dairy*, which ſignifies elevated Lord, were in ſome meaſure governed by thoſe to whom they intruſted the Command of their Forces; and this prime Miniſter, and General in chief, had the Title of *Cubo-Sama*, which has very near the ſame Signification with the *Turkiſh* Title of *Vizir-Azem*, that is, *moſt illuſtrious*, or *moſt reſplendent Lord*; and at length the *Cubo-Sama* became in Fact the Maſter of the Empire, and the *Dairy* had the Title only, or at the moſt an empty Shadow of Authority, or rather of Sovereignty.

This Uſurpation in the *Cubo-Sama's* began about the twelfth Century, and occaſioned great Wars and Diſturbances in *Japon*, from whence aroſe that Multitude of little Kingdoms and Principalities into which this Country was divided, when firſt it was viſited by the *Europeans*. For when the Governors of Provinces ſaw that the *Cubo-Sama's* had made ſo free with their Lords and Maſters the *Dairy's*, who were, and ſtill are, treated with divine Honours, they thought there might be leſs Crime in reſiſting theſe lawleſs Miniſters, and ſo ſet themſelves up for Kings and Princes. *Taico-Sama*, which is another Title of Honour, tho' uſed by moſt Writers, and particularly by ſuch as I have tranſcribed in this Section as a proper Name, was the firſt who formed a Deſign of making the *Cubo-Sama* as abſolute as
ever

ever the *Dairy* had been; but he ſuffered himſelf to be diverted from this Scheme by the Invaſion of *Corea*.

His Son, whoſe Name, according to the *Japoneſe* Chronicles, was *Fide-Jori*, ſucceeded him, and is the young Prince mentioned by Captain *Saris*, whoſe Tutors rebelled againſt him, and who was at laſt deprived of his Empire by that Monarch, who granted the Privilege of ſettling in *Japon* to the *Engliſh*, and whoſe Name, according to the Chronicles before-mentioned, was *Jeſi-Jas*, which explains the ſigning of his Letter, and of the Articles; for as to the Title at the Head of them (*Ogoſhoſamma*) it is a Corruption of the Words *Cubo-Sama*. After the Defeat of the young Prince, who in the Letters herein cited is called *Fidai*, he reigned without any farther Diſpute; and all the ſucceeding *Cubo Sama's*, whom our modern Writers call Emperors of *Japon*, are his direct Deſcendants. He was the greateſt Politician that ever this Country produced, and his Maxims have been ſteadily followed by all his Succeſſors.

Theſe Maxims were to reduce all the little Kingdoms into Provinces of his Empire, which he effected; to extirpate the Chriſtian Religion from a Principle of Policy, that the People might not be induced to take up Arms againſt their Emperors from a Notion of Religion; and upon the ſame Principle his Succeſſors expelled all Foreigners, and reſtrained the *Japoneſe* from going out of their own Country: For, it was the ſettled Opinion of this new Legiſlator, that the only Way for him and his Family to reign in Peace, was to exclude all Thoughts of Novelties, and to keep the People cloſely to their old Laws and Cuſtoms. which he thought were beſt adapted to the Maintenance of the Imperial Dignity, and to their own Happineſs. If, in Exception to this general Rule, the *Chineſe*, the *Siameſe*, and the *Dutch*, are allowed ſome kind of Commerce in this Empire, yet it is againſt the Grain, and contrary to the Maxims of their Policy, as appears plainly by the ſevere Reſtrictions under which theſe Nations are allowed to carry on their Commerce. It is no leſs certain, that the *Japoneſe* hate and deſpiſe thoſe very Nations with whom they trade, for ſubmitting to theſe Regulations, which were no leſs intended to exerciſe. and even to wear out their Patience, who were to be ſubjected to them, than for their Security and Preſervation, by whom, and for whoſe ſakes, they were impoſed.

For it is to be obſerved, that the Inhabitants of this Empire, conſidered freely, and without Prejudice, are as wiſe, as quick-witted, as ſenſible, as generous, and as well bred a People as there are upon the Face of the Earth. They love Freedom, and underſtand it much better than all other Nations; they conſider their Laws as Fences to that Freedom, and therefore never repine at the Severity with which they are executed; but call that Tyranny, which exceeds the Meaſure of thoſe Laws, becauſe this proceeds from the Prince himſelf; whereas Severity, in the Execution of Juſtice proceeds from the common Depravity of a Nation. In one thing their Law is very remarkable; they have Attainders as well as we; but if a Man expiates his Offence by voluntary Death, his Family ſuffers nothing in Honour, Perſon, or Property. This paſſionate Love of Freedom, joined to their natural Boldneſs and Contempt of Death, made them love the *Engliſh* extreamly, of which I can give the Reader a very ſingular Proof, which at the ſame time will reſolve a Difficulty, that I muſt confeſs, when I firſt entered upon this Section, I thought abſolutely beyond the Reach of Solution.

They have amongſt them a Title of Honour, which they call *Cami*, which the *Spaniſh* and *Portugueze* Writers thought equivalent to Knighthood; and the *French*, who only tranſcribe thoſe Authors, render it by the Word Chevalier. This Honour they conferred upon our Countrymen *Adams* and Captain *Saris*; and from hence, beyond Queſtion, they came to be ſtiled the Chevaliers *Adams* and *Saris*; and, I conceive, that it was a Diſtinction no other Foreigners ever attained. It likewiſe appears by the Queſtions put to the laſt *Engliſh* Captain that was there, that theſe People were not a little chagrined at the Loſs of the *Engliſh* Factory, for which they could never account; but probably underſtood it to have riſen from their Affection to their Enemies the *Portugueze*, in which Error they were, without doubt, confirmed by the *Dutch*, who have left no Method untried; and, indeed, who can blame them for it? to keep this profitable Commerce entirely to themſelves.

Theſe Obſervations and Remarks have coſt me a great deal of Pains and Trouble; but if they prove entertaining and ſatisfactory to thoſe judicious Perſons, who have hitherto expreſſed a Regard for this Work, I ſhall think they are fully repaid; and it is from the Hopes of this that I ſhall adventure to cloſe this Section with ſome Thoughts on the Means of recovering this long loſt Trade. As we are excluded at preſent from *Japon*, upon a Principle of Policy only, and not from any actual Miſdemeanour, as was the Caſe of the *Portugueze*, who, under Colour of propagating the Chriſtian Religion, interfered with the civil Concerns of that Nation, and gave their Government a great deal of Trouble, ſo, I conceive, that the only way to obtain Admiſſion again into *Japon*, is to remove the Prejudices that have been conceived againſt us.

This too, I apprehend, might be very eaſily done, if the Government of that Country were apprized of the Change that has happened in our Conſtitution, by which it is become impoſſible that any of our Princes ſhould ally themſelves by Marriage. either to the Crowns of *France*, *Spain*, or any other Popiſh Power. I do not pretend to ſay, that this would afford them any real Security, or that they would be at all in leſs Danger from us now than they were before; but then, if it be conſidered, that they were in no Danger then, and are in no Danger now, but that their Apprehenſions flow intirely from an ill-grounded Prejudice, the removing that Prejudice, however ill-grounded, may be of Uſe to us. In the next place, if the *Dutch* have a great Commerce with the *Chineſe* at *Batavia*, and are thereby enabled to furniſh a proper Cargo for *Japon*; we have a direct Trade to *China*, and conſequently lie under no Impediment that Way, as we did at the Time our former Factory was ſettled there. But it will be ſaid, How ſhall the *Japoneſe* be informed of this? Can it be expected that the *Dutch* will acquaint them? and if they will not, how are they to be informed? Why, truly, that is the very Queſtion; for, I conceive, that if they were once ſatisfied in that Point, the reſt would very eaſily follow.

The Means therefore that I would propoſe, ſhould be the landing in the Northern Part of the great Iſland of *Niphon*, two or three Perſons properly inſtructed, who, under pretence of Shipwreck, might deſire and obtain a Paſſage to the *Dutch* Port; and as this is the biggeſt of the three Iſlands that compoſe the Empire of *Japon*, I conceive, that in their Paſſage acroſs it, they might have many Opportunities, eſpecially if they took Pains to learn the Language, to inform a People ſo inquiſitive as theſe are, of the Particulars which it concerns us moſt that they ſhould know; and if at a proper Seaſon a Ship ſhould be ſent from the Coaſt of *China* to the Port of *Nangazaqui*, to enquire after theſe People, it might afford us an Opportunity of feeling the Pulſes at leaſt of the *Japoneſe* once more.

I foreſee a Multitude of Objections that may be made to this Scheme, ſuch as, that it will be found extreamly hard, if not impoſſible, to meet with Perſons, either capable, or willing to undertake it. But I have conſidered theſe Objections, and I do not think they have much Weight. There are ſo many People, who at this Juncture, ſhip themſelves for the *Eaſt-Indies* in the moſt low and laborious Stations, in hopes of bettering their Fortunes, that I am perſuaded, if a Reward of three thouſand Pounds, or ſome ſuch Sum, was promiſed to be paid immediately on their coming back, there would not want ſome who would offer themſelves for this Service; and then as to their Capacities, they might be tried, and even improved, before they were ſent; and they might have ſuch Inſtructions given them, though not in Writing, for that might hazard all by being found upon them, as might enable them to execute this Commiſſion with great Probability of Succeſs.

That they ſhould at once obtain a Privilege and ſettled Trade there, is what I am not ſanguine enough to expect, nor is it what I mean by the Probability of executing their Commiſſion with Succeſs; but that they might be able to learn ſome News of the *Japoneſe*, and carry them ſome News of us, which in Time, and with proper Helps, might come to ſomewhat, is what I cannot help thinking very probable; at leaſt it is apparent, that if ſome Attempt of this kind be not made, we can never hope for any thing; and to deſpair in a Matter of Trade, is incompatible with the true Spirit of a trading Nation, and with ours more eſpecially. For after all, what is there in this more extraordinary than what was actually performed by Mr. *Adams?* He came to *Japon* helpleſs, and without Friends; his own Merit recommended him, and made him Friends, ſuch Friends as enabled him to do the great Things that he did, Things to the full as great or greater than thoſe we expect from the Perſons that ſhould be now ſent; and therefore, whoever will have this Method ſet aſide, for want of Probability, is bound to offer a Method more probable, and in that Caſe I ſhall moſt readily ſubmit.

But if, while we conſider all Attempts of this ſort as chimerical or impracticable, any other Nation ſhould ſtep in, and either expel the *Dutch*, or ſhare with them in that Commerce, it will be a very high Reflection upon us, who may pretend to it with at leaſt as great, if not greater Hopes than any other. That this Conjecture of ſome other Nation's making an Attempt of this Nature is not abſolutely wild or groundleſs, may appear from the Endeavours of the *Ruſſians*, who have actually reached in their Diſcoveries ſome Iſlands, the Inhabitants of which make uſe of Money ſtamped with *Japoneſe* Characters; from whence it is with great Probability conjectured, that they are Vaſſals at leaſt, if not Subjects, to that Empire. There are other Nations too, as will appear by the ſucceeding Sections, which have found their Way to the *Eaſt-Indies*, and the Coaſts of *China*, though it was thought they laboured under inſuperable Difficulties, and why they ſhould not be able to extend their Commerce farther, and even reach *Japon*, is what no good Reaſon can be aſſigned to prove, any more than I apprehend any ſolid Cauſe can be ſhewn why we ſhould not endeavour to be before-hand with them in a Point of ſuch Conſequence.

But, perhaps, ſome Critick may demand, how do you know it is of ſuch Conſequence? How can you take upon you to aſſert ſo confidently things relating to a Place and People at ſuch a Diſtance? How can you tell that all theſe Points have not been long ago conſidered by better Judges than yourſelf, and ſuch Projects as you propoſe upon ſubſtantial Motives rejected? or what Reaſon is there that you ſhould expect the Schemes you form in your Cloſet ſhould ſerve for Rules for ſuch as are better acquainted with theſe Matters than yourſelf? I am very ſenſible, that there are a Race of ill-natured People in the World very capable of throwing out ſuch Reflections as theſe, and I know too, that many of them do it againſt the Conviction of their own Minds, and merely from a Spirit of Envy. But, however, as ſuch Queſtions may have a bad Effect on the Minds of a better ſort of People, by which I mean Perſons of honeſter Diſpoſitions, and who really wiſh well to the Publick, and yet are led away by ſuch trite Animadverſions, for want of a due Meaſure of Attention, I think it may not be amiſs, for their ſakes, to examine ſuch Notions once for all, and to ſhew, that however ſpecious they may appear at firſt Sight, they have in reality no Foundation.

In the firſt Place I muſt obſerve, that the Theory of Trade may be as well acquired from Books and Enquiries, as from being actually concerned in it, and that Experience ſhews us the moſt extenſive Projects; and ſuch as have been attended with the greateſt Succeſs have been formed by ſpeculative Men, who, by reaſoning upon Facts, have been able to form much better Judgments, with reſpect to Commerce, than thoſe from whom they received the Facts upon which they argued. But, to come cloſer to the Point, and by anſwering theſe Queſtions, ſo far as they regard this Subject, to put an End to this Diſpute, ſince the ſame Anſwers will ſerve with equal Truth and Certainty on any other Occaſion. If we know the Situation and Extent of a Country, its Climate, Soil, Product, and Manufactures, we can very eaſily, and with the utmoſt Certainty determine, whether it be a Country worth viſiting, and what kind of Commodities are like to have vent there. In this there is nothing ſtrange or wonderful, nothing that requires a very extraordinary Degree of Penetration or Sagacity. For, in whatever Climate Men live, they muſt have Food and Raiment, and in proportion, as they are civilized, they will not only deſire the Neceſſaries, but aſpire alſo to the Conveniencies of Life, and what we call the Inſtruments of Luxury, which may alſo be ſuited to their Humours, if we have a tolerable Account of the Manners and Cuſtoms of the People.

We know very well what Commodities and Manufactures of ours are taken off in *Spain*, *Portugal*, and Part of *France*; and therefore, when we know that the beſt Part of the Empire of *Japon* lies in pretty near the ſame Situation, we cannot be much at a Loſs for the Goods the Inhabitants of that Country are like to take off our Hands, in caſe we had an open Trade with them; but, to be more certain in this Caſe, we have it in our Power to learn what the *Dutch* carry thither; and upon Enquiry, we ſhall find, that they are chiefly Scarlet, and other fine Cloths, Cambleis, Serges, and our own Kerſeys, together with ſome Silk Manufactures, ſuch as rich Damaſks, Brocades, fine Night-Gowns, and in general, a great Variety of Linnen, Woollen, and Cotton Cloths, together with Glaſs and Stone-Wares, Coral, and many other things. We may therefore with great Confidence pronounce, that if the Way were once opened to us, we might be able to vend a vaſt Quantity of the natural Commodities and Manufactures of our Country there.

Beſides, ſince the Diſcoveries made by the *Ruſſians*, it is very certain, that the Countries to the North of *Japon*, particularly the great Peninſula of *Kamtſchatka*, which perhaps is the Continent of *Yedzo*, is very throughly peopled by Inhabitants that are much inclined to Trade, and who, from the Coldneſs of their Climate, muſt neceſſarily ſtand in need of our coarſer Cloths, and other Manufactures of the like kind.

If the vaſt Diſtance between us and them be objected, let us conſider how the *Dutch* carry on this Trade, who are not at all nearer them than we; for if they can manage it with Eaſe, the ſame Method ſurely will render it practicable for us. They fit out their Ships from their Settlements in the *Indies*, *viz.* *Batavia* and *Malacca*; and as we have Settlements in the *Indies* too, our Ships may be fitted out from thence; and if even theſe Settlements are at too great a Diſtance, this is no invincible Objection, ſince there ſeems to be no Cauſe why we ſhould not attempt at leaſt to open this Trade from the Coaſt of *China*, where we had formerly a Factory in the Iſland of *Chuſan*, of which I have given ſome Account, and there is no doubt, but that we might either obtain that, or another more convenient again, if we apply for it.

As to the Sentiments of People who have viſited the *Eaſt-Indies*, and reſided a conſiderable Time in them, there is no Reaſon, ſuppoſe their Notions contrary to mine (which however is not the Fact) to yield implicitly to them. They may have other Motives for their Opinions, than thoſe which they think fit to diſcover; and if after all, there ſhould be ever ſo good Reaſons advanced why the *Eaſt-India* Company ſhould not endeavour to acquire this Trade; yet I cannot apprehend, that what I have offered, ought to be at all affected thereby, ſince it is certain, that if the Commodities and Manufactures of this Country are exported, that Exportation muſt turn to the general Benefit of the Nation. This was the Sentiment of the great *De Wit*, with reſpect to the *Eaſt-India* Company in *Holland*. He made no Difficulty in declaring, that how uſeful ſoever that Company might be to the Republick in its Infancy, there might nevertheleſs come a Time, when the Intereſts of the Company might claſh with thoſe of the State; and if this might be the Caſe in *Holland*, it may be ſo elſewhere.

It is very eaſy to conceive there may be good Reaſons to induce even the greateſt Companies to limit their Commerce, becauſe this will put it in their Power to manage it the better, and to render it more advantageous; but there never can be any Reaſon aſſigned for reſtraining the Commerce of any Nation. The more of her Commodities and Manufactures a Nation can ſend Abroad, the more People ſhe muſt neceſſarily employ at Home, and the more her Shipping muſt increaſe; neither is there any Fear that this ſhould exhauſt their People; for while her Trade flouriſhes, it will never fail to invite Strangers, and therefore Experience ſhews us, that tho' in poor Countries the People are generally ſpeaking more prolifick; yet it does not follow, that they are more populous, becauſe their Wants drive them Abroad, and that too under ſuch Circumſtances, as that they ſeldom return Home.

But to ſum up all, the *Dutch* Writers themſelves inform us, that of late Years, among other Reſtraints impoſed upon them by the *Japoneſe*, the very Quantity of Goods they are to ſend into the Country is limited, and this to about the Value of one hundred thouſand Pounds of our Money; notwithſtanding which, the ſame Writers own, that the Profits on this Trade amount, one Year with another, to near four Times that Sum; and thus, I think, I have effectually ſhewn, that there is nothing wild, chimerical, or abſurd, in propoſing to recover our Trade to *Japon*, if it be poſſible; to which I beg Leave to add, that while the Price of Wool is ſo low, the Number of our Poor ſo great, our Taxes ſo many, and ſo high, and the Complaints of the lower Sort of People, for want of Employment, ſo loud and general, a Man muſt be of a very timorous Diſpoſition, who can be afraid of Cenſure, for endeavouring to point out the only Way by which theſe Evils can be effectually cured, and the Wants and Diſtreſſes of the Multitude prevented from either driving them abroad, or rendering them mutinous and troubleſome at home, with which Remark I ſhall conclude this Section.

SECTION XXXIII.

An hiſtorical Account of the Intercourſe between the Inhabitants of Great-Britain, *and the People in the* Eaſt-Indies: *Containing likewiſe a compleat Hiſtory of the* Eaſt-India *Company, from its Erection under Queen* Elizabeth *of glorious Memory, and of the ſeveral Alterations that have been made therein down to the preſent Reign.*

1. *An Account of the Voyage of* Sighelmus, *Biſhop of* Shireburn, *his Voyage to the* Eaſt-Indies *in the Reign of King* Alfred, *and of ſome other ancient Travellers.* 2. *Of the Manner in which the* Venetians *imported* Indian *Commodities into this Kingdom, to the Time of Queen* Elizabeth. 3. *Of ſeveral Matters previous to the erecting the* Eaſt-India *Company in her Reign, with a large Account of her Charter to that Company,* 4. *A ſuccinct Hiſtory of the ſeveral Voyages undertaken under that Charter, in the Reigns of Queen* Elizabeth *and King* James. 5. *Of the Tranſactions of the* Engliſh Eaſt-India *Company, from their obtaining a new Charter from King* James I. *to the Time of the unfortunate Buſineſs at* Amboyna. 6. *The Account publiſhed of that Tragedy by the* Engliſh Eaſt-India *Company.* 7. *The* Dutch *Relation of the ſame bloody Buſineſs.* 8. *Remarks made by Order of the* Eaſt-India *Company upon this Account of the* Dutch. 9. *The Hiſtory of the* Eaſt-India *Company, continued to the End of the Reign of* Charles I. 10. *The Proſecution of the ſame Subject to the Cloſe of the Civil Wars.* 11. *An Account of the new Charter granted to the Company by King* Charles II. *and of the Progreſs of their Affairs during his Reign.* 12. *Of the Charter granted by King* James II. *and of what followed to the Time of his Excluſion.* 13. *A brief View of the State of the two* Eaſt-India *Companies, and the Diſputes between them under the Reign of King* William III. 14. *The Concluſion of thoſe Diſputes, and the Settlement of the preſent* Eaſt-India *Company.* 15. *The Affairs of the Company, from the Time of this new Settlement to the Cloſe of the Reign of Queen* Anne. 16. *The ſame Hiſtory purſued down to the preſent Time.* 17. *A clear Proſpect of the preſent State of the Affairs of the* Engliſh *in the* Eaſt-Indies.

1. AS we have now paſſed through the greateſt Part of thoſe Subjects, which it was propoſed ſhould be handled in this Chapter, we come regularly, and in that Order which was originally laid down, to ſpeak of the ſeveral Companies that have been formed in *Europe*, for the Management of the Commerce of the *Eaſt-Indies*, which Method, as I conceive, ſooner or later, has been followed by every Nation, that ſince the Diſcovery of the Paſſage by the *Cape of Good-Hope*, hath been concerned therein. We will begin with the *Engliſh*, and with all the Accuracy that is in our Power, trace the Hiſtory of their Commerce into theſe diſtant Parts from the earlieſt Accounts we have of them down to the preſent times. But it will be requiſite firſt of all to obſerve, that there is good Reaſon to believe our firſt Knowledge of theſe Countries was derived to us from the *Romans*, at ſuch Time as this Iſland made a Part of their extenſive Empire; but I do not find any Evidence to prove, or indeed ſo much as a Hint to ſuggeſt, that any Commerce was attempted with that Country from hence before the Cloſe of the ninth Century.

At that Time there ſat upon the *Engliſh* Throne (as it is a Truth, I hope I may ſpeak it without Offence) the greateſt and wiſeſt Prince that was ever placed thereon; I mean the famous *Alfred*, the Glory of whoſe Reign, even the Confuſion of ſucceeding Times, and the Obſcurity of our ancient Hiſtories, have not buried in Oblivion. He, *Anno Domini* 883, as the *Saxon* Chronicle informs us, ſent one of his favourite Eccleſiaſticks, whoſe Name was *Sighelmus*, to carry his Alms to the poor diſtreſſed Chriſtians of *Saint Thomas* and *Saint Bartholomew* in the *Indies*. The Fact is, indeed, pretty extraordinary; and if we had not as clear and diſtinct Evidence to ſupport it, as any one Point in our ancient Hiſtory, I ſhould not have mentioned it; but as the *Saxon* Annals, which have been always allowed to contain as fair and as authentick an Account of Facts as any Hiſtory whatever, ſets down this as a Paſſage, which certainly fell out in that Year; and as this *Sighelmus* did not only perform that Voyage, according to the Inſtructions of his Royal Maſter, but afterwards returned home, and became Biſhop of *Shireburn*, or *Sherburn*, in *Dorſetſhire*, and left in the Treaſury of his Church, as *William* of *Malmſbury* hath recorded, both Spices and Jewels, which he brought back with him out of that Country; I ſee no Reaſon at all to doubt or queſtion a Fact for which we have all the Evidence that the moſt ſcrupulous Critick can deſire.

But it muſt, however, be confeſſed, that though this Intercourſe was ſo early begun, yet the moſt diligent Enquirers into Subjects of this Nature, ſuch as *Eden* and *Hakluyt*, have been able to find no Footſteps of Continuance, ſince they immediately deſcend to much later Times, and ſpeak particularly of the Travels of an *Engliſhman*, whoſe Name is not mentioned, through the Country of the *Tartars*; and of Sir *John Mandeville*. But, however, though no ſuch Footſteps appear as to the Voyages or Travels of particular Perſons, yet beyond a Queſtion, there was not in thoſe Days an entire Stop put to the Commerce between the Weſt and Eaſt Parts of the World, or the *Engliſh* Nation entirely deprived of *Indian* Commodities.

2. If it be enquired how any Certainty can be had of this, or by what Channel ſuch a Trade could be carried on, I muſt take leave to remind them, that when the *Goths* and *Vandals* overturned the *Roman* Empire, that Commerce

through the *Red-Sea* by *Alexandria* ceaſed, and was afterwards carried on by the Way of *Trebezon*, *Damaſcus*, and *Aleppo*, which encreaſed the Trade of the free Cities or States of *Venice*, *Genoa*, *Piſa*, &c. And thoſe Goods were not only vended in all the Countries bordering upon the *Mediterranean*, but were ſent to *England*, *Germany*, and the *Netherlands*, and all over the *Baltick*, which gave Encouragement to the Traffick of *Bruges*, where the Commodities of the North, as Corn, Naval Stores, *&c.* were lodged in the Summer, and where thoſe Ships took in the Commodities from the *Levant* back again to the *Hans-Towns*; and thoſe Ships that came from the *Levant*, tranſported the Northern Goods from *Bruges* into the *Mediterranean*.

Such was the Courſe of the Trade then, and it is very clear from our old Writers, that Spices and other *Indian* Commodities were never totally Strangers in this Iſland, nor indeed could they, ſince we had an annual Veſſel, and ſometimes more from *Venice*, well ſupplied with ſuch rich Goods; and by this means, though ſuch Commodities might be dear, ſince it was in the Power of the State of *Venice* to raiſe them almoſt to what Prices ſhe would, yet we had them regularly, and in conſiderable Plenty, by this Method, down to the Reign of Queen *Elizabeth*, when the laſt great Carack, which came from that Country, was loſt upon our Coaſt, of which Sir *William Monſon* was an Eye-witneſs; and has given of it, as he does of all things, a moſt clear, entertaining, and inſtructive Account, which for the Reader's Information, and my own Juſtification, I ſhall tranſcribe, as it gives a clearer, fuller, and more authentick Account of theſe Points, than is any where elſe to be met with.

"The *Venetians* engroſſed the whole Trade upon thoſe Seas, and furniſhed us with the rich Merchandize of *Turky*, *Perſia*, and *India*, at what Rate they pleaſed themſelves; and yet this was not all, for they laboured to make us Strangers to the Great *Turk*, the *Egyptians*, and bordering Countries, and brought them to that Ignorance of our Nation, that they thought *England* to be a Town in the Kingdom of *London*. The *Venetians* ſent yearly their *Argoſſes* to *Southampton*, which Town enjoyed a Charter from the Kings of this Land, which was wreſted out of their Hands by the Earl of *Leiceſter*, to the utter Decay of that Town; and the *Argoſſes* ſince then have become Strangers in *England*, the laſt whereof took her leave with an unfortunate End, which my Eyes were Witneſſes to in the Month of *October*, 1587.

"This goodly Ship of one thouſand one hundred Tuns, being richly laden with the accuſtomed Commodities they uſed to ſerve the Kingdom with, and being come in the Channel, as high as the *Iſle of Wight*, which Land the *Engliſh* Pilot viſibly made; this Pilot, called *Forſter*, who for his excellent Skill, was not long before redeemed out of the *Turkiſh* Captivity, by the *Venetians*, to ſerve in this Voyage. Upon this good Land-fall the Pilot put the Paſſengers, in hopes, many of them being of great Account and Eſteem, the next Morning to harbour them; for Night growing on, he would not hazard to put in with the Shore that Evening; but the Gentlemen being impatient of Delays, and the Land appearing unto them, they thought themſelves free from all Danger, which is the common Ignorance of many that know not the Seas.

"But to be ſhort, they compelled the Pilot by Force to put in at the *Needles*, the weſtermoſt Part of the *Iſle of Wight*. When the poor Man, neither with Perſuaſions, nor Tears, could prevail, he did his beſt to enter the Channel of the *Needles*; but ſuch was the Greatneſs of the Waves, and the Unweildineſs of the Ship, not anſwering her Helm, that ſhe ſtruck upon the Shingles, where ſhe, her Goods and Company, except ſeven poor Creatures, periſhed. The Sea betwixt the Iſland and the main Land was enriched, by her Loſs, with ſeveral Sorts of Merchandize. What was ſaved was not worth ſpeaking of. I had the Fortune to light on two Butts of Muſkedine floating on the Sea, for then was I riding at *Cowes*.

"In the firſt Ship I ever went Captain of, I found theſe two Butts of Muſkedine a great Help to us in our Voyage, when we were reduced to Extremity for want of Victuals. About this Time our Merchants of *London* began to take into Conſideration theſe great and ineſtimable Riches brought into the Land by the *Venetians* and *French*, who abſolutely enjoyed the Trade of *Turky*, and a great Part of the Wealth which came out of *Perſia* and *India* was retailed from them to us. They deviſed how ſuch Commodities might come to our Hands by a more direct Way than to be ſerved as we were at ſecond hand, and therefore reſolved to make an Overture by Favour of the Queen, and her Letters to the Great *Turk*, for an immediate Traffick from *England* to *Turky*, and his Dominions, and ſo home again, with Ships of her Subjects, without being beholden to others.

"Theſe Letters were ſent by her Majeſty, and received with great Humanity and Courteſy by the Grand Seignior, as appears by his Letters yet extant. He could not give more Reſpect and Honour to her Majeſty, than by ſhewing a Willingneſs to embrace her gracious Propoſitions of Trade; and in Concluſion, Articles were agreed upon, and a Grant of great Privileges and Immunities to her Majeſty's Subjects, which have ſince continued, and been peaceably enjoyed. We may reckon from this Time the Decay of State in Matters of the *Venetian* Trade: For *Argoſſes*, which were wont to viſit us, are now unknown to us, and we poſſeſs the Wealth they were wont to reap. The Commodities of *Perſia*, and the *Eaſt-Indies*, are brought by ourſelves in our own Veſſels directly out of *Turky*, where we have obtained as great a Freedom as we can deſire. Such Places as the *Venetians* were wont to take Freight in their Ships to tranſport from Port to Port now we abſolutely enjoy that Privilege; for all Strangers are more deſirous to put their Goods into *Engliſh* Bottoms than theirs."

Thus from the Concluſion of this Trade, we may eaſily conceive both the Nature and the Importance of it, and the prodigious Change it made, as well in the Affairs of the *Venetians*, as in our own, when it came to be carried on by the Subjects of *Great-Britain*: Yet here it will be neceſſary to diſtinguiſh between this and the true Commerce of the *Indies*; for, though we found a Way to free ourſelves from this Dependance upon the *Venetians*, yet it was by breaking in upon their *Levant* Trade at firſt, and not by ſailing directly to theſe Eaſtern Parts, which was a Work of great Time and Labour, and brought about by a great Variety of Accidents, with the Relation of which the *Engliſh* Reader cannot but be extreamly well pleaſed, ſince it will ſhew him the great and ſpeedy Progreſs of our Maritime Strength and Power at Sea.

3. The firſt Perſon, ſo far as I have been able to learn, that ever propoſed the eſtabliſhing the *Eaſt-India* Trade in *England*, was one Mr. *Robert Therne*, a Merchant of *London*, who ſettled at *Seville* in *Spain*, and reſiding there many Years, gained a perfect Knowledge of the Manner in which both the *Eaſt* and *Weſt-Indies* were diſcovered. This very judicious Gentleman, who from his Writings yet extant, appears to have drawn his Knowledge, in an equal Degree, from Books and Experience, applied himſelf about the Year 1527, to his Majeſty King *Henry* VIII. to whom he repreſented very fully, yet in few Words, the vaſt Advantages that would accrue to his Subjects by a direct Commerce to the *Eaſt-Indies*; and to ſuit his Propoſal to the great Genius and high Spirit of that Prince, he adviſed him not only to encourage this new Navigation, but to attempt it by a new Rout; for as the *Portugueze* had puſhed their Diſcoveries to the Eaſt, and the *Spaniards* to the Weſt, ſo he was ambitious that the *Engliſh* Nation ſhould find a Way to the *Indies* of their own, and that by the North.

But it is worthy of Obſervation, that this Gentleman was ſo early aware of the inſuperable Difficulties that have been found in ſearching for a Paſſage to the North-Eaſt, and therefore propoſed very ſenſibly, and for good Reaſons, ſailing directly North, or at leaſt very near it; from which he thought many Advantages might be gained, and many Inconveniencies avoided. As for inſtance, he conceived that this might be undertaken at ſuch a Seaſon of the Year, as to enjoy the Benefit of the half Year's Day in that Climate; and he thought it abſurd and ridiculous to ſuppoſe, that the Seas were frozen under the North Pole, at a Time when the Sun, from its long Continuance on the Horizon, muſt have ſuch prodigious Force. He likewiſe judged, that whatever Difficulties might occur in the Beginning of ſuch a Paſſage, they muſt be quickly and certainly got over, and be fully recompenſed, by coming ſoon on the Coaſt of *Tartary* and *Japon*, and ſo to *China* and the *Manillas*. To ſay the Truth, if we conſider the Time when this Propoſal was made, the Sagacity and Penetration of this Gentleman can ſcarce be enough commended or admired, ſince it is very certain, that if ever any Diſcovery is made on this Side, it muſt be made by this Method.

But, how wiſe or how practicable ſoever Mr. *Thorn*'s Scheme might be, I do not find that it was ever conſidered in any other Light, than as a Project too bold to be put in Execution; and to ſay the Truth, the firſt Perſon that gave us any Light into this Navigation was Sir *Francis Drake*, in the Year 1578. The very next Year Mr. *Stevens* went from *Liſbon* to *Goa* by the *Cape of Good Hope*, and wrote a large Account of his Voyage while he reſided at *Goa*. *A. D.* 1586, the famous *Candiſhe* made his Voyage round the World, which having clearly opened a Paſſage to theſe Parts, Captain *George Raymond*, in a Ship of his own, called the *Penelope*, accompanied by two others, called the *Merchant-Royal*, and the *Edward-Bonaventure*, ſailed in the Year 1591 for the *Eaſt-Indies*, not with a View to trade, but to cruize upon the *Portugueze*. This Voyage was extreamly unfortunate; for Captain *Raymond* found himſelf obliged, at the *Cape of Good-Hope*, to ſend home the *Merchant-Royal*, with the ſick Men they had in the three Ships. Having doubled that Cape, and ſailed about ſixty Leagues, he was loſt in the *Penelope*; ſo that Captain *James Lancaſter*, in the *Edward-Bonaventure*, was the only one that performed this Voyage, and that too with very indifferent Fortune; for after a diſaſtrous Voyage to the *Eaſt*, he was obliged to paſs from thence to the *Weſt-Indies*, where having loſt his Ship, he with much Difficulty, by the Aſſiſtance of a *French* Privateer he met with in thoſe Parts, returned home.

But in this Space of Time, though no *Engliſh* Ships had been ſent to the *Indies* for Commerce, abundance of *Engliſhmen* had been there in different Services, and on their Return home, gave ſuch an Account of thoſe Countries, and of the Eaſe with which the *Engliſh* might ſettle Factories, and eſtabliſh a regular Trade thither, that many great Men, and rich Merchants, began to entertain a Deſire of eſtabliſhing ſuch a Commerce; and that they might do this effectually, they applied themſelves to Queen *Elizabeth* for a Charter, and ſhe accordingly granted them one, which was dated the 31ſt of *December* 1600, in the forty-third Year of her Reign. By this Charter ſhe created them a Body Corporate, by the Stile of the Governor and Company of Merchants of *London* trading to the *Eaſt-Indies*; granted them a common Seal, appointed *Thomas Smyth*, Eſq; Alderman of *London*, their firſt Governor, and eſtabliſhed a Court of twenty Directors to be choſen annually on the 1ſt of *July*, or within ſix Days after. She likewiſe granted them Authority to make Bye-laws, allowed them to export Goods Cuſtom-free for four Years, permitted them to export thirty thouſand Pounds in Foreign Coin, with Licence to do the ſame in every Voyage, provided they brought that Sum by their Trade out of Foreign Countries into this Kingdom. This Charter was excluſive, and the Queen bound herſelf not to grant any Charter to other Merchants for the Space of fifteen Years; but with this Proviſo, that if within that Space this Charter ſhould appear to be in any reſpect detrimental to the Publick, it ſhould, upon two Years Warning, under the Privy-Seal become void; but if from Experience it ſhould appear, that this new Corporation was a publick Benefit, then ſhe promiſed to renew their Charter, with ſuch additional Clauſes in their Favour, as ſhould appear requiſite.

I have been the more particular with reſpect to this Point, becauſe I look upon it that there never was any publick Act of this Nature better conſidered, or drawn with greater Wiſdom and Foreſight, both for the Benefit of the Adventurers, and the publick Good; by which I mean the Intereſt of the whole Nation, Circumſtances which ought to be equally conſidered in all ſuch Caſes, ſince whatever the Deſign may be of the Perſons concerned in ſuch Adventures, it ought to be the Care of the Government, that even theſe excluſive Companies ſhould be calculated for the common Advantage, and be ſo guarded, as that Perſons concerned therein may never have it in their Power to ſacrifice the general Intereſt of a People to their particular Profit, and private Advantage.

4. It was in Conſequence of this Charter that the Company immediately began to raiſe a joint Stock for carrying their Project into Execution; and this with ſuch Induſtry, that in a very ſhort Space their Treaſurer had in his Hands ſeventy-two thouſand Pounds; upon which it was reſolved to fit out five able Ships to begin their Correſpondence in that Part of the World. Theſe were the *Dragon* of ſix hundred Tuns; Admiral of the Squadron: The *Hector*, Vice-Admiral, of three hundred Tuns: The *Suſannah*, of two hundred Tons: The *Aſcenſion*, of the ſame Burthen: The *Gueſt*, a Store Ship, of a hundred and thirty Tuns. The Complement of Men in all their Ships were four hundred and eighty, and the Expence of equipping them amounted to forty-five thouſand Pounds, and their Cargo took up the other twenty-ſeven thouſand Pounds. On the 2d of *May* 1601, they ſailed from *Torbay*, and without any conſiderable Accident continued their Voyage to the *Indies*, where Captain *James Lancaſter*, who commanded with the Title of Admiral, made a Treaty with the King of *Achen*, ſent a Pinnace to the *Moluccas*, and erected a Factory in the Iſland of *Java*; after which the Admiral returned ſafely, and with good Profit, into *England*.

This was the only Voyage that was undertaken by the Company in the Reign of Queen *Elizabeth*; but upon her Demiſe, they found a very kind Maſter, as well as powerful Protector in her Succeſſor King *James*, who from his Acceſſion to the Throne, ſhewed them all the Countenance, and afforded them all the Aſſiſtance that they could deſire, which, with the Profits of their firſt Voyage, engaged them to undertake a ſecond in the Year 1604, Sir *Henry Middleton*, in the *Red Dragon*, having the Title of Admiral, the *Hector* Vice-Admiral, the *Aſcenſion*, and the *Suſannah*. Theſe Ships viſited the *Moluccas*, and the Iſland of *Java*, were well received by all the *Indian* Princes, but met with very indifferent Uſage from the *Dutch*, who began already to loſe all Senſe of Gratitude to the Nation that had preſerved them, endeavoured all that in them lay to miſrepreſent the *Engliſh* to the *Indians*, as a cruel, unjuſt, and ambitious People, who meant not to trade with them fairly for their Commodities, but to ſeize their Country, and to take them by Force. That this Diſpoſition in the *Dutch* did not take Riſe, either from their Hatred or Contempt of King *James*, but was bred in them by their own Self-love, and Averſion to all other Nations, appears moſt clearly from the Letter of the King of *Ternate* to King *James* by Sir *Henry Middleton*, in which he expreſsly aſſerts, that the *Dutch* had uſed their utmoſt Endeavours to root out the good Opinion which himſelf and his Subjects entertained of the *Engliſh* from the Time that Sir *Francis Drake* had viſited their Iſland; and thus thoſe Diſputes began, of which we ſhall have ſo much to ſay in the Courſe of this Section.

When Sir *Henry Middleton* ſailed from *Bantam*, he received from the King a Letter for his *Britannick* Majeſty, and a Preſent of Bezoar Stones. In their Paſſage home they met with the *Hector* beating off of the *Cape of Good-Hope*, with only ten Men left alive, by whom they were informed of the Loſs of the *Suſannah*, and in Company with this Ship they arrived ſafely in the *Downs*, *May* 6, 1606. The very next Year the Company undertook a third Voyage, in which three Ships only were employed, *viz.* the *Dragon*, the *Hector*, and the *Conſent*, under the Command of Captain *William Keeling*. Their Voyage was very ſucceſsful, eſpecially in the *Moluccas*, where they were, notwithſtanding, extreamly ill uſed by the *Dutch*. This did not hinder them, however, from bringing home a very valuable Cargo of all Sorts of Spice, with which they arrived in the *Downs*, *May* 10, 1610, with this extraordinary Mark of good Fortune, that in their whole Voyage out and home, they loſt not ſo much as a ſingle Man. With this Captain *Keeling* went out Captain *William Hawkins*, with the Title of the King's Embaſſador to the Great Mogul, by whom he was very kindly received, and by his prudent Management a good Correſpondence was eſtabliſhed between the two Courts.

In the Spring of the Year 1607, the Company ſent the *Aſcenſion* and the *Union* to the *Red-Sea*, and the Coaſt of *Arabia*, which, however, proved but indifferent in their Succeſs. In *April* 1609, Captain *David Middleton*, in the *Expedition*, was ſent by the Company to the *Moluccas*, where the *Dutch* now began to act as Maſters, and had a Deſign of ſeizing the Captain's Ship, which by his good Management he prevented, and brought home with him a hundred and thirty-nine Tuns of Nutmegs, and the like Quantity of Mace, beſides Pepper and other valuable Goods, which I conceive to have been the moſt proſperous Voyage that had been undertaken by the Company.

5. The *Eaſt-India* Company now began to make a great Figure, to employ a vaſt Number of Men, and to export large Quantities of *Engliſh* Goods and Manufactures, ſo that they conceived, that though their former Charter was not expired, yet upon due Application his Majeſty might be prevailed upon to fulfil the Promiſe of his Royal Predeceſſor, inaſmuch as they had already fulfilled the Terms upon which that Promiſe was made, and had rendered it manifeſt, that the continuing this Corporation would be for the common Benefit of the whole *Engliſh* Nation. Upon a Repreſentation to this Purpoſe, his Majeſty was graciouſly pleaſed, in the Month of *May* 1609, to enlarge their firſt Charter, in the Manner they deſired, and to make it perpetual; upon which the Company began to build a very large fine Ship, of the Burthen of one thouſand two hundred Tuns, which is taken Notice of even by our general Hiſtorians, becauſe this was the firſt great Ship that had been built in this Kingdom, the Cuſtom having hitherto been to buy them ready built in ſome of the *Hanſe-Towns*; and it is farther obſerved both by *John Stowe* and Sir *William Monſon*, that the *Jeſus* of *Lubeck*, which Sir *John Hawkins* loſt in the *Weſt-Indies*, was the laſt great Ship which was either builded or bought beyond the Seas. They likewiſe built a new Pinnace of two hundred and fifty Tuns to attend the great Ship; and when both were ready to be launched, the King, the Prince of *Wales*, and a great Number of the principal Nobility of the Kingdom, went down to *Deptford*, where they dined on Board the great Ship, and were all entertained in *China*; the Diſhes and Plates, after the Dinner was over, though then great Curioſities, and of high Price were left to be taken away by the Servants, or whoever elſe had a mind to them.

His Majeſty, at the Time of launching the Ship, called it the *Trade's Increaſe*, and gave the Pinnace the Name of the *Pepper-corn*. In the ſucceeding Spring the Company fitted out for their ſixth Voyage this new Ship and Pinnace, together with two others, under the Command of Sir *Henry Middleton*, Knight, at the Expence of eighty thouſand Pounds. In 1610, they ſent a ſingle Ship, and the ſucceeding Spring three Ships, under the Command of Captain *John Saris*, at the Expence of threeſcore thouſand Pounds.

The *Portugueze* at this Time endeavoured to hinder the *Engliſh* from trading on the Coaſt of *India*, which obliged the Company to be at more than uſual Pains and Expence in equipping out their next Squadron, which ſailed in the Year 1611, and conſiſted of four large Ships, of which the biggeſt was the *Dragon*, commanded by Captain *Thomas Beſt*, who arrived ſafely at *Surat* in ſix Months, and ſettled a Factory there, which he had hardly done before the Viceroy at *Goa* fitted out a large Fleet to deſtroy him. It conſiſted of four great Galleons, and twenty-ſix Gallies, in which were five thouſand Men, and one hundred and thirty Pieces of Cannon; but Captain *Beſt*, though he had with him only a ſmall Pinnace, reſolved to maintain his Factory, and in Defence of it, engaged and defeated this *Portugueze Armada*, in which Action they loſt twelve hundred Men. After this the *Portugueſe* never more diſturbed the *Engliſh* upon that Coaſt; and as for Captain *Beſt*, when he had ſettled every thing to his good liking at *Surat*, he ſailed to *Java*, and having taken a valuable Cargo on Board there, returned ſafely to *London* in the Month of *July* 1614.

In this Year Captain *Saris* alſo returned with a very rich Lading, and Sir *Thomas Smith*, Governor of the *Eaſt-India* Company, having repreſented to the King, that they had left Mr. *Paul Canning*, as their Agent, at the Court of the Great Mogul; but that they conceived it would be for the Benefit of the Company, and for the Honour of the Nation, if his Majeſty would be pleaſed to ſend a Perſon of Diſtinction, with the Title of his Embaſſador, to that great Prince; to this his Majeſty conſented, and appointed Sir *Thomas Roe*, Knight, his Embaſſador. The Company alſo, to ſhew their Gratitude, fitted out a fine Squadron of four large Ships, under the Command of Captain *Keeling*, who carried Sir *Thomas Roe* ſafe to *India*, where he proſecuted his Affairs with great Succeſs. The *Engliſh* and *Dutch* Companies in the *Indies* were now grown ſo powerful, that they began to extend the Sovereignty of their reſpective Countries over ſeveral Places in the *Indies*, and the *Engliſh* particularly procured from the Inhabitants of the Iſland of *Banda* a Surrender of themſelves to the Crown of *England*, which they did by a formal Inſtrument, which, however, did not hinder the *Dutch*, who alledged, that they had prior Claims upon thoſe Countries, from endeavouring to make themſelves Maſters of them. The *Engliſh* on the other hand proceeded in extending their Dominions in the *Eaſt-Indies*, without conſidering that they wanted a Force to maintain them, and procured likewiſe the Surrender of *Lantore* by another ſolemn Inſtrument, under the Hands of the Natives, dated the 24th of *November* 1620.

It is very certain that all this was very well deſigned, and that the *Engliſh* Company, if they had been ſtrong enough, would by this means have procured to themſelves a very large Share of the Spice Trade; but as it was, they only opened a Way to their own Deſtruction. While this was doing in the *Indies*, there was a Treaty carried on in *Europe* for the ſettling all the Differences between the two Companies, of which, as there is nothing ſaid in any of our general Hiſtories, it is requiſite that we ſhould give a diſtinct Account here.

There had been two Commiſſions iſſued by King *James* for Treaties, for the Regulation of theſe Differences, the one in the Year 1613, when the Conferences were held at *London*, the ſecond in 1615, when the Negotiation was carried on at the *Hague*; but both theſe proved ineffectual, and therefore a new Treaty was had in the Year 1619, between Commiſſioners appointed by each of the *Eaſt-India* Companies, *Engliſh* and *Dutch*, under the Inſpection and Direction of Miniſters Plenipotentiaries from the King of *Great-Britain*, and the States General. The Treaty between the two Companies was concluded on the ſeventh of *July*, by which it was agreed, that all paſt Offences on either Side ſhould be buried in Oblivion, that both Companies ſhould trade freely upon their own Stock, for their own Benefit, but with a mutual Regard to each others Intereſt; that the Price of Pepper, and other Spices, ſhould be amicably ſettled between them; that the *Molucca* Iſlands, together with thoſe of *Banda* and *Amboyna*, ſhould belong to the *Engliſh* and *Dutch*; but in ſuch a manner, that the *Engliſh* ſhould have but one-third of the Trade, and the *Dutch* two-thirds.

That the Expence of the Fortifications in thoſe Iſlands ſhould be defrayed by a Duty or Impoſition on the Spices exported from them; that a Council of Defence ſhould be erected, compoſed of Members of both Companies, who ſhould provide ſuch Ships of War as are mentioned in the Treaty, for the joint Defence of both Companies; that the Fortreſſes erected in thoſe Parts ſhould remain in the Hands of thoſe who are poſſeſſed of them; and that ſuch as had been acquired by both Companies, ſhould remain to, and be poſſeſſed by them both, and be garriſoned by *Engliſh* and *Dutch* Troops, according as this Matter ſhould be ſettled and adjuſted by the Council of Defence before mentioned; that for the future the whole Trade of the *Indies* ſhould be free to both Nations, and that neither ſhould attempt to ſhut out the other by Fortifications, or Contracts, with the Natives; that to render this Treaty more effectual, his *Britannick* Majeſty, and the States General, ſhould be moſt humbly deſired not to erect any other Companies

I

panies during the Time fixed for the Continuance of this Treaty.

That if in any of the Factories of the *Indies* belonging either to the *Engliſh* or *Dutch*, it ſhould fall out by Death or other Accidents, that none ſhould be left to take care of the Effects in the Factory, that then they ſhould be be preſerved by, and juſtly accounted for by the Members of the other Factory; that this Treaty ſhall endure for twenty Years, and in caſe any Diſputes ſhall ariſe notwithſtanding thereof, which cannot be either decided or accommodated by the Councils of the ſaid Companies, his *Britannick* Majeſty, and the States-General, are humbly deſired to take the ſame under their Cognizance, and finally, to adjuſt and determine them. All thoſe Articles were to be faithfully and inviolably obſerved on both Sides, according to the Intention of the ſaid Treaty, and the ſame to be ratified by his Majeſty in one Month. This Treaty was accordingly ratified by King *James*, on the 16th of *July* 1619, under his own Hand, and ſealed with his Broad-Seal: In this Ratification his Majeſty promiſed not to grant any Charter or Powers to any other Company during the Continuance of this Treaty.

One would have imagined that all Things muſt now have gone on harmoniouſly and peaceably, and that an End had been put to all the Diſputes between the *Engliſh* and *Dutch* Companies for twenty Years at leaſt: But it fell out quite otherwiſe; for the *Dutch* General of the *Eaſt-India* Company having a Fleet of large Ships under his Command, attacked *Lantore*, and having defeated the Natives, fired the Town, plundered the *Engliſh* Factory, took away the Cloth, Money, and Bullion, belonging to the *Eaſt-India* Company, together with twenty-three thouſand Pounds Weight of Mace, and one hundred and fifty thouſand Pounds of Nutmegs. The *Engliſh* Factors that were ſettled there, were ſtripp'd naked, bound, beaten, thrown over the Town-Wall, and afterwards dragged through the Streets in Chains. The Factory of *Poolaroon* had the ſame Fate; and thus all things were in a worſe State after this Treaty than they were before, in the *Indies*. What ſeems to be moſt extraordinary and aſtoniſhing is, that the *Dutch Eaſt-India* Company publiſhed in *Holland* a Defence or Vindication of theſe Proceedings, in which they alledge, that having a prior Right to theſe Iſlands, this could not be taken away by any ſubſequent Act of the Inhabitants, who were no longer their own Maſters; that this War was proſecuted againſt the Natives as Principals, and againſt the *Engliſh* as Auxiliaries only. To this the *Engliſh* publiſhed an Anſwer, in which they abſolutely denied, that the Inhabitants of the Iſland of *Banda* ever ſubmitted themſelves to the *Dutch*, and inſiſted on their legal Title to that Country.

But it does not appear, that the Government ever interfered properly in this Affair, or demanded juſt Satisfaction from the States of *Holland*, which might perhaps be owing to the perplexed Circumſtances of our Adminiſtration, and the Differences that had riſen between King *James* and his Parliament. But if this ill Uſage was hard to be born, there followed ſoon after much worſe, when, to take from the *Engliſh* the ſmall Remains of the Spice Trade, and to monopolize entirely a Commerce of ſuch Importance into their own Hands, the *Dutch* were guilty of ſuch unheard-of Barbarities in *Amboyna*, as tho' they may be forgiven, yet ought never to be forgot; and we find them very ſlightly paſſed over, even in thoſe Works where we might reaſonably expect the fulleſt Accounts of them, which is probably owing to the Inclination ſome Writers have to hide the Faults of their Neighbours, and to publiſh the Exceſſes of no Government but their own.

Yet as at the very Time it happened, the *Eaſt-India* Company here took care to give a full and large Account of the whole Tranſaction, from ſuch Authorities as cannot be queſtioned, it ſeems but reaſonable that for the ſake of Truth, and the perpetual Preſervation of ſo authentick and curious a Piece, which otherwiſe as a Pamphlet may be in Danger of being loſt, as well as for other Reaſons which ſhall be expreſſed hereafter, we ſhould inſert it intire. It is indeed of ſome Length, and delivered in an uncouth and antiquated Stile; but however, it is better it ſhould ſtand ſo, than that we ſhould run any Riſque of altering the Facts, by endeavouring to amend the Language in which they are expreſſed.

6. *Amboyna* is an Iſland lying near *Seran*, of the Compaſs of forty Leagues, and giveth Name alſo to ſome other ſmall Iſlands adjacent. It beareth Cloves; for gathering and buying in whereof, the *Engliſh* Company, for their part, had planted five ſeveral Factories: The Head and Rendezvous of all at the Town of *Amboyna*, and therein firſt Maſter *George Muſchamp*, and afterward Maſter *Gabriel Towerſon*, their Agents, with Directions over the ſmaller Factories at *Hitto* and *Larica* upon the ſame Iſland, and at *Lobo* and *Cambello* upon a Point of their neighbouring Iſland of *Seran*. Upon theſe Iſlands of *Amboyna*, and the Point of *Seran*, the *Dutch* have four Forts; the chief of all is at the ſaid Town of *Amboyna*, and is very ſtrong, having four Points, or Bulwarks, with their Curtains; and upon each of theſe Points ſix great Pieces of Ordnance mounted, moſt of them of Braſs. The one Side of this Caſtle is waſhed by the Sea, and the other is divided by the Land, with a Ditch of four or five Fathom broad, very deep, and filled with the Sea. The Garriſon of this City conſiſteth of about two hundred *Dutch* Soldiers, and a Company of free Burghers. Beſides theſe, there is always a matter of three or four hundred Mardikers in the Town, ready to ſerve the Caſtle at an Hour's Warning. There lie alſo in the Road, diverſe good Ships belonging to the *Dutch*, as well for the Guard of the Place by Sea, as for the Occaſion of Traffick, this being the chief Rendezvous as well for the Iſland of *Banda*, as for the reſt of *Amboyna*. Here the *Engliſh* lived not in the Caſtle, but under Protection thereof, in a Houſe of their own, in the Town, holding themſelves ſafe, as well in reſpect of the ancient Bonds of Amity between both Nations, as of the ſtrict Conjunction made by the late Treaty before mentioned.

They continued here two Years converſing and trading together, with the *Dutch*, by virtue of the ſaid Treaty, in which Time there fell out ſeveral Differences and Debates between them; the *Engliſh* complaining, that the *Dutch* did not only laviſh away much Money in Building and unneceſſary Expences upon the Forts, and otherwiſe, and bring large and unreaſonable Reckonings thereof to the common Account, but alſo did, for their Part, pay the Garriſon with Victuals and Cloth of *Coromandel*, which they put off to the Soldiers at three or four times the Value it coſt them, yet would not allow of the *Engliſh* Company's Part of the ſame Charge, but only in ready Money, thereby drawing from the *Engliſh* more than two Thirds of the whole true Charge. Hereupon, and upon the like Occaſions, grew ſome Diſcontents and Diſputes, and the Complaints were ſent to *Jaccatra*, in the Iſland of *Java Major*, to the Council of Defence of both Nations there reſiding, who alſo not agreeing upon the Points in Difference, ſent the ſame hither over into *Europe*, to be decided by both Companies here, or in default of their Agreement, by the King's Majeſty, and the Lords the States-General, according to an Article of the Treaty of the Year 1619 on this Behalf. In the mean time, the Diſcontent between the *Engliſh* and the *Dutch* about theſe and other Differences continued, and daily increaſed, until at laſt there was a Sword found to cut in ſunder that Knot at once which the tedious Diſputes of *Amboyna* and *Jaccatra* could not untie; and this was uſed in the Manner as followeth.

About the 11th of *February* 1622, O. S. a *Japoneſe* Soldier of the *Dutch* in their Caſtle of *Amboyna*, walking in the Night upon the Wall, came to the Centinel, and there, among other Talk, aſked him ſome Queſtions touching the Strength of the Caſtle, and the People that were therein. It is here to be obſerved, that thoſe *Japoneſe* did for the moſt Part ſerve the *Dutch* as Soldiers, yet were not of their truſty Bands always lodged in the Caſtle, but upon Occaſion called out of the Town to aſſiſt the Watch. This *Japoneſe* aforeſaid, was, for his ſaid Conference with the Centinel, apprehended upon Suſpicion of Treaſon, and put to the Torture; thereby he was brought to confeſs himſelf and ſundry others of his Countrymen there, to have contrived the taking of the Caſtle. Hereupon other *Japoneſe* were examined and tortured, as alſo a *Portugueze*, the Guardian of the Slaves under the *Dutch*.

During this Examination, which continued three or four Days, ſome of the *Engliſhmen* went to and from the Caſtle, upon their Buſineſs, ſaw the Priſoners, heard of their Tortures, and of the Crime laid to their Charge, but all this while ſuſpected not that this Matter did any whit concern themſelves, having never had any Converſation with the *Japoneſe*, nor with the *Portugueze* aforeſaid.

At the ſame Time, there was one *Abel Price*, Chirurgeon to the *Engliſh*, Priſoner in the Caſtle, for offering in his Drunkenneſs, to ſet a *Dutchman*'s Houſe on Fire. This Fellow the *Dutch* took, and ſhewed him ſome of the *Japoneſe*, whom they had firſt moſt grievouſly tortured, and told him, they had confeſſed the *Engliſh* to have been of their Confederacy for the taking of the Caſtle, and that if he would not confeſs the ſame, they would uſe him even as they had done the *Japoneſe*, and worſe alſo. Having given him the Torture, they ſoon made him confeſs whatever they aſked him. This was on the 15th of *February* 1622, O. S. Forthwith, about Nine of the Clock the ſame Morning, they ſent for Captain *Towerſon*, and the reſt of the *Engliſh* that were in the Town, to come to ſpeak with the Governor in the Caſtle. They all went, ſave one that was left to keep the Houſe. Being come to the Governor, he told Captain *Towerſon*, that himſelf and others of his Nation, were accuſed of a Conſpiracy to ſurprize the Caſtle, and therefore, until further Trial, were to remain Priſoners. Inſtantly alſo they attacked him that was left at home in the Houſe, took the Merchandize of the *Engliſh* Company there into their own Cuſtody, by an Inventory, and ſeized all the Cheſts, Boxes, Books, Writings and other things in the *Engliſh* Houſe.

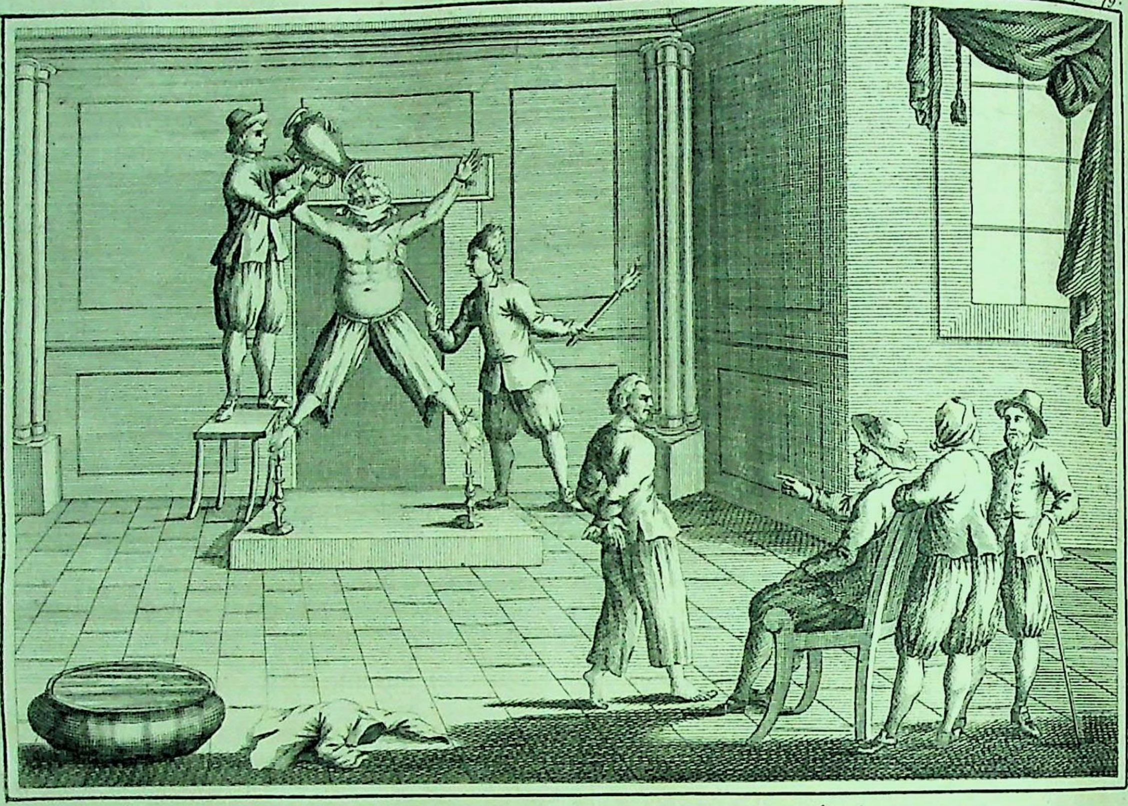
Captain *Towerſon* was committed to his Chamber, with a Guard of *Dutch* Soldiers. *Emanuel Thomſon* was kept Priſoner in the Caſtle; the reſt, *viz. John Beamont*, *Edward Collins*, *William Webber*, *Ephraim Ramſey*, *Timothy Johnſon*, *John Fardo*, and *Robert Brown*, were ſent aboard the *Dutch* Ships then riding in Harbour; ſome to one Ship, and ſome to another, and all made faſt in Irons. The ſame Day alſo the Governor ſent to the two other Factories in the ſame Iſland, to apprehend the reſt of the *Engliſh* there; ſo that *Samuel Colſon*, *John Clark*, *George Sharrock*, that were found in the Factory at *Hitto*, and *Edward Collins*, *William Webber*, and *John Sadler*, at *Larica*, were all brought Priſoners to *Amboyna*, the 16th of *February*; upon which Day alſo *John Pocol*, *John Wetherel*, and *Thomas Ladbrook*, were aprrehended at *Cambello*, and *John Beamont*, *William Griggs*, and *Ephraim Ramſay* at *Lobo*, and brought in Irons to *Amboyna*, the 20th of the ſame Month. In the mean time, the Governor and Fiſcal went to work with the Priſoners that were already here; and firſt, they ſent for *John Beamont* and *Timothy Johnſon*, from on Board the Unicorn, who being come into the Caſtle, *Beamont* was left with a Guard in the Hall, and *Johnſon* went into another Room, where, by and by, *Beamont* heard him cry out very pitifully, then to be quiet a little while, and then loud again.

After Taſte of the Torture, then *Abel Price* the Chirurgeon that firſt was examined and tortured, was brought in to confront and accuſe him: But *Johnſon* not yet confeſſing any thing, *Price* was quickly carried out, and *Johnſon* brought again to the Torture, where *Beamont* heard him ſometimes cry aloud, then quiet again, then roar afreſh. At laſt, after he had been about an Hour in this ſecond Examination, he was brought forth wailing and lamenting, all wet, and cruelly burnt in diverſe Parts of his Body, and ſo laid aſide, in a Bye-place in the Hall, with a Soldier to watch him, that he ſhould ſpeak to nobody. Then was *Emanuel Thomſon* brought to Examination, not in the Room where *Johnſon* had been, but in another ſomewhat farther from the Hall; yet *Beamont* being in the Hall, heard him roar moſt lamentably, and many times: At laſt, after an Hour an half ſpent in torturing him, he was carried away into another Room another Way, ſo that he came not by *Beamont* thro' the Hall, Next was *Beamont* called in, and being demanded many things, all which he denied with deep Oaths and Proteſtations, was made faſt to be tortured, a Cloth tied about his Neck, and two Men ready with their Jars of Water to be poured on his Head; but yet for this Time the Governor bad looſe him, he would ſpare him a Day or two, becauſe he was an old Man; this was all *Saturday*'s Work, the 15th of *February* aforeſaid.

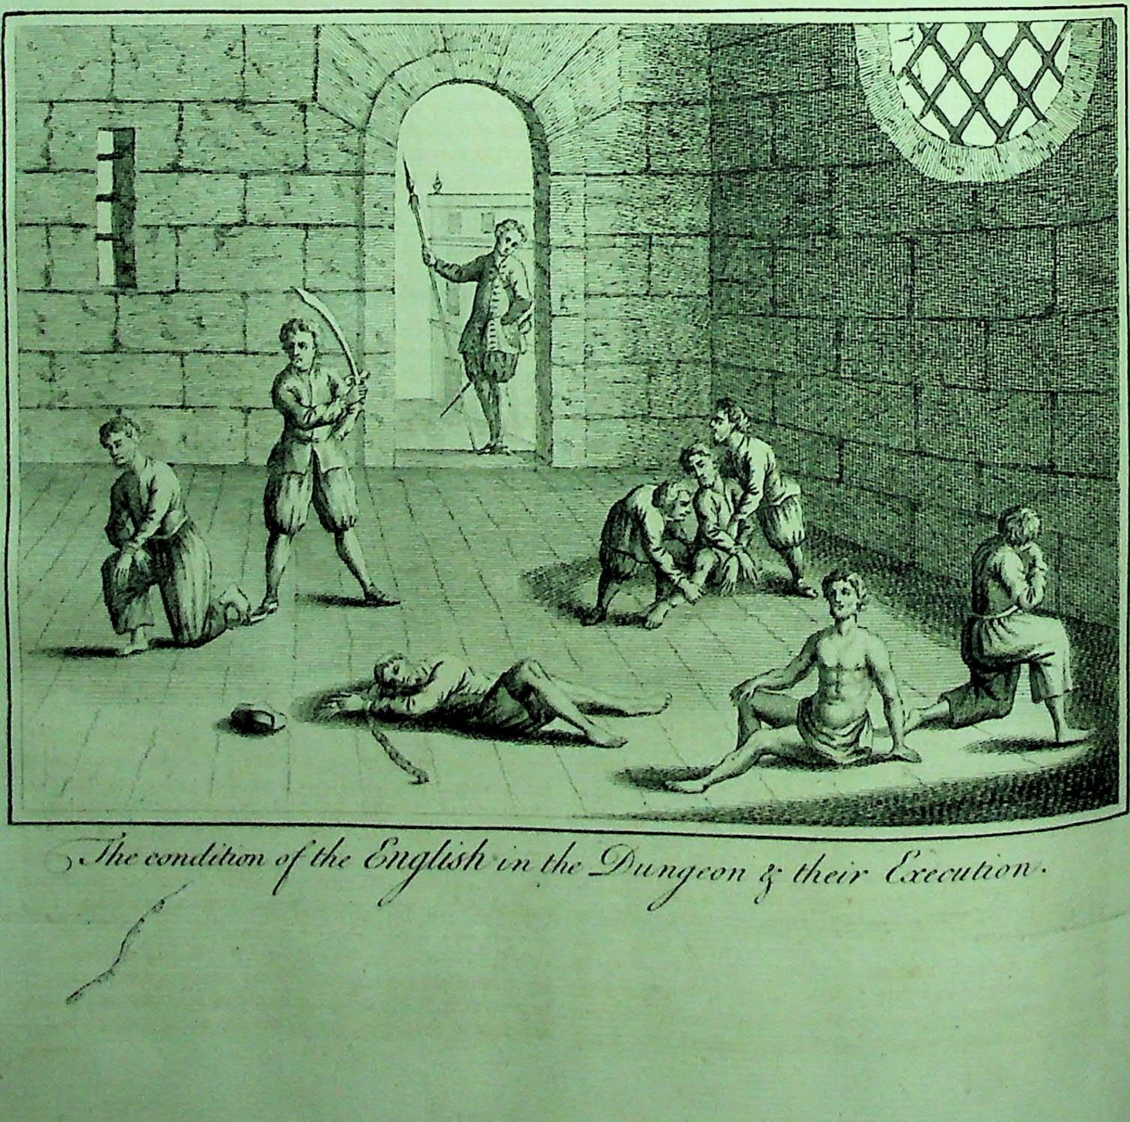
On the 16th *William Webber*, *Edward Collins*, *Ephraim Ramſay*, and *Robert Brown*, were fetched from aboard the *Rotterdam* to be examined: At the ſame time came *Samuel Colſon*, *William Griggs*, and *John Clark*, *George Sharrock*, and *John Saaler*, from *Hitto* and *Larica*, and were immediately upon their Arrival, brought into the Caſtle-Hall. *Robert Brown*, Taylor, was firſt called in, and being tormented with Water, confeſſed all in order as the Fiſcal aſked him. Then was *Edward Collins* called in, and told that thoſe that were formerly examined had confeſſed him as acceſſary to the Plot of taking the Caſtle, which, when he denied with great Oaths and Execrations they made his Hands and his Feet faſt to the Rack, bound a Cloth about his Throat ready to be put to the Torture of the Water. Thus prepared he prayed to be reſpited, and he would confeſs all. Being let down, he again vowed and proteſted his Innocency; yet ſaid, that becauſe he knew they would, by Torture, make him confeſs any thing, though never ſo falſe, they would do him a great Favour to tell him what they would have him ſay, and he would ſpeak it, to avoid the Torture. The Fiſcal hereupon ſaid, What, do you mock us? And bad up with him again, and ſo gave him the Torment of Water, which he not able long to endure, deſired to be let down again to his Confeſſion: Then he deviſed with himſelf and told them, That about two Months and half ago, himſelf, *Thomſon*, *Johnſon*, *Brown*, and *Fardo*, had plotted, with the Help of the *Japoneſe*, to ſurprize the Caſtle. Here he was interrupted by the Fiſcal, and aſked whether Captain *Towerſon* were not of that Conſpiracy? He anſwered, No; you lye, ſaid the Fiſcal, did not he call you all to him, and tell you, that thoſe daily Abuſes of the *Dutch* had cauſed him to think of a Plot, and that he wanted nothing but your Conſent and Secrecy? Then ſaid a *Dutch* Merchant, one *John Igoſt*, that ſtood by, Did not you all ſwear upon a Bible to be ſecret to him? *Collins* anſwered with great Oaths, that he knew nothing of any ſuch Matter: Then they bade make him faſt again; whereupon he then ſaid, all was true that they had ſpoken. Then the Fiſcal aſked him whether the *Engliſh* in the reſt of the Factories were not conſenting to this Plot? He anſwered, No; the Fiſcal then aſked him whether the Preſident of the *Engliſh* at *Jaccatra*, or Maſter *Welden*, Agent in *Banda*, were not Plotters, or privy to this Buſineſs? Again he anſwered No: Then the Fiſcal aſked him by what Means the *Japoneſe* ſhould have executed their Purpoſe? Whereat, when *Collins* ſtood ſtaggering and deviſing of ſome probable Fiction, the Fiſcal helped him, and ſaid, Should not two *Japoneſe* have gone to each Point of the Caſtle, and two to the Governor's Chamber-door; and when the Hurlyburly had been without, and the Governor coming to ſee what was the Matter, the *Japoneſe* to have killed him? Here one that ſtood by ſaid to the Fiſcal, Do not tell him what he ſhould ſay, but let him ſpeak of himſelf; whereupon the Fiſcal, without attending the Anſwer to his former Queſtion, aſked what the *Japoneſe* were to have had for their Reward? *Collins* anſwered 1000 Rials a-piece. Laſtly, he aſked him when this Plot ſhould have been effected? Whereupon, although he anſwered him nothing, not knowing what to deviſe upon the ſudden, yet he was diſmiſſed, and very glad to come clear off the Torture, though with certain Belief that he ſhould die for this his Confeſſion.

Next was *Samuel Colſon* brought in, being newly arrived from *Hitto*, as is before touched, and was the ſame Day brought to the Torture, who, for fear of the Pain wherewith he ſaw *Collins* come out, in ſuch a Caſe, that his Eyes were almoſt blown out of his Head with the Torment of Water, choſe rather to confeſs all they aſked him, and ſo was quickly diſmiſſed, coming out weeping, lamenting, proteſting his Innocency. Then was *John Clark*, that came with *Colſon* from *Hitto* fetched in, and a little after was heard to cry out amain. They tortured him with Water and with Fire, by the Space of two Hours. The Manner of his Torture, which was likewiſe that of *Johnſon*'s and *Thomſon*'s, was as followeth: Firſt, they hoiſted him

Vol. I. p. 879.



The Torments inflicted by the Dutch on the English in Amboyna.



The condition of the English in the Dungeon & their Execution.

him up by the Hands with a Cord, on a large Door, where they made him faſt, upon two Staples of Iron fixed on both Sides, at the Top of the Door-Poſts, halling his Hands one from the other as wide as they could ſtretch. Being thus made ſo faſt, his Feet hung two Foot from the Ground, which alſo they ſtretched aſunder as far as they could ſtretch, and ſo made them faſt beneath, under the Door-Trees on each Side. Then they bound a Cloth about his Neck and Face ſo cloſe, that little or no Water could go by; that done, they poured the Water ſoftly upon his Head, until the Cloth was full up to the Mouth and Noſtrils, and ſomewhat higher, ſo that he could not draw Breath but he muſt withal ſuck in the Water; which being ſtill continued to be poured in ſoftly, forced all his inward Parts to come out of his Noſe, Ears, and Eyes, and often, as it were, ſtifling or choaking him; at length took away his Breath, and brought him to a Swoon, or Fainting: Then they took him quickly down, and made him vomit up the Water; being a little recovered, they tied him up again, and poured in the Water as before, often taking him down as he ſeemed to be ſtifled. In this Manner they handled him three or four ſeveral Times with Water, till his Body was ſwoln twice or thrice as big as before; his Cheeks like great Bladders, and his Eyes ſtarting and ſtrutting out beyond his Forehead; yet all this he bore without confeſſing any thing, inſomuch that the Fiſcal and Tormentors reviled him, ſaying, that he was a Devil, and no Man, or ſurely he was a Witch, at leaſt had ſome Charm about him, or was inchanted, that he could bear ſo much; wherefore they cut off his Hair very ſhort, as ſuppoſing he had ſome Witchcraft hidden therein. Afterwards they hoiſted him up again, as before, and then burnt him with lighted Candles in the Bottom of his Feet until the Fat dropped out on the Candles, yet they applied freſh Lights unto him; they burnt him alſo under the Elbows, and in the Palms of his Hands, likewiſe under the Arm-pits, until his Inwards might evidently be ſeen.

At laſt, when they ſaw he could of himſelf make no handſome Confeſſion, then they led him along with Queſtions of particular Circumſtances by themſelves framed. Being thus wearied and overcome by the Torment, he anſwered, Yea, to whatever they aſked, whereby they drew from him a Body of Confeſſion to this Effect; to wit, That Captain *Towerſon* had, upon *New-Year's-Day* then laſt paſt, ſworn all the *Engliſh* at *Amboyna* to be ſecret and aſſiſtant in a Plot that he had projected, with the Help of the *Japoneſe*, to ſurpriſe the Caſtle, and to put the Governor and the reſt of the *Dutch* to Death. Having thus martyred this poor Man, they ſent him out by four Blacks, who carried him between them to a Dungeon, where he lay five or ſix Days, without any Chirurgeon to dreſs him, until his Fleſh being putrified, great Maggots dropped and crept from it in a moſt loathſome and noiſome Manner. Thus they finiſhed their Sabbath-Day's Work; and it growing now dark, ſent the reſt of the *Engliſh* that came that Day from *Hitto*, and 'till then attended in the Hall, firſt, to the Smith's Shop, where they were loaded with Irons, and then to the ſame loathſome Dungeon, where *Clark* and the reſt were accompanied with the poor *Japoneſe*, lying in the Putrefaction of their Tortures.

The next Morning, being *Monday*, the Seventeenth of *February*, O. S. *William Griggs* and *John Fardo*, with certain *Japoneſe*, were brought into the Place of Examination. The *Japoneſe* were firſt cruelly tortured to accuſe *Grigg*, which, at laſt, they did; and *Grigg*, to avoid the like Torture, confeſſed all that the Fiſcal demanded. By and by the like was alſo done by *John Fardo* and other *Japoneſe*: But *Fardo* himſelf endured the Torture of Water, and at laſt confeſſed whatſoever the Fiſcal aſked him, and ſo was ſent back to Priſon. The ſame Day alſo *John Beamont* was brought the ſecond Time to the Fiſcal's Chamber, where one Captain *Newport*, a *Dutchman's* Son, born in *England*, was uſed as an Intepreter; *William Griggs* was alſo brought in to accuſe him, who ſaid, That when the Conſultation was held for taking the Caſtle, he the ſaid *Beamont* was then preſent; *Beamont* denied it with great Earneſtneſs, and deep Oaths; at laſt, being ſtretched up, and drenched with Water till his Inwards were ready to crack, he anſwered affirmatively to all the Fiſcal's Interrogatories. Yet, as ſoon as he was let down, he clearly demonſtrated to Captain *Newport*, and *Johnſon*, a *Dutch* Merchant, then alſo preſent, that theſe Things could not be ſo; nevertheleſs he was forced to put his Hand to the Confeſſion, or elſe he muſt to the Torture again, which, to avoid, he ſubſcribed, and ſo had a great Iron-bolt, and two Shackles riveted to his Legs, and then was carried back to Priſon.

After this *George Sharrock*, Aſſiſtant at *Hitto*, was called in Queſtion, who ſeeing how grievouſly others were martyr'd, made his earneſt Prayer to God, as ſince upon his Oath he hath acknowledged, that he would ſuffer him to make ſome ſuch probable Lies againſt himſelf, as the *Dutch* might believe, and ſo he might eſcape the Torment. Being brought to the Rack, the Water provided, and the Candles lighted, he was by the Governor and Fiſcal examined, and charged with the Conſpiracy. He fell upon his Knees, and proteſted his Innocence; then they commanded him to the Rack, and told him, unleſs he would confeſs he ſhould be tormented with Fire and Water to Death, and then ſhould be drawn by the Knees to the Gallows, and there hanged up. He ſtill perſiſting in his Innocence, the Fiſcal bid him be hoiſted up; then he craved Reſpite a while, and told them, that he was at *Hitto*, and not in *Amboyna* upon *New-Year's-Day*, when the Conſultation was pretended, neither had he been there ſince *November* before, as was well known to ſundry of the *Dutchmen* themſelves that reſided there alſo with him.

Hereupon they commanded him again to the Rack; but he craving Reſpite, as before, now told them that he had many Times heard *John Clark* ſay, that the *Dutch* had done them many unſufferable Wrongs, and that he would be revenged on them; to which End he had once broken with Captain *Towerſon* a brave Plot; at which Word the Fiſcal and the reſt were attentive, encouraging him to proceed; ſo he went on, ſaying, that *John Clark* had entreated Captain *Towerſon* that he might go to *Macaſſar*, there to conſult and adviſe with the *Spaniards* to come with Gallies, and rob the ſmall Factories of *Amboyna* and *Secan*, when no Ships were there. Here they aſked him what Captain *Towerſon* ſaid to this? To which he anſwered, that Captain *Towerſon* was very much offended with *Clark* for the Motion, and from thenceforth could never abide him. Hereupon the Fiſcal called him Rogue, and ſaid he prated all from the Matter, and ſhould go to the Torture: He craved Favour again, and began another Tale, to wit, That upon *Twelfth-Day*, then laſt paſt, *John Clark* told him at *Hitto*, that there was a Practice to take the Caſtle of *Amboyna*, and aſked him whether he would conſent thereto; whereupon he demanded of *Clark* whether Captain *Towerſon* knew of any ſuch Matter, which *Clark* affirming; then the ſaid *Sharrock* ſaid, he would do as the reſt did. Then the Fiſcal aſked him what Time the Conſultation was held? He anſwered in *November* laſt: The Fiſcal ſaid that could not be, for the Conſultation was on *New-Year's-Day*. The Priſoner ſaid as before in the Beginning, that he had not been in *Amboyna* ſince the Firſt of *December* till now, that he was brought thither; why then, quoth the Fiſcal, have you belied yourſelf? Whereto the Priſoner reſolutely anſwered, that all that he had ſpoken touching Treaſon was falſe, and feigned only to avoid Torment. Then went the Fiſcal out into another Room to the Governour, and anon returned and ſent *Sharrock* unto the Priſon again.

The next Day he was called again, and a Writing preſented him, wherein was framed a formal Confeſſion of his laſt Conference with *Clark* at *Hitto*, touching the Plot to take the Caſtle of *Amboyna*, which being read over to him, the Fiſcal aſked him, whether it was true or no? He anſwered no: Why then, ſaid the Fiſcal, did you confeſs it? he anſwered, for fear of Torment. The Fiſcal and the reſt, in a great Rage, told him he lyed, his Mouth had ſpoken it; and it was true, and therefore he ſhould ſubſcribe it, which, as ſoon as he had done, he fell preſently into a great Paſſion, charging them bitterly to be guilty of the innocent Blood of himſelf and the reſt, which they ſhould look to anſwer for at the Day of Judgment;

ment; withal he grappled with the Fiſcal, and would have ſtopped him from carrying in the Confeſſion to the Governor, with whom he alſo craved to ſpeak, but was inſtantly laid hold on, and carried away to Priſon. *William Webber* being next examined, was told by the Fiſcal, that *John Clark* had confeſſed him to have been at *Amboyna* on *News-Year's-Day*, and ſworn to Captain *Towerſon*'s Plot, *&c.* all which he denied, alledging he was that Day at *Larica*; yet, being brought to the Torture, he then confeſſed he had been at the Conſultation at *Amboyna* upon *New-Year's-Day*, with all the reſt of the Circumſtances in order as he was aſked.

He alſo further told them, he had received a Letter from *John Clark*, after which was a Poſtſcript, excuſing his brief Writing at that Time, for that there was then great Buſineſs in hand. But one *Kender*, a *Dutch* Merchant, then ſtanding by, told the Governor, that upon *New-Year's-Day*, the Time of this pretended Conſultation, *Webber* and he were merry at *Larica*; ſo the Governor left him and went out: But the Fiſcal held out upon the other Point, touching the Poſtſcript of *Clark*'s Letter, urging him to ſhew the ſame, which, when he could not do, though often terrified with the Torture, he gave him Reſpite, promiſing to ſave his Life, if he would produce the Letter. Then was Captain *Towerſon* brought to the Examination, and ſhewed what others had confeſſed of him; he deeply proteſted his Innocency. *Samuel Colſon* was brought to confront him, who being told, that unleſs he would now make good his former Confeſſion againſt Captain *Towerſon*, he ſhould go to the Torture, coldly reaffirmed the ſame, and ſo was ſent away. They alſo brought *William Griggs* and *John Fardo* to juſtify their former Confeſſions to his Face. Captain *Towerſon* ſeriouſly charged, that as they would anſwer it at the dreadful Day of Judgment, they ſhould ſpeak nothing but the Truth: Both of them inſtantly fell down upon their Knees before him, praying him, for God's Sake, to forgive them; and ſaying further openly, before them all, that whatſoever they had formerly confeſſed, was moſt falſe, and ſpoken only to avoid Torment. With that the Fiſcal and the reſt ordered them again to the Torture, which they would not endure, but then affirmed their former Confeſſions to be true. When *Colſon*, who had accuſed the Captain before, was required to ſet his Hand to his Confeſſion; he aſked the Fiſcal upon whoſe Head he thought the Sin would lie, whether upon his, who was conſtrained to confeſs what was falſe, or upon the Conſtrainer?

The Fiſcal, after a little Pauſe upon this Queſtion, went in to the Governor, then in another Room; but anon, returning, ſaid he muſt ſubſcribe it, which he did, yet withal made this Proteſtation; Well, quoth he, you make me to accuſe myſelf and others, of that which is as falſe as God is true; for God is my Witneſs, I am as innocent as the Child new born. Thus have they examined all that belong to the *Engliſh* Company in the ſeveral Factories of the Iſland of *Amboyna*. *February* the Twenty-firſt they examined *John Wetherel*, Factor at *Cambello*, in the Iſland of *Seran*. He confeſſed he was at *Amboyna* upon *New-Year's-Day*, but for the Conſultation whereof he was demanded, he ſaid he knew of no other but touching certain Cloth of the *Engliſh* Company that lay in the Factories rotting and worm-eaten, which they adviſed together how to put off to the beſt Avail of their Employers. The Governor ſaid, he queſtioned him not about Cloth, but of Treaſon, whereof, when he had proteſted his Innocence, he was for that Time diſmiſſed; but the next Day he was ſent for again, and Captain *Towerſon* brought to confront and accuſe him, having before confeſſed ſomewhat againſt him; but Mr. *Towerſon* ſpoke theſe Words only, O Mr. *Wetherel*, Mr. *Wetherel*, ſpeak the Truth, and nothing but the Truth, as God ſhall put it in your Heart; ſo Captain *Towerſon* was put out again, and Mr. *Wetherel* brought to the Torture of Water, with great Threats, if Water would not make him confeſs, Fire ſhould. He prayed them to tell him what he ſhould ſay, or to write down what they would, he would ſubſcribe it. They ſaid, he needed no Tutor, they would make him confeſs himſelf; but when they had hoiſted him up four ſeveral Times, and ſaw he knew not what to ſay; then they read him other Mens Confeſſions, and aſked him from Point to Point, as they had done others, and he ſtill anſwered, *Yea*, to all.

Next was called in *John Powel*, *Wetherel*'s Aſſiſtant at *Cambello*; but he proving that he was not at *Amboyna* ſince *November*, ſave now, when he was brought thither Priſoner, and being ſpoken for by one *John Jooſt*, who had long been well acquainted with him, was diſmiſſed without Torture. Then was *Thomas Ladbrook*, Servant to *Wetherel* and *Powel* at *Cambello*, at the Time of the pretended Conſultation, and ſerving in ſuch Quality, as that he was never acquainted with any of the Letters from the Agent of *Amboyna*, he was eaſily and quickly diſmiſſed. *Ephraim Ramſey* was alſo examined upon the whole Conſpiracy, and particularly queſtioned concerning Captain *Weldon*, the *Engliſh* Agent in *Banda* but denying all, and proving that he was not at *Amboyna* at New-years-tide, being alſo ſpoken for by *John Jooſt*, was diſmiſſed, after he had hanged in the Rack a good while, with Irons about his Legs, and the Cloth about his Mouth. Laſtly, *John Sadler*, Servant to *William Griggs* at *Larica*, was examined, and being found to have been abſent from *Amboyna* at New-years-tide, when *Griggs* and others were there, was diſmiſſed.

Thus have we all their Examinations, Tortures, and Confeſſions, being the Work of eight Days, from the 15th to the 23d of *February*, after which was two Days reſpited before the Sentence. *John Powel* being himſelf acquitted as aforeſaid, went to the Priſon to viſit *John Fardo*, one of theſe that had accuſed Captain *Towerſon*; to him *Fardo* religiouſly proteſted his Innocency, but eſpecially his Sorrow for accuſing Maſter *Towerſon*; for, ſaid he, the Fear of Death doth nothing diſmay me; for God, I truſt, will be merciful to my Soul, according to the Innocence of my Cauſe. The only Matter that troubles me is, that through Fear of Torment I have accuſed that honeſt and godly Man Captain *Towerſon*, whom, I think in my Conſcience, was ſo upright towards all Men, that he harboured no Ill-will to any Man; much leſs would attempt any ſuch Buſineſs as he is accuſed of. He farther ſaid, he would before his Death receive the Sacrament, in Acknowledgment, that he had accuſed Captain *Towerſon* falſely and wrongfully, only through Fear of Torment.

On the 25th, O. S. all the Priſoners, as well the *Engliſh* as the *Portugueze* and *Japoneſe*, were brought into the great Hall of the Caſtle, and there were ſolemnly condemned, except, *John Powel*, *Ephraim Ramſey*, *John Sadler*, and *Thomas Ladbrook*, formerly acquitted as aforeſaid; Captain *Towerſon*, during all his Impriſonment, having been kept from the reſt, ſo that none could come to ſpeak with him, writ much in his Chamber; but all was ſuppreſſed, ſave only a Bill of Debt, which one *Thomas Johnſon*, a free Burgher, got of him, by Favour of his Keepers, for an Acknowledgment, that the *Engliſh* Company owed him a certain Sum of Money. In the End of this Bill he writ theſe Words, *Firmed by the Form of me* Gabriel Towerſon, *now appointed to die guiltleſs of any thing that can be juſtly laid to my Charge. God forgive them their Guilt, and receive me to his Mercy.* Amen. This Bill being brought to M. *Weldon*, the *Engliſh* Agent at *Banda*, he paid the Money, and received in the Acknowledgment. *William Griggs*, who had before accuſed Captain *Towerſon*, writ the following Words in his Table Book: "We whoſe Names "are here ſpecified, *John Beamont*, Merchant of *Lobo*, *William Griggs*, Merchant of *Larica*, *Abel Price*, Cuirurgeon "of *Amboyna*, *Robert Brown*, Taylor, which do here lie Priſoners in the Ship *Rotterdam*, being apprehended for Conſpiracy, for blowing up the Caſtle of *Amboyna*, we being "judged to Death this fifth of *March*, *Anno* 1622, which "we, through Torment, were conſtrained to ſpeak that "which we never meant, nor once imagined, the which "we take upon our Deaths and Salvation. They tortured "us with that extream Torment of Fire and Water, that "Fleſh and Blood could not endure; and this we take "upon our Deaths, that they have put us to Death guiltleſs of our Accuſation: So therefore that we deſire that "they that ſhall underſtand this, that our Employers may "underſtand theſe Wrongs, and that yourſelves would

“ have a care to look to yourſelves; for their Intent was to have brought you in alſo: They aſked concerning you, which, if they had tortured us, we muſt have confeſſed you alſo, and ſo farewel; written in the dark.”

This Table-Book was afterwards delivered to M. *Weldon* before mentioned, by one that ſerved the *Dutch*. *Samuel Colſon* alſo, another that accuſed Captain *Towerſon*, writ as followeth in the waſte Leaves of a Book, wherein were bound together the Common-Prayers, the Pſalms, and the Catechiſm. In one Page thus: “ *March* the fifth, N. S. being *Sunday*, on board the *Rotterdam*, lying in Irons, underſtand, that I *Samuel Colſon*, late Factor of *Hitto*, was apprehended for Suſpicion of Conſpiracy, and for any thing I know muſt die for it; wherefore, having no better means to make my Innocency known, have writ this in this Book, hoping ſome good *Engliſhmen* will ſee it. I do here upon my Salvation, as I hope by his Death and Paſſion to have Redemption for my Sins, that I am clear of all ſuch Conſpiracy; neither do I know any *Engliſhman* guilty thereof, nor other Creature in the World. As this is true, God bleſs me, *Samuel Colſon*.”

On the other Side, upon the firſt Page of the Catechiſm, is thus written; *In another Leaf you ſhall underſtand more, which I have written in this Book.* Samuel Colſon. In the Beginning of the Pſalms, and in the Leaf ſo referred unto, is thus written, *viz.* “ The *Japoneſe* were taken with ſome Villany, and brought to Examination; being moſt tyranouſly tortured, were aſked, if the *Engliſh* had any hand in the Plot, which Torture made them ſay yea. Then was Maſter *Thomſon*, and Mr. *Johnſon*, Mr. *Collins*, *John Clark*, brought to Execution, and were burned under the Arm-pits, the Hands and Soals of the Feet, with another moſt miſerable Torment, to drink Water; ſome of them almoſt tortured to Death, and were forced to confeſs that which they never knew, by reaſon of the Torment which Fleſh and Blood is not able to endure. Then were the reſt of the *Engliſhmen* called one by one, amongſt which I was one, being wiſhed to confeſs, or elſe I muſt go to Torment; withal, cauſed M. *Johnſon*, who was before tormented, to witneſs againſt me, or elſe he ſhould be tormented again; which, rather than he would endure, he ſaid what they would have him ſpeak. Then muſt I confeſs that I never knew, or elſe go to Torment, which, rather than I would ſuffer, I did confeſs that which, as I ſhall be ſaved before God Almighty, is not true, being forced, for fear of Torment. Then did they make us witneſs againſt Captain *Towerſon*; and at laſt made Captain *Towerſon* confeſs all, being for fear of moſt cruel Torment, for which we muſt all die. As I mean and hope to have Pardon for my Sins, I know no more than the Child unborn of this Buſineſs; written with my own Hand, the firſt of *March*, N. S. *Sam. Colſon*.”

Yet in another Page were theſe Words; *I was born in* New-Caſtle upon Tyne, *where I deſire this Book may come, that my Friends may know of my Innocence.* Samuel Colſon. This Book he delivered to one that ſerved the *Dutch*, who ſewed it up in his Bed, and afterwards, at his Opportunity, delivered it to Mr. *Weldon* beforementioned. All theſe ſaid Writings are yet extant, under the Hands of the ſeveral Parties well known to their Friends here in *England*.

The twenty-ſixth Day of *February*, O. S. the Priſoners were all brought into the great Hall of the Caſtle, except Captain *Towerſon*, and *Emanuel Thomſon*, to be prepared for Death by the Miniſters. The *Japoneſe* now all in general, as ſome of them had done before in particular, cried out unto the *Engliſh*, ſaying, Oh! you *Engliſhmen*, where did we ever in our Lives eat with you, talk with you, or, to our Remembrance, ſee you? The *Engliſh* anſwered, why then have you accuſed us? The poor Men perceiving they were made believe each had accuſed others, before they had ſo done, indeed, ſhewed them their tortured Bodies, and ſaid, if a Stone were thus burnt, would it not change its Nature? How much more then we that are Fleſh and Blood? Whilſt they were all in the Hall, Captain *Towerſon* was brought up into the Place of Examination, and two great Jars of Water carried after him; what he there did, or ſuffered, is unknown to the *Engliſh*; but it ſeemeth, they made him then to underwrite his Confeſſion. After Supper, *John Powel*, *Ephraim Ramſey*, *Thomas Ladbrook*, and *John Sadler*, who were found not guilty, as aforeſaid, were taken from the reſt, and put into another Room; by and by alſo were *Samuel Colſon* and *Edward Collins* brought from the reſt, into the Room where *Emanuel Thomſon* lay: The Fiſcal told them, it was the Governor's Mercy to ſave one of thoſe three; and it being indifferent to him which of them were the Man, it was his Pleaſure they ſhould draw Lots for it, which they did, and the free Lot fell to *Edward Collins*, who then was carried away to the Chamber, where *John Powel*, and the reſt that were quit, lodged; and *Samuel Colſon* back into the Hall. Anoh alſo *John Beaumont* was brought out of the Hall into the Chamber, where *John Powel*, and the reſt of the acquitted Perſons were, and was told, that he was beholden to *Peter Johnſon*, the *Dutch* Merchant of *Lobo*, and to the Secretary, for they two had begged his Life. So then there remained in the Hall ten of the *Engliſh*; for Captain *Towerſon* and *Emanuel Thomſon* were kept in ſeveral Rooms apart from the reſt. To theſe that remained in the Hall came the *Dutch* Miniſters, who telling them how ſhort a time they had to live, admoniſhed and exhorted them to make their true Confeſſions; for it was a dangerous and deſperate thing to diſſemble at ſuch a Time.

The *Engliſh* ſtill profeſſed their Innocency, and prayed the Miniſters that they might all receive the Sacrament, as a Seal of the Forgiveneſs of their Sins; and withal, thereby to confirm their laſt Profeſſion of their Innocence; but this would by no means be granted: Whereupon *Samuel Colſon* ſaid thus unto the Miniſters, You manifeſt unto us the Danger of Diſſimulation in this Caſe; but tell us, if we ſuffer guiltleſs, being otherwiſe alſo true Believers in *Jeſus Chriſt*, what ſhall be our Reward. The Preacher anſwered, by how much the clearer you are, ſo much the more glorious ſhall be your Reſurrection. With that Word *Colſon* ſtarted up, embraced the Preacher, and gave him his Purſe, with ſuch Money as he had in it, ſaying, *Domine*, God bleſs you: Tell the Governor I freely forgive him, and I intreat you to exhort him to repent him of his bloody Tragedy wrought upon us poor innocent Souls. Here all the reſt of the *Engliſh* ſignified their Conſent to this Speech. Then ſpake *John Fardo* to the reſt, in the Preſence of the Miniſters, as followeth: My Countrymen and Brethren, that are here with me, condemned to die, I charge you all, as you will anſwer it at God's Judgment Seat, if any of you be guilty of this Matter, whereof we are condemned, diſcharge your Conſciences, and confeſs the Truth, for Satisfaction of the World. Hereupon *Samuel Colſon* ſpake with a loud Voice, ſaying, according to my Innocence in this Treaſon, ſo, Lord, pardon all the reſt of my Sins, and if I be guilty thereof, more or leſs, let me never be Partaker of thy heavenly Joys; at which Words every one of the reſt cried out, Amen; for me, Amen; for me, good Lord. This done, each of them knowing whom he had accuſed, went one to another, begging Forgiveneſs for their falſe Accuſation, being wrung from them by the Pains or Fear of Torture; and they all freely forgave one another; for none had been ſo falſely accuſed, but he himſelf had accuſed another as falſely; in particular, *George Sharrock*, who ſurvived to relate this Night's Paſſage, kneeled down to *John Clark*, whom he had accuſed of the Tale at *Hitto* abovementioned, and craved Forgiveneſs at his Hands: *Clark* freely forgave him, ſaying, How ſhall I look to be forgiven of God, if I ſhould not forgive you, having myſelf ſo falſely accuſed Captain *Towerſon* and others? After this they ſpent the reſt of the doleful Night in Prayer, ſinging of Pſalms, and comforting one another, though the *Dutch* that guarded them offered them Wine, bidding them drink luſtily, and drive away the Sorrow, according to the Cuſtom of their own Country in the like Caſes, but contrary to the Nature of the *Engliſh*.

Upon the Morrow Morning, being the Execution Day, the 27th of *February*, O. S. *John Powel* being freed, as before recited, came into the Room where the condemned Perſons were, and found them at Prayers. They all requeſted him to relate unto their Friends in *England* the Innocency of their Cauſe, taking it upon their Deaths, that what they had confeſſed againſt themſelves and others, touching this Crime, was all falſe, and forced by fear of

Torture. The ſame Morning *William Webber* was called again into the Fiſcal's Room, and there preſſed to produce the Letter which he had before confeſſed to have received from *John Clark*, in the Poſtſcript whereof ſome great Buſineſs was intimated: They promiſed him his Life, if he would deliver, or produce to them that Letter, which, tho' he did not, nor indeed could, yet at laſt they pardoned him, and ſent him to the reſt that were ſaved, and *Sharrock* with him. That Morning *Emanuel Thomſon*, underſtanding that *John Beaumont* was pardoned, made Means to have him come and ſpeak with him, which with much ado he obtained. *Beaumont* found him ſitting in a Chamber all alone, in a moſt miſerable Faſhion, the Wounds of his Torture bound up, but the Matter and gore Blood iſſuing through the Rollers: He took M. *Beaumont* by the Hand, and prayed him, when he came into *England*, to do his Duty to the honourable Company his Maſters, to M. *Robinſon*, and to his Brother *Billingſley*, and to certify them of his Innocence, which, ſaid he, you yourſelf know well enough.

All Things being prepared for the Execution, the condemned were brought forth of the Hall along by the Chamber, where the quit and pardoned were, who ſtood in the Door to give and take the Farewel of their Countrymen now going to Execution; ſtaying a little for this Purpoſe, they prayed, and charged thoſe that were ſaved, to bear witneſs to their Friends in *England* of their Innocence, and that they died not Traitors, but ſo many Innocents merely murdered by the *Dutch*, whom they prayed God to forgive their Blood-thirſtineſs, and to have Mercy upon their own Souls. Being brought into the Yard, their Sentence was read unto them from a Gallery, and then they were thence carried unto the Place of Execution, together with nine *Japoneſe* and a *Portugueze*, not the ordinary and ſhort Way, but round about, in a long Proceſſion through the Town, the Way guarded by five Companies of Soldiers, *Dutch* and *Amboyneſe*, and thronged with the Natives of the Iſland, that upon the Summons given the Day before by the Sound of the Drum, flocked together to behold this Triumph of the *Dutch* over the *Engliſh*. *Samuel Colſon* had conceived a Prayer in Writing, in the End whereof he proteſted his Innocence, which Prayer he read to his Fellows the Night before; and now alſo at the Place of Execution, devoutly pronounced the ſame; then threw away the Paper, which the Governor cauſed to be brought to him, and kept it. *Emanuel Thomſon* told the reſt, he did not doubt but God would ſhew a Sign of their Innocence; and every one of the reſt took it ſeverely upon their Death, that they were utterly guiltleſs; and ſo one by one, with great Chearfulneſs, ſuffered the fatal Stroke. The *Portugueze* prayed over his Beads very devoutly, and often kiſſed the Croſs, ſwearing thereupon, that he was utterly innocent of this Treaſon, yet confeſſed, that God had juſtly brought this Puniſhment upon him; for that having a Wife in his own Country, he had, by the Perſuaſion of the *Dutch* Governor, taken another in that Country, his firſt being yet living.

The *Japoneſe*, likewiſe, according to their Religion, ſhut up their laſt Act with the like Profeſſion of their Innocence; ſo there ſuffered ten *Engliſhmen*, viz. Captain *Gabriel Towerſon*, the Agent for the *Engliſh* at *Amboyna*; *Samuel Colſon*, Factor at *Hitto*; *Emanuel Thomſon*, Aſſiſtant at *Amboyna*; *Timothy Johnſon*, Aſſiſtant there alſo; *John Wetherel*, Aſſiſtant at *Cambello*; *John Clark*, Aſſiſtant at *Hitto*; *William Griggs*, Factor at *Larica*; *John Fardo*, Steward of the Houſe; *Abel Price*, Chirurgeon, and *Robert Brown*, Taylor. The *Portugueze* alſo ſuffered with them; his Name was *Auguſtin Perez*, he was born at *Bengal*. The Names of the *Japoneſe* that ſuffered were as followeth: *Hitiſo*, *Tſioſa*, *Sinſa*, all born at *Firando*; *Sidney Migial*, *Pedro Congie*, *Thomas Corea*, born at *Naganſaque*; *Quiandayo*, Native of *Coraets*; *Iſabinda*, of *Tſoncketgo*; *Zanchoe*, of *Fiſien*. Beſides theſe there were two other *Japoneſe*, the one named *Soyſimo*, born at *Firando*, and the other *Sacoube*, of the ſame Place; the former of which being tortured, confeſſed both to have been privy to this private Treaſon, and to have offered his Service to the *Engliſh* to aid them in taking of the Caſtle; and the latter confeſſed to have had Knowledge of the Conſultation of the other *Japoneſe* to this Purpoſe; but neither of them was executed, or ſo much as condemned; the Reaſon whereof was not known to the *Engliſh* that were ſaved. They had prepared a Cloth of black Velvet for Captain *Towerſon*'s Body to fall upon, which being ſtained and defaced with his Blood, they afterwards put to Account of the *Engliſh* Company. At the Inſtance of the Execution there aroſe a great Darkneſs, with a ſudden and violent Guſt of Wind and Tempeſt, whereby two of the *Dutch* Ships riding in the Harbour were driven from their Anchors, and with great Labour and Difficulty ſaved from the Rocks. Within a few Days after one *William Dunckin*, who had told the Governor, that *Robert Brown* the *Engliſh* Taylor, had a few Months before told him, he hoped that within ſix Months the *Engliſh* ſhould have as much to do in the Caſtle of *Amboyna* as the *Dutch*; this Fellow coming upon an Evening to the Grave, where the *Engliſh* were buried, being all, except Captain *Towerſon*, in one Pit, fell down upon the Grave; and having lain there awhile, roſe up again ſtark mad, and ſo continued two or three Days together, and then died. Forthwith alſo fell a new Sickneſs at *Amboyna*, which ſwept away above one thouſand People, *Dutch* and *Amboyneſe*, in the Space wherein there uſually died not thirty at other Seaſons. Theſe Signs were, by the ſurviving *Engliſh*, referred to the confident Prediction of *Emanuel Thomſon* above named, and were by the *Amboyneſe* interpreted as a Token of the Wrath of God for this barbarous Tyranny of the *Dutch*.

The next Day after the Execution, being the 28th of *February*, O. S. was ſpent in Triumph for the new General of the *Dutch* then proclaimed, and in publick Rejoicing for the Deliverance from this pretended Treaſon. On the 1ſt of *March*, *John Beaumont*, *George Sharrock*, *Edward Collins*, and *William Webber*, were brought to the Governor, who told *Beaumont* and *Sharrock*, that they were pardoned in Honour of the new General; and *Collins*, that he was to go to *Jaccatra*, there to ſtand to the Favour of the Governor; ſo the Governor made them drink Wine with him, and courteouſly diſmiſſed them, willing them to go and conſult with the reſt that were ſaved, who were fit to be placed in the ſeveral Factories; which done, and their Opinions reported to the Governor, he accordingly commanded each to his Place, adding, that he would thenceforth take upon him the Patronage and Government of the *Engliſh* Company's Buſineſs, to which Purpoſe he had within a few Days paſt opened a Letter that came from the *Engliſh* Preſident at *Jaccatra*, directed to Captain *Towerſon*, being the firſt *Engliſh* Letter he ever intercepted; further ſaying, that he was glad that he found by the Letter that the *Engliſh* at *Jaccatra* were innocent touching this Buſineſs. The Governor and Fiſcal having juſt made an End at *Amboyna*, diſpatched themſelves for *Banda*, where they made very diligent Enquiry againſt Captain *Weldon*, the *Engliſh* Agent there, yet found no Colour or Shadow of Guilt to lay hold on; but at laſt entertained him with courteous Speeches, profeſſing to be very glad that they found him as well as the *Engliſh* at *Jaccatra* to be without Suſpicion of this Treaſon.

Captain *Weldon* perceiving the Diſorder and Confuſion of the *Engliſh* Company's Affairs at *Amboyna*, by means of this Dealing of the *Dutch*, forthwith hired a *Dutch* Pinnace at *Banda*, and paſſed to *Amboyna*, where, inſtantly upon his Arrival, he recalled the Company's Servants, which were ſent by the *Dutch* Governor to the upper Factories. Having inquired of them, and the reſt that were left at *Amboyna*, of the whole Proceedings lately paſſed, he found by the conſtant and agreeing Relation of them all, that there was no ſuch Treaſon of the *Engliſh* as was pretended; as alſo underſtanding what ſtrict Command the Governor had given to the ſurviving *Engliſh* not once to talk, or confer with the Country People concerning this bloody Buſineſs, although the ſaid Country People every Day reproached them with Treaſon, and a bloody Intention to have maſſacred the Natives, and to have ripped up the Bellies of Women with Child, and ſuch like Stuff, wherewith the *Dutch* had poſſeſſed the poor Vulgar, to make the *Engliſh* odious unto them; the ſaid M. *Welden* therefore finding it to ſuit neither with the Honour nor Profit of the *Engliſh* Company, his Maſters, to hold any longer

Reſidence in *Amboyna*, he took the poor Remnant of the *Engliſh* along with him in the ſaid hired Pinnace for *Jaccatra*, whither the Governor had ſent *John Beaumont* and *Edward Collins* before, as Men condemned, and left to the Mercy of the Governor. When this heavy News of *Amboyna* came to *Jaccatra*, and the *Engliſh* there, the Preſident ſent forthwith to the General of the *Dutch*, to know by what Authority the Governor of *Amboyna* had thus proceeded againſt the *Engliſh*, and how he and the reſt of the *Dutch* there at *Jaccatra* did approve theſe Proceedings. The Governor returned for Anſwer, that the Governor of *Amboyna*'s Authority was derived from the Lords States-General of the *United Netherlands*, under whom he had lawful Juriſdiction both in criminal and civil Cauſes, within the Diſtrict of *Amboyna*; further, that ſuch Proceeding was neceſſary againſt Traitors, ſuch as the *Engliſh* executed at *Amboyna* might appear to be by their own Confeſſions, a Copy whereof he therewith ſent to the *Engliſh* Preſident, who ſent the ſame back to be authentickly certified, but received it not again. Hitherto hath been recited the bare and naked Narration of the Progreſs and Paſſage of this Action, as it is taken out of the Depoſitions of ſix ſeveral *Engliſh* Factors, whereof four were condemned, and the other two acquitted, in this Proceſs of *Amboyna*. All ſince their Return into *England*, examined upon their Oaths in the Admiralty-Court. The Particulars of Captain *Towerſon*'s, as alſo of *Emanuel Thomſon*'s Examinations and Anſwers, are not yet come to Light, by reaſon that theſe two were kept a-part from all the reſt, and each alone by himſelf, nor any other of the *Engliſh* ſuffered to ſpeak with them, except only that ſhort Farewel which *John Beaumont* took of *Thomſon*, the Morning before the Execution before mentioned. The like Obſcurity is yet touching the Examinations and Anſwers of diverſe of the reſt that are executed, being, during their Impriſonment, ſo ſtrictly looked to, and watched by the *Dutch*, that they might not talk together, nor mutually relate their Miſeries; but becauſe the *Dutch* defend their own Proceedings by the Confeſſions of the Parties executed, acknowledging ſeverally under their Hands, that they were guilty of the pretended Crime:

It will not be amiſs to recollect and recal unto this Place, as it were unto one Sum and Total, certain Circumſtances diſperſed in ſeveral Parts of this Narration, whereby as well the Innocence of the *Engliſh*, as the unlawful Proceeding againſt them, may be manifeſted.

Firſt, therefore, it is to be remembered, that the *Japoneſe* were apprehended, examined, and tortured three or four Days before the *Engliſh* were attacked, and the ſame as well of their Apprehenſion as Torture was rief and notorious in the Town of *Amboyna*, and the Parts adjoining. *Thomſon* in this Interim, and the very firſt Day of the Examination of the *Japoneſe*, went to the Caſtle, to aſk Leave of the Governor to land ſome Rice, and brought back the News with him to the *Engliſh* Houſe of the cruel Handling of theſe poor *Japoneſe*. This had been *Item* enough to the *Engliſh*, if they had been guilty, to ſhift for themſelves, whereto alſo they had ready Means by the Curricurries, or ſmall Boats of the *Amboyners*, which lie along the Strand, in that Number wherewith they might eaſily have tranſported themſelves to *Seran*, to *Bottoun*, or *Macaſſar*, out of the Reach and Juriſdiction of the *Dutch*; but in that they fled not, in this Caſe, it is a very ſtrong Preſumption, that they were as little privy to any Treaſon of their own, as ſuſpicious of any treacherous Train laid for their Bloods.

In the next Place, let it be conſidered, how impoſſible it was for the *Engliſh* to atchieve this pretended Enterpriſe. The Caſtle of *Amboyna* is of a very great Strength, the Garriſon therein two or three hundred Men, beſides as many more of their free Burghers in the Town. What their Care and Circumſpection in all their Forts is, may appear, not only from the quick Alarm they took at the fooliſh Jeſting of the poor *Japoneſe*, made to the Centinel above recited, but alſo by that which a little before had happened at *Jaccatra*, where one of their Soldiers was ſhot to Death for ſleeping on the Watch. Durſt ten *Engliſhmen*, whereof not one Soldier, attempt any thing upon ſuch a Strength and Vigilance? As for the Aſſiſtance of the *Japoneſe*, they were but ten neither, and all unarmed, as well as the *Engliſh*: For, as at the Seizure at the *Engliſh* Houſe, all the Proviſion there found, was but three Swords, two Muſkets, and half a Pound of Powder; ſo the *Japoneſe*, except when they are in Service of the Caſtle, and there armed by the *Dutch*, are allowed to have no Arms, but only a Catan, a kind of ſhort Sword; and it is forbidden to all the *Dutch*, upon great Penalty, to ſell any Hand-gun, Powder or Bullets to the *Japoneſe* or *Amboyners*.

But let it be imagined theſe twenty Perſons, *Engliſh* and *Japoneſe*, were ſo deſperate as to adventure the Exploit, how ſhould they be able to maſter the *Dutch* in the Caſtle, or to keep Poſſeſſion when they had gotten it? What Second had they? There was neither Ship nor Pinnace of the *Engliſh* in Harbour. All the reſt of the *Japoneſe* in the Iſland were not twenty Perſons, and not one *Engliſh* more. The neareſt of the reſt of the *Engliſh* were at *Banda*, forty Leagues from *Amboyna*, and thoſe but nine Perſons, all afterwards cleared by the Governor and Fiſcal themſelves, from all Suſpicion of this pretended Crime, as were alſo the reſt of the *Engliſh* at *Jaccatra*.

On the other Side, beſides the Strength of the Caſtle, and Town of *Amboyna*, the *Dutch* have three other ſtrong Caſtles, well furniſhed with Soldiers, in the ſame Iſland, and at *Cambello*, near adjoining. They had then alſo in the Road of *Amboyna* eight Ships and Veſſels, namely, the *Rotterdam* of 1200 Tuns, the *Unicorn* of 300 Tuns, the *Freemens* Veſſel of 100 Tuns, the *Calk* of 60 Tuns, Captain *Gamal*'s *Junck*, of 40 Tuns, the *Flute* of 300 Tuns, the *Amſterdam* of 1400 Tuns, and a ſmall Pinnace of about 60 Tuns, and all theſe well furniſhed with Men and Ammunition. It is true, that the Stories do record ſundry valiant and hardy Enterpriſes of the *Engliſh* Nation, and the *Dutch* are Witneſſes of ſome of them; yea, have reaped the Fruit of the *Engliſh* Reſolution, yet no Story, no Legend, ſcarcely reporteth any ſuch Hardineſs either of the *Engliſh* or others, that ſo few Perſons, ſo naked of all Proviſions and Supplies, ſhould undertake ſuch an Adventure upon a Counter-Party, ſo well and abundantly fitted at all Points. But let it be further granted, that they might poſſibly have overcome all thoſe Difficulties, yet to what End and Purpoſe ſhould they have put themſelves into ſuch a Jeopardy? They knew well enough, that it was agreed between both Companies at home, that the Forts in the *Indies* ſhould remain reſpectively in the Hands of ſuch as had Poſſeſſion of them at the Date of the Treaty *Anno* 1619, and that the ſame was ratified by the King's Majeſty and the Lords States-General. They knew likewiſe, and all the World takes Knowledge of his Majeſty's religious Obſervation of Peace and Treaty with all his Neighbours, yea, with all the World. What Reward therefore could theſe *Engliſh* hope for of their Valour and Danger? Certainly none other than that which is expreſsly provided by the Treaty itſelf, that is, to be puniſhed as the Diſturbers of the common Peace and Amity of both Nations.

But let theſe *Engliſhmen* have been as fooliſh as they will in this Plot, as the *Dutch* will have them, is it alſo to be imagined, that they were ſo graceleſs, as when they were condemned, and ſeriouſly examined, and admoniſhed by the Miniſters to diſcharge their Conſciences, yet then to perſiſt in their Diſſimulation, being otherwiſe of ſuch godly Behaviour, as to ſpend the Time in Prayer, Singing of Pſalms, and ſpiritually comforting one another, which the *Dutch* would have had them beſtow in Drinking to drive away their Sorrow? Let *Colſon*'s Queſtion to the Miniſter be conſidered, his, and the reſts, Offer and Deſire to receive the Sacrament in Sign and Token of their Innocence, their mutually aſking Forgiveneſs for their like falſe Accuſations of one another forced by the Torture.

Thomſon's laſt Farewel to *Beaumont*, *Colſon*'s Prayer, and his writing in his Prayer-Book; *Fardo*'s Farewel to *Powel*, alſo his conjuring Exhortation to his Fellows to diſcharge their Conſciences, and all their Anſwers thereunto, craving God's Mercy or Judgment, according to their Innocency in this Cauſe; their general and religious Profeſſion of their Innocence to their Countrymen at their laſt parting with them, and finally, their ſealing this Profeſſion with their laſt Breath and Blood, even in the very Article of Death, and in the Stroke of the Executioner. What horrible and unexampled Diſſimulation was this? If ſome one or more of them had been ſo fearfully deſperate, yet would there not one amongſt ten be found to think of the Judgment to come, whereunto he was then inſtantly ſummoned, without Eſſoin, Bail or Mainprize? What! Had they hope of Reprieve and Life, if they kept their Countenance to the laſt? Yet what Hope had *Thomſon* and the reſt when Captain *Towerſon*'s Head was off? Nay, what deſire had *Thomſon* and *Clark* to live, being ſo mangled and martyred by the Torture? They were executed one by one, and every one ſeverally, took it upon his Death, that he was guiltleſs.

Now to blanch and ſmooth over all this rough and barbarous Proceeding, it is here given out, that the Governor and Fiſcal found ſuch Evidence of the Plot, and dealt ſo evenly in the Proceſs, that they ſpared not their own People, having uſed ſome of their native *Dutchmen*, Partakers of this Treaſon, in the ſame Manner as they did the *Engliſh*; but this, as well by the Relation here truly and faithfully ſet down, grounded upon the ſworn Teſtimony of ſix credible Witneſſes, as alſo by other ſufficient Reports of diverſe lately come out of thoſe Parts, appeareth to be a meer Tale, not one alledged by any in the *Indies* in many Months after the Execution, but only invented and diſperſed here for a Fucus, and a fair Colour upon the whole Cauſe, and to make the World believe, that the Ground of this barbarous and tyrannous Proceeding was a true Crime, and not the unſatiable Covetouſneſs of the *Hollanders*, by this cruel Treachery, to gain the ſole Trade of the *Moluccas*, *Banda*, and *Amboyna*, which is already become the Event of this bloody Proceſs. To add hereunto by way of Aggravation, will be needleſs, the Fact is ſo full of odious and barbarous Inhumanity, executed by the *Dutch*, upon the *Engliſh* Nation, in a Place where both lived under Terms of Partnerſhip and great Amity, confirmed by a moſt ſolemn Treaty.

It muſt be confeſſed, that this is in all reſpects a moſt aſtoniſhing and ſurpriſing Relation. That the *Dutch* ſhould be deſirous of ingroſſing the Spice-Trade, had nothing in it but what might be eaſily accounted for, becauſe of the former Inſtances they had given us of their Avarice, that they ſhould make no ſcruple of attacking and deſtroying the *Engliſh* that were ſettled in the Spice-Iſlands, and conſequently ſtood in the Way of their Deſign, is what might have been expected from their boundleſs Ambition, by which they were become formidable, even to their own States; but that they ſhould take this Method, which was at once the moſt barbarous, the moſt provoking, and the moſt contrary to the ſolemn Treaty they had made, is ſtrange in the higheſt Degree. But perhaps it may be accounted ſtill ſtranger, that, when they had done it, they durſt juſtify it, and juſtify it even here; which however they did, which produced the Account we have given the Reader, as appears from that very Account which the *Eaſt-India* Company were not at Liberty to publiſh till the *Dutch* made this Appeal to the Publick themſelves.

After this, indeed, the publiſhing of their Caſe could be no longer refuſed them, eſpecially as what they offered was ſupported by the fulleſt Proofs upon Oath, regiſtered in the Court of Chancery. We ſee from hence, the great Conſequence of the Liberty of the Preſs: Had it been open at that Time, it had been impoſſible to have hindered the Nation from receiving ample Satisfaction for ſuch a flagrant Injury, ſuch an intolerable Inſult. But as it was, we are told, there was a Party in King *James*'s Court, that if they did not juſtify, at leaſt excuſed this horrid Fact, from the *Dutch* Account of it before mentioned, which renders it abſolutely neceſſary, that this *Dutch* Account ſhould be likewiſe given to the Reader, not only to prevent any Suſpicion of Partiality, but that all the Circumſtances of this Tragedy may appear in the cleareſt Light, there being ſome of them which could only be ſet forth by the *Dutch* themſelves.

It may not be amiſs, however, to obſerve, previous to the tranſcribing this *Dutch* Account, that at this Juncture the States were actually demanding and receiving Aſſiſtance from the Crown of *Great Britain*, and that too as large in its Nature, and as effectual in its Conſequences, as any which they had received in the Time of Queen *Elizabeth*, and for which the States expreſſed as much Gratitude and Thankfulneſs to that Monarch, as ever they did to the Queen, and, as it clearly appears, with juſt as much Sincerity. I would not, however, be underſtood to mean, that the Tragedy of *Amboyna* was acted in conſequence of any Inſtructions from *Holland*, ſince that would not only be unfair, but untrue; but then the Reaſon of this ought to be attended to, which was, that the Prince of *Orange* was at the Head of their Affairs, and they could not, under the Eye of their Stadtholder, take any ſuch bloody Reſolutions. But in the *Indies* they were at full Liberty, and there therefore the true Genius of the Nation diſplayed itſelf; and the *Dutch* Writers, in thoſe very times, boaſt, that the General of the *Eaſt-India* Company kept as great a Court, and made in every reſpect as magnificent an Appearance as the Prince of *Orange* himſelf, which plainly proves, that as they hated the Government of the Princes of *Orange*, ſo they were willing that Strangers ſhould take notice of their Independency and Power in another Part of the World, where the Government was in ſuch Hands as they beſt approved.

Theſe Things being remembered, let us now proceed to the *Dutch* Account of the pretended Conſpiracy at *Amboyna*, addreſſed in a Letter to a Friend of theirs here, under the Title of a true Detail of the News that came out of the *Indies*.

7. “ The very Cauſes and Beginnings through which the Governor and Council, eſtabliſhed in the Name of the *United Netherlands* in *Amboyna*, came into Suſpicion that ſomething was plotted againſt the Province, did firſt flow from the great Licentiouſneſs of the *Tarnatanes* in *Moluque* and *Amboyna*, who, contrary to the Contract of Alliance 1606, made with the High and Mighty Lords the States without our Conſent and Knowledge, to make Peace with the King of *Fidore*, as alſo a Truce with the *Spaniards*, their and our ancient Adverſaries, by which the ſaid *Tarnatanes* had too much caſt off all Reſpect, which they, both in regard of our Confederacy and manifold Aſſiſtance, did owe to this State. The *Spaniard* alſo was Maſter enough at Sea in the *Moluccas*, becauſe the *Engliſh* Merchants there in the *Eaſt-Indies* were unwilling to furniſh us with Ships of War towards the common Defence, as they were bound to do, according to the Treaties 1619, to the Number of ten, through which the Voyages to *Manilla* coming to ceaſe, the Enemy traded there without any Interruption, and procured Power to ſend Gallies, Ships and Pinnaces to *Molucca*, with great Succours of People and Proviſion, and that becauſe again through the ſame Default of the *Engliſh* Merchants, there were no Ships of War kept as ſhould have been. The Subjects of the King of *Ternate* began to commit great Inſolencies againſt our Nation, having outrageouſly aſſaulted divers of us divers ways, and alſo ſlain ſome, and we, notwithſtanding, would not obtain any Puniſhment upon them; and as one Outrage unpuniſhed provokes more, through Hope of the like Impunity, or other Conſiderations, ſo were the ſaid *Tarnatanes* of *Amboyna* dwelling at *Lobo*, *Cambello*, and thoſe near adjoining Places, proceeded farther, and have armed themſelves at Sea, and invading divers Iſlands and Places ſtanding under the *Netherlands* Governor in *Amboyna*, ſpoiling them, and killing our Subjects, and taking others, and carrying them away for Slaves; and, notwithſtanding the inſtant Requeſt of the *Netherlands* Governor, no Satisfaction or Juſtice hath followed; but the ſaid *Tarnatanes* are yet gone farther, and openly threatened to murder the *Dutch* Merchants, and to ſpoil and burn the Lodge, or Factory, which our People have many Years there enjoyed, ſo that our Merchants have taken out the *Dutch* Goods to avoid Damage; and the *Tarnatanes* at *Lobo* did actually ſet on fire and ruin the ſaid *Netherlands* Factory.

“ In the *Manichels*, an Iſland being under the Province of *Amboyna*, they have in like manner ſhortly after burned the *Netherlands* Lodge, with the Loſs of all the Goods therein. The *Netherlands* Governor, that by his Preſence and Authority he might cauſe ſuch Rebellions to ceaſe, and to give Order for Time to come,

“ alſo to ſeek Satisfaction and Puniſhment upon the aforeſaid Inſolencies, went towards *Lobo*, with a ſmall Power of Sloops; and coming thereabout, was met, otherwiſe than was wont, by a Navy of Sloops of the *Tarnatans* of *Lobo*, ſtronger than his were; thoſe by their Conferences gave him well to know, how little Reverence they gave the *Dutch* Governor: They braved him without any hope of Reſtitution of any thing to come, ſo that he was fain to return to his Caſtle of *Amboyna*. By reaſon of theſe things, the ſaid *Tarnatans* became ſo ſtout and daring, that they gave out openly, that they would come and ſpoil our Subjects, by a general Army, with above an hundred Frigates: With theſe, they ſaid, they would come againſt *Amboyna*, to make an univerſal Spoil of our People, through which there came a great Fear upon the *Indians*, ſtanding under the Subjection of the High and Mighty Lords the States, as alſo over the *Netherlanders*. In the Iſlands lying far Eaſtward of *Banda*, it was alſo ſaid, and the News went currently there, that the *Dutch* were ſure enough quit of the Caſtle of *Amboyna*; and at that Time there was divers ſecret Correſpondencies between the *Indians* and others, which gave us great Suſpicion.

“ By this means the *Netherlands* Governor and Council of *Amboyna* were moved to have ſpecial Regard, and look narrowly into all things, ſeeing that it might thence be clearly gathered, that ſomething might be plotted againſt the State in *Amboyna*, and that the *Indians* of themſelves durſt not offer to undertake any ſuch great Deſign without ſome great Help of ſome of *Europe*, either of *Spaniards*, *Portugueze*, or ſome others; and alſo they underſtood, that theſe at *Lobo*, *Cambello*, &c. had great ſecret Correſpondence with the *Engliſh* Merchants. When things were in ſuch a State at *Amboyna*, there came forth, and was wonderfully diſcovered in *February* 1623, a horrible Conſpiracy againſt the Caſtle and Perſon of the *Dutch* Governor, the whole State of *Amboyna*, and firſt by the Apprehenſion of a certain *Japoneſe*, who, at an unſeaſonable Time, was often ſeen upon the Wall of the Caſtle, where he alſo over-curiouſly enquired of the moſt unſkilful and ſillieſt Soldiers, touching the Setting and Change of the Watch, and what Number of People might be in the Caſtle, and many other things: Whereupon in the very Act the ſaid *Japoneſe* was apprehended, and being examined of many Circumſtances, he confeſſed, that the *Japoneſe* Soldiers under our Service, had determined to make themſelves Maſters of the Caſtle, and that they ſhould have ſet upon this by the Help of the *Engliſh*, who had ſolicited them unto it; and that he, with all the other *Japoneſe* in the *Engliſh* Houſe, oftentimes, within three Months before, had conferred with the *Engliſh*, touching the Manner whereby they ſhould bring this Treachery to paſs. Then all the *Japoneſe* Soldiers, who were in our Service, were diſarmed and impriſoned; and by Examination of them all, it appeared plainly, by an orderly and joint Confeſſion, that all the ſaid *Japoneſe*, upon the Treaty of *Gabriel Towerſon*, and other *Engliſh* Merchants and Officers, agreed to aſſiſt the ſaid *Engliſh* to betray the ſaid Caſtle, and to give it over into the *Engliſh* Power; and that *Gabriel Towerſon*, and *Abel Price*, an *Engliſh* Chirurgeon, and other *Engliſh*, dealt often with them, on the Ways and Means how they ſhould work it.

“ The ſaid *Abel Price* being before impriſoned for a foul and execrable Fact, and yet remaining ſo confined, and although it appeared ſufficiently to the Governor and Council of *Amboyna*, out of the Confeſſion of the *Japoneſe*, what the ſaid *Gabriel Towerſon*, with his Merchants and other Accomplices, had before reſolved to do, and that the Council had ſufficient Information to impriſon them all, yet the General Council would not precipitate, but commanded the ſaid *Abel Price*, then a Priſoner, to come before the Council; and after the Places, Perſons, and Time nominated to him, where and when he had dealt with the *Japoneſe* and other *Engliſh* about the ſaid Treachery; it was alſo from him well underſtood, how he and another *Japoneſe* had perſuaded all the *Japoneſe* to conſent to this Villany, and that conſequently the ſaid *Towerſon*, as the firſt Author, and all the other *Engliſh* Merchants, had alſo Knowledge of the ſaid Treachery. Upon this full and uniform Examination and Confeſſion of twelve Perſons, as well of the eleven *Japoneſe* as one *Engliſh*, the ſaid *Gabriel Towerſon* was called to the Council, and there appearing, the ſaid *Towerſon* called together all his People unto the Caſtle, upon the Requeſt of the General Council, who were then taken and impriſoned, except the ſaid *Gabriel Towerſon* himſelf, to whom, at his Requeſt, and in regard of his Quality, being chief Merchant in *Amboyna*, in the Name of the *Engliſh* Company, his own Houſe was allotted him for his ſafe-keeping and forth-coming; and the ſaid Priſoners were all lawfully and orderly examined; and it appeared by them jointly, according to their own Confeſſion, every one having underwritten it with his own Hand as followeth:

“ *Gabriel Towerſon*, about New year's-day 1623, having with him almoſt all the *Engliſh* Merchants of the Foreign Cantore in *Amboyna*, aſſembled them in his Chamber, and propounded to them, that he had ſomething of great Moment to impart unto them under the Fidelity of an Oath to be taken before, for the keeping ſecret thereof, and being truſty therein, ſaying, it is neceſſary ſo to be; for if the thing ſhould come abroad which I ſhall make known unto you, it will coſt all our Lives: Whereupon the holy Goſpel was produced, upon which every one who was preſent did ſwear Secreſy and Fidelity, as was required. Then *Towerſon* opened to the Conſpirators, how he had a Way and Means to make himſelf Maſter of the Caſtle of *Amboyna*; and whereas ſome preſent made it difficult to do, being too weak for it; the ſaid *Towerſon* anſwered, that he had already won to his Purpoſe the *Japoneſe* Soldiers, who were in the Caſtle, and that they ſhould execute his Purpoſe, when the *Dutch*, who were in the Caſtle, were in their greateſt Weakneſs, and worſt provided, or when the Governor ſhould be abſent about ſome Exploit; and that they ſhould wait till ſome *Engliſh* Ship or Ships were in *Amboyna*, whoſe People he might employ in this Attempt; as alſo, when all other the *Engliſh* Merchants and Slaves of the Foreign Cantore in *Amboyna* ſhould be ſent for to the Caſtle; and ſaid farther, that he knew how to get Men enough, and they ſhould leave this to his Care, and themſelves do their beſt; and that they of *Lobo* ſhould alſo come to help him, with certain *Correcurries*, &c.

“ Upon which Inducements, all that were preſent ſwore to aſſiſt *Towerſon* herein, and concerning the Manner of Execution; the ſaid *Towerſon* had preſcribed to the *Japoneſe*, who were in the Caſtle, that they ſhould ſend to every Point of the Bulwarks two Men, and the reſt in the Court ſhould attend the Governor, and murder him; and that at the Sign which ſhould be given to the *Engliſh*, they ſhould make themſelves Maſters of every Point of the Bulwark, and kill all who ſhould reſiſt, and impriſon the reſt; and further, ſhould take and divide between themſelves and the *Japoneſe* the Goods of the *Eaſt-India* Company, except one thouſand Rials of Eights, which every *Japon* ſhould have before; and that they ſhould kill the Citizens, who would not conſent with them, and do them all the Miſchief they could; and touching the Time, he had not yet certainly ſet it; but that there ſhould ſuddenly be another Aſſembly of the Conſpirators, when *Gabriel Towerſon* would give Orders for all things, and would give a Sign to the *Japoneſe*, whereupon, when they ſhewed it, they ſhould begin the Work within.

“ The ſaid *Gabriel Towerſon* being aſked in particular, what moved him to ſuch a wicked Fact? He anſwered, the Deſire of Honour and Profit: Being farther demanded, who ſhould enjoy the Honour and Profit, and for whom he would have taken the Caſtle? he anſwered, that if he did obtain his Deſire, he ſhould preſently have advertiſed thoſe of his Nation being in *Batavia*, and called for their Help, who, if they had ſent him Succour, he would have kept the Caſtle to his own Company, *viz.* the *Engliſh Eaſt-India* Company; and if not, he would have held it for himſelf, and have endeavoured a Peace with the *Indians*; that ſo, by the one Means, and the other, he might attain his Purpoſe. After the Examination of *Towerſon* was ended, the *Dutch* Gover-

“ nor in *Amboyna* upbraided him of his cruel Intention, and aſked if this ſhould have been the Recompence of the manifold Honours and Kindneſſes he had done to him? Whereunto *Towerſon* anſwered with a deep Sigh, Oh! if it were to be begun it ſhould not be done.

“ This voluntary Confeſſion and penitent Acknowledgment, with much Sorrow, was made the Ninth of *March*, being the Day when the Execution ſhould have been done; but the Examination of *Towerſon* was ended the Eighteenth of *February*, ſo many Days before. This is the Subſtance of the Confeſſion of the ten *Japoneſe*, of fourteen *Engliſh*, and of a *Netherlandiſh* Merinho, or Captain of the Slaves, who all confirmed theſe their Confeſſions with their own Hands. What Crime this intended Prodition was, is hence very many manifeſt, and undoubted; what Puniſhment is due to Treachery, according to the Law and Cuſtoms of all Nations, is alſo well known; no true Chriſtian Man will patronage any ſuch horrible Attempt, but will adjudge it worthy of Death, as it was determined upon the Accomplices of the Conſpiracy, according to the Order of Juſtice, as there in *Amboyna* is exerciſed, according to Deſert, by the Governor and Council, in the Name of the High and Mighty Lords the States. Here you have, Sir, the very Subſtance of the Truth, both of the Fact and Puniſhment, other than which many Things are ſpread abroad in *England*, but upon what Pretence or Intendment I know not; let the Matter itſelf ſpeak for itſelf.

“ The firſt Point which is objected againſt this Juſtice done in *Amboyna*, is concerning the Proceedings which are ſaid to be holden without Formality, and with Extremity, againſt theſe Conſpirators: Your Worſhip, and each reaſonable Man, knoweth that every Land hath their Laws, and Ordinances, and their particular Manner of Proceedings, as well in Civil, as in Criminal Cauſes; *England* hers, *France*, *Spain*, *Dutchland*, and all other Kingdoms and Governments have alſo theirs, which are juſt and lawful to every one in their Dominion; ſo that when any one will judge of the Equity or Juſtice of a Proceeding uſed in any Land, he muſt examine the ſame according to the Laws and Cuſtoms of that Kingdom, or Dominion, where the Juſtice and Proceedings were holden. Theſe Proceedings were holden before the Governor of the *Netherlands*, in the Name of the Illuſtrious Lords the States, having ſupreme Power, many Years ſince, in the Iſles of *Amboyna*, which were conquered in the Name of the ſaid Illuſtrious Lords the States, from the *Spaniards* or *Portugueze*, who held the Caſtle in the Name of the King of *Spain*, our hereditary Enemy; therefore they are now poſſeſſed in the Name of the Lords the States, and are under their Dominion, by a juſt and lawful Title of War, according to the Law of Nations. Theſe Juſtices adminiſtered according to the Law of the *Netherlands*, in that Manner as was uſed in the Proceedings againſt thoſe Conſpirators. I know that the Laws of *England* are diverſe from ours in criminal Caſes; yea, and from all the Nations in *Europe*.

“ Howbeit therefore no Man hath any Ground of Reaſon to ſay that the Proceedings of the *Engliſh* Judges againſt Delinquents are not legitimate, tho' the ſaid *Engliſh* Proceedings do vary in the Manner from the Proceedings of *France*, *Spain*, &c. where other Cuſtoms are; for that is lawful which agreeth with the Laws of the Land where the Fact is committed. Now then, the *Japoneſe* Soldiers being in the Service of the *Netherlands* Company in *Amboyna*, are diſcovered to have conſpired againſt the Caſtle and the Governor there, under whoſe Oath and Pay they were; they were apprehended, examined, and convicted of the ſaid Conſpiracy. This Proceeding is lawful, and toucheth no Man, becauſe the ſaid *Japoneſe* knew no other Maſter than the *Netherlanders*, under whoſe Oath, Service and Pay they ſtand. All theſe Conſpirators, with the ſaid *Marinho*, a Captain of the *Netherlands* Slaves, confeſſed with one Mouth, that they were moved and induced to this Conſpiracy by the *Engliſh* Merchants reſident in *Amboyna*, whoſe Names they named. Now, not only the Right of the *Netherlands*, but *England*, and of the whole World, requireth that the Authors, Abettors, and Accomplices of Murder and Treaſon, ſhould be puniſhed with Death.

“ Whereunto, according to the Common Law, as alſo the particular Laws of every Kingdom or Dominion, the ſuſpected Perſons firſt, and before all, ſhould be impriſoned, not only for preventing the Effect of their evil Purpoſes, but that they might alſo receive their deſerved Puniſhment; which Apprehenſions could not be done of any other Man than by the Command of the *Netherlands* Governor, to whom it belonged to take care to ſee every Act concerning ſupreme Power to be there obſerved; and eſpecially the higheſt *Engliſh* Officer there could not apprehend theſe *Engliſh* Conſpirators, becauſe all the chief of the *Engliſh* Merchants at *Amboyna* were themſelves of the Conſpiracy, and Accomplices of the Fact upon which the Apprehenſion was made; therefore the Apprehenſion of the *Engliſh* Accomplices muſt be done by the *Dutch* Governor, who therefore hath therein proceeded according to the Cuſtom of all Nations of the World.

“ And that theſe Apprehenſions may be holden more lawful, it appearing out of the written Proceſs, that the ſaid *Engliſh* Accomplices were not impriſoned upon the firſt Suſpicions and groſs Evidences which were had againſt them; but then, at laſt, when all the *Japoneſe* Soldiers were taken, examined, and convicted, and had diſcovered, by the uniform Confeſſion of all the eleven.

“ The Names, and Surnames of ſuch *Engliſh* as had perſuaded, and hired them to this Fact, of which *Engliſh*, viz. one *Abel Price*, Barber, was before apprehended as an Incendiary, for burning, and other Violences done upon other Houſes, who alſo was firſt examined, and firſt confeſſed; as the other eleven *Japoneſe*. That he, by Name *Gabriel Towerſon*, and other *Engliſh* Merchants, in the foreign Countries of *Amboyna*, had Knowledge of this Conſpiracy, *&c.* ſo that it may be ſeen out of that which went before, that the *Dutch* Governor dealt no otherwiſe in the Apprehenſions and Examinations of the *Engliſh* than according to his Place and Power, and that with great Diſcretion, according to the Laws of the United Provinces. The ſecond Point, which is abſolutely diſperſed in *England* againſt this Execution is, that it is ſaid, that it did not appertain to the *Netherlands* in *Amboyna*, to impriſon the ſaid *Engliſh*, and to proceed againſt them, or to puniſh them; but that it did belong to the Council of Defence, reſident at *Jaccatra*, conſiſting half of *Engliſh* and half of *Netherlanders*, according to the Treaty of the Year 1619, made between his Majeſty and the Lords the States, between the two *Eaſt-India* Companies.

“ That I might the better inform myſelf thereof, I took in Hand, and peruſed the general Treaty of 1619, with the Explication following thereupon; but I profeſs, as I think, that every underſtanding Man muſt confeſs, that neither in the ſaid Treaty, nor in the Enlargement, any one Article or Word could be perceived, whereby, according to that which is untruly ſaid in *England*, either this, or any ſuch thing, is ordained or decided by the ſaid Treaty, as it ought to have been in ſo great and important a Point as this Part of Juriſdiction is, I appeal to all wiſe Men, who I deſire may judge of this, whether this Speech of ſome in *England*, to wit, that the ſaid Council of Defence ſhould alone have judged theſe Conſpirators, be agreeable to the ſaid Treaty, or contrary to the ſame. I find many Arguments for my negative Opinions, to wit, that before the Treaty of 1619, the *Dutch* in *Amboyna* adminiſtered Juriſdiction and Judicature upon all, and every one, who dwelt in, or under the Juriſdiction of the Caſtle, as well Inhabitants as Strangers, without Difference; and that, in the ſaid Treaty, the *Dutch*, with the *Engliſh* Merchants, made only a League in the Manner of Commerce and Negotiations of Nutmegs, Mace, Cloves, and Pepper, in ſome Quantities, without having any further Treaty or Communication in the Land. So that without the Bounds of this common Negotiation, every one remained free and unhindered in the Land by the Right and Poſſeſſion which either Company enjoyed and exerciſed ſeverally, according as the ſame appeareth out of the twenty-third Article of the Treaty, where it is expreſsly ſaid, that Caſtles and Forts ſhall remain in their Hands who do at preſent poſſeſs them: And out of the thirteenth, fourteenth, and fifteenth Articles of the Treaty, all may ſee that this Common Council of Defence hath no more Power, ſave only over the Fellowſhip of the Treaty, that is, over the Navy of Defence in the Sea, to the Defence of common Merchandize and Liberty of Commerce. And, laſtly, to tax the Charges for the Proviſion of Ammunition in the Forts; neither can any other Thing be ſincerely collected out of the ſaid Treaty, ſo far as I can conceive.

“ Therefore, this ſecond Point is found to be untrue and abuſive, being not founded upon the ſaid Treaty, which Treaty, notwithſtanding, ought to be the only Rule both of the one and the other Company. Finally, it is given out in *England*, that in the Examination of the Conſpirators, there was Exceſs in the *Netherlands* Judges in the Point of Torture. I acknowledge, that no Argument or Pretext againſt the Juſtice of this Execution, hath more moved me in the Beginning, than this Pretence of Exceſs aforeſaid; becauſe this ſtirreth Chriſtian Compaſſion; although I alſo judge, that wiſe Men will not ſuffer themſelves to be too much tranſported thereby, before the true Reaſons do fully appear which ſhould move us thereunto; for I well remember yet, that in the Time of former Miſtaking in the *Indies*, many Things were pretended on both Parts; upon which Pretence were great Out-cries on either Side, which yet, by due Examination, were found to be falſe Pretexts of ſome Ill-willers, and Men deſirous to wrangle; which Pretences, being thoroughly ſifted by the high and much-admired Wiſdom of his Majeſty, and the Lords the States, were well diſcovered to be no ſuch Matters as they were made; as it is alſo undoubtedly believed, that his Majeſty and the States will yet further do in this Affair, and ſo the Cauſe of the *Dutch* Company may be rightly juſtified, of which I underſtand, that the Lords the States have ſpecial Regard; and that they have been thoroughly informed what is the very Truth of the Things there paſt, and of the Execution in *Amboyna* of the *Engliſh* Conſpirators; unto which End the Lords the States reſolved to ſee and peruſe all the Papers and Letters touching the ſaid Proceedings. And now, thereupon, Men ſpeak far otherwiſe than heretofore; for Pretences and Cavils cannot ſtand with Truth. And it doth plainly appear, that there is little Truth in the Matter of Torture, reported to be moſt cruelly inflicted upon the *Engliſh* Conſpirators, as in *England* it is ſaid; and I have ever ſuſpected this for a Slander; for, I know the *Dutch* Nation doth naturally abhor this kind of Cruelty, and are as much moved to Commiſeration as any other People. But whether theſe evil-minded Men, who have ſcattered this great Slander in *England*, and have ſo fouly defaced a juſt Cauſe, have done it by Occaſion of an Uſe of Tortures in theſe Lands in ſome weighty Cauſes, according to the Cuſtom of moſt Dominions in *Europe*, I cannot judge.

“ But is that to be cenſured and judged to be unjuſt of the whole World, which is repugnant to the Laws of *England* (or any one Nation) where Torture is really uſed? Nothing ſo but the Juſtice or Injuſtice of a Cauſe muſt be determined according to the Laws where it is done, and not of other Lands. If this were not ſo, why then ſhould not the whole World much more judge that as hard, and a thing unheard of, which in ſome Cauſes is uſed in *England*, according to the Laws there, when they proceeded againſt ſome guilty Perſons, who being once, and again aſked of the Judge, and utterly refuſing to be legally tried, is adjudged to be dumb, that is, by Contumacy, whoſe Condemnation then accordingly followeth, that he is laid upon a Table, or Plank, and another Plank upon him, that his Body is miſerably bruiſed, and ſo preſſed violently to Death. The which, according to the Confeſſion of all Nations, and by the *Engliſh* Writers, is judged to be one of the moſt ſharp and ſevere kinds of Deaths that can be invented; yet cannot ſuch an Execution be called cruel and unlawful, when it is done in *England*, becauſe it is done according to the Laws of that Land, though Strangers ſhall judge otherwiſe of it; and in like Manner the *Engliſh* Nation cannot complain of the Torture which Evil-willers ſay was uſed upon theſe *Engliſh* Conſpirators in *Amboyna*, becauſe it was done according to the Laws of this Government, and is not unuſual in Caſes of Treaſon, neither with us, nor with any Nation in *Europe*.

“ And for *England* itſelf, it is well known, and his moſt excellent Majeſty doth acknowledge, by his own princely Pen, that the Rack and the Manicles are the only Tortures that are exerciſed upon Traitors, to force them to confeſs what they know to be dangerous to the State; and to ſay the Truth, without taking Parts, the *Engliſh* Conſpirators being affronted with the uniform and written Confeſſions of the eleven *Japoneſe*, their Accomplices, which would convince them ſufficiently, according to the Laws, and find them guilty of the ſame Conſpiracy, and conſequently of Death; if now notwithſtanding this, they had perſiſted in the ſtout Denial of the Fact, were not this enough to judge them dumb by Contumacy, and ſo to eſteem them worthy of this ſore Puniſhment of preſſing to Death as aforeſaid? But this Torture of ours, is to be judged far leſs than that preſſing where the Malefactor doth ſuffer ſuch extream Miſery as cannot be imagined, and which is not to be lenified or eaſed at all, but ended by Death.

“ But to the ſufficient Satisfaction of myſelf, and your Worſhip, and all Men, and not to ſpeak according to the Sentences and Conſciences of others, I have uſed all Diligence to get into my Hands the written Proceſs concerning the Conſpirators in *Amboyna*, which I obtained authentically, and read carefully, and I find, that all by me above ſaid is confirmed, to wit, that the *Japoneſe* Accomplices were examined and made their Confeſſions as aforeſaid, for three Days, *viz.* the 23d, 24th and 25th of *February* 1623; and that all this being done and conſummated before, then at laſt is *Gabriel Towerſon*, firſt with the reſt of the *Engliſh* Accomplices, impriſoned the ſaid 25th of *February*, when their Examination and Confeſſion began, and continued divers Days, without ever haſtening till the 3d of *March*; and the ſaid Examinations and Confeſſions being ſo finiſhed, the *Netherlanders* Governor and Council deliberated whether the Puniſhment might be deferred to any long Time, or referred to any other Place; but it was ſo concluded, by joint Conſent of all, that the ſaid Puniſhment there deſerved, muſt be executed in the ſame Place for Example; and that it could not in any wiſe be delayed without extream Danger, for Reaſons there related: And, among others, becauſe the *Tarnatans* and *Indians* about *Amboyna* had, otherwiſe than they were wont, rebelled; neither could it be further known what great Confederacy theſe Conſpirators had made with them and others.

“ And touching any extraordinary and cruel Torture, I have accurately looked over every one's Confeſſion; but I find not one Word in any one, which maketh any Mention of ſuch Torture, as is unjuſtly ſpoken of in *England*; nay, ſcarce find any Mention of that ordinary Torture which is in Uſe, ſave only theſe Words; in one Act of the 25th of *February* 1623, *viz.* the Council being gathered together, have thought meet that all the *Engliſh* ſhould be preſently examined, one after another, as accordingly it was inſtantly done, and ſome of them before any Torture; others, after a little, or rather a Touch of it, confeſſed as followeth.” Unto

“ which followeth preſently, the particular Confeſſion of every one, ſubſcribed with his own Hand, as aforeſaid. So that hence it is manifeſt, that no extraordinary Torture was uſed in ſuch Manner as is given out there by thoſe that wiſh us evil; nay, that thoſe few that felt any, were only touched (not puniſhed) with ordinary Torture.

“ And thus your Worſhip hath the upright and impartial Truth of this Buſineſs, touching the whole Paſſage as it proceeded, and the Puniſhment as it was inflicted, from which ſome of the *Engliſh* were exempted by Favour, that the *Engliſh* Goods ſhould not be loſt, according as Order had been given to that End. And I find that the Sentence had been given the 9th of *March*, 1623, by a competent Aſſembly of fourteen Judges, who, as it appeareth in the Sentence, in the doing thereof, did before earneſtly call upon the Name of the Lord, that he would pleaſe to be Preſident, and predominant in every one of their Hearts, in this ſorrowful Aſſembly, and that he would inſpire them only with that which might be judged to be expedient and juſt, *&c.* So that out of all that is above-ſaid, nothing elſe can appear, but that this Buſineſs was managed lawfully and orderly, by Men of Honeſty and Conſcience, againſt ſuch as had undertaken againſt the State, againſt the Wealth, and Advantage of this *Eaſt-India* Company, the Lives of their Officers there placed, againſt the State and Welfare of many, who as little deſerved, and as little expected ſuch Wickedneſs from their friendly Confederates in the ſame Society of Merchants there reſiding with them.

“ And now (conſidering the Premiſes) I hope it ſhall be far from every Chriſtian, in anywiſe, to protect, or excuſe this wicked Fact; but rather to mourn and grieve, as we do, for this Conſpiracy, and for the Evil the Conſpirators have ſo deſervedly drawn upon their own Heads, and to honour them who, in Juſtice, have puniſhed Villainy according to the true Merit thereof; for, we all know, that, without Juſtice, without Reward of that which is good, and Puniſhment of that which is evil, no Society of Mankind can conſiſt.

“ And for this Information, which I ſend in Love and Honour to your Worſhip, as unto a Lover of Truth, and a Hater of Treachery, you may make ſuch Uſe as to you ſhall ſeem good in any Place where you come, both for Refutation of any thing already reported contrary thereunto, and for Prevention of any farther falſe Rumours or Clamours. And, finally, for the Propagation of that undoubted Truth, which here, to my beſt, I have endeavoured to diſcover.

“ And if you ſhall meet with any thing of Worth, which can be truly avowed to be contradictory unto any thing I have written, I deſire to underſtand it from you, and you to ſuſpend your wiſe and impartial Judgment, till I have cleared it unto you: Truth remaineth ever the ſame. So I commend you to the God of Truth, deſiring him to give us Minds, not to judge according to outward Appearance, but to judge with righteous Judgment.”

8. It is evident enough, from the Stile and Compoſition of this extraordinary Piece, that it was penned at the Requeſt, and for the Uſe of ſome Perſon of Credit here, who was a great Friend to the *Dutch*, and highly inſtrumental in preventing the Government from interpoſing, as they ought to have done, in favour of the *Eaſt-India* Company, and obtaining the *beſt*; for a *full* Satisfaction could not be had, for the baſe and barbarous Uſage of Captain *Towerſon*, and the reſt of the *Engliſhmen*, who were thus cruelly murdered at *Amboyna*. But it is not ſo eaſy to ſay who this Perſon was. The Writers of Scandal in thoſe Times, charged this, diſſuading the King from interpoſing, upon two Perſons, by Name, *viz.* the Great Duke of *Buckingbam*, and the then Secretary of State Sir *Ralph Winwood*. And I have met with a Book, printed in 1651, in which it is affirmed, that the Secretary received a Bribe from the *Dutch* of 30 or 40000 Pounds for that Service only. I take this to be a horrid Calumny; for having taken ſome Pains in examining the Hiſtory of thoſe Times, of which indeed I once intended to have written, I have met with ſo many Proofs of the Candour, Integrity, and publick Spirit of that worthy Secretary, that I make not the leaſt Scruple of affirming, that this muſt be a prodigious Falſhood.

As to the Duke of *Buckingbam*, his Intereſt with King *James* was ſo great, that if he had not been ſome way or other appeaſed, I cannot but think the Maſſacre at *Amboyna* would not have paſſed as it did; but, at the ſame time, I muſt profeſs, that I do not believe he was capable of being bribed to ſuch a Behaviour: I rather think he was miſled and impoſed upon; and I make no queſtion that this very Paper was tranſmitted to ſome Perſon in his Confidence for that Purpoſe. It is an eaſy matter to ſpeak ill of the Dead, and too common a Practice to tear thoſe Characters to pieces which are leaſt like to be defended; but this I dare not do: Though, to ſhew that it is not without Reaſon, that I ſuſpect the Duke of *Buckingbam* to have had a large Share in preventing King *James* from teſtifying a becoming Reſentment upon this Occaſion, I will relate a particular Fact that led me into this Opinion. The *Eaſt-India* Company, to perpetuate the Memory of this barbarous Tranſaction, cauſed the Tortures and Sufferings of the *Engliſh* at *Amboyna*, to be very exactly painted, and hung up in their Hall; which Picture, by the Direction of *Buckingbam*, was taken down; for which this Reaſon was aſſigned, that, as it had not been thought proper to involve the Nation in a War on this Account, it was, by no Means, decent, that ſuch a Picture ſhould remain in publick View; ſince, at the ſame time that it expoſed the Cruelty of the *Dutch*, it threw ſome kind of Odium on the *Engliſh* Adminiſtration.

But tho' theſe Paintings in Oil were removed, the *Eaſt-India* Company could not be drawn, either to forget this Affair, or to ſuffer the Account that this *Dutch* Agent had publiſhed of it, to paſs unanſwered; and therefore they employed a very good Pen, to ſhew the Inconſiſtencies of this Relation, and furniſhed him with all the Materials that were requiſite for that Purpoſe. This Deſign of his he executed with great Spirit and Diligence, and the Piece itſelf is ſo clear a Vindication of the Innocence of the *Engliſh*, and ſo full a Proof of the Cruelty and Barbarity of the *Dutch*, that I have thought fit to inſert it for the ſame Reaſons, which induced me to give Place to the other Papers; and I perſuade myſelf that it will be very agreeable to my Readers, to ſee, at one View, and in ſo narrow a Compaſs, all the authentick Evidence that ſtill remains of this cruel, arbitrary, and unjuſt Proceeding, by which ſo many brave Men were, at that Time, deprived of their Lives in ſo ignominious a Manner, and the *Engliſh* Nation for ever deprived of ſo important and valuable a Commerce. This Reply of the *Eaſt-India* Company was conceived in the following Terms.

“ The Compiler of this Relation, perceiving that he had an hard Taſk to make it probable, that eighteen *Engliſhmen*, Merchants, and their Servants, all unarmed, ſhould, with the Aſſiſtance of ten *Japoneſe*, likewiſe unarmed, undertake the Surprize of a Caſtle, ſo provided every Way as that of *Amboyna*, is before in the Relation of the *Engliſh* truly deſcribed to be: As alſo the ſame Author well weighing, that albeit, all that he was to write of this pretended Conſpiracy ſhould be taken for true; yet the Fact would ſeem very poor to bear ſo rigorous a Puniſhment in Perſons of that Quality, and of that Relation to thoſe that inflicted it, provides more ſkilfully than fairly, for both theſe Points, in the Preamble of this Relation. To this End he rakes and heaps together all the Jealouſies and Dangers that the *Dutch* had in the *Indies*; yea, and more than they truly had at, or about the Time of the pretended Conſpiracy, and applies them all to the Suſpicion of this Buſineſs, as if all their Enemies were likely to conſpire with the *Engliſh*; and therefore the Facts, under Colour whereof they were condemned and executed, were poſſible and probable; and as if the State of the Time had been then ſo dangerous that every Shadow of Conſpiracy was to be exquiſitely enquired of, and the leaſt Offence to be ſeverely puniſhed; wherefore,

“ fore, although this be no direct Charge of the *Engliſh*, but uſed by the Author to ſupply the Want of Probabilities in the Proceſs itſelf.

“ It will not be amiſs to examine the ſeveral Circumſtances, and how far they may yield any Suſpicion againſt the ſaid *Engliſh*. Now, this Author taketh the many Grounds of this Suſpicion of ſome great Plot againſt the Province of *Amboyna*, from the unwonted Boldneſs and Inſolence of the *Tarnatanes*, firſt in the *Moluccas*, and then in *Amboyna*: For thoſe in the *Moluccas*, he ſaith, they had lately before the pretended Conſpiracy of the *Engliſh*, gone about, contrary to the Treaty, *Anno* 1606, between them and the *Dutch*, to make Peace with the King of *Tidore*, and a Truce with the *Spaniards*, without the Conſent or Knowledge of them the *Dutch*; which, how honeſtly and conſcionably it is alledged to this Purpoſe, may appear by the Journals of thoſe Parts; which, evidently ſhew, that this Treaty between thoſe of *Ternate* and *Tidore*, was in *November*, 1621; that is to ſay, fifteen Months before this forged Conſpiracy, and that with the Knowledge of *Houtman*, the Governor of the *Dutch*, who, upon the 19th of *November*, the Year aforeſaid, acquainted M. *Nichols*, the Agent of the *Engliſh* in thoſe Parts, with the Preparations of this Treaty, which was actually holden at *Ternate* the 24th of the ſame Month. But the Matter was ſo well handled by the *Dutch* to keep thoſe neighbour Iſlands in perpetual War, that the Treaty was diſſolved *re infecta*; and the 7th of *December* following an Edict was publiſhed by the King of *Ternate*, commanding all the *Tidorians* forthwith to depart the Iſland of *Ternate*, upon Pain to be made Slaves.

“ After this, the Correſpondence between the *Dutch* and *Tarnatanes* in the *Moluccas*, returned into as firm a State as ever. The *Tarnatanes*, performing daily Exploits againſt the *Spaniards*, and communicating the Triumph with the *Dutch*: as the 17th of *February*, 1622, being a full Year before the feigned Treaſon of the *Engliſh*, the King of *Ternate*, with twenty Curricurries, took a *Spaniſh* Gally, ſlew forty in Fight, and took one hundred and fifty Priſoners, whom they ſold to the *Dutch* for Cloth and Rice; and coming by the *Hollanders* Caſtle of *Maalaio*, the 18th of the ſame Month, with the Heads of divers *Spaniards* at his Stern, the *Dutch* ſaluted him from their ſaid Caſtle with nine Shot of great Ordnance. The 25th of *April* following, the Admiral of the King of *Ternate*, took a Prow of the *Spaniards*, ſlew ſome, and ſold the reſt to the *Dutch*; the 28th of the ſame Month, both *Dutch* and *Engliſh* were feaſted by the King of *Ternate*; the 28th of *May* next enſuing, the King of *Ternate* went forth to *Machain* with ſix Curricurries, and at his Departure, was honoured with thirty Shot of great Ordnance from the *Dutch* Caſtle; the 15th of *June* the Admiral of the King of *Ternate* made a Voyage towards *Mindanow*, carrying diverſe of the *Dutch* with him to aſſiſt him; the 3d of *July* the *Tarnatanes* took their Priſoners and ſold them to the *Dutch*; the 24th of *Auguſt* the King of *Ternate* made one *Vogler*, a *Dutch* Merchant, his Treaſurer, at whoſe Inſtalment in his new Office, the *Dutch* gave ſeven great Shot from the Caſtle. And this good Correſpondence between the *Tarnatanes* and the *Dutch* in the *Moluccas*, continued even until, and after the Execution of the *Engliſh* at *Amboyna*, which was, as has been ſhewed, in *February* 1623, N. S. upon the 14th of which Month the *Dutch* gave the King of *Ternate*, and other Blacks, two hundred Bales of *Japon* Rice, with other Preſents; at the Delivery whereof there were ſhot off from the Caſtle ſeven Pieces of Ordnance, and three Vollies of Small-Shot: By all which may appear how ſincerely this Author applieth the Difference between the *Dutch* and the King of *Ternate*, which was none at all, to this Buſineſs at *Amboyna*.

“ The next Point is, that the *Tarnatanes* in the *Moluccas* went about alſo to make Truce with the *Spaniards*, without Conſent or Knowledge of the *Dutch*, wherein this Dealing of the Author is worſe than the former; for this Treaty of Truce appeareth by the Journals to have been holden the 19th of *July* 1623, which was five Months after the Execution of the *Engliſh* at *Amboyna*, and ſo came too late to move Suſpicion againſt them; and yet this pretended Fear and Jealouſy of the *Moluccas* is further amplified by the Strength of the *Spaniard*, being then, as this Author affirmeth, Maſter of the Sea there; and that by default of the *Engliſh*, who, contrary to the Treaty of the Year 1619, had deſerted the Defence, and ſent no more Ships, neither to the *Moluccas*, nor to the *Manillas*; whence now the *Spaniards* had Means to ſend Ships, Gallies, and Pinnaces to the *Moluccas*. What the Strength of the *Spaniards* in the *Moluccas* by Sea was at the Time of this pretended Fear, may appear, by the Exploits beforementioned, done upon them by the Curricurries of the *Tarnatanes*, without the Help of the *Dutch*.

“ But for the Default of the *Engliſh*, which is here odiouſly alledged, it will be requiſite to ſet down the true Cauſes wherefore the *Engliſh* relinquiſhed the Action of Defence, as well at the *Manillas* as elſewhere, being a Matter much aggravated upon all Occaſions by the *Dutch*, albeit themſelves have given the Cauſe thereof. Wherefore ſhortly, the true Motives of the *Engliſh* their deſiſting from the Action of Defence is as followeth. The *Engliſh* had, by Agreement of the Council of Defence, two Years together maintained a Fleet of five tall and warlike Ships to join with the like Strength of the *Dutch* for the Action of the *Manillas*, and the Profit of the Voyage, as well as the Charge to be common to both Companies. The *Dutch* prepared another Fleet of ſeven Ships all of their own for *Macao*, bordering upon *China* near the *Manillas*, without giving Knowledge thereof to the *Engliſh* at *Jaccatra*, until their Fleet was ready to depart thence, well knowing, that upon ſuch Warning, it would be impoſſible for the *Engliſh* to prepare a like Force to join with them: To theſe they appointed eight Pinnaces that were then abroad to join them, and afterwards ſent another Ship with Proviſions to them. This Fleet paſſing by two of the *Engliſh* Ships which were appointed for that Quarter of the *Manillas*, the *Engliſh* welcomed them, and offered to join them in their Exploit, which the *Dutch* refuſed, ſaying, that this being an Exploit of their own, the *Engliſh* ſhould neither participate of the Fact, nor of the Benefit that might ariſe thereby. Likewiſe by Agreement of the Council of Defence of both Nations, there was another Fleet of ten Ships ſet forth at the Charge of the *Engliſh* and *Dutch*, for the Coaſt of *Mallabar*, to ſecure the Trade in that Part.

“ Of the *Dutch* Ships, about a Month after they ſet ſail, two were found to be ſo weak and leaky, that they were fain to return to *Jaccatra*, the reſt being come to their Quarter: Two of the beſt of the *Dutch* Ships were ſent away by the *Dutch* Admiral for the *Red-Sea*, contrary to their Inſtructions and Commiſſion at *Jaccatra* from the Council of Defence; and notwithſtanding the Proteſtations, Obteſtations, and Exclamations of the *Engliſh* againſt this Prevarication; ſo that four Carracks of the *Portugueze* coming that Way, the reſt of the Fleet of the *Engliſh* and *Dutch* being thus weakened by the Default of the four *Dutch* Ships aforeſaid, the firſt Opportunity that happened, either before or ſince the joining of the *Engliſh* and *Dutch* Companies, or is ever likely to offer itſelf in the future, was loſt, and utterly defeated: By this it appeareth what Cauſe the *Dutch* have to complain of the *Engliſh* for deſerting the Action of Defence, and what Reaſon and Encouragement the *Engliſh* have to continue the joint Action and Charge with thoſe that uſe ſo little Sincerity, ever contriving the common Action and Charge to their private Advantage; that when the joint Forces are employed to give the Enemy Work in one Part, the *Dutch* might with Eaſe oppreſs them in another, and appropriate the whole Benefit to themſelves.

“ The next Suſpicion that this Author gathereth is from the Inſolencies of the *Tarnatanes* of *Amboyna* dwelling at *Lobo* and *Cambello*, and thereabout, who, as this Author ſaith, preſumed now, beyond former Example, to outrage the Subjects of the *Dutch*, ſlaying them, and

“ carrying them away for Slaves; yea, burning two of their Houſes, one at *Lobo*, and another at *Manicbels*; for which, when the Governor went out with a Fleet to crave Juſtice and Reparation, he was braved by the *Tarnatanes* with a ſtronger Fleet than his own; yea, they threatened to come with a hundred Curricurries againſt *Amboyna*.

“ This Dealing of the Author is like the former about the Treaty of Peace with the *Tidorians*, and Truce with the *Spaniards*; for when the Governor of *Amboyna* ſet forth the Fleet of Curricurries, before the Apprehenſion of the *Engliſh*, he ſtood in good Terms with the *Tarnatanes* at *Lobo*, neither of the Factories here mentioned being then burnt, or injured; the Governor then went only, according to his yearly Cuſtom, to viſit the Skirts and Out-parts of *Amboyna*, and had no Affront offered him. After that upon occaſion of a Slave of the *Engliſh* that ran away; and being afterwards laid hold on, was reſcued by a reputed holy Man of or near that Part; the *Engliſh* craved Aſſiſtance of the *Dutch* Governor, who did his beſt, but was therein abuſed by thoſe of *Lobo*; and not only ſome of his Men outraged, but the *Engliſh* Factor, M. *Beamont*, to whom this Slave belonged, was way-laid by the People of the holy Man; and inſtead of him one of the Servants of the *Dutch* was ſlain between *Cambello* and *Lobo*. The next Day alſo was *Beamont* himſelf aſſailed, and ſhot in the Hand by the ſame holy Man's People, who alſo a little before did their beſt to kill *William Griggs*, another of the *Engliſh* Factors, that finding the ſaid Slave at *Lobo*, laid hold on him there. Upon this Occaſion both the *Engliſh* and *Dutch* left their Factory at *Lobo*, which was ſhortly after burnt by the *Tarnatanes*.

“ That other, touching the burning the Factory at *Manicbells*, is more groſsly applied than the former; for that Factory was burned after the *Engliſh* were apprehended; beſides that, this Author diſſembleth, that there was a vehement and common Suſpicion at *Amboyna*, that this Factory at *Manicbels* was burnt, not by the *Tarnatanes*, but by the *Dutch* Factor himſelf, who being there alone, was firſt ſaid to have conveyed away the Goods of the *Dutch* and *Engliſh* there for his own Uſe, and then to have burnt the Factory, laying the Fact upon the *Tarnatanes*. After this ended, the Governor of *Amboyna* made out a Fleet of Curricurries to procure Reparations of theſe Exceſſes, and therein, not going ſo ſtrong as he might, was braved by thoſe *Tarnatanes* of *Amboyna*; but this was after the Apprehenſion and Execution of the *Engliſh*, and ſo is as honeſtly applied to move Suſpicion in this Place, as the joint Quarrel of the *Engliſh* and *Dutch* with thoſe of *Lobo*, beginning upon occaſion of the *Engliſh*; and as the Burning of the Factory at *Manicbels*, done after the *Engliſh* were apprehended and impriſoned. As for the Threats of the *Tarnatanes* here mentioned, that they would come with an hundred Curricurries againſt *Amboyna*, it is, for aught any of the *Engliſh* ever heard, a mere Fiction; at moſt, it was a vain Brag, and ſuch as could not affright the Governor, that knoweth well that the *Tarnatanes* have no Gun-powder, nor other Proviſions, for ſuch an Exploit; and yet are far behind the Governor of *Amboyna* for Number of Curricurries, beſides the *Dutch* Ships and Caſtles.

“ The next Cauſe of Suſpicion this Author makes to be an idle Report in the Eaſt Parts beyond *Banda*, uncertain which, or by whom, that the *Dutch* were already quit of their Caſtle at *Amboyna*: A poor Pretence, and not worthy to be anſwered, yet ſtill farther diſcovering what Penury of good Matter this Author had, that he was fain to borrow ſuch crazy Stuff. But the laſt, and that which is expreſsly applied to the *Engliſh* is, that about this time the *Dutch* underſtood that thoſe of *Lobo* and *Cambello* held great and ſecret Correſpondence with the *Engliſh*. How did the *Dutch* underſtand this? or why does not this Author expreſs the particular Proof in a Matter ſo pertinent? It is true, the *Engliſh* had their Factories at *Lobo* and *Cambello*, but in the ſame Houſes with the *Dutch*, and for their joint Account, and had Traffick with the Country People as the *Dutch* had; but what ſecret Correſpondence is this? or what Danger to the *Dutch*? Was the Burning of the Factories, which belonged to the *Engliſh* as well as to the *Dutch*, a Note of good Intelligence between the *Engliſh* and the Incendiaries? What was that for Correſpondency with thoſe of *Lobo*, when at one time they way-laid M. *Beamont* to kill him, and at another time ſhot him in the Hand with an Arrow; offered to kill *William Griggs*, and from Time to Time out-raged our People equally with, and as the *Dutch*? Further, our People, as well as the *Dutch*, now diſſolved their Factory at *Lobo*, and were come all thence; What Letters or Meſſages did they ever ſend thither afterwards? or how, or by what means maintained they this Correſpondence? Yet this was underſtood, perhaps, by the Governor's Dreams; for that, as he afterwards told Mr. *Welden*, *Hill*, and *Cartwright*, that came thither from *Banda*, was a Motive to him to examine the firſt *Japon*, which was the Beginning of the whole Proceſs.

“ The Author having thus quitted himſelf in this Preface, proceedeth to the Matter itſelf, firſt ſetting down the Occaſion and Manner of the Diſcovery of this pretended Plot, and then the Confeſſions of the *Japoneſe*, and of the *Engliſh*; but he maketh no mention of any Torture uſed upon the *Japoneſe* that firſt confeſſed, nor of any other Indicium or Preſumption to torture or examine that *Japoneſe*; but only his curious queſtioning, touching the ſitting and changing of the Watch, and of the Number of the Soldiers in the Caſtle, which ſhewed what ſufficient Indicium and Cauſe it was to torture a Soldier of their own that ſerved them, had Reaſon to underſtand the Courſe of their Watches, and the Strength of the Aid he might expect, if any ſudden Attempt ſhould happen in his Quarter, is eaſily to be judged; and how this poor Man, and the reſt of his Countrymen were tortured, appeareth in the *Engliſh* Relation. Here alſo is concealed, by what manner and kind of Queſtions this and the other *Japoneſe* were led along in their Confeſſions, to make up the Plot juſt as the *Dutch* had deviſed it; and alſo what other Anſwers they made before they were thus directed: That they and the *Engliſh* both confeſſed what the *Dutch* would have them, is no Doubt nor Wonder, being ſo tormented, and ſcared with Torture, *etiam Innocentes cogit mentiri dolor*. But what Likelihood or Poſſibility there is of the Truth of their Confeſſions, if yet they confeſſed, as is here related, may appear by that which hath already been diſcourſed in this Point towards the End of the *Engliſh* Relation, which, for Brevity ſake, is here forborn to be repeated; yet ſome Circumſtances, which the *Dutch* Relation hath more than the *Engliſh*, deſerve here to be examined.

“ And firſt, that of *Abel Price*, the *Engliſh* Barber, who is made the Meſſenger and Negotiator of this Practice with the *Japoneſe*: It is true, that he, and he alone, of all the *Engliſh*, had ſome kind of Converſation with ſome of the *Japoneſe*; that is, would dice and drink with them, as he likewiſe did with other Blacks, and with the *Dutch* alſo: But is it credible, that Mr. *Towerſon* would commit any thing of Moment, nay, ſo dangerous a Matter as this, to a drunken, debauched Sot, who alſo, as the *Engliſh* that were there conſtantly report, threatened to cut his, the ſaid *Towerſon*'s, Throat, for that he had puniſhed him for his Miſdemeanors? Further, this Relation maketh this *Abel Price* confeſs, that all the *Engliſh* Merchants in the Out-factories were privy and acceſſary to this pretended Treaſon; yet the Governor and Fiſcal, in their own Proceſs, found *John Powel*, *Ephraim Ramſey*, and two others, guiltleſs.

“ After *Price*'s Confeſſion, he ſets down the general Subſtance of all the Confeſſions in one Body, where, firſt, having aſſigned Mr. *Towerſon* a Preface to the reſt, to induce them to the Exploit, he tells us, that they made doubt of the Point of Poſſibility, as well they might, knowing the Weakneſs of their own Part, and impregnable Strength of the *Dutch*, in Compariſon of theirs; for Satisfaction of which their Doubt, he ſaith, Mr. *Towerſon* told them, that he had already won the *Japoneſe* within the Caſtle to his Purpoſe, and that he would attempt this Matter, not when the *Dutch* were at

" their Strength, and the *Engliſh* at the weakeſt, but would expect till the Governor ſhould be ſomewhere abroad upon ſome Exploit, and ſome *Engliſh* Ships or Ship, at leaſt at *Amboyna*, the People whereof he would uſe in the Enterprize; likewiſe he would ſend for the Factors, and Slaves of the other Factories, and ſhould have a Supply from the *Tarnatanes* of *Lobo* of certain Curricurries, *&c.*

" Here he hath inrolled a goodly Army for this Action; but let us ſee the Manner how they ſhould have executed their Exploit; and firſt, for the *Japoneſe* in the Caſtle, we muſt believe, if this Author or his Voucher ſay true, that Maſter *Towerſon* had acquainted thoſe, and won them to his Plot, before he had imparted it to his own Countrymen the *Engliſh*; and yet in the Acts of the Proceſs, *Emanuel Thomſon* is recorded to have confeſſed, that eight Days after the Conſultation, Maſter *Towerſon* told him, that he had then ſent out *Johnſon* and *Price* to treat with the *Japoneſe*, and win their Conſent to this Enterprize; but what could theſe do, being in all but ten? Marry, ſaith the Relation by and by, Maſter *Towerſon* had ordained that eight of them ſhould have been beſtowed, by two in a Company, upon the four Points of the Caſtle, to kill all thoſe that would reſiſt them, and to take the reſt Priſoners.

" It muſt be therefore here imagined, that the *Dutch* and their Mardikers in the Caſtle, being three or four hundred, would ſcorn to take the Advantage of ſending forty or fifty, much more of an entire Company, to any Point of the Caſtle, but would combat with the *Japoneſe* at even Hand, by two at a time, and ſo give the *Japoneſe* Reſpite to kill or take them by two, and by two; a ſweet Conceit, and ſuch a Service as perhaps hath been ſometimes repreſented upon a Stage, but never acted in Surprize of a Caſtle in good Earneſt. Thus we ſee how eight of the *Japoneſe* were to be employed, what ſhould the other two have done? Forſooth, they ſhould have waited in the great Chamber to murder the Governor; yea, but this Relation told us, yet while, that this Plot ſhould have been executed while the Governor was abroad upon ſome Action. How then ſhould theſe two *Japoneſe* have killed him in the Caſtle at the ſame time?

" But we ſee how all the *Japoneſe*, that is, all the pretended Party of the *Engliſh* within the Caſtle, ſhould have been occupied, who ſhould have opened the Gates to the *Engliſh*, and their other Aids? who ſhould have killed the Court of Guard at the Gate? Theſe Parts were left for them that were without, therefore let us take a Review of them what they were. The Relation muſtereth them to be fourteen *Engliſh*, whereof eleven were Merchants, one Steward of the Houſe, one Taylor, and one Barber to dreſs the Wounds; beſides, God knows how many Skippers, Slaves, and *Tarnatanes*. Firſt, for the *Engliſh* Merchants, of what Dexterity they are to take Forts, is eaſily judged; and in all the *Engliſh* Houſe, when it was ſeized by the *Dutch* upon this pretended Treaſon, the whole Proviſion was but three Swords, two Hand-Guns, and about half a Pound of Powder; yea, but the *Engliſh* Ships would have brought both fitter Men, and better Proviſion: But how knew Maſter *Towerſon* that thoſe of the *Engliſh* Ships, when they came, would join with him in this Work, being ſo contrary to the Treaty, and itſelf ſo dangerous? or why did he not ſtay the opening of the Plot, till his Ship or Ships were come, that he might ſwear the Skippers alſo, at leaſt the chief Officers amongſt them, and take their Advice? Is it poſſible that Maſter *Towerſon* was ſo ſlight to open this Plot to all the *Engliſh* at *Amboyna*; yea, to the Taylor and Barber, ſo long before it was to be put in Execution, and before he knew the Minds of the chiefeſt Aſſiſtants, of whoſe Arrival he was ſo uncertain? Yea, but he was ſure of the Slaves of the *Engliſh*, and of the *Tarnatanes* of *Lobo*, with their *Curricurries in quemlibet Eventum.*

" This, indeed, is the Remainder of the Army; let us view them; the Slaves were, in all the *Engliſh* Factories, juſt ſix in Number, and all Boys; the *Tarnatanes* were Enemies as well to the *Engliſh* as to the *Dutch*, as is before ſhewed; in Anſwer to the Preface; when were they reconciled? How came this, that in all the Examinations of the *Engliſh*, this Point was not ſifted, and ſomewhat confeſſed of it amidſt ſo many Tortures? There is no Confeſſion thereof in all the Examinations, and Mr. *Towerſon* in his expreſly denied it, and was preſſed no farther. The Truth is, the Governor and Fiſcal of *Amboyna* knew, that whatever had been confeſſed in this Point, would not have been believed by their own People there, who knew well enough, that the firſt Beginning of this Breach with the *Dutch*, and the *Tarnatanes* of *Lobo*, was about the Slave of the *Engliſh*, and the Outrages thereupon following were done upon the *Engliſh*, as well as upon the *Dutch* Yet this Author ſeems to hope, that they may be believed here in *Europe*, which had no Colour at *Amboyna*.

" Concerning the Time of executing this Plot, it was not, as the Relation ſaith, yet prefixed, but left to the next Meeting of the Conſpirators, which ſhould be ſhortly holden, when *Gabriel Towerſon* had prepared all things, *&c.* Here was certainly a hot Practice of Treaſon, and worthy to be termed by this Author an horrible Conſpiracy. They met together on New year's-day, and plotted, as is before related; and now it was the five and twentieth of *February*, and not only nothing done all this Interim, no not ſo much as a new Conſultation; but this, forſooth, is the Body and Subſtance of the unanimous Confeſſion of all the *Engliſh* by themſelves, ſeverally ſubſcribed.

" In the next place, the Author relateth ſomewhat ſingular in M. *Towerſon*'s Confeſſion, as that he ſaid he was moved to this Fact by Hope and Deſire of Honour and Profit; and being demanded for whom he intended this Honour, and for whom he meant to hold the Caſtle? his Anſwer was, that if he could have compaſſed his Projects, he would forthwith have given Advertiſement thereof to the reſt of his Nation at *Jaccatra*, which now they have chriſtened *Batavia*, and have craved their Aid, which, if they had yielded to him, then he would have held the Caſtle for the *Engliſh* Company; and if not, then he would have kept it for himſelf, and have uſed Means to have agreed with the *Indians*, and ſo by one Means or other would have compaſſed the Enterprize.

" Here firſt is to be obſerved, that he would not, as the Author makes him ſpeak, have ſent for Aid to *Jaccatra*, until he were firſt Maſter of the Caſtle; and yet in the general Confeſſion before, it is ſaid, he would attend the Coming of ſome *Engliſh* Ships before he would adventure upon the Caſtle. Next, let the ambitious and alternative Reſolution here ſaid to be confeſſed by Maſter *Towerſon* be conſidered in both the Parts thereof, and it will appear, that no Man in his Wits would have any ſuch Conceit as is here pretended. What Hope could Maſter *Towerſon* have, that the Preſident and *Engliſh* Conſul at *Jaccatra*, living under Command of the *Dutch* Fort there, and altogether ſubject to them, durſt join any ſuch Action, thereby to give Occaſion to the *Hollanders* to arreſt, torture, and condemn them of Treaſon?

" Maſter *Towerſon* knew well enough, that about ſix Months before the General of the *Dutch* at *Jaccatra* had caught a very ſly Occaſion to entrap the *Engliſh* Preſident there, who, having ſent out two of his People in the Night to the *Engliſh* Cow-houſe, to ſee what Watch the Blacks in their Service kept over their Cattle, the ſaid two *Engliſh* were apprehended by the *Dutch* Soldiers, kept in Priſon ſeven Days, and charged that they had ſaid that they went the Round; and one of them being laſt examined, was told by the Balieu, the Officer of the *Dutch* in criminal Cauſes, that his Fellow had confeſſed, that they had ſaid, they went their Round, and that by the *Engliſh* Preſident's Commiſſion; and if he would not confeſs the ſame, he ſhould be tortured; but the Fellow being conſtant in the Truth, came off at laſt without Torture; Yet this was Item enough to the *Engliſh* Preſident and Council, how the Intent of the *Dutch* was to entrap them upon the leaſt Occaſion; and this, and other daily captious

Dealings of the *Dutch* at *Jaccatra*, which were too long here to recite, were all advertiſed, from time to time, to Mr. *Towerſon*, who therefore was ſure he could expect no Aſſiſtance from them, that were themſelves in ſuch a Predicament.

“ The other Part of Mr. *Towerſon*'s Reſolution is ſaid to have been to keep the Caſtle for himſelf, and to agree with the *Indians*, in Default of Help from the *Engliſh*. This is yet more improbable than the former: Were the *Portugueze* and the *Indians* not able to keep out the *Dutch* from *Amboyna*, when they had no Footing there; and ſhall Captain *Towerſon* with twenty *Engliſh* and *Japoneſe*, without Ship or Pinnace, be able, with the Help of the poor naked *Indians*, to drive them out, having three Caſtles in the Iſland of *Amboyna* and at *Cambello* hard by, all well furniſhed with Men and Proviſions, beſides their Power of Shipping, which makes them ſtile themſelves Lords of the Sea? And yet how could Maſter *Towerſon* hope to win the *Amboyneſe* (the *Hollanders* ſworn Subjects) to his Side? He might rather aſſure himſelf, that after he had maſtered the *Hollanders*, if yet that muſt be believed to be poſſible, the *Amboyneſe* would have ſurpriſed him, and caſt him out, being ſo weakly provided to ſtand of himſelf, that ſo they might utterly free themſelves from their Servitude: Here alſo muſt be remarked, that this Author himſelf in his Preamble ſaith, that the *Indians* themſelves durſt not undertake ſuch a great Deſign as he there ſeigneth againſt the State of *Amboyna*, without ſome great Aid of ſome Nations of *Europe*, either of *Spaniards* or *Portugueze*, or ſome other; whereby is not only confeſſed how weak the *Indians* of themſelves are, but withal it followeth, how ſmall Hope Mr. *Towerſon* might have, being deſerted of his own Nation, as here the Caſe is put, to hold the Caſtle for himſelf by the Help of thoſe *Indians*, if yet he could once have won it.

“ In a Word, they that know the Power of the *Dutch* in *Amboyna*, and thereabouts, and the Weakneſs of the poor *Indians*, will judge this Conceit of Mr. *Towerſon*'s to keep the Caſtle for himſelf, to be a mad Plot, and for which Maſter *Towerſon* ſhould rather have been ſent to *Bedlam*, or the *Dullen Kiſt*, as the *Dutch* call it, than to the Gallows. But this Author hath one voluntary Confeſſion, upon which he taketh eſpecial Hold, to wit, that Maſter *Towerſon*, after his Examination was finiſhed, being expoſtulated with by the *Dutch* Governor, and demanded whether this ſhould have been the Recompence of his (the Governor's) manifold Courteſies towards him, anſwered with a deep Sigh, *Oh! were this Matter now to do, it ſhould never be done.* This voluntary Confeſſion, and penitent Acknowledgment, ſaith this Author, was made the Ninth of *March*, being the Day when the Execution was to be done, and the Examination of *Towerſon* was ended the Twenty-eighth of *February*, ſo many Days before. But how ſhall we believe this? Forſooth, he hath it out of the Acts of the Proceſs of *Amboyna*; yea, but in theſe Acts are omitted many material Paſſages of theſe Examinations, as is already ſhewed, why may they not then be guilty of Addition, as well as of ſuch Mutilation and Omiſſion? But let us peruſe the Words of the Act itſelf, which are theſe;

“ We whoſe Names are hereunto ſubſcribed, do declare upon our Troth, inſtead of an Oath, that *Gabriel Towerſon*, after that he had been already examined touching his ſaid Offence; and that the worſhipful *Van Speult* had expoſtulated with him thereupon, aſked him, whether this ſhould have been the Recompence of his Courteſies from time to time ſhewed unto him the ſaid *Towerſon?* Thereupon he the ſaid *Towerſon*, with a deep Sigh, anſwered him, and ſaid, Oh! if this were to be begun again, it ſhould never be done. *Actum* this Ninth of *March*, in the Caſtle of *Amboyna*, and ſubſigned,

Harman Van Speult,
Laurence de Maerſchalck,
Clement Herſſeboom,
Harman Crayvanger,
Peter Van Zanten,
Leonart Clock.

“ Thus we ſee the Act itſelf, and this pretended voluntary Confeſſion of Mr. *Towerſon*, which is not delivered upon the Credit of the Court or Council at *Amboyna*, but upon the Atteſtation or Affidavit of the Governor, and five others, the principal Actors in this bloody Tragedy; and this not upon their Oath, but upon their Troth, or honeſt Word, forſooth, inſtead of an Oath. The Time when theſe Words were uttered by Mr. *Towerſon*, is not deſcribed by the Day when he ſpake them, but only by the precedent Act of his Examination; and yet the Circumſtance of Time is not only an uſual and cuſtomary Solemnity, and requiſite in all ſuch Atteſtations, but alſo in a Buſineſs of this Nature altogether neceſſary, as likewiſe in this Caſe that of the Place was; for if theſe Words were ſpoken in the Place of Torture, or incontinently after the Examination ended, they are by their own Law eſteemed no more voluntary, than the Confeſſion upon the Rack itſelf: Neither yet doth this Atteſtation affirm, that this Confeſſion was voluntary.

“ But this Author, unconſcionably reporting the Date of the Atteſtation for the Time of the Confeſſion, collects it to be voluntary, becauſe, as he ſaith, it was made the Ninth of *March*, being ſo many Days after his Examination, which was taken the 28th of *February*; can a Man atteſt nothing but what was done upon the very Day when he maketh Affidavit? The Atteſtation ſaith, that theſe Words were ſpoken by Mr. *Towerſon*, after he had been already examined; why may not that rather have been upon the very Day of his Examination, than upon the Day when this Act was entered, if yet he ever ſpake any ſuch Words, or meant them, as he is here interpreted, the contrary whereof is the more probable, by all the Circumſtances of this Buſineſs truly ſet down in the Relation of the *Engliſh*.

“ But in that this Author makes ſo much of this poor Circumſtance of Mr. *Towerſon*'s Profeſſion of Sorrow for what was done, naming it a voluntary Confeſſion, it is plain how deſtitute he was of voluntary Confeſſions, and of all true and concluding Circumſtances. What, was there not a Letter, or other Paper, to be found in all the Cheſts and Boxes of the *Engliſh*, ſo ſuddenly ſeized at *Amboyna*, *Larica*, *Hitto*, and *Cambello*, to diſcover this Treaſon? Nor, amongſt ſo many Accomplices of diverſe Nations, a falſe Brother to betray the reſt, and to accuſe them voluntarily, but the Proceſs muſt begin with the Torture, and the Heathens Confeſſions upon Torture be ſufficient to bring Chriſtians to Torture.

“ That debauched and notoriouſly infamous Perſons (ſuch as *Price* was) to draw Torture upon the ſober, orderly, and untainted? And yet this Relation itſelf confeſſeth, that *Price*'s Confeſſion was drawn from him by the Examiners, ſpecifying of Place, Perſon and Time unto him; certainly one of their own Nation had Reaſon to adviſe that more Advocates might be ſent over to the *Indies* to aid the Accuſed, and make a legal Anſwer; for, ſaid he, they go to work there ſo villainouſly and murderouſly, that the Blood of the poor People crieth to Heaven for Vengeance. But why have we no Particular of any Man's Confeſſion but this of *Price* and Mr. *Towerſon*, and all the reſt blended together in one Body? Did none of all the reſt go farther than his Fellows, or confeſs more than they? Where is *Sharrock*'s Confeſſion, that he was at *Amboyna* upon New-year's-day, when ten or twelve of the *Dutch* themſelves witneſſed he was at *Hitto?* Where is his Confeſſion of *Clark*'s Plot to go to *Maccaſſar*, to deal with the *Spaniards* there to come and rob the ſmall Factories? Where is *Collins*'s Confeſſion of another Plot about two Months and a half before his Examination, undertaken by *Thomſon*, *Johnſon*, *Price*, *Brown*, *Fardo*, and himſelf? Where be the leading Interrogatories that directed them to the Accuſation framed by the *Dutch*, leſt otherwiſe there had been as many ſeveral Treaſons confeſſed as Perſons examined? Not a Word of all this, nor of a great deal more of this kind, which is here in *England* proved by the Oath of ſix credible Perſons to have paſſed in the Examinations, whereby appeareth how faithfully the *Dutch* at *Amboyna* have entered the Acts of this Proceſs?

“ Well, at laſt he concludes the Narration of the Confeſſions with the ſumming up of the Number and Nations of the Parties that had thus confeſſed, which he ſaith, were ten *Japoneſe*, fourteen *Engliſh*, and the *Netherlandiſh Marnicho*, or Captain of the Slaves; by which laſt Words, he would give the Reader occaſion to think, that this Fact was ſo clear, and their own Proceedings ſo even and juſt, that they had executed one of their own *Netherlanders* for it; which how true it is, is already declared in the Concluſion of the *Engliſh* Relation. The Truth is, this Captain of the Slaves was of the *Portugueze* Race, and born in *Bengal*; his very Name, *Auguſtin Perez*, ſheweth he was no *Netherlander*.

“ Having thus finiſhed this Relation, this Author proceedeth to a Diſputation, and taking Notice of ſome Aſperſions in *England* caſt upon theſe Proceedings at *Amboyna*, he divideth them into two Heads; the one, that the Proceſs was without its due Formality, the other, that there was Exceſs and Extremity uſed againſt the Conſpirators. For the Point of Formality, he firſt taketh great Pains to prove, that the Formalities of Proceſſes in *Amboyna* are not therefore unlawful, becauſe they agree not with our Form in *England*; which Labour he might have ſpared, for no wiſe Man will deny him this Point; and ſuch as ſhall be ſo ignorant as to blame the *Dutch* for varying from us herein, were not worthy the anſwering. Herewithal alſo, he deduceth the Title of the Lords the States-General to the Sovereignty of *Amboyne*, and ſo the Governor of *Amboyna*'s Juriſdiction, in Cauſes as well criminal as civil, to be rightly grounded. Thence he concludes, that the *Japoneſe* being ſworn Servants to the *Dutch*, and in their Pay, were ſubject to the Juriſdiction of the *Dutch* Governor. Then he telleth us, that the Author and Accomplices of Murder and Treaſon, are by the Laws of all Nations to be puniſhed with Death; all which Points may be granted him without any Prejudice to the Cauſe of the *Engliſh* in this Queſtion. At laſt he comes in particular to their Caſe, and affirms, that the Chief of the *Engliſh* there might not apprehend the *Engliſh* Accomplices of this Conſpiracy, becauſe themſelves were Accomplices of the Fact; all which alſo may be granted in this Point of Apprehenſion and ſafe Cuſtody; but how it may proceed in the Point of Cognizance, ſhall be anon in due Place examined.

“ In the mean time, this Author, to make the Point of Apprehenſion clear beyond Exception, ſaith, that the *Engliſh* were not apprehended upon the firſt Suſpicion, when yet there was Evidence and Indicia ſufficient to it. But after the Examination of all the *Japoneſe*, and their joint Confeſſion, that the *Engliſh*, whom they ſpecified by Name and Surname, moved and hired them to this Treaſon: Yea, not until *Abel Price* had alſo confeſſed as much, and that all the *Engliſh* in the Out-Factories were privy thereunto. For Anſwer hereof, that muſt be repeated, which hath been upon other Occaſions before alledged, that the firſt Beginning of the Proceſs was by the Torture, there being no ſufficient Evidence or Indicium to torture the *Japoneſe*, that only ſought to inform himſelf of the Courſe of the Watch, and of the Strength of the Caſtle where he himſelf was a Soldier; and ſo the whole Series of Examination proceeding from the Confeſſion of one tortured Perſon, to apprehend and torture another, without other Evidence, though it brought forth more Confeſſions, and thoſe with Name and Surname, and other Circumſtances, according as the Interrogatories or Directories of the Governor and Fiſcal led the Priſoners, was wholly againſt all Laws of Tortures. *Silicet in fabrica ſi prava eſt regula prima. Cætera mendoſe fieri, atque obſtipa neceſſe eſt.*

“ But here muſt be anſwered an Objection, that may be made againſt this from another Part of this Relation; that is, that ſome of the *Engliſh* confeſſed without, or before Torture. Yea, this *Price* here mentioned, was either not tortured at all, or very lightly; yea, but he was ſhewed the tortured Bodies of the poor *Japoneſe*, martyred with Fire and Water, and told, that unleſs he would confeſs that which they told him they had firſt confeſſed, he ſhould be tortured as ill, or worſe than they. This Fear of Torture is by their own Law equalled to the Torture itſelf, and conſequently the Confeſſion thereupon, made no better Indicium, or Evidence, to bring another Man to the Torture, than the Confeſſion made upon the Rack itſelf. Again, it muſt be here remembered, that the very Matter of *Price*'s Confeſſion here mentioned, to wit, that all the *Engliſh* Merchants of the Out-Factories were privy to the pretended Treaſon, was confuted by the Proceſs of the *Dutch* themſelves, that found *Powel*, *Ramſey*, and two others of thoſe Factories guiltleſs.

“ Next, this Author taketh Notice of an Objection made in *England* againſt the Juriſdiction of the *Dutch* Governor, and his Council at *Amboyna*, over the *Engliſh* there, becauſe this Power is by the Treaty of the Year 1619 diſpoſed of, and agreed to conſiſt in the Council of Defence of both Nations at *Jaccatra*; for Information in which Point, this Author ſaith, he hath peruſed over all the ſeveral Articles in the ſaid Treaty, and findeth in the twenty-third Article, that the Fortreſſes were to remain in the Hands of them that then poſſeſſed them; and in the thirteenth, fourteenth, and fifteenth, that the Council of Defence hath no other Power but only over the Fleet of Defence, over the Commerce, and, finally, to tax the Charges of Maintenance of the Forts; but he could not ſee the thirtieth Article, which orders that all Diſputes that cannot be decided by the Council of Defence, ſhould be remitted into *Europe*, firſt, to the two Companies there, and in Default of their Agreement, to the King and States; why then was not this Diſpute ſo proceeded in? There is nothing in the former Articles to limit the Council of Defence, and this general Article appeareth to be added by way of Amplification, to provide for that which was not particularly and expreſly cared for in the former, which is moſt plain by the Words of the Explanation upon this thirtieth Article, agreed upon at the firſt, and ſubſcribed by the Commiſſioners on both Sides, *Anno* 1619, where this Courſe of Proceeding is expreſly directed, not only in Diſputes about the Meaning of the Articles, but alſo about any other Matter happening in their Commerce abroad; ſince which alſo the King's Majeſty hath, upon a ſmaller Occaſion than the Life of his Subjects, clearly declared himſelf in the Point of Sovereignty, that both Nations in the *Indies* ſhould wholly lay aſide all Pretence thereof, which Declaration was ſent to the Lords States-General, and by them accepted before this bloody Butchery was executed. But if it were granted, that the *Dutch* were abſolute Lords of their Partners the *Engliſh* in thoſe Parts, without reſpect to the Treaty, yet at leaſt the *Dutch* in *Amboyna* were bound to obſerve the Laws of the *United Provinces*, for ſo ſaith this Author himſelf. Do theſe allow to begin the Proceſs as to the Torture, and to bring Perſons of honeſt Fame to the Rack upon others Confeſſion made in the Torture? Do their Laws allow of the leading Interrogatories above mentioned, to direct the Priſoner what to ſay, to avoid the Torture? Where, in the *United Provinces*, is that drowning with Water in uſe? Or the Torture with Fire uſed to *Johnſon*, *Thomſon*, and *Clark*? Or eſpecially the ſplitting of their Toes, and lancing of the Breaſt, and putting in Gunpowder, and then firing the ſame, whereby the Body is not left intire, neither for Innocency nor Execution? *Clark* and *Thomſon* were both fain to be carried to their Execution, though they were tortured many Days before.

“ Laſtly, their Confeſſions were contradictory, apparently falſe, and of things impoſſible to be done, much leſs practiſed before by the ſaid Parties, and therefore ought not by their Law to have been believed, nor the Priſoners to have been condemned thereupon, without other ſufficient Indicia, or Evidence beſides. In the laſt Place, this Author handleth the Exceſs of Torture, whereof he taketh Notice, there is much Complaint in *England*, and ſaith, that the Lords States-General took

“ great Care to inform themſelves of all the Paſſages in this Buſineſs; and to that End deſired to ſee all the Letters, Pieces, and Papers, that concern this Proceſs, by which it appeareth not that there was any cruel Torture uſed. But ſuppoſe the Acts made no mention of them, is it any Marvel that the Authors of this murderous and tyrannous Proceſs, being themſelves the Perſons that alſo formed the Acts, would omit thoſe things that made againſt them?

“ It is to be preſumed alſo, that the Acts kept by their People at *Poloway* in *Banda*, have omitted many things of their Proceſs againſt the poor *Poloroons*, whom in *Auguſt* 1622, being about ſix Months before this Execution of the *Engliſh*, their Governor there uſed in like Sort as the Governor of *Amboyna* did the *Engliſh*, and gave him a Model and Precedent of this Proceſs, which it will not be amiſs to relate briefly, becauſe this Author in the next Place alledgeth the merciful Diſpoſition of the *Netherlandiſh* Nation in general, to infer thence, that it is therefore unlikely, that their Governor at *Amboyna* was ſo cruel as is reported in *England.*

“ *Poloroon*, one of the Iſlands of *Banda*, was in Poſſeſſion of the *Engliſh* at the Time of the Treaty *Anno* 1619, and by Agreement was to remain theirs.

“ After the Treaty came to the *Indies*, the *Dutch* forbore the publiſhing thereof in the Iſlands of *Banda*, until they had taken *Poloroon*; but knowing that it muſt be reſtored again, according to the Treaty, they firſt take all Courſes to make the Iſland little or nothing worth. They demoliſh and deface the Building, tranſplant the Nutmeg-trees, plucking them up by the Roots, and carrying them into their own Iſlands of *Nera* and *Poloway*, there to be planted for themſelves, and at leaſt find a Means to diſpeople the Iſland, and to leave it ſo as the *Engliſh* might make no Uſe of it, worth their Charge of keeping; and that upon this Occaſion was a young Man, the Son of an Orankey, or a Gentleman in *Poloroon*, that had committed Felony, for which, by the Laws of his Country, he was to die. This Fellow, to ſave his Life, fled to another Iſland of *Banda*, called *Roſinging*, and there turned Chriſtian; but quickly underſtanding that that would not make him ſafe from Puniſhment, he went back ſecretly into his own Country of *Poloroon*, and having lurked there for two or three Days, took his Paſſage for *Nera*, another Iſland where the *Dutch* have a Fort, and told the *Dutch* Governor, that the Orankeys of *Poloroon* had conſpired to maſſacre the *Dutch* as well at *Poloroon* as at *Poloway*, with Help of the People of *Seran*, that ſhould ſend over thirty Curricurries for that Purpoſe. Immediately upon this Indicium of this Malefactor, certain Prows or Fiſher-boats of the *Poloroons* that were fiſhing at *Poloway* were ſeized, and the People made Priſoners; Command was ſent by the *Dutch* Governor to *Poloroon*, that the Orankeys ſhould come over to him, that there might be farther Inquiſition made of this Matter.

“ The Prieſt of the *Poloroons* and ſeventy Orankeys inſtantly took a Prow, or ſmall Veſſel of their own, and embarked themſelves for *Poloway*. As they were at Sea, and yet out of Sight of the *Dutch* Caſtle, they were met by a Fiſhing-boat of *Bandanezes*, and told how all the reſt were apprehended, and that if they went to *Poloway* they were all but dead Men. Nevertheleſs the Prieſt and the reſt, although they had Space and Means to have eſcaped to *Seran*, and other Places ſafe enough from the *Dutch*, yet were ſo confident of their Innocency, that they would needs go to *Poloway* to purge themſelves, where, as ſoon as they arrived, they were inſtantly carried Priſoners to the Caſtle, and withal the Governor, with a Force of two hundred Men, went perſonally for *Poloroon*, whence he fetched all the reſt of the Orankeys, and brought them Priſoners to the ſame Caſtle: As ſoon as they were come, they were preſently brought to the Torture of Water and Fire, even in the ſame ſort that our People were afterwards at *Amboyna*, only herein differing, that of thoſe of *Poloway* two were ſo tortured, that they died in their Tortures; the reſt, being one hundred and ſixty-two Perſons, were all, upon their own forced Confeſſions, condemned and executed. The Prieſt, when he came to the Place of Execution, ſpake theſe Words in the *Malayan* Tongue: All ye great and ſmall, rich and poor, black and white, look to it, we have committed no Fault; and when he would have ſpoken more, he was taken by the Hands and Feet, laid along, and cut in two by the Middle with a Sword; forthwith the Governor cauſed the Wives, Children, and Slaves of thoſe of *Poloroon* to be all carried out of the Iſland, and diſtributed in other Iſlands ſubject to the *Dutch*, and ſo have made a clear Country for the *Engliſh*, where they may both plant and gather themſelves, deſtitute of the Help of any of the Country People, without whom neither the *Engliſh* nor the *Dutch* can maintain their Trade in the *Indies*; and yet this is not here recited, to the End thereby to charge the *Netherlanders* Nation with thoſe cruel Proceedings, but the Perſons themſelves that have committed theſe barbarous Tyrannies, who, if we ſhall believe an Author of their own, are not of the beſt of that Nation.

“ For the *Majors*, as this Author ſays, uſe the *Indies* as a Tuckt-houſe, or Bridewell, to manage their unruly and unthrifty Children and Kindred, whom, when they cannot rule and order at home, they ſend to the *Indies*, where they are preferred to Offices and Places of Government; yea, ſaith he, they prefer ſuch to be Fiſcals there as never ſaw Study nor Law; ſo that it is no marvel, that ſuch Perſons proceed not with that Juſtice and Moderation as is uſed generally in the *Low Countries* by the Choice of the Nation there; and this agreeth well with the Report of our Merchants of Credit that came lately from *Amboyna*, who aver, that excepting the Governor himſelf, who is well ſtept in Years, of the reſt of the Council there, as well the Fiſcal as others, there was ſcarce any that had Hair on their Faces; yea, that moſt of them are leud, drunken, debauched Perſons, and yet muſt be Judges, as well of our *Engliſh* as the poor *Indians* there. Now to return to this Author's Proofs, that there was no Exceſs uſed in the Proceedings, at the laſt he taketh one Argument by way of Compariſon from the Law of *England* to preſs Men to Death, which, he ſaith, hath much more Cruelty than their Courſe of Torture uſed by the *Dutch* in *Amboyna*, and is holden, as well by ſome Authors of our own Nation as others, for damnable. How pertinently is this Matter of preſſing alledged for juſtifying their Tortures, ſince no Man in *England* is preſſed for not confeſſing, which is the Cauſe of the Torture with the *Dutch*? But the Cauſe why any is preſſed is, for that he obſtinately refuſes the Trial of his Country, and challengeth the Judges as incompetent, which the Law appointeth him, which he doth for the moſt part to ſave his Goods, which but by that ordinary Courſe of Trial cannot be confiſcate; what is this to the Point of Confeſſion? for Refuſal whereof the *Dutch* uſe the Torture, and yet no Man blameth them for proceeding according to the Law of their Country therein, nor yet in their Execution, when they break the Legs, Arms, and Thighs of the Malefactors, and then ſet them upon a Wheel on the End of a great Pole, there to languiſh to Death; an Execution far more direful than the *Engliſh* Preſſing, which is ſo ſuddenly done, and ſo ſeldom uſed.

“ But why doth he not name the Author of our own, or foreign Writers, which condemn this kind of Execution? Let him do it yet, and he ſhall have more Authors of his own Country that ſhall condemn their Courſe of Tortures; and yet the *Engliſh* complain not of the Courſe in general, but of the unlawful Uſe of it, contrary to the Laws even of the *United Provinces*. Laſtly, in this Point the Author pretendeth, that little or no Torture was uſed in this Proceſs. What the Torture was, and in what Degree, appears in the *Engliſh* Relation; but he can find little or none mentioned in the Acts. What if he will not find it? or what if their Officers at *Amboyna* have concealed it? Shall we not believe thoſe that ſuffered it themſelves? Shall we not believe thoſe that being themſelves acquitted, yet heard the Cries, and ſaw the Bodies of *Johnſon*, *Clark*, and *Thomſon*, and have confirmed their Relation by their corporal

“Oaths? As for the Act of the five and twentieth of *February*, which this Author hath here tranſcribed, it cannot be a true Act; for therein it is ſaid, that that Day all the *Engliſh* were examined one by one, and ſome before Torture, and ſome after, confeſſed the Fact: Whereas it appeareth not only by the *Engliſh* Relation, but by this very Author in the precedent Page, that they were not all examined the ſame five and twentieth Day of *February*, but that the Examination continued ſix Days together, even to the third of *March* incluſive. How then could the Act of the five and twentieth of *February* have all their Confeſſions? By this may appear what Credit may be given to thoſe Acts, or elſe to this Author.

“Here alſo by the way, he tells us of the Deliberation of their Council, whether the Puniſhment of the Fact might be reſpited, or the Cauſe removed, wherein it was reſolved, that Execution muſt needs be done in the Place of the Delict for Example's ſake, and might not be reſpited, for fear leſt the Conſpirators, as he terms them, might have more Dependencies than yet were known, and in particular the *Tarnatanes*, and other *Indians* about *Amboyna*; a poor Pretext, as if having all the *Engliſh* in Irons aboard their ſeveral Ships, they ſhould need to fear their joining with the *Tarnatanes*; but it may be, they feared ſome *Engliſh* Ships alſo to come thither, for ſo they had made their own People believe, and therefore two Ships being deſcried at Sea, the *Dutch* and their free Burghers cried out, that there were the *Engliſh* that ſhould have holpen to take the Caſtle; but when they arrived, they proved to be two Ships of the *Dutch* come from *Jaccatra*, wherein was a Letter from the Preſident of the *Engliſh* there to call away Captain *Towerſon*, and all the *Engliſh* from *Amboyna* to *Jaccatra*; which Letter was opened and read by the *Dutch* Governor, while our People were yet in Priſon, and not executed, and might well have ſecured him, that there was no farther Danger to be feared of the *Engliſh* Aids of Shipping, whatever the *Engliſh* Priſoners had through Torture confeſſed. At laſt the Author comes to the Sentence itſelf, tranſcribing out of the Acts of the ninth of *March*, that the College of Judges being then competent, and calling upon the Name of the Lord to aſſiſt them in this mournful Aſſembly, to preſide in their Hearts, and inſpire them with Equity and Juſtice, proceeded to Sentence, *&c.*

“Who knoweth not but the Act may be thus formed, and yet no Prayer at all made? Or, if there were any ſuch Prayer, yet the Proceedings, well weighed, will ſhew it to be but like *Jezabel*'s Faſt, the Preparative to the falſe Judgment againſt *Naboth*. Neither will the wiſe and indifferent Judges of this whole Matter conceive the better of the Cauſe, for the hypocritical Formalities therein obſerved. Laſt of all, he concludes his Treatiſe with a Juſtification, yea, an Elogy and Commendation of the whole Proceedings of the *Dutch* at *Amboyna* againſt the *Engliſh*, not finding the leaſt to be blamed in the *Dutch*, but aggravating the Crime of the *Engliſh* very ridiculouſly, becauſe, forſooth, that this Plot, amongſt other Things, was againſt the great Means of the *Netherlands Eaſt-India* Company, as if a Conſpiracy to rob them muſt needs be Treaſon; or if the Intent only, in any Crime but Treaſon, were capital. Thus have we examined this ſtrained Juſtification of that baſe and execrable Proceſs of *Amboyna*, conſiſting of a Preamble full of falſe and forged Suſpicions; a Narration of the Fact, fraught with ridiculous Abſurdities, Contrarieties, and Impoſſibilities, and of a Diſpute of Impertinencies, with Concealment of the main Grounds of the *Engliſh* Griefs: All which verifieth that of *Papinian*, that Parricides are more eaſily committed than defended.” This Anſwer is ſo clear and full, and we have already ſpent ſo much Time, though I think not more than it deſerved, upon this Affair of *Amboyna*, that I am very willing to conclude it, which I ſhall do with this ſingle Remark, which I conceive has not been made before, and which I perſuade myſelf will ſet the whole Affair in a much clearer Light than it has hitherto ſtood in. The Genius of the *Dutch* Nation, and of their *Eaſt-India* Company, was Gain at all Events, and no Matter at whoſe Expence. The Genius of the *Dutch* Government at home, was to live fair with her Neighbours, and by ſmooth Language, high Profeſſions of Friendſhip and ready Compliance in Trifles, to ſecure their Protection, and command their Aſſiſtance. It was this Diſpoſition in the latter, that engaged them to make the Treaty with *Great-Britain* in 1619, by which there was a ſort of Union made between the two *Eaſt-India* Companies.

This was what the *Dutch* Company diſliked, and reſolved not to bear, which induced them to frame and execute that barbarous and bloody Contrivance at *Amboyna*, which anſwered their Ends effectually. For, firſt, it abſolutely dipped the States-General in their Quarrel, the firſt Queſtion in the Diſpute being this, whether the Governor of *Amboyna*, by Virtue of the Authority derived to him from them, had any Right to proceed againſt the *Engliſh*; and next, it totally deſtroyed all Confidence in the Treaty, and obliged the *Engliſh Eaſt-India* Company to abandon the Methods preſcribed by it, which turned them out of the Spice Trade entirely, the great Thing aimed at by the *Dutch*, and which they never otherwiſe could have accompliſhed.

9. The Death of King *James* happened in a very ſhort Time after this Misfortune, and the Troubles of various kinds, which very early diſturbed the Reign of King *Charles* I. put it out of his Power to purſue that Matter as he ſeems to have intended; for, in the Beginning of his Reign, he granted Letters of Requeſt to the States-General for obtaining Satisfaction, which, however, had not their Effect, neither did the King purſue that Point any farther; the Reaſon of which I preſume to have been this, that, finding other Cauſes of Complaint againſt the *Dutch*, he abſolutely determined to leſſen their Strength as a maritime Power, the rather, becauſe he found them joining with the *French*, in order to the Execution of a Scheme which they have had always in View, of dividing the *Spaniſh* Low-Countries with *France*, and then diſputing, in Confederacy with her, the Sovereignty which the *Engliſh* claim over the Narrow Seas. This King *Charles* I. ſaw, and determined to prevent; and in order thereunto, found it neceſſary to fit out a Fleet, which induced him to demand Ship-Money; and that began thoſe Confuſions, which ended in the Ruin of our Government, and leaving the *Dutch* in Poſſeſſion of all that Trade, which they had acquired at our Expence. This Language may ſeem new and ſtrange to ſome People; but it is, nevertheleſs, Matter of Fact, in Proof of which I ſhall cite what is ſaid by Sir *William Monſon*, who lived at that Time, was an Eyewitneſs of what he wrote, and underſtood the Subject as well as any Man that ever lived. This Gentleman, after aſſigning the Reaſons why the King did not reſent the Injuries done his Subjects by the *Dutch* ſooner than the Year 1635, when he fitted out a Royal Fleet, under the Command of the Earl of *Lindſay*, and having likewiſe touched the Reaſons which had compelled his Majeſty to it then, proceeds thus:

“After much Working, and Embaſſadors often paſſing between them and *France*, at laſt they concluded on an Offenſive and Defenſive League, by which *France* was to declare War againſt *Spain*; the Conſequences of ſuch a League being dangerous, and an unlimited Ambition never with Safety to be truſted, his Majeſty had juſt Cauſe to be ſuſpicious of theſe Innovations; he had Reaſon to weigh theſe Things, and to conſider why *Holland* and *France* ſhould ſo ſtrictly combine and league together, both of them being Neighbours to him, and why it ſhould be now haſtened more than in former Times, when *France* and *England* gave a ſufficient Relief to *Holland* by Conſent. The King alſo ſeeing the ambitious Enterprizes of *France*, aſſiſted and animated by *Holland*, to diſturb the Chriſtian and peaceable Commonwealth of *Europe*, and unjuſtly to ſeize upon his neighbouring Territories, without Cauſe given, yea, not ſparing, by Treachery and Force, to enjoy the Countries of his weakeſt and neareſt Friends the ancient State of *Lorrain*, which lay in his Way to hinder his unlawful Deſigns. Theſe were ſufficient Motives

“ and Reaſons for the King's Majeſty to behold his own Caſe with an Eye of Prevention; but eſpecially finding a Combination betwixt *France* and *Holland* to take and divide the Provinces of *Flanders* betwixt them, and to poſſeſs the maritime Towns, as *Dunkirk*, and others oppoſite to *England*. This made his Majeſty think how to quench the Fire that might flame into his own Houſe. And having Intelligence that they were both to join in one Fleet, a Thing not uſually done by the *French*; and they making no publick Declaration of the Deſign of their Ships, as commonly Princes uſe to do in ſuch Caſes, his Majeſty could make no leſs Conſtruction, than that they intended to deprive him of his ancient and allowed Prerogative of the Narrow Seas, which behoved him as much to defend, as his Kingdom; for he that covets the one, will do as much by the other, if it were in his Power to effect it. Wherefore his Majeſty armed theſe Ships following to Sea, to enquire the Reaſon at their Hands, not intending to injure any Nation, but to keep himſelf and Subjects from being injured, and to curb the Inſolency and Pride of any People that ſhould go about to infringe his Royal Prerogative.”

It may not be amiſs to obſerve here, that the Word Prerogative is uſed in a Senſe by this Author, which intereſts the Subject as much as the Prince; for the Prerogative here contended for, though nominally in the Crown, was virtually in the People of *England*; and it was to maintain their Right that the famous *Selden* was encouraged to compoſe his *Mare Clauſum*, in Anſwer to *Grotius*'s Book, entitled *Mare Liberum*, intended to juſtify, by Reaſon, the ambitious Projects of the *Dutch*. That this was truly the Caſe, and that the King had nothing in View but for the Benefit of his Subjects, appears plainly, by the Care he took for advancing the Trade to the *Eaſt-Indies*, which began now to decline exceedingly; for the *Dutch* had ſo frighted them by their Severities, that the Servants of the *Eaſt-India* Company were afraid to diſpute with them, and not much inclined to ſettle in any Colonies there; ſo that by degrees, our Trade would have fallen to nothing, which was preciſely what the *Dutch* deſired, and were, by all means, endeavouring to bring about.

The King, to redreſs this Evil, and to preſerve this Trade, as far as it was poſſible, liſtened to the Propoſals made by Sir *William Courten*, and ſome other rich Merchants of *London*, for ſending a Squadron into thoſe Parts to ſettle and trade, but without Prejudice to the Rights of the *Eaſt-India* Company; and accordingly by his Commiſſion, under his Royal Signature, dated the 12th of *December* 1635, he did grant Licence to the Perſons therein named, to ſend a certain Number of Ships into the *Eaſt-Indies*; and they accordingly did ſend ſix large Ships, Sir *William Courten* himſelf adventuring One hundred and twenty thouſand Pounds. Theſe Adventurers had very good Succeſs abroad, if they could have found any Way to have got their Riches home; but the *Dutch* were too cunning for that; for, dreading the Eſtabliſhment of a free Trade between the *Engliſh* and *Indians*, they reſolved to take Things in the Beginning, and accordingly ſo way-laid the *Dragon* and the *Catherine*, which were two of the largeſt Ships theſe Gentlemen had employed, that not far from the *Cape of Good-Hope* they ſunk both the Veſſels, and every Soul in them, by which a great Number of able Seamen were loſt, together with a Cargo of the Value of One hundred and fifty thouſand Pounds.

Neither was this the ſingle Act of this kind, for in the Year 1641, the ſame Proprietors, except Sir *William Courten*, who was dead, fitted out ſeven more Ships, which likewiſe failed to the *Eaſt-Indies*, and were again met with by the *Dutch*; for in the Month of *January* 1643, the *Henry Bonadventure*, laden with Pepper and other *Indian* Goods, ran aſhore upon *Maurice-Iſland*, in the Hands of the *Dutch*, who, under Pretence of helping the Maſter and Seamen to ſave the Goods, ſeized and poſſeſſed themſelves of Ship, Tackle, Ammunition, Merchandize, and Proviſions, and converted the ſame to the Uſe of the ſaid *Eaſt-India* Company; and *Adrien Vanderſtel*, the Governor of the Iſland, ſent away the Maſter and Mariners without any manner of Succour or Relief, to the Damage of Mr. *Courten*, and the reſt of the Intereſted, the Sum of 10000 Pounds and upwards. And about the Month of *June* 1643, the *Bona Eſparanza* making a trading Voyage from *Goa* to *Maccao*, in the Streights of *Malacca*, was violently ſet upon by two *Dutch* Ships, Men of War (belonging to the ſaid Company) called the *Vendillo* and the *Portogallo*, whereof Seignior *Fermeren* and Seignior *Gealand*, with the Lieutenant of the Fort of *Malacca*, were Commanders, who, in a hoſtile Manner, killed the Maſter, *Roger Tuckerman*, and divers Seamen were wounded, the reſt took Priſoners, and robbed them of all their Goods, Merchandize, Books of Accounts, Writings, and Papers, and afterwards led the Mariners about the Streets of *Batavia* in Deriſion of the *Engliſh* Nation, dragging alſo the King's Colours after them in Triumph, contrary to the Laws of Nations and common Amity; all which tended to the Damage of Mr. *Courten* and the Intereſted in that Voyage, to the Sum of 75000 Pounds, or thereabouts.

Upon the News of theſe inhuman Dealings, Mr. *Courten* was forced to abſent himſelf from the *Exchange*, his Bills were proteſted in *England*, *Holland*, and *Zealand*; ſo he became inſolvent, and was out-law'd, with Sir *Edward Littleton*, in the Years 1644 and 1645, for the Sum of Fifty thouſand Pounds, or thereabouts. Sir *Edward Littleton*, being then ſequeſtrated for his Fidelity and Allegiance to his Majeſty, and in the actual Service of the King, could not appear to proſecute his Action, either before the Parliament, or the Courts of *Holland*, for Reparation of the violent Injuries aforeſaid. Sir *Paul Pindar* having taken up ſeveral great Sums of Money, and advanced them to the King's Uſe, was with the reſt of the Commiſſioners for the contracted Farms of the Cuſtoms, fined 150,000 *l.* by the Parliament, and alſo proſecuted at Law for the ſaid Debts, whereby he became a Priſoner in his own Houſe, and during the late diſtempered Times made incapable to look after his Proportion of the ſaid Damages from the *Eaſt-India* Company of *Holland*.

Thus all this Project for reviving and reſtoring the *Eaſt-India* Trade came to nothing; but thoſe Merchants, who had engaged in them ſuch vaſt Sums, were utterly beggared. It is true, that King *Charles* I. interpoſed in their Behalf with the States, which ſerves rather to ſhew the Care of that Monarch, even in his loweſt Circumſtances, for the Intereſt of his Subjects, than to demonſtrate the Juſtice of the *Dutch*, who with much ado were brought to pay 85,000 Gilders, which proves that the Charge muſt have been juſt, though the Satisfaction was almoſt below Notice. While Things ſtood thus in *England*, the *Dutch* *Eaſt-India* Company carried all before them in the *Eaſt-Indies*, and having none to oppoſe them, eſtabliſhed themſelves ſo effectually, that it was not only impoſſible for the *Engliſh* to form any Deſigns to their Prejudice, but they were forced likewiſe to lay aſide all Thoughts of recovering their juſt Rights, and to abandon their Affairs as a trading Body for ſeveral Years. Such were the ſad Effects of our Confuſions at home, with regard to our Trade abroad, and this too at ſuch a critical Juncture, when ſo much might have been done for the Service of this Nation.

This is, indeed, a very dark and diſmal Scene, the Proſpect of which was never clearly exhibited to the View of an *Engliſh* Reader; nor ſhould I have dwelt upon it ſo long now, but that at this Diſtance of Time I ſuppoſe all Prejudices are worn off, and we may be allowed to judge freely of the Miſchiefs the Civil War brought upon us, not only by the Confuſions and Slaughters it created amongſt ourſelves, but in the Injuries likewiſe, which by its Conſequences it drew upon thoſe Branches of our Commerce, which might otherwiſe have made us the richeſt and greateſt People in *Europe*. This is a Conſideration that ought never to be forgot, becauſe while we retain it in our Memory, it is impoſſible that we ſhould be guilty of any ſuch Overſight for the future, or that we ſhould ſuffer ourſelves to be betrayed into ſo fatal an Opinion, as that any Advantages that can be procured by the Overthrow of one Party, or the prevailing of another amongſt us, can in any degree compenſate the vaſt Loſſes we ſuſtain in Trade, when by reaſon of ſuch Diſturbances as theſe Struggles create, we are diverted from the Attention we ought always to pay to our general, laſting, and ſolid Intereſt, as to Affairs at Sea, and of Traffick.

Theſe great and neceſſary Cares can never be proſecuted as they ought, but in Times of full Peace, and perfect Settlement; that is, when the People and the Government look one Way, and have but one View, as they never can have but one Intereſt. We ſee how little, during theſe Diſtractions, it was in the Power either of the King or Parliament to obtain any Satisfaction for the Loſſes they ſuſtained from foreign Nations, which being grounded in the Nature of things, muſt always be the Caſe whenever any thing of the like kind happens, in proportion to the Degree in which it happens; for beyond a Queſtion, the Proſperity of this Nation at home and abroad, depends ſolely on the Harmony ſubſiſting between the Government and the People, which can ſubſiſt no other Way than by the former attending to the Concerns of the latter, with that Diligence and Diſintereſtedneſs that becomes thoſe, who for the publick Benefit are entruſted with the Adminiſtration of the Concerns of a free People. We have nothing more to add during this Reign, and ſhall therefore proceed to ſuch Matters as concern this Subject after the Death of the King.

10. The immenſe Wealth, and great naval Power of the *Dutch*, acquired, as has been before obſerved, in the Times of our Diſtractions, and when it was impoſſible for us to prevent it; encouraged them to think of eſtabliſhing their own Wealth and Grandeur by a total Supppreſſion of our maritime Force, to which, perhaps, they were tempted, from an Opinion, that the Parliament, or, as it was then called, the Commonwealth of *England*, would ſcarce adventure upon a War abroad, when ſhe had ſcarce extricated herſelf from one at home. But they were miſtaken, for the Parliament of *England*, however they came by their Right, or by their Power rather, were determined to make a juſt Uſe of it; and this produced the firſt *Dutch* War, in which they, for the Reaſons before aſſigned, were the Aggreſſors, but ſuffered dearly for it in the End, ſince after repeated Defeats at Sea, and notwithſtanding they helped to procure a new Revolution here, by ſetting up the Protector inſtead of the Parliament, yet they were forced to ſubmit to a Peace upon the Terms preſcribed to them, which was ſigned at *Weſtminſter*, *April* the 5th, 1654, and by this Treaty the States were obliged to do that Juſtice to *Cromwell*, which they had refuſed to King *James* and King *Charles*.

The twenty-ſeventh Article of that Treaty being conceived in theſe Words: "It is agreed as above, that the Lords the States General of the *United Provinces*, ſhall take Care that Juſtice be done upon thoſe who were Partakers or Accomplices in the Maſſacre of the *Engliſh* at *Amboyna*, as the Republick of *England* is pleaſed to term that Fact, provided any of them be living." In conſequence of this Treaty, there was a Commiſſion granted on both Sides, which ſat at *Goldſmith's-Hall*, in order to hear and determine the Complaints that ſhould be made to them both by the *Engliſh* and *Dutch Eaſt-India* Companies, and their Determination was to be final. The *Engliſh* Company put in a Charge, conſiſting of fifteen Articles, concluding, that beſides the Loſs of their Settlements, they had ſuffered to the Amount of the Sum of two Millions ſix hundred ninety-five thouſand nine hundred and ninety-nine Pounds fifteen Shillings Sterling. The *Dutch Eaſt-India* Company on the other hand brought in their Demands, but without entering exactly into Particulars; yet aſcertaining in the Cloſe their Expences at eight hundred and fifty thouſand Pounds, which being conſidered, together with the Evidence offered on the Support of each Side, the Commiſſioners cames to a Concluſion, which they ſtiled a Regulation concerning the Loſſes and Damages ſuſtained in the *Eaſt* and *Weſt-Indies*, which was ſigned on the 30th of *Auguſt*, 1654.

And in this Paper, after reciting all the Demands before-mentioned at large, they proceed in the following Terms: "All which Complaints and Demands exhibited to us the ſaid Commiſſioners, by the Deputy of both the *Engliſh* and *Dutch* Companies, expreſsly choſe to this Purpoſe, have been laid before us with a great Number of Documents, Inſtruments, and Proofs, exhibited as well for forming and corroborating their own Demands, as for deſtroying and refuting thoſe of the oppoſite Party; and at length the Arbitration of all thoſe Controverſies is ſubmitted to us the aforeſaid Commiſſioners by the ſaid Deputies of both Companies. Wherefore we the aforeſaid *John Exton*, *William Turner*, *William Thomſon*, *Thomas Kendal*, *Adrian Van Aelmonde*, *Chriſtian Van Rodenburgh*, *Lewis Houwens*, and *James Oyſel*, after having ſeen, read, examined, and accurately conſidered all the Documents, Inſtruments, and Proofs exhibited to us on both Sides, together with all other things which ſeemed neceſſary for the Diſcovery of the Truth; and being deſirous to reconcile and to eſtabliſh a perpetual Agreement between both the Companies aforeſaid, by virtue of the Power and Authority to us given and granted by the moſt high the Lord Protector of the Republick of *England*, *Scotland*, and *Ireland*, and the High and Mighty Lords the States General of the *United Netherlands*, have decided, defined, and determined, and by this our preſent Award and Arbitration do decide, define, and determine, as follows:

"We make void, extinguiſh, obliterate, and altogether wipe out and commit to Oblivion (ſo as never to be revived at any time, and upon any Pretence, by any Perſon whatſoever) all Complaints, Pretenſions, and Controverſies mentioned more at large above, and all others whatſoever, which the *Engliſh* Company trading in the *Eaſt-Indies*, doth or may form againſt the *Dutch* Company, without excepting any, of whatſoever kind, Nature, or Condition they may be; and paticularly we appoint and ordain, that the ſaid *Engliſh* Company ſhall not for the future ſue or demand any thing of the ſaid *Dutch* Company in *Perſia*, or elſewhere, under the Denomination of the Cuſtoms of *Ormuz* and *Gambron*, ſo that the *Dutch* ſhall never be moleſted, or diſturbed by the *Engliſh* for this Cauſe, under any Pretext: Provided nevertheleſs, that this does not prejudice any Action or Plaint, which the *Engliſh* Company may enter againſt the King of *Perſia*, or any other Perſon whatſoever, the *Dutch* excepted. In like manner we make void, extinguiſh, obliterate, and wholly blot out and commit to Oblivion, ſo as never to be revived at any time, and on any Pretence, by any Perſon whatſoever, all Complaints, Pretenſions, and Controverſies mentioned above more at large, and all others, whatſoever they be, which the aforeſaid *Dutch Eaſt-India* Company doth or may form againſt the before-named *Engliſh* Company trading in the *Eaſt-Indies*, except none, of whatſoever kind, Nature, or Condition they may be; and moreover we appoint and decree, that the ſaid *Dutch* Company ſhall yield and reſtore the Iſland *Poleron* to the ſaid *Engliſh* Company, in the ſame State and Condition as it is now; provided nevertheleſs, that it ſhall be lawful for the ſaid *Dutch* Company to take away and remove out of the ſaid Iſland all military Furniture, Merchandize, Houſehold-Stuff, and all Moveables, if they happen to have any in the ſaid Iſland.

"And in the laſt place we declare and ordain, that the ſaid *Dutch* Company ſhall pay the ſaid *Engliſh* Company 85,000*l.* Sterling to be paid here at *London*, one Moiety before the laſt Day of *January* next enſuing, according to the *Engliſh* Style, and the other Moiety before the laſt Day of *March* following, according to the ſame Style; and all Controverſies between the ſaid Companies being by this means compoſed, decided, and determined, to the end that a Stop may alſo be put to the Quarrels of private Perſons.

"We have ſeen, peruſed and examined, all the Complaints and Demands exhibited to us in due time, in the Name of ſome private *Engliſhmen*, who complain of having received Injury and Damage at *Amboyna* in the Year 1623; and on the other hand, we have heard and conſidered the Matters which have been alledged and exhibited by the above-mentioned Deputies of the *Dutch* Company in their own Defence; and we the Commiſſioners aforeſaid conſidering that no one Perſon beſides theſe under-written has on this Account entered any Actions or Demands before us within the due Time, after which it is not lawful to enter any more, and being

“ therefore deſirous that no Relicks of Complaint ſhould remain, and that all Cauſe of Wrangling may be removed, after having duly conſidered and weighed all things, do, by virtue of the full Power and Authority given and granted unto us by the moſt high Protector, and the high and mighty States of the *United Netherlands*, appoint and ordain, that all Complaint, Action, and Demand of the *Engliſh* whomſoever, whether publick or private, on the Score of any Injury or Damage which they pretend to have ſuffered at *Amboyna* in the Year 1622, the *Engliſh* Stile, and 1623, N. S. may be made void, terminated, and commited to Oblivion; and that no Perſon, whomſoever he be, ſhall enter any Action on that Account, or moleſt, diſturb, or vex the ſaid *Dutch* Company, or any *Dutchman* on that Pretext; and on the other Hand, we alſo decree and ordain, that the ſaid *Dutch* Company ſhall pay here at *London* before the firſt Day of *January* next enſuing ſeven hundred Pounds Sterling to *William Towerſon*, Nephew and Adminiſtrator of the Effects of *Gabriel Towerſon*, late of *Amboyna*, deceaſed. To *William Coulſon*, Brother of *Samuel Coulſon*, &c. Adminiſtrator in like manner of his Effects, four hundred and fifty Pounds. To *James Bayles*, Adminiſtrator of the Effects of *John Powel*, three hundred and fifty Pounds. To *Anthony Ellingham*, Adminiſtrator of the Effects of *William Grigg*, two hundred Pounds. To the Adminiſtrators of the Effects of *John Wetherel*, two hundred Pounds. To *Jane Webber*, Adminiſtratrix of the Effects of *George Scharrock*, 150*l.* To *John* and *Elizabeth Collins*, the Children and Heirs of *Edward Collins*, 465*l.* To the Adminiſtrators of *John Beamont*, 300*l.* To *Jane Webber*, Widow, and Adminiſtratrix of *William Webber*, 200*l.* to *James Baile*, Adminiſtrator of the Effects of *Ephraim Ramſey*, 350*l.* to the Executors of the Will of *Thomas Radbroſee*, 50*l.* and to *Thomas Billinſby*, Adminiſtrators of the Effects of *Emanuel Thompſon*, 200*l.* all which Sums added together make the Sum of 3615*l.* Sterling, to be paid here at *London*, before *January* next enſuing: And, on this Condition, we inſiſt that their Actions, or Suits, be altogether ſet aſide and cancelled, ſo as never to be revived hereafter, by any Perſon whomſoever.”

This Award, or Arbitration, was ſtrictly put into Execution as ſoon as it was made, and ought therefore to be conſidered as deciſive againſt the *Dutch*, who by theſe ſmall and inconſiderable Satisfactions to the Repreſentatives of thoſe that were murdered at *Amboyna*, clearly admitted, and took upon themſelves the Guilt of that whole Proceeding. After this Treaty, the Affairs of the *Eaſt-India* Company began to recover; and under the Protection of *Cromwel*, there was a Subſcription of Eight hundred thouſand Pounds for the carrying on of that Commerce; but before any great Progreſs could be made in the Execution of theſe Projects, the Conſtitution was reſtored by his Majeſty's happy Return.

11. It was one of the earlieſt Acts of King *Charles* the IId's Government to give that Satisfaction to the *Eaſt-India* Company which was requiſite, to revive and eſtabliſh its Commerce. This he did, by granting to the Company a new Charter, dated the 3d of *April*, 1661, by which he not only confirmed the Privileges which they had before received, but likewiſe added others. He enlarged the Quantity of Bullion to 50,000*l.* every Voyage, provided ſo much was brought into the Kingdom by the Exportation of *Indian* Goods. He confirmed their excluſive Trade, and gave them Power to licenſe others to trade in the *Indies*, as alſo Authority to ſettle Civil and Military Government, and to make Peace and War with the Infidels in the *Eaſt-Indies*: But ſtill this Charter had the old Condition of being made void, if it ſhould be found detrimental to the Nation upon three Years Notice.

As ſoon as a Negotiation was commenced for the King's Marriage with the Infanta of *Portugal*, it was reſolved to procure a Ceſſion of ſome convenient Colony in the *Eaſt-Indies*, as Part of her Portion; and by this Means the Iſland of *Bombay*, which has been ſo often mentioned, came into the Hands of the *Engliſh*. It muſt be owned that the Soil of this Iſland is but barren, and the Air far enough from being wholeſome. But, however, the Situation was extremely convenient; and as it was not in the Power of the King, or any of his Miniſters, to alter the Nature of Things, they were forced to take up with what they could get; and it muſt be owned that, notwithſtanding ſome Inconveniencies, the obtaining this Iſland was both a convenient, and an important Acquiſition, as by the Conſequences attending it, and the preſent Condition of that Place, did and doth manifeſtly and unqueſtionably appear.

Very ſoon after the Marriage, King *Charles* ſent the Lord *Marleburgh*, with four or five Ships of War, to take Poſſeſſion of it; and the King of *Portugal* ſent a Viceroy to deliver it and all its Royalties, to the ſaid Lord; and Sir *Abraham Shipman* was ordered to be Governor for King *Charles*. They arrived at *Bombay* in *September* 1663; but the Clergy withſtood the Crown, and diſobeyed the Order; nor would they acknowledge the Viceroy, unleſs he would come into their Meaſures, which, rather than loſe his new Dignity, he did, and the *Engliſh* Fleet was forced to go to *Swally* to land their Men, and get Refreſhments. The Governor of *Surat*, in whoſe Diſtrict *Swally* is, grew jealous of the Numbers and Bravery of the *Engliſh*, threatned the Factory eſtabliſhed at *Surat*, if they did not ſpeedily re-imbark, which, to avoid, they did; and the Governor allowed them the free Uſe of the Markets; ſo that they had no Want of Proviſions and Merchandize while they ſtayed there. In *Jan.* 1664 his Lordſhip went back to *England*, carrying two Ships with him, and left Sir *Abraham* with the reſt to paſs the weſterly Monſoons in ſome Port on the Coaſt; but he being unacquainted, choſe a deſolate Iſland, called *Anjadiva*, to winter at. It is ſo far from an Harbour, that it is even but a bad Road for Shipping in thoſe boiſterous ſouth-weſt Winds and turbulent Seas: However, he landed all the Land-Forces, and built Huts to defend them from the Weather. The Iſland is barren, but has ſome Springs of good Water. It is a Mile long, and three hundred Paces broad. Here they ſtayed from *April* till *October*, in which Time they buried above two hundred of their Men.

When the Monſoons were over, the Squadron put to Sea, and put into *Bombay*, to try if the Church had conſidered on the Obedience due to the King of *Portugal*'s Orders, or if they had a mind to draw the Arms of *England*, as well as their Sovereign, on them. Some of them, who had not forgot what Damages *Spain* and *Portugal* had ſuſtained by the *Engliſh* Fleet in *Cromwel*'s Time, adviſed the Church to obey the King, ſetting forth the Miſeries they ſhould be brought into in caſe of Noncompliance. At length their holy Zeal abated, and they were content to admit of a Treaty, but before the Treaty was concluded, Sir *Abraham* died, and one Mr. *Humphry Cooke*, who was next in Commiſſion, continued the Treaty, and articled, that the Inhabitants ſhould enjoy their Lands and Religion under the King of *England*, but forgot to inſert the Royalties appending on *Bombay*, which reached as far as *Verſua*, or *Salſet*; which Omiſſion has been a Bone of Contention for both Parties ever ſince. Mr. *Cooke*, according to the Treaty, took Poſſeſſion of the Iſland in the King's Name, and forthwith began to fortify regularly, and, to ſave Charges of building a Houſe for the Governor, built a Fort round an old ſquare Houſe, which ſerved the *Portugueze* for a Place of Retreat, when they were diſturbed by their Enemies, till Forces could be ſent from other Places to relieve them.

After the Fort was traced and the Foundation laid, Sir *George Lucas* arrived from *England* with two Ships; but Affairs being ſettled before he came, did not ſtay at *Bombay* longer than *January*, 1666, and left the Government of the Iſland in the Hands of Mr. *Cooke* and his Council, the Preſidency for the then Company reſiding at *Surat*. Their Trade flouriſhed and increaſed wonderfully: But after the Fort was finiſhed, the King finding that the Charge of keeping *Bombay* in his own Hands, would not turn to Account, the Revenues being ſo inconſiderable, he made it over to the *Eaſt-India* Company in Fee-Tail, which continues to this Day. In building the Fort where it is, Mr. *Cooke* ſhewed his Want of Skill in Architecture, where a proper and convenient Situation ought to be well conſidered; for it is built upon the Point of Rocks that jet into the Sea, where there are no Springs of freſh Water; and it ſtands within eight hundred Paces of an Hill called *Dungeree*, that over-looks it; and an Enemy might much incommode it from the Hill, as we found by Experience, in *Anno* 1689, when the Mogul ſent an Army on *Bombay*.

As for the Magnitude, Figure, and Materials of the Fort, there is no Fault to be found in them, for it is a regular Tetragon; the outward Polygon is about five hundred Paces, and it is built of good hard Stone, and can mount above one hundred Pieces of Cannon, and that is all that is commendable in it. But had it been built about five hundred Paces more to the ſouthward, on a more acute Point of Rocks, called *Mendham's-Point*, it had been much better, on ſeveral Accounts; firſt, it had been much nearer the Road for protecting the Shipping there; it had been farther off *Dungeree-hill*; it would have had a pretty Spring of good Water, which ſerved the Hoſpital that was afterwards built there, and the Shipping had been better ſecured that lay in the little Bay between the Point where the Fort now ſtands and *Mendham's-Point*. They went about building ſeveral other little Forts and Sconces, in convenient Places, to hinder an Invaſion, if any of their Neighbours ſhould have attempted one. At *Maſagun* there was one, at *Souree* one, at *Sian* one, at *Mabim* one, and *Werlee* had one, and ſome great Guns mounted on each of them.

Notwithſtanding the Company was at ſo much Charge in building of Forts, they had no Thoughts of building a Church; many Years after, Sir *George Oxenden* began to build one, and charitable Collections were gathered for that Uſe: But when Sir *George* died, Piety grew ſick, and the Building of Churches was grown unfaſhionable. Indeed, it was a long Time before the Iſland had People enough to fill a Chapel that was in the Fort; for as faſt as Recruits came from *Britain* they died in *Bombay*, which got the Iſland a bad Name. There was reckoned above 5000 Pounds had been gathered towards building the Church; but Sir *John Child*, when he came to reign in *Bombay*, converted the Money to his own Uſe, and never more was heard of it. The Walls were built by his Predeceſſors to five Yards high, and ſo it continued till the Year 1715, that Mr. *Boone* came to the Chair, who ſet about building it, and in five Years Time finiſhed it by his own Benevolence, and that of other Gentlemen, who, by his Perſuaſions, were brought in to contribute; the Company alſo contributed ſomething towards that pious End.

About the Year 1674, Preſident *Aungier*, a Gentleman well qualified for the Government, came to the Chair; and leaving *Surat* to the Management of Deputies, came to *Bombay*, and rectified many Things that were amiſs, and brought the Face of Juſtice to be unveiled, which before lay hid in a ſingle Perſon's Breaſt, who diſtributed her Favours according to the Governor's Direction. He erected a formal Court, where Pleas were brought in and debated. But that Method laſted but a few Years: When Sir *John Child* came to the Chair, the Court expired. Mr. *Aungier* adviſed the Company to encloſe the Town from *Dungeree* to *Mendham's-Point*, for ſecuring the trading People from the Inſults of their troubleſome beggarly Neighbours on the Continent: But his Propoſals were rejected, and that neceſſary Piece of Work was reſerved for Mr. *Boone* alſo. And happy it was for the Inhabitants that the Town was ſecured by a Wall, otherwiſe *Connojee Aungarie* would have haraſſed them with continual Inſults, ſince his War with the *Engliſh* began. The Name of Mr. *Aungier* is much revered by the ancient People of *Surat* and *Bombay* to this Day. His Juſtice and Dexterity in managing Affairs got him ſuch an Eſteem, that the Natives of thoſe Places made him the common Arbitrator of their Differences in point of Traffick; nor was it ever known that any Party receded from his Award. There are no Dangers in going into *Bombay* Road, but one ſunk Rock, that lies about half a League from the Caſtle. It is dry at Low water, and has a Channel within it deep enough for the greateſt Ships to paſs. I never heard of any Damage done by that Rock, but to a ſmall Ship called the *Baden*, which, by Carleſſneſs, run on it at Noon-Day, and was loſt.

In the Year 1673, the *Dutch Eaſt-India* Company having an Eye on *Bombay*, ſent a Squadron of Ships, with a little Army to try if they could take it among their other Conqueſts of *India*; but, on their Landing, met with ſo warm a Reception, that they were glad to get off with the Loſs of two or three hundred of their Men, and ſo left the *Engliſh* in the quiet Poſſeſſion of it. The Governors proved tolerably good till 1682, that Sir *John Child* came thither. The *India* Company knowing how to make uſe of King *Charles*'s Neceſſities, made him ſome Preſents, and he, in grateful Acknowledgment, granted them Power; but they uſed that Power to their own Deſtruction, for Mr. *Child*'s Pride and Oppreſſions grew ſo very intolerable, that even the Gentlemen in the Company's Service had not the free Exerciſe of Trade, and much leſs private Merchants: And he trampling on the eſtabliſhed Laws of *England*, and by Advice of his Name ſake, who governed the Company in *Europe*, by impriſoning and murdering their Fellow Subjects, grew hateful to all.

In *Anno* 1614, he made his Brother-in-law, Mr. *Ward*, his Deputy of *Bombay*, who deſigned to fiſh in troubled Waters. Mr. *Child* being honoured with the Title of Baronet, by the powerful Motives of the Company's Money to the King; at the ſame Time got the Commiſſion of General, which puffed him up ſo, that he contemned all Laws, human and divine. The military Gentlemen, who had made Contracts in *England* for their Salaries, though paid at 20 *per Cent.* leſs; yet, to ſhew himſelf a good Oeconomiſt for his Maſters Intereſts, ſent his Deputy freſh Orders to reduce their Pay to 30 *per Cent.* leſs than it was before, though it was ſo ſmall that they could hardly bring both Ends to bear at the Month's End. That hard Pill the Sons of *Mars* could not ſwallow, and ſo bent their Minds on a Revolution; and having come to ſome Knowledge of Mr. *Ward*'s Tampering with the *Sevajee* to land on the Iſland, they detected ſome Letters of his to that Purpoſe, which gave them a Ground for a Revolt. The *Sevajee*, indeed, ſent a Fleet of eighty Sail of ſmall Veſſels to land on the Bay which faces the Ocean; but on their trying to land ſome Forces, they were warmly repulſed, and loſt many of their Men, which made them draw off again in Confuſſion; and Mr. *Ward* being confronted with his own Letters, and having little to ſay in his own Defence, was made a Priſoner; and General *Child*'s Faction was ſent to *Surat* to him.

The Iſlanders taking the Government of the Iſland into their own Hands, choſe Captain *Kegwine* Major of the Military, to ſuperintend military Affairs, and one Captain *Thorburn* to regulate the Civil. General *Child* ſoon diſpatched Letters to *England*, and gave an Account of the Rebellion; and King *Charles* diſpatched a Frigate, called the *Phœnix*, for *India*, to demand the Reſtitution of the Iſland, and put it again into the Company's Hands. They arrived at *Bombay* in *September* 1695, and ſhewed the King's Letter, with a full Pardon to all who yielded Obedience, which the Iſlanders unanimouſly did; but for their own Security, drew up ſome Articles to be ſigned by General *Child*, and Captain *Tyrell*, who commanded the *Phœnix*; which Articles were, That any Perſon that had a mind to go to *England*, ſhould have free Liberty and Paſſage on board the Company's Shipping; which, being agreed to and ſigned, Captain *Kegwine* took his Paſſage on board the firſt Ship; but *Thorburn* being a married Man, and having a ſmall Eſtate, as well as a Family on the Iſland, could not ſo eaſily remove, but truſted to the Act of Grace, and the Treaty they had made.

After General *Child* had got the Reins of Government again into his own Hands, he became more inſupportable than ever. He erected a Court of Inquiſition, and made an old *Greek*, one Captain *Gary*, Judge, who had condemned a Man to be hanged on a *Tueſday*, and the Man ſuffered according to Sentence: But, on the *Friday* after, the poor dead Fellow was ordered to be called before the Court, but he would not comply with the Orders. Captain *Thorburn* was the firſt that felt the Weight of Mr. *Child*'s Diſpleaſure; he got ſome Fellows to ſwear him out of his little Eſtate, who brought in forged Bonds for Sums borrowed of one *King*, whom he never had any Dealings with, and found Witneſſes to atteſt them. All that *Thorburn* had was too little to pay the Sums, for which his Eſtate was taken from him, and himſelf put in Priſon, without the Permiſſion of one Slave to attend him, or ſerve him in Priſon; his Wife was not permitted to viſit him, which hard Uſage brought him into a violent Fever, that ſoon put an End to his Life. About two Days before he died, the Goaler acquainted his Lady with the Danger, and ſhe, with two ſmall Children, went to the General, and, on her Knees, begged that a Doctor might be permitted to viſit her Huſband; but he was inexorable, and would allow no ſuch Favour, only granted her Leave to be in Priſon with him till he died, and ſhe ſtayed but one Day and Part of a Night, before he expired.

When the Tragedy was over, ſhe was going home to her diſtreſſed Family, but found her Slaves and Children removed into a little Out-houſe of her's, and the Doors of her Dwelling-houſe ſhut againſt her. The Lady had two Siſters married on the Iſland, and ſhe hoping to find Relief from them, went to ſee the eldeſt; but ſhe met her at the Door, and told her ſhe could have no Admittance, her Huſband being liable to Proſecution if he admitted her into the Houſe, and ſhe believed the other Siſter's Huſband durſt not entertain her in his Houſe. The poor Lady, full of Sorrow and Grief, being abandoned of all her Friends and Relations, went back to her diſtreſſed Family, and having no viſible Way of Support, had once ſome Thoughts of putting an End to her Miſeries: But her Siſters, unknown to their Huſbands, ſent her ſome Relief by a truſty female Slave in the Night, and a Letter, that they deſired her to burn as ſoon as ſhe had read, wherein they promiſed to be aſſiſting in the Maintenance of her and her Children, till the Almighty ſhould think proper to deliver her out of the Perſecution.

The poor Lady had both Beauty and Diſcretion enough to recommend her to the virtuous Part of Mankind; but none of the Gentlemen that wiſhed her well, durſt make Addreſſes to her; only one who had the Command of a Ship in the *Indian* Merchants Service, as he had no Dependance on the General and his Maſters in *England*, thought he could not well come within the Reach of their Perſecution; ſo he courted her, and married her; but that was thought a capital Crime, and the General acquainted his *Indian* Owners, that without they diſcharged him their Service, they ſhould alſo find the Weight of his Diſpleaſure; and accordingly, to avoid Conteſts with his Excellency, he was diſcharged; but Grief put an End to his Troubles, for he died within a Year after his Marriage, and left the poor Lady another Child to take Care of, but left her above One thouſand Pounds Sterling of Stock for her and her Family's ſupport's Support.

As the *Phœnix* was in her Way for *India*, ſhe called at the Iſland of *Johanna*, and there found an *Engliſh* Ship, called the *Briſtol*, ſtopping ſome Leaks in her Bottom. Captain *Tyrell*, by a diſpenſing Power from the King of *England*, ſeized her, and deſigned to have carried her to *Bombay*, in Company with a ſmall Veſſel that he had ſeized on the Coaſt of *Madagaſcar*. The *Briſtol* ſunk the third Day after they put to Sea, but the other came ſafe. The *Briſtol* Men were looked on as Pirates; and one Mr. *Mews*, a Supercago, was arraigned before the General's Tribunal, where he himſelf ſat Lord Chief Juſtice; and after his uſual Manner of beſtowing opprobrious Names, he condemned Mr. *Mews* to loſe all that he had in the World, and One thouſand Pounds beſides, and to lie in Priſon at his own Charge, till the Fine was paid; but Mr. *Vaux*, who was Judge of the Iſland in petty Affairs, ſhewed him the Weakneſs of his Sentence, and perſuaded him to ſet the poor Man at Liberty, and order him a Paſſage for *England*.

As I have taken theſe Paſſages from the Travels of one Captain *Hamilton*, ſo upon his Credit I muſt leave them. He had the Reputation of being an honeſt and a ſincere Man, and one ſo far from being ſuſpected of having but a ſlender Regard for Truth, that, on the contrary, he was held enthuſiaſtically fond of it, ſo as to have ſpoke it upon all Occaſions, and without any Regard to the good old Maxim, *That Truth is not to be ſpoken at all Times*. I muſt likewiſe have Leave to ſay, that I knew not where elſe to find Materials for this Part of my Subject, and therefore I choſe rather to ſet theſe Things down, than to leave ſo large a Chaſm in my Collection. But if there be any Falſhoods among theſe Facts, or any Truths written with a Spirit of Prejudice or Animoſity, it is none of my Fault, and quite beſide my Intention; beſides all this, the Facts related are ſo notorious, and ſo very capable of being diſproved from their very Nature, at the ſame time that publick and private Intereſts were equally concerned to diſprove them, that I cannot help thinking their remaining ſo many Years as my Author's Book has been printed, unqueſtioned as well as unrefuted, is a ſufficient Reaſon to believe that though very extraordinary, they are yet conſiſtent with Truth; and if ſo, I am very ſure that no Facts can better deſerve a Place in his Hiſtory than they do.

The *Dutch* all this time very ſteadily purſued their Plan of driving us out of the *Indies*. In time of War they attacked us directly, and having a ſuperior Strength, had generally the better of us; but in time of Peace between the States of the *United Provinces*, and the Crown of *Great Britain*, they contented themſelves with attacking the *Indian* Princes, to whoſe Dominions we traded, and proſecuting the War againſt them, till ſuch time as they were obliged, from a Principle of Self-preſervation, to purchaſe their own Peace by excluding us. It was in this manner, and after a long War carried on for that Purpoſe, that the *Dutch* were ſo fortunate in the Iſland of *Java*, as to carry their Point entirely; ſo that after a long civil War ſet on foot, and encouraged by them between the old King and his Son, by the Help of the latter in *Anno* 1683, the *Dutch* diſpoſſeſſed the *Engliſh* Company of their Factory of *Bantam*, on the Weſt End of *Java*; and the *Engliſh* having a mind to regain it by Force of Arms, built ſeveral Ships of between ſixty and ſeventy Guns, ſo that in *Anno* 1685, they had a Fleet ready victualled, and manned with ſeven or eight thouſand Men, to the Number of twenty-three Sail of Line of Battle Ships; which Expence, and the continual Craving of the Court, brought their Stock very low; yet ſince the Maw of the Court was not enough crammed, the King laid Embargoes on the Fleet from Time to Time for nine Months, and then the *Dutch* Embaſſador had Orders to preſent his Majeſty with one hundred thouſand Pounds, if he would command the Company not to uſe Violence. He ſnapt at the Bait, and defeated the Deſign to all Intents and Purpoſes, which was of infinite Prejudice to the Company's Affairs, gave the *Dutch* vaſt Advantages, and was highly diſhonourable, as well as detrimental to the Nation.

12. Upon the Acceſſion of King *James* the Second to the Throne of *England*, the *Eaſt-India* Company found in him a ſtill more powerful Protector than they had done in his Brother, though he granted them a new Charter, dated the 5th of *October*, in the twenty-eighth Year of his Reign, and extended this again by another Charter, dated the 9th of *Auguſt*, in the thirty-fifth of it. But King *James* not only extended their Privileges as a Company, but being perſuaded that ſuch Prerogatives were neceſſary to the carrying on their Trade, for the promoting of which he would deny nothing, he in a manner ſhared his Sovereignty with them, by granting them a Power to erect Fortreſſes, raiſe Armies, execute martial Law, and coin Money; all which was with a View to make them equal in Power with the *Dutch*, and to enable them to ſecure at leaſt a conſiderable Share of this profitable Trade to his Subjects. Under ſo gracious and kind a Prince, we need not at all wonder, that the Company extended their Authority very conſiderably, but the great Misfortune was, that they extended it only over, and not for the Benefit of their Countrymen, as we ſhall preſently ſee.

The Company having ſuch a Number of great Ships on their Hands, were obliged to ſend them abroad; but having no Stock to employ them, ordered the Generals and Chiefs of the Factories in *India* to borrow what Sums they could on the Company's Credit from the *Indian* Merchants, and to lade their Ships home, which accordingly they did, and what they could not lade home, they were to employ by Freights in *India*; and I ſaw a Letter from the Governor of the Company in *England*, intimating, that when they had got as much Credit of the Mogul's Subjects as they could, then they would pick Quarrels with the Creditors, and put a general Stop to their Trade, which was accordingly done; for in 1686 and 87, the *Surat* Merchants traded briſkly by Sea to *Macha*, *Perſia*, and *Baſſora*, to the Weſtward; and to *Bengal*, *Achen*, *Malacca*, and *Siam*, to the Eaſtward. The General granted Paſſes to all who required them then; but about the latter End of the Year 1687, he ſent many Complaints and Grievances to the Governor of *Surat*, and demanded Redreſs and Satisfaction.

Theſe Complaints of his were digeſted into thirty-five Articles, moſt of which related to Meſſ. *Pitt* and *Boucher*, who were originally of the Governor's Council, appointed him by the Company, Men of fair Characters, and who had given him much Trouble, by oppoſing all his illegal and violent Meaſures, which made him uſe them ſo ill, and ſhew withal ſuch an Inclination to uſe them worſe, that to preſerve themſelves from Beggary and Ruin, they retired into the Mogul's Country; and Mr. *Boucher* having, by an Application to that Monarch, procured his Licence to trade, continued it with great Succeſs; but as for Mr. *Pitt*, he had the Misfortune to be taken by Pirates at Sea, who at firſt would have ranſomed him for five thouſand Pounds, but were perſuaded by the Governor to demand twenty-five thouſand Pounds, ſo that he remained a Priſoner to the Day of his Death; and the Governor required Mr. *Boucher*, who reſided at *Surat*, from the Governor, together with his Wife, Children, and Effects; the reſt of his Demands were alike reaſonable, and all of them delivered in ſuch Language, as would not become one Gentleman to uſe to another, much leſs fit from the Governor of a trading Company to ſo great a Prince, as may appear from one of them; in which he demands, that the Gates of *Surat* ſhould not be ſhut, when he went to take his Pleaſure, or ſhould be opened at his Return, and due Reſpect paid him whenever he thought fit to unbend his Mind, and to amuſe himſelf with ſuch kind of Diverſions.

Theſe Grievances were the Foundation on which General *Child* built a Quarrel with the Mogul, without ever ſending them to Court to know the King's Pleaſure; but without declaring War, ſeized his Subjects Ships, where-ever they were found, although they had the Sanction of his own Paſſes. His Articles of Complaint were but weak Arguments to ſupport and raiſe a War that coſt his Maſters above four hundred thouſand Pounds before they could get rid of it, beſides the Loſs of their Credit with the Mogul, and his Subjects, which to this Time is not quite recovered. For by what Rule in Policy could Sir *Joſiah* or Sir *John Child* think to rob, murder, and deſtroy the Mogul's Subjects in one Part of his Dominions, and expect the Company to enjoy a free Trade in the other Parts? Or how could they ſuppoſe that he would ſtand neuter? The General having ſuch a great Number of Ships on his Hands, and little Employment for them, ſent them to *Mocha*, *Perſia*, and *Bengal*, where the *Suraters* had ſent theirs, under the Protection of his Paſſes. Captain *Andrews* in the *Ch.* II. went to *Mocha*, and ſet up the King of *England*'s Flag on his Factory, and there he ſeized two *Engliſh* Ships, one from *England*, called the *Streight's Merchant*, commanded by Captain *Bear*, and another belonging to Mr. *Samuel Whiteborn* at *Siam*; ſhe was commanded by one Captain *Wren*, whom they killed in the Cabbin, becauſe he would not deliver his Ship up voluntarily; there was but little of their Cargoes on board of the Ships, ſo they might as well have let them alone. However, ſuch Doings diſpleaſed the Governor and Merchants of *Mocha*, and they had a Deſign to force Captain *Andrews* to reſtore the Ships; but he ſuſpecting as much, fled on board, and left his Colours flying on the Factory.

He ſoon after left *Mocha*, and carried his two Prizes with him; and Mr. *Clive*, Supercargo of the *Streights Merchant*, got Bills for his Stock, payable at *Grand Cairo*, except about ſixty Bales of Coffee, that he carried with him to *England*, where it ſold very well, and the Company were obliged by Law to make good all his Ship's Cargo *pro rata*, as thoſe ſixty Bales ſold for, which amounted to thirty-two thouſand Pounds. The *Briſtol*'s Cargo was alſo made good to her Owners, with the Ship that was taken at *Johanna* by the *Phœnix*, which came to ſixty thouſand Pounds; and the *Little Betty*, that was alſo taken by the *Phœnix*, in her way to *India*, coſt them twelve thouſand Pounds, though ſhe and her Cargo at *Bombay* were ſold for leſs than ſix hundred Pounds. The Owner of that Veſſel was one Mr. *Haſtewell*, a Quaker, and a ſubſtantial Merchant in *London*, who arreſted Captain *Tyrell* going off the *Exchange*. The Captain proffered King *James* for Bail; but the Quaker would not accept of him; yet was content to accept of Sir *Joſeph Herne*, who became Bail. The *Charles*, *Cæſar*, and *Royal James* and *Mary*, way-laid the *Surat* Shipping, and brought in fourteen Sail to *Bombay*, in *Anno* 1688, and yet no War with the Mogul, only with the Inhabitants of *Surat*, whom he threatened to humble.

In *October* 1688, he went to *Surat* Road in the *Royal James* and *Mary*, with three or four other Ships of Countenance, to try if he could bully the Governor, and frighten the Merchants to a Compliance of loſing their Eſtates; but was diſappointed in both. He ſtaid there till the Beginning of *January* 1689, and then left *Surat* in a Huff, and brought all the *Engliſh* Ships, except the Ship *Adventure*, which the *Phœnix* had forced over the Bar, when ſhe was lying at the River's Mouth, taking in a Cargo for *England*, under the Protection of Mr. *Boucher*'s Firmand. However, her Supercargo dying, the Ship's Bottom was eaten up with Worms in the River, and Part of the Cargo remained many Years in Mr. *Boucher*'s Poſſeſſion. On the General's Paſſage to *Bombay*, he met with a Fleet of Veſſels that were carrying Corn to an Army of the Mogul's that lay at *Dunder-rajah-pore*, about fourteen Leagues to the Southward of *Bombay*: That Fleet he alſo ſeized, and carried into *Bombay*, though againſt the Opinion of moſt of his Council. Before this Seizure, he aſked the Opinion of ſome Sea Officers; and one Captain *Hilder* being the eldeſt, adviſed him not to meddle with the Corn Fleet, becauſe it would ſtraiten the Army, and force them to look abroad for Proviſions, where it might be procured, and perhaps might affect *Bombay*, which was in a great meaſure beholden to its Neighbours for Suſtenance and Fire-wood. The General inſulted him with ſcurrilous Language, called him Coward and Fool, and bragged, that if *Sedee Yacoup*, which was the Mogul General's Name, ſhould dare to come with his Forces to *Bombay*, he would blow him off again with the Wind of his Bum. Cowards are generally ſtout when Dangers are at a Diſtance, and ſo was our General, who had never ſeen a Sword drawn in Anger, and who was conſequently very ill acquainted with War; and when it came to his Door, none was ever ſo confounded and ſo dejected as he was, as appeared by his Conduct in that War, that he ſo fooliſhly brought on himſelf and his Country.

When the News came to *Sedee Yacoup*, that his Fleet with his Proviſion of Corn and Cloth were ſeized, and carried to *Bombay*, he ſent a civil Letter to our General to diſcharge his Fleet, proteſting, that as he had not meddled in the Affairs between him and the People of *Surat*, he would continue neuter, unleſs he was forced to do otherwiſe. But our General gave him an inſolent Anſwer, and the Fleet was unladed at *Bombay*. *Sedee Yacoup* ſent again to deſire the Delivery of his Fleet in plain Terms, otherwiſe he ſhould be obliged to come with his Army and quarter in *Bombay*, where his Proviſions were detained; and that if his Fleet was not ſet at Liberty before the 11th of *February*, which was near at Hand, he would certainly be at *Bombay* the 14th. But ſtill receiving uncivil Anſwers, he performed his Promiſe to a Tittle; for that very Night he landed at a Place called *Souree*, about four Miles diſtant from the main Fort, with twenty thouſand Men at his Back. Our General's Security had made him neglect providing for receiving ſuch Gueſts, truſting to the Reputation of the Forces, which were greater than ever they had been before, or ever were ſince that Time; and he had ſmall Ships enough, had they been placed in proper Places, that might certainly have hindered his landing, and forced him home again; but all thoſe neceſſary Preparations were neglected, and the *Sedee* landed at Midnight, and the Redoubt, where he landed, fired a great Gun to give the Alarm, and ſo deſerted their Poſt, and the *Sedee* took Poſſeſſion of it.

At One in the Morning the Caſtle fired three Guns to give the General Notice, which brought ſuch Fear on thoſe that lived ſecurely in their Houſes without the Caſtle, that the poor Ladies, both white and black, ran half naked to the Fort, and only carried their Children with them; but they were all obliged to wait without the Walls, till Daylight relieved them. Next Morning the *Sedee* marched to *Maſſagun*, a ſmall Fort of fourteen Guns, and about a random Shot diſtant from the Caſtle. On the Enemy's Approach, the Fort, though ſituated on a Point of Rocks, where the Sea defended three Quarters of it, was alſo deſerted in ſuch Precipitancy that eight or ten Cheſts of Treaſure, which generally contain one thouſand Pounds each, and four Cheſts of new Arms, were left behind, though the Seamen that were ſent in Boats to bring them off proffered to carry them along with them; but the commanding Officer thought them not fit to be truſted with Money and Arms, and ſo they were left for a Preſent to *Sedee Yacoup*, with fourteen Cannon, two Mortars, with ſome Powder, Shot, and Shells. But why that Treaſure, and thoſe Arms and Ammunition were depoſited in *Mazagun*, few could account for; and the Reaſon why they were left to the Enemy was as wonderful: But it is plain, that the old Way of fiſhing in troubled Waters was known at *Bombay*, and the Officer was never called to account for his Overſight. *Sedee Yacoup*, finding no Oppoſition, ſent a Party of Men towards *Mahim* to plunder the poor Peaſants, and to take the Fort, which he thought might be deſerted as the reſt had been, and was not in the leaſt out of his Conjecture; for the Garriſon had embarked in Boats, and came by Sea to *Bombay* before they ſaw an Enemy; the *Sedee* taking Poſſeſſion of *Mazagun*, hoiſted his Flag there, and made it his head Quarters. The following Day ſome of the Enemy appeared on *Mazagun* Hills, which grieved our General's righteous Soul to ſee Infidels come ſo near him in a hoſtile manner.

He called a Minion of his own, one Captain *Pean*, who was no better Soldier than himſelf, and ordered him to take two Companies, each containing about ſeventy Men, and march to thoſe Hills, and drive the Enemy out of Sight; he ordered one *Monro*, who had been a Soldier at *Tangier*, to be his Lieutenant. In *Tangier* he had received a Wound in his Heel that ſpoiled his running, and accordingly they marched in good Order within Shot of the Enemy, who ſhewed their Heads above the Surface of the Hill, but did not offer to advance, or expoſe their Bodies; ſeveral Gentlemen Voluntiers took their Arms, and accompanied the little Army. The Lieutenant adviſed the Captain to march up the Hill in Platoons to ſeparate the Enemy's Forces. The Captain, who took it as an Affront to be adviſed, told his Lieutenant, that when he had the Command in his own Hands, he might uſe it as he thought fit; but as it was intruſted to him, he would uſe it according to his own Mind, and ſo ordered his Men to ſpread as much as they could; and when they ſaw the Enemy open in the Plain, to diſcharge all at once amongſt them, which he ſaid would terrify them. *Monro* oppoſed his Scheme, and told him of the Danger he would bring himſelf and them into, if the Enemy ſhould attack them, whilſt their Arms were reloading; but nothing could diſſuade him from his Project, and ſo commanded his Men to fire, as he had directed. The *Sedees* being ten to one in Numbers, and better Runners than our Men, and better acquainted with cloſe fighting with Sword and Target, took hold of the Opportunity, and advanced with all their Speed, which the Captain perceiving, betook himſelf to his Heels, and was the foremoſt Man to the *Portugueze* Church, where he took Courage to look behind him, to ſee what was become of his Men. Poor *Monro* thinking to ſtop the Enemy's Carreer by a Part of the Wing that he commanded, found himſelf deſerted by all but thirteen or fourteen ſtout Fellows, who were ſoon ſurrounded by the Enemy, and cut to Pieces. *Pean* had not ſtopped at the *Portugueſe* Church, had he not found a Party of one hundred Men that lay there ready to ſupport or receive him, as his Caſe ſhould require. He was a Fellow as well made for running as any that was ever ſeen, and was ſo much in the General's Favour, that he had not ſo much as a Reprimand for his Cowardice and Miſbehaviour. This Relation I had, ſays Captain *H.* from a Gentleman Voluntier, who always kept near the Captain, while he could keep Pace with him.

When the General left *Surat*, there were ſeveral Gentlemen in it, ſome in the Company's Service, and ſome private Perſons, who were all impriſoned, and put in Irons, except Mr. *Boucher* and his Dependants, who were protected by his Phirmaund. Thoſe impriſoned were ſeverely uſed, being obliged to paſs through the Streets with Irons about their Necks, for Spectacles to pleaſe the Mob. Captain *Johnſon* and Captain *Yeaman*, though particular Merchants, were obliged to act their Parts in the Tragi-Comedy, and continue Priſoners, where Captain *Johnſon* died; but Captain *Yeaman* got his Liberty at the End of the War, which was about the Beginning of *June* 1690. I will now return back to the Year 1686, when Sir *John Weyborn* was ſent from *England* with a Commiſſion of Judge-Admiral from the King, and he had likewiſe another Commiſſion from the Governor of the Company, which they made him believe was alſo from the King, to condemn and hang thirteen of the Inhabitants of *St. Helena*, where, in a Tumult cauſed by the Oppreſſions of the Governor of that Iſland, one *Johnſon*, the Second, was killed. Sir *John Weyborn* took his Paſſage to *India* on board the Ship *London*, and in his Way called at *St. Helena*, and hanged up the thirteen proſcribed Perſons without Form or Proceſs, for which the Company paid dear afterwards; and ſo had Sir *John*, had he lived. But he finding the illegal Proceedings of Mr. *Child* to be inſupportable, and meeting with many Affronts (from that Man without Manners) died at *Bombay* about two Months before the *Sedee* came on it. He was much lamented by all honeſt Men that knew him. He was Captain of the *Happy Return*, who accompanied the *Glouceſter*, when ſhe was bringing the Duke of *York* to *Scotland*, and loſt by the Way. It was Captain *Weyborn* that ſent his Barge to wait on the Duke, and brought him ſafe on board the *Happy Return*, who carried him forward to *Scotland*, for which good Service he was knighted; he was ever after a great Favourite with King *James*, who ſeeing he could not be brought into his Meaſures, put that Employment on him, to diſmiſs him with Honour: And now the *Sedee* being Maſter of the whole Iſland, except the Caſtle, and about half a Mile to the Southward of the Caſtle, he raiſed Batteries on *Dungree-Hill*, which overlooked the Fort Wall, and diſturbed the Garriſon very much; then he put four great Guns in the Cuſtom-Houſe, commonly called the *India-Houſe*, and raiſed a Battery at the *Moodies-Houſe*, within two hundred Paces of the Court, and another in the Lady's Houſe, that he had been ſo unkind to; ſo that it was dangerous to go out or in at the Caſtle Gate, till we got up an Half-Moon over it. All Men were then preſſed into the Company's Service, and our Author among the reſt.

We paſſed, ſays he, the Months from *April* to *September* very ill; for Proviſions grew ſcarce, by the Addition of three thouſand *Sovajees* that were employed as Auxiliaries in the military Service of the Company. When the Winter Months were over, in *September* we went to Sea with our ſmall Ships to cruize on the Mogul's Subjects, and had pretty good Succeſs. I was employed in that Service, and had the Command of a ſmall Privateer of ſeven or eight Tuns, with twenty fighting Men, and ſixteen Rowers. In three or four Months I brought nine Prizes into *Bombay*, laden moſt with Proviſions and Cloaths for the Enemy's Army, which was now increaſed to forty thouſand; but we were not allowed any Plunder, but were rather plundered ourſelves; for when we brought our Prizes in, our Cheſts were ſeverely ſearched, and if we had ſaved any of our Pay, it was ſeized for the Company's Uſe, as Money we had found in the Prizes, which made us careleſs in purſuing the Enemy at Sea: Except when Hunger pinched we never looked out for Prizes; by which Indifference of ours many of the Enemy eſcaped that we could have taken. The ill Succeſs we had aſhore with the Enemy made our General ſick; and in *December* he diſpatched two Factors to the Mogul's Court, with a *Surat* Merchant called *Meer Mezamie*; he was our Friend, and had ſome Intereſt at

Court. They went under the Name of the *Engliſh* Embaſſadors; Mr. *George Weldon* was firſt in Commiſſion, and *Abraham Naavar*, a *Jew*, was ſecond. In fifteen Days they arrived at Court, being then at *Jebanabat.*

They were received but coldly; but about the Middle of *April*, by the ſpecial Aſſiſtance of Preſents to the Officers at Court, they were admitted to Audience, but were brought to *Aurengzeb*'s Preſence, after a new Mode for Embaſſadors, their Hands being tied by a Saſh before them, and were obliged to proſtrate themſelves. The King gave them a ſevere Reprimand, and then aſked their Demands. They firſt made a Confeſſion of their Faults, and deſired Pardon. Then that their Phirmaund, which was forfeited, ſhould be renewed, and that the *Sedee* and his Army ſhould be ordered off *Bombay*; their Submiſſion he accepted of, and pardoned their Faults, on condition that Mr. *Child* ſhould leave *India* in nine Months, and never come back again. The Phirmaund to be renewed on condition that Satisfaction ſhould be given his Subjects on account of Debts contracted, Robberies committed, and Loſs and Damages made good; and on Security given for the due Performances of theſe Premiſes, the *Sedee* and his Army ſhould be ordered off the Iſland.

In *January* General *Child* died, which much facilitated their Affairs; but it was kept ſecret at Court, till they knew how the King would order the Affair about him. In *March*, *Meer Mezamie* died alſo, and it was ſuppoſed was poiſoned by ſome Enemies contracted by his good Services to the *Engliſh.* When he was given over by the Phyſicians our Embaſſadors ſent to know what he had done with the fifty thouſand Rupees he had received for ſecret Services? He anſwered, that he was ſorry that ever he had meddled in their Affairs; for he had ſerved them even with his Life, and yet they were not contented; for what Uſe that Sum was put to, he durſt not divulge. When our Affairs were in ſo bad Circumſtances at the Mogul's Court, the *Dutch* Company had one Mr. *Baroon* their Embaſſador there, who deſigned to impoſe on *Aurengzeb*, who he thought was ignorant of *European* Affairs. The News of the Revolution in *Britain* being arrived in *India*, when he had an Audience of *Aurengzeb*, he began to magnify the Power and Authority of his Country, and villify the *Engliſh.*

The Mogul ſeemed to be pleaſed with his Diſcourſe and encouraged him to go on: He ſaid, that the *Engliſh* were but contemptible in Compariſon of his Sovereigns, for they were forced to ſend the *Engliſh* a King to rule over them; and that if his Majeſty would exclude the *Engliſh* from the Trade of his Dominions, the *Dutch* would carry it to a much greater Height, and enrich his Treaſury, and the *Engliſh* would not know where to get Bread. The Mogul gravely anſwered, that if his Maſters were ſo much ſuperior in Power and Riches to the *Engliſh*, they might eaſily drive them out of *India*, and engroſs all the Trade of his Countries to themſelves, and commanded him to tell his Maſters, that he expected it from them. Then the Embaſſador excuſed himſelf, and ſaid that he could act nothing in that Affair, till he received Orders from *Holland*: *Aurengzeb* then reprimanded him, and ſhewed him wherein he had lyed; for, ſays he, about ſeventeen Years ago the King of *France* conquered moſt of your Country in a few Days, and then it was the *Engliſh*, and not the Power of *Holland*, that repelled him; and that if *England* did not hold the Ballance of Power, either the Emperor, or the King of *France*, could conquer it in one Campaign. The Embaſſador knew not how to anſwer theſe Truths; but being ſent to ſollicit ſome Indulgence in that Trade, he could obtain none, and ſo left the Court diſſatisfied.

After our Embaſſadors had obtained Pardon, they began to be reſpected, and had Liberty to take their Diverſions abroad, till a new Phirmaund was drawn up, which, according to the Method of Eaſtern Courts, took up ſome Time. However, Orders were ſent to the *Sedee* to forbear Hoſtilities, and the *Engliſh* had the ſame Orders; ſo that frequent Viſits paſſed between the *Sedee*'s People and ours; and during the War, about fifty *Europeans* of ſeveral Nations had deſerted us, and took Pay of the *Sedee.* The Reaſon they gave for their Deſertion was ill Uſage they received from ſome *Iriſh* Officers, yet moſt of them returned after the War, on promiſe of Pardon. The Phirmaund being ready, and the required Security given, *Sedee Yacoup* left *Bombay* the 8th of *June* 1690, but he alſo left a Peſtilence behind him, which in four Months Time deſtroyed more Men than the War had done, and for Joy made a malicious Bonfire of his head Quarters, *Mazagun* Fort.

Now we may ſee the Mogul's Stile in his new Phirmaund, to be ſent to *Surat*, as it ſtands tranſlated from the Company's Interpreter, which runs thus in the printed Copy annexed to Sir *John Child*'s Articles of Grievances:

"The Occaſion of your writing to me was, your being "in Fault in all theſe Troubles; that you have repented "of what you have done; that you made ſeveral Com-"plaints againſt former Governors; all which I have "here from ſeveral of my Omras, and the ſeveral "Abuſes received from them and their Officers; all "which you ſhould have acquainted me with before you "proceeded ſo violently. Having acknowledged your "Error, and deſired Pardon, I do not only grant your "Requeſt, pardoning what is paſt, but granting you a "Phirmaund, according to your Deſire, and have order-"ed *Aſſu-Caun* to forward it to the Governor of *Surat*, "with ſuch Particulars as he will acquaint you with. At "the Arrival of my Phirmaund, receive it with great Re-"ſpect, acknowledging the great Glory you have got in "obtaining the ſame. That you may trade as formerly "at your Pleaſure, and as accuſtomary. That you deli-"ver to the Merchants that have complained againſt you "their Ships, with their Effects. That, for the future, "you do not commit the like Error in doing as you have "done; and proceed according to my Will and Pleaſure, "and be not forgetful of the ſame. If you receive any "Affronts from my Governors, or their Officers, or any "of my Subjects, be not negligent in acquainting me "of the ſame; I have ordered *Aſſu Caun* to write accord-"ingly. What you write concerning former Governors "protecting Mr. *Boucher*, that you have ſeveral Demands "on him; that you cannot call him to an Account, de-"ſiring that he may be delivered to you; my Order is, "that you prove your Demands according to Law, that "Juſtice may be done accordingly. Dated the 31ſt "Year of *Aurengzeb*'s Reign."

It ſeems, the King was not ignorant of the hard Uſage his Subjects had met with; nor was he deſirous of Severity in puniſhing Offences and Affronts, but, like an indulgent Prince, only told them of their Faults, and prudently admoniſhing them not to be guilty of falling into ſuch-like Errors; and, in a Majeſtick Stile, adviſed them to receive his Favour and Graces with great Reſpect; and that they ought to make the Law the Standard of Juſtice, and in all his Words and Actions uſes a Chriſtian Moderation. General *Child* being dead, Mr. *John Vaux* ſucceeded him in the Government of *Bombay*: But Mr. *Bartholomew Harris*, who had been Priſoner at *Surat* all the Time of the Rupture, had the Seniority in the Company's Service; but it not being a Cuſtom for one that had been the Mogul's Priſoner for any Crimes judged to be capital, to receive publick Marks of Eſteem from the State, without a ſingular Amneſty from the King, Mr. *Vaux* was obliged to go to *Surat*, and receive the Phirmaund, and the King's *Serpaw*, or Preſent, which, on ſuch Occaſions, is generally a fine Horſe, and a Suit of Cloaths from Head to Foot, made of rich Atlaſſes, or Zeerbaſtas; thoſe are Sattins, or Taffaties, full of Gold and Silver Flowers wrought in them. The Horſe muſt never after be ſold on any Account whatſoever. They have alſo a fine Turban, embroidered Shoes, and a Dagger of Value ſtuck into a fine Cummerband, or Saſh; and being equipped in that Habit, the Phirmaund is preſented by the Goſberdaar, or Hoſhalhoukain (or, in *Engliſh*, the King's Meſſenger) and the Governor of the Province or City, makes a ſhort Speech adapted to the Occaſion, ſetting forth the great Honour conferred upon him by the greateſt King in the World; with an Admonition to make his future Actions deſerve ſuch Favours.

After the aforeſaid Manner Mr. *Vaux* received the Phirmaund in a gilded Box; and, according to Cuſtom, put it on his Turban for a little while, and, by an Interpreter, returned the Governor a Compliment, acknowledging the King's Favour and the Governor's Civilities; and then the

Governor conducted him from the Garden (where the Ceremony was performed) into the City, through a great Concourſe of People, who welcomed him with Shouts of Joy as he paſſed through the Streets to the *Engliſh* Factory. After Mr. *Vaux* had ſtayed in the City about a Week, he ſent to acquaint the Governor of the Neceſſity he lay under to return back to his Government of *Bombay*, but the Governor ſent him Word, that none but he could be truſted by the King, to ſee the Performance of the Contract accompliſhed, and begged he would not think of leaving the City, leſt the King ſhould take it amiſs, and repent him of the Favours he had ſhewed to the *Eaſt-India* Company; and ſo Mr. *Vaux* was detained a Hoſtage for his Maſter's future good Behaviour. Mr. *Harris*, according to that Company's ordinary Cuſtom, demanded the Preſidency from Mr. *Vaux*, who, to ſave Contention, gave it to him; though his Mind was ſo debilitated, that he was but few Degrees wiſer than an Idiot; and, in two Years Time, Mr. *Vaux* was ſuſpended the Company's Service, and left to remain their Hoſtage at his own Charges; and ſo he continued till the Year 1697, that, by Accident, he was drowned in *Surat* River by a Pinnace's overſetting, in which he and his Lady had been taking their Pleaſure on the Water.

This Mr. *Vaux* had been Book-Keeper to Sir *Joſiah Child* in *England*, and for his good Services and Behaviour was preferred by his Maſter to a Supercargo's Poſt in a Ship to *China*, which Trade in thoſe Times was the moſt profitable of any within the Limits of the Company's Charter. In *Anno* 1684, he was ſent thither on board a Ship, called the *Carolina*, commanded by one Captain *Harding*; but Mr. *Vaux* and *Harding* diſagreeing in their Paſſage to *China*, Mr. *Vaux* laded the Ship, and ſent her back to *England*, while he himſelf went a Paſſenger on board a *Surat* Ship for *Bombay*, where he was entertained in the Company's Service as a Factor, and wrote to Sir *Joſiah Child* the Reaſon he had for leaving the *Carolina*, and his Reſolution of Staying in *India*. Sir *Joſiah* continued his Eſteem for Mr. *Vaux*, and procured him ſeveral profitable Poſts at one and the ſame Time, in the Company's Service; and, amongſt the reſt, conſtituted him Judge in Civil Affairs, which brought him both a good Salary and Perquiſites.

After he was inſtalled in that Office, Sir *Joſiah* wrote him a Letter of Admonition and Reminiſcence, wherein, after many Poſtulates, he put him in mind of the many Favours he had done him; and that now having the Power of Condemning the Company's Enemies, or ſuch as ſhould be deemed ſo, particularly thoſe who ſhould dare to queſtion the Company's Power over all the *Britiſh* Subjects in *India*; he expected his Orders from Time to Time, ſhould be obſerved and obeyed as Statute Laws. Mr. *Vaux* gratefully acknowledged Sir *Joſiah*'s Favours in his Anſwer to that Letter, and promiſed that, as he had put him into the Poſt of Honour and Profit, he would ſtrive to acquit himſelf with all the Integrity and Juſtice he was Maſter of, and that the Laws of his Country ſhould be the Rules he deſigned to walk by. In Anſwer to that Letter Sir *Joſiah* ſeemed to be angry, and wrote roundly to Mr. *Vaux*, that he expected his Orders were to be his Rule, and not the Laws of *England*, which were a Heap of Nonſenſe, compiled by a few ignorant Country Gentlemen, who hardly knew how to make Laws for the good Government of their own private Families, much leſs for the regulating of Companies and foreign Commerce.

I am, ſays Captain *Hamilton*, the more particular in this Account, becauſe I ſaw, and copied both theſe Letters in *Anno* 1696, while Mr. *Vaux* and I were Priſoners at *Surat*, on account of Captain *Every*'s robbing the Mogul's great Ship, called the *Gunſway*. Having given an Account of ſome of Sir *Joſiah Child*'s Reign, I muſt alſo mark a few Slips in the Government of ſome of his Succeſſors, and of the Ways they took to get into the Chair of *Bombay*. I remarked before, that Mr. *Harris* was a very weak and indolent Perſon, very unfit to govern a Colony and the Factories ſubordinate to *Bombay*; and by that Means, a cunning deſigning Fellow, one Mr. *Samuel Anneſley*, had the Reins of the Government wholly in his Hands, who ſhewed that he had malicious Wit and Avarice enough to embroil both his Maſters and the private Merchants Affairs in *Surat* in *Harris*'s Time; and on *Harris*'s Death got into the Preſidency, or, rather Tyranny.

The Mogul's Subjects have a good many fine large Ships that trade all over *India*: The Owners of theſe Ships had a very great Regard for the Courage, Conduct, and Art of Navigation of the *Engliſh* above any other *European* Nation in *India*. And for theſe Qualifications the *Indian* Owners procured *Engliſh* Officers to go in their Ships, and allowed them very handſome Salaries and Indulgencies; the Captains had from ten to fifteen Pounds *per* Month, Mates from ſix to nine Pounds; and the Gunners and Boatſwains had alſo good Salaries, beſides the carrying of ſome Goods and Merchandize Freight-free. Mr. *Anneſley* thought theſe Salaries and Indulgencies too great for Seamen; ſo he went about to reduce them to about one half, and the other Moiety he looked on as his own Due, by virtue of his Poſt. Some, through Fear and Neceſſity, complied; others again, who deſpiſed both his Power and Tyranny, would by no means come into his Meaſures, and thoſe he looked on as Rebels, and proſecuted them to the utmoſt of his Power, bribing the Mogul's Governor to plague them; ſo ſome were ruined by his Villainy, whilſt others bad him open Defiance; and we were not wanting on our Side to expoſe him and his Maſters to the Mogul's Subjects, which in the End was the Loſs of both their Eſteem and Credit among the trading People of that Country. The poorer Sort, whoſe Maintenance depended on their Labour and Induſtry, loſing their Employs in the *Mooriſh* Merchants Service, were obliged to fall on new Schemes to ſupport themſelves, not very well ſuited to the Company's Intereſt; for ſome went and joined themſelves with the Pirates.

The Company in *England* receiving Accounts from every one that came from *India*, of *Harris*'s and *Anneſley*'s Male-Adminiſtrations, ſent out Sir *John Gayer* to take care of their Affairs. He arrived in *Anno* 1694. with the lofty Title of General of all *India*. He continued *Anneſley* in the Company's Buſineſs till the Year 1700, but diveſted him of all Power of doing more Miſchief; and, in the End, diſmiſſed him the Company's Service. Sir *John Gayer* was a Man not vicious in his Temper, yet he made ſome Slips in his Government that proved prejudicial to his Character; tho' in Matters of common Commerce he acted pretty regularly, till a young Laſs of about 3000 Portion made him diſpenſe with the common Methods of Matrimony. This young Gentlewoman was a Daughter of Mr. *Ward*'s beforementioned: She had no Relations alive, and unadviſedly married one Mr. *Solomon Lloyd*, a Factor, and the Marriage was clandeſtine, which was poſitively againſt the Statute-Law of *Bombay*, where no Marriage is binding but when the Governor's Conſent is tacked to it. This Law Sir *John* had got by heart, and unmarried the poor Factor after Conſummation, and married her to his own Son. Another Piece of ill Conduct was, in forcing the *Mocba* Frigate's Men on board againſt their Wills, to proceed on a Voyage to *China*, notwithſtanding their juſt Complaints againſt *Edgecombe*, their Captain, whom the Mutineers ſhot in his Cabin, and then turned Pirates, and infeſted the Straits of *Malacca*, robbing and plundering all Ships that they could overcome. Captain *Hide*, in the *Darrel*, met them there in her Paſſage to *China*, and had a ſharp Engagement with them, but got clear, with the Loſs of ſixteen Men killed, and ſome wounded, which diſabled the *Darrel*, ſo that ſhe proceeded no farther than *Malacca*. And another Fault of Sir *John*'s was, in ſuffering himſelf and his Lady to be taken Priſoners at *Swally* by the Governor of *Surat*'s Order, when he might have avoided that Diſgrace by Force or Flight: But it was generally believed, that that was only a Piece of Policy to get to *Surat*, in order to employ his Money, which he could do much better there than at *Bombay*. Sir *Nicholas Waite* ſupplanted Sir *John* in the Government of *Bombay*, and in the Preſidency. He was a Man of very looſe Morals, and his bare-faced Injuſtice, and Prevarication, ſo irritated the Inhabitants and Soldiery at *Bombay*, that they ſeized him, and ſent him Priſoner to *England.* Though his Reign was ſhort, it was very pernicious to his Maſters, as well as to particular Merchants under his Juriſdiction.

But to return from this Digreſſion: *Bombay* was governed by a Deputy, ſince the Preſident was obliged to ſtay at *Surat*, and of ſeven or eight hundred *Engliſh* that inhabited before the War, there were not above ſixty left by the Sword and Plague. Thus *Bombay*, that was one of the pleaſanteſt Places in *India*, was brought to be one of the moſt diſmal Deſarts; but the Spirit of Injuſtice ſtill reſided in it; for thoſe who had ventured through the War and Plague in Defence of the Iſland, had not the Liberty of returning home to their own Country, nor to raiſe their Fortune by private Trade; but all were continued preſſed Men, in the Right Honourable the Company's Service, without the Hope of Preferment, which made ſome Diſcontents; and even in the Time of War, when Strangers ſhould have been encouraged to have brought Proviſions into the Iſland, the Company's Taxes of five *per Cent.* were exacted with great Severity; for it was common to ſee the *Portugueze* Subjects bring twenty or thirty Poultry to the Market, and five of the beſt taken for the Cuſtom of the reſt.

13. The Deſire of continuing this hiſtorical Account of the Affairs of *Bombay*, which I take to be very uſeful and inſtructive, as well as curious and entertaining, has led me a little out of my Road of Chronology, and therefore I ſhall be obliged to go back again with reſpect to the Affairs of this Company, and the political Accidents that have attended them during the Reign of King *William*; but the Reader will not fall into any Perplexity or Confuſion from this Method of treating them, becauſe what I have now to ſay has little or no Reference to the Affairs abroad, and conſequently has no Connection with what goes before.

The firſt Tranſaction I meet with in this Reign is a Charter of Regulations granted to the *Eaſt-India* Company, by their Majeſties King *William* and Queen *Mary*, under the Great Seal of *England*, bearing Date *Nov.* 11, 1693. Referring to a Charter of the 7th of *October*, by which it ſeems their former Charters were confirmed, and by this new Charter they were enabled to take in a new Subſcription for ſeven hundred and forty-four thouſand Pounds. The Company was alſo tied down to make publick Sales by Inch of Candle, to export yearly to the Value of one hundred thouſand Pounds of the Manufactures of this Kingdom, and to furniſh the Crown yearly with five hundred Tun of the beſt Saltpetre, at the Rate of thirty-eight Pounds ten Shillings *per* Tun in Time of Peace, and at forty-five Pounds *per* Tun in Time of War; they were likewiſe directed to make no Dividend upon their joint Stock, but in Money only. This Charter was to continue for twenty-one Years, provided the Governor and Company complied exactly with the Rules therein preſcribed; as alſo with ſuch other Orders, Directions, Additions, Qualifications and Reſtrictions as their Majeſties, by and with the Advice of their Privy Council, ſhould think fit to appoint on or before the 29th of *September* 1694, otherwiſe all their Powers and Privileges might be determined and taken away, by Letters of Revocation.

In purſuance of this Proviſo, another Charter of Regulations was granted to the ſaid Company, under the Great Seal of *England*, dated *September* 28, 1694, and in the ſixth Year of their Majeſties Reign, in which among other things it is preſcribed, that once every Year, in the Month of *Auguſt*, the Governor and Company ſhould preſent to the Privy Council a true Account fairly written, under the Governor or Deputy Governor's Hand, of the Nature, Quantity, Value, and prime Coſt of the Manufactures of this Country by them exported, and from what Place; and this upon the Oaths of the proper Officers and Servants of the Company. And it was further ordered, that none of theſe Goods ſhould be again landed in *England*, or carried elſewhere, than within the Limits of the Company's Charter. It was alſo directed, that, on the Application in Writing, of any ſix or more of the Proprietors, each poſſeſſed of One thouſand Pounds Capital Stock, demanding a general Court of the ſaid Company to be called, then the Governor, or Deputy Governor ſhould be obliged, within eight Days, to call ſuch a Court, which ſhould not be adjourned but by the Conſent of the Majority of the Proprietors ſo aſſembled; and the Company were required to ſignify their Acceptance of, and Submiſſion to theſe, and other Reſtrictions, under Pain of Diſſolution.

But, notwithſtanding all theſe Charters and Regulations, which ſeemed ſo fully to confirm, and ſo much to enlarge the Powers and Privileges of this Company, yet were they never ſo precarious as at this Juncture; for, on the one hand, their Authority was boldly diſputed by ſuch as had an Intention to trade to the *Indies*, without any Regard to the Company's Rights, and who, by them, therefore were ſtiled Interlopers: And this, upon Pretence that it was not in the Power of the Crown to grant any excluſive Charter. On the other hand, the Government wanted Money, and therefore the Miniſters, who ſhould certainly have defended the King's Prerogative, ſince otherwiſe it was a high Crime in them to adviſe him to grant ſuch Charters, ſtruck in with the other Party; and, for the ſake of making more Money, and removing the Obſtacles in the Way of their own Adminiſtration, promoted the Ruin of thoſe Grants and Charters, which they had been moſt exorbitantly paid for procuring; and upon the Faith of which vaſt Numbers of Perſons had ſubſcribed their Fortunes into the Company's joint Stock. But as it was not to be ſuppoſed that any Set of new People would advance two Millions, which was the Sum propoſed upon a new Charter, which might prove as precarious as the old one, it was reſolved to ſubject the whole of this Affair to the Cognizance of the Houſe of Commons, in order to have every thing ſettled and ſecured by an Act of Parliament. Accordingly, in the Year 1698, this Matter was propoſed to the Houſe, not only with the Concurrence of Perſons in Power, but backed and ſupported by all their Intereſt; ſo that though it was ſteadily and vehemently oppoſed by the Members of the old Company, yet it was to very little Purpoſe. They followed the Bill however into the Houſe of Lords, and were heard there by their Council, Sir *Thomas Powis*, and Sir *Bartholomew Shower*; who, with much Eloquence and great Strength of Reaſon, maintained the Cauſe of their Clients, but without Succeſs; and it was a Point determined, that their Intereſt ſhould give Way to that which, whether truly or falſly I ſhall not determine, was called the Intereſt of the Publick.

Thus it came to paſs, that in the Reign of King *William* III. a new Company trading to the *Eaſt-Indies* was incorporated by Act of Parliament, they having advanced the Government two Millions of Money, for which they at firſt received Intereſt, after the Rate of Eight *per Cent.* out of the Funds aſſigned for the ſame: But that Intereſt hath been ſunk by ſubſequent Statutes to Six and Five *per Cent.* After this, the old and new Companies, having a due Regard to their own common Intereſts, for the Prevention of divers Inconveniencies that might otherwiſe have happened, both to themſelves and this Nation in general, agreed upon ſeveral Articles for the Union of the ſaid Companies in manner following, *viz.*

It was agreed that the Effects of both Companies ſhould be brought home with all convenient Speed for their ſeparate Accounts, and all poſſible Proviſion made for the enabling both Companies to bring home the ſame with Security; and that neither the Crown nor the new Company take any Advantage of the old Company, under Pretence of Forfeiture; and that each Company give a Releaſe to the other, and to their reſpective Factors and Servants.

The old Company's 315,000*l.* in Funds, upon the Execution of this Agreement, to be immediately united to the Capital Stock of the new Company; and that the old Company purchaſe of the new Company, to be tranſferred by three of their Members in their political Capacity, 673,500*l.* in the Capital Stock and Fund of 1,662,000*l.* with the Benefits to ariſe thereby; ſo that the old Company may have 988,500*l.* in the ſaid Fund, which will make that Company equal to the new in Fund and Title to the Trade, and which Stock of 673,500*l.* ſhall be transferred at four ſeveral Times, each fourth Part to be paid for at the Time of their Transfer, at 100*l.* for 100*l.*

That the old Company's dead Stock at home and abroad be valued at 33 000*l.* and the new Company's dead Stock both abroad and at home, at 70,000 *l.* and that the old Company, at the Time of transferring the firſt fourth Part of the ſaid 673,500 *l.* do transfer all their dead Stock, abroad and at home, to the new Company, the new Company paying for one Moiety thereof at the ſame time 16,500 *l.* and that the old Company ſhall alſo pay to the new Company 35,000 *l.* for the Moiety of their dead Stock; and thereupon the old Company ſhall have, and be entitled to a Moiety of both the ſaid Stocks, as Members of the new Company.

The Members of the new Company transferring, ſhall be entitled to the Arrears of their Annuity until the Time of the ſeveral Transfers; after which all Annuities ariſing by the old Company's 315,000 *l.* ſhall be paid to ſuch Perſons as ſhall be appointed for that Purpoſe by the ſaid old Company for their Uſe; and the new Company ſhall have the Benefit of all Money ariſing before their Agreement, and alſo 5 *l. per Cent.* on all Ships entered or cleared before the Execution of the ſaid Agreement: each Company is to deſiſt from any ſeparate Exportation.

That, during ſeven Years, each Company ſhall have an equal Power in the Adminiſtration and Management of the Fund and Trade; and, to that End, twelve Perſons ſhall be appointed by the General Court of each Company reſpectively, out of the Courts of Committees and Directors of the ſaid Companies, who ſhall be called in the new Charter, *Managers of the United Trade to* India; and a new additional Stock ſhall be raiſed for carrying on the future Trade, and be advanced in ſuch Proportions as the ſaid Twenty-four Managers, or the major Part of them, ſhall from time to time appoint, the General Courts of each Company agreeing thereunto.

The old Company, during the Space of ſeven Years, ſhall preſerve their Stock in their political Capacity; and, for that Time, remain a ſeparate Corporation, ſo as to transfer and aſſign in their own Books, as now they do; and, at the End of the ſaid ſeven Years, the old Company ſhall transfer and aſſign in the Books of the new Company their Share in the Fund to their ſeveral Members who ſhall be then entitled to the ſame; and thereon the ſaid Members of the old Company ſhall become, and be admitted Members of the new Company *gratis.*

That each Company ſhall indemnify the other from their reſpective Debts and Demands, and a proper Proviſion be made for that Purpoſe: And, that the new Company, after the executing their Agreement, ſhall not take up any Money upon their common Seal, or do any other Act, except what relates to their ſeparate Effects as aforeſaid, without the Concurrence of the old Company.

A Covenant to be entered into, that his Majeſty ſhall make a Re-grant within ten Days after the making ſuch Aſſignment as aforeſaid; and that the old Company, within one Month after the ſaid ſeven Years are expired, ſhall ſurrender their Charter and Corporation; and alſo that the King, within ten Days after ſuch Surrender, ſhall make a new Grant to the ſame Truſtees, and ſubject to the ſame Truſt of all ſuch Eſtate and Effects of the old Company as ſhall come to or devolve upon the Crown, by reaſon of the ſaid Surrender.

That immediately from and after the ſaid Surrender, the new Company ſhall change its Name, and be called the *United Company of the Merchants of* England *trading to the* Eaſt-Indies. Nevertheleſs, the future Management of the ſaid Stock and Trade, after the ſaid Term of ſeven Years is expired, is to be, according to the new Company's Charter, on the 5th of *September*, 1698. And for the better attaining the Purpoſes aforeſaid, that there be a Tripartite Indentnre, executed by his Majeſty and both the ſaid Companies, wherein ſuch Covenants and Proviſions may be made as ſhall be thought reaſonable, with proper Releaſes from his Majeſty to each Company; ſo that as ſoon as the aforeſaid ſeven Years, allowed for the Conveniency of Affairs on both Sides, are expired, the two Companies may be entirely one in Name and Effect.

This, in Truth, was the only Remedy that could be deviſed for the Cure of ſo great an Evil, many of the bad Conſequences of which were foreſeen before it took Effect, which, however, proved but few in compariſon of what was diſcovered by Experience. Some there were who imagined that this was a *Dutch* Deſign originally, and formed with a View to undermine our national Intereſt in this Trade to favour their own; and, to ſpeak freely, there are ſome Circumſtances which give ſome Probability to this Notion; and, perhaps, amongſt theſe Circumſtances, there is none ſtronger than that the Subſcription of the Two Millions was chiefly promoted by Foreigners, as we are expreſly told by the Author of the *Compleat Hiſtory of* England, in his Account of the Reign of King *William*, who magnifies the Alacrity with which that Sum was ſubſcribed, and ſeems to think, that twice as much might have been obtained, if the Act of Parliament had extended ſo far. But it may ſeem a Paradox to ſay, that People would venture their Money to hurt the old *Eaſt-India* Company: But this is eaſily ſolved, by conſidering that little depended on that Trade, where they were to have ſo large an Intereſt as Eight *per Cent.* for their Money.

The only Way to form a right Judgment of this Affair is, to take a View of the Situation of Things in the *Indies*, after this new Eſtabliſhment took place: And of this, in his Account of *Bengal*, the before mentioned Captain *Hamilton* has given us a very full and fair Relation, interſperſed with ſome Concerns of his own, which ſhews that he was an Eye-witneſs, and did not deliver any thing from Hearſay. If we wanted other Evidence, I might cite that of Mr. *Lockyer*, who, in his Account of the Trade of the *Indies*, informs us, that the old and new Companies had each of them a Factory at *Surat*; and that thoſe that managed them acted with ſuch Animoſity againſt each other, that it was very hard, even after the Companies were united, to reconcile them. It is extremely difficult to find out, and bring together ſuch Relations as theſe; but the Deſire I have that the Readers ſhould be perfectly acquainted with the State of this Commerce in different Periods of Time, that he may frame the better Notion of what has contributed to promote, and what has occaſioned, at any Time, the Decay of this Trade, has encouraged me to take all the Pains I could to range the ſeveral Accounts I have been able to collect, in ſuch Order as might make them beſt underſtood, and beſt anſwer the End that I propoſed. It was ſolely with this View, that I reſolved to give the following Paſſages from Captain *Hamilton*'s Travels, which, I hope, will ſet this Matter in as clear a Light as either myſelf or the Reader could wiſh. The Country about *Bengal* deſcribed, he proceeds a little higher. Up the Eaſt-ſide of *Hughly* River is *Ponjelly*, a Village where a Corn-mart is kept once or twice in a Week: It exports more Riches than any Place on this River. And five Leagues farther, upon the other Side, is *Tanna* Fort, built to protect the Trade of the River, at a Place convenient enough, where it is not above half a Mile from Shore, but it never was of much Uſe; for, *Anno* 1686, when the *Engliſh* Company quarrelled with the Mogul, the Company had ſeveral great Ships at *Hughly*; and this Fort was manned, in order to hinder their Paſſage down the River. One ſixty Gun Ship approaching pretty near the Fort, ſaluted it with a Broad-ſide, which ſo frightened the Governor and his Myrmidons, that they all deſerted their Poſts, and left their Caſtle to be plundered by the *Engliſh* Seamen. About a League farther, upon the other Side of the River, is *Governapore*, where there is a little Pyramid, built for a Land-mark, to confine the Company's Colony of *Calcutta*, or *Fort-William*, on that Side: And about a League farther up, ſtands *Fort-William.*

The *Engliſh* ſettled there about the Year 1690. After the Mogul had pardoned all the Robberies and Murders committed on his Subjects, Mr. *Job Channock*, being then the Company's Agent in *Bengal*, he had Liberty to ſettle an Emporium in any Part of the River-ſide below *Hughly*; and for the ſake of a large ſhady Tree, choſe that Place, though he could not have choſen a more unhealthy Place on all the River; for three Miles to the North-eaſtward is a Salt-water Lake that overflows in *September* and *October*, and then prodigious Numbers of Fiſh reſort thither; but in *November* and *December*, when the Floods are diſſipated, theſe Fiſhes are left dry, and with their Putrefaction affect the Air with thick ſtinking Vapours, which the North-eaſt Winds bring with them to *Fort-William*, where they cauſe a yearly Mortality. One Year I was there, and there were reckoned in *Auguſt* about 1200 *Engliſh*, ſome military, ſome Servants to the Company, ſome private Merchants reſiding in the Town, and ſome Seamen belonging to Shipping lying in the Town; and before the Beginning of *January* there were four hundred and ſixty Burials regiſtered in the Clerk's Book of Mortality.

Mr. *Channock* chuſing the Ground of the Colony where it now is, reigned more abſolute than a Rajah, only he wanted much of their Humanity; for when any poor ignorant Native tranſgreſſed his Laws, they were ſure to undergo a ſevere Whipping for a Penalty; and the Execution was generally done when he was at Dinner, or ſo near his Dining-room, that the Groans and Cries of the poor Delinquent ſerved him for Muſick.

The Country about being over-ſpread with *Paganiſm*, the Cuſtom of Wives burning with their deceaſed Huſbands is alſo practiſed. Before the *Mogul*'s War, Mr. *Channock* went one Time with his ordinary Guard of Soldiers, to ſee a young Widow act that tragical Cataſtrophe; but he was ſo ſmitten with the Widow's Beauty, that he ſent his Guards to take her by Force from the Executioners, and conduct her to his own Lodgings. They lived lovingly many Years, and had ſeveral Children; at length ſhe died, after he had ſettled in *Calcutta*. But inſtead of converting her to Chriſtianity, ſhe made him a Proſelite to *Paganiſm*, and the only Part of Chriſtianity that was remarkable in him, was, burying her decently; and he built a Tomb over her, where, all his Life, after her Death, he kept the Anniverſary-day of her Death by ſacrificing a Cock on her Tomb, after the *Pagan* Manner. This was, and is the common Report, and I have been credibly informed, both by Chriſtians and Pagans, who lived at *Calcutta*, under his Agency, that the Story was really Matter of Fact.

Fort *William* was built an irregular Tetragon of Brick and Mortar, called *Puckah*, which is a Compoſition of Brick-duſt, Lime, Molaſſes, and cut Hemp; and when it comes to be dry, is as hard and tougher than firm Stone or Brick, and the Town was built without Order, as the Builders thought moſt convenient for their own Affairs, every one taking in what Ground beſt pleaſed him for Gardening; ſo that in moſt Houſes you muſt paſs thro' a Garden into the Houſe, the *Engliſh* building near the River-ſide, and the Natives within Land.

The Agency continued till the Year 1705, that the old and new Companies united, and then it became a ſplit Government, the old and new Companies Servants governing Week about, which made it more anarchical than regular. Sir *Edward Littleton* was Agent and Conſul for the new Company at *Hughly*, when this Union of the Companies was made, and then he was ordered to remove his Factory to *Calcutta*, and being of an indolent Diſpoſition, had let his Accounts with the Company run behind; he was ſuſpended, but lived at *Calcutta* till 1707, that he died there. He was the only Precedent, or Preſident, in the Company's Service, that loſt an Eſtate of ſeven hundred Pounds *per Annum* in ſo profitable a Poſt in their Service.

This double-headed Government continued at *Calcutta* till *January* 1709, that Mr. *Welden* arrived with the Company's Commiſſion to ſettle it at *Bombay* and Fort *St. George*, which were under the Management of a Governor and Council, which thoſe of the Direction in *England* took to be a better Way to promote their own Creatures, as well as their own Intereſt. His Term of governing was very ſhort, and he took as ſhort a Way to be enriched by it, by haraſſing the People to fill his Coffers: There was one ſingular Inſtance of it. A poor Seaman had got a pretty *Muſtic* Wife, a little inclined to Lewdneſs in her Huſband's Abſence. She entertained two *Armenians*, who were like to quarrel about ſharing her Favours, which coming to the Governor's Ears, he reprimanded them; however, by the ſtrong Perſuaſion of five hundred *Rupees*, paid in Hand by one of them, he awarded him to have the ſole Right to her, and he carried her to *Hughly*, and bragged openly what his Purchaſe had coſt him, to the great Credit and Praiſe of the Governor; and when the poor Huſband returned, he was forced to ſubmit to loſe his Mate under the Pain of Flagellation: Yet he was very ſhy in taking Bribes, referring thoſe honeſt Folks who trafficked that way to the Diſcretion of his Wife and Daughter, to make the beſt Bargain they could about the Sum to be paid, and to pay the Money into their Hands. I could give many Inſtances of the Force of Bribery, both here and elſewhere in *India*, but am loth to ruffle the Skin of old Sores.

About fifty Yards from Fort *William*, ſtands the Church built by the pious Charity of Merchants reſiding there, and the Chriſtian Benevolence of ſea-faring Men, whoſe Affairs call them to Trade there; but Miniſters of the Goſpel being ſubject to Mortality, very often young Merchants are obliged to officiate, and have a Salary of fifty Pounds *per Annum* added to what the Company allows them for their Pains, in reading Prayers and Sermons on *Sundays*.

The Governor's Houſe in the Fort, is the beſt and moſt regular Piece of Architecture that I ever ſaw in *India*, and there are many convenient Lodgings for Factors and Writers within the Fort, and ſome Storehouſes for the Company's Goods, and the Magazines for their Ammunition.

The Company has a pretty good Hoſpital at *Calcutta*, where many go in to undergo the Penance of Phyſick, but few come out to give an Account of its Operation. The Company has alſo a pretty good Garden, that furniſhes the Governor's Table with Herbage, and Fruits; and ſome Fiſh-ponds to ſerve his Kitchen with good Carp, Calhops and Mullet.

Moſt of the Inhabitants of *Calcutta*, that make any tolerable Figure, have the ſame Advantages, and all ſorts of Proviſions, both wild and tame, being plentiful, good and cheap, as well as Cloathing, make the Country very agreeable, notwithſtanding the above-mentioned Inconveniencies that attend it.

On the other Side of the River are Docks made for repairing and fitting their Ships Bottoms, and a pretty good Garden belonging to the *Armenians*. That had been a better Place to have built their Fort and Town in, for many Reaſons; one is, that where it now ſtands, the Afternoon Sun is full in the Fronts of the Houſes, and ſhines hot in the Streets, that are both above and below the Fort, whereas here the Sun would have ſent its hot Rays on the Backs of the Houſes, and the Fronts had been a good Shade for the Streets.

Moſt Gentlemen and Ladies in *Bengal* live both ſplendidly and pleaſantly, the Forenoons being dedicated to Buſineſs, and after Dinner to Reſt, and in the Evening to recreate themſelves in Chaiſes, or Palankins, in the Fields, or going to Gardens, or by Water in their Budgeroes, which are convenient Boats that go ſwiftly with the Force of Oars; and on the River, ſometimes there is the Diverſion of Fiſhing, or Fowling, or both, and before Night they make friendly Viſits to one another, when Pride or Contention do not ſpoil Society, which too often they do among the Ladies, as Diſcord and Faction do among the Men; and altho' the conſcript Fathers of the Colony diſagree in many Points among themſelves, yet they all agree in oppreſſing Strangers, who are conſigned to them, not ſuffering them to buy or ſell their Goods at the moſt advantageous Markets, but to the Governor and his Council, who fix their own Prices, high or low, as ſeemeth beſt to their Wiſdom and Diſcretion; and it is a Crime hardly pardonable, for a private Merchant to go to *Hughly* to inform himſelf of the current Prices of Goods, altho' the Liberty of Buying and Selling is entirely taken from him before.

The Garriſon of Fort *William* generally conſiſts of two or three hundred Soldiers, more for conveying their Fleet from *Patana*, with the Company's Salt-petre, Piece goods, raw Silk, and ſome Opium belonging to other Merchants, than for the Defence of the Fort: For, as the Company holds their Colony in Fee-tail of the *Mogul*, they need not be afraid of any Enemies coming to diſpoſſeſs them; and if they ſhould at any Time quarrel again with the *Mogul*, his prohibiting his Subjects to trade with the Company would ſoon end the Quarrel.

There are ſome imperious troubleſome Rajahs, whoſe Territories lie on the Banks of the *Ganges*, betwixt *Patana* and *Caſſambuzaar*, who pretend to a Tax on all Goods and Merchandize that paſs by, or through their Dominions of the River, and often raiſe Forces to compel Payment; but ſome Forces from Fort *William* in Boats generally clear the Paſſage, tho' I have known ſome of our Men killed in the Skirmiſhes.

In *Calcutta* all Religions are freely tolerated but the Preſbyterian, and that they brow-beat. The Pagans carry their Idols in Proceſſion through the Town. The *Roman* Catholicks have their Church to lodge their Idols in, and the *Mahommedan* is not diſcountenanced; but there are no Polemics, except what are between our High-churchmen and our low, or between the Governor's Party and other private Merchants, on Points of Trade.

The Colony has very little Manufactory of its own; for the Government being pretty arbitrary, diſcourages Ingenuity and Induſtry in the Populace; for, by the Weight of the Company's Authority, if a Native chances to diſoblige one of the upper Houſe, he is liable to arbitrary Puniſhment, either by Fine, Impriſonment, or corporal Sufferings. I will give one Inſtance out of many, that I knew of the Injuſtice of a Governor of the double-headed Government in *Anno* 1706.

There was one Captain *Perrin*, Maſter of a Ship, who took up about 500*l.* on Reſpondentia, from Mr. *Ralph Sheldon*, one of the Governors, in a Voyage to *Perſia*, payable at his return to *Bengal*. *Perrin* having diſpatched his Affairs in *Perſia* ſooner than he expected, called at *Goa* as he came home, and bought a *Surat* built Ship, very cheap, and carried her to *Calecut*, and took in a Quantity of Pepper for the *Bengal* Market, and having brought in his other Ship good Store of *Perſia* Wines, called at Fort *St. George*, to diſpoſe of what he could there: But finding no Encouragement from that Market, carried it to *Bengal*. On his Arrival, he complimented Mr. *Sheldon* with the Offer of his Pepper and Wine; but he declined meddling with that Bargain, farther than with as much of the Pepper, at the current Price, as would ballance his Account of Principal and Reſpondentia. Accordingly *Perrin* delivered ſo much Pepper, and, on the Delivery, required his Bond up; but the Governor told him, that he being a Fellow troubled with the Spirit of interloping in buying Goods, and taking in Freights where he could beſt get them, he would keep the Bond as a Curb on him, that he ſhould not ſpoil his Markets for the future. Poor *Perrin* uſed all his Rhetorick to get his Bond up, but to no Purpoſe; and the Governor moreover gave his Wine a bad Name, ſo that he could not diſpoſe of that neither; and all this Oppreſſion was in order to ſtraiten him, that he might be obliged to ſell his purchaſed Ship at a low Price to him and his Aſſociates, which at laſt he was obliged to do, holding a Quarter-part in his own Hands, to ſecure the Command of her to himſelf, which, after all, he could hardly do. *Perrin* made his Complaint to me, but I was in no Condition to aſſiſt him; becauſe having three or four large Ships at *Bengal*, I was reckoned a Criminal guilty of that unpardonable Sin of interloping. However, I adviſed *Perrin* to comply with his inexorable Maſter, on any Terms of Agreement whatſoever, which he endeavoured to do, that he might at leaſt keep the Command of his Ship, where he was ſo much concerned, and had hardly done it but by Accident. One Day meeting me on the Green near the Fort, he ſtopped me to relate his Grievances, and begged, that if he was turned out of his own Ship, he might have an Employ in one of mine, which I promiſed he ſhould.

Sheldon eſpied us out of a Window, holding a long Confabulation; and being impatient to know about what, ſent a Servant to call *Perrin*, and he obeying the Summons, was interrogated about what our Diſcourſe was, and he told the Promiſe I had made him. *Sheldon* told him, that he was as capable to employ him as I could be. *Perrin* anſwered, that he knew that, but wiſhed that he would be as willing too; ſo *Sheldon* promiſed that he ſhould command his own Ship to *Perſia*.

But the Wine ſtill lay unſold, though it was ſcarce then in *Bengal*; but the Name that it got firſt in *Fort St. George*, and afterwards in *Fort William*, ſtuck ſo faſt to it, that none of it would go off at any Price: So I adviſed him to carry it off in the Night in my Boats on board of one of my Ships, and I would try if I could ſerve him in ſelling it, which accordingly he did; and two Gentlemen of the Council being that Seaſon bound for *England*, coming one Day to dine with me, I treated them and the reſt of my Company with that *Perſia* Wine, which they all praiſed, and aſked me where I got it? I told them, that knowing that good Wine would be ſcarce at *Bengal* that Year, I had provided a good Quantity at *Surat*, from whence I had come that Seaſon. Every one begged that I would ſpare them ſome Cheſts, which I condeſcended to do as a Favour, and next Day ſent them what they wanted at double the Price the Owner demanded for it while he had it, and ſo got off above one hundred and twenty Cheſts, which enabled Mr. *Perrin* to ſatisfy moſt of his Creditors. *Sheldon* provided a Stock and Freight for *Perrin* to *Perſia*, and put on board ſome rotten long Pepper, that he could diſpoſe of no other Way, and ſome damaged Gunnies, which are much in uſe in *Perſia* for embailing Goods when they are good in their kind; but, *nolens volens*, *Perrin* muſt take them, and ſign Bills of Lading for good well conditioned Goods; and yet, after he was ready to ſail, he had been ſtopped, if he could not raiſe the Sum of 2500 Rupees to diſcharge a Bill that at that Time became due, and was indorſed to *Sheldon*. I alſo helped him out of that Difficulty, and took his Bond for the Sum, bearing Intereſt from the Date at the current Intereſt of one *per Cent. per Menſem*; ſo *Perrin* proceeded on his Voyage to *Perſia*, but called at *Callecut* in his way home again, and laid up his Ship there, and took Protection of a *Neyer*, with the full Hand of 11,000 Pounds Sterling of *Bengal* Money, and wrote to Mr. *Sheldon* that he might keep his former Bond, and he would take care of his Part of the Stock in his Hands. He alſo wrote to me, that he would take particular care to reimburſe me; but in a ſhort time after he died, and his Effects came into the *Engliſh* Chief's Hands, who detained them ſeveral Years, denying that ever he paid any till Governor *Boone* came to the Government of *Bombay* in 1715, and then he made a lame Account. I have been ſo prolix and particular in this Story, that you may form an Idea of the Deformity and diſmal Image of Tyranny and Villany, ſupported by a Power that neither divine nor human Laws have Force enough to bridle or reſtrain. The Company's Colony is limited by a Land-mark at *Governapore*, and another near *Barnagul*, about ſix Miles diſtant, and the ſalt-water Lake bound it on the Land-ſide. It may contain in all about ten or twelve thouſand Souls, and the Company's Revenues are pretty good, and well paid; they ariſe from Ground-rents and Conſulage, on all Goods imported and exported by *Britiſh* Subjects; but all Nations beſides are free from Taxes.

It is very clear from this hiſtorical Account of the Company's Affairs, and of their Government in *India*, that nothing held them together, but the ſlender Tie of Self-intereſt, which obliged ſuch as otherwiſe hated each other, ſo far to comply, as to be able to make the Machine go on; but ſtill this was doing Things uneaſily, and nothing can be clearer than that the publick Intereſt muſt have ſuffered greatly, while it had no other Support than theſe left-handed Aſſiſtances, from ſuch as wanted its Protection to make their private Fortunes. But we were all this Time engaged in a foreign War, from the glorious Motives of ſettling the Ballance of Power, humbling *France*, and ſecuring the Tranquillity of *Europe*, which ſo much took up our Miniſters Heads, that they had ſcarce Time to think of Trade and Navigation. Yet there is nothing plainer than this to any Man who will ſtudy the Intereſt of this Nation, which one would imagine ſhould be the Science of Miniſters, than that an Application to the Extention of our Commerce, is the ſole Means of raiſing the Power and Credit of this Kingdom, which muſt be rendered conſiderable abroad by its naval Force, and that naval Force cannot be kept up, or increaſed, any other Way than by promoting a Spirit of Trade and Navigation. However, as the Heads of the Miniſtry were now turned another Way, the *Eaſt-India* Company was obliged to think of ſome Means of obtaining ſuch Regulations in their Favour, as might be ſufficient to remedy the Inconveniencies that had reſulted from the ſettling two Companies; and in order to obtain ſuch a Law as was requiſite for this Purpoſe, they, in the ſixth Year of Queen *Anne*, reſolved to lend the Government the Sum of one Million two hundred thouſand Pounds, over and above what had been lent already; which Propoſal of theirs was accepted, and in Conſideration thereof, it was agreed, that the Parliament ſhould give them ſuch Aſſiſtance for carrying on their Trade as they required. The Reader will obſerve, that by this Means the *Eaſt-India* Company is to be conſidered in a double Capacity; that is to ſay, as Creditors to the Publick, and as a trading Company. In the former Capacity, they have a Security, as other Companies have, for the Monies by them advanced, and a proportionable Intereſt thereupon; and in their other Capacity, their Directors are Truſtees for the Company's Trade, the Profits of which likewiſe belong to the Proprietors; and from hence it appears, that the Dividends upon their Stock are compounded of the Intereſt they receive from the Government, and of the Profits accruing from their Trade to the *Indies*. The firſt being fixed and invariable, ſerves as an Index to the latter, ſince at all Times the Intereſt paid to the Company being deducted from the Dividend, paid by them to the Proprietors, ſhews clearly what the Profits made by their Trade muſt be, as we ſhall farther explain in the Courſe of this Hiſtory. In the mean time, let us return to this Act of Parliament in the Reign of Queen *Anne*, in order to ſee what Effects it had upon the Affairs of the Company, and what Advantages they received in Conſideration of this large and neceſſary Supply for the publick Service; and, by the way, let us remark that it was but reaſonable to grant a trading Company certain Advantages, beyond the bare Intereſt of their Money, becauſe they might otherwiſe have employed it more to their Advantage. It was therefore enacted, that the *Engliſh* Company trading to the *Eaſt-Indies*, ſhall advance and pay in to the Exchequer 1,200,000 *l.* on ſeveral Days appointed, and, in caſe of Failure by the ſaid Company, the Monies not paid ſhall be recovered by Action of Debt, and 12 *per Cent.* Damages; and the ſaid Company may borrow Money by their Common Seal, on Security of their united Stock, ſo as the principal Money at any Time to be owing don't exceed 1,500,000 *l.* above what might lawfully be borrowed thereon before this Act. In caſe the Governor and Company of Merchants of *London* trading to the *Eaſt-Indies*, and the General Court of the ſaid *Engliſh* Company, whilſt they ſeparately continue, *&c.* ſhall think fit to call in Money from their reſpective Adventurers towards raiſing the ſaid 1,200,000 *l.* or repaying the Money borrowed for that Purpoſe, they are impowered to make ſuch Calls accordingly, to make up the ſaid Sum; and if any Members ſhall neglect or refuſe to pay their Shares of the Monies called in, or which the ſaid Company in Purſuance of the Statute of 9 *W.* III. *cap.* 44. or their Charters, ſhall call in for carrying on their Trade (after Notice fixed on the *Royal Exchange*) then the ſaid Company reſpectively may ſtop the Dividends payable to ſuch Members, and apply the ſame towards ſuch Payment, until it be ſatiſfied; and alſo ſtop the Transfers of the Shares of ſuch Defaulters, and charge them with Intereſt at 5 *per Cent.* till Payment; in neglecting which, in three Months, the Company may ſell ſo much of the Defaulter's Stock as will pay the ſame. The aforeſaid Sum of 1,200,000 *l.* ſhall be deemed to be an Addition of the Stock of the *Engliſh* Company, and be Tax-free. The united Stock of the ſaid *Engliſh* Company ſhall be ſubject to the Debts contracted by the ſaid Company, and Perſons entituled to 7,200 *l.* Part of the two Millions, the original Stock, who have not united their Stocks to the Corporations, and who are authorized to carry on a Trade for their ſeparate Uſe, may hold and enjoy their Trade as if the ſaid Act had not been made. But the *Engliſh* Company may repay the ſame at the End of three Years, together with the Annuities due thereon, and then the whole Trade ſhall be veſted in the ſaid Company. Matters in Difference between the two Companies, concerning an Union between them, are referred to *Sidney* Earl of *Godolphin*'s Arbitration, and after the making the ſaid Award and Surrender of the Charter of the Governor and Company of Merchants of *London* trading to the *Eaſt-Indies*, the Perſons who at the Time of the Surrender, purſuant to an Indenture Tripartite, made between the Queen of the firſt Part, the ſaid Governor and Company of the ſecond Part, and the ſaid *Engliſh* Company of the third Part, ſhall be Directors and Managers of the united Trade of the *Engliſh* Company, ſhall be ſuch until new Directors are choſen, according to the Charter dated the 5th of *September*, 10 *W.* III. This Act hath alſo a Proviſo, that on three Years Notice, after a Time limited, and Repayment of the ſaid two Millions, and 1,200,000 *l.* and all Arrears then due for the Annuities, which Annuities amount to 160,000 *l.* *per Annum*; then the aforeſaid Duties on Salt, *&c.* and the Benefit of Trade given by this and the former Act and Charters to ceaſe. This Proviſo of Redemption is enlarged, as to the Time, by Stat. 10 *Ann. cap.* 28. and by the 29th, the *Eaſt-India* Company may enter ſuch Goods as they ſhall import at the Cuſtom-houſe, by Bills at Sight or Sufferance, and ſhall give Security under their Common Seal for Payment of the Cuſtoms and Duties as are rated in the Book of Rates, and upon Coffee, which is to be aſcertained by the Oath of the Importer, *viz.* for paying half thereof at the End of ſix Calendar Months, and the other half at the End of twelve Months; and the Cuſtom Officers ſhall grant to the ſaid Company ſuch Bills at Sight or Sufferance, and take Security as aforeſaid, and make ſuch Allowances and Deductions as are made to other Merchants, paying their ſaid Cuſtoms at or before the landing their Goods and Merchandize; but nothing herein ſhall extend to alter the Method of paying the Duties of 15 *per Cent.* on Muſlins and Callicoes, or the Duties upon any other Goods that are to be aſcertained by Sale at the Candle.

16. In the Beginning of the Reign of King *George* the Firſt, it was found, that various Attempts had been made to diſcover the Secrets of the Company's Commerce, for the Information and Benefit of Foreigners, and therefore a Law was obtained to remedy this Evil, *viz.* the Statute of 5 K. *George* I. which ordains, with a View to render ſuch Practices impoſſible, That if any Subjects ſhall ſail, or go to the *Eaſt-Indies*, or ſuch Places of *Aſia*, *&c.* beyond the Cape of *Bona Eſperanza*, to the Straits of *Magellan*, where any Trade, or Traffick, or Merchandize is, or may be uſed, or had, contrary to the Laws in being, or the Tenor of this Act: Every Perſon ſo offending, ſhall be liable to the Puniſhment inflicted by Law for ſuch Offence; and it ſhall be lawful for the united Company of Merchants of *England* trading to the *Eaſt-Indies*, and their Succeſſors, to arreſt and ſeize ſuch Perſons, being Subjects to the Crown of *Great-Britain*, at any Places where they ſhall be found, within the Limits aforeſaid, and to ſend them to *England*, there to anſwer for their Offences, according to due Courſe of Law. Every Perſon who ſhall procure, ſollicit, obtain, or act under any Commiſſion, Authority, or Paſs from any foreign Prince, State, or Potentate, to ſail or trade in, or to the *Eaſt-Indies*, or any the Parts aforeſaid, ſhall forfeit 500 *l.* the ſaid Penalties and Forfeitures to be ſued for and recovered in any Court of Record at *Weſtminſter*, by Bill, *&c.* one Moiety to the Informer, the other to the Crown.

But notwithſtanding theſe Severities, this Law did not produce the Effects expected from it; for our *Eaſt-India* Company having for many Years divided 10 *per Cent.* upon their Capital, which in moſt foreign Countries was underſtood to be the Profits of their Trade, it raiſed ſuch a Spirit of ſharing in this Commerce, and ſo many *Engliſhmen* were found ready to join in ſuch Projects abroad, that a Company was eſtabliſhed at *Oſtend*, which made another Act neceſſary, which paſſed in the ninth Year of the ſame Reign, by which it was enacted, that if any Subject of his Majeſty ſhall contribute to, or encourage the eſtabliſhing or carrying on any foreign Company trading from any Part of the *Auſtrian Netherlands*, to or from the *Eaſt-Indies*, and other Places beyond the *Cape of Good-Hope*, deſcribed in former Acts for ſecuring the ſole Trade thither to the united *Eaſt-India* Company in *England*, or ſhall be intereſted in any Share of the Stock or Actions of any ſuch foreign Company, or ſhall make any Payments in Money, or by Bills of Exchange, or otherwiſe, towards promoting or ſupporting ſuch Company, or the Trade thereof, or ſhall ſubſcribe to the eſtabliſhing any other foreign Company, for trading to the *Eaſt-Indies*, or be concerned in any Stock therein, *&c.* the Perſon ſo offending ſhall forfeit their Intereſt and Share in the Stocks of any ſuch Company, with treble the Value thereof, one Third to the Crown, and the remaining two Thirds to the *Eaſt-India* Company, if they inform or ſue for the ſame; otherwiſe one Third of two ſuch Thirds to the common Informer, recoverable by Action of Debt, *&c.*

And the Attorney-General, of his own Authority, or at the Relation of the ſaid united Company, and for the Company, may file a Bill of Complaint in the Court of Chancery, or the Exchequer, againſt any Perſon who ſhall have ſubſcribed or contributed to, or promoted, or any ways become intereſted in the eſtabliſhing any ſuch foreign *Eaſt-India* Company, or the Stock or Trade thereof, for the Diſcovery of his Offence, remitting or waving the Forfeiture of the treble Value of the Offender's Stock, or Concern in any ſuch Company, and inſiſting only on the ſingle Value. And thereupon, ſuch Perſon ſhall anſwer to the Bill, and not plead or demur to the Diſcovery thereby ſought; and in caſe the ſingle Value only of ſuch Intereſt or Share ſhall be decreed to be paid, one third Part thereof ſhall go to his Majeſty, and the other two Thirds to the Company. If any Subject ſhall have accepted of any Truſt, or know of any Intereſt, Share, or Concern, which any of his Majeſty's Subjects ſhall have, or be entitled to, in any ſuch foreign Company, and ſhall not within ſix Months after accepting the Truſt, or the coming to the Knowledge of any ſuch Intereſt, *&c.* truly diſcover the ſame in Writing to the ſaid united Company of *England*, or their Court of Directors, he ſhall forfeit treble the Value of the Intereſt, *&c.* ſo accepted in Truſt, or ſo known, and not diſcovered, one Moiety to the Crown, the other to him who will ſue for the ſame, by Action of Debt, *&c.* or ſuch Offender ſhall, at the Diſcretion of the Court where the Proſecution is commenced, ſuffer one Year's Impriſonment; and Perſons that within the Time above limited ſhall voluntarily come to the Court of Directors, and make a true Diſcovery in Writing of the Intereſt, Share, or Concern of any Subjects in the Stock of any ſuch foreign Company, ſhall have one half Part of the clear Amount of the Forfeitures ariſing by this Act.

In caſe any of his Majeſty's Subjects (other than ſuch as are lawfully authorized) ſhall go to, or be found in the *Eaſt Indies*, they are hereby declared to be guilty of a high Miſdemeanor, and may be proſecuted for the ſame, in any Court at *Weſtminſter*, and being convicted thereof, ſhall be liable to ſuch corporal Puniſhment, or Impriſonment, or to ſuch Fine, as the Court where the Proſecution is commenced ſhall think fit; and the Offenders may be ſeized, and brought to *England*, and any Juſtice of Peace may commit them to the next County Goal, till ſufficient Security be given by natural born Subjects, or Denizens, to appear in Court, *&c.* and not to depart out of the Kingdom without Leave.

All Offences againſt this Act, or againſt 9 *W.* III. *cap.* 44. or 5 *Geo.* I. *cap.* 21, *&c.* ſhall be laid in *London* or *Middleſex*, at the Pleaſure of the Proſecutor; and a *Capias* in the firſt Proceſs ſhall iſſue upon any Bill, Plaint, Indictment, *&c.* proſecuted for the ſaid Offences. One would have imagined, that theſe Laws might have prevented any *Engliſh* Subjects from being concerned in Deſigns ſo prejudicial and deſtructive, as theſe manifeſtly were to their native Country; yet when we come to ſpeak more particularly of this *Oſtend* Trade, we ſhall be obliged, tho' unwillingly, to ſhew the contrary, and that all the Meaſures that have been ſince taken in other Countries to leſſen the Commerce of our *Eaſt-India* Company, have been brought about by the Intrigues of ſuch avaritious Perſons as were determined to make their Fortunes at any Rate, and from ſuch ſelf-intereſted Views ſacrificed the Welfare of this Nation to their private Advantage.

What in ſome meaſure contributed to this, might be the Pains taken by the Company to prevent the Frauds committed by ſome in their own Service; in order to which, a Law was paſſed in the ſeventh Year of the ſame Reign, for the better preventing an unlawful, and further ſecuring a lawful Trade to the *Eaſt-Indies*, by which it was enacted, that all the Goods ſhipped on board any Ship to the *Eaſt-Indies* (except Goods of the Company, or ſuch as are licenſed by them, and naval Stores, Proviſions, and Neceſſaries for the Ship in her Voyage) and all Goods taken out of ſuch Ship in her Voyage homeward bound from the *Eaſt-Indies*, *&c.* to *England*, before her Arrival here, ſhall be forfeited, and double Value, and the Maſter, or Officer of ſuch Ship, knowingly permitting the Goods to be ſhipped or taken out of ſuch Ship, ſhall forfeit for every Offence one thouſand Pounds, and ſhall not be entituled to any Wages, *&c.*

Agreements or Contracts made, or entered into by any of his Majeſty's Subjects, or any in Truſt for them, on the Loan of Monies by way of Bottomry, upon any Ship in the Service of Foreigners, and bound to the *Eaſt-Indies*, *&c.* and all Contracts for Loading, or ſupplying any ſuch Ship with a Cargo of any ſort of Goods, Merchandize, Treaſure or Effects, or with Proviſions, Stores, or Neceſſaries, and Copartnerſhips entered into, relating to any ſuch Voyage, the Profits thereof, and all Agreements for the Wages of any Perſons ſerving on board any Ship to be employed in ſuch Voyage, ſhall be void; and every Perſon, Subject of his Majeſty, that ſhall go to the *Eaſt-Indies* contrary to the Laws now in Force, ſhall be deemed a Trader, and to have traded there; and all the Goods there bartered, or trafficked for, or purchaſed by any ſuch Perſon, or found in his Cuſtody, or any other in Truſt for him, by his Order or Procurement, ſhall be forfeited, and double the Value.

And by this Act it ſhall be lawful for the Attorney-General, or for the united Company trading to the *Eaſt-Indies*, at any Time within the Space of ſix Years, to file in any of the Courts at *Weſtminſter*, Informations againſt clandeſtine Traders, and if the Defendants ſhall be found guilty thereof, the Court ſhall forthwith proceed to give Judgment againſt them, *&c.* Alſo it is declared lawful for the Attorney-General, at the Relation of the Company, or by his own Authority, to exhibit Bills of Complaint in the Exchequer, againſt Perſons trading, dealing, trafficking, or adventuring to, or from the *Eaſt-Indies*, *&c.* contrary to Law, or againſt any Perſon concerned as an Agent, or Factor, or Copartner with ſuch illegal Traders, for diſcovering of ſuch their trading, *&c.* and for the recovering of the Duties and Damages, *&c.* and ſuch Perſons ſhall pay to his Majeſty the Cuſtoms of the Goods ariſing or purchaſed by the ſaid unlawful Trade, and ſhall anſwer to the Company 30 *per Cent.* according to the Value thereof in *England*; and if ſuch Offenders pay the Cuſtoms, or the Amount of the ſame, into the Exchequer, and Damages to the Company, they ſhall not be otherwiſe proſecuted by this Act, or any other Statute, for the ſame Offence; but if a Decree be obtained againſt the Defendants, they ſhall pay Coſts to his Majeſty and the Relator, reſpectively.

And if ſuch Bills (being exhibited at the Relation of the Company) be diſmiſſed by the Court, ſo that the Parties are acquitted, the Company ſhall pay every Defendant his full Coſts; the Forfeitures and Penalties herein before appointed, or in former Acts relating to the *Eaſt-India* Company, may be ſued for, not only by the Attorney-General, or the ſaid Company, but alſo by any Officer of the Cuſtoms, ſuch Officer having the Conſent and Direction of the Court of Directors of the united Company, as by the Act is particularly required; and one third Part of all ſuch Penalties ſhall be to the Crown, one other Third to the Company, and the remaining Third to ſuch Officers of the Cuſtoms as ſhall inform and ſue, as aforeſaid. The ſaid united Company ſhall be allowed to ſhip out Stores, Proviſions, Utenſils of War, and Neceſſaries for maintaining their Garriſons and Settlements, free of all Duties, ſo as the Duties, if they had been paid, do not exceed in any one Year three hundred Pounds. No *Eaſt-India* Goods to be imported into *Ireland*, or the Plantations, but from *Great-Britain*, on Pain of forfeiting Ships and Goods, *&c.*

It is very evident, from the whole Current of this Hiſtory of our *Eaſt-India* Trade, that ſuch as have been entruſted with the Management thereof, have had continual Difficulties to ſtruggle with; whereas our Rivals in this Trade, the *Dutch*, have all along enjoyed the full Protection of their Government; and, at the ſame time, have been allowed to manage their own Concerns in ſuch a Manner as ſeemed to them moſt conducive to their own Intereſt. But, of late Years, and ſince our Company have had the Authority of Acts of Parliament to ſupport them, they have, in ſome meaſure, gained upon the *Dutch*, eſpecially in thoſe Countries where both Nations trade freely, and where, conſequently, the Succeſs of their Labours muſt, in a great meaſure, depend upon the Inclination of the Natives, and that Preference which their good Opinion gives to either Nation.

In the Iſland of *Sumatra* particularly, the *Engliſh* have extended their Trade with great Succeſs, having not only a good Settlement at *Achen*, but alſo at the other End of the Iſland, where their principal Settlement was *Bencoulen*, which firſt began to flouriſh about the Year 1685. They had alſo another at *Sillebar*, where they likewiſe carried on a conſiderable Commerce: By degrees they became ſo conſiderable, that ſeveral of the little Princes of that Iſland choſe to put themſelves under their Protection, as well to ſecure themſelves from the Power of the *Dutch*, as that they may receive the Benefits of the *Engliſh* Trade; and have, generally ſpeaking, continued very firm in their Attachment to the Company; though they have been ſometimes but indifferently treated. The firſt Inducement the Company had to fix their Factories and Settlements on this Part of the Iſland was, the Advantage derived from the Pepper-Trade, carried on from *Lampoun*, which is in the Southern Part of the Iſland, and about twenty Leagues within the Streights of *Sunda*, very well ſituated in a deep Bay. Here they had a good Trade for Pepper, till they were deprived of it in 1683 by the *Dutch*, in conſequence of the famous War with the King of *Bantam*, which we have ſo often had Occaſion to mention: For this Town of *Lampoun* lying oppoſite to his Territories in the Iſland of *Java*, made likewiſe a Part of his Dominions; and therefore, when the *Dutch* brought him entirely over to their Intereſt, or, in other Words, which however mean the ſame thing, and are the plain *Engliſh* of the foregoing *Dutch* Phraſe, had reduced him under their Yoke, they obliged him to break off all Commerce with the *Engliſh*, which put an End to the Pepper-Trade at *Lampoun*, and forced the Company to remove to the Place before mentioned.

The Country about *Bencoulen* is mountainous and woody, and in the Heart of the Iſland there are ſeveral Volcano's, which render the Country ſubject to Earthquakes, and fill the Air ſo full of malignant Vapours, that it is very far from being wholſome. We may add to this, that the Town itſelf ſtands in a Moraſs, which obliges the Natives to build their Houſes upon Poſts, to defend them from the bad Effects of the continual Moiſture of the Soil. Theſe Inconveniencies did not hinder the *Engliſh* from making it their principal Reſidence in this Country, and where, for their greater Security, they erected a Fort, of no great Strength indeed, but which ſeemed ſufficient to anſwer their Purpoſes. This Fort was garriſoned with *Bugaſſes*, which is the Name given to the *Macaſſars* when tranſplanted out of their own Country; and as they depended on theſe for military Services, ſo with regard to their Revenues, they confided in the Chief of the *Chineſe*, who had the Title of Captain, a Thing cuſtomary in all the Settlements where the *Chineſe* reſide. As for the Natives, they lived, as they had formerly, under the Juriſdiction of their own Princes, called in the *Malayan* Language *Pangarans*, of whom there were two that were particularly under the Protection of the Company. One whoſe Dominions lay North from *Bencoulen*, and who was ſtiled *Pangaran-Munco* Rajah; and the other called *Pangarang-Soongé-Etam*, whoſe Country lay to the South. Though their Territories were not large, yet they were divided into ſeveral Diſtricts, each under a Governor, called a Dupatty, the Place of whoſe Reſidence was, in their Language, ſtiled their *Duſan*: And theſe Governors had under them leſſer Magiſtrates, called *Dattoes*. The Company had alſo a good Correſpondence with the moſt powerful of the Princes in the inland Parts of the Iſland, ſuch as the Sultan *Cutcheel*, and ſeveral others, which induced them to believe they might take any Meaſures they thought neceſſary for the Advantage of the Company, and Eaſe of the Factory.

It was this that, in the Year 1719, engaged the then Chief to think of removing from *Bencoulen*, where, from the Cauſe before-mentioned, abundance of *Engliſh* People died every Year; and it was with this View that a Place was fixed upon a few Miles diſtant, for erecting a new Fort and Factory, which was to be called *Marlborough* Fort; and the Ground being traced out, the Work began to be carried on with great Vigour and Spirit. But, it ſeems, they had not ſufficiently conſulted the Temper and Diſpoſition of the Natives, who were not at all well pleaſed with this Deſign. There had been ſome little Jealouſies and Heart-burnings amongſt them before, which not breaking out into an open Quarrel, had been overlooked; but theſe People conſidering with themſelves that this new Fortification roſe apace, and that it looked as if the *Engliſh* were diffident of them, or had a mind to puniſh ſome Offences that they hoped had been forgotten; they from thence grew abſolutely diſaffected, and meditated nothing leſs than a total Revolt, and an abſolute Deſtruction of that Power which they now began to dread. They concealed, however, their Sentiments ſo well, and ſhewed ſo little Sign of Uneaſineſs or Reſentment, that the *Engliſh* went on without any Apprehenſion of what was contriving againſt them, till it was on the Point of breaking out. The remaining Part of this Hiſtory will beſt appear, and the Concluſion of this Conſpiracy be moſt naturally made known, from the following Account, written by the Perſons principally concerned, to the Company's chief Officer in the *Indies*, which I have therefore choſen to inſert, as containing the moſt remarkable Piece of Hiſtory within this Period of Time.

To the Honourable Joseph Collet, *Eſq*; *Preſident and Governor of Fort* St. George, &c.

" Honoured Sir,

" IT is with the greateſt Concern that we acquaint you
" with the Miſfortunes that have befallen us and our
" honourable Maſters Affairs, ſince our Advices by the
" *Queen* and *George* Brigantine, wherein we did, with too
" much Confidence, aſſure you of the perfect Peace and
" Tranquillity we then enjoyed at *Marlborough-Fort*,
" which the Satisfaction the Natives ſeemed to expreſs in
" our Adminiſtration, gave us but little Reaſon to ima-
" gine would prove of ſo ſhort a Date. Our Pepper, for
" ſome Time after, coming in very plentifully, and we
" having frequent Promiſes from them of much greater
" Quantities ready to be brought out of the Country, we
" had made a Progreſs in our Buildings, even beyond our
" own Expectations; the Foundation of one Gorge and
" two Curtains of our Fort-walls being laid, and raiſed in
" Brick and Chinam a Foot above Ground, and the Earth
" laid open for a third, in the Space of a little more than
" a Month; and we had made ſuch Proviſion for Bricks
" and Chinam, that we ſhould have had ſufficient to com-
" pleat the whole, which, at the Rate we had begun, might
" have been finiſhed in leſs than twelve Months. Thus
" we thought ourſelves ſucceſsful in our Undertaking;
" and it was no ſmall Pleaſure to us, to think that, by di-
" ligently ſerving our Maſters, it would add to our Cre-
" dit, and in a more peculiar Manner recommend us to
" their Favour hereafter: But, in the midſt of our Pro-
" ſperity, all our Hopes were blaſted by a ſecret Combi-
" nation of the whole Country againſt us, which they cer-
" tainly deſigned to put in Execution whilſt we had no
" Ship in the Road to aſſiſt us, the *Metchlapatam* having
" been at *Bantal* from the 21ſt of *January*, but fortunate-
" ly returned to our Aſſiſtance the 18th of *March*, being
" but very few Days before this horrid Plot was diſco-
" vered.

“ It was late at Night, on the 23d of *March*, before we had the leaſt Suſpicion of any Treachery, when Captain *Gibb* adviſed the Deputy-Governor, that *Dupetty Bentorin* had got together between four and five hundred Men in his Duſan, and he believed they deſigned to make War with the Company. The Deputy-Governor immediately diſpatched a Letter to him, to know the Reaſon of his entertaining ſuch Numbers of People in his Duſan, ordering him immediately to diſperſe them, and to come himſelf to the Fort in the Morning, where, if he had any Complaints to make, they ſhould be heard, and he ſhould have Redreſs; which, if he did not immediately comply with, we ſhould no longer eſteem him our Friend, but treat him as an Enemy. Early in the Morning he ſent a trifling Anſwer, aſſuring us of his Friendſhip; but taking no Notice of diſperſing his People, or coming himſelf to the Fort, as deſired. Whereupon the Council was immediately ſummoned, and acquainted with what had paſſed, when it was agreed to ſend Mr. *Macky*, who was the Dupatty's Friend, to bechar, or confer with him, and perſuade him to come to the Fort. About Noon he returned with the Dupatty's Anſwer, who promiſed to wait on the Governor the next Morning. In the mean time our *Pangarans* and *Dattoos* were ſent for, to adviſe with on this Occaſion, who were the Perſons that ought to have given us the firſt Notice thereof; but they ſeemed to make ſlight of it, and perſuaded us the Dupatty was an honeſt good Man, and one that would not be guilty of an ill Action againſt the Company, the People of his Duſan being only Friends that he had invited out of the Country to feaſt with him. This different Opinion of theirs made us jealous of their Fidelity, which made us deſire them all to take a freſh Oath of Allegiance to the Company; and the preſent Deputy-Governor and Council, before we bechared farther with them on this Affair, which they did with much Perſuaſion conſent to, and it was performed by one of their Padres; after which *Pangaran-Munco* Rajah undertook to bring in the Dupatty, and did accordingly ſet out himſelf for *Benterin*; but not an Hour after he was gone out of the Fort, we were alarmed at the dreadful Sight of the Sugar-Plantations being on Fire, it being then about Six o'Clock at Night.

“ A ſtrong Party was immediately ſent out to *Bencoulen*, under the Command of Enſign *Adaire*, with Orders to proceed next Morning, on the 25th of *March*, to *Duſan Benterin*, and to engage the Enemy either there, or where he ſhould meet them, uſing his Endeavours to deſtroy the Duſan, and as many of their People as he poſſibly could: But in this we had no Succeſs for want of the *Pangaran*'s Aſſiſtance, who had promiſed to ſupply him with Sampans to ferry his People over the Water at *Benterin*, or where he ſhould have Occaſion for them; but in this they deceived us; for our Party finding a Body of the Enemy had fortified themſelves with a ſtrong Breaſt-work of Fire-wood, and ſome ſmall Guns on the other Side the River, over-againſt the Sugar-Plantations, and not one Sampan ſent by the *Pangarans*, according to their Promiſe; for want of which he could only come to an Engagement a croſs the River, in which Manner they continued till about Four in the Afternoon, when moſt of our *Buggaſes*, *Blacks*, and *Chineſe* having left the *Engliſh*, the Enſign with the reſt returned to the Fort about Six in the Evening, having performed but little Execution on the Enemy. By the Account we had from the Enſign, we plainly found that the whole Country were concerned in this Rebellion. The principal Perſons that he ſaw and knew amongſt them were Rajah *Roojong*, *Pangaran Muncho* Rajah, under moſt of the Dupatties of the Duſans adjacent to us, with many of the Inhabitants and *Bazar* People of *Bencoulen*, who were headed by Dupatty *Benterin* and *Selebrian*; but he could not well gueſs at their Number, they being under the Cover of the Trees and Breaſt-work they had raiſed of Fire wood; and Mr. *Allcock*, from *Sillebar*, had given us an Account the ſame Day, that *Pangaran Jantentally* and his Country alſo were in concert with them.

“ On the 26th of *March* in the Morning, the ſtrongeſt Party we could muſter of *Engliſh*, *Buggaſſes*, *Blacks*, and *Chineſe*, were ordered out to engage them, under the Command of Mr. *Newcome* and Enſign *Johnſon*; but when they came to *Bencoulen* to join the *Buggaſſes*, they were ſtrangely ſurpriſed to find them refuſe to fight without a preſent Reward; and Mr. *Newcome* was credibly informed, that a conſiderable Number of the *Buggaſſes* were laid in Ambuſh to fall on the *Engliſh*, of which he immediately ſent Advice to the Fort; whereupon the Sign was given to recal the Party, which prevented our coming to an Action that Day. The Sultan being examined, pretended that a wrong Interpretation was put upon what he ſaid at *Bencoulen*, and would have perſuaded us that he had always been, and was ſtill ready and willing to fight for the Company; but our Suſpicion of his Treachery made us unwilling to truſt him at that Time. About Eleven o'Clock the ſame Day, *Pangaran Munco* Rajah brought a Token, which, as he ſaid, was from his Uncle Rajah *Boojong* from *Singledemend*, to give us Notice that two hundred *Orangoonoes* were come on our Side at *Singledemend*, and deſired we would lend the *Malayes* ſome Weapons to defend themſelves. This we had great Reaſon to ſuſpect was falſe, Rajah *Boojong* himſelf being at that Time in Arms againſt us at *Banterin*; but the *Pangaran* poſitively affirmed he was then at *Singledemend*, notwithſtanding Enſign *Adaire* had ſeen and ſpoke to him the Night before at *Banterin*.
